3. In combination with the devices in the second claim, the main brace E', as and for the purpose set forth.

4. The stirrup B, in combination with the end of elliptic springs and the body F, substantially as and for the purpose set forth.

5. Broadly securing and operating the front springs of vehicles to the thills or pole of the same, in the manner and for the purpose substantially as shown and described.

117,820. — HEATING-DRUM. — Charles W. Servoss, Chicago, Ill.

Claim.—1. The arrangement, within the tubular radiator A, of the stationary diaphragm D and movable diaphragm E with relation to the inlet and exit-flues B C, as and for the purpose set forth.

2. In tubular radiators, the scrapers G, arranged and operating substantially as described.

117,821. — CHURN. — Jacob Shaver, Lawrence, Ill.

Claim.—The combination of the cogged rod D F, dashers G H, lever E, and box A B K J, as and for the purpose set forth.

117,822. — PADDLE-WHEEL.—Nathaniel P. Sheldon, San Francisco, Cal.

Claim.—1. The combination, in a paddle-wheel, of the radial arms C forming ways H, and paddle-blades N with the circular ways F, substantially as and for the purposes herein described.

2. The combination of the ways F, paddle-blades N, ways W, and screw H, as herein described.

117,823. — SHAFT-COUPLING. — Edward G. Shortt, Carthage, N. Y., assignor to himself, Levi Wood, Minor Guyot, A. Irving Sternberg, and George Gilbert, same place.

Claim.—1. The wedge *a* provided with the slot *b*, as specified.

2. The wedge *a* provided with the groove *c*, as described.

117,824.—APPARATUS FOR DISINTEGRATING SUBSTANCES.—Charles Graham Chappell Simpson, Montreal, Canada.

Claim.—1. The novel disks *a*, each in one piece, and attached to the shafts *b* or *i*, substantially in the manner and for the purpose described.

2. The novel saddles b^2, sub-bed b^3, projections b^4, and screws *c*, substantially as and for the purposes set forth.

3. The novel openings *f*, casing f^1, semi-pyramidical pieces f^2, plate *g*, feed-spout *h*, and guards f^3, substantially as and for the purpose set forth.

4. The novel hollow shafts *i*, spindle i^2, screw i^3, hopper i^3, pulley *l*, and socket *k*, substantially as and for the purpose set forth.

5. The novel bar *p* with disk *a*, substantially as and for the purpose set forth.

117,825.—COMPRESSED-AIR ENGINE.—Amos M. Smith, Chicago, Ill.

Claim.—The main tank A, the governor or regulator E, the auxiliary tank D, and engine C, when all are arranged on wheels and combined so as to operate substantially as described.

117,826, antedated July 25, 1871. — DIE-MOLD FOR COMPOSITION ARTICLES.—Isaac Smith, New York, N. Y., assignor of one-half his right to William Sanderson, same place.

Claim.—The combination, with the parts of the die, of a securing-collar, the whole so constructed and operating as to permit the keying together of the parts of the die while in the press, substantially as described.

117,827. — SAW-SHARPENING MACHINE.—Zealous Sperry, Midland, Mich.

Claim.—1. The curvilinear frame A, secured to a bench or other suitable support at one end, and supplied with the top and bottom pieces *a a'* having perforations cut through them, and curvilinear toothed bar C attached to the table D of the machine, which is supplied with grooves for the reception of the side rails of frame A, and gearing or engaging with a pinion on the shaft *b* having its bearings in an upright, *b'*, of cap-piece *a'*, secured to the frame, and operated by crank *b*, combined, arranged, and operating as and for the purpose described.

2. The employment of the pivoted arm F, in combination with the revolving vertical post E, acting both as a lever and a pawl in rotating and holding in place the said post, its projection *f* entering depressions or recesses cut in the semicircular stationary leaf *d* secured to table D, constructed and arranged as and for the purpose described.

3. In combination with the post E, arm *h'*, the lever H, shaft *g*, knee-joint *h*, and pivoted frame G, all constructed, arranged, and operating, as and for the purpose described.

4. The pivoted frame G, constructed as shown, and supplied with the operating-screw *i* and support *i'*, in combination with the vertical sliding support I, having its lower end so recessed or grooved as to receive the top rails of said frame G, constructed and operating as and for the purpose set forth.

117,828.—MACHINE FOR TURNING LOGS.—Edward H. Stearns, Erie, Pa.

Claim.—1. The toothed bar or arc E, operated by rack or spur-gearing *e* and G, substantially as and for the purpose described.

2. The rocking-guide *g*, either with or without the anti-friction rollers *g'*, in combination with the toothed arc or bar E, constructed and arranged substantially as in the manner and for the purpose described.

3. The stirrup *c*, in combination with the bar E provided with slot *a*, constructed substantially as and for the purpose described.

4. The elastic buffer W, in combination with the

are or bar E, constructed substantially as and for the purpose described.

5. The spring-cog e'', in combination with the arc or bar E and pinion G, constructed substantially as and for the purpose described.

6. The combination of the brake N having the shoulder Z', the spring-tooth Z, and the brake P^1, constructed and arranged substantially as and for the purpose described.

7. The rocking frame H^2 having the arms H^1 H^1, the friction-wheel I with its shaft I', friction-wheel K with its shaft Z'', the pinion G, and the toothed bar E, in combination, each constructed and all operated substantially as set forth.

117,829.—DRAFT DEVICE FOR VEHICLES.—Jonathan S. Tibbets, Brazil, Ind.

Claim.—1. The whiffletrees, provided with the hooked projections E, and mounted in the angle-ears B B' of the plates C, the latter being pivoted to the evener, all substantially as specified.

2. The revolving whiffletrees, provided with an arm, F, and combined with the revolving shaft I, having the yokes G and the strap K, all substantially as specified.

3. The tongue, having the adjustable arms L, and bar P, for adapting it to connect with clips at different distances apart, all substantially as specified.

4. The notched guard-plates, and the bolts Q with elongated and weighted heads Q', in combination with the clip-irons and adjustable serrated arms L L of the tongue, as shown and described.

117,830. — SPRING BED-BOTTOM.—Charles Henry Triphagen, Pewamo, Mich.

Claim.—The combination of the clips B, clamps F and F', the elastic loops E, and the slats A of a bed-bottom, all constructed and arranged substantially as described and shown, for the purposes set forth.

117,831. — CORNER-SOCKET FOR SHOW-CASES, BOXES, &c.—John W. Truby, Chicago, Ill., assignor to Matthias Terhune, same place.

Claim.—The corner-sockets A, for show cases, boxes, and frames, having cavities C molded to fit the molding which connects said sockets, as shown and described.

117,832, antedated July 27, 1871.—HAND-STAMP.—Sidney S. Turner, Westborough, and Collins Stevens and George M. Stevens, Boston, Mass., assignors to themselves and Edward B. Pendleton, Westerly, R. I.

Claim.—The printing-wheels B and C, carrying upon their peripheries characters indicating time, when the same are connected to and operated by clock-work, as and for the purpose set forth.

117,833, antedated August 3, 1871.—BASE-BURNING STOVE.—Henry B. Van Benthuysen, Lockhaven, Pa.

Claim.—1. A rotary or alternating magazine-stove, having an improved fire-chamber composed of the wall B, staves K, ring a, cap Q, wings L, one or more, and grate M, arranged and combined substantially as and for the purposes set forth.

2. A convex rotary or alternating grate, having its outer ring outside the interior diameter of the fire-pot, in combination with a fire-chamber wall or lining composed of narrow cast staves, arranged substantially as and for the purposes set forth.

3. Elevating a part of the grate-bars or alternate radial bars above the principal bars, in combination with one or more projections on the inner wall of the fire-chamber.

4. The grate-bangor 2, dumping-bar 4, fins 3 3, and pinion A, as arranged for dumping the grate, substantially as set forth.

117,834.—POT AND KETTLE-COVERS.—Sumner Van Horn, Chicopee, assignor of two-thirds his right to Vallette W. Van Horn and Edw. A. Van Horn, Springfield, Mass.

Claim.—A pot or kettle-cover, composed of two or more plates or disks, A and B, connected substantially as described, in combination with pipe F G H, as specified.

117,835. — SEED-PLANTER. — Thomas G. Smith Vaniz, Canton, Miss.

Claim.—1. The distributing-wheel G, having a channeled or grooved periphery and made adjustable, substantially as described.

2. The combination of the hopper F and adjustable casing J with the spiral spring M and leather linings f.

3. A seed-planter, composed essentially of the hopper F A, distributing-wheel G s, adjustable casing J, the spring M, and cord L, or their equivalents, and a frame, A, with drill and covering-shares, a wheel, B, and driving-gearing, all operating substantially as herein described.

117,836. — APPARATUS FOR RECTIFYING SPIRITS.—William Harrison Ware, Philadelphia, Pa.

Claim.—1. The combination and arrangement of a rectifying-vessel or vessels, F, arranged in a basement room, a reservoir, K, arranged in a room above said vessel, a pipe, J, communicating with the reservoir and with the rectifying-vessel, and a pump, G, or its equivalent, by which the liquor after being refined is elevated through the pipe to the reservoir above, all as set forth and shown.

2. The combination, with the rectifying-vessel, of a pipe, J, extending to a reservoir, K, and communicating with the lower part of the latter through a pipe, J', the said pipes J and J' being provided with cocks j^2, j^3, and q, and the whole being arranged and operating as set forth.

3. The rectifying-vessel, consisting of the tank F, perforated partition b and partition g, and chambers f f^1, communicating with each other, as specified.

4. The combination, with the rectifying-vessel of a gauge operated by a float, g^2, through the medium of a cord, g^1, substantially as described.

5. The combination, with the said rectifying-vessel, of a close-fitting hinged cover g, consisting of canvas or other fabric stretched upon a frame, as specified.

117,837.—SHUTTLE FOR WEAVING WIRE-CLOTH.—Charles H. Waters, Groton, and William Ott, Jr., Clinton, assignors to Clinton Wire-Cloth Company, Clinton, Mass.

Claim.—The revolving friction-finger, constructed and operating as described, in combination with the wire-carrying bobbin, for the purpose of holding the running thread of wire under restraint as it is drawn through the delivery-rolls, substantially as described.

117,838. — CONSTRUCTION OF DIES FOR FORMING THE LIPS OF AUGER-BITS.—Richard N. Watrous, Elmira, N. Y., assignor to himself and W. W. Kellogg, same place.

Claim.—As an improvement in dies for swaging and forming auger-bits, the projection d on pintle B, made separate from the other parts of the die and inserted in the die-block in the tapering socket, and made removable therefrom in virtue of the holes b, as and for the purpose specified.

117,839.—PEG-CUTTER.—William M. Watt, Como, Miss.

Claim.—A shoemaker's tool, consisting of handle E, scraper A, slotted chisels B B, and set-screws D

D all constructed, arranged, and operated as herein described, and for the purposes set forth.

117,840.—HOISTING APPARATUS.—Alexander Weide, Chicago, Ill.

Claim.—1. The combination of the screws B B, platform A, and half-nuts F F, and the bearings C C', substantially as specified.

2. The combination of the subject of the last-above claim with the horizontal shaft I, miter-gear wheels H H G G, loose pulleys J J', and clutch K, substantially as specified.

117,841. — STEAM-POWER AIR-BRAKE DEVICE.—George Westinghouse, Jr., Pittsburg, Pa.

Claim.—1. A bent-lever, receiving power, by its shorter arm, from the piston-stem, and communicating the same from its longer arm to the brake-lever, arranged and combined substantially as described.

2. A spiral or other suitable form of spring, arranged, in connection with the longer arm of a bent lever, in a power car-brake apparatus, so that the spring will act with a continually-increasing power in causing the brake-shoes to clear the wheels, substantially as described.

3. In a power car-brake apparatus, the diagonally-opposite arrangement of the male and female couplings on the branching air-pipe, substantially as described.

117,842. — BRICK-MACHINE. — William G. White, Bedford, Ohio.

Claim.—The triangular-shaped lever E, in combination with the cam D, lever F, arm G, and follower or frame H H, arranged and operating substantially as and for the purpose described.

117,843. — BREECH-LOADING FIRE-ARM.—Andrew E. Whitmore, Ilion, N. Y.

Claim.—1. A bolt, H, in combination with slotted and recessed lugs I K formed on the under side of the barrel or barrels, and operating substantially in the manner and for the purpose described.

2. A hammer-guard and lifter, L, operated by the guard-lever E, substantially in the manner and for the purpose set forth.

3. The guard-lever E, bolt H, one or more slotted and recessed lugs, I K, and the hammer-guard and lifter L, all combined and operating substantially as described, for the purpose set forth.

117,844.—BROOM.—Addison Willis, Chicago, Ill.

Claim.—As a new article of manufacture, a broom, formed of wood-splints and broom-corn, when arranged and constructed in the manner described, and secured upon the handle A by the fastenings C C, as herein shown and described.

117,845.—OILING JOURNALS.—William G. Winne, Albany, N. Y.

Claim.—The journal A having spiral groove a', and the fixed bearing B, removable bearing C having close oil-reservoir D and channels d^1 d^2, and the end-grooved rod E, all constructed and arranged together as and for the purpose specified.

117,846.—WASHING-MACHINE.—George L. Witsil, Philadelphia, Pa.

Claim.—1. The combination of a tub for holding clothes to be cleansed, a corrugated cylinder suspended within such tub, and an oscillating corrugated rubber, substantially as and for the purpose set forth.

2. The combination and arrangement of the tub A, shaft C, spring C^1, cylinder or roller C^2, and rubber D, substantially as and for the purpose set forth.

117,847. — CLOTHES-DRIER. — Malcolm H. Wood, Carlisle, Ohio.

Claim.—The combination of the lever B and ratchet e with the rack C, post A, cross-bar D, when the same are constructed and arranged to operate as described.

117,848.—DITCHING-MACHINE.—Stephen S. Wood, Brooklyn, N. Y.

Claim.—1. The rotary feeding-wheel, consisting of a drum or shaft and the spiral blades, constructed and arranged substantially as specified.

2. The said feeding-wheel, mounted in the vertically-oscillating frame F, and the latter arranged between the guides H, all substantially as specified.

3. A carrier, M, and lateral carrier T, combined with the plate R, endless belt S, and apron W, when arranged intermediately, as and for the purpose specified.

4. The power-wheel, consisting of a drum and two or more rows of points with a plane surface between the said rows of points, substantially as specified.

5. The combination, with the power-wheel constructed as described, of the scraper D', substantially as specified.

117,849.—WHEEL-HUB.—Johnston V. Woolsey, Sandusky, Ohio.

Claim.—1. The combination of the wood central portion C grooved at g all round, the metal collars G G' with rectangular partitions c and with rivets b, and the spokes A with tapered surfaces a a^1 and a^2 a^3, the latter bearing against one another and the former against the rectangular partitions, all arranged substantially in the manner and for the purpose described.

2. The shoulders s s formed on the grooved wooden hub C, in combination with the shoulders s' s' formed in the metal clamping-collars G G', one of which has rectangular partitions c, substantially as described.

3. The partitions c formed on the collar G, and having their ends beveled, as at Y, as shown, for the purpose set forth.

117,850. — CUTTER-HEAD. — Johnston V. Woolsey, Sandusky, Ohio.

Claim.—1. The cutter-head A B, one plate of which is obliquely and tangentially grooved to receive the cutters, in combination with the set-screws c, substantially as described.

2. The spacing-pieces b and cutters a, combined with a cutter-head which is constructed substantially as described.

117,851.—PENCIL-SHEATH.—Charles E. Abbott, Malden, and Rufus S. Merrill, Hyde Park, Mass.

Claim.—1. A pencil-holder and point-guard, composed of a metallic barrel with a drawn-down and closed end to receive and protect the point of the pencil, and a metallic cylinder formed with spring-fingers to hold the pencil, both the cylinder and barrel being formed with lugs, whereby they may be secured to the flap of a diary, memorandum, or other book.

2. The combination, with the flap of a diary, memorandum, or other book, of a pencil-holder and point-guard, constructed and secured to said flap, as herein shown and set forth.

117,852.—PROCESS OF OBTAINING VEGETABLE FIBERS. — William Adamson and Charles F. A. Simonin, Philadelphia, Pa., assignors to William Adamson.

Claim.—The mode, substantially as herein described, of obtaining vegetable fibers by the application of hydrocarbon vapors.

117,853. — HOSE-PIPE VALVE. — Albert F. Allen, Providence, R. I.

Claim.—1. In combination with a valve or supply-chamber, the inverted conical valve-seat, with conical exterior, extending into the chamber toward the immediate source of supply, and the hol-

low rotary valve, the two being provided with corresponding elongated triangular ports, substantially as described, for the purposes specified.

2. The inverted conical valve-seat D with a conical exterior, the valve-chamber A, and the hollow rotary valve E, the two being provided with corresponding elongated triangular ports, combined substantially as described, and operated peripherically, as and for the purposes specified.

117,854. — Tap for Oil-Cans. — Matthew Andrew, Melbourne, Victoria.

Claim.—The tap for oil-cans, consisting of the exterior socket B upon the plate *f*, which is soldered to the can, the plug C within the socket, and the capsule D inclosing both the tube and socket, as herein described, for the purpose specified.

117,855.—Metallic Roofing.—William S. Belt, Cincinnati, Ohio.

Claim.—In a metallic roof, the arrangement of the V-crimped sheets B C, as shown and described, the novelty consisting in placing the crimp with the perforated flange D over the crimp of the adjacent sheet, so that each sheet will be fastened at each side of the sheathing of the roof.

117,856.—Machine for Channeling the Soles of Boots and Shoes.—Lyman R. Blake, Fort Wayne, Ind.

Claim.—1. In combination with the lower feed-wheel and shaft journaled in stationary bearings, and the pivoted arm or lever *f* that carries the upper feed-wheel shaft, a stationary edge-guide, *j*, attached to the front stand, substantially as shown and described.

2. An edge-guide attached to the front stand *b* and made adjustable from said stand, substantially as shown and described.

3. In combination with the movable arm or lever and the cutters attached thereto, the adjustable journal-box *g* for raising and lowering the wheel *i*, substantially as described.

4. In combination with the wheel *i*, made adjustable, as described, the presser-foot *s*, attached to and moving with the adjustable journal-box.

117,857.—Air-Pressure Tap.—Charles T. Bonsall and Theodore Bergner, Philadelphia, Pa.

Claim.—The body A, formed with the air-chamber *c* and ducts *a*, and the plug or valve *g* for closing the air and liquid-passages, in combination with tapping-tube B and the suspended packing C, constructed and operating in the manner described.

117,858.—Mode of Securing Pockets to Traveling-Bag Partitions. — Henry Braunhold, New York, N. Y.

Claim.—The within-described fastening for pockets of partitions for traveling-bags or other articles of a similar nature, composed of strips of muslin or other tough and flexible material passed through slits *a b* in the partition and secured to said partition and to the parts of the pocket, substantially as set forth.

117,859, antedated August 5, 1871.—Organ. Riley Burdett and Benjamin O. Church, Chicago, Ill.

Claim.—1. In combination with the bellows of an organ, the cut-off valve K, or its equivalent, connected with said bellows by suitable mechanism to make said valve automatic, to prevent the flow of wind to the pipes except when under bellows pressure sufficient to produce a proper tone, as set forth.

2. The independent blow-pedal U, in connection with the pedals S T and an independent pressure-bellows for the organ-pipes.

3. The adjusting-screw *g* and rod *f* connected as described, and combined with the lever *d* and spring *e*, substantially as set forth.

4. The temperature-index A, in combination with the adjustable pressure-lever *d* and adjustor of two-*g*, or their equivalents, to operate as and for the purposes set forth.

5. The pressure or cut-off valve K, in combination with the lever P and studs Q and R attached to the upper and lower parts of the bellows of a pipe-organ, for the purpose set forth.

117,860. — Device for Forming Spiral Bed-Springs. — Edwin L. Bushnell, Poughkeepsie, N. Y.

Claim.—1. The combination of the stud *a*, clamp B, and jaws E, with the mechanism to operate said clamp and jaws, constructed and arranged to operate substantially as described.

2. In combination with the above-named device, the adjustable gauge L for regulating the distance apart of the eyes or loops, as set forth.

3. In combination with the stud *a* and clamping or bending-jaws E, the rest G, constructed and arranged to operate as set forth.

4. The vise O, having the guide or holding-bar *s* applied to one of its jaws, when constructed and arranged to operate as and for the purpose herein described.

117,861.—Fog-Alarm.—Samuel G. Cabell, Quincy, Ill., assignor to himself and George P. Este, Washington, D. C.

Claim.—1. The combination herein shown, in a fog-alarm, of one or more air-cylinders, a reed, horn, and a piston-head working in the cylinder or cylinders, substantially as and for the purposes set forth.

2. The combination of the two cylinders A and G, piston-rod B, and piston L, and an air-valve, *b*, arranged in the head of the cylinder, substantially as and for the purposes set forth.

3. In combination with the air-cylinder in a fog-alarm provided with a reed operated upon by a piston, the cone E under the arrangement shown, for protecting the mouth-piece and bracing the cylinder, substantially as herein set forth.

4. In combination with the air-cylinder A^1 provided with its exterior tubes A, cone E or its equivalent, and reed D, the piston-rod B^1, piston L, and guide-rods *f*, all substantially as and for the purposes herein set forth.

5. The combination of the outer cylinder A^2, provided with reed D and cone E or its equivalent, the interior working cylinder G^2 having a piston-head and air-passage, b^2, on its inner end, and the piston-rod B^2 with piston L, all substantially as and for the purposes herein set forth.

6. In combination with the cylinders A and G, constructed substantially as described, the hollow piston-rod B provided with openings *c*, and piston L, substantially as and for the purposes herein set forth.

7. The combination, in a fog-signal, of an air-cylinder, A^3, piston-rod B^3, piston L, flexible air-bulb J, regulating-cock I, and a chamber inclosing a reed, D, connected with a horn, all substantially as and for the purposes herein set forth.

117,862.—Harvester. — James A. Cauldwell, Watkins, N. Y., assignor to Frank L. Johnson, George Johnson, Orlando Hurd, Bradford C. Hurd, and Samuel M. Barker, same place.

Claim.—1. The semi-spherical case or shell C, provided with the tubular arm G and central sleeve mounted upon and vibrating about the main axle, in combination with the independently vibrating tongue, substantially as described.

2. The semi-spherical shell or case C, provided with the sleeve C', having a bearing thereon for the inner end of the countershaft O, and with a bearing for the outer end of said shaft, substantially as set forth.

3. In combination with the shell C, gear-wheel D, countershaft O, and main axle B, the collar or stop c^2, whereby a proper relation between the shell C, wheel D, clutch L, and cam M is maintained.

4. The toothed segment-lever S, mounted on the vibrating tubular arm or sleeve G, in combination with the coupling-sleeve and toothed segment, also mounted on sleeve G, as described.

117,863.—Fire-Screen. — Augustus Chestnutwood, Davidsville, Pa.

Claim.—The herein-described automatically-adjustable screen, consisting of the tubular stand A, spring B, rods C, fan or screen D, and set-screw F, substantially as specified.

117,864. — Mowing-Machine. — Levi S. Clark, Bethel, Conn.

Claim.—1. The arrangement, relatively with the sickle G and lever H, of the pitman J and reciprocating sleeve M for operation of the sickle, substantially as specified.

2. The spring-borne pawls *f f*, arranged within the boxes *g* and provided with horns *h* and rings *i*, for operation substantially as shown and described.

3. The crutched pendent bar I, in combination with the lever H, pitman J, and the axle C of the main frame, substantially as specified.

4. The combination, with the sickle G, of the reciprocating sleeve M, the strap or clip N, the connecting-rod O, the lever P, and the link Q, essentially as herein set forth.

117,865.—Croquet-Arch. — Frederick M. Clarke, Washington, D. C.

Claim.—A croquet-arch, provided with a projecting shoulder, spur, or equivalent device for adapting it to be driven or forced into the ground, as set forth.

117,866.—Faucet.—William Cleveland, Orange, N. J.

Claim.—The shank of the faucet formed with the slot *x*, in combination with the bent spring *a* and annular groove of the key *b*, the whole constructed and operating as described.

117,867.—Machine for Sewing Hat-Tips to Linings.—Jacob L. Coles, Newark, N. J.

Claim.—1. The carriage A, the oval turning mechanism, and the screw for adjusting the same in relation to the stitching and cutting mechanism, when combined with and made movable laterally on ways parallel to the line of the feed-motion of the sewing-machine, as described.

2. The carriage A, sustaining the oval turning mechanism, mounted on railways and controlled by latches, in combination with stitching and cutting mechanism, as described.

3. The combination of the turn-table slotted as described, the main stud, and the auxiliary stud, the table being partially controlled in its movement with relation to the stitching mechanism by the stud *i*, as and for the purposes specified.

4. The adjustable lever for controlling the auxiliary stud, in combination with the turn-table slotted as described, the central stud, and the auxiliary stud, as and for the purposes specified.

5. The combination of the stop-latch and the turn-table face-plate, substantially as described.

117,868.—Journal-Bearing. — Sydney P. Cook and Hiram Burt Cook, San Francisco, Cal.

Claim.—Ivory or any analogous bone as a bearing for journals, substantially as and for the purpose above described.

117,869.—Propulsion of Canal-Boats.—Michael N. Cummiskey, Paterson, N. J.

Claim.—1. The jaws *m n*, suspended from the eccentrics *i* upon the shaft *b*, and provided with rollers 2 or guides for the chain *f*, in combination with the chain-wheel *e*, substantially as and for the purposes set forth.

2. The hinged jaw *n* and cams *k* and *i*, in combination with the jaw *n*, eccentrics *i*, and chain-wheel *e*, for the purposes and as set forth.

117,870, antedated July 20, 1871.—Medical Compound for Treating Rheumatism, &c.—William Curless, Truckee, Cal.

Claim.—A medical compound composed of the ingredients above enumerated, mixed together in about the quantities above given, for the purpose specified.

117,871.—Call-Bell.—Henry A. Dierkes, New York, N. Y.

Claim.—The arrangement of the hammer E, coupling D, and rod *f*, in which the weighted side of the coupling is in a right line with the hammer, axis, and rod, whereby a slight motion of the latter imparts a quick and extended movement to the hammer, producing an effective blow upon the gong and a rapid subsidence to a position of rest, substantially as set forth.

117,872. — Safety-Valve. — Jarvis B. Edson, Brooklyn, N. Y.

Claim.—1. The construction and combination of pairs of corrugated diaphragm springs, in which the springs have their convex surfaces turned inward, as S S, Fig. 3.

2. The adaptation and combination of corrugated diaphragm steel springs, constructed as described, so as to impinge against a safety-valve lever at any certain pressure, and by which action the steam or other fluid under pressure will blow off.

117,873. — Condenser for Oil-Stills.—Hiram W. Faucet, Titusville, and Thomson McGowan, Meredith, Pa.

Claim.—The longitudinal cylindrical perforated pipe R, arranged within the condensing-cylinder C and communicating with the feed-pipe W, as described, in combination with the vapor-pipes V V surrounded by water in the water-box B, and operating with reference to the still S, substantially as and for the purpose set forth.

117,874, antedated August 4, 1871.—Wagon-Seat Fastening.—James H. Fellows, Alba, Pa.

Claim.—In a wagon-seat fastening, the combination, with the lock-plate A having socket B and perforated recess G, of the sliding bolt C, slotted at Z to receive the rivet *v*, and operating automatically by the spiral spring E and the tongue D, the whole being placed under the seat, as shown, to secure it firmly and prevent it from tipping, substantially as specified.

117,875.—Shingling and Slating Bracket.—Levi W. Fifield, Worcester, Mass., assignor to himself and William H. Hathorne, same place.

Claim.—The within-described adjustable shingling and slating-bracket, consisting of the toothed jaw A, head B, foot D, hoop-iron E, bar G, with yoke *b*, and the notched bar H, when all of said parts are constructed and arranged substantially as and for the purposes herein set forth.

117,876. — Shoe-Fastening.—Franklin D. Ford, New Bedford, Mass., and Elmer D. McIntosh, Washington, D. C.

Claim.—1. A boot or shoe, provided with the eyes *c c* and eyelet-openings or eyes C D, substantially as specified.

2. In a shoe, the button-hook placed under the leather with its loop projecting up through the leather to form the eye *c*, substantially as specified.

117,877.—Machine for Finishing Leather.—John P. Friend, Peabody, Mass.

Claim.—1. A machine for finishing leather, in which the bed-plate is supported by the levers C E and *g*, in the manner and for the purpose specified and shown.

2. A machine for finishing leather, in which the bed-plate is supported by levers, in combination with the spring *g*, by which the elasticity of the bed is adjusted, substantially as set forth.

3. The device for carrying the tool in a machine for finishing the leather, the same consisting of the foot O, which is attached to the pendulum by means of the links N and P, substantially as described and shown.

117,878.—WAGON-HUB.—John Henry Gaines, Durhamville, Tenn.

Claim.—1. The construction of the center piece or ring, having in its opposite faces double dovetailed recesses and screw-threaded projections, substantially as and for the purpose set forth.

2. The combination of the double dovetailed center piece or ring, and the spokes when made to fit the recesses in said center piece or ring, substantially as and for the purpose set forth.

3. The combination and arrangement of the center piece or ring A, having the dovetailed recesses in its opposite sides, the collars or flanges B B′, the pipe-box C, and nut C′, substantially as and for the purpose set forth.

117,879. — MILL FOR GRINDING COFFEE, SPICES, &c.—Joel Garfield, Ayer, Mass.

Claim.—1. In combination with the rotary and stationary grinding-surfaces, the spring o located between the end of the grinding-cone and the end *q* of the bearing i, and also operating to keep the grinding-surfaces apart, all as shown and described.

2. In combination with the shaft and the rotary and stationary grinding-surfaces or plates, the adjustable bearing k having holes therein larger than their screws r, and having its hole through which the shaft passes also made larger than the shaft, as and for the purpose described.

117,880. — SEALING AND UNSEALING DIP-PIPES IN HYDRAULIC MAINS.—William Earl Grenelle, New York, N. Y.

Claim.—1. The within-described arrangement and method of sealing the dip-pipe C upon the opening of the retort-lid H, thereby releasing the arm F and the weight E, depressing the lever G, causing the cut D to be elevated, in the manner and for the purpose herein set forth.

2. The combination of the arm A, weighted lever B, with the cup or saucer attachment D D, in the manner and for the purpose herein described.

3. The combination of the spindle J, stuffing-box K, cup D, with the lever G and arm F, in the manner and for the purpose herein described.

117,881.—LOCK-NUT. — Robert W. Hamilton, New York, N. Y., assignor to William L. Williams, same place.

Claim.—1. The screw-bolt, with a split end and tapering recess, combined with the nut and clamping-bolt, substantially as described.

2. A cylindrical nut, receiving the ends of the main and clamping-bolts, so that the nut is prevented from turning by screwing the clamping-bolt against the end of the main bolt, as set forth.

117,882.—BUCKLE.—George Havell, Newark, N. J.

Claim.—The center or tongue B, stamped or otherwise formed of one piece of metal, with a slot, *a*, and alternate semi-tubular depressions and projections *b d*, with the rod *c* and frame A, all arranged substantially as and for the purposes herein set forth.

117,883.—DEVICE TO PREVENT HOGS FROM ROOTING.—Daniel P. Heflebower, Champaign county, Ohio.

Claim.—The device for preventing hogs from rooting and raising gates, &c., consisting of a shank provided with a barbed and pointed head at each end, each head being bent forward to form an angle with the shank, and the lower head being slightly turned up at the point, substantially as specified.

117,884.—PRESERVING FRUITS AND VEGETABLES.—Francis C. Hooton, West Chester, Pa.

Claim.—The process of applying air-slaked or felled lime to all organic substances perishable in their nature, in combination with or without chloride of sodium, so as to absorb the oxygen of the surrounding atmosphere and the gases of decomposition, and thus arrest decay, substantially as described.

117,885.—DRAWER.—Irving A. Howe, Boston, Mass.

Claim.—The described improvement in drawers, consisting in forming them with the full unscarfed piece or gusset e inserted and located as shown and set forth, the point of the gusset being protected by the fly-pieces *f g* lapping thereon.

117,886. — KNITTING-MACHINE. — John M. Howe, Rochester, N. Y.

Claim.—1. The friction-clutch or dog d, applied and operating substantially as described, to adjust the V-cams of a knitting-machine by the reversal of the movement of the sliding frame in either direction, at any point in the stroke of the latter, for the purposes set forth.

2. The supporting-bars E E′ of the V-cams, hinged upon a common fixed center, in combination with the adjusting clamp-bar I, operating substantially in the manner set forth.

3. The V-cams D D′, provided with the supporting-bars E E′, when said bars are rigidly attached thereto and hinged to the sliding frame, substantially as and for the purposes set forth.

4. The frictional clutch-bar d, slotted plate F, and V-cams D D′, in combination with the carrier-plate *f*, arranged to operate substantially as set forth.

5. In combination with the frictional clutch-bar *d* and sliding cam-plate F, the locking latch *g* and stops h, substantially as and for the purposes set forth.

6. The wing-cams J J′, provided with graduations upon their faces, which are exposed through the openings in the lock-plates, substantially as and for the purposes set forth.

7. In combination, with the clamping-screw *o* and slot *p*, the wing-cam J provided with a slot, *n*, and the guiding pin *o* upon the lock-plate, arranged to operate conjointly, for the purposes set forth.

117,887. — STAVE-JOINTER. — Amyntus J. Howell and James Murphey, Spruce Hill, Pa.

Claim.—1. The table-carriage, pivoted on a longitudinal guide-rod, C, in connection with holding devices *a* N for supporting the respective edges of the tables at different distances from the saw, the whole arranged and co-operating substantially as represented and described, for the purpose set forth.

2. In the table-carriage of a stave-jointing machine of the form herein specified, head-blocks F and followers I, constructed with grooves *b* and knives *b′* for holding the ends of the staves, as represented and described.

3. The combination, with the followers I, of the handles J with the screw-stems *g* and nuts h, and the springs K L (either or both) for operating the same, as set forth.

117,888. — PRUNING-SHEARS. — Homer H. Ingalsbe, South Hartford, and Gustavus A. Prescott, Sandy Hill, N. Y.

Claim.—1. The lever E, constructed as set forth, in combination with the rod C, staff D, and jaws A B, all constructed and arranged to operate substantially as set forth.

2. The lever E, for operating the cutting jaw, when said lever is provided with two fulcrums and so constructed as to change fulcrums in the middle of the stroke, substantially as herein set forth.

117,889.—DIETETIC COMPOUND FROM MILK. Victor Appolinaris Jagielski, London, England.

Claim.—The manufacture of a dietetic remedy or artificial koumiss of the various modifications herein described from milk by the addition of a ferment, and other materials, according to the process, substantially as herein described.

117,890.—STILL FOR BEER, &c.—Charles B. Jarvis and James W. Goff, Cincinnati, Ohio.

Claim.—In a beer-heater or still, constructed substantially as described, the combination of the casing A, plates F, and openings *f* upon alternate ends of the plates for the upward passage of the steam and downward passage of the beer simultaneously, in the manner and for the purpose set forth.

117,891.—FIRE-EXTINGUISHER.—Samuel B. Johnson, Philadelphia, Pa.

Claim.—1. The mode of extinguishing fire by means of a vessel containing an extinguishing medium, to be thrown or projected into the fire, and by breaking to liberate said medium in order to act on the fire, substantially in the manner set forth.

2. A vessel to be thrown with the extinguishing medium into the fire, and operate substantially as and for the purpose described.

117,892. — PEACH-STONE EXTRACTOR.—Thomas E. Johnson, Indianapolis, Ind.

Claim.—1. The knife A having shank *a*, in combination with handle B, socket *b*, and set-screw *d*, either with or without the automatic and adjustable guard C, substantially as shown, and for the purpose set forth.

2. The construction and arrangement of the automatic and adjustable guard C, spring *e*, socket *b* with metallic band or ring *c* of handle B, shank *a*, and knife A, all as shown and described.

117,893. — SELF-ACTING JACK FOR SPINNING.—Patrick Keane, Cohoes, N. Y., assignor to himself and Samuel Bilbrough, same place.

Claim.—1. In a self-acting spinning-machine, the combination and arrangement of the shaft *i* with its pulleys *o q* and tripper *p*, the weight *r*, trip-catch *h*, and swiveled bearing *k*, constructed substantially as and for the purpose specified.

2. In combination with the bell-crank *l*, the shaft *i*, pulleys *o q*, weight *r*, trip-catch *h*, tripper *p*, and spring, as described, constructed, and arranged, substantially as and for the purpose specified.

117,894. — DOOR-HANGER.—Trumble Kent and James S. Barker, Waukegan, Ill.

Claim.—A door-hanger, consisting of the arm A and pintle B cast in one piece, and the pulley D thereon, with wrought-iron pin C in the end of said pintle, provided with washer E and nut F, all constructed and arranged as specified.

117,895, antedated August 2, 1871.—ROTARY MEASURING-FAUCET. — William H. Laubach, Philadelphia, Pa.

Claim.—1. The curved pistons C C, with their pallets D D, in combination with the inner cylinder B and outer or fixed cylinder A, constructed and operating substantially as described, and for the purposes set forth.

2. The curved pistons C C, in combination with the pallets D, their stops *d* and *e*, slide F, and cam G, constructed and operating substantially as described.

3. The combination of the curved pistons C C, pallets D D, slide F, and cam G with the inner cylinder B, outer cylinder A, inlet-port H, outlet-port I, and handle N, constructed substantially as described, and for the purpose intended.

117,896.—DRILLING-MACHINE.—John Lemman, Cincinnati, assignor to Hamilton Bates and Daniel L. Bates, Dayton, Ohio.

Claim.—In combination with the solid grooved spindle B *b′* and loose wheels M N, which gear into and are driven by the differential wheels T U, the adjustable feather L *a*, set-screw R *s*, and slotted collar P, the parts being constructed and arranged substantially in the manner and for the purpose set forth.

117,897.—RUBBER SHOE.—Johnson Letson, New Brunswick, N. J.

Claim.—1. A vulcanized India-rubber gore, made in imitation of corrugated goods.

2. As a new manufacture, shoes or gaiters, whether of India rubber or not, provided with gores made of vulcanized India rubber in imitation of corrugated goods, substantially as herein shown and set forth.

3. The method herein described of inserting gores in and uniting the same with the body of the shoe or gaiter by cementation and vulcanization, as herein set forth.

117,898. — CIDER-MILL. — Henry Lightner, Neff's Mills, Pa.

Claim.—In the cider-mill herein described, the arrangement of the toothed crushing-roller B, comb *a*, mashing-rollers C C, partitions *n n*, endless belt D, squeezing-rollers *s s* having spring bearings, when said parts are constructed and arranged substantially as specified.

117,899. — BURGLAR-PROOF SAFE. — Lewis Lillie, Newark, N. J.

Claim.—A safe, containing in its walls, near the exterior surface, a series of tubular spaces, which are independent of one another, and separately filled with explosives, substantially in the manner and for the purposes set forth.

117,900. — FIRE-EXTINGUISHER. — Samuel Morris Lillie, Elizabeth, N. J.

Claim.—1. The application of a stationary reservoir or reservoirs with or without compartments connected with the various rooms of a building, as and for the purpose specified.

2. The application of fusible-metal plugs, or of devices depending on the fusing of such a metal, for the release of the gas or of any device charged with explosives to any pipe or reservoir of mephitic gas, excepting safes, for the purpose specified.

3. The application of a holder of combustibles and of fuses and electricity, as and for the purposes specified.

117,901.—GATE.—Matthew E. Livingston, Manchester, Ill.

Claim.—1. A sliding gate, when operated by means of a roller, G, playing between standards *f* on the sliding gate and held in crank *g* of shaft H, which latter is operated by crank-arms A, all arranged to operate substantially as herein described.

2. The combination of the stationary and sliding parts D D′ of the gate, the latter provided with standards *f* and rollers *b d′* moving on ways *a e*, with the crank-shaft H *g h*, handles *i*, and posts A C C′ I, all arranged to operate substantially as herein described.

117,902. — CARRIAGE-WHEEL. — James H. Loughridge, Key West, Fla.

Claim.—A wagon-wheel, constructed as herein described, the spokes C of which are screwed into elongated screw-threaded sockets in the hub, and are constructed with tenons *c* for securing them to the solid continuous rim B, in the manner set forth.

117,903.—GOVERNOR FOR STEAM-ENGINES. John D. Lynde, Philadelphia, Pa.

Claim.—1. The balance-disk *g*, in combination

with the regulating-disks *e* and *f*, constructed and arranged substantially as herein set forth.

2. The arrangement of the valve M with the seats *a b c d*, constructed and operating substantially as herein set forth.

3. The volute spring B, in combination with the valve-rod C, when constructed and arranged substantially as herein set forth.

117,904.—DENTAL INSTRUMENT. — Charles H. Mack, Portland, Oreg.

Claim.—As a dental instrument, the combined socket and wrench with the opening or recess at the end of the shank to receive and hold a pin or screw, as described.

117,905. — DRYING-GLUE. — John J. Manning, Rockport, assignor to himself, William N. Manning, and F. Tarr, Jr., same place, and F. W. Homans, and Friend & Smith, Gloucester, Mass.

Claim.—A drying apparatus, consisting of the main air-tube *a*, supplied with air under pressure by any suitable blast apparatus, the horizontal tubes *b* extending from and opening out of said cylinder, and having air-outlet orifices *c* through which the air is impelled upon the material placed in pans under the tubes, all substantially as shown and described.

117,906. — BREECH-LOADING FIRE-ARM.—James M. Mason, Washington, D. C.

Claim.—1. The combination, with a solid breech-block having a thumb-piece by which it is swung backward and downward to uncover the rear end of a breech-loading fire-arm, and with a hammer and brace behind the same, of a solid fixed recoil-bearing, whereby, when the breech-block is swung up into place to close the breech, the same shall be securely locked and held in place, substantially as herein set forth.

2. The combination, with a breech-block swinging backward and downward, of a rocking-block, substantially as described, whereby the vertical movement of the breech-block is reduced to the minimum, as set forth.

3. A curved slot or pivot-bearing in a solid breech-block having a backward and downward motion to uncover the rear end of the barrel of a breech-loading fire-arm, in combination with the pivot passing through said slot, when said pivot and slot are so arranged with relation to each other that when the breech-block is closed there will be a small space between the pivot and lower end of the slot, whereby the shock will have a tendency to move the block bodily toward the rear instead of turning it upon its pivot, substantially as herein set forth.

4. A solid breech-block, having a thumb-piece by which it is swung backward and downward, and a hammer and brace behind the same, and provided with an elongated slot or pivot-bearing, whereby a reciprocating vertical, as well as backward and downward, movement may be imparted thereto in opening and closing the same, substantially as herein set forth.

5. The combination of a breech-block provided with a slot or elongated pivot-hole and a projecting or angular bearing with a spring, whereby the block is forced and held upward in position when closed, and forced and held backward when opened, as set forth.

6. A thumb-piece, extending from the top of a swinging breech-block to operate the same, and provided with a hole or opening to aim through, substantially as herein set forth.

7. The combination of a solid breech-block having a backward and downward movement to uncover the rear end of the barrel of a breech-loading fire-arm, a fixed recoil-bearing, and a hammer and locking-brace, arranged centrally behind the breech-block, substantially as herein set forth.

117,907.—GAUGE-COCK.—Patrick McGrath, Plattsburg, N. Y.

Claim.—1. The combination of a spring-lever with an independent steam-passage, as described.

2. The combination of the cylinder A, lever C, and spring *d*, as set forth.

3. The gauge-cock described, consisting of the cylinder A, valve B, with rod *b* and arm b^2, lever C, and spring *d*, constructed and arranged as described.

117,908.—SELF-CLOSING COCK.—James Metier Meharg, Montreal, Canada.

Claim.—A cock of the described construction, provided with a spindle moving vertically through the guide *h*, said spindle having a collar, *l*, bearing against the rubber tubing *n*, the slot *r* for the purpose of causing the spindle to be moved vertically by revolving the handle, and notch *s'* for holding the same down, when desired.

117,909.—RAILWAY-CAR COUPLING.—George H. Merriam, Portland, Me., assignor to himself and Cyrus S. Clark, same place.

Claim.—In combination with the arm D and the coupling-pin C, the draw-head, constructed as herein described, whereby the pin is allowed to swing back as it rises, substantially as and for the purpose set forth.

117,910.—CORN-PLANTER.—Charles T. Merry and Marlin A. Dunton, Norwalk, Ohio.

Claim.—In a corn-planter, the construction and arrangement of the slotted wheel D, cams E, bar F, spring *e*, lever S, openers K', cam *r'*, and markers L, substantially as specified.

117,911.—HARVESTER-REEL.—John Miller, Swan, Ind.

Claim.—1. The combination of the reel-post, the bracket attached thereto, the lifting-lever pivoted to the bracket, the connecting-link, and the reel-bearing, all these parts being constructed and operating substantially as set forth.

2. In combination with the above, the adjustable bar C with its friction-rollers and adjustable guide I, these parts being constructed and operating substantially as described.

117,912. — COMBINATION LOCK. — Samuel Miller, Gratis, Ohio.

Claim.—1. The gravitating toothed tumbler L, constructed with a long cog, *l*, in combination with the bolt G, substantially as set forth.

2. The toothed tumbler L, having an elongated cog, *l*, in combination with an adjustable weight, L', substantially as set forth.

3. In combination with the tumbler L and weight L', the feather l^2, on the stud l^1, and corresponding groove in the weight, substantially as and for the purpose set forth.

4. The combination of the bolt G, sliding bar I, cam E, and gravitating-tumbler L, substantially as set forth.

117,913. — POTATO-DIGGER. — Henry J. Moore, Topeka, Kan.

Claim.—1. The hinged or pivoted buckets I I, provided with curved rods or hooks *i i*, substantially as and for the purposes herein set forth.

2. In combination with the buckets I I and curved rods or hooks *i i*, the rods *h h* and endless chains *f f* passing around the grooved wheels or pulleys *d e* of unequal diameter, all substantially as and for the purposes herein set forth.

3. The arrangement of the main frame A supported upon the two wheels B B, the swinging frame D, scoop E, screen H, elevator *f* I, and adjustable wheels G G, all constructed substantially as and for the purposes herein set forth.

117,914.—BEE-HIVE.—Samuel Christopher Moore, Pattonsburg, Mo.

Claim.—The receptacles or chambers E E, and tubes *c c*, with their recessed valves c^1 c^1, constructed, arranged, and operating substantially as herein shown and described.

117,915.—CHAIR.—Jacob Morrison, Indianapolis, Ind., assignor to himself and Calvin A. Elliott, same place.

Claim.—1. The adjustable back of a chair, arranged to move in the arc of a circle through sockets in the seat thereof by means of pivotal arms C and springs D, substantially as shown and for the purpose set forth.

2. The construction and arrangement of the adjustable back B, rail *d*, seat A provided with metallic sockets *a*, arms C, and springs D, all substantially as shown and described.

117,916.—BUTTON OR STUD.—Charles A. Newton, Providence, R. I.

Claim.—The button or stud herein described, consisting of the head C provided with a nail-slot in the rim, and the spring H, slide F having the pear-shaped slot *f*, and of the back A provided with the grooved stem B, combined, arranged, and operated substantially as specified.

117,917. — HAY-RAKE. — George Notman, Deerfield, Ohio.

Claim.—The bearing-plate B' formed with the shank *d*, prong *f*, and opening *e*, in combination with the rake-tooth, constructed as described, and for the purpose set forth.

117,918.—STOPPER FOR LADLES.—Francis A. Ostrander, Troy, N. Y.

Claim.—1. The stopper A, in which is formed the orifice or hole *a* having one or more grooves, *b*, and one or more recesses, *c*, substantially as and for the purpose shown and described.

2. The manner of attaching the stopper A to the lifting-rod or bar B that by grouting the space in the orifice or hole *a* the stopper A is prevented from becoming detached therefrom while in use, substantially as herein set forth.

117,919.—LEVER-PRESS.—Josiah Outland, Barnesville, Ohio.

Claim.—1. The arrangement of the pivoted lever B, loops *a a*, ratchets C^1 C^2, and wedge D provided with head *b*, all substantially as shown and described, and for the purposes herein set forth.

2. The combination of the lever B, ratchets C^1 C^2, wedge D, windlasses G^1 G^2, ropes d^1 d^2, and weights H^1 H^2, all constructed and arranged substantially as and for the purposes herein set forth.

117,920.—STAVE-JOINTER.—Lemuel R. Palmer, Belfast, Me.

Claim.—1. The swinging guide-plate D, in combination with the carriage, when constructed and operating substantially as and for the purpose specified.

2. The carriage C provided with the clamping-handle *c*, and the laterally-adjustable platform *e*, substantially as and for the purpose set forth.

3. The combination of the lever L, swinging guide-plate D, and the carriage and saw, substantially as and for the purpose described.

117,921. — MACHINE FOR SCOURING AND STRETCHING LEATHER.—James C. Parmerlee, Bean Blossom, Ind.

Claim.—1. In a machine for scouring and stretching hides, a revolving cylinder, B, provided with a series of projections or pressure-scrapers, *a a*, arranged diagonally from the center to the ends of the cylinder, in combination with the apron C, substantially as and for the purpose set forth.

2. In a machine for scouring and stretching hides, a series of brushes, *b b*, arranged diagonally from the center to the ends of the surface of the cylinder, in combination with a series of similarly-arranged projections or pressure-scrapers, *a a*, substantially as and for the purpose set forth.

3. In a machine for scouring and stretching hides, the inclined apron C, formed with elastic legs *f* arranged below the rotary scouring-cylinder B, as and for the purpose set forth.

4. In a machine for scouring and stretching hides, the inclined elastic apron C, in combination with the foot-lever A, spring-bars f^3 f^3, bars *d d*, and roller D, substantially as and for the purpose specified.

5. In a machine for scouring and stretching hides, the water-tank F arranged above the elastic and adjustable apron C, in combination with the cylinder E, brushes *b b*, and pressure-scrapers *a a*, substantially as described.

6. In a machine for scouring and stretching hides, the inclined table G, in combination with the inclined elastic legs *f* of the apron C, roller D, and tank F, substantially as described.

7. In a machine for scouring and stretching hides, the rotary cylinder B, brushes *b b*, and projections or pressure-scrapers *a a*, in combination with the inclined apron C, foot-lever A, roller D, and adjusting-bars *d d*, and the driving mechanism, substantially as set forth.

117,922.—ANIMAL POWER.—William Patterson, Oneonta, N. Y.

Claim.—1. The pivoted spindle-box H, provided with lugs *a a* to support it, and allow the inclination of the spindle to be easily changed.

2. The cross-support G, provided with holes or sockets to hold the foot of the spindle C in position.

3. The spindle C, provided with projecting hooks *c c* at its upper end to secure it to the plate E, the whole arranged and operating substantially as described, as and for the purpose herein set forth.

117,923.—TRACE-BUCKLE.—Daniel K. Peacock, Little Valley, N. Y., assignor to himself and Joseph F. Thompson, same place.

Claim.—A buckle, composed of the frame B *b* and the hame-tug lever C *c* and tongue D, the said tongue projecting rigidly from the fulcrum-bar *c* of the said lever, and the parts being constructed and arranged to operate together, as herein set forth.

117,924.—VEGETABLE GRATER.—Charles R. Peirce, Philadelphia, Pa., assignor to George J. Naylor, same place.

Claim.—As an article of manufacture, the vegetable grater hereinbefore set forth and described.

117,925.—GAS-PUMP.—William H. Pollard, Seneca Falls, N. Y., assignor to The Goulds Manufacturing Company, same place.

Claim.—1. The chamber E, provided with the longitudinal partition *a*, forming distinct and separate passages *b b*, which have side ports *c c* for the attachment of the induction and eduction-pipes, and ports *d d* at top and bottom opening outward into the valve-casings, as herein described.

2. The duplex valve-casings F, with the ports d^1 d^1 d^2 opening respectively to the passages in the side chamber and to the cylinder, and provided with the seats *g g* so arranged as to admit the gas or other fluid over one valve and under the other, as herein described.

3. The combination and arrangement, with the cylinder B, of the outside chamber E, provided with the seats *f f* of the valve-casings F F bolted thereon, in the manner and for the purpose specified.

117,926. — FLAX-PULLER. — Benjamin M. Reeves, Franklin, Pa.

Claim.—The combination of the lever P', loop Q, roller O, and frame A, constructed and arranged substantially as and for the purpose specified.

117,927.—STUFFING-BOX.—Phillip W. Richards, Boston Highlands, Mass.

Claim.—1. The series of sectional rings E E E and D D D, each constructed with a rib and groove, as described, in combination with the bearing-blocks G G and their springs *f f*, all constructed substantially as and for the purpose set forth.

2. The disk H and bearing-spring I in combination with the series of sectional rings D D D and E E E, and the blocks G G G, with their springs *f f*, all arranged and operating substantially as set forth.

117,928. — Stuffing-Box and Stuffing-Box Packing. — Phillip W. Richards, Boston Highlands, Mass.

Claim.—A stuffing-box, constructed with ring series D and E in section, in combination with springs *d*, adapted to hold said rings D and E against and about the rod, moving in the core or opening of the stuffing-box, substantially as and for the purpose specified.

117,929.—Steering Apparatus.—Nathan Richardson, Gloucester, Mass.

Claim.—A steering apparatus in which the tiller-arms *f g* on each side of the rudder-head are connected to the screw-shafts and operated by nuts *h*, each nut having a swiveled runner, *k*, both over it and under it, (said runners working in grooves in the tiller-arms,) and having also a lateral sleeve, *n*, sliding in the rod *m*, substantially as shown and described.

117,930.—Medical Compound for Coughs, Colds, &c.—John D. Richmond, Jr., New Liberty, Ky.

Claim.—The medical compound, prepared of the ingredients, in the proportions, and for the purposes set forth.

117,931. — Knitting-Machine, &c. — Sylvester H. Roper, Roxbury, Mass.

Claim.—1. The sinker-cam, formed substantially as shown and described, and operating, when in action, to depress the sinkers previous to the outward movement of the needles acting in conjunction with them, as set forth.

2. As a means for bringing into action reserve needles, an automatically-traveling and rocking-bar.

3. A pattern-wheel, constructed substantially as shown and described, to control and vary the widening mechanism.

4. The combination of a pattern-wheel with the pivoted cam-piece 60 and the described shifting-mechanism, for automatically stopping the machine.

5. The novel seam at the widened parts of the fabric, hereinabove described.

6. The needle-bed, formed with grooves, enlarged laterally at their forward ends, as described, so as to leave the necks between such grooves wider above than at such enlarged part, for the purpose set forth.

117,932. — Die for Making Covers of Sheet-Metal Boxes.—Charles E. Russ, Boston, Mass.

Claim.—The combination of the die A, having slots *a* in its sides and at right angles to its recess B, with the die or follower D, for the purpose of forming up sheet-metal covers for boxes, as described.

117,933.—Railway Rail.—Rufus S. Sanborn, Rockford, Ill.

Claim.—1. A railroad rail, constructed of steel, tubular in form, and having the configuration described and represented, for the purpose of securing a limited and definite amount of elasticity sufficient to relieve the shocks to which the rails and rolling-stock of railroads are usually subjected, all as set forth.

2. The elastic cylindrical joint or connecting-tube J, constructed as described, for the purpose specified.

117,934.—Fastening for Spinning Rings. Jacob H. Sawyer, Lowell, Mass.

Claim.—The retainer, flanged or constructed with the ring-race socket, as described, and split so as to be sprung upon or over the lower race of the ring, all being substantially as explained.

117,935. — Satchel, &c. — Ferdinand C. Schmidt, Newark, N. J.

Claim.—1. The staples E, arranged upon a traveling-bag lengthwise of the frame, in combination with handles or handle-caps arranged loosely on said staples, substantially as described.

2. The staples E, arranged horizontally on both jaws of the frame lengthwise thereof, with the caps C D hung loosely upon said staples, as herein described, for the purpose specified.

117,936. — Saw-Mill Carriage. — George Selden, Erie, Pa.

Claim.—1. In combination with the head-blocks C C, the T-girt H, pockets J, and rack I, substantially as set forth.

2. In combination with the head-block C, rack and stringer H, and set-shaft L, the dummies F, substantially as set forth.

117,937.—Thill-Coupling.—Simon Slack, Lebanon Centre, N. H.

Claim.—1. The head C of the thill-iron D, provided with a segmental slot, *e*, in combination with the socket A and pin *d* of the clip A, substantially as described.

2. The head C of the thill-iron D, provided with the radial slot *a* and segmental slot *e*, in combination with the pins *b d* of the socket A of the clip B, substantially as described.

117,938. — Flour-Bolt. — John Crawford Smith, Zanesfield, Ohio, assignor to himself, Samuel Bradford Smith, and Nathaniel Stuart Crew, same place.

Claim.—1. The arrangement of the spring-hammers F with the lugs or arms B formed on or applied to the ribs, as herein described, to deliver their strokes longitudinally upon said lugs or arms.

2. The combination of the twisted-wire cords I, triggers J, and spring-hammers F, substantially as and for the purposes set forth.

3. The arrangement of the bolting-cloth D, conveyer-box M M^1 M^2 M^3 Q Q', coat-board P, and return-trough N, constructed and operating substantially as and for the purposes set forth.

117,939.—Packing for Doors and Windows.—Samuel Stroock, New York, N. Y.

Claim.—A felt-packing for doors and windows, constructed and applied substantially as described.

117,940. — Washing-Machine.—Alfred T. Sullivan, San José, Cal.

Claim.—1. The corrugated convex wash-board B, connected with the cranks *i* by means of the loosely-attached connecting-rods *h* and *n*, for the purpose of giving free play to the board as above specified, in combination with the endless slat-band D, substantially as described.

2. The shaft *j* provided with the operating-crank *k*, said crank having a supplementary crank, *l*, which is connected with the crank *n* of the drum C by the rod or pitman in the manner and for the purpose specified, and by which an oscillating motion is produced.

117,941. — Railroad-Car Ventilator.—Orrin W. Swift, New Haven, Conn.

Claim.—As an article of manufacture, the herein-described device for ventilator, consisting of the two parts A B pivoted together at *a*, as specified, one part provided with the notch *f* and the other with the notch *n* so as to be extended and set in the car-window, as herein set forth.

117,942.—Medicinal Beverage.—Asher S. Taylor, San Francisco, Cal.

Claim.—A medicinal beverage, compounded substantially as herein described.

117,943. — Mop-Head. — Luke W. Taylor, Upper Falls Post-Office, Vt.

Claim.—1. The binder D, formed at one end into the spiral *f* embracing the handle C, in combination with the collar *b* having lugs *e e* and ears *d d*, substantially as set forth, for the purposes specified.

2. The combination of the collar *b*, formed with lugs *e e* and ears *d d*, with the binder D having a spiral, *f*, when arranged to operate in connection with the cross-head and handle, substantially as and for the purpose set forth.

117,944.—Saw.—Patrick Thompson, Pittsburg, Pa.

Claim.—The saw-tooth B, provided with tang C for securing it in the blade A, constructed as herein shown and described.

117,945. — Ice-Creeper. — Edmund Malcolm Turner, Pittsburg, Pa.

Claim.—The metal plate C, constructed with a raised edge, C^2, and flanges C^1 or their equivalents upon the under side, adapted to be placed in a cavity in a detachable or permanent rubber-heel of a boot, shoe, or overshoe, substantially in the manner and for the purpose set forth.

117,946.—Composition for Paving and Roofing. — Archibald B. Vandemark, Jersey City, N. J.

Claim.—1. Combining asphaltum, paraffine oil, and pulverized calcareous rock in the proportions and manner substantially as described.

2. The paving and roofing composition, substantially as described.

117,947.—Tuyere.—Peter L. Weimer, Lebanon, Pa.

Claim.—1. The split and grooved cast-iron tuyere-shell A, substantially as described.

2. The combination, with such shell, of the coiled pipe B, substantially as set forth.

117,948. — Hoisting Apparatus.—Jerome Wheelock, Worcester, Mass.

Claim.—1. In combination with the cross-beam of a cable-hoisting apparatus, the catch-bolts E and E' connected together at their inner ends, the hoisting-hook F, and the operating-springs, as and for the purposes specified.

2. The catch-bolts E and E' and the elastic cushions H, in combination with the cross-beam of a cable-hoisting apparatus, substantially as and for the purposes specified.

3. The adjustable deflecting-springs, in combination with the catch-bolts of a hoisting apparatus, as and for the purposes specified.

117,949. — Process of Manufacturing Cast-Steel Tools, &c. — David Wihl, Brooklyn, N. Y., assignor of one-fourth his right to Henry Wehle, New York city.

Claim.—1. The process of converting wrought-iron forged in wares or articles retaining the original form of the articles, by first purifying the iron of its foreign deleterious substances and then impregnating the same with carbon, silicon, and nitrogen.

2. The compound of carburet of iron, black ivory, charcoal, yellow cyanide of potassium, saltpeter, common salt, and cast-iron filings, or ingredients containing substantially the same elements in substantially the same proportions as herein described, used for converting wrought-iron into steel, substantially as herein described, and for the purpose mentioned.

117,950. — Process of Manufacturing Cast-Steel Tools, &c. — David Wihl, Brooklyn, N. Y., assignor of one-fourth his right to Henry Wehle, New York city.

Claim.—1. The process of converting white (malleable) iron cast in wares or articles, retaining the original form of the articles, by first purifying the iron of its foreign deleterious substances and then impregnating the same with carbon, silicon, and nitrogen, substantially as herein described, and for the purpose mentioned.

2. The compound of wrought-iron filings, oxide of iron, peroxide of iron, silicon, magnesia, and common salt, or ingredients containing substantially the same elements in substantially the proportion as herein described, used for converting white cast-iron into steel, substantially as herein described, and for the purpose mentioned.

117,951.—Wood-Splitting Machine.—William L. Williams, New York, N. Y.

Claim.—The knives *e f*, extending across the feeding-trough at an inclination to each other, and made with the bevel of the cutting-edges toward the delivery end of the feeding-trough, in combination with the feeding-trough *a b* and rollers *c d*, as and for the purposes set forth.

117,952.—Machine for Splitting Kindling-Wood.—William L. Williams, New York, N. Y.

Claim.—1. The shield *s*, in combination with the feeding-rollers *t t'* and trough *a* of the wood-splitting machine, as and for the purposes set forth.

2. The pawl 18 upon the yielding slide 10, in combination with the feeding-rollers *t t'*, knives *e e*, and feeding-trough *a*, as and for the purposes set forth.

3. The knives *e e*, sharpened at their vertical edges as well as their under edges, and introduced in a wood-splitting machine, substantially as and for the purposes set forth.

4. The V-shaped knives with the cutting-edges nearly on a line with the inner surfaces of such knives, for the purposes set forth.

117,953.—Die for Manufacturing Followers for Draw-Bars of Railroad Couplings.—John T. Wilson, Pittsburg, Pa.

Claim.—The drop and counter-die, substantially such as described for punching out a follower or spring-plate for the draw-bars of railroad couplings, of the shape and form herein described and represented, and stamped out at one operation of said drop and counter-die, as herein set forth.

117,954.—Die for Manufacturing Draw-Head Face-Plates for Railroad Couplings.—John T. Wilson, Pittsburg, Pa.

Claim.—The drop and counter-die, substantially as herein described, for cutting out, punching, and bending draw-head face-plate for railroad-car couplings, as and for the purposes described and represented.

117,955. — Heel-Burnishing Machine.—Richard C. Lambert, Quincy, Mass.

Claim.—1. In combination with a reciprocating boot or shoe-holding jack, a burnishing-tool attached to a hand-operated lever pivoted by a universal joint, substantially as described.

2. The heel-plate *c* against which the heel-tread or face is clamped, such plate projecting beyond the tread and the burnishing-tool being made at its inner corner to fit into the angle formed between the heel and plate to polish and condense the heel-edge up to and against the plate, substantially as described.

117,956, antedated August 1, 1871.—Barrel-Pitching Machine. — Arthur De Witzleben, Washington, D. C.

Claim.—1. The combination and arrangement of the casing A, pipes *f* and *h*, and lid F, with flange G, substantially as shown and described.

2. In a pitching device, an adjustable grate, constructed and arranged substantially in the manner shown and described.

3. The combination and arrangement of the casing A, pipes *f* and h, and grating M N, substantially in the manner shown and described.

REISSUES.

4,501.—Fire-Plate for Stoves.—Etienne Boileau, St. Louis, Mo.—Patent No. 92,253, dated July 6, 1869.

Claim.—1. A fire-plate, consisting of triangular bars B joined together at their upper and lower ends and separated by narrow slots I, all substantially as set forth.

2. In combination with the V-shaped slots I, the opening *c* at the upper part of the fire-plate, as and for the purpose set forth.

4,502.—Self-Regulating Journal-Box.—James Duff, Peoria, Ill., assignor to himself and E. B. Pierce, same place.—Patent No. 90,937, dated June 8, 1869.

Claim.—1. A journal-box, combined with an oil-box and a wick, so that the latter lies in a groove at the side of the journal-box, substantially as described.

2. The journal-box E, provided with the channel *b*, orifices *n*, projections *q*, ribs *m* and *k*, and combined with the oil-box B and wick *a*, as specified.

4,503.—Division A.—Clothes-Frame.—John E. Earle, New Haven, Conn., assignor, by mesne assignments, to Peter R. Carll, same place.—Patent No. 36,994, dated November 25, 1862.

Claim.—1. A clothes-frame or bars, in which the bars are arranged one above another upon a vertical rod or pintle, and so as to swing freely therein, the said pintle supported in a bracket, and the said bracket constructed with a slot or slots to set over a headed device to secure the said bracket in position, substantially as specified.

2. The sockets F, more or less in number, arranged upon a vertical rod or pintle supported in a bracket, when the said sockets are constructed substantially as described, for the insertion and support of the bars.

4,504.—Division B.—Clothes-Frame.—John E. Earle, New Haven, Conn., assignor, by mesne assignments, to Peter R. Carll, same place.—Patent No. 36,994, dated November 25, 1862.

Claim.—A clothes-frame or bar, consisting of two or more bars arranged upon a vertical rod or pintle supported in a bracket, when the connection of the said bar to the pintle is made in the manner substantially as described, so that when the said bars are parallel to each other they are not in the same vertical plane.

4,505.—Clothes-Rack.—Vilas M. Heath, Morristown, Vt.—Patent No. 94,598, dated September 7, 1869.

Claim.—1. In a clothes-rack, the series of folding extension arms, each pivoted to and supported by the preceding arm, the outer frame being supported by braces *a*, substantially as specified.

2. In a clothes-rack, the slotted suspension brackets A, in combination with the series of independent folding extension arms and braces *a*, constructed and arranged substantially as specified.

3. The combination of the slotted supports A, bars C and H, arms D, G, and K, and stops *a*, substantially as specified.

4,506.—Iron Spoon.—Garry I. Mix, Yalesville, Conn.—Patent No. 18,513, dated October 27, 1857.

Claim.—A metal spoon, having the rivet which unites the handle and bowl made or formed of the same piece of metal with and forming part of the handle or bowl, substantially as herein described.

4,507.—Refining and Tempering Iron and Steel.—Alexander H. Siegfried, South Bend, Ind., assignor to himself and George B. Garman.—Patent No. 113,583, dated April 11, 1871.

Claim.—1. The mode of purifying steel in the process of forging by applying in their powdered state sulphate of copper and sal-soda, substantially in the manner set forth.

2. The use of a powder applied during the process of forging steel, compounded of substantially the ingredients set forth, or their equivalents.

3. A bath for tempering steel, compounded of the ingredients substantially as set forth, or their equivalents.

4. The process of purifying and tempering steel by the use of the powder and bath, respectively, compounded substantially as set forth.

4,508.—Process of Extracting Fatty Substances.—Charles F. A. Simonin, Philadelphia, Pa., and Edward W. Coffin, Glendale, N. J., assignors, by mesne assignments, to William Adamson, Philadelphia, Pa.—Patent No. 102,166, dated April 19, 1870; reissue No. 4,067, dated July 12, 1870.

Claim.—1. The extraction, substantially as herein set forth, of fatty and oily matter by the application of hydrocarbon vapors, in a closed vessel.

2. Simultaneously cleansing and extracting oily and fatty matters by the application of hydrocarbon vapors, generated in the same vessel which contains the wool or other material to be operated on.

3. Extracting oily and fatty matters by means of hydrocarbon vapors, which are condensed, revaporized, and roused, substantially in the manner described.

4,509.—Division A.—Machine for Making Loom-Harness.—Joseph Sladdin, Lawrence, Mass.—Patent No. 80,774, dated August 4, 1868.

Claim.—1. The stationary needle E, constructed with a groove, Q, along its upper face, and with two eyes, *e*, leading outward from said groove, one on each side, substantially as described, for the purpose specified.

2. The twister W, for seizing one of the yarns employed and carrying it around and depositing it on a holder or former in the form of a heddle-eye, substantially as described, for the purpose specified.

3. The pusher L^2, constructed, arranged, and operating in connection with the heddle-eye former, substantially as and for the purpose described.

4. The combination of the needle R, twister W, former G^3, and pusher L^2, arranged with regard to each other, and operating substantially as described, and for the purpose set forth.

5. The carriers P^2 and fingers C^3, combined, arranged, connected, and operating together as described, for the purpose described.

6. The fork-shaped lever *g*, provided with a link-connection, c^4, arranged to act on the lever *g*, substantially as and for the purpose described.

7. The presser H^3, for holding the needle R, in combination with the forked-shaped lever *g*, substantially as described.

8. The rods A^6 A^7, combined and arranged to rise and fall, substantially as described, for the purpose specified.

4,510.—Division B.—Machine for Making Loom-Harness.—Joseph Sladdin, Lawrence, Mass.—Patent No. 80,774, dated August 4, 1868.

Claim.—1. The combination, with the twister W, of the means substantially as described for operating the same, as and for the purpose specified.

2. The combination of the yarn-holders G^3 with the yarn-carriers P^2 and barbed needles M^2, substantially as and for the purposes described.

3. The combination of the lapper-cylinders K^2, having guide-eyes, as described, with the yarn-holders G^3 and needles M^2, substantially as and for the purpose specified.

4. The combination, with the needle-guide and support S^2, of the presser-wheels U^2, when arranged and operating as and for the purpose described.

5. The combination, with the devices for forming heddle-eyes, substantially as described, of the devices for knitting the heddle-yarns to the rig-bands, substantially as and for the purpose described.

4,511.—Grate-Bar.—John R. Smith, Salem, Mass.—Patent No. 70,638, dated November 5, 1867.

Claim.—1. A grate, constructed of the double-curved ribs A, substantially as and for the purpose specified.

2. The double-curved ribs A, in combination with the flanges B B and connections *a*, substantially as and for the purposes set forth.

3. The combination, with the double-curved ribs A, of one or more projections, *b*, flanges B B, and connections *a*, as and for the purposes set forth.

4. The combination, with the side of the bar, of the peculiarly-constructed filling-piece, composed of the parts lettered B' B', C D, and E, for the purpose stated.

DESIGNS.

5,164.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,165.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,166.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,167.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,168.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,169.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,170.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,171.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,172.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,173.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,174.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,175.—Carpet-Pattern.—Albert Cowell, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

5,176.—Molding.—Joseph H. Ferreira, Newark, N. J.

Claim.—The design for moldings, as shown.

5,177.—Stair-Rod.—William B. Gould, New York, N. Y.

Claim.—The design for a four-sided twisted stair-rod, as shown.

5,178.—Stair-Rod.—William B. Gould, New York, N. Y.

Claim.—The design for a six-sided twisted stair-rod, as shown.

5,179.—Oil-Cloth.—Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co., same place.

Claim.—The design for an oil-cloth, as shown.

5,180.—OIL-CLOTH. — Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co., same place.

Claim.—The design for an oil-cloth, as shown.

5,181.—OIL-CLOTH. — Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co., same place.

Claim.—The design for an oil-cloth, as shown.

5,182. — OIL-CLOTH.—Henry Kagy, Philadelphia, Pa., assignor to Thomas Potter, Son & Co., same place.

Claim.—The design for an oil-cloth, as shown.

5,183.—SLATE-PENCIL SHARPENER.—Charles Kennedy, Philadelphia, Pa.

Claim.—The design for the particular shape of the pencil-sharpener, as shown.

5,184. — CARPET-PATTERN.—William Kerr, Philadelphia, Pa., assignor to John Gay, same place.

Claim.—The design for a carpet, as shown.

5,185. — DRAWER-PULL. — Joseph Kintz, West Meriden, Conn., assignor to himself and P. J. Clark, same place.

Claim.—1. The design for the base-piece to which the drop-handle is connected, substantially as shown.

2. The design for the drop-handle, substantially as shown.

5,186.—FILLING-IN TILE.—Balthasar Kreischer, New York, N. Y.

Claim.—The design for a filling-in tile, as herein shown and described.

5,187.—CARPET-PATTERN.—Charles S. Lilley, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,188.—CARPET.—John Neil, Clinton, Mass., assignor to "Bigelow Carpet Company," same place.

Claim.—The design for a carpet, as shown.

5,189.—CARPET.—John Neil, Clinton, Mass., assignor to "Bigelow Carpet Company," same place.

Claim.—The design for a carpet, as shown.

5,190. — CAKE-DISH. — William Parkin, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—The design, as above explained and represented.

5,191.—ORNAMENT ON HARNESS-SADDLES.—Louis Rommeiks, Newark, N. J.

Claim.—The design E F G, as shown and described, for an ornament on harness-saddles.

5,192.—DRAWER-PULL.—Joseph B. Sargent, New Haven, Conn.

Claim.—The design for a drawer-pull, as herein described and shown.

5,193.—BASE OF CARRIAGE-BODIES.—Rufus M. Stivers, New York, N. Y.

Claim.—The ornamental design for the base of a carriage-body, as shown and described.

5,194.—DENTIST'S UPPER-IMPRESSION TRAY. Eli T. Starr, Philadelphia, Pa., assignor to Samuel S. White, same place.

Claim.—The design for a dentist's upper-impression tray, as shown.

5,195. — CALL-BELL. — Horace C. Wilcox, West Meriden, Conn., assignor to The Meriden Britannia Company, same place.

Claim.—The design for call-bell, as shown in the accompanying photographic illustration, and as herein described.

5,196. — TEA-BELL. — Horace C. Wilcox, West Meriden, Conn., assignor to The Meriden Britannia Company, same place.

Claim.—The design for tea-bell, as shown in the accompanying photographic illustration, and as herein described.

TRADE-MARKS.

416.—MEDICINE.—Perry Davis & Son, Providence, R. I.

417.—MEDICINE.—J. N. Harris & Co., Cincinnati, Ohio.

418. — COTTON SHIRTING. — B. B. & R. Knight, Providence, R. I.

419.—JEWELRY AND WATCHES. — Silvius Landsberg, New York, N. Y.

420.—WOOLEN FABRICS. — San Francisco Pioneer Woolen Factory, San Francisco, Cal.

421.—MEDICINE.—Tilden & Co., New Lebanon, N. Y.

EXTENSIONS.

ISAAC HAYDEN, of Boston, Mass.—Letters Patent No. 17,929, dated August 4, 1857.

"Improvement in Bobbins for Roving and Slubbing."

Claim.—Making that portion of the barrel of the bobbin which receives and takes up the second layer of roving larger than that part of the barrel which receives and takes up the first layer, substantially as described, to compensate for the thickness of the said first layer and make the draft on the roving or slubbing uniform.

ALFRED MONNIER, of Philadelphia, Pa.—Letters Patent No. 17,976, dated August 11, 1857; reissue No. 502, dated October 6, 1857; reissue No. 603, dated September 21, 1858.

"Improvement in Sulphuric Acid."

Claim.—The process of treating native metallic sulphurets or arsenio-sulphurets in connection with the substances above described, in order to expel all or part of the sulphur and arsenic for the purpose of obtaining therefrom sulphuric acid, and the metals as sulphates or oxides.

ISSUE OF AUGUST 15.

PATENTS.

117,957.—FISHING-NET.—Levi H. Alexander, Gloucester, Mass.

Claim.—1. An improved bottom seine, as constructed in manner, and provided with pursing lines, as hereinbefore described, and as represented in the accompanying drawing.

2. As a new or improved manufacture, and my invention, a fish-seine as made with netted sides and a bottom, and as closed at one end and open at the other, and having the open end provided with pursing-lines or devices, and the upper edge of the seine with floats, all being substantially as described.

117,958, antedated August 3, 1871.—METHOD OF ATTACHING WHEELS TO AXLES.—Francis Alger, Boston, Mass.

Claim.—The combination of the axle A, the tube B, disk B', disk A', and D D', or their mechanical equivalents, substantially as described and for the purpose set forth.

117,959.—BROOM.—Edward Americus Anderson, Danville, Tex.

Claim.—The combination of the conical or oval-tapered sheet-metal ferrules A B and the correspondingly-shaped handles C D in a broom, substantially as specified.

117,960.—PIPE-COUPLING.—Joseph F. Andrews, Nashua, N. H.

Claim.—The groove C, the tongue F, the recesses D and G, and the orifice E, in forming a joint in pipes, substantially as shown and described.

117,961.—CULTIVATOR.—William J. Arrington, Louisville, Ga.

Claim.—The circular perforated plates E and F, the two sets of pivoted perforated bars H, I, J, and K, the side beams B C, and plows, all constructed and arranged in the manner shown and described, whereby said side beams may be adjusted simultaneously or independently of each other without changing the relation of parallelism between the plows and the central or fixed beam A, as specified.

117,962.—BALING-PRESS. — William J. Arrington, Louisville, Ga.

Claim.—1. The combination of the boxes B' E, doors *l o*, corner-irons *j*, and offsets *k*, as specified.

2. The combination of the hinged nut *d*, arms *e e'*, cross-bars *f f'*, frame B, lugs *g*, bolt *h*, screw *c*, and follower D, as described.

117,963. — FENCE-POST. — Charles Ayers, Farmington Centre, Wis.

Claim.—A cast-metal fence-post, spear-shaped at the lower end, and provided with the flange *a* and rib *c*, as set forth.

117,964.—SLATE.—William F. Baade, Buffalo, N. Y.

Claim.—The combination of the slate B with the rule C, arranged within grooves, substantially as and for the purposes described.

117,965.—EPERGNES FOR FRUITS AND FLOWERS. — Samuel S. Barrie, Green Point, N. Y.

Claim.—As an article of manufacture, an epergne, consisting of hollow stands A B, the metal ferrule F, bowl D having boss E, bouquet-holder G, and screw-bolt C, all detachably applied together, as and for the purpose specified.

117,966.—FRUIT-GATHERER.—James S. Barry and Alfred M. Barry, Sheridan township, Mich.

Claim.—The arrangement and combination, with each other and with the handles A A' and fruit-receiving bag C, of the bag-bows B B', rigid clamping-bow D, and spring clamping-bow D', substantially in the manner and for the purpose set forth.

117,967.—PAPER WRAPPER FOR NEEDLES.—Mary Emma Baylis, Redditch, England, assignor to Henry Baylis, New York city.

Claim.—The improvements in needle-cases or wrappers hereinbefore described and illustrated in the accompanying drawing—that is to say, making the needle-case or wrapper of a flat tube of paper or other flexible material, folded at its middle so as to form a double wrapper, in one or both of the flaps or sides of which double wrapper the needles are introduced, the inner side of the flat tube being cut away at its middle and at its ends, so as to exhibit both the heads and points of the needles, substantially as described and illustrated.

117,968.—MACHINERY AND BUILDING FOR MANUFACTURE OF IRON AND STEEL.—Henry Bessemer, London, England.

Claim.—1. Placing two or more converting-vessels with their respective axes in a line, when used in combination with melting-furnaces to which the mouths of the converters approach when turned down to receive the molten iron.

2. Raising and lowering the casting-ladle vertically in front of the converting-vessel by the direct action of a hydraulic plunger, or by screw or rack, as described.

3. Employing, in combination with such raising-and-lowering apparatus, a turn-table mounted on a vertical axis, for bringing the molds in succession under the casting-ladle, as herein described.

4. The movement of converting-vessels on their axes by means of a worm and worm-wheel and bevel-gearing, as herein described.

5. The employment of a ladle or receiver for weighing molten cast-iron, so placed as to receive a charge of metal from two or more melting-furnaces, and provided with a movable gutter for the conveyance of the metal therefrom into two or more converting-vessels.

6. The mode herein described of receiving in a truck on rails and conveying away the waste fuel and slags or other matters from the converting-vessels.

7. The general arrangement and grouping together of the several implements or apparatus employed in the manufacture of Bessemer steel, as shown in the drawing hereunto annexed.

117,969, antedated July 31, 1871. — MOSQUITO-FAN.—John M. Beverley, Chicago, Ill.

Claim.—The combination of the pallet B, shaft C, supplemental lever D, pitman E, arm F, rock-shaft G, pendulum-rod H, fan-shaft J, frame A, arm M, and standard N, the whole arranged to operate together, substantially in the manner and for the purpose described.

117,970.—GANG-PLOW. — John Blackwood, Madison township, Ohio.

Claim.—1. The reversible clevis-blocks J, in combination with the axle B, plow-beams G, and clevis or straps K, substantially as herein shown and described, and for the purpose set forth.

2. The arrangement of the wheel [illegible] double crank-axle B, lever C, catch-bar *c'*, [illegible]d frame D, tongue E, adjustable slotted gau[illegible]-plate F, plows G H, inclined and cross-braces or bolts I, reversible clevis-blocks J, clevises or straps K, rear frame L, caster-wheel M, chain N, pulley O, brackets P, capstan Q, bracket R, hand-wheel S, ratchet-wheel T, spring-pawl U, and driver's seat V W, with each other, substantially as herein shown and described, and for the purposes set forth.

117,971.—HOISTING-MACHINE. — Daniel A. Bolt, Harrisburg, Pa.

Claim.—A series of friction chain-sheath pulleys, driven by gearing, in combination with the worm W, worm-wheel C, chain E, and driving-pulley P, substantially as described, and for the purposes already specified.

117,972.—OMNIBUS-BRAKE.—Henry Bothe, St. Louis, Mo.

Claim.—The arrangement of lever A, rod G, bar E, coil spring H, rod M, brake levers J J, and shoes L L, all constructed, as described, to form an improved omnibus-brake.

117,973.—CLAY-PULVERIZER. — George C. Bovey, Cincinnati, Ohio.

Claim.—1. The combination of the smooth cylinders B B', gear-wheels C C', shaft F, blades G, arms I, discharge-nozzle L *l*, and adjustable scrapers P P', for the object stated.

2. In combination with the cylinders B B', wheels C C', trough E, shaft F, blades G, and nozzle L, the conical head K *k*, or its equivalent, substantially as described, for the purpose set forth.

117,974. — CHEESE-FRAME. — Thomas M. Brintnall, Medina, Ohio.

Claim.—1. The shelves, provided with the guide-band D and guide-pin *b*, in combination with the jointed levers E and guide-post B, substantially as and for the purpose specified.

2. The combination of the shelves, the jointed levers E, and the slotted guide-post B with the axis and washer *a*, substantially as described.

3. The combination of the flanged shelves, the jointed levers E, slotted guide-post B, axis and washer *a*, uprights A, and the compressing device G *g*, substantially as and for the purpose specified.

117,975.—WATER-METER. — John Broughton, Brooklyn, N. Y.

Claim.—1. The combination and arrangement of the upper stationary tube *e* and outer case A with the enlarged upper tubular portion *g* of the wheel and body-tube *d* thereof, substantially as and for the purpose herein set forth.

2. The flange *h* at the lower end of the stationary tube *e*, in combination with the enlarged upper tubular portion *g* of the wheel, body-tube *d* thereof, and outer case A, essentially as described.

3. The spiral blades or vanes *b* of the wheel, bevcled off at top on their under or advance sides so as to retard the volume of water entering by contracting the orifice and presenting an impinging surface to the water at right angles or thereabout to its course, substantially as and for the purpose specified.

4. The wheel, constructed of a central hollow metal shaft, *m*, an annular body, *s*, of rubber, wood, or other suitable material, hollow metal end caps *r r'*, a screw-plug or bearing-block, *n*, and spiral vanes *b*, essentially as described.

5. The bearing-bush *k* for the lower pivot, constructed with a passage up through it in communication with a chamber or space above the bearing-point of the pivot and within the bush, substantially as shown and described.

117,976. — SPRING BED-BOTTOM. — George Brownlee, Princeton, Ind.

Claim.—The springs C C', or their equivalents, cord D, bearers G, and slats B, in combination with a bedstead, when arranged to operate substantially as and for the purposes described.

117,977.—COMBINED LIFE-BOAT AND BED-BOTTOM.—Charles Bütgenbach, Louisville, Ky.

Claim.—1. The combination of the lower portion A, hinged boxed sides B B, and ends C C having hinged boxes, all constructed and arranged substantially as described, and forming a folding boat and bed-bottom, for the purpose set forth.

2. In combination with the folding boat and bed-bottom herein described, the mattress J provided with springs projecting from its under side, for the purpose specified.

3. The hinged keel G, pawl H, and stop I, in combination with a folding life-boat, substantially as described.

117,978.—CARVING-MACHINE. — James W. Campbell, New York, N. Y.

Claim.—1. The cutter-head D, having a threefold motion, as described, namely, a revolving one over the stuff or strip to be worked, a reciprocating lateral one relatively to said strip, and a reciprocating up-and-down motion in relation thereto, when constructed substantially as specified.

2. The combination of the sliding or laterally-moving bearing-box G and its cam H with the rocking bearing *s*, the revolving cutter-head shaft E, the rising-and-falling front bearing Q, and the cam P, essentially as and for the purposes herein set forth.

3. The pendent revolving cutter-heads R R, in combination with one or more intermediate cam or cams, A', the driving-belt *m'*, and the pulleys *l' r'* and *r¹ r²*, when the whole are arranged for operation substantially as specified.

117,979. — ELECTRO-MAGNETIC ANNUNCIATOR.—Jacob Capron, New York, N. Y.

Claim.—1. The combination of a lever having the armature of an electro-magnet attached thereto with the dog or tumbler A, substantially as described.

2. The combination of a swinging or dropping-dog connected directly or indirectly to the gong with a spring-bar or arm connected with one of the room-wires, the dog and bar being relatively so arranged that the falling of the former forms a new connection with the latter, substantially as described.

3. A dog or tumbler adapted to fall and break the circuit which has operated the electro-magnet that caused its fall, and further adapted, also, to form a new circuit with the gong.

4. The metallic frame supporting the insulated electro-magnet which operates the dog, and connected to the gong by means substantially as described.

5. The plate E with its sliding shaft, constructed as described.

6. The combination of the plate E and its shaft with the standard G or G', the parts being relatively arranged as described.

7. The insulated bar H, in combination with the spring-armature and a wire adapted to conduct a current through the bar H, as described.

117,980.—PACKING FOR OIL-WELLS.—Henry S. Cate, Deerfield, Pa.

Claim.—In combination with oil-tube A and casing B having collar G, the rubber disk D, metallic rings E F, and clamps H H, all arranged as and for the purpose specified.

117,981. — CORN-PLANTER. — William B. Chambers, Decatur, Ill.

Claim.—The catch G, constructed and operating substantially as described, and for the purpose hereinbefore set forth.

117,982. — EGG-BEATER.—Daniel B. Clayton, Columbia, S. C.

Claim.—As an improved article of manufacture, an egg-beater, comprising the vessel or trough A, the horizontal shaft C, disks or arms E, thin flat beaters F, cover G, and the driving-gear, all constructed and arranged substantially as specified.

117,983, antedated August 11, 1871.—TILE-MACHINE.—George Clayton, Cleveland, Ohio.

Claim.—1. The combination of the tub A, dome A', extension F, and auxiliary plunger h with the pitman *i*, crank *j*, shaft *k*, and gear-wheels *l* m provided with open spaces and the projections *l'*, substantially as and for the purpose set forth.

2. The combination of the tub A, dome A', extension F, auxiliary plunger h, the throat, the base B, and the main plunger C provided with the gate *g*, all substantially as set forth.

3. The double die, Fig. 5, provided with the annular flange *r* and the centers *q q*, having the arms bent as shown, as and for the purpose described.

117,984.—VENTILATING DECANTING APPARATUS FOR OIL-CANS.—William Cleveland, Orange, N. J.

Claim.—A can or vessel provided with a tube for the admission of air, formed by striking up a groove in the head or top of said vessel and cementing thereto a strip to form the other side of said tube, which tube projects into the nozzle of the can at the side uppermost in decanting, substantially as and for the purpose set forth.

117,985.—COMPOSITION ROLL FOR DRESSING-FRAMES.—Ralph Collier, Laurel, Md.

Claim.—The use of a composition of block-tin, lead, and antimony in the construction of a roller, substantially in the manner and for the purpose herein described.

117,986.—BROOM.—Robert E. Copson, Hamburg, Iowa.

Claim.—The extra braided wires E, in combination with the outer or circumference-wires C and with the handle B, substantially as herein shown and described, and for the purpose set forth.

117,987. — SCROLL-SAW. — Thomas L. Cornell and Sturges Whitlock, Derby, Conn., assignors to Thomas L. Cornell.

Claim.—1. The overhanging goose-neck B B', saw *s*, belt *o*, belt-pulleys *g g¹ g²*, head and tail-blocks *c c'*, and the bracket D, in combination with the adjustable foot-piece G carrying belt-pulley *g²*, substantially as described.

2. The arrangement of the lathe E, E', W, and F', saw-table A, crank-shaft R, saw *s*, pitman *p*, pulleys P^1 P^2, and belt *r*, as and for the purpose described.

117,988. — EGG AND FRUIT-CARRIER.—Joseph Taylor Cornforth, Kansas City, Mo.

Claim.—The series of cells B, formed of flexible and corrugated material C arranged in a case, A, as and for the purpose specified.

117,989.—COMBINED CULTIVATOR, MARKER, AND COVERER.—Hugh J. Coyle, Buffalo, N. Y.

Claim.—The central beam A, combined with the wing-beams E F, adjustably arranged with respect to the former, as described, for the purpose of being readily adapted to serve the purpose of a coverer, marker, or cultivator-frame.

117,990.—BRAN-DUSTER.—John Damp, Ashland, Ohio.

Claim.—In combination with the wire-gauze cylinder A, shaft H having adjustable arms K, and brushes G, the suction-fan M, constructed and arranged as and for the purpose specified.

117,991.—PADDLE-WHEEL.—Daniel S. Darling, Brooklyn, N. Y.

Claim.—The castings A A flanged at E E, the compartments D F, and the buckets B, arranged together in a paddle-wheel, as and for the purpose specified.

117,992.—CAR-COUPLING.—Perry W. Davis, Portland, Oreg.

Claim.—The draw-head A, provided with the cam H, spring E, and link F, in combination with draw-head B provided with piece G, lever K, and pin C, substantially as described.

117,993. — EXCAVATING-MACHINE.—Robert W. Davis, Sonora, assignor to The Davis Excavator Company, Bath, N. Y.

Claim.—1. The shovel, hung eccentrically in relation to the elevators, and so that, when rising, it frees obstacles getting in between it and the elevators, substantially as specified.

2. The shovel hung eccentrically from two points, *l l*, in relation to the elevators, essentially as described.

3. The foot-board I, in combination with the rising-and-falling shovel G, essentially as described.

4. The combination of the self-locking and self-unlocking pawl K with the rising-and-falling shovel, substantially as specified.

5. The combination, with the axle D and dirt-receptacle E secured thereto, of a friction clamp for holding in a yielding manner said receptacle from turning, and allowing of its free rotation when required, substantially as specified.

6. The gearing and ungearing device or plate *k*, with its rods *i i* arranged on back of one or more of the elevators for operation with the wheels C C of the machine, essentially as herein set forth.

7. The dumping-button M, arranged on back of one or more of the elevators F, in combination with the dirt-receptacle E hung so as to be capable of rotation when required, substantially as specified.

117,994.—HAME-TUG FOR HARNESS.—Paul R. Dawson, Brenham, Tex.

Claim.—1. An improved metallic hame-tug, consisting of the body A, detachable jointed eye B, and lock-plate D, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The pivoted guard E, rod F, and lugs G, arranged as described, and applied to the rear end of tug A, as and for the purpose specified.

117,995.—BILLIARD-CUSHION.—Mathew Delaney, New York, N. Y.

Claim.—1. The arrangement of the spindle B within the wood-work of the table, and projecting vertically below the same, to enable the wire to be readily and conveniently tightened without removing any part.

2. The arrangement at the pocket of a billiard-table of a block of hard rubber, E, which shall not possess the elasticity of the ordinary cushion A, the rigidity of metal or wood, and which will yet yield to a small extent, thereby saving the rapid wear on the cloth.

117,996.—BASE-BURNING STOVE.—William Doyle, Albany, N. Y.

Claim.—1. Revolving valve A, in combination with reservoir B of a base-burning stove or furnace, when constructed in the manner and for the purpose herein shown and set forth.

2. The combination and arrangement of oven D, air-chamber C, and reservoir B within the combustion-chamber of a base-burning stove, as herein set forth.

3. The oven D within the combustion-chamber of a base-burning stove, combined with and arranged with reference to top plate G, reservoir B, descending-flues E E and F F, and extension flue K, and air-chamber C, in the manner and for the purpose herein shown and set forth.

117,997.—SCRUBBER AND MOP-HEAD.—William H. Earnest, Parkersburg, W. Va., assignor to Robert P. Steed, same place.

Claim.—The combination of the cylinder A with holes *a a* under tube B, bent rubber C, handle-tube D, and mop-holding rod E, all as shown and described.

117,998. — METHOD AND APPARATUS FOR SEPARATING CERTAIN HYDROCARBON VAPORS FROM ILLUMINATING-GASES.—Henry H. Edgerton, Fort Wayne, Ind.

Claim.—1. As an improvement in the manufacture of naphtha, petroleum, or other rich illuminating-gases, the forcing the same through or over petroleum or other hydrocarbon liquids denuded of their more volatile constituents, for the purpose of

absorbing any hydrocarbon vapors that may be present.

2. The herein-described apparatus, arranged for operation substantially in the manner and for the purposes set forth.

117,999.—MEAT-CHOPPER.—Martin L. Edwards, Salem, Ohio.

Claim.—1. The intermittently-rotating cutting-block B, centered and held within an annular opening, *b*, in the table by means of an annular rim, *a*, and by which the cutting-block and hopper are also rendered removable at pleasure, as described.

2. The metallic cellular web C, constructed with interior division-ribs *j* and an inclosing confining-rim, *i*, for holding and confining a sectional cutting-block for meat and vegetable-cutters, as described.

3. A cutting-block for meat and vegetable cutters, made in sections *m*, secured in separate cells *l*, and locked in position by wooden wedges *n*, as and for the purpose described.

4. The slotted or adjustable crank *g*, in combination with the feed-rod P, the ratchet-pawl R, and the ratchet-wheel E, for producing an adjustable or variable feed to the cutting-block, as described.

5. In a meat-and-vegetable-cutting apparatus, the combination of the cutting-block B, constructed as described, the metallic cellular web C, the annular centering-rim *a*, the cutter-stock G *c*, the vibrating carrying-arm H, and the variable feed devices, the several parts being constructed, arranged, and operating as described.

118,000.—CULTIVATOR.—Thomas J. Ellis, Decatur, Ill.

Claim.—The shaft F, knee H, handles A A, standards I I', rods K K K' K', braces D D E E, and hinges *b b b' b'*, in combination with the standards C C C' C' and forked pole A, substantially as and for the purpose hereinbefore set forth.

118,001.—ROOF-BRACKET.—David Fisher, Mansfield, Mass.

Claim.—The within-described roof-bracket, consisting essentially of the strip A, staple B, and one or more hooks, C, for the purpose set forth.

118,002.—MACHINE FOR DRESSING HIDES.—Edward Fitzhenry, Boston, Mass., assignor to Hide and Leather Machine Company, same place.

Claim.—The arrangement and combination of the two carriages B F, the base-frame A, the rotary table N, and the mechanisms, substantially as described, viz., the racks, gears, and shafts, for actuating such carriages, all being applied together substantially in manner and so as to operate as specified.

118,003.—MACHINE FOR DRESSING LEATHER.—Edward Fitzhenry, Boston, Mass., assignor to Hide and Leather Machine Company, same place.

Claim.—1. The leather-dressing-machine table, provided with the trough arranged with it, as described.

2. The combination of the table provided with the trough, arranged as described, and having castors to its legs, as set forth, with the platform furnished with the raised ledge and the educt, substantially as set forth.

118,004.—OIL-PROOF RUBBER FOR STEAM-PACKING, &c.—James M. Flagg, Providence, R. I.

Claim.—The combination of clay with vulcanized rubber, in the manner and for the purpose specified.

118,005, antedated August 11, 1871.—DEVICE FOR RAISING LETTERS ON METAL PLATES.—Richard R. Foote, Chicago, Ill.

Claim.—The plate A, provided with the raised letters I I, &c., fastened to it temporarily, in combination with the elastic bed B, for raising letters on metal plate by clamping said plate between the said letters and bed, as set forth.

118,006. — PHOTOGRAPHY. — Eliphalet J. Foss, Boston, Mass.

Claim.—1. A clear-glass negative, having a series of fine lines engraved, ruled, or printed upon it, and used for the purpose of producing the backgrounds of photographic pictures, substantially in the manner described.

2. As a new article, a photographic picture, card, or print, having a lined or reticulated background, when the same is produced in the manner herein described, or by other equivalent process.

118,007. — TOY STEAM-ENGINE. — Russel Frisbie, Cromwell, Conn.

Claim.—1. The rod G for communicating the lateral motion of the connecting-rod C to the valve F, substantially as herein described.

2. The combination of the connecting-rod C, the valve F, and the rod G, substantially for the purpose herein set forth.

118,008.—APPARATUS FOR AUTOMATICALLY OPERATING GAS-COCKS.—Samuel Gardiner, Jr., New York, N. Y.

Claim.—1. The lock-bar P, with its hook *f*, spring *s'*, and curved hook *r*, in combination with the wheel A, having four or more holes upon its face, and the stop-cock, as and for the purpose set forth.

2. The arrangement of the lock-bar P, stop *r*, fly *q*, screw-pinion *f*, as and for the purpose set forth.

3. The arrangement of the electro-magnet K, pushing-bar *d*, and stop-bar *p*, as and for the purpose set forth.

4. The combination of the bent plate F with the wheel *n*, as and for the purpose set forth.

118,009. — THILL-COUPLING.—Marcellus C. Graves, Tuscola, Mich., and Byron D. Graves, Waterloo, Iowa.

Claim. — The bolt A having the transverse grooves *a a*, in combination with the nut B and spring *b*, substantially as and for the purpose described.

118,010. — TUNNELING-MACHINE. — Chalkley Griscom, John P. Griscom, and Lewis Griscom, Port Carbon, and John Fritz, Mahanoy Top, Pa.

Claim. — 1. The combination, operating as described, of the extensible column and the extensible spar which supports the boring-tool, and which is adjustable both vertically upon the column and also about the axis thereof.

2. The combination, with the collar H, pulleys I I, and rope, or equivalent devices, of the drums T mounted on the hub K, and operating to raise or lower the spar.

118,011.—RACE-COURSE TOY-BANK.—John Hall, Watertown, Mass.

Claim.—1. The combination and arrangement of either or both the race-levers *m n*, the trigger-lever *s*, the spring *y*, and the wheel *a* provided with the teeth *w* and stud *a'*, all being applied to a box, A, or base, so as to operate substantially as set forth.

2. The combination of the disk or ground-plate *e* and its arches or supporters *g g*, as described, with the box or base A and one or more race-levers *m n*, applied thereto and having operative mechanism, substantially as specified.

3. The race-course toy-bank, composed of instrumentalities as described, constructed and arranged in manner and so as to operate substantially as and for the purpose as set forth.

118,012. — SELF-CLOSING FAUCET. — Joel Hayden, Jr., Haydenville, Mass.

Claim.—A self-closing faucet, in which are combined the case E having the grooves A A, the valve A with its wings *a a*, the spindle L provided with screw-thread *b* and stop *d*, the spring *m*, the parts being constructed and arranged substantially as and for the purpose set forth, and forming a faucet in which the steam has no rise or fall in operating the valve.

118,013.—MODE OF ATTACHING PLOWS TO TRACTION-ENGINES.—William R. H. Heydrick, Chestnut Hills, Pa.

Claim.—1. The drawing-frame, having beam I and the plow-beams, combined with ribbed plate K and slotted and grooved plate L M, as and for the purpose specified.

2. In combination with beam I and plates K L, the bolts and nuts provided with springs O, arranged as and for the purpose specified.

118,014.—WASHING-MACHINE.—Harvey C. Horsey, Romo, Iowa.

Claim.—In combination with box A, the frames B B' and rollers *b b'*, uprights C, blocks D, springs E, and levers F, constructed and operating substantially as and for the purpose specified.

118,015.—BLACKING-BRUSH.—John R. Howard, Boston, Mass.

Claim.—The combination and arrangement of the receptacle *d*, the elastic material *c*, and the parts *e f g*, inclosed by the rim *a*, with the follower A and the screw *i*, whereby the blacking in the receptacle *d* is raised and lowered, all of the parts being applied to the applying-brush B, and operating substantially as described.

118,016.—MECHANICAL MOVEMENT.—Charles W. Hurd, Comstock's Landing, N. Y.

Claim.—1. An improved mechanical movement, formed by the combination of the horizontally-vibrating driving-lever F and vertically-vibrating levers D, four, more or less, with each other, substantially as herein shown and described, and for the purposes set forth.

2. The combination of the weights I and springs J, either or both, with the levers D and F, substantially as herein shown and described, and for the purpose set forth.

118,017.—TABLE FOR EMERY-GRINDERS.—James L. Jackson, New York, N. Y.

Claim.—1. The intervening carriage-frame K, movable in a transverse direction on inclined planes or ways, as described, in combination with the lower frame D running on the shears and the bed E, movable transversely on the intervening frame K, substantially as specified.

2. The combination, with the carriage or its lower frame D, of the roller-truck C, composed of a series of rollers united by a frame at their axles, and arranged to run on lower rails *d d* of the shears and to project above the top surfaces of the latter, substantially as herein set forth.

3. The revolving supplementary bed S, composed of a face-plate, *s*, and stationary ring or box-part *r*, in combination with the transversely-movable main bed E and its lower frame or frames running on or along the shears, essentially as described.

118,018. — SPRING-BED. — John Johnson, Hartford, Conn.

Claim.—1. The rocking end piece, designed for attachment to the canvas stretcher, pivoted at its ends, and provided with arms *e'* at either or both ends, overhanging and bearing upon the springs *f*, substantially as described, and for the purpose set forth.

2. The combination of the arms *e'* with the springs *f* by means of the adjustable cap *i*, substantially as and for the purpose set forth.

118,019.—METAL CARPET-BINDING.—Reuel P. Johnston, Steubenville, Ohio.

Claim.—The tube A, having slits E therein and oblique toothed lips B thereon, combined with hooks D, arranged and applied as and for the purpose specified.

118,020.—LIFTING-JACK.—Stephen D. Jones, Blue Island, Ill.

Claim.—The combination of the standard A having grooved D, the fulcrum C, clasps *d*, bail-shaped pawl E, ratchet F, lever G, pawl H, and ratchet I, all constructed and arranged substantially as described and shown.

118,021.—METALLIC COLUMN.—John A. Kay, St. Charles, Mo.

Claim.—A compound column, composed of a group of metallic tubes connected by metallic bands, which serve both to bind together the parallel tubes and to connect the sections of the separate tubes, substantially as shown and described.

118,022.—FLY-WHEEL. — John W. Keely, Philadelphia, Pa., assignor to Nathan Middleton and Allen Middleton, Jr., same place.

Claim.—The fly-wheel C, in combination with the gear-wheels E F H I, all arranged and operating in relation to shaft D, substantially as set forth.

118,023.—BLIND-SLAT MACHINE.—Kendrick Kendal and Lewis Henry Stark, Goffstown, assignors to Samuel C. Forsaith, Manchester, N. H.

Claim.—The combination of the dies G G operated by the cams C C, with the adjusting screw-shafts M M, substantially as and for the purpose set forth and specified.

118,024, antedated August 4, 1871.—WASH-BOILER. — William E. Kinnear, Upper Sandusky, Ohio.

Claim.—The shallow steam-tight boiler or chamber A with pipes C and D, in combination with the tub B, plate G, pipe E, chamber F, and tubes *f*, all constructed and arranged as herein shown and described.

118,025. — COMPOSITION ROOFING. — William Kinsey, Cincinnati, Ohio.

Claim.—As an article of roofing, the combination of tar-paper and textile fabric, coated with the preparation of animal-tar, drying oil, and clay described.

118,026.—WASH-BOWL.—Collins Knowles, Boston, Mass.

Claim.—1. The combination and arrangement of the disk and tubular valves D E with the slotted valve-case C and its perforated partition *d*, the valves being connected as described.

2. In combination therewith, the forked lever F, the oblique-slotted sleeve G, and the spindle or shaft H, all constructed and applied together in manner and so as to operate substantially as explained.

3. The combination of the valve apparatus, substantially as described, with a wash-bowl or vessel and the vent thereof, as set forth.

4. The arrangement and combination of the ajutage *g* with the disk and tubular valves, and the slotted valve-case and its partition, all combined and arranged in manner as specified.

118,027.—CAKE AND FRUIT-BASKET.—Cyrus H. Latham, Lowell, Mass., assignor to himself, Edward P. Woods, and Daniel Sherwood, same place.

Claim.—The basket A and base B, made of wire and united together, substantially as described and for the purposes specified.

118,028, antedated August 3, 1871.—Gas-Engine.—Charles P. Leavitt, New York, N. Y.

Claim.—1. The arrangement here shown for the introduction and gradual combustion of the gas, consisting of the pipe *y*, the gasometer O, and the burner A, combined, arranged, and operated substantially as described.

2. The hollow ring *a'*, in combination with the cylinder A, substantially as described and for the purpose set forth.

3. The cylinder A, the pump E, and the valve *d*, combined, arranged, and operated substantially as described.

118,029.—Mechanism for Adjusting the Rollers of Carding-Machines.—Edward Lord, Todmorden, England.

Claim.—The slotted bearing *c c'*, ribbed plate *b b'*, right-and-left-hand screw *f*, bolt *d*, and bend *a a' a² a³*, all constructed and arranged as shown and described.

118,030. — Steam-Boiler. — Thomas J. Lovegrove, Philadelphia, Pa., assignor to himself and George H. Meyers, same place.

Claim.—1. In combination with bent connecting-tubes between a steam and mud-drum, the series of chains C, passed back and forth therethrough, as and for the purpose specified.

2. A series of tubes, C, pipes D D having the same capacity as all the tubes, steam-drum A, and mud-drum B, when combined as and for the purpose specified.

118,031.—Hydraulic Hoisting Apparatus.—Albert Lucius, New York, N. Y.

Claim.—The combination of the cylinder A, piston B, rack C, pinion D, drum E, and guide-roller F with each other, all arranged to operate substantially as herein shown and described.

118,032.—Coating for Iron, &c.—George Albert Mariner and Folsom Dorsett, Chicago, Ill., assignors to The United States Pipe-Protecting Company, same place.

Claim.—Oleaginous, resinous, and mineral substances combined in about the proportions set forth.

118,033.—Electro-Magnetic Fire-Alarm Telegraph.—John W. Martin, St. Joseph, Mo.

Claim.—The combination of the numbered swinging lever H and supporting-armature G with the wire *d* and disk D of the alarm apparatus, all arranged as described.

118,034.—Apparatus for Tanning in Vacuo.—Wenzel Maeck, Nashville, Tenn.

Claim.—A vat, P, containing the tanning liquor, agitating rack D E, and vacuum-chamber A, combined and arranged with sprinklers O, as and for the purpose specified.

118,035, antedated August 3, 1871.—Vegetable Cutter.—Gideon B. Massey, New York, N. Y.

Claim.—One or more horizontal slicers, F G, and vertical slitters H, arranged on and projecting through the revolving disk B combined, as described, with the hopper I, placed obliquely to the plane of said disk, as and for the purpose specified.

118,036.—Machine for Bottling Liquids.—Jean Victor Mathivet, Cleveland, Ohio.

Claim.—The combination, with the filling-head and corking-plunger, of the interposed hinged gauge E, arranged to control the descent of said plunger relatively to the filling-head and to admit of its being turned aside to allow the latter to rise while the plunger remains down, substantially as and for the purpose or purposes herein set forth.

118,037.—Refrigerator.—John Matthews, Jr., New York, N. Y.

Claim.—The revolving ice-well D, of corrugated form, whereby the vessels placed on the shelves in the recesses E are partially surrounded by the refrigerating agent contained in said well, substantially as shown and described.

118,038. — Sash-Holder. — Thomas Jennings McCarver, Oregon City, Oreg.

Claim.—The sash-fastener herein described, consisting of the plate *f*, pawl or catch *a* pivoted thereon and provided with nib *d*, a spring, *c*, encircling an arm or bar, *i*, working in a slotted guide-plate *e*, and ratchet-bar *b*, all constructed and arranged in the manner specified.

118,039.—Bit-Stock.—William H. McCoy, Erving, Mass., assignor to Miller's Falls Manufacturing Company, same place.

Claim.—The handle of a bit-stock with metal tubes or hoops forced into grooves in the ends of the wooden handle, thereby preventing splitting or shrinking, substantially as and for the purposes set forth and specified.

118,040.—Gunpowder. — Angelo Molfino, New York, N. Y., assignor to The United States Cartridge Company, Lowell, Mass.

Claim.—A new and useful gunpowder composed of the following ingredients, viz., chlorate of potash, wheat-starch, and charcoal, combined substantially in the proportions specified.

118,041. — Jig-Saw. — Charles D. Moore, Lawrence, Mass.

Claim.—The combination of the pedals *e' e²*, the rods *d' f'*, the pawls *i' h'*, the ratchets *a' b'*, and the springs *g' h'*, or their mechanical equivalent, with the hand-wheel shaft *p*, the gears *n o*, the prismatic shaft *s*, the pulleys *s f a b*, the endless chains *g h*, applied to the saw and its carrier C and to the table or frame of the machine, all being substantially as described, whether such shaft *p* be provided or not with a hand-wheel, as set forth.

118,042.—Device for Suspending Window-Sash.—Thomas Morton, New York, N. Y.

Claim.—The hook E, constructed with the peculiarly-recessed slot described, and applicable to a link-chain in the manner specified.

118,043.—Process for Ornamenting Sewing-Machines, &c.—Charles Ferdinand Mueller, Hamilton, Canada.

Claim.—The improved art or process of ornamenting sewing-machines or other articles of manufacture of wood, metal, or glass, with gold, silver, and metal leaf, by means of pattern-plates of sheet metal or other suitable material, substantially as, in the manner, and for the purpose specified.

118,044. — Billiard-Marker. — William Henry Newell, Hudson City, N. J.

Claim.—1. A marking-plate, A B C, combined with two sliding pointers, E E, arranged opposite to each other but directed to the same line of notations, as and for the purpose specified.

2. As an improved article of manufacture, a billiard-marker, formed of a double-faced plate having three longitudinal divisions, A B C, and three sets of transverse divisions, *a' b' c'*, on each face thereof, combined with two bifurcated pointers, E E, arranged to slide on rods D D, as described.

118,045, antedated August 10, 1871.—Reel for Harvesters.—D. Chaplin Nutting and Joseph D. Allen, Bowling Green, Ky.

Claim.—The reel H I, having pulley J operated from the pulley B, combined as described, with the block and pinion D E traveling over a rack, C, which is the arc of a circle struck off from the pulley B as a center, for the purpose specified.

118,046. — Loop for Harness. — Addison M. Osborn, Girard, Pa.

Claim.—The triple metallic loop A B C, constructed substantially as herein shown and described, and for the purpose set forth.

118,047, antedated August 9, 1871.—Lounge-Bedstead.—Frederick C. Payne, New York, N. Y.

Claim.—The lier formed in two sections, A and B, the one hinged to the head of the lounge and the other rigidly secured to the upper slat-frame C, substantially as and for the purpose herein set forth.

118,048.—Smut-Mill.—Dan Pease, Floyd, N. Y.

Claim.—1. The spreader-plates *l l*, arranged in the grain-passage between the scouring-cylinder and separator, as set forth.

2. The adjustable springs *o o*, provided above the inclines *i*, and in combination with the plates *l l*, as specified.

3. The combination of the gate *m* with the spreaders *l* and inclines *i j*, substantially as herein shown and described.

4. The conduit E, constructed in two longitudinal sections, *i j*, and provided with upright edge K, as and for the purpose specified.

118,049.—Reversible Side-Hill Plow.—Charles B. Pettengill, Hebron, Me.

Claim.—1. In combination with two hinged wings, G G, attached to a reversible mold-board, the jointed rod passing behind the mold-board, the effect being to compel each wing to move inward as the other moves outward.

2. In combination with hinged wings, G G, on the mold-board, the pivoted catch K curved on its outer surface, the effect being to move out and support the wings.

3. The combination of a mold-board, E, having projection Q, and a pair of wings, G G, all constructed and arranged as described, the effect being to enable the same plow to work on level ground as well as on a hill side.

4. The rod M, toothed bar N, pinion O, and lever P combined with a catch, K K', to operate it in the manner and for the purpose described.

118,050.—Clevis.—Samuel W. Pope, Louisville, Ky.

Claim.—The clevis-rod C, bent substantially as described, in combination with the side plates B, or their equivalents, as set forth.

118,051. — Funnel. — Norman L. Price, Lynchburg, Va.

Claim.—The funnel A, provided with a cover, B, having holes adapted for receiving and holding the measures D and used therewith, all substantially in the manner specified.

118,052. — Medicine or Powder for Treating Cattle and Hogs.—Balzar H. Pullin, McDowell, Va.

Claim.—The recipe or composition of the ingredients above named, in the quantities substantially as and for the purposes above set forth.

118,053.—Cultivator.—Edwin Reese, Eutaw, Ala., assignor to C. M. Reese, same place.

Claim.—The arrangement of the shovel-frame *a*, bar or bow *c*, lever *f*, rock-shaft E, chains *g g*, and whiffletree *h* with the frame A and tongue F, as shown and described, to operate as specified.

118,054.—Rain-Water Cut-Off.—Bernard Rein, Marietta, Ohio.

Claim.—The case A, with pipes *a a' a²*, chamber *a²*, flange B, guide-plate C, and guard D, constructed and arranged as described, for the purpose set forth.

118,055.—Suspender.—Thomas Rich, South Seekonk, Mass.

Claim.—The combination of the button-straps C C, the connecting-spring B, with the shoulder-straps A A drawing from the center of the spring, substantially as described.

118,056, antedated August 2, 1871.—Horse-Power.—Titus H. Russell, Lebanon, N. H., assignor to himself, Henry C. Mahurin, New York city, and Frederick A. Hatch, Manchester, N. H.

Claim.—1. The construction and arrangement of the bottom platform A with rail *a* and adjusting-screws *e e*, the six-armed wheel or carriage B with rollers *b b*, the bisected and hinged platform C with circular rack-bar *f*, and the center journal *d*, all as herein shown and described.

2. The folding horse-stall, consisting of the posts G G, bars *h h' h²*, and rods *k k'*, constructed and arranged substantially as and for the purposes herein set forth.

118,057. — Letter-Box. — John A. Ryan, Cleveland, Ohio.

Claim.—The rod F, in combination with the door G, hook E, indicator D, constructed and arranged to operate in combination with the box A, substantially in the manner as described, and for the purpose set forth.

118,058. — Bit-Stock. — Samuel Sawyer, Erving, Mass., assignor to Miller's Falls Manufacturing Company, same place.

Claim.—The sleeve B, constructed with a flange, *b*, in addition to the screw, and securing it to the head A, substantially as and for the purposes described and specified.

118,059. — Hydrant.—Nickulas Schleffer, Chicago, Ill.

Claim.—The combination of valve D, stem F, connecting-rod H, spring L, lever J, and hook N, the whole arranged to operate together, substantially as and for the purpose described.

118,060. — Cotton-Press. — John Schley, Savannah, Ga.

Claim.—The arrangement, in the cotton-press herein described, of the two pairs of followers C C and guides D D, the four pairs of toggle-arms H H, and nuts F I, double nut E, guides *b b*, and the right-and-left screw G, as and for the purpose shown and described.

118,061.—Gutter-Strap.—Albert B. Schulz, Baltimore, Md.

Claim.—The combination of the screw *d*, which has a thread extending from end to end, the straps *f f* lapping over the top of the gutter, the under and upper nuts *g* and *g'*, *e* and *f*, and the brackets *c c*, all in the manner shown and described, whereby the gutter can be adjusted both at *g g'* and also at *f* and *e*, and the gutter, or a strap thereof, may be removed without disturbing the screws, as set forth.

118,062. — Drop-Grate for Furnaces.—William Shepherd, New York, N. Y.

Claim.—1. The grate-bars C, provided with the cars *d* secured to the cross-bars of the pivot-frame B by means of pins *e*, substantially as herein shown and described.

2. The air and draught-chamber F, formed around a grate by a cover, D, as set forth.

3. The base-plate A, receiving the pivoted grate and combined with the cover D, substantially as herein shown and described.

118,063.—Door-Check.—Don Carlos Smart, Cambridgeport, Mass.

Claim.—My said improved door-check, as composed of the flanged elastic cushion A, the tubular knob B having openings at its opposite ends of different diameters, and the plug or base part C containing the screw D, and serving to retain the cushion in its normal position, the whole being constructed and arranged substantially as shown and described.

118,064, antedated August 3, 1871.—Valve for Steam-Pumps and Engines.—William B. Snow, Brooklyn, N. Y.

Claim.—1. The combination, with the main slide-valve, of its attached cylinders *k k'* and smaller cylinder *l*, together with their respective stationary pistons *m* and *m'* and exhaust-piston *n*, substantially as specified.

2. The combination of the exhaust-piston *n* with the exhaust branch *o* in the valve, essentially as specified.

3. The exhaust branch *o* in the valve, in combination with the bridge *i* between the exhaust and steam-ports of the engine or pump, and with the cylinders *k k'* and *l* and stationary pistons *m m'* and *n*, essentially as and for the purpose herein set forth.

4. The valve B formed with two D-cavities *g g'*, in combination with the exhaust branch *o*, the cylinders *k k'* and *l*, and the stationary pistons *m m'* and *n*, substantially as shown and described.

118,065.—Adjustable-Gauge Car-Wheel.—William B. Snow, Brooklyn, N. Y.

Claim.—The combination, with the fixed notched key or feather C on the axle, of the spring-bolt D, arranged within the wheel for automatic action, as described.

118,066.—Paper-Trimming Machine.—Orlando L. Starkey and Elisha W. Pouton, Fort Wayne, Ind., assignors to Orlando L. Starkey, same place.

Claim.—The cylinders A and B, provided with cutters *c c'* and *d d'*, flange *e*, and groove *g*, spiral springs *i* and *k*, nut and screw adjustment *h* and *j*, all combined and operating in the manner and for the purposes substantially as described.

118,067.—Sewing-Machine.—Carlos Stebbins, Pike, N. Y.

Claim.—1. The combination, with the slotted cam-plate E and the thread take-up A, of the bar *b*, all being arranged substantially in the manner described.

2. The improved oscillating joint, consisting of the socketed support *h*, bolts *g*, cap *i*, and jam-nuts *j*, all combined and arranged substantially as specified.

118,068.—Farmer's Boiler.—George Stevenson, Zionsville, Ind.

Claim.—The within-described apparatus, consisting of the cylinder A, boiler B, fire-box C, connecting-pipes D E G, tub F, double vessel K, supply-pipe N with waste-pipe O, and the smoke-pipe P, all of said parts being constructed and arranged substantially as and for the purposes herein set forth.

118,069. — Machine for Bottling Gas-Charged Liquids. — Esau D. Taylor, Hornellsville, N. Y., assignor to firm of John Matthews, New York city.

Claim.—1. The arrangement of a corking-magazine relatively to the filling-head and to the pipe, by which the gas and liquid are supplied to the latter, substantially as herein specified.

2. The combination of the compressible and elastic plunger M, having an independent action, as described, with the corking-magazine L, the valve or cock *d* that controls the supply of gas and liquid through the pipe *b* and the filling-head B, substantially as specified.

3. The combination, with the filling-head and corking-plunger, of a wiring apparatus, consisting of a cross-head, O, connected with the filling-head by means of springs and latches, essentially as described.

4. The sleeve *o* and lip *p* of the wiring apparatus, in combination with the cross-head O, the springs *k k*, and latches P P, substantially as specified.

5. The hand or guiding device *q*, in combination with the guides *s s*, the sleeve *o*, the lip *p*, the spring *r*, and the cross-head O, essentially as described.

118,070. — Ice-Pick. — Thomas A. Taylor, Bangor, Me.

Claim.—The improved ice-pick, as herein described, having the flat pick *a* inserted in the metallic head *b*, substantially in the manner and for the purposes set forth.

118,071, antedated August 11, 1871.—Washing-Machine. — James M. Thompson, Dowagiac, Mich., assignor to himself, Justus Coney, and Charles Merwin, same place.

Claim.—1. The frame A, consisting of the wringer-board B, legs *d d d d*, bracing-handle C, and bars D D, substantially as and for the purposes hereinbefore set forth.

2. In combination with the first-named parts, the tub E, lovers H and I, beaters G, abutting-boards F, rubbing-board *j*, and covers L and *k*, all constructed and combined substantially as and for the purposes hereinbefore set forth.

118,072.—Dumping-Carriage. — Jeremiah R. True, Richmond, Me.

Claim.—1. The single restorer B and the two shutters *c c*, arranged together and with the body of the carriage, and applied so as to operate substantially as specified.

2. The arrangement of the tripper or trippers D with the shutters *c c*, their latches C C, and the carriage-body, all being applied as set forth.

3. The improved dumping-carriage A as made or provided with the opening *a* in its bottom, the shutters *c c*, the restorer B, the latches C C, and the trippers D D, all arranged substantially in the manner and to operate as explained.

118,073.—Uterine Supporter. — William S. Van Cleve, Centralia, Ill.

Claim.—The tube K, extended above the bottom of the cup of a pessary, and provided with a detachable nozzle, L, for entering the uterus, substantially as specified.

118,074. — Agitator for Washing-Machines.—Van Vanderburgh, Bacon Hill, assignor to Horatio Graves, Warsaw, N. Y.

Claim.—In combination with perforated disk and perforated hollow arms, the upwardly-projecting rim *e*, arranged around the circumference of the disk, as and for the purpose specified.

118,075. — Device for Locking-Bolts.—Samuel Vanstone, North Providence, R. I., assignor to George Chatterton and James Chatterton, same place.

Claim.—The fastening of rail or other similar joints by means of the tapering plates, or the equivalent straight plates with the tapering slots, and bolts running into key-hole slots, in combination with the single-slot bolt and cotter, substantially as described.

118,076.—Elevator-Cup.—Alfred A. Vitt, Union, Mo.

Claim.—The hook-shaped extension B of the rear side of an elevator-cup A, to adapt it for attachment to an elevator-belt, C, by means of a cross-strap, D, substantially as herein shown and described, and for the purposes set forth.

118,077. — Bushes for Mill-Spindles.—Herman W. Vitt, Union, Mo.

Claim.—1. The screw-tube C *c'* and tapering tube B, in combination with the case A and tapering followers E, to move said followers simultaneously toward or from the spindle, substantially as herein shown and described.

2. The flanges *e'* and projections *e²* formed upon the tapering followers E to adapt them for use with the case A and tapering tube B, substantially as herein shown and described, and for the purpose set forth.

118,078. — Lubricating Apparatus for Steam-Engines.—Moses N. Ward, Somerville, Mass., assignor to himself and Franklin Friend, same place.

Claim.—1. The improved lubricator, or combination and arrangement of the vessels A B, the valve-stem C, the valves *a b*, the valve-seats *c d*, the passage *e*, the shoulder *f*, and the spring *g*, all being to operate as described.

2. The combination of the steam-space or heating-chamber *m* with the valve-stem C, the two vessels A B, the two valves *a b*, and their seats *c d*, arranged as described.

3. The chamber *m*, arranged to extend from the lower part of the valve-stem up into the two vessels A B, as set forth, such chamber being combined with the said vessels, the valve-stem C, and its valves *a b*, and their seats *c d*, arranged as explained.

118,079.—Chair-Seat. — Gardner A. Watkins, Cavendish, Proctorsville Post-Office, Vt., assignor to The American Chair-Seat Company, Gardner, Mass.

Claim.—Securing the bottom fabrics of chairs to the seat-frames thereof by means of a groove or channel, B, and a continuous strip or spline, C, fitting therein, substantially as herein shown and described.

118,080.—Curtain-Fixture. — Thomas N. Webb, Baltimore, Md.

Claim.—The fixed plate A provided with triangular openings or projections, in combination with the cord-holding plate B provided with projections or openings, as described, when the said plate B is suspended entirely free from the fixed plate A, all arranged substantially as described.

118,081. — Curtain-Fixture.—Thomas N. Webb, Baltimore, Md.

Claim.—The cord-holding plate D, provided with either slots or projections, in combination with the fixed plate A provided with either slots or projections, when the said plate D is suspended entirely free from the fixed plate A, all arranged substantially as described.

118,082. — Electro-Magnetic Billiard-Game Register.—George A. Webster, Elgin, Ill., assignor to himself and Dean S. Webster, same place.

Claim.—1. In an electro-magnetic billiard-game register, the lever P, arranged to open and close the circuit, substantially as described.

2. In combination with lever D, the pointers C and *f*, arranged to indicate the number of points upon the dials *d* and *d'*, substantially as described.

3. The combination of magnet H, armatures L, pawl-lever O, pawl P, ratchet-wheel N, shaft K, and pointer A, the whole arranged to operate substantially as and for the purpose described.

118,083.—Handle for Carriage-Doors.—Edward Wells, New Haven, Conn.

Claim.—The arrangement of the crank *a b c* between the body and inner lining of the door, with its knob *f* projecting through and working in an arc slot formed in the said lining, said crank operated, also, by the spindle upon the outside, for the purpose specified.

118,084. — Dust-Pan.—William Westlake, Chicago, Ill.

Claim.—The combination of the handle B with the border C and bottom A of a dust-pan, when constructed and operating substantially as specified.

118,085.—Carriage-Washing Machine.—Oliver P. Weston, Shattuckville, Mass.

Claim.—1. The combination of the washing-boxes and the lifting-jack, substantially as specified.

2. The combination, with the boxes and jack, of the sliding covers and a system of levers for working them simultaneously, substantially as specified.

118,086. — Bearing-Surface and Journal of Machinery. — Joseph Wharton, Philadelphia, Pa.

Claim.—The new manufacture above described, namely, journals and bearings, and bearings of shaftings, and wearing-surfaces of machinery, made of nickel or nickel alloy, as specified.

118,087.—Jig-Saw.—Artemus H. Whitney, Essex, assignor of one-half his right to John L. Randall, Albany, N. Y.

Claim.—1. The arms D D', having their trunnions arranged diagonally across them, as herein described, and for the purposes herein set forth.

2. The adjustable bearing C, when arranged in relation to the standard B and arms D D', as and for the purpose herein set forth.

3. The combination of the standard B, adjustable bearing C, arms D D', screws E E, saw F, tightening-screw G, adjustable tightening-connection H, crank-wheel I, wrist-pin J, and pitman K, when constructed and arranged as herein described, and for the purposes specified.

118,088.—Garden Implement.—David S. Wilhoit, Madison Court House, Va.

Claim.—The construction of stock *a* with plate *c* having pin *d*, shoulder *f*, and tongue *g* thereon, and with plate *e* having shoulder *p*, tongue *q*, recess *e*, pin *s*, and shoulder *t* thereon, so as to enable the tools specified to be fastened thereto in the manner set forth.

118,089. — Tanning. — Daniel Woodbury, Peabody, Mass.

Claim.—1. The employment of a bath of metallic tin and acid, as set forth, and water in or about the proportion as stated, on a partially-tanned skin, in manner substantially as specified, to effect the completion of the tanning process or permeation of the skin by the tannin.

2. The employment of a bath of tin and acid, as mentioned, and water, in or about the proportions set forth, and turmeric, or an equivalent coloring matter, on a partially-tanned skin, substantially in manner described, to effect the thorough permeation of the skin by the tannin and the coloring or modification of color of it, all being essentially as specified.

118,090.—Brake for Bending Sheet Metal. — Frederick Yaeschè, Springfield, Mass.

Claim.—The double-acting-levers *a a*, in combination with its clamp *b*, folding bar *c*, brake-beam *d* provided with recess *e*, and spring-cushion *n*, all constructed, arranged, and operating substantially as and for the purpose specified.

118,091. — GRAIN-BINDER. — James Youll, Manchester, Iowa.

Claim.—1. The jointed gathering-arm composed of the blocks I I, constructed and operating substantially as described.

2. In combination with the above-claimed arm, the spring-fingers P and notched arm M, for seizing, holding, and carrying, the band-twine, substantially as described.

3. The arrangement of the stand T, slide V, and lever W for closing the griping-staple on the band and cutting the band-twine, substantially as described

4. In combination with the gathering-arm, the spool R and crank for holding, carrying, and tightening the band-twine, substantially as described.

5. In combination with the gathering-arm, the levers *c* and *d*, constructed substantially as described, for operating and working the gathering-arm, as set forth.

118,092.—BEATING-ENGINE FOR PREPARATION OF PAPER-PULP.—Gustavus Ames, New York, N. Y.

Claim.—1. The combination of the horizontal shaft armed with round pins, in combination with the surrounding case armed with round pins, and provided with a feeding-tube and a discharge-tube, so that the case can be kept full of water and fibers, substantially as and for the purpose specified.

2. In combination with the subject-matter of the first claim, the centrifugal finisher, substantially as and for the purpose set forth.

118,093.—RUNNING-GEAR FOR CARRIAGES.—John C. Anderson and Allen W. Benson, Saginaw, Mich.

Claim.—The segmental bearing-plate F and hook F' secured to the reach C, in the manner and for the purpose set forth.

118,094.—GRAIN-SEPARATOR.—Frederick A. Balch, Hingham, Wis.

Claim.—1. The cylinder A, constructed with cells, as described, formed by perforations in said cylinder, covered by a surrounding jacket or plate, *a*, either with or without depressions or indentations, substantially as set forth.

2. In combination with the cylinder A, the trough or pan C and feed-screw F, substantially as set forth.

118,095. — PORTABLE FURNACE. — Henry Beatty, Massillon, Ohio.

Claim.—The portable furnace herein described, consisting of the body A, with door B and one or more dampers, C D, grate-ring N, grate P, hood-ring M with holes *e* around its upper edge, and smoke-pipe G, united to the body A by hooks K K and braces I I, the ring-base F having one or more kettle-rings, *a*, therein, if required, and the several parts being constructed and arranged as herein specified.

118,096. — CHAIR AND LADDER.—William Bergmann, Philadelphia, Pa., assignor to himself and Adam Keller, same place.

Claim.—A ladder, connected at the top to the back of a chair by a rod or bolt, *f*, and slotted so as to be capable of sliding on the said rod, and provided at the bottom with hooks *a a*, by which it can be attached to the legs of the said chair, all substantially as specified.

118,097. — BARREL AND BOX-ELEVATOR.—Ezekiel Blake and James E. Blake, Chicopee, Mass.

Claim.—The rod A, in combination with the hook D, hook E, chain F, and hook G, all constructed substantially as and for the purposes set forth.

118,098. — MILK-RACK.—William Boswell, Pontiac, Mich.

Claim.—The revolving standard B, the metallic surface C, the annular cups D G, the safe F, with the arms E, when combined to operate as and for the purposes substantially above set forth.

118,099. — TAP-SOLE FOR RUBBER BOOTS AND SHOES.—Augustus O. Bourn, Providence, and Isaac F. Williams, Bristol, R. I.

Claim.—The improved tap-sole for rubber boots and shoes herein described, provided with the extension B, narrower than the main sole at the shank and extending along the center of the shank from the tread to, and connected with, the front line of the heel, as and for the purposes specified.

118,100.—PROCESS OF CONVERTING IRON INTO STEEL.—Thomas Brooks, Minerva, Ohio, assignor to himself, Thomas Jackson, and Frank A. Foster, same place.

Claim.—1. In the process of converting iron into steel, the combination, in the proportions stated, of the ingredients employed to produce a tool-welding steel, as described.

2. In the process of converting iron into steel, calcium-tungstate, in combination with the ingredients stated, to produce a fine quality of steel, as described.

3. In the process of converting iron into steel, bismuth, in combination with the ingredients used to produce a fine quality of file-steel, as described.

4. In the process of converting iron into steel, fluor-spar or chlorophane, in combination with the ingredients used to produce file-steel, as described.

118,101.—MILLSTONE-BUSH.—James Brown, Fonda, N. Y.

Claim.—The arrangement of beveled blocks B loosely in relation both to the beveled sides of case A and to gauge-screws E, as and for the purpose specified.

118,102.—MACHINE FOR CRIMPING BLIND-SLATS.—Martin Buck, Lebanon, N. H.

Claim.—1. The dies L L, adjusted for the varying lengths of slats by the movable cams C C and screws G G on the shaft B, and held in proper relative position during adjustment by pins *e*, or equivalent device, constructed, arranged, and operating substantially as described and specified.

2. The hopper composed of the racks N N, arranged for adjustment simultaneously with and relatively to the dies L L by the ledges O O, substantially as described and specified.

3. The combination, with the racks N, of the clearers A A, and adjusting them simultaneously with and relatively to the dies L L, so as to automatically discharge the compressed slats, substantially as described and specified.

118,103.—SAFETY-WHIFFLETREE. — Isaiah Byrd and Turner Byrd, Jr., Calvin township, Mich.

Claim.—In connection with the double-tree A and whiffletrees B, provided with irons C, the arrangement of the locking-rods D, the connecting-rods F, and the plate E, provided with lever G, all constructed and operated as and for the purpose set forth.

118,104.—CHARGER FOR POWDER-FLASKS.—George A. Capewell, George D. Capewell, and Joseph T. Capewell, Woodbury, Conn.

Claim.—1. The neck of the charger, consisting of the plates B C, the said plate C provided with a neck, D, and flange *d*, and with a projecting edge, as described, combined with the spring S and cut-off H, all constructed and united in the manner specified.

2. In an adjustable charger, the inner tube N, constructed with the slit *n*, in the manner and for the purpose substantially as set forth.

118,105.—FLOUR. — Thomas Carr, Bristol, Great Britain.

Claim.—1. The flour produced by the within-described process, and having the granular character and other qualities herein set forth.

2. The within-described process of producing the said flour.

118,106.—PIPE AND TUBE FOR WATER, GAS, &c.—Frederic Chase, Philadelphia, Pa.

Claim.—1. As a new article of manufacture, a metal pipe having an enameled inner surface.

2. A pipe having an enameled inner surface and coated exteriorly with zinc or its equivalent.

118,107. — FRICTION-BRAKE FOR MACHINERY.—John C. Clapp, Boston, Mass.

Claim.—1. The application of friction to that portion of the fly-wheel of a printing-press hereinbefore described, for the purpose as set forth, by means of arms A A, or other arms acting upon the wheel in the manner of a vise.

2. The combination of the fixed frame B B B B, the movable frame C C C C, and the rod R, acting in the manner and for the purpose described.

118,108.—ARROW-SPRING.—John B. Cleaveland, Indianapolis, Ind.

Claim.—The body of the bow *a*, when constructed to fit the backs of the fingers, substantially as set forth.

118,109. — ATTACHMENT FOR SEWING-MACHINES.—George A. Colton and Sylvester P. Babcock, Adrian, Mich.

Claim.—1. In combination with the plate A, having loop *h* and cap *k*, the removable presser-plate G provided with a slot or catch, *s*, for the purpose specified.

2. The corder, constructed substantially as described, and provided with a set-screw having a collar, *c'*, in combination with the bed-plate having the flanch *b* and notched bearing *b'*.

3. In combination with the bed-plate A having the bearings *b b'*, the combined tongues and corder herein described, provided with the adjusting-screw *a* with its collar *c'*, substantially as and for the purpose specified.

118,110. — ATTACHMENT FOR SEWING-MACHINES.—George A. Colton and Sylvester P. Babcock, Adrian, Mich.

Claim.—1. The angular cord-plate E, pivoted to the tongue D, provided with the oblique cord-way *a*, and rendered adjustable by means of the set-screw *s* bearing against the gauge of the bed-plate, as specified.

2. In combination with the sheet-metal bed-plate having the slot *e* and spring-hook *d*, the detachable presser-plate B provided with the depressed catch K, when constructed and arranged to operate as shown and described.

118,111.—BINDER FOR SEWING-MACHINES.—George A. Colton and Sylvester P. Babcock, Adrian, Mich.

Claim.—The combination, with the bed-plate A having the bearings *c c*, of the variable binder herein described having the stationary upper guide H, and the adjustable lower guide L provided with the adjusting devices *z h*, substantially as herein specified.

118,112.—METER.—David P. Davis, Jersey City, N. J.

Claim.—1. The valves *t*, made of hollow cylinders closed at the ends and having ports 6, 7, and 8 in the sides, and introduced in the open cylinders provided with ports 9 and 10 and pipe *e*, in combination with the cylinders *g*, pistons *h*, shaft *k*, and connections, substantially as and for the purposes set forth.

2. The removable sleeve v^2, carrying the shaft v^1, packing, and worm-pinion, constructed as specified, and inserted into the case of the water-meter, as and for the purposes set forth.

118,113.—MILLSTONE-BALANCE.—Zedekiah Dawson, Cole Creek, Ind.

Claim.—In combination with a millstone, *a*, the weights *b b b*, when constructed, applied, and arranged for operation in the manner described and shown, and for the purpose set forth.

118,114, antedated August 11, 1871.—LOOM. John Detweiler, West Liberty, Ohio.

Claim.—1. The perpendicular shafts C, with their arms *e* and *f*, rods *e'* and *f'*, slides *d*, and parallel bars *c*, and coiled springs *h*, constructed and operating in combination with the picker-staffs D and triggers *i*, substantially in the manner and for the purposes set forth.

2. The ratchet and flange-wheels F and G, ratchet-hooks H, and springs *n*, in combination with the triggers *i* and springs *m*, and picker-staffs D and spring E, when constructed and operating substantially in the manner and for the purposes described.

3. Pulley N, coiled spring S, and collar T, in combination with collar M and shaft O, when constructed and operating substantially in the manner and for the purposes set forth.

118,115. — DOUBLE PERCH AND FIFTH-WHEEL FOR CARRIAGES.—David C. Doran, Mount Healthy, Ohio.

Claim.—A double perch and fifth-wheel, formed by two bent wooden sides, C C', and bifurcated metallic facing D, connected substantially in the manner and for the purpose specified.

118,116.—HYDRANT.—William H. Duffett, Rochester, N. Y.

Claim.—1. The movable head E, provided with a series of nozzles, G, each having its own water-way *g g* and cut-off valves L L, arranged and operating in connection with the barrel A, rod M, valve N, stop *s*, and trip-valve P, substantially as and for the purpose set forth.

2. In combination with the above, the elbow B, connected with the barrel A and provided with the cylinder C, in combination with the stem *b* and valve D, as set forth.

3. The barrel A, casing R, nozzles G G, valves L L, rod M, valve N, stop *s*, valve P, and cut-off valve D, all arranged as described, and operating in the manner and for the purpose specified.

118,117.—CASTER FOR SEWING-MACHINES. Frank Harper Duncan, Evansville, Ind.

Claim.—A caster, arranged for attachment to the foot of a sewing-machine stand, or other article of furniture, by means of two or more set-screws having heads which overlap and bind upon projecting portions of the said foot, all substantially as specified.

118,118.—CAISSON FOR SINKING PIERS.—James B. Eads, St, Louis, Mo.

Claim.—1. In connection or combination with a caisson for sinking piers of masonry or other material, the air-lock K placed at or near the bottom of the air-shaft G and partially or wholly within the air-chamber of said caisson, substantially as herein set forth.

2. The extensions A' of the caissons, substantially as and for the purpose set forth.

118,119. — PLOW.—Thomas Edmunds, Talcott, Va.

Claim.—The combination of the share A with guide or box *a*, and the point B with shank C and

rib *b*, all substantially as and for the purposes herein set forth.

118,120.—WASHING-MACHINE.—Robert E. Ferguson, Chicago, Ill.

Claim.—1. The tub A, provided with inside cleats or beaters, and hung in the hinged frame *ss* to be revolved therein with its axis of revolution inclined, substantially as and for the purposes described.

2. The folding frame, in combination with the inclined beater-tub, substantially as described, for the purpose specified.

3. In combination with the tub, the hollow chute or beater C, the plug D, and cover E, substantially as described, for the purpose specified.

4. The adjustable frame of the machine, consisting essentially of the upright portion B, hinged portion B^1, pivoted arms B^2, and bearing-pieces J P^1, as herein shown and described, for the purposes specified.

118,121.—FORK FOR HAY-ELEVATORS.—Benjamin G. Fox, Princetown, Pa.

Claim.—The combination of the retaining and releasing-lever D, hung to one of the jaws or bars of a fork for a hay-elevator, with a link, B, adapted to a pin, *i*, on the same bar, and attached to a rope, X, connected to the opposite bar, all substantially as specified.

118,122.—PRINTING-TELEGRAPH INSTRUMENT.—Robert H. Gallaher, New York, N. Y., assignor to "Gallaher Gold and Stock Telegraph Company," same place.

Claim.—1. In a printing-telegraph instrument, the method of operating the type-wheel and the printing-pad by means of an armature placed beneath the poles of an electro-magnet and of a connecting-rod or rods, moved upward thereby in line parallel or nearly parallel with the axes of the magnet, substantially as and for the purpose herein set forth.

2. The arrangement, within tubular electro-magnet cores, of longitudinally-vibrating armature-arms or connecting-rods, substantially as and for the purpose set forth.

118,123.—TABLE-SLIDE.—Mortimer Griffin, New York, N. Y.

Claim.—The square metallic disks C beveled on two of the corners and diagonally secured to the guides B B of the slides A A, substantially as and for the purpose set forth.

118,124.—WINDMILL.—James Hall, Ligonier, Ind.

Claim.—1. The combination of the pivoted wind-sail D *d*, adjusting-rod E, governor-weight F, pivoted lever G H, link *l*, and sail-spring P, the several parts being arranged and operating substantially as herein specified.

2. The combination of the sail-spring P, combined head-pieces *m n m*, links *l l*, bent levers G H G H, adjusting-rods E E, governor-weights F F, and sails D *d* D *d*, the several parts being arranged as shown, so that one sail-spring serves as part of the governing mechanism for two sails, substantially as herein specified.

3. The combination of the circular head Q on the slides *b b* with the wind-wheel A C D, having three or more pivoted sails, D *d*, each controlled by means of an adjusting-rod, governor-weight, pivoted bent lever, link, and sail-spring, the several parts being connected and arranged and operating substantially as and for the purpose herein specified.

4. The combination of the shipping-lever O, rod *r*, bent lever *q*, and links *s* with the slides *b b* and circular head Q, said head serving as a means of simultaneously operating the governing mechanism for the pivoted sails of a wind-wheel, and the several parts being arranged substantially as and for the purpose herein specified.

118,125.—HOUSEHOLD UTENSIL.—Herrick R. Halsey, La Fayette, Ill.

Claim.—An opaque vessel, A, adapted to household use, provided with a mouth, *a*, wide enough to permit a free view of the interior, and internal projections or flanges *b* to mark gradations of quantity, as set forth.

118,126.—ILLUMINATING INCENSE-BURNER.—E. Warren Hastings, Boston, Mass.

Claim.—1. A combined illuminator and incense-burner, as constructed with the lamp *i*, movable around the fulcrum *y* and over the inclined rail *o* inside the arm *a*, said lamp operated by the projecting pin *m'* moving through the curved slot *n* in a manner as set forth.

2. In combination with an illuminator and incense-burner, the protecting-shield *p*, cover *d* with its cup *f*, hole *g*, and fuse *h*, in a manner and for the purpose as herein fully shown and described.

118,127.—MARINE PROPULSION.—Benjamin S. Heath, Philadelphia, Pa.

Claim.—1. The paddles D and crank-shafts A, arranged and operated in connection with the stern of the boat or vessel, substantially as set forth.

2. In combination with the adjustable paddle D, the adjustable braces H G, substantially as set forth.

118,128.—ADJUSTABLE SCAFFOLDING.—Andrew J. Heavner, Pittsfield, Ill.

Claim.—1. The platform A, constructed as described, and combined with the posts B by means of the slides C and braces D, substantially as and for the purpose specified.

2. In combination with the platform A and posts B, constructed as described, the cords E and I, the shives *b* and F, the roller G, and the pulley H, substantially as and for the purpose shown.

3. In combination with the platform A, the posts B, and the elevating devices above named, the pawl K pivoted within said platform, and engaging with the ratchet-teeth *h* of the pulley H, substantially as and for the purpose set forth.

4. In combination with the platform A, the posts B, and the cords E, the studs E' (provided upon their peripheries with ratchet-teeth) and the spring-pawl L, substantially as and for the purpose shown and described.

5. The sections M, provided with the pivoted braces N, and combined with the platform and with the braces D, substantially as and for the purpose specified.

118,129.—HYDROCARBON STOVE.—Charles Hitchcock, Chicago, Ill.

Claim.—The combination, with the stove-body A having the side perforations D D' and the level water-bottom C, of the circular combustion-plates E', surrounded by the neatly-fitting cylinder-shields G, substantially as specified.

118,130.—HORSE HAY-RAKE.—Miron S. Holman and Cyrus S. Farrar, Armada, Mich.

Claim.—The ring G provided with projections *b c*, the spring-stops E F, and the lug H, all arranged relatively to each other, and in combination with a rake-head, A, handle D, and strap, by means of which the knee is secured to the rake-head, substantially as and for the purposes set forth.

118,131.—TOOL FOR PACKING VALVES.—James Edwin Hooper, Boston, Mass.

Claim.—In combination with a stop-valve, the ring *b*, having a slit or opening on one side, acting conjointly with the spindle and hand-wheel of the valve, as a device for packing valves, in a manner as shown and described.

118,132.—HYDROCARBON TORCH.—William K. Horner, Ypsilanti, Mich.

Claim.—The construction and arrangement of the extinguisher-case F F' and ball D with the supply-pipe E, cock C, and feunt A, as described.

118,133.—STEAM-ENGINE.—Amariah W. Jackson, Napoleon, Ohio.

Claim.—1. The sleeve C, open at both ends, fitted within a steam-engine cylinder, A, and operated by means of the friction of the piston D, all constructed substantially as and for the purposes herein set forth.

2. The combination of the sleeve C, open at both ends, and with openings A' A' with the cylinder A, provided with grooves *a a*, chamber *b*, bearings *d d*, and its passages and ports, and the piston D, all constructed and arranged to operate substantially as herein set forth.

118,134.—CORN-PLANTER.—John Jackson, Jr., Chatsworth, Ill.

Claim.—1. The screw *k*, arranged underneath the hopper, with an opening in the hopper bottom extending to its front, and of such a width as to permit the kernels to move singly along said opening or slot, substantially as described.

2. The hoppers F, pivoted at their front end and arranged to swing inward for the purpose of throwing the driving mechanism in and out of gear, substantially as set forth.

3. The combination of the screw *k* and the adjustable pinion *l* with the series of driving-cog-wheels G for regulating the feed, as set forth.

4. The hinged runners E, having the inclined tubes *b* attached to their rear ends, and all arranged to operate as set forth.

5. The tubes *b*, provided with the valves *p* having the rod *r* attached thereto, in combination with the movable pinion *u* provided with the pin or arm *w* and the driving-wheel *t*, all arranged to operate as set forth.

6. The runners E, hinged at their front ends to the frame and having their rear ends connected by the cross rod *d*, provided with the arm *f*, in combination with the standard *g*, arranged as described, whereby the runners can be raised and suspended independently of the hoppers, as set forth.

7. The marker *z*, having the arm *y* attached, with the pivoted lever *z*, arranged and operating as herein set forth.

118,135.—FENCE.—Lyman P. Judson, Rose, N. Y.

Claim.—A fence made with hoop or band-iron, in which the edges of the lengths are cut and formed into projecting spurs or barbs, as and for the purpose specified.

118,136.—GRIST-MILL.—Ernst C. L. Kunnecke, Dayton, Ohio.

Claim.—1. The combination and relative arrangement of the runner A, the crackers H and I, the pivoted lever F, and the regulating-screw G, substantially as and for the purpose specified.

2. The lever K pivoted within the standard E, and adjusted vertically by means of the screw L and the hopper M, in combination with the runner A and crackers H and I, substantially as and for the purpose shown and described.

118,137.—HARNESS-SADDLE.—William Leonard and William E. Leonard, Chelsea, Mass.

Claim.—The back-strap holding-piece D, with its slotted upper portion *d* and rivet *d'* at its lower portion, and the stiffening-plate C, when arranged as described and shown, to hold all the parts together by means of the turret E and screw-nut F at the upper end by means of rivet *d'* at the lower end, without other fastening, substantially as described.

118,138.—RUBBER BOOT.—Charles E. Line, Ashland, Pa.

Claim.—The arrangement, in a rubber boot, of vertical air-tubes A A' at front and rear having their external openings at or near the top of the leg, duplicate insoles B and sub-lining C provided with longitudinal and transverse air-passages *b b'* D D', and a lining having longitudinal and vertical corrugations, as and for the purpose specified.

118,139.—MACHINE FOR SHELLING CORN.—Henry Lippold, Silver Creek, N. Y., assignor to himself, Leroy Andrus, and George Haman, same place.

Claim.—1. The combination, in a corn-sheller, of the beater D and the elliptical shelling-case E, arranged as described.

2. The arrangement, with the beater D, of the elliptical case E, provided with polygonal interior surface and toothed plates *e* and intervening spaces *e'*, as hereinbefore set forth.

3. The combination and arrangement of the beater D and inclosing-case E, constructed as described, with the shaker H, sieve I, and pan K, as hereinbefore set forth.

118,140.—LADLE FOR POURING WAX.—Peter Loeb, Dayton, Ohio.

Claim.—The wax-ladle herein described, having two or more spouts, B, arranged as shown, and provided with the arched or dome-like caps D, having arched recesses *a'* extending upward and rearward from each spout, substantially as specified.

118,141.—WRENCH.—Allen P. Lord, Friendship, N. Y., assignor to himself and James E. Wisner, same place.

Claim.—In combination with the adjustable bar E, the jaw D, when connected to said bar by the slot *l* and pivot *k*, and the spring M when connected to the bar E, as described, to hold the slotted jaw either open or closed, as herein shown and described, for the purpose specified.

118,142.—COTTON-PRESS.—Ransom Mauldin, Marietta, Miss.

Claim.—1. The combination and arrangement of the shaft *m*, pawls *n'* and *n''*, ratchet *n*, pinion-wheel *o*, drum *p*, clutch-collars *q* and *q'*, and cog-rail E, all constructed substantially as and for the purpose set forth.

2. In combination with the subject-matter of the first claim, a follower-block, consisting of side frame-piece *l* and F, rollers K' and K'', and block K, for the purpose specified.

118,143.—STEAM-PLOW.—Herman Miller, Bellville, Tex.

Claim.—In a steam plowing apparatus, the arrangement of the chain-wheel *j*, sheaves *l* and *m*, spur-gear *h*, pinion *g*, crank-shaft *e*, sliding pinions *b*, and internally-toothed wheels B *a*, as shown and described, whereby they are adapted to operate in connection with the chain fastened at each end outside the machine, as set forth.

118,144.—WINE AND CIDER-PRESS.—Thomas M. Millett, Jr., Savannah, Ga.

Claim.—The combination, in a wine and cider-press, of the perforated hollow false sides B C D and bottom E with the press-board F and shaft G, when all are constructed and operate substantially in the manner and for the purpose specified.

118,145.—RUFFLING AND CORDING ATTACHMENT FOR SEWING-MACHINES.—Milton J. Palmer, Syracuse, N. Y.

Claim.—1. The ruffling-plate E, constructed as described, hinged to the bed-plate A having a guiding-edge, and arranged and operating as and for the purposes set forth.

2. The corder *w*, having one or more cord-channels *c c'*, *c c''*, or *c c'''*, in combination with the double tongue C C', for the purposes set forth and described.

3. The combination of the spring-fingers B D, intermediate tongue, and cording device with the bed-plate A provided with the guide H.

118,146. — MACHINE FOR BRUSHING AND FINISHING LEATHER.—George H. Parker, Detroit, Mich.

Claim.—In a leather-finishing machine, the construction and arrangement of the frame A, sliding table D, roller E, and journal-boxes a, for the reception of the brush-roll B or cloth-covered finishing-roll C, as and for the purpose set forth.

118,147.—EXTRACTING MERCURY FROM ITS ORES.—Adolph Patera, Vienna, Austria.

Claim.—1. Employing, for the extraction of mercury from mercurial ores, a muffle or pipe heated from the exterior and having one end open for the access of air, while the other end is connected with means for condensing the vapors evolved, the whole constructed essentially as described, and essentially for the purpose of excluding the mercurial ores and vapors from contact with the fuel and products of combustion, and of preserving a regulated temperature.

2. Employing, in connection with a muffle or pipe constructed substantially as described and for the purpose aforesaid, any kind of device for producing a draught of air through said pipe and condensing devices, essentially as described.

3. Employing, in the extraction of mercury from mercurial ores by the process and means described, a temperature slightly exceeding 360° centigrade, but not exceeding 500° centigrade, substantially as and for the purpose described.

4. Employing, in the extraction of mercury from mercurial ores by the process and means described, the ore in the form of coarse powder to enable the distillation to take place at the lowest possible temperature.

118,148. — SPOKE-LATHE. — Josiah Pierce and Augustin B. Curtis, New Haven, Conn.

Claim.—1. In combination with the transverse table F and its mechanism for supporting and revolving the spoke, and the cutters, the longitudinal table W, to which a longitudinal movement is imparted by connecting the said table W with the cam T^3, substantially in the manner specified.

2. In combination with the cam T^3 and its coupling mechanism, and the tables F and W, the lever L, connected both to the table F and coupling mechanism, whereby the operator is enabled to impart both a longitudinal and transverse movement to the table F.

118,149.—ICE-CREAM FREEZER.—Albert L. Platt and Isaiah White Wilmeth, Bloomington, Ill.

Claim.—1. In combination with a cylinder, H, and boxing A, the movable head J beveled on its circumference, as described, cross-bar M, and screw-sleeve *f*, all constructed substantially as and for the purposes set forth.

2. The combination, with the box A, of the horizontally-revolving cylinder H, stationary shaft *e* with beaters and scrapers K, movable head J, bar M, and screw-sleeve *f*, all constructed, arranged, and operating substantially as set forth.

118,150.—SLATE-WASHER. — Frederick W. Porter, Winona, Minn.

Claim.—The blackboard-cleaner, having the conical cup A with projecting flange *b* and perforated bottom B, sponge *b'*, cap D, rod E, and valve F, arranged substantially as and for the purpose specified.

118,151. — PROPELLING MECHANISM FOR VESSELS.—Ebenezer Raynale, Birmingham, Mich.

Claim.—In an engine for propelling canal-boats and other vessels, the combination of a water-cylinder, C, open at both ends, a steam-cylinder, B, open at one end, and the mechanism for aiding the steam in forcing the piston in the proper direction for propelling the boat, the parts being constructed and arranged substantially as set forth.

118,152. — MAGAZINE FIRE-ARM. —Joseph Rider, Newark, Ohio.

Claim.—1. In combination, a magazine, a carrier for transferring the cartridge from the magazine to the barrel, and a breech-piece and hammer arranged to operate at one movement by means of a thumb-piece, substantially as set forth.

2. In combination with a magazine and breech-piece and hammer arranged to operate at one movement by means of a thumb-piece, a carrier, which transfers a cartridge from the magazine to the barrel, and at the same time expels the shell of the discharged cartridge, substantially as set forth.

3. A breech-piece, constructed with a slot or recess, combined with and arranged to receive the carrier, and also the hammer, substantially as set forth.

4. A breech-piece which has both a vertically-reciprocating and oscillatory motion, and provided with a thumb-piece, by which it is operated from above, in combination, in a magazine arm, with the carrier, substantially as set forth.

5. In combination with a recessed breech-piece, a thin carrier, arranged to be received in the recess in and operated by the breech-piece, substantially as set forth.

6. In combination, the breech-piece and a carrier, constructed with two beveled surfaces for throwing up the carrier with the backward movement of the breech-piece, and throwing it down with the forward movement of the same, substantially as set forth.

7. A carrier, constructed with a recess to receive the cartridge from the magazine, and an arm or spring to bear against the base of the cartridge remaining in the magazine when the carrier is thrown up, and also to permit the charges to be inserted through the receiver and hold them in position in the magazine after they are thus inserted, substantially as set forth.

8. In combination with the retractor, a breech-piece having a recess to receive a pin on the retractor and admit of two movements of the breech-piece, substantially as set forth.

9. A breech-piece, constructed with a beveled surface, acting in combination with the stirrup-lever and spring to raise the breech-piece, substantially as set forth.

10. In combination with the breech-piece C and hammer, a spring, which is arranged to perform the double function of raising the breech-piece and bringing down the hammer, substantially as set forth.

11. The combination of the spring-stirrup and stirrup-lever with the tumbler, pivoted in relation to each other, substantially as set forth.

12. The arrangement of the projections upon the trigger and breech-piece in such relation to each other that the breech-piece may be raised by the positive action of the trigger, substantially as set forth.

13. The breech-piece, trigger, and sear, arranged as shown in relation to each other, so that the former cannot act upon the latter until the breech-piece has been raised to its proper position for the explosion of the cartridge, substantially as set forth.

14. The arrangement of the exploding-pin or point on the face of the hammer in such relation to the hole in the head of the vertically-reciprocating and oscillating breech-piece, through which the former so acts on the fulminate that the pin or point cannot be brought in contact with the cartridge unless the breech-piece is raised to its proper position, substantially as set forth.

15. A trigger, constructed with a recess to receive the carrier, and in combination therewith, substantially as set forth.

16. A web, A', constructed substantially as described, to support the plates of the handle and the carrier, and at the same time so as not to interfere with the action of the breech-piece and hammer, and used in combination therewith, substantially as set forth.

17. In combination with a magazine fire-arm, the carrier G, the upper surface of the lower arm of which, or of the arm which is next to the spring, has a convex or double-beveled surface for allowing the charge to assume a horizontal position when brought opposite to the aperture in the barrel, substantially as shown.

118,153, antedated August 4, 1871.—TOBACCO-ELEVATOR.—Reps. O. Robertson, Barnesville, Va.

Claim.—The combination and arrangement of the frame A, windlass B B, frame C E, adjustable legs D D, ropes h h, frame G, pulleys *k k*, connecting-chain n, clamps m m, and stick I, all as shown and described, and for the purposes herein set forth.

118,154.—NOZZLE FOR LIQUID-PACKAGES.—Henry H. Rogers, Brooklyn, N. Y., assignor to "Charles Pratt Manufacturing Company," New York city.

Claim.—1. A nozzle or top for liquid-packages having within it a fixed discharge-spout, substantially as described, for the purpose specified.

2. A nozzle or top for liquid-packages provided with an interior discharge-spout composed of fixed and detachable sections, substantially as described, for the purpose specified.

118,155.—SCREW-NOZZLE FOR LIQUID-PACKAGES.—Henry H. Rogers and George F. Walter, Brooklyn, N. Y., assignors to "Charles Pratt Manufacturing Company," New York city.

Claim.—The metallic nozzle provided with the screw-valve, the discharge-spout, and an air-vent, in combination with the exterior sealed cap M, substantially as described, for the purposes specified.

118,156. — FENCE. — John Rohrer, Springfield, Ohio.

Claim.—The rails a a and posts *b* and *b'*, constructed of angle-shaped rolled iron of uniform size, and secured together by splitting and turning back a portion of the rails, as shown, and then bolting them to the posts, substantially as and for the purpose set forth.

118,157, antedated August 4, 1871.—DEVICE FOR FASTENING NECK-YOKES TO POLES. Titus H. Russell, Lebanon, N. H., assignor to himself and Henry C. Mahurin, New York city.

Claim.—The slotted casting B, tongue C, lever D, and pin *b*, all constructed and arranged as shown and described, in combination with the recessed and mortised pole A and the ring E, substantially as and for the purposes herein set forth.

118,158. — MACHINE FOR BURRING AND CLEANING WOOL, &c.—Charles G. Sargent, Graniteville, Mass.

Claim.—1. The feed-rolls B B, constructed and operated as described, so that one shall revolve faster than the other, as set forth.

2. The removable screen L, arranged over the picker-cylinder, in combination with a slide or register, by which the draught of air through said screen may be regulated, substantially as described.

3. In combination with a burr-cylinder, the two guards F F' and the shield V, arranged to operate substantially as described.

4. The pivoted finger-rack or support W, constructed and arranged for operation substantially as and for the purposes set forth.

5. The supply-roller Z located in an oil-reservoir, in combination with the scraper *a* and rotating brush *b*, all arranged to operate substantially as described.

118,159.—CULTIVATOR.—Samuel B. Shank, Millersville, Pa.

Claim.—The cultivating devices K and P, shown in Fig. 3, in combination with the frame, consisting of the outer side pieces A A and inner beams B B, all pivoted to the front bar F, and made obliquely adjustable by means of the curved slots in the bar E, and fitted to receive either set of cultivating devices, as shown.

118,160.—SPEED-RECORDING APPARATUS.—Edward F. Sheltman, Christiansburg, Va.

Claim.—1. A record-paper or strip, A, mounted upon reels *a a'*, in combination with clock-work B to move it continuously forward, clock-work C to regulate its movement to correspond with the time of day, and a marker or markers to indicate upon it the speed, movements, or stoppages of the car or other vehicle or machine, substantially as described.

2. A record-paper or strip, A, in combination with actuating mechanism B, regulating chronometer mechanism C, and a shifting-guide, G, for adjusting the paper laterally, substantially as herein described.

3. The combination of a marker, D, to indicate by a peculiar mark the forward movement of the car or machine with another marker, D', to indicate by a different mark the backward movement of the car or machine, when connected by any suitable apparatus, W W', *p*, p^1, &c., with the axle-wheels or other running-gear of the vehicle or machine, so as to operate substantially as herein set forth.

4. The pulleys and belts *p*, p^1, p^2 &c., which connect the car-axle and the shaft T, as herein set forth, in combination with said shaft T, and with the pulley *t*, the wheels W W', the ratchet and pawls or friction-clutch, the spring or cams *s s'*, and the markers D D', substantially as herein described.

118,161. — SCHOOL-DESK. — James Smith, Richmond, Ind.

Claim.—1. An adjustable-backed desk, combining in its construction a stationary part and adjustable part, springs, and adjusting-studs or screws, substantially as and for the purpose set forth.

2. In a school desk, the combination of the connected frames A A, the bar D for rigidly connecting two or more desks, and the folding seats C C, which turn at one end in the frames A A, respectively, and at the other ends upon studs C' C' secured to the bar D, substantially as set forth.

118,162. — WASHING-MACHINE. — Samuel Smith, Bourbon, Ind.

Claim.—The adjusting-lever C, in combination with the sliding standards K K, swinging corrugated rubber-board A, and stationary rubbing-board B of the tank E, constructed as described, for the purpose set forth.

118,163.—TOILET-BOTTLE FOR TOOTH-POWDERS.—Warren A. Spalding, Waterbury, Conn.

Claim.—As a new and improved article of manufacture, a toilet-bottle constructed with a cup or cavity, B, for a brush, upon which the powder is distributed for use, substantially as and for the purposes set forth and specified.

118,164.—HAY-PRESS.—Adam Spanier, St. John, Ind.

Claim.—1. The follower M, with beveled guides *b b*, sliding upon the plate L, substantially as and for the purposes herein set forth.

2. The combination of the levers P P', connecting-bar R, pawls *c c'*, ratchet or toothed bar K, and follower M, all constructed and arranged to operate substantially as and for the purposes herein set forth.

118,165.—DEVICE FOR DRAWING IRON FROM HEATING-FURNACES.—William Stephens, New Albany, Ind.

Claim.—The device herein described for drawing

iron from heating-furnaces, consisting of the shaft D with drum c, clutch b, lever d, chain e, pulleys f f, swivel-pulley h, and tongs G, all constructed and arranged to operate substantially as and for the purposes herein set forth.

118,166.—LIGHTNING-ROD.—George A. Stephenson and Oliver L. Sutliff, Wooster, Ohio.

Claim.—The within-described joint for lightning-rods, consisting of the right-and-left-hand screw B, ferrule C, and pin D, constructed and arranged substantially as and for the purposes herein set forth.

118,167.—SAFETY-BRIDGE FOR RAILWAY-CARS.—Eli Sturgeon, Columbiana, Ohio.

Claim.—In a safety-bridge, the railings E, consisting of the slide-bars a a, vertically pivoted, and the heel-posts F F, horizontally pivoted, all substantially as herein shown and described.

118,168.—LIFE-PRESERVER.—James E. Thomson, Buffalo, N. Y., and Elijah Clark, Louisville, Ky.

Claim.—The cork C C C, when impregnated or saturated with asphaltum, constructed and arranged substantially as described and for the uses and purposes set forth.

118,169.—MOLD FOR FINGER-RINGS.—George W. Tinsley and Ebenezer W. Storer, Minneapolis, Minn.

Claim.—The yielding core B, made of metal or other suitable material, in combination with a flask or mold, A A', for finger-rings, all constructed and arranged substantially as and for the purposes herein set forth.

118,170.—CHANGEABLE-GAUGE CAR-WHEEL AND AXLE.—Charles D. Tisdale, Boston, Mass.

Claim.—The combination of the sliding wheel b, the chock f, the chock-operating key or shaft k, bit i, and the axle-slots d e, when the key is located in the hub or hub-sleeve c, and is wholly inclosed by such hub or sleeve, except at its head, as shown and described.

118,171.—BREECH-LOADING FIRE-ARM.—Joseph B. Wayne, Birmingham, England.

Claim.—1. The spirally-grooved rotary cam E and retractor F, arranged substantially as described, the said cam being operated by the opening of the breech-block D, as and for the purpose set forth.

2. The arrangement of the latch-bolt d, spring e, latch-socket f, the boss b on the rearmost bracket B, constructed and operating substantially as and for the purpose set forth.

118,172.—FIRE-ESCAPE.—Edwin Robert Wethered, London, England.

Claim.—The combination, with the frame a and its system of pulleys, of the brake-lever f, arranged, as described and shown in Figs. 1 and 2, so as to gripe the cord by force of the weight of the person or body suspended therefrom.

118,173.—MACHINE FOR THROATING SPOKES.—Jacob Woodburn, Indianapolis, Ind., assignor to "Woodburn 'Sawen' Wheel Company," same place.

Claim.—1. In combination with the carriage for carrying and cutter for dressing spokes, the rocking-table L, made to operate substantially in the manner and for the purpose specified.

2. In combination with the rocking device for the support of the spoke on the carriage, the lever E upon the post S, as and for the purpose specified.

118,174.—PROCESS FOR CASTING BRASS INGOTS.—Letsome T. Wooster, Ansonia, Conn.

Claim.—The method herein described for casting ingots by means of a flask constructed in the manner herein set forth.

118,175.—STALK-CUTTER.—Edgar Alfred Wright, Fort Madison, Iowa.

Claim.—The frame E F N, carrying the cutter K I' I hinged directly to the short arms of the arched axle B C by suitable connections so that the stalk-cutter apparatus may be readily removed and walking-cultivators attached, substantially as described.

118,176.—STEERING APPARATUS.—Emanuel S. Drew, New Orleans, La.

Claim.—1. The drum C and tiller-disk H of uniform diameters, and so connected by tiller-ropes as to act substantially as described.

2. The drum C, lever D, either with or without its spring-pawl attachment, ropes F F, tiller-plate H, and rudder L, when the same are so combined and arranged as to operate substantially as described.

3. The drum C, lever D, spring-lever pawl D^1 D^2 E^1, and ratchet-segment b, when the same are so connected with the tiller-ropes of a steering apparatus as to operate the same, substantially as described.

REISSUES.

4,512.—STEAM-GENERATOR.—George H. Babcock and Stephen Wilcox, New York, N. Y., assignors to George H. Babcock and Joseph P. Manton.—Patent No. 65,042, dated May 28, 1867.

Claim.—1. The within-described safety-boiler, composed of cylindrical vessels connected at the ends substantially as represented, so that the water and steam shall separate in the upper cylindrical vessels or top connection, the dense water descend and pass thence in inclined pipes through the furnace and ascend again in suitable connections at the other end, to repeat the round of circulation indefinitely, in combination with the bridge L', as represented, for compelling the hot products of combustion to traverse upward and again downward through the interstices between the inclined pipes B, all substantially as and for the purposes herein set forth.

2. A steam-generator made up of sections of pipes, each of the several sections being composed of a series of inclined pipes, B, and a series of horizontal pipes, D, united at the ends by distinct side pipes appropriate to each section, the several sections, when arranged side by side and connected, forming an intermediate combustion-chamber, A, and operating to cause a constant circulation of the water through the pipes in one direction, substantially as described.

3. In combination with the series of horizontal pipes D, the series of upright connecting-pipes D', for the purpose of allowing the steam, as formed, to separate from the water and rise to the discharge-aperture, arranged substantially as described.

4. The flanges L', fixed crosswise to the axes of the water-pipes B, and matched together to form partitions crossing the same, as specified.

4,513.—AUTOMATIC SIGNAL-BOX FOR FIRE-ALARM TELEGRAPHS.—Moses G. Crane, Newton, and Edwin Rogers, Boston, Mass., assignors, by mesne assignments, to Gamewell & Co., New York city.—Patent No. 92,275, dated July 6, 1869.

Claim.—1. The combination of the circuit-wheel d, shaft e, pinion f, vibrating gear-sector i, driving-

shaft l, mechanical motor n, and winding-lever m, said gear-sector meshing directly into the pinion f, substantially as and for the purpose specified.

2. Limiting the rotation of the main driving-shaft of an automatic fire-alarm apparatus in either or both directions by means of fixed stops acting in combination with the gear-sector on said shaft for the purpose of limiting the length of the fire-alarm given by such apparatus.

3. In combination with the weighted lever and the gear-train, operated by the lever, a spring or series of springs interposed between the weight and the rotating gears, substantially as described.

4. In combination with the gear-train and an escapement and pallet connected thereto, a reciprocating fly, placed directly on the pallet-shaft, substantially as described.

5. In combination with the setting-lever a^2 and the slot through which the finger-piece of the lever traverses, the stationary guard-plate g, substantially as described.

6. In combination with the lever a^2, the swinging or spring-lifter c^3, substantially as shown and described.

7. In combination with the weighted lever, the slide-pin b^2, so arranged that while it may be actuated by the lifter whenever the signal is not being transmitted, it cannot be operated while the signal is in course of transmission.

4,514.—RAILWAY STOCK-CAR.—John S. Kendall, St. Louis, Mo., assignor, by mesne assignments, to The National Cattle-Car Company, Salem, Ohio.—Patent No. 90,851, dated June 1, 1869.

Claim.—1. The troughs hinged to the side of the car so that they can be turned down out of the way when not in use, substantially as herein described.

2. The combination, in a railway stock-car, of a trough with a supply-pipe arranged outside of the car so as to be out of reach of the stock, substantially as hereinbefore set forth.

3. The combination, with a railway stock-car, of troughs divided by the door-ways, and supply-pipes passing around the door-ways, substantially as hereinbefore set forth, to supply the troughs without obstructing the door-ways.

4. The combination, with a railway stock-car, of the staples, the rings sliding on the staples, and the fastening-chains, these members being constructed and operating substantially as hereinbefore set forth, to prevent the cattle from rearing or lying down, while leaving them free to move comfortably.

4,515.—STILL FOR HYDROCARBONS.—Charles Lockhart and John Gracie, Pittsburg, Pa.—Patent No. 80,294, dated July 28, 1868.

Claim.—1. In combination with an upright still, a series of fire-chambers radially arranged around and under the still, such chambers converging to a central smoke-chamber connecting with a flue or chimney, substantially as described.

2. The combination of a series of fire-chambers arranged radially around and under the still, with a central flue or chimney passing up the center of the still, substantially as hereinbefore described.

3. The arrangement of the scraper-wheel 7 with the central smoke-flue of the still, so that the latter may form the journal or bearing of the former, substantially as hereinbefore described.

4. The arrangement of the pipe e opening into the still, the pipe g extending below the pipe e into the still and furnished with a valve, g^2, and an exit-pipe, f^2, substantially as and for the purposes described.

4,516.—MACHINE FOR MANUFACTURING AUGER-BITS.—James Swan, Seymour, Conn. Patent No. 78,769, dated June 9, 1868.

Claim.—1. The combination of the clamping-jaws B and the stationary or female dies formed therein—the die J to operate in conjunction with said stationary dies to bend, compress, and draw the lips of the blank; mechanism to impart to die J reciprocating rotary movements upon its axis; mechanism to force said die J gradually and rectilinearly up to and against the auger-bit, and the spring or its equivalent to suddenly force said die away from said bit—the combination being such as to effect the operations here ascribed to it in the manner substantially as hereinbefore described.

2. The combination of the arbor H and supporting and guiding-frame; mechanism to impart to said arbor a rectilinear and also a rotary movement; the spring I arranged as described to impart to said arbor reciprocal rectilinear and rotary movements in opposite directions; the die J, the clamping-jaws B, and the stationary or female-bit swaging-dies upon or within said jaws B.

3. The combination of cam N, rotating-wheel K having vertical pin d, arbor H having horizontal pin e, the hub d' having pin f, and the hollow standard G having pin g, all arranged substantially as described to turn the stock d' exactly one quadrant of a circle and no more.

4,517.—MACHINE FOR BENDING THE LIPS OF AUGER-BITS.—James Swan, Seymour, Conn.—Patent No. 100,816, dated March 15, 1870.

Claim.—1. The combination, with jaws for holding the blank, of an operating former consisting of a pair of rolls, each suitably molded in the face and edge, and mechanism to rotate said rolls separately, to partially revolve them together around a common axis, to impart to them rectilinear movements toward and from the holding-jaws, and movements of approach and recession toward and from one another, substantially as described.

2. The combination, with the holding-jaws r, of the rotary forming-rolls C and mechanism to impart to said forming-rolls rectilinearly reciprocating movements toward and from the jaws, substantially as specified.

3. The combination, with the holding-jaws s, of the rotating forming-rolls C and mechanism to impart to said forming-rolls rectilinearly reciprocating and oscillating movements, substantially as described.

4. The combination, with the holding-jaws s, of the rotary forming-rolls C, the yielding bearings and supports of said rolls, mechanism to impart to said rolls rectilinear reciprocating movements toward and from the jaws, and the guide-yoke R, as specified.

5. The combination, with the holding-dies s, of the rotary forming-rolls C, movable platform S, cam T, and springs W, as specified.

6. The combination, with the holding-jaws s, of the right-and-left-handed screw to equally and simultaneously move said jaws to clamp and unclamp the blank and the rotary forming-rolls C, as specified.

7. The combination, with the holding-jaws s, of the horn-like projections s, of the form described and shown, attached to and projecting from said jaws, as specified.

DESIGNS.

5,197.—BARN-DOOR HANGER.—Pascal P. Child, St. Louis, Mo.

Claim.—The design for barn-door hanger, substantially as shown and described.

5,198.—CARPET.—George Crompton, Worcester, Mass., assignor to Crompton Carpet Company, same place.

Claim.—The design for a carpet, as shown.

5,199.—CARPET.—George Crompton, Worcester, Mass., assignor to Crompton Carpet Company, same place.

Claim.—The design for a carpet, as shown.

5,200.—CORNER-PIECE FOR ROOMS.—Charles A. Durgin, East Andover, N. H.

Claim.—The design for a corner-piece for rooms,

stairs, &c., of corrugated sheet metal, substantially as shown in the accompanying drawing.

5,201.—HOE.—Cyrus Fisher, Canton, Mass., assignor to himself and Tobias Kohn, Hartford, Conn.

Claim.—The design for a hoe, as shown.

5,202.—PAPER-WEIGHT.—George B. Garrett, Philadelphia, Pa.

Claim.—The design for a paper-weight, as shown.

5,203.—STAIR-ROD FASTENING.—William B. Gould, New York, N. Y.

Claim.—The design for a stair-rod fastening, consisting of a barrel, A, provided with a conical end and perforated ears, as shown.

5,204.—TONGUE-SUPPORT.—Joseph Keller, Laury's Station, Pa.

Claim.—1. The design for a support for tongues of harvesters, &c., as herein set forth and shown.

2. The shape or conformation of the clevis D, as and for the purpose set forth.

3. The shape or conformation of the bearing C with the piece or support *c*, as and for the purpose set forth.

4. The shape or conformation of the clevis D, formed with the journal *d*, as and for the purpose set forth.

5. The shape or conformation of the bearing C, as and for the purpose set forth.

5,205.—CARPET PATTERN.—Hugh S. Kerr, Philadelphia, Pa., assignor to Israel Foster, same place.

Claim.—1. The design for the member A, as described and illustrated.

2. The design for the member B, as shown and described.

3. The design for the members C, as described and represented.

4. The design for the whole pattern, including the members A B, and C, and minor ornamentation.

5,206.—JELLY-GLASS.—William M. Kirchner, Pittsburg, Pa.

Claim.—A design for jelly-glasses, as described and shown.

5,207.—REED-ORGAN PIPES.—Charles Edwin Snell, Chatham, Canada.

Claim.—The design for resonant pipes or tubes, as described and shown.

5,208.—SADDLE-HOOK FOR HARNESS.—Oscar Wiener, Newark, N. J.

Claim.—The design for saddle-hook, consisting of the portion A and arm B, as herein shown and described.

TRADE-MARKS.

422.—CURTAIN-FIXTURE.—Silas S. Putnam, Boston, Mass., assignor to S. S. Putnam & Co.

423.—MEDICINE.—Edwd. S. Sharp, Salem, N. J.

ISSUE OF AUGUST 22.

PATENTS.

118,177.—MANUFACTURE OF PAPER AND PAPER-PULP.—John M. Allen, Marion, Mass.

Claim.—1. Pulp or paper made of the bark of coniferous trees from which the resin has been wholly or almost wholly extracted.

2. Extracting the resin from the bark of coniferous trees by the process above described.

118,178.—TWIST-DRILL.—Benjamin Arnold, East Greenwich, R. I.

Claim.—A twist-drill, with slots or grooves made in its shank, substantially as herein set forth, as a new article of manufacture.

118,179.—MACHINE FOR SLOTTING THE SHANKS OF TWIST-DRILLS.—Benjamin Arnold, East Greenwich, R. I.

Claim.—1. The combination of the cutters *c c c*, arbors *g g g*, bevel-gear wheels S S S S, with the carriages V V and plate B, substantially as specified, and for the purpose herein set forth.

2. The combination of the worm-wheel *y* with the plates D B and the carriages V V and *c c c*, and arbors *g* with gear-wheels S' S', all being arranged and operating substantially as and for the purpose set forth.

3. The combination of the carriages *c c* and V V with the plate B and movable plate D, the latter being provided with slots *r r*, substantially as described, and for the purpose set forth.

118,180.—READING AND DRAWING-CASE.—William F. Baade, Buffalo, N. Y.

Claim.—1. The case D, having a slide-way, Q, for the rule, and opening and slide-way formed, as shown at O and P, for receiving the slate and cards, so that said cards may be easily reached or withdrawn, substantially as described.

2. The sliding screens M, arranged substantially as and for the purposes described.

118,181.—TILT-HAMMER.—Hugh Baines, Toronto, Canada.

Claim.—1. The combination of the hammer-helve B, shaft 2, cam C, the vertically-adjustable bearings E E, guides F F, links N N, and weighted levers L M, with any suitable mechanism for catching and holding the bearings at different vertical points, substantially as and for the purpose specified.

2. The combination of the hammer-helve B, shaft 2, cam C, vertically-adjustable bearings E E, guides F F, hinged upright bars G G, friction-wheels D D, links N N, weighted levers L M, and any suitable mechanism for forcing the bars G G against the friction-wheels, substantially as and for the purpose specified.

118,182, antedated August 18, 1871.—PRINTING-PRESS.—William L. Balch, Boston, assignor to William H. Golding and Edward H. Dennison, Chelsea, Mass.

Claim.—Actuating both the platen and the ink-roller frame from lever M by means of links I G, combined substantially in the manner described.

118,183.—ARRANGING STEAM AND WATER-PIPES IN AN EXHAUST-CHAMBER.—John Becker, Chickies, Pa.

Claim.—The arrangement of the steam and water-pipes S W within a trunk or elongated exhaust-chamber T, substantially in the manner and for the purpose described.

118,184.—CAR-COUPLING.—William C. Bibb, Morgan county, Ga.

Claim.—The trigger T, constructed as shown and described, having the opening S and lip C pivoted in front of the pin-hole, and operating substantially as and for the purpose hereinbefore set forth.

118,185.—MACHINE FOR SHAPING THE SOLES OF SHOES.—Elias Blaney, Marblehead, Mass.

Claim.—1. In a machine for shaping the soles of shoes, the devices shown and set forth, by which the last is reciprocated alternately under the former and out toward the front of the machine, substantially in the manner and for the purpose described.

2. The combination of the screw-shaft F with the clutch L and pulleys I I, operating in the manner substantially as and for the purpose specified.

3. In a machine for shaping the soles of shoes, the sliding piece *e*, for the purpose of guiding the traversing-fork *e*, substantially as set forth.

4. The sliding socket C, made adjustable by means of the movable piece *n*, for the purpose set forth.

118,186, antedated August 8, 1871.—CULTIVATOR.—Bengt C. Blomsten, Wanpaca, Wis.

Claim.—The cultivator described, provided with the elastic side beams formed of a single metallic bar bent as described, and central beam united to the side beams by the connections described, each beam having standards provided with a longitudinally-adjusting brace-rod, the parts being combined and arranged as and for the purpose set forth.

118,187.—SCHOOL-DESK AND SEAT.—Alrick M. Bodwell, Ann Arbor, Mich.

Claim.—1. In a school-seat and desk, the construction and arrangement of the braces F and links G with relation to the brackets D and standards A, as and for the purpose set forth.

2. The arrangement of the rubber cushions H in the brackets D with relation to the braces E, as described, for the purpose specified.

118,188.—MACHINE FOR CRUSHING CORN.—Aaron Bolander, Akron, Ohio.

Claim.—1. The combination of the revolving knives F with the roller G and the plate I, substantially as described.

2. The combination of the rollers B P with the knives F, the roller G, and plate I, all arranged and operated substantially as above described.

118,189.—MOLE-TRAP.—Daniel Boswell, Greencastle, Ind.

Claim.—The combination of the sills A with tapering sides, standards B, cross-beams C and D, the latter serving to guide the spikes of the drop-beam E, standards E', trigger *a* with its connecting-wire, trigger *b*, and trigger *c* with bar-plate *d*, all constructed and arranged as described.

118,190.—SHUTTER-WORKER.—Charles M. Brown, Chicago, Ill.

Claim.—1. The cam *d*, in combination with the case B C, universal joints H H, &c., and shutter F, when made as and for the purposes hereinbefore specified.

2. A case made of two parts, B and C, in combination with a series of universal joints or their equivalent, and cam *d*, when made in the manner and for the purposes hereinbefore specified.

118,191.—COMBINED FIRE AND BURGLAR-ALARM.—Henry Lewis Brower, New York, N. Y., assignor to Charles D. Fredericks, Summit, N. J.

Claim.—The combination, in one portable instrument, of the sound-generator with its actuating mechanism, the detent constructed to be actuated by a thread, and the thermometric indicator, substantially as before set forth, the whole constituting a compound fire and burglar-alarm.

118,192, antedated August 21, 1871.—VAPOR-BURNER.—Coolidge B. Brown, Placerville, Cal.

Claim.—The regulating-screw *g*, in combination with the hollow conical plug *d* with its communicating-hole *e*, substantially as and for the purpose set forth.

118,193.—LAMP-BURNER.—George E. Brush, Danbury, Conn.

Claim.—The wick-tubes I I, arranged in a line with and inclined toward each other, and having their upper portion flattened and the lower portion bent into a horseshoe-form, in combination with the plate D provided with the cones C C, and plate F provided with air-chambers N N, all arranged as described and shown.

118,194.—OIL-CAN.—James Burson, Yates City, Ill., assignor of one-half his right to Henry Whitall.

Claim.—1. The improved oil-cup for machinery, consisting of the inverted oil-can H, the sponge-regulator S, and the adjuster S', all combined and arranged substantially as specified.

2. The sponge-holder, constructed and connected to the adjuster S', substantially as specified.

118,195.—HOT-AIR FURNACE.—Ferdinand E. Chatard, Jr., Baltimore, Md.

Claim.—1. The series of flues C, one side of which is formed by the outside surface of the fire-pot and dome, when constructed and arranged to operate substantially as shown and described.

2. The arrangement of water-tank within the cast-iron jacket, with space between the water-tank and cast-iron for the passage of the products of combustion.

3. The outer jacket of thin metal or other material, which directs the current of air and keeps it in contact with the heating-surfaces and forces it over the water-tank.

4. The combination of center-supporting or shaker-bar for the grate with the lateral supporting-bars, substantially as and for the purposes hereinbefore set forth.

118,196.—POST-HOLE AUGER.—Alfred R. Clark, Albia, Iowa.

Claim.—As a new article of manufacture, the semi-cylindrical blade C contracted at its lower end into a pod-shape, having the shank B and handle A attached, as described.

118,197.—STEAM-GENERATOR.—Orlando Clarke, Rockford, Ill.

Claim.—1. The upright cylindrical fuel-magazine C, having air-tubes or flues *h*, in combination with the conical or flaring section C', in the manner and for the purpose shown and described.

2. The conical or flaring section C', made in halves or two upright parts and joined together in the manner and for the purpose described.

3. The revolving cap B, having opening *a''*, hinged door *a'*, or sliding plate and fuel-chute *e*, in combination with the magazine C and section C', in the manner and for the purpose described.

4. The revolving cap B, having opening *e'* and hinged door *e*, in combination with the fire-flues *d* in top or section A^4 of the steam-generator, in the manner and for the purpose described.

5. The steam-generator herein described, composed of the several sections A', A'', A^3 and A^4 with their fire-flues *d* and water and steam-spaces *c*, in combination with the revolving cap B, with fuel-chute *e*, magazine C, and section C', in the manner described.

118,198.—CROSSCUT-SAW.—William Clemson, Middletown, N. Y.

Claim.—A saw, having the scoring-teeth *a* and *a'*, and pairs of clearing or ripping-teeth *b* and *b'*, constructed and arranged with relation to each other as herein described and shown.

118,199.—ELECTRO-MAGNETIC BURGLAR-ALARM.—George E. Cock and John H. Guest, New York, N. Y.

Claim.—1. The adjustable spring *b*, applied to the alarm apparatus above the arm or spring *a* of the armature, as specified.

2. The beam H, pivoted between the plates E and F, and weighted at one end to operate substantially in the manner herein shown and described.

3. The spring-plates L M, combined with the spring N, and applied to the window-frame, substantially as specified.

118,200.—Machine for Milling Heads of Governor-Valves. — William A. Cogswell, Rochester, N. Y., assignor to Junius Judson, same place.

Claim.—1. In a milling-machine, the combination of the lever A, cutters B B', gears C C', rotary shaft D, and adjustable bearing K K, arranged and operating substantially as described, for the purpose specified.

2. In a milling-machine, the combination of the lever A, cutters B B', gears C C', shaft D, bearings K K, and friction-rollers *h h*, arranged and operating substantially as and for the purpose set forth.

3. In a milling-machine, the combination of the lever A and adjusting mechanism I I' A, cutters B B', gears C C', rotary shaft D, and adjustable bearings K K, substantially as and for the purpose specified.

4. In a milling-machine, the combination of the circular stay-bar H, lever A, cutters B B', gears C C', rotary shaft D, and adjustable bearings K K, arranged and operating substantially as and for the purpose specified.

118,201.—Shield for Boots and Shoes.—Orrin Collier, Sacramento, Cal., assignor to Robert M. Funkhouser, New York, N. Y.

Claim.—A projecting plate or shield secured to the heel of a boot or shoe, substantially as and for the purpose specified.

118,202.—Sled-Brake.—John E. Contant, Rondout, N. Y.

Claim.—The plate I, clip-hinge J, and circular rod or brace K, relatively constructed and connected with tenon *g* and rods L, as shown and described, and for the purpose specified.

118,203.—Heel for Boots and Shoes.—Albert O. Crane, Boston, Mass.

Claim.—1. The heel-seat described, constructed substantially as and for the purposes hereinbefore set forth.

2. The mode of attaching to the heel-seat and revolving the tread part of a rotary heel by means of a stud or button within the heel-seat, which receives the screw by which the two parts of the heel are fastened together, and is so confined to the tread part that it revolves with it, substantially as described.

3. The combination of the heel-seat described and the stud or button within it with the tread part of a rotary heel, attached and revolving substantially as set forth.

118,204.—Mode of Preventing and Detecting the Alteration of Bank-Checks, &c.—Seymour Crane, Dalton, Mass., assignor to Samuel W. Hoffman, New York city.

Claim.—The embossing, indentation, or perforation of bank-checks, drafts, bills of exchange, or other papers, in a manner substantially as herein described, after the manuscript portions have been inscribed.

118,205. — Machine for Cutting Lath-Bolts.—Thomas Crispin, Bay City, Mich.

Claim.—1 The combination of pulley H, crank I, connections J K, roller R, and friction-plates M, attached to the carriage, all constructed as and for the purpose specified.

2. The lever Q, fulcrum P, rod N, and lever F, in combination with the friction-pulleys C B and saw-mandrel, as and for the purpose hereinbefore set forth.

118,206.—Pump.—Everard S. Crowell, Augusta, Me.

Claim.—The three induction-valves P P P and eduction-valves R R R, receiving-chamber K and eduction-chamber S, cylinder A, and pistons B B, constructed and arranged as shown and described.

118,207.—Corn-Harvester. — Thomas E. Curtiss, Titusville, Pa.

Claim.—The cutters C C formed with slots T T and adjusted by the clamp-screws H H, in combination with the guides D, fixed cutters B B, frame A, and wheels W, all constructed and arranged as herein shown and described.

118,208.—Cultivator-Teeth.—Lewis Daley, Minnaville, N. Y.

Claim.—The steel bottom facings A A and overlapping wrought-iron stock C, constructed and applied to the standard D, as and for the purpose specified.

118,209.—Apparatus for the Manufacture of Chlorine. — Henry Deacon, Widnes, England.

Claim.—1. The application and use of a vertical column or tower, or of a number of vertical columns or towers, connected together in a series filled with some active reagent, or with tiles, bricks, or pieces of burned clay or other suitable material soaked with a solution of such reagent, substantially as and for the purpose hereinbefore described.

2. The surrounding the herein-described column or tower, or columns or towers, with suitable coverings, or air-spaces, or flues, for the purpose of preventing loss of heat, or of imparting or regulating the heat, as the circumstances of the manufacture require.

3. The use of the hereinbefore-referred-to saturated bricks, or pieces of burned clay, or other suitable material, arranged with vertical spaces, or the use of vertical pipes saturated as described, supported over a vacant space or chamber below, so that the dust-like substance formed or deposited from the gases may fall through the vertical openings and descend into and remain in the vacant space below them until withdrawn therefrom.

4. The application and use of a heat-regulator, as and for the purpose hereinbefore described.

118,210. — Manufacture of Bleaching-Powders. — Henry Deacon, Widnes, England.

Claim.—1. The use, in the manufacture of bleaching-powder, of an apparatus wherein a series of surfaces of slaked lime is subjected to the action of passing currents of chlorine, mixed with other but inert gases, the series of surfaces or the series of members of the apparatus, which may each contain one or more such surfaces, being so connected together that each surface or each member of the series can become the first one of the series in rotation, and be isolated in turn for the purpose of being filled or emptied, as hereinbefore described, the entrance and exit of the current of gases being such that the first gases containing most chlorine are always presented first to the lime containing most chlorine, and the gases which are weakest in chlorine are presented to the freshest lime, so that both the lime and gases at any moment in the series shall contain chlorine in gradually-lessening proportions from the first to the last of the series, for the purpose specified.

2. The use alone, or in combination with the aforesaid series of surfaces, of apparatus wherein layers of slaked lime are exposed on perforated shelves or gratings to the action of currents of chlorine mixed with other but inert gases which pass through such layers of slaked lime in the same way that coal-gas is passed through layers of slaked lime in the ordinary dry-lime coal-gas purifiers, for the purpose specified.

3. The use of layers of slaked lime on perforated shelves or gratings, through which layers the currents of gases pass when arranged in series similar to that herein described for use with surfaces—that is to say, so arranged that each shelf or grating, or member containing one or more shelves or gratings, shall become the first one of the series in rotation, and be isolated in turn for filling and emptying, for the purpose specified.

4. The application and use of either one or of both of the aforesaid apparatus in combination with the methods of producing chlorine, for which Letters Patent for the United States were granted to me bearing date the 29th day of December, 1868, or in combination with the improved apparatus for the manufacture of chlorine described in the specification of an invention for which I am now applying for Letters Patent of the United States.

118,211. — Apparatus for Producing Chlorine. — Henry Deacon, Widnes, England.

Claim. — The cleansing of apparatus wherein chlorine is generated in the manner hereinbefore described, by means of powerful blasts of air, reversible at pleasure, substantially as hereinbefore described.

118,212.—Treating Mixed Gases Containing Chlorine for the Production of Bleaching-Powders, &c.—Henry Deacon, Widnes, England.

Claim.—The drying of the mixed gases, produced as herein described, when employed for the manufacture of bleaching-powder, or otherwise, by means of chloride of calcium or by means of sulphuric acid, substantially as hereinbefore described.

118,213.—Cover for Cones of Hat-Body Formers.—Francis Degen and Edwin R. Parsil, Newark, N. J.

Claim.—1. The arrangement of a sieve, *a*, on the top of the cone-cover A, substantially as described.

2. The arrangement of a cup, C, with a perforated bottom, *a*, on the top of the cone-cover A, substantially as set forth.

118,214.—Carpet-Stretcher.—James H. de Poe, Booneton, N. J., assignor to himself and Richard Mansell, same place.

Claim.—The improved carpet-stretcher, consisting of the stock A B, fixed jaw C, and swinging jaw G, combined and arranged substantially as specified.

118,215. — Stave-Jointer. — Frederic P. Deuel, Tecumseh, Mich.

Claim.—1. The combination of the face-plates D provided with slots E and semicircular notches *h*, the knives G, shafts B, and frames A, the supports I provided with the slots *b*, and the bed or rest H pivoted thereto at *a*, and provided with set-screws *d* and gauge J, all constructed, arranged, and operated as described and shown.

2. The arrangement of the frame A, shafts B, pulley C, face-plates D, lugs F, knives G, bed H, supports I, and cradle K, when each part is constructed, combined, and operates substantially as and for the purposes set forth.

118,216.—Wooden Pavement. — Charles Deutsch, New York, N. Y.

Claim.—The corner-grooved blocks A, having steps *a* and shoulders *b*, combined with strips *c*, arranged as and for the purpose specified.

118,217.—Combined Corn-Harvester and Husker.—Leonard Devore, Victor, Iowa, assignor of one-third his right to D. J. Hussey, and one-third to B. F. Booth, same place.

Claim.—1. The combination of the combs L, horns L', and rotating fingers J provided with grooves *s*, as specified.

2. The combination of the foregoing with the box M, chute M', and elevator-case M², as described.

3. The case M², provided with the rollers *d* and slots *e f*, constructed with a slanting bottom opposite said slots, and combined with the cutters *g*, as set forth.

4. The case M², provided with the blades *i*, as explained.

5. The combination of the box N', rods *n'*, roller N², rail N³, and cover *o* and flap *o'*, as specified.

118,218.—Miniature Steam Fire-Engine. Albert L. Dewey, Westfield, Mass.

Claim.—1. The construction, combination, and peculiar arrangement of parts A Z Y, composing the steam-pipe, smoke-stack, and boiler, together with its supporting-jacket B, composing the fire-box, substantially as and for the purpose hereinbefore set forth.

2. The peculiar construction, arrangement, and combination of the frame common to the steam and force-pump cylinders H I, connecting the two valve-seats T and h and forming one piece of casting, G, together with the separate pieces composing the steam-cylinder H, oscillating force-pump I, and air-chamber M, substantially as and for the purpose hereinbefore set forth.

3. The construction and arrangement of the main frame D of the machine with its supporting-wheels E E, and in combination with the parts composing the boiler A, furnace B B, supporting-screw P, and steam-pump or engine-frame G, of a miniature portable steam-pumping engine, substantially as hereinbefore described and set forth.

118,219.—Washing-Machine. — Loyal M. Doddridge, Union City, Ind.

Claim.—The combination of rotary dasher-shaft C, having arms *b* and stationary wash-boards *d*, with the series of rollers *e*, arranged as and for the purpose specified.

118,220.—Fire-Proof Floor.—James Dunseith, New York, N. Y.

Claim.—The combination of the flanged flat bars A, arched bars C, narrow transverse strips D and J, or wood pieces E, all arranged substantially as specified.

118,221. — Register for Gas-Meters.—Henry H. Edgerton, Fort Wayne, Ind.

Claim. — In a gas-meter registering the value of the gas consumed in dollars and cents, the combination, with the registering-train proper and the wheel on the spindle receiving motion from the diaphragms, of the means, substantially as herein shown and described, whereby registrations varying according to different values may be obtained without change or alteration in the registering-train.

118,222, antedated August 18, 1871.—Pump. Jacob Edson, Boston, and Person Noyes, Lowell, Mass., assignors to Person Noyes.

Claim.—1. A self-charging pump, substantially as described, consisting of an outer pump-tube, an inner tube, *f*, valve-seat *d*, and valve *h*, and provided with a connection or inlet, *m*, having a side port, *i*, a cap, *g*, a draught-pipe, D, an upper box, *e*, and an operating-lever, all combined, arranged, and operating substantially in the manner and for the purpose set forth.

2. The combination of all the parts, viz., the pump and the cabinet B, the fountain C, return-tube *a*, the gauge *k*, faucet *p*, sink H, flexible tube E or N, bed-plate L, and tank A, all arranged to effect the objects herein set forth.

118,223.—Automatic Railway Signal.—Henry S. Evans, West Chester, Pa.

Claim.—1. The improved automatic-signaling apparatus, formed by the combination of the posts C

D, pulleys E F, signals G H, endless chain or wire I, chains J K, levers L M, levers N O, stirrup P, springs Q, lever R, and weight S with each other, substantially as herein shown and described, and for the purposes set forth.

2. The stirrup P, constructed substantially as herein shown and described, in combination with the levers N O and lever L, to cause the signals to be operated by a train passing in one direction, and prevent them from being operated by a train passing in the other, as set forth.

118,224. — NAIL-PLATE FEEDER.—James Ferguson and John Turner, Bridgewater, Mass.

Claim.—1. The nipper-rod A and sleeve B combined with a holder, D E F, and mechanism for operating said holder, as and for the purpose specified.

2. The combination of holder D E F, tube G pivoted in plate H, and mechanism to cause the holder to vibrate and reciprocate vertically, as set forth.

3. The combination of reciprocating rack S and lever J with holder D E F, sleeve B, and nipper-rod A, universal joint T, and wheel U, substantially as set forth.

4. The combination of bar c, arranged at the angle of bell-crank V and having a screen in each end, with mechanism to vibrate said bar, the arms a a, and cams Z to open and close the jaw F, as described.

5. The reversing-wheel U and feeding and lifting holder D E F, combined with the nipper-rod A, sleeve B, and universal joint T, substantially as described.

118,225.—RULER.—Louis Feusier, Jr., Virginia City, Nev.

Claim.—The ruler A, having the pad *c* secured by the clasp B, substantially as shown and described.

118,226.—RULER.—Louis Feusier, Jr., Virginia City, Nev.

Claim.—A blotting-ruler, provided with the channels *b*, in combination with the blotting-pad *c*, substantially as and for the purpose above described.

118,227. — BALANCING-PISTON. — Leonard Finlay, St. Louis, Mo.

Claim.—The cavities A in the bottom of the piston-packing, having passages admitting the steam thereto for counteracting the weight of the piston, substantially as specified.

118,228. — SIDE-ARM SHEATH. — Joseph J. M. Frey, Sacramento, Cal.

Claim.—The holster or scabbard-clasp A, provided with a hook, *e*, and slot *f*, substantially as and for the purpose above described.

118,229.—COMBINED SOLDERING-LAMP AND BLOW-PIPE.—Albert C. Frieseke, Owasso, Mich.

Claim.—The soldering-lamp and blow-pipe described, wherein the lamp is divided into two compartments, *a* and *c*, the former being provided with wick-tube *b* and the latter with tubes B and *d*, in connection with the pipes C and D, the several parts being constructed, arranged, and operated substantially as described and shown, for the purposes set forth.

118,230. — BRICK-KNIFE. — James Garity, Brewer, Me., assignor of one-half his right to Edwin D. Gould and one-half to Albert H. Barnes, same place.

Claim.—The knife, constructed as herein shown, for cutting brick from a stream of clay, in combination with the revolving disk *d*, substantially as set forth.

118,231. — ELECTRO-MAGNETIC ANNUNCIATOR.—Elisha Gray, Chicago, Ill.

Claim.—1. The arrangement of circuits for operating the needle or armature *e* either forward or backward by the electrical current, substantially as and for the purpose set forth.

2. The commutator J of an electro-magnetic annunciator, constructed and arranged to operate substantially as and for the purpose specified.

3. The springs G G' H H' and wires R S T, in combination with rings I and I' of the commutator J, the whole arranged substantially as and for the purpose described.

4. The spring A, in combination with points L, M, and N, arranged as described, whereby the electrical current is reversed, substantially as and for the purpose specified.

118,232. — STAKING HORSE-POWERS.—William Gregg, Dansville, Mich., assignor to himself and Charles Newkirk, same place.

Claim.—The combination and arrangement, with the frame A of a horse-power, of the braces B B provided with the yokes *b b*, as described, the stakes C C, brace-stays D D, keys E E, and nuts F F, as and for the purpose set forth.

118,233. — BUCK-SAW FRAME. — William Hankin, Hawley, Pa.

Claim.—The buck-saw frame, provided with the angle-braces E E, which pass through the cross-bar C and bear against the side pieces A, substantially as herein shown and described.

118,234. — MACHINE FOR CUTTING AND GRINDING CORN-FODDER, &c.—Benjamin Harnish, Lancaster, and David H. Harnish, Pequea, Pa.

Claim.—In combination with the conical mill, composed of the shell E and grinding-shaft R, the cutting-disk D, feed-box N, winged feed-roller V, and gearing, all arranged and operating substantially as herein set forth.

118,235.—VEGETABLE-CUTTER.—Benjamin Harnish, Lancaster, and David H. Harnish, Pequea, Pa.

Claim.—The arrangement, in a vegetable cutter, of the parallel, united and hinged bars Q Q, tripper P, springs T, guide R, connecting-arm *g*, with the rear end of the box V, in combination with the combined disks L X, bill-hooked cutters Y, combined drums and clutch G H I K, and cord-connection W, all jointly operated by a crank-handle, substantially in the manner and for the purpose specified.

118,236.—HARVESTER-DROPPER.—Orrel M. Harrison, Glasgow, Mo.

Claim.—A weighted lever, J, when pivoted to the rod I entering a notch upon the under side of a brace, H, and passing over the reel-box, in front of the reel-post, as specified.

118,237.—DENTAL DRILL.—Alexander Hartman, Murfreesborough, Tenn.

Claim.—1. The rattan D applied in a dental drill as the flexible rod or connection by which the bur-holding mandrel is revolved.

2. The double-threaded nut C applied to holder B B' and rattan D, within a tube, as and for the purpose specified.

118,238. — LOCK-NUT. — Joseph Harvey, Painesville, Ohio.

Claim.—The nut B, composed of the part C, having its screw-thread cut on its inner surface of equal diameter through its thickness, and the part D slotted, and the screw-thread of less diameter at its outer end than at its junction with part C, as shown and described.

118,239.—MEANS FOR EXTINGUISHING GAS-LIGHTS.—Charles H. Harwood, Salem, Mass.

Claim.—The combination of the cock E, lever D, and cord C with the pulley B, when attached to the alarm-shaft of the clock, substantially as set forth.

118,240. — INFANT'S CHAIR.—John Hayes, Philadelphia, Pa.

Claim.—1. The combination, with the frame A of the folding or hinged floors E and G H, and the top K L, all arranged substantially as specified.

2. The combination, with the frame A, folding floors G H, and top K L, of the extensible ends and bottoms, all substantially as specified.

3. The combination, with the elements of the above claims, of the rockers C, detachably connected to the frame A, as shown and described.

118,241. — STOVE-PIPE CLOTHES-DRIER.—Cassius M. Herreman, Mankato, Minn.

Claim.—The band K, to encircle the pipe, with eyes T T, in combination with bar Y, hooks P P, and braces U U, as shown and described.

118,242.—DENTIST'S ARTICULATOR.—Louis Hoffstadt, Philadelphia, Pa.

Claim.—1. The construction and arrangement of the pivots *a' a'* as parts of the bracket-plate A, the bearing-hole in the upright *d''*, and the bearing-hole *e'* and inclined plane or groove *e''* in the spring C, substantially as and for the purpose hereinbefore set forth.

2. The broad flat upright plate *c'* of the lower jaw E, the corresponding upright flat plate D, the uprights *d' d''* of the bracket, and the thumb-screw F, the said parts being constructed and combined to operate substantially as and for the purposes hereinbefore set forth.

118,243.—CAKE-MIXER.—Thomas Holmes, Williamsburg, N. Y.

Claim.—The box A a^1, plate a^2, cover B C *c'*, wire loops D, disks E, journals F G, sockets H J, screws I L N, cap K, and crank M, all combined, constructed, and arranged, as and for the purpose specified.

118,244.—PROPELLING CANAL AND OTHER VESSELS.—John Jochum, Brooklyn, N. Y.

Claim.—The arrangement of propeller A within a fixed hood, B, and on the deck, as and for the purpose specified.

118,245. — PRESERVING WOOD. — Joseph Jones, New Orleans, La., assignor to himself and Peter Welch, St. Louis, Mo.

Claim.—A solution of solid asphalt in turpentine, combined with a varying proportion of carbolic acid, applied, in the manner substantially as described, to the treatment and preservation of timber for the purposes stated.

118,246.—STEAM-BOILER. — George Keen, North McGregor, Iowa.

Claim.—The smoke-consuming chamber B having damper E to admit air from the outside, and conical flues C to bring up the products of combustion thereinto from a fire-box beneath, when arranged in a boiler, as and for the purpose specified.

118,247.—WASHING-MACHINE.—Hamlin F. Keeney, West Salem, Ohio.

Claim.—In combination with the wash-board M and standards A, the plates B provided with the apertures C and notches D, when constructed, arranged, and operating together as described.

118,248.—WASHING-MACHINE. — John Joseph Kenyon, Boston, and Hazen Prescott Huntoon, Cambridge, Mass., assignors to John J. Kenyon.

Claim.—A washing-machine, consisting of a coiled spring, A, of any suitable material, in combination with rod or stem B, lever C, standard I, socket F with its lugs H, and receptacle E, substantially as described.

118,249.—GAME-BOARD.—George W. Kintz, Rochester, N. Y.

Claim.—The rotary board A on pedestal D, provided with the annular chamber M, race-way *e*, depressions n, and table C, used in combination with the indicator F and a ball, and furnished with the letters, figures, and signs for playing games of amusement, substantially as described.

118,250. — MACHINE FOR DISTRIBUTING NAILS.—Albion Knowlton, Boston, Mass.

Claim.—1. In nail-distributers, the combination of the hopper C and reservoir B, the movable slotted frame D, the plate E, the stationary slotted frame F, with plunger J and bisected conductor H, substantially as and for the purpose set forth.

2. The combination of the plunger J, the slide D with slotted plate *e* attached, and the plate F, as and for the purpose described.

118,251.—RICE-HULLING AND POLISHING-MACHINE.—Leroy E. Lee, New Orleans, La., assignor of one-half his right to Louis Gerties, same place.

Claim.—The arrangement herein shown of the burs A A' A'', each provided with brushes *a a*, and the burs B B' B'', provided with furrows, in combination with the shafts C, levers D, and spouts F F' F'', all constructed and operating as shown and described, for the purpose set forth.

118,252.—METAL-HOOP.—Sylvester Lewis, Rochester, N. Y., assignor to himself and Henry Churchill, same place.

Claim.—In a hoop-lock substantially as herein described, the angular seats *y* at the base of the interlocking tongue, for the purpose set forth.

118,253.—SHADE-RACK.—Harvey Lull, Hoboken, N. J.

Claim.—The dog B and spring C, formed in one piece and in substantially the manner herein shown and described, to adapt them to fit and work upon the turned-out toothed edges of the body A, as and for the purpose set forth.

118,254.—COTTON-TIE STRETCHER.—Samuel Mather, New Braunfels, Tex.

Claim.—The improved cotton-tie stretcher herein described, consisting of the bent bar A having hook *a'* at one end and slot at the other, the lever B having jaw *b'*, in combination with the adjustable arm C with jaw *c'*, all constructed and operating substantially as and for the purpose set forth.

118,255. — STREET-CARRIAGE. — George S. McHenry, Kansas City, Mo.

Claim.—The recesses *e'* formed in the double walls of the sides of the carriage-body C to receive the large wheels A, substantially as herein shown and described.

118,256. — DEVICE FOR LOCKING NUTS.—Almeron McKenney, Maumee, Ohio.

Claim.—The within-described nut-lock, consisting of the angular plate E, through which the bolt passes, and placed edgewise, with its lower edge resting on a base, B, and secured on the outer face and on one or two sides of the nut C by the nut F on the end of the bolt D, all substantially as and for the purposes herein set forth.

118,257.—WAGON.—Michael Miller, Waterloo, Ind.

Claim.—The combination of the swiveling head Z and the reach with the fifth-wheel, having upon its lower-plate a V-shaped annular ridge, and in its

upper plate a groove to fit therein, all as shown and described, and for the purpose set forth.

118,258. — BRIDGE. — George C. Morgan, Chicago, Ill.

Claim.—1. The mode of tightening the vertical braces D by means of the plate *b* and screws *c*, substantially as specified.

2. The cranes or stays F and *f* when made continuous and applied, by means of eyes *e*, so as to make the strain uniform, substantially as specified.

3. The wire cords E when made enlarged at the middle and gradually tapered each way and applied to a truss-bridge, substantially as described.

118,259. — TOBACCO-STRIPPER. — Charles Müller, Albany, N. Y.

Claim.—1. The grooved guide and cutting-roller F, in combination with knives *f f* and car S, the said knives and car being inclined, as herein shown and described.

2. Rollers M and N, constructed with or without grooves *g*, in combination with bands C' C' and G G and cords H H, or their equivalents, and weights I I, or other equivalents therefor, as and for the purpose herein shown and described.

3. Elastic table C C, in combination with bands G G and C' C', weights I, and rollers *e* and *e*, substantially as herein shown and described.

118,260. — BEARING-PLATE FOR RAILWAY RAILS.—Elijah Myrick, Ayer, Mass.

Claim.—The plate A, having lugs on the under side thereof, applied as and for the purpose specified.

118,261. — CURB-ROOF. — Dudley Newton, Newport, R. I.

Claim.—1. The improvement in curb-roofs, which consists in projecting the base ends of the wall-rafters beyond the front face of the plate, and in combining therewith a *fascia* extending from the abutting end of the rafters downward, parallel with the front face of the plate, and an inclined bed-molding extending from near the outer edge of the abutting ends of the wall-rafters inward to the *fascia*, substantially as described, for the purposes specified.

2. The wall-rafters B, with their abutting base ends projecting beyond the front face of the plate, the plate, *fascia*, bed-mold, and gutter, all combined, substantially as described, for the purpose specified.

118,262. — COMBINED LATHE AND GEAR-CUTTER.— Ulrich Oppermann, Washington, D. C.

Claim.—1. In combination with the pulleys H and Q and suitable cords or belts, the standards A', connected together by means of the brace C', the shaft B'', the standard H', the pulleys D', F', I', and K', the shive L', and the weight M', substantially as and for the purpose shown.

2. The cutter-head N provided with the lugs *n*, the spindles O and P provided with the pinions *o* and *p*, the pulley Q, the way R provided with the lug *r* and collar U, the screw S, the handle T, the stud V, the nut *v*, and the bar W provided with the head *w*, when constructed substantially as described, and combined with the tool-post M, in the manner and for the purpose substantially as set forth.

118,263. — MACHINE FOR RANDING BOOT AND SHOE-HEELS.—Henry F. Packard, North Bridgewater, assignor to Azra B. Keith, Braintree, Mass.

Claim.—1. In combination with a nailing or pegging mechanism and a heel-supporting rest or post, a rand-guide for guiding the rand-strip into position to be nailed upon the heel and relatively to the edge of the heel, substantially as described.

2. In a nailing or pegging-machine, the combination of an adjustable edge-guide and adjustable rand-guide, substantially as described.

3. The process of randing heels successively and continuously by employing, in connection with the nailing and feeding mechanism, heel-supporting post, and rand and edge-guides, the rand-coil or ribbon, and placing the heels breast to breast, so as to feed from one to the other, substantially as shown and described.

118,264. — METHOD OF MANUFACTURING AXES.—George Palmer and Charles W. Hubbard, Pittsburg, Pa.

Claim.—1. The method herein described and represented of manufacturing axes and hatchets.

2. The pair of dies *a a*, for roughly swaging and welding the poll of the ax or hatchet, substantially as described.

3. The swaging-dies *d d*, having swaging faces of suitable form for shaping, by a percussive blow, the ends of an ax, in combination with a pair of eye-pins, *e*, constructed substantially as described.

4. The series of dies *a a*, *d d*, and *g g*, of a construction substantially as described.

118,265.—WASH-BOILER.—Nathaniel Parks and George A. Hynds, Rome, N. Y.

Claim.—1. The water-reservoir G affixed to a wash-boiler, in conjunction with the valve A, substantially as and for the purpose herein shown and described.

2. The pipes D D, perforated throughout their entire length, and held in place by the continuous band E, as specified.

3. The false cover F, arranged within a wash-boiler, in combination with the main cover B, false bottom C, and pipes D, all arranged as herein shown and described.

118,266, antedated August 5, 1871.—AX.—Washburn Peabody, Orono, Me.

Claim.—The improved ax as herein described, and for the purposes set forth.

118,267.—CLOD-FENDER.—George L. Perry, Berlin, Wis.

Claim.—An improved corn-shield, consisting of the bracket B, bolt C, bar D, and plate E, said parts B C D E being constructed and operating in connection with each other, substantially as herein shown and described, and for the purpose set forth.

118,268.—DENTAL DRILL.—Chandler Poor, Dubuque, Iowa.

Claim.—1. In combination with a bur-carrying mandrel, K, and rotating spindle F, the intermediate cat-gut J, applied as and for the purpose specified.

2. A swinging frame, E, to support the pulley mechanism, journaled in uprights, and counter-balanced by weighted cord M, as and for the purpose specified.

118,269. — CORK-CUTTING MACHINE.—George Purves, New York, N. Y.

Claim.—1. The adjustable spindle-head stock D, tail-stock E made adjustable thereon, sliding bar Q, levers R and T, and spring S, combined substantially as and for the purpose specified.

2. The cutter oscillating bar W, arm Y, vertical slide Z, slotted lever W', and stops U', combined and arranged substantially as and for the purpose specified.

3. The combination, with the elements of the first and second claims, of the oscillating cutter M, the sliding frame F, and the operating-cord and pulleys, as and for the purpose specified.

4. The combination of the carriage, clamping-dogs *a b*, belt H, and the spindle D, substantially as specified.

118,270. — HAY-ELEVATOR. — Herman H. Quint, Brookfield, Me.

Claim.—The device, as a hay-elevator, embodying the construction contemplated and set forth in the accompanying drawing and description.

118,271. — STAIR-ROD. — Emil Rath, New York, N. Y., assignor to Moritz Krickl, New York city.

Claim.—The fastening for stair-rods, formed by the depressions *a* in the rod A in which the eye-bolts *b* are held by the tension of the stair-carpet, as herein set forth and shown, for the purpose specified.

118,272, antedated August 10, 1871.—CLOTHES-DRIER.—James W. Reed and Hugh A. Jones, Pittsburg, Pa.

Claim.—The within-described clothes-drier, consisting of a skeleton frame made larger at its top than at its bottom, and composed of the inclined bars E E, disk D, and circular bars *a a* with a central shaft, C, all arranged within the frame A and operated by the shaft H and wheels G G', as set forth.

118,273.—TREADLE-POWER.—William Reed, Allentown, Pa.

Claim.—The arrangement of the inclines *c'*, treadle-levers C, and cranks a^1 a^2 of the driving-shaft A with each other, substantially as herein shown and described, and for the purpose set forth.

118,274. — SAW-GUMMER. — William Reed, Allentown, Pa.

Claim.—The arrangement of the lever E, provided with the cams e^1 e^2, and link F with the punch C and the recessed, slotted, and grooved top of the stock A, substantially as herein shown and described, and for the purpose set forth.

118,275.—COTTON-PRESS.—Samuel S. Rembert, Memphis, Tenn.

Claim.—1. A press-case, made in two sections, and arranged for separating to expose the bale when pressed, in combination with two followers, arranged for simultaneously pressing on two opposite sides of the mass, substantially as specified.

2. The combination of the right-and-left-threaded screw, toggle-jointed arms F I, blocks C, followers E L, movable cross-heads K N, and rods M, substantially as specified.

3. The arrangement of the rods O with the cross-head K and section C of the case, substantially as specified.

4. The combination of the lever Q with the section D of the case and the cross-head N, substantially as specified.

118,276. — OIL-CUP. — William Rider, Almont, Mich.

Claim.—The construction and arrangement of the cup A, stem A', cap B, receptacle B', valve-seats *a b*, spindle C C', spring E, pin D, lever H, valves F G, and openings or passages *a'*, *b'*, *c*, *d*, *e*, and *f*, as and for the purpose set forth.

118,277. — ICE-HOUSE FOR PACKING AND CURING MEATS.—Henry A. Roberts, Boston, Mass.

Claim.—1. A chill-room, G, and a curing or packing-room, H, when separated by a partition, and constructed with the flues and air passages, as herein shown and described.

2. The ceiling of an ice-chamber, E, composed of an absorbing and evaporating material, in combination with a continuous flue for creating a draught over and upon it, substantially as and for the purpose set forth.

118,278. — SIGNAL-LANTERN.—William S. Roberts and Egbert H. Flake, East Greenwich, R. I.

Claim.—1. The combination of the two globes *a* and guards S with the swinging lamp B, substantially as and for the purpose specified.

2. The combination of the ball C and slotted brackets *d d* with the reversible lantern, substantially as herein set forth, and for the purpose stated.

118,279.—FURNACE FOR THE MANUFACTURE OF IRON AND STEEL.—Henderson Ross and John H. Clemens, Pittsburg, Pa.

Claim.—A furnace used for the manufacture of iron or steel provided with a water-box, as herein-before described, and for the purpose set forth.

118,280. — LAMP-EXTINGUISHER.—William G. Ruge, Holstein, Mo.

Claim.—The spring-jaws C C, combined with the pivoted fork D, hook E, lug *g*, and notched arm *e*, all arranged to constitute a lamp-extinguisher, as set forth.

118,281.—TRUSS-HOOP.—Elmina C. Ryding, Tully, N. Y.

Claim.—A cooperage or truss-hoop, when the lap of its joint is made perpendicularly to the plane of the hoop, substantially as specified.

118,282.—SPINDLE-BEARING FOR SPINNING-MACHINES.—Jacob H. Sawyer, Lowell, Mass.

Claim.—In a spinning-machine, having the spindle-whirl arranged or to be arranged between the two supporting-rails, as set forth, a spindle-bearing and its holding-socket constructed larger in size or diameter than the whirl, so as to enable the spindle, the whirl, and such bearing (whether the bolster or the step) to be inserted or withdrawn together through the rail and the spindle, to be inserted into or drawn out of the other bearing, substantially in manner as described, and as occasion may require.

118,283.—APPARATUS FOR CRIMPING WIRES. Charles P. Seitzinger, Scranton, Pa.

Claim.—The combination of the two (2) iron blocks A, the movable iron teeth or slats C and D, and the grooved plates G, fastened with screws H or otherwise, substantially as and for the purpose hereinbefore set forth.

118,284, antedated August 11, 1871.—MOWING-MACHINE.—Moses R. Shalters and Samuel Ray, Alliance, Ohio.

Claim.—1. The ratchet-wheel M, disks O N, in combination with the drag-bar I, these parts being constructed substantially as described, and for the purpose set forth.

2. The combination of the spring-catch lever P, ratchet-wheel M, disks O and N, drag-bar I, and shoe R with the pitman V having the swivel-joint *h*, the cutter-bar X, and finger-bar U, these parts being constructed and arranged in the manner and for the purpose described.

118,285, antedated August 17, 1871.—SAFETY-FROG FOR RAILWAYS.—Warren M. Shawen, Bellaire, Ohio.

Claim.—1. The lateral shifting-bar G, having the ellipsoid device I located between its pivoted ends, in combination with the movable winged rails E of the frog, the several parts being arranged to operate as described.

2. The pivoted shifting-bar G united to the wing-rails E of the frog by a yoke or coupling-arm, H, as described.

3. The coupling-arm or yoke of the curved wing-rails E, made of two sections, *b c*, and locked together and to the wing-rails, as described.

118,286.—BALE-TIE. — John L. Sheppard, Charleston, S. C.

Claim.—The bale-tie herein described, having the curved lips A and B, rectangular slot C, and transverse slit *d e*, constructed and arranged substantially as and for the purpose set forth.

118,287. — Globe and Check-Valve.—George W. Shields, Louisville, Ky., assignor to himself, Michael L. Mitchell, and John A. Melcher, same place

Claim.—The arrangement of the valve *c*, provided with the stem *d* and disk *e*, with the skeleton frame, threaded stem *l*, and plug *m*, as specified.

118,288.—Billiard-Table.—George Smith, Detroit, Mich.

Claim.—Rubber billiard-cushions cut from the top to the table in wedge-shape, or in a rectangular, semicircular, curved, or other form, substantially as shown and described, and having the points or projections connected at the edge by a whalebone strip, hoop-skirt spring, or other similar device, in the manner set forth.

118,289.—Machine for Making "Excelsior."—George H. Smith, Guilford, Me.

Claim.—1. The combination of parts constructed specifically and to operate as and for the purpose described, such being the frame A, the bed *e* with the two plane-irons *a b* and throats *d c*, and the two sets *f g* of stripping-knives, the main and auxiliary carriages B E, and toothed feed-rollers C D, the gears and ratchets *k k l l m n* of the feed-rollers, the rocker-lever G, and its two pawls, *n' p*, and the cammed bar H, all being applied as explained, the auxiliary feed-roller carriage E being provided with means as described for moving it and retaining it in position.

2. The mechanism or combination as described for effecting the intermittent revolutions of the two feed-rollers, such consisting of the cammed bar H, the rocker-lever G, the two pawls *n' p*, the ratchet-wheels *n n*, and the gears *k k l l*, all being arranged and applied to the reciprocating carriage and its bed in manner and so as to operate as set forth.

118,290.—Hand Garden-Plow.—William D. Smith, Homerville, Ga.

Claim.—A garden-plow, consisting of two acute-angled blades, B C, an upwardly-rising shank, A, and a fender, D E F, when all are constructed so that the plow may be operated by hand, as described.

118,291. — Dummy-Engine. — Christian George Spengler, Hoboken, N. J.

Claim.—The reach D, secured to and extending forward of the burden division B, and the coupling-socket affixed to the center of the truck supporting the traction division when the forward end of the reach and the plate A of the socket are beveled as described, in combination with the rests *F*, as herein set forth and shown, for the purposes specified.

118,292. — Horse-Power. — Isaac Starr, Wooster, Ohio.

Claim.—1. The crown-wheels B and E, when overlapping one the other, and operating the two pinions I J, one fixed and the other adjustable, as and for the purposes specified.

2. The line-shaft H, when provided with fixed pinion I and adjustable pinion J, and arranged to be inclining, as specified and set forth.

118,293. — Wire-Stretcher. — Ebenezer Burnet Stephens, Brownsville, Neb.

Claim.—1. The adjustable pins D, in combination with the wires B and stay or bar C, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the wire-rope E, pulleys F, one or more, and weight H, whether the lever I be used or not, with the posts G, stay or bar C, and wires B, substantially as herein shown and described, and for the purpose set forth.

118,294.—Neck-Chain.—George D. Stevens, New York, N. Y.

Claim.—1. The arrangement on a chain of two slides, one being fastened to each end of the chain, and each being provided with an aperture through which the chain slides, in combination with an intermediate slide forming a guide for the chain, substantially as herein shown and described.

2. The arrangement of a hook or other fastening on the center side of the neck-chain A, in combination with an additional chain, provided with a device to engage with said fastening, substantially as set forth.

118,295. — Packing for Machinery and Lining for Journal-Boxes and Bearing-Surfaces.—Chase A. Stevens and Cyrus Butler, New York, N. Y.

Claim.—1. The process and method of making, preparing, and using the within-described compound or mixture for journal-boxes and bearing-surfaces, when composed of prepared asbestus flock, and prepared pulverized plumbago, combined in the manner and for the purpose herein specified.

2. A lining for journal-boxes, bearing-surfaces, and as a packing for machinery, being a compound or mixture composed of prepared asbestus flock, prepared pulverized plumbago, glycerine, oil, or other oleaginous or fluid substance, in the manner and for the purpose herein set forth.

118,296.—Composition for Roofing, Paving, &c.—William M. Stuart, Port Huron, assignor to himself and Alexander Chisholm, Smith's Creek, Mich.

Claim.—The above-described composition, composed of the ingredients, in or about the proportions, and applied substantially as herein specified, for the purposes set forth.

118,297. — Anti-Friction Bearing for Shafts.—John Switzer, Lynn, Mass.

Claim.—1. As an anti-friction bearing for the ends of heavy shafts, the employment of the frusto-conical roller K in combination with the plate A and disk H, or the equivalent, the said plate A being stationary and loosely receiving the shaft, while the disk H is fixed to and travels with the shaft, the whole being in manner as described.

2. In combination with the rollers K, plate A, disk H, and shaft C, the ring or support *d*, or its equivalent, for insuring the proper relative position of each roller.

118,298.—Manure-Cart.—Benjamin Teague, Moscow, Tenn.

Claim.—The wheels C, axle A, puller D, hopper B having sliding door H, and lever I, all arranged relatively one to the other, as and for the purpose hereinbefore set forth.

118,299.—Hot-Air Furnace.—George G. Thomas, St. Louis, Mo.

Claim.—1. The series of open tubes G, arranged in the hot-air chamber about the radiator F, and held by the securing-band, as described.

2. The furnace described, consisting of the base A, constructed as described, plate C, bricks E, radiator F, removable tubes G G, and cylinder H, the parts being constructed and arranged as described.

118,300.—Elevator.—Gustavus C. Timpe, New Orleans, La.

Claim.—1. The arrangement of the internally-toothed gear-wheel F, pinion-wheels E M, and gear-wheels K L with the drum G and shaft A H J, substantially as herein shown and described, and for the purposes set forth.

2. The arrangement of the sliding bar P and levers N O with the pinion-wheels E M of the gearing E F K M L, substantially as herein shown and described, and for the purposes set forth.

3. The combination of the balance-weight U and balance-rope S with its guide-pulleys T with the drum G, substantially as herein shown and described, and for the purpose set forth.

118,301.—Elevator.—Gustavus C. Timpe, New Orleans, La.

Claim.—1. The slack weight J and its continuous rope D, swiveled pulley I, idler H, and drum G, all combined and arranged with the cage B, as and for the purpose specified.

2. In combination with pivoted brake-strap R, arranged on shoulder Q of wheel O, the lever T *t'*, pawl X, ropes U V Y, and weight W, as and for the purpose specified.

118,302. — Apparatus for Carbureting Air and Gas.—Oakes Tirrill, Brooklyn, N. Y.

Claim.—1. An apparatus for carbureting air or gases, so constructed that it may be literally buried up in the earth without vault or gas-house to inclose it, incapable of being seen, touched, or visited without being unearthed, requiring no repairs, or periodical adjustment, or attention except occasional filling, and receiving the necessary current of air from some distant air-forcing apparatus, substantially as shown and described.

2. In carbureting apparatus, the combination, with the generator and carbureting devices proper, of a fluid-holding tank or vessel surrounding the generator and supplying the latter with fluid, substantially in the manner shown and described.

3. The combination, with the generator and carbureting devices proper, of the fluid-holding tank, surrounding and communicating with the generator, as specified, and provided with air and gas-service connections, and with devices for filling the tank and indicating the level of the liquid therein, as described, all of said parts being so arranged that the apparatus may be buried in the ground or water without inclosing the same in a gas-house or vault.

4. The combination, substantially as herein shown and described, of a floating carburetor with a generator, capable of being buried beneath the earth, the necessary current of air being obtained from some distant air-forcing apparatus, as described.

118,303.—Lap-Board.—Charles Trefethen, Manchester, N. H.

Claim.—1. The combination of the board and the hooks, arranged and connected together, substantially as described.

2. The combination of the board and the hooks and the legs arranged and connected with such board, essentially as specified.

118,304.—Soap-Cutting and Beading-Machine. — John B. Ultsch, Cambridge, Mass., assignor to himself and Curtis Davis, same place.

Claim.—The combination, in a soap-cutting machine, of the templets *c*, *c*, *c'*, &c., with the cutting-frames E and F, substantially as described, and for the purpose set forth.

118,305.—Apparatus for Distilling Turpentine.—Adrian H. Van Bokkelen, Wilmington, N. C.

Claim.—1. A condensing-chamber, H, having two discharge-pipes, L J, and surrounded by a water-chamber, I, in which a cold current is constantly being received at the bottom and discharged over the top, for the purpose of condensing the less volatile vapor and passing it through the pipe J, while the more volatile products of distillation pass through the upper pipe L, as described.

2. In combination with a steam and fire-still, A B E, the condenser H, pipes H L, coil K, resin-receptacle P, and coil R, all combined and arranged as and for the purpose specified.

3. The resin-receptacle P, combined with the coil of steam-pipe R placed within it, as and for the purpose specified.

118,306.—Filter.—Johann P. A. Vollmar, Bingen, Germany.

Claim.—1. The frames B B, composed of the parts *a b* and *c* and pipes *d*, substantially as herein set forth and described.

2. The combination of the filtering-vessel A, having the perforated pipe C D, with the frames B, all arranged as set forth.

118,307.—Water-Wheel and Gate.—Philip H. Wait, Sandy Hill, N. Y.

Claim.—1. In water-wheels, a gate formed of the annular plate C and flanged plate D F, both having apertures curved on their edges *a b* and radially lined on their sides, as and for the purpose specified.

2. The said gate *a b* C D F, spider E having rim E^1 and seat *d*, and guide having flange *e*, all combined in a water-wheel, as and for the purpose specified.

118,308. — Paper-Cutting Machine.—George A. Walker, Boston, Mass.

Claim.—The cutter-frame, guided as shown and described, and having the cutter-stock adjustable by means of the adjusting-screws u v or their equivalent, substantially as shown and described.

118,309.—Animal-Trap.—George S. Walker, Erie, Pa.

Claim.—The metallic body A A, constructed as described, in combination with the tines *q q*, head D, spring *t t*, standard G, and rods I, J, and R.

118,310.—Hame for Harness.—Peter B. Watson, Belvidere, N. J., assignor to himself and Moses A. Dewitt, same place.

Claim.—The grooved and toothed plate B, the toothed adjustable hook C, and the recessed cap-plate D, in combination with each other and with the recessed hame A, substantially as herein shown and described, and for the purpose set forth.

118,311. — Sad-Iron. — Peter W. Weida, Philadelphia, Pa.

Claim.—The combination and arrangement of the lever C, provided with the spring D and catch *h*, with the reversible handle B and lip-mortise *d* of the iron A, substantially in the manner and for the purpose above set forth.

118,312. — Washing-Machine.—Calvin J. Weld, Brattleborough, Vt.

Claim.—1. The combination of the bed F and rollers G with the vertically-adjustable yokes H and springs, substantially as herein shown and described.

2. The combination of the yokes H with the posts C, when the latter are used as guides, substantially as herein shown and described.

3. The mode of fastening the machine within the tub by means of the spring-plug *f*, substantially as herein shown and described.

4. The corrugated bars *a* when connected at their ends, substantially as described.

5. The flat loops *b'*, in combination with the links *b* and the bars *a*, substantially as described.

118,313. — Wringer-Roller. — Joseph Whitehead, Trenton, N. J.

Claim.—The improved wringer-roller, comprising the shaft, disk, plates, the India-rubber sheet *a*, and the strips F, all combined and arranged substantially as specified, the said plates being covered with canvas coated with India rubber, as described.

118,314. — Vapor-Burner.—Isaac Whitehouse, New York, N. Y., assignor to Charles Royle, same place.

Claim.—The ring-tube F, in combination with the burner-tube C and tip D, substantially as here-

in shown and described, and for the purpose set forth.

118,315.—HARVESTER.—William N. Whiteley and Salem T. Lamb, Springfield, Ohio, assignors to Salem T. Lamb.

Claim.—1. The reversible latch-segment H, in combination with frames A F, as set forth.

2. In combination with the wheel B', provided with ratchet-teeth, the detent C' mounted upon a yielding arm, D', substantially as set forth.

3. The combination of the rakes u and I' and shaft S with the cranks B' and t and pitman K', arranged as described.

4. In combination with the rake I' and crank-pin k', the slotted pitman K', flange-plate F', and pins p' p'', as and for the purpose set forth.

5. In combination with the rake I', crank k', and slotted pitman K', the spring P', as and for the purpose set forth.

118,316. — MACHINE FOR LIFTING DROP-WEIGHTS. — Lewis L. Whitlock, New York, N. Y.

Claim.—1. The combination and arrangement relative to one another, substantially as herein described, of the cam-shaft T, cam B, friction-roller I, and the bar or other device to which said friction-roller and the drop or weight to be lifted are connected.

2. In combination with the cam-shaft T, cam B, and friction-roller I, arranged relative to one another, as described, the cross-head H and the guide-rods E.

3. In combination with the cam-shaft T, cam B, and friction-roller I, arranged relative to one another, as described, the V-grooved gear-wheel A and driving gear-wheel J, the shaft D, and the movable journal-bearings F.

4. The combination, with the V-grooved friction-gearing A and J, of the V-grooved and eccentrically-pivoted frictional brake O.

5. The combination of the eccentrically-pivoted brake O with its arm P, the spring t or its equivalent, the lever u, and cord S, substantially as and for the purpose set forth.

6. The combination of the cam-wheel A with cross-head H, guide-rods E, roller I, and brake O with the rocker-shaft D, V-pinion J, pulley N, and balance-wheel M with spring L and lever K, or their equivalents, operating substantially as described.

118,317.—DROP-PRESS AND TRIP-HAMMER. Lewis L. Whitlock, New York, assignor to Maria Whitlock, Brooklyn, N. Y.

Claim.—1. The combination of the knee-lever r, pivoted arm e, spring-bolts s and s, with hammer-shaft B and arm S, substantially as described, and for the purpose specified.

2. The combination and arrangement of the friction-gear V, rocker-shaft H, rod w, foot-lever h, and cam-wheel D, when constructed and operating substantially as herein set forth.

3. The combination, with the bar B, of a cam for elevating the same, V-grooved friction-gear wheels for communicating motion to said cam, mechanism for making and breaking at will contact of said gear-wheels with one another, and a balance-wheel to graduate the velocities of the driving-gear and to accumulate power during the intervals when contact of gearing is broken, substantially as described.

118,318.—MACHINE FOR MAKING WIRE FOR BOOT-AND-SHOE PEGS.—William Wickersham, Boston, Mass.

Claim.—As an improvement for the purpose named, the combination of grooved rollers, convergent, to form an aperture, as described, the striation of the walls of said grooves as set forth.

118,319.—PROCESS FOR LASTING BOOTS AND SHOES.—William Wickersham, Boston, Mass.

Claim.—A process of lasting a boot or shoe, which consists, first, in applying a sole which has been split in the edge and opened to the bottom of the last; second, in gathering or fulling the edge of the upper by means of stitches in the same, thereby drawing it close to the open split edge of the sole preparatory to the attachment of said sole to the upper, as shown and for the purpose set forth.

118,320.—CHURN.—Eli Willcox, Hamburg, Iowa.

Claim.—1. An improved churning apparatus, consisting of the arms L, bar K, sliding bars N, toothed rack O, gear-wheel P, dasher-shaft F, dasher G H, and ribbed case or body A J, whether the inner case C I be used or not, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the arms L, bar K, sliding bars N, toothed rack O, gear-wheel P, dasher-shaft F, dasher G H, inner ribbed case C I, and outer ribbed case A J with each other, substantially as herein shown and described, and for the purpose set forth.

118,321, antedated August 9, 1871.—WATER-TUYERE.—Samuel Williamson, Cincinnati, Ohio.

Claim.—The combination of water-box A B, nozzle C D, slotted bolts E H, perforated lugs F, and cotters G, for the objects stated.

118,322.—METHOD OF MAKING DRAW-BARS OR BUFFERS. — John T. Wilson, Pittsburg, Pa., assignor to Coleman, Rahm & Co., same place.

Claim.—Jointly, the particular form or shape of the blank for draw-bars or buffers described and shown, and the manner of producing the same—that is to say, molding a bar by means of rolls so that it shall constitute a number of connected or undivided blanks, and subsequently severing the blanks from the bar and from one another.

118,323.—MACHINE FOR DRESSING STONE.—Thomas Woods, Nicholasville, Ky.

Claim.—1. The cylinder, composed of the disks L, divided into pairs by the blocks d and held together by the nuts b upon the shaft E, substantially as and for the purpose described.

2. The cutters H, pivoted, constructed, and operated substantially in the manner and for the purpose described.

118,324.—WATER-WHEEL. — Daniel Woodsum and Frank M. Woodsum, Harrison, Me.

Claim.—1. The combination of the two sets of oppositely-revolving wheels c d, in combination with the surrounding casing f, collar b, and gearing e, p, and s, whereby the power of all the wheels is centered upon a single shaft, substantially as shown and described.

2. The shaft n, gears m k, valves h, and segments I, when all are arranged to operate substantially as described.

3. The combination of the shaft a, the collar b, oppositely-revolving wheels c d, casing f, shaft n, gears m, k, o, p, and s, valves h, segments i, and friction-rollers E, when all are united to form a water-wheel, substantially as described.

118,325.—SCREW-PROPELLER.—Henry Zahn, San Francisco, Cal.

Claim.—1. In a screw-propeller arranged to cut two threads in the water, the blades b d c e arranged in opposite directions alternately, substantially as shown, and for the purpose above described.

2. The blades b d c e, when each alternate blade is arranged with an opposite twist, substantially as and for the purpose described.

118,326.—HARNESS-TUG BUCKLE.—Charles S. Abeel, Marshalltown, Iowa.

Claim.—The tug-fastening apparatus herein described, consisting of the frame D, bars a e f h, sliding tongue B, and eyelet C, constructed and arranged substantially as specified.

118,327.—PAPER-CUTTING MACHINE.—James Arkell, Canajoharie, N. Y., assignor to himself, Benjamin Smith, and Adam Smith, same place.

Claim.—In combination with a feed mechanism, a knife or cutter which moves at a greater velocity than the material fed to it, and a suitable presser-roll, the whole operating in substantially the manner and for the purpose set forth.

118,328. — RIVETING APPARATUS. — James Berry, Buffalo, N. Y., assignor to himself and Henry Berry, same place.

Claim.—1. The arrangement of the rivet-inserting device B, table A, and the adjustable clamp F, all constructed as described, for the purpose set forth.

2. The combination of the punching device, consisting essentially of the clamp-gauge L and die-plate M, with the table A and rivet-inserting device B, as and for the purpose set forth.

3. The combination, with a riveting-table, A, of the rivet-inserting device B, connected by the dovetail s or equivalent means, whereby the rivet-inserting device can be slid longitudinally, for the purpose specified.

118,329.—PROPULSION OF CANAL-BOATS.—William C. Bibb, Madison, Ga.

Claim.—1. The combination of the V-grooved pulleys d d with the wire-rope c, each arranged in relation to the other substantially as and for the purpose hereinbefore set forth.

2. The guide b, substantially as and for the purpose hereinbefore set forth.

3. The flap attachment h, for sustaining the wire rope, substantially as and for the purpose hereinbefore set forth.

118,330. — RAILWAY. — William C. Bibb, Madison, Ga.

Claim.—1. The driving-wheels c c, having grooved peripheries acting upon fixed rope or band, being in relation substantially as described to the track and locomotive of a railway, as set forth.

2. The rope or band suspended by flaps to a beam, or an equivalent, the flange of one or both wheels, outwardly, being turned down to permit the flap to pass between, substantially as and for the purpose set forth.

3. The driving-wheels c c, acting on the suspended rope or band, and having cogged wheels fixed upon them, as shown, substantially as and for the purposes set forth.

118,331.—HARVESTER-DROPPER.—Christian Bickel and Jacob F. Leibold, Delaware, Ohio.

Claim.—The graveling devices herein described, consisting of the center dropping-racks C C with their cranks E E', the concave waste-rack G with its crank, the connecting-rods E'' E''' G^2, and the elbow-lever F, substantially as specified.

118,332. — SPEED-INDICATOR. — Hugo Bilgram, Philadelphia, Pa.

Claim.—A speed-indicator, in which a sleeve, G', operated by the revolving weighted arms E E' and spring S P, is arranged to both revolve and slide on a stationary spindle, C, all as and for the purpose described.

118,333.—CLUTCH FOR HARVESTERS.—Frank Bramer, Little Falls, N. Y.

Claim.—The arrangement, upon the axle A, of the clutch N, ring O with projections, as shown, shifting-arm R having double-inclined planes, and sleeve or hub Q, they being combined for joint operation, as shown and described.

118,334.—ASH-SIFTER. — John Brady and Charles Lafayette Wall, Philadelphia, Pa.

Claim.—An ash-sifter, consisting of the box A, screen B X, chute E contracted to form the side spaces y y, and detachable hopper D having a flexible flap, the whole being constructed and arranged as described.

118,335. — METALLIC HEEL. — Edward P. Bray, Elizabeth, N. J.

Claim.—The plate C, when formed with an annular rim, d, and recess D, as stated, and attached to the sole of the boot and to the metallic heel, substantially as described.

118,336.—HOMOGENEOUS METAL FOR CASTING GIRDERS, BEAMS, &c.—William F. Brooks, New York, N. Y., assignor to William Brooks Jones, same place.

Claim.—A composition of steel and cast-iron, fused together, for casting beams, girders, and for other architectural purposes, substantially as set forth.

118,337. — BUNG-FUNNEL. — James Buck, Baltimore, Md.

Claim.—In combination with the funnel A, the air-pipe in two sections, B and C, whereby a supply of air may be furnished to the interior of the barrel during the emptying operation, and by the removal of the section C air may be allowed to escape during the filling operation, substantially as herein shown and described.

118,338.—WEAVING BRUSSELS AND OTHER PILE CARPETS.—John P. Buzzell, Clinton, Mass., assignor to "Bigelow Carpet Company," same place.

Claim.—1. The herein-described improvement in the method of weaving pile fabrics, consisting in separating the ground-warp shed from the worsted or figure-yarns after the under shoot of filling is introduced, and beating it up during such separation.

2. An organization of mechanism, substantially such as herein described, by which the worsted or figure-yarns are retained in position after the under shoot of filling is introduced and while the ground-warp shed is closed or separated from the worsted or figure-yarns and the filling beat up.

118,339.—GRAIN-DOOR FOR RAILWAY CARS. Miles H. Card, Freeport, and Levi Saffod, Chicago, Ill.

Claim.—The grain-door D, provided with the flap L, curved groove or dovetailed slot F, offset g, and hinge d, in combination with the dovetailed curved guide-piece E, abutment G, and detent K, all constructed and arranged substantially as described and shown, for the purposes set forth.

118,340.—CUT-OFF VALVE FOR STEAM-ENGINES.—Samuel M. Carter, Norristown, Pa.

Claim.—The combined valve V P P with self-adjustable face, provided with flanges l l' or their equivalent, for the purpose of allowing the valve to shorten and lengthen itself at each end alternately while in operation, substantially and for the purpose hereinbefore set forth.

118,341.—WASH-STAND BRACKET.—Albert Cary, Norwich, N. Y., assignor to B. F. Little and R. B. Prindle, same place.

Claim.—As an article of manufacture, the herein-before-described bracket, constructed of metal, in the form shown and for the purpose specified.

118,342.—Combined Planter and Roller. John A. Comstock, Bowling Green, Mo.

Claim.—The roller B *b b*, lever C, bar C^1 provided with the slide c^3, seed-box C^2 having brush c^4, and the lifting device, consisting of the lever D^3 standard *d*, loop *d'* and seed-drill D, all constructed and arranged to operate substantially as shown, and for the purpose set forth.

118,343.—Dust-Pan.—Walter M. Conger, Newark, N. J.

Claim.—The removable spring-clamp or holder B, constructed as described, for holding the brush by pressure, in combination with the dust-pan A, when the spring-clamp or holder is secured upon the rear-wall of the pan, in the manner and for the purpose herein shown and set forth.

118,344.—Trace-Carrier for Harness.—Edward A. Cooper, Lancaster, assignor to himself and Josiah Letchworth, Buffalo, N. Y.

Claim.—The arrangement, with the frame A, of the bridge-bars *b b* and pendent tongues *c c*, forming a trace-carrier, substantially as hereinbefore set forth.

118,345.—Burglar-Alarm.—Thomas P. Coulston, Philadelphia, Pa.

Claim.—1. The within-described burglar-alarm, arranged for attachment to a door-frame by means of flanges *b* and *b'* and set-screw *d*, substantially as herein set forth.

2. The detachable pin *m*, adapted to the operating-lever K of the alarm, and arranged to be struck and turned by the door, substantially as herein described.

118,346.—Corpse-Preserver.—James Edwards Cox, Baltimore, Md.

Claim.—The outer casing A, composed of layers of wood, paint, paper, sawdust, and zinc, substantially as and for the purpose specified.

118,347.—Fifth-Wheel for Vehicles.—Patrick H. Cummins, Adams, N. Y., assignor to himself and Edgar Kenyon, same place.

Claim.—1. The within-described fifth-wheel, with its lower part formed rounding and its upper part constructed with a rounding groove, the sides thereof extending below the center of part A to a line almost in contact with each other, thus effectually preventing a separation of the two parts when in use, and serving also to keep out the dirt, &c., substantially as set forth.

2. In combination with the above, caps D D, substantially as and for the purpose described.

118,348.—Grape-Trellis.—Isaac D. Custer, Davenport, Iowa.

Claim.—The combination of the fixed posts *b* with the wires *f* attached, and the loose supporting-bars *h* with the transverse wires *g* secured to the top thereof, all arranged substantially as shown and described.

118,349.—Sustaining Device for Center-Drop Lights of Gasoliers.—Charles Deavs, New York, N. Y., assignor to Archer and Pancoast Manufacturing Company, same place.

Claim.—The combination, with the box or cap C secured to the end of the outer tube, of the two reversed sets or series of conical clamps E E and F F, and the set-screws G G, substantially as and for the purpose herein set forth.

118,350.—Breech-Loading Fire-Arm.—William C. Dodge and Philip Tell Dodge, Washington, D. C.; said P. T. Dodge assignor to Wm. C. Dodge.

Claim.—1. The swinging lever C, provided with the hook *r*, arranged to lock over the pin *c*, or its equivalent, said pin being arranged in relation to the pivot of the lever substantially as described, whereby the barrels are locked to the frame, and the lever held in place without the use of other devices, as herein set forth.

2. The combination, in a breech-loading gun, of the lever C with its locking-hook and front-projecting arm, and the tipping barrel or barrels with the lug B and extractor *c*, arranged to operate substantially as described, whereby the swinging of the lever forward and backward serves to unlock the barrels, tip them up at the rear, shove out the extractor, bring the barrels and extractor back into position, and lock the barrels securely in place, as herein set forth.

3. The lug B provided with the curved slot or groove, in combination with the lever C provided with its locking hook, whereby the lever is permitted to move far enough to unlock the barrels before it begins to tip the same, substantially as described.

118,351.—Bedstead-Spring.—Elijah F. Dunaway, Cincinnati, Ohio.

Claim.—1. The combination of the slats C D E and rubber springs G, arranged and operating in the manner described.

2. In combination with the rails A A' and slat D, the hangers F, as described and for the purpose specified.

118,352.—Bedstead-Spring.—Elijah F. Dunaway, Cincinnati, Ohio.

Claim.—1. The combination of the slats D E, props F, and bolts G, to form an improved bedstead-spring, substantially as described.

2. In combination with the bed-rails and slat D, the vibrating supports C, as described, and for the purpose specified.

118,353.—Piano.—Anthony Faas, Philadelphia, Pa.

Claim.—The combination, with the wires, tuning-pins, and bridge A of a piano, of clamps or washers F, capable of vertical adjustment only, and operated by screws H, in the manner described.

118,354.—Tuning-Pin for Pianos.—Anthony Joseph Faas, Jr., Philadelphia, Pa.

Claim.—The combination, with two or more tuning-pins, of a yoke D, resting upon shoulders *h* of the said pins, and confined to the latter by nuts B, all substantially as specified.

118,355.—Cut-Nail Machine.—David J. Farmer, Wheeling, W. Va.

Claim.—1. The combination of the two or more sets of cutters arranged obliquely to each other, two or more sets of griping dies, two or more headers, the intermittently-rotating head or table E, the series of feeders or conductors F non-rotating relatively to the said table, and any suitable means for advancing the nail-plates through or between said feeders or conductors, substantially as herein set forth.

2. The combination of the feed-table or head E with the pivoted frame R, and the screw and nut S *s* for adjusting the said table to or from the cutters, substantially as set forth.

3. The combination of the intermittently-rotating head or table E, the continuously-rotating shaft A', the transmitting mechanism G^2 G^4, and stopping and releasing mechanism G^1 G^3 g^6, substantially as set forth.

4. The automatic griping device N, constructed and applied substantially as described, in combination with the cutters C and any suitable device for feeding the nail-plates to said cutters, for the purposes set forth.

5. The arrangement of the sectional feeders or conductors F, grooved at their edges, on the periphery of the revolving head or table E, to which they are permanently attached, substantially as and for the purposes herein set forth.

6. The lever e^1, slide e^3, pawl e^4, and cam-wheel *e*, in combination with the notched feed-rod F', substantially as and for the purposes set forth.

118,356.—Cut-Nail Machine.—David J. Farmer, Wheeling, W. Va.

Claim.—1. The combination of the oscillating frame A and stationary frame C with one or more nail-plate feeders or conductors of suitable form and the cutters, substantially as herein set forth.

2. The box E, springs *e e*, and stops O, in combination with the oscillating frame A, stationary frame C, and one or more nail-plate conductors and pairs of cutters, substantially as set forth.

118,357.—Nail and Tack Machine.—David J. Farmer, Wheeling, W. Va.

Claim.—1. The endless-chain feeder-carrier E, in combination with the cutters, griping-dies, heading-tools, and feeders of a cut-nail or tack-machine, substantially as herein described.

2. The combination of the oblique and yielding feed-bar K and the notched nipper-rods J, as herein described.

118,358.—Coal-Oil Stove.—John A. Frey, Washington, D. C., assignor to himself, S. A. H. Marks, and John F. Walker.

Claim.—1. The cement-chamber *c*, inclosing the wick-elevators, in combination with the water-chamber *b* and fuel-chamber *a*, when arranged in relation to the wick-tubes and perforated plate *i*, as herein recited.

2. The arrangement of the cones *k* and *l*, having the disseminator *r*, and surrounded by the chimney *j*, as set forth.

3. The combination of the oil, water, and cement-chambers, and the cones *k* and *l*, disseminator, *r*, chimney *j*, and perforated plate *i* with the part *m*, as described.

118,359.—Process for Deodorizing Hydrocarbon Oils.—Richard Gaggin, Erie, Pa.

Claim.—Pure dry chlorine gas, either with or without atmospheric air, as a deodorizer of paraffine, kerosene, and other like oils.

118,360.—Garden-Hoe.—Charles R. Gilbert, High Point, N. C.

Claim.—As a new article of manufacture herein described, a garden-hoe having a curved, triangular, tapering blade, and a shank so as to be attached to a handle, substantially in the manner set forth and described.

118,361.—Combined Line-Holder and Wardrobe-Hook.—Curtis Goddard, Alliance, Ohio.

Claim.—The combined line-holder and wardrobe-hook, consisting of the socketed bed-plate A and the journaled vibrating hook B, with the aperture H and the inclined surface I for holding the line, all cast in two parts, as shown and described, and for the purpose set forth.

118,362.—Cultivator and Shovel-Plow.—Thomas F. Hamilton, Genesco, Ill.

Claim.—1. In a cultivator or shovel-plow, an adjustable shovel-block or attachment, when provided with a ball-and-socket bearing and combined with the standard and shovel, substantially as and for the purpose specified.

2. The plate B provided with the semi-spherical socket, and the block E provided with the curved slots *e* and boss E', in combination with each other, the standard A, the shovel D, and the bolts F, substantially as and for the purpose shown and described.

118,363.—Propulsion of Vessels.—Willard M. Harding, Chelsea, Mass.

Claim.—In combination with the piston and jet-pipe of a propeller such as described, the inlet-pipe B opening downward through the bottom of the vessel, and closed at its upper end by a valve, C, as described, in connection with a similar valve, D, in said piston, the whole to operate as set forth.

118,364.—Brick-Kiln.—Benjamin R. Hawley, Normal, Ill.

Claim.—1. The combination of the two parallel arched structures A B, four furnaces, E, and the stack F, all constructed and arranged as and for the purpose herein shown and described.

2. The arrangement of the rabbet-joint connecting the roof and sides of the kiln with the superimposed charge of sand, as and for the purpose described.

3. The arrangement of the open floor, composed of bricks O and spaces P, with arched walls L and their intervening spaces, as and for the purpose set forth.

4. The arrangement of the arched walls L, open floor O, superimposed course of bricks, and combustible filling W, as and for the purpose set forth.

5. The arrangement of air-passages *y*, *f*, and *s'*, as and for the purpose set forth.

6. The arrangement in the adjoining burning-chambers, as herein shown and described, of the adjacent furnaces, the flues *f*, passages *f'*, *a'*, *b'*, and C', and their governing dampers, for the purpose of reversing the current of heated air, after the completion of the burning in one compartment, backward from such compartment through its furnace into any other compartment, as herein set forth.

7. The arrangement of air-passages *y*, *f*, and *h'*, as herein shown and described, for the purpose of admitting hot air to the furnace above the grates, as set forth.

118,365.—Cutter-Head.—Eli B. Hayes, Vergennes, Vt.

Claim.—The knives A A, secured to the head B by means of the grooved plate C fitting in the beveled grooves on the knives, and fastened to the head by bolts D D, substantially as herein set forth.

118,366.—Rotary Steam-Engine.—Constantine Alexander Hege, Forsyth county, N. C.

Claim.—The arrangement, in the rotary engine herein described, of the heart-shaped steam-chambers A A', partition C, shaft D, piston E, ports H H, and slide-valve F, all constructed and operating substantially as shown and described, for the purposes set forth.

118,367.—Pen-Holder.—John Holland, Cincinnati, Ohio.

Claim.—1. The double tube-holder A B, when the inner tube B is formed with side crimps *b b'*, as and for the purpose described.

2. In combination with an ordinary pen-holder, the eye D *d'*, inserted in the end of the handle, substantially as and for the purposes set forth.

118,368.—Sofa-Bedstead.—David B. Hubbard, Wheeling, W. Va.

Claim.—The combination of the hinged seat A, the box B, the mattress and its frame, with removable head-piece and folding legs, all constructed and arranged substantially as described.

118,369.—Hub for Wheels of Vehicles.—Ellsworth D. Ives, Philadelphia, Pa.

Claim.—The box A having the part B cast with it, in combination with the part C held in place by a set-screw, D, the socket *a b*, and rubber band G, when all are combined as set forth to form a metallic hub.

118,370. — SAW. — Mortimer W. Jefforda, Muskegon, Mich.

Claim.—A reciprocating or up-and-down saw, constructed with teeth of equal length, so spaced as to increase in number from the center regularly toward both ends of the saw, substantially as described and shown, and for the purpose specified.

118,371, antedated August 11, 1871.—COTTON-CULTIVATOR.—Mireybeau B. Lamar, Atlanta, Ga.

Claim.—1. The shifting-wing 16, arms 17, and cranked levers 36, constructed and arranged as described, in combination with plows 15 and angular frame 14, for the purpose set forth.

2. Cuff 22, rod 21, angle-knee 20, curved lever 19, angular frame 14, and curved rack 6, all constructed as described, and arranged relatively one to the other, as set forth.

3. Wheel 2 provided with an annular row of teeth 44, pulleys 26 and 27, shaft and pinion 25, carrying also wheel 31, arranged relatively one to the other, as and for the purpose specified.

4. Curved rack 6, pinion 8, pawl 10, ratchet 9, handle-wheel 11, and slider 7, arranged relatively to each other and to lever 12 and pinion 8, as and for the purposes set forth.

118,372.—ALLOY OF COPPER AND TIN.—Alexandre Etienne Lavroff, St. Petersburg, Russia.

Claim.—The alloy herein described.

118,373.—FLY-TRAP.—Benjamin J. Leslie, Irvine, Ky.

Claim.—The combination of the trap-box B with its water-gutters *b b*, glass top, and apertures at its lower edges, with the bottom A provided with the bait-groove *a*, all substantially as and for the purposes set forth.

118,374. — WASHING-MACHINE. — Tristram S. Lewis, Buxton, Me.

Claim.—The combination of the box *a*, the cover *b*, the standard *c*, the brake *d*, the dasher-rods *e e*, the dashers *f f*, and rims *g g*, as herein described, for the purposes set forth.

118,375. — SAD-IRON HEATER. — Matthew Little, East Saginaw, Mich., assignor to Amanda M. Starker, same place.

Claim.—The flat-iron heater herein described, consisting essentially of the horizontal plate A, provided with the covered chambers C C above and the corresponding chambers D D below, constructed substantially as shown, for the purposes herein set forth.

118,376.—DEVICE FOR EXTRACTING PENS FROM HOLDERS.—Frederick W. Mattern, Chicago, Ill.

Claim.—In combination with a paper-weight, A, having hollow shank B, knob C, and horizontal aperture in said shank, the screw D, with or without the bar *a*, and spring *b*, substantially as and for the purposes herein set forth.

118,377.—AXLE-SKEIN.—Lorenzo Mayhew, Greenfield, N. Y.

Claim.—In combination with the axle-skein and linch-pin, the flanched washer E, having the rim-opening F and the radial stop F', substantially as specified.

118,378. — UTERINE SUPPORTER. — Lyman D. McIntosh, Waseca, Minn.

Claim.—1. The combination of the soft rubber stem *a*, nut *b*, screw *c*, cup *d* of hard-rubber tube *e*, and knob *f*, as specified.

2. The combination of the cup *d* of hard-rubber ring A and extension *i*, both of soft rubber, as described.

118,379, antedated August 16, 1871.—SEPARATOR FOR GOLD ORES.—Helem Merrill, Brooklyn, N. Y.

Claim.—The combination of a taper separating-vessel with a receptacle and a flow-pipe and overflow, substantially as described.

118,380.—SAMPLE-FRAME FOR MERCHANTS.—John S. Monroe, Mitchell, Ind.

Claim.—1. A merchant's sample-frame, consisting of the members A, B, B', C, D, E, F, and J, all arranged and adapted to be employed substantially as herein explained.

2. In combination with the devices A *a*, B B', *b b'*, E F, and J, the removable top C and sliding back board D, for the purpose set forth.

118,381.—THILL-COUPLING.—Jehu C. Moore, Madison, Ind.

Claim.—The cam-shaped shackle D, provided with a lug, *a*, when combined and arranged to operate with the long jaw C and short jaw C' of the clip B, and the elastic backing *c*, in the manner shown and for the purposes specified.

118,382.—CONSTRUCTION OF BUILDINGS.—Thomas W. H. Moseley, Hyde Park, Mass.

Claim.—1. The combination of the boards B, interposed blocks C, and joists D, the said boards being of width decreasing upward in the successive stories, and the blocks C being arranged beneath, or in the plane of the joists, all as herein represented and described, for the purposes set forth.

2. The combination of the joists D, strips *d*, and boards B, as and for the purpose specified.

3. The combination of the flooring L, joists D, and boards B, all connected together as and for the purpose specified.

4. The open crib-work or framing F G of the cornice and gutter, constructed as described, and adapted for securing the composition or grouting, applied by means of a suitable mold, to complete said cornice and gutter.

5. The girder E, in combination with the wall-plate P, ridge-pole M, and gable H, substantially as described.

118,383.—THILL-COUPLING.—Alexander O. Nelson, Boston, Mass.

Claim.—In a thill-coupling, the combination, with the eccentric *a* having the opening *a'* rounded out toward the rubber and flat on the opposite side, of the bolt *b* having its opposite sides made, respectively, rounded and plane to correspond with the form of said opening, substantially as specified.

118,384.—TOPICAL HEATER FOR OIL-WELLS.—Elizur Newberry, Titusville, Pa.

Claim.—The heated bar A, in combination with the graduated chain C, for the purposes above set forth.

118,385.—SPRING-SEAT FOR WAGONS.—Ambrose S. Newman, Plymouth, Ill.

Claim.—1. One or more sets of springs, each composed of two boards, A A, connected in the center, with or without the cross-bar B between them, and provided with movable fulcrums C C, substantially as and for the purposes herein set forth.

2. The spring-bars H H, foot-bar I, and fulcrums D' D', constructed and arranged substantially as and for the purposes herein set forth.

3. A wagon or car-seat, composed of boards A A, fulcrums C C, top board E, spring foot-board H I, and fulcrums D' D', all constructed, combined, and arranged substantially as and for the purposes herein set forth.

118,386.—DENTAL TONGUE-HOLDER.—Francis M. Osborn, Port Chester, N. Y.

Claim.—1. The tongue-holder A constructed with the flat portions a^2, substantially as and for the purpose set forth

2. The cup or tongue-holder A constructed with the flat portion a^1 and recess or indentation a^1, substantially as set forth.

3. In combination with the cup or tongue-holder, a hinged or jointed frame for attaching the same, substantially in the manner set forth.

4. In combination with parts last aforesaid, the stirrup and ratchet, or its equivalent, for confining and retaining the frame and cup, substantially as set forth.

5. In combination with the cup and hinged frame, the adjusting and confining-screw and pad or button, substantially as set forth.

6. In combination, the cup, hinged frame, stirrup, and screw, substantially as set forth.

118,387.—STAVE-JOINTER.—Lemuel R. Palmer, Belfast, Me,

Claim.—1. In a machine for jointing staves at different tapers, a track, so constructed as to move laterally at and near its center, but not in the same direction at its ends, substantially as described, for the purposes specified.

2. The combination of a track laterally adjustable at its center, but not in the same direction at its ends, with a movable saw, guided in varying curves by said track, substantially as described.

3. The combination of two tracks simultaneously adjustable in opposite directions at the center, with two movable saws arranged alongside of each other, and guided in varying curves by said tracks, for the purpose of jointing both edges of a stave at one movement, substantially as described.

4. The combination of the double-acting lever C, constructed as described, with the two adjustable guide-tracks, substantially as and for the purposes specified.

5. The combination of the adjustable guides with the swinging saw-standards, the bar G, and the belts *d* and pulleys *m n*, all arranged to operate as and for the purposes set forth.

118,388.—THILL-HOLDER FOR HARNESS.—Joseph A. Putt, Marlborough, Ohio.

Claim.—The metal ring A, provided with recesses *a a* and pin *b*, and used in combination with the loops B B and covering C, substantially as and for the purposes herein set forth.

118,389. — PIANO-KEY.—William A. Reed, Deep River, Conn.

Claim.—The two parts A and B of the covering for keys of musical instruments, when united by a rabbet formed on one part, the other part constructed to set on the said rabbet, substantially as described, and with or without a veneer upon the under surface.

118,390.—HAY-KNIFE.—George Reiber, Dover, Pa., assignor to himself, Lewis Raffensperger, and Samuel Reiber, same place.

Claim.—A heart-shaped hay-knife, having convex cutting-wings *e* and receding sides *f*, as described.

118,391.—THIMBLE-SKEIN FOR WAGONS.—Hezekiah H. Richards, Fond du Lac, Wis.

Claim.—The axle-skein herein described, provided with an extension in the rear of the shoulder B, whose wall extends downward to form the bracing-flanges D' D', between which and at or about the shoulder B the downwardly and outwardly-inclined lug C is formed, substantially as specified.

118,392. — PISTON-VALVE FOR FLUID-METERS AND MOTORS.—Alexander K. Rider, New York, N. Y., assignor to himself and Cornelius H. Delamater, same place.

Claim.—1. The combination, with two cylinders which are set in transverse relation with each other and with axes in different planes, of two reciprocating pistons, constructed substantially as herein described, whereby each one operates as its own valve, but is turned on its axis by the other to reverse its alternate and intermittent reciprocating motion.

2. The arrangement, in combination with a pair of fixed outlet-ports *c c* or *c' c'* and intermediate fixed inlet *d* or *d'*, of the grooves or passages *e e* or *e' e'* in the pistons C or D, said passages leading to opposite ends of either piston, which is arranged to turn on its axis as well as to reciprocate in direction of its length, essentially as herein set forth.

3. The pistons C D, arranged to intersect each other at their peripheries, and constructed with recesses at their intersecting portions, having keys *g k*, cross-ways or passages *h h m m*, and heels or projections, by which either one piston at the end of its stroke is made to turn the other, substantially as specified.

118,393. — GATE. — Hezekiah Root, Union City, Ind.

Claim.—The combination, with the posts *b b*, of the notched loose rails *a a'* and the fixed pins *p p*, substantially and for the purpose herein specified.

118,394.—PACKING FOR PISTONS, CYLINDERS, VALVES, &c.—Junius Schenck, Brooklyn, N. Y.

Claim.—A packing for stuffing-boxes, pistons, and the like, composed of asbestus cloth and a vulcanizable gum, combined and united so as to form a material substantially such as herein specified.

118,395.—MACHINE FOR ROLLING AND RAMMING ROADS.—Abbott Q. Ross, Cincinnati, Ohio.

Claim.—1. A self-propelling road-constructing machine, embodying in its construction a roller, B, and series of rammers K L, combined, connected, and operating substantially in the manner and for the purpose specified.

2. In the described combination with the rammers K, the steam-cushion P *p'* connected to the boiler, and operating substantially as and for the purpose specified.

3. The hollow roller B, in combination with the steam-heating device G J, as and for the purpose specified.

4. The diagonal overlapping arrangement of the rammer-weights *k*, as and for the purpose described.

5. In combination with the rammers K and cushions P *p*, the springs S, as and for the purpose specified.

6. In combination with the rammers K *k k' k''* and cushions P *p p'*, the straddling-lifter L', as and for the purpose specified.

7. In combination with the lifter-shaft M and the propelling mechanism of the machine, the sliding sleeve W *w w'*, as and for the purpose described.

8. In combination with the ramming device K *k k' k''* L M, the shoes N, as and for the purpose specified.

118,396.—EXTRACT OF HOPS. — Charles A. Seely, New York, N. Y.

Claim.—1. The separation of extract of hops into two portions, in the manner and for the purpose described.

2. The hop-bitter herein described, as a new product and a new article of manufacture.

3. The process of using, in the manufacture of beer, the separated constituents of hop-extract, as herein described.

118,397.—COMPOUND FOR COATING IRON.—Joseph A. Sewall, Normal, Ill.

Claim.—The within-described compound, consisting of coal-tar, sulphur, plumbago, and carbonate of lime, and used for the purposes set forth.

118,398. — FENCE. — Alexander H. Smith, Elkhorn, Wis.

Claim.—A fence, when made with slats A projecting only half-way over the posts B, end pieces C and D, block E on post B, under which slat A passes to prevent the panel from being raised, and wires F fastened to stakes driven into the ground, all arranged in the manner described and shown.

118,399.—MACHINE FOR MAKING HORSE-SHOES.—John H. Snyder, Richmond, Va.

Claim.—1. In combination with the dies for rolling out the blank, and the rests or supporting-surfaces, arranged as specified, the automatic nipper-carrier for taking the rolled blank and depositing it in proper position to receive the action of the device which moves it off to the benders, the whole constructed and operating in the manner described.

2. In combination with the surfaces or supports for holding the blanks brought from the rolls, the reciprocating carriage and guides, by means of which the blanks are fed to the benders, the whole constructed and operating in the manner and for the purpose set forth.

3. The curved spring-guides, in combination with a bending mechanism arranged below the point from which the blank is fed to it, and a suitable device for pushing the blank along so that it may be turned and presented edgewise to the bender, substantially as described.

118,400.—KNOB FOR PICTURE-NAILS.—William E. Sparks, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—A knob, consisting of the parts A B C, constructed as described, so that each part forms a support for the other to retain it in position, and so as to be secured together by a screw or nail which passes through the parts, substantially as herein described.

118,401. — STEAM-ENGINE. — William M. Starr, Washington, D. C.

Claim.—The above-described combination of three or more steam-cylinders provided with valves, arranged to admit the steam and force the pistons only in the direction of travel, the pistons acting successively and entirely upon the upper part of the driving-wheel and in the same direction, and the steam being admitted wholly at one end of the cylinder when traveling one direction, and wholly at the opposite end and when traveling in the opposite direction, substantially as set forth.

118,402.—RUB-IRON FOR VEHICLES.—David D. Stelle, New Brunswick, N. J.

Claim.—An improved rub-iron for vehicles, consisting of the plate A and roller B, arranged substantially as set forth, the plate A being angular to fit the lower edge of the wagon-body, and having bearings for the roller.

118,403. — DEVICE FOR GUMMING AND SHARPENING SAWS.—Jerome B. Sweetland, Pontiac, Mich.

Claim.—1. The adjustable standard C provided with stop *n*, gauge *r*, and set-screws *p s t*, in combination with the yoke D provided with bearings *e e* and a shaft or axle, *b*, the latter passing through the adjustable standard, substantially as and for the purposes herein set forth.

2. The adjustable counter-balance E attached to the yoke D, substantially as and for the purpose herein set forth.

3. In combination with the adjustable standard C and yoke D, constructed as shown and described, the hinged, pivoted, or swinging lever G, provided with arbor *d* and crotched or forked bearings *f f*, substantially as and for the purposes herein set forth.

4. The movable dust-pan M, substantially for the purposes herein set forth.

5. The combination of the adjustable standard C, yoke D, swinging lever G, standard K, spring *m*, and adjustable counter-balance E, all constructed and arranged substantially as and for the purposes herein set forth.

118,404. — QUILTING-MACHINE. — William John Tate, Philadelphia, Pa.

Claim.—1. In a quilting-machine, a reservoir for holding shoddy or other filling and rotating beaters, or their equivalents, for introducing the filling from the reservoir between two fabrics where they converge to the feed-rolls.

2. The combination of the rotating beater P within the reservoir M with the adjustable door q^1 of the latter and its roller q^4, the whole being arranged substantially as described, for the purpose of regulating the supply of shoddy or other filling into the converging space between the two fabrics.

3. In combination with the double row of needles, arranged substantially as described, the carriage and feed-rollers, and the devices described, or their equivalents, for imparting differential movements to the rollers and carriage, for the purpose set forth.

4. The combination, with the feed-levers and with cams for operating the same, of pattern-bars, arranged and operating substantially as specified.

5. The combination and arrangement, substantially as herein described, of the elongated cam *s* on the driving-shaft, the pattern-bar T secured to the fixed frame, and the feed-lever s^1 hung to the traversing-carriage D.

6. The combination and arrangement, substantially as described, of the sliding pattern-bar U, deriving its movement from the carriage D, and the feed-lever s^1 and the cam *s* hung to the fixed frame.

7. The combination and arrangement, substantially as described, of the feed-lever s^1, friction gear s^2, spindle s^4, heart-cam *t*, lever R, and rod t^2, for connecting the latter to the carriage D.

8. The combination of a series of needles, arranged in two rows, one behind and alternating with the other, and devices for feeding the work beneath the needles, substantially as described.

9. The combination of the bar H or H^1, operating a series of needle-arms, the bar H^2 operating a series of shuttles and springs or cams or their equivalents, whereby the needle-arms are depressed and the shuttles moved forward by the action of the springs, as and for the purpose set forth.

10. The carrier sliding on a guiding-rod or rods, and having a projection, *k*, in combination with the adjustable lever *l*, and with the spring *m* or equivalent device for retaining the lever after adjustment.

118,405. — LOOM-SHUTTLE. — Frederic O. Tucker, Stonington, Conn.

Claim.—1. The guard *a*, arranged within the shuttle-body, between its spindle and eduction-tube, for operation with reference to the weft-thread, in combination with the pawl *d* and the trigger *g*, operated by the interlock of the warp-thread, arranged and operating substantially as and for the purpose specified.

2. The guard *a*, secured upon the rotating shaft *b*, carrying the coiled spring *i*, in combination with the pawl *d*, spring *f*, and trigger *g*, arranged and operating substantially as set forth.

118,406.—DEVICE FOR SECURING THE BOXINGS IN HUBS.—Marshall Turly, Council Bluffs, Iowa.

Claim.—The pipe-box A, provided with screw-threads around each end, and screwed into the hub by means of the sleeve C, shaft B, and pin *a*, all constructed and arranged substantially as and for the purposes herein set forth.

118,407. — PIANO-FORTE.—William F. Ulman, Boston, Mass.

Claim.—1. The sound-board-supporting projections *i*, formed by recessing the frame, substantially as shown and described.

2. The filling *m* in the recesses *h*, formed between the supports *i*, substantially as shown and described.

3. The bridges *g i*, formed as one continuous or endless bridge, substantially as described.

4. The bridge *h*, having its end extending over the string-plate *c* and setting in a recess, *i*, in said plate, substantially as shown and described.

118,408.—MACHINERY FOR MAKING CORDS OR BANDS.—Thomas Unsworth and Edward Whalley, Preston, England, assignors to Thomas Unsworth.

Claim.—The combination of the rollers *e* and *f*, around which the threads are led from the cops a^6 to the fliers f^2, thence to the bobbins f^1, with spindle *e* upon the opposite side of the machine to receive said bobbins when wound, and the grooved rolls s' s'', having a differential movement, around both of which the threads from said bobbins pass to the fliers f^2, substantially as and for the purpose specified.

118,409. — WAGON AND CART-BRAKE.—Joshua Veasey, Highland, Me.

Claim.—The combination of the bar *b*, bracket *c*, blocks *d*, lever *f*, and springs *e* with chain *g*, substantially as and for the purpose set forth.

118,410.—COMBINED HAY AND MANURE-FORK.—Friedrich Villard, Mount Eaton, Ohio.

Claim.—1. The adjustable latch H, as and for the purpose set forth.

2. The removable runner or support M, applied to the tine-head by the described means, for the purposes specified.

118,411.—APPARATUS FOR MAKING ICE.—Elwyn C. Weld, New York, N. Y.

Claim.—1. An air-condensing engine, in which the water injected into the cylinder is supplied through the piston of the engine by any suitable pumping mechanism, substantially as and for the purpose set forth.

2. In a refrigerating-machine, in combination with a chamber adapted to contain the ice formed, a rotary case, or its equivalent, between the bottom of which and the surface of the ice the refrigerant passes, and from which the water is distributed over the surface to be frozen, substantially as set forth.

3. In a refrigerating-machine, in combination with a suitable chamber on the bottom of which the ice is formed, a traveling surface, between which and the bottom of said chamber a space is formed, and from which the water and the refrigerant are both supplied, substantially as and for the purpose set forth.

4. A refrigerating-machine, in which the surface on which the ice is formed is wetted in advance of the supply of cold air which is discharged onto said surface, substantially in the manner set forth.

118,412.—ATTACHMENT FOR SEWING-MACHINES. — William A. Wells, Adrian, Mich.

Claim.—The main or attaching-plate A, constructed at a^1 a^1 with grooves, and supplied with guides a^4 a^4, notch a^3, lever or arm a^2, and opening *a*, substantially as and for the purpose described.

118,413. — RAIL-LIFTER. — Alexander Wilson, Oxford, Pa.

Claim.—The construction of the above-described lifting-jack, consisting of the frame, its projection *e*, screw-rod, foot *f*, and nut D, as set forth.

118,414.—SHOEMAKER'S FOOT-MEASURE.—William Wilson, Boston, Mass.

Claim.—1. The sole-scale *a*, lateral scales *b c d e*, with their fastenings, and the sole-plate *f*, relatively arranged, substantially as shown and described.

2. In combination with either of the straps, the locater *l*, substantially as described.

118,415.—STEM-WINDING WATCH.—Charles V. Woerd, Waltham, Mass.

Claim.—A stem-winding and setting watch, in which the teeth of the time-changing gear-wheels are constantly in gear, the connection of the same with the stem being made by a sliding friction-clutch sleeve, substantially as shown and described.

118,416.—CLOTHES-RACK.—Charles H. Wolcott, Jamestown, N. Y.

Claim.—1. The combination of the shelf A and cone B cast in one piece, and provided with the openings *a* and *c c* and slots *b b*, with the adjustable bars C C having screws or knobs *d d*, all substantially as and for the purposes set forth.

2. In combination with the shelf A and cone B cast in one piece, and with slots and openings for the adjustable bars C C, the under hanging wire *f*, for the purposes set forth.

118,417, antedated August 11, 1871.—CLIPPING-SHEARS.—Robert Wyatt, New York, N. Y.

Claim.—The top or sliding cutter C formed with a bent rear edge, *b*, and provided with guiding-projections *c c*, in combination with the slots *d d* in the lower cutting-plate A, essentially as described.

118,418.—WEATHER-STRIP.—David Young, Kingston, Mo.

Claim.—The combination of the slotted sliding plate B and the hinged plate C, having its inner edge turned upward, all constructed and arranged substantially as and for the purposes herein set forth.

118,419. — CUTTING-SHEARS.—Rosto Orrin Wood, Niagara Falls, N. Y.

Claim.—1. The combination with the slotted bed-piece A having the combined wire and plate-shears *m*, the gauge B' having the extension C' and the oblique bar C, substantially as specified.

2. The combination with the bed-piece A, provided with a fixed blade F having cutter-hole *m* and curved edge *v*, of the pivoted blade G provided with the concave edge *n*, substantially as specified.

REISSUES.

4,518. — Division A.—BIT-BRACE. — Harry S. Bartholomew, Bristol, Conn.—Patent No. 32,347, dated May 21, 1861; reissue No. 1,351, dated November 4, 1862.

Claim.—The ball-brace A', provided with an undivided hand-block, B, fitted upon its bow-shaped portion, substantially as and for the purposes described.

4,519. — Division B.—BIT-BRACE. — Harry S. Bartholomew, Bristol, Conn.—Patent No. 32,347, dated May 21, 1861; reissue No. 1,351, dated November 4, 1862.

Claim.—A bit-brace, the main portion or bow-shaped part of which is formed of wire, in the manner substantially as shown and described.

4,520.—WHIP-HANGER.—Pindar F. Cooley, Pittsfield, Mass.—Patent No. 81,754, dated September 1, 1868.

Claim.—1. The arrangement of the sloping or down-curving upper surface-line *c* with the V-shaped notch *a*, whereby the said notch is rendered capable of readily drawing the snapper of the whip toward the lowest point *a'* of the said notch when the whip is drawn down, and discharging the same from the notch when the whip is thrown up, substantially in the manner set forth.

2. The arrangement of the notched rim A, constructed as described, and the supporting-rods *e e*

e with the swivel C, whereby the said notched rim will be rendered capable of being revolved, substantially as and for the purpose set forth.

4,521.—Boiler and Washing-Machine.—Daniel H. Hull and J. B. Savage, Plantsville, Conn., assignees of Daniel H. Hull. Patent No. 101,622, dated April 5, 1870.

Claim.—1. A sheet-metal wash or clothes-boiler, which, while adapted to be set or placed upon a stove or range like an ordinary wash-boiler, is so constructed as to receive a wringer, substantially as shown and set forth.

2. A sheet-metal wash-boiler, provided with means to receive a wringer, in combination with a trough or conduit for catching and returning to the boiler the water squeezed from the clothes passing through the wringer.

3. A combined clothes-boiler and washing-machine, constructed substantially as herein described, so that all the moving parts of the washing apparatus proper shall be carried by and removable with the cover of the boiler.

4. The combination, in one apparatus, of a sheet-metal clothes-boiler, adapted to be placed upon a stove or range, and used like an ordinary wash-boiler, a washing mechanism and means or devices to receive a wringer, substantially as shown and described.

5. The washing mechanism, constructed and applied to the boiler-cover, substantially as herein shown and set forth.

4,522.—Loom-Shuttle.—Thomas Isherwood, Stonington, Conn.—Patent No. 115,614, dated June 6, 1871.

Claim.—1. The combination, with a loom-shuttle, of mechanism constructed, arranged, and operating substantially as described, for the purpose specified, viz., to sever the weft-thread to prevent floats.

2. The knife E, arranged to act within the eduction-tube D of the loom-shuttle, as set forth.

3. The knife or clamp E having operating-spring *a* and shoulder *b*, lever or latch *d*, bent wire *f* having spring *h*, in combination with the eduction-tube D of a loom-shuttle, substantially as and for the purpose described.

4,523.—Machine for Graduating Squares and Rules.—Norman Millington, Shaftsbury, Vt., assignor to The Eagle Square Company.—Patent No. 11,489, dated August 8, 1854; extended seven years.

Claim.—1. The arrangement in a single frame, substantially as set forth, of as many gravers as there are units to be divided, in combination with the wheel or movable former W, so operated as successively to trace, of the proper length, each set of division and fractional lines.

2. The balance-frame V with its appendages to equalize the pressure of the spiral springs on the graver-handle H, so as to give the same depth of mark on the thin as on the thick end of the taper square.

3. The inclined plane *i*, with suitable operating and connecting means, acting wedgewise, as shown, for moving the square longitudinally, and dividing the inch into any desirable number of equal parts.

4. The square-holder C and graver-carriage G, arranged to press the squares and the points of the gravers into contact by a cam or its equivalent, and allow them to separate at the proper time.

5. The slide A, worked by the carriage C, operating with the pawl X and detent *d*, or their equivalents, and suitable connecting mechanism, as shown, so as to automatically release and return the graduator-piece A *i*, which lays off the spaces to be marked, or repeats the action indefinitely, substantially as specified.

6. The universal joints or swivels *u*, arranged to serve as represented, relatively to the gravers *g* and graver-stocks or handles H, to allow of both vertical and horizontal adjustment, as set forth.

4,524.—Manufacture of Paper-Stock from Certain Plants.—John Pickles, Wigan, England, assignor to James S. Sturgis and Thomas Keech, New York city.—Patent No. 91,480, dated June 15, 1869.

Claim.—The manufacture of paper-pulp from material or article, substantially as herein described.

4,525.—Ice-Machine.—Charles Plagge, New York, N. Y., assignor to himself and Theodore C. Glazier.—Patent No. 106,722, dated August 23, 1870.

Claim.—1. The combination of the differential gearing, or its equivalent, with a condensing-pump or engine, for the purpose of applying the greatest power or an increased power at the point of the greatest resistance in the stroke of the compressing-piston, substantially as set forth.

2. The combination of a differential gearing, or its equivalent, with an expansion-engine, substantially as set forth.

3. An adjustable cut-off, in combination with an air-expansion engine, substantially as set forth.

4. The rod K, the crank I, or their equivalents, by means of which the air-expanding engine is connected with the driving-shaft and differential gearing, or its equivalent, to work the air-compressing pump or engine, substantially as set forth.

5. The above-described arrangement for regulating the air expanding engine and its adjustable cut-off in order to equalize the power required for compressing the air as far as possible and to obtain the greatest effect of the power reproduced by the expanding air, substantially as set forth.

4,526.—Cooking-Range.—Watson Sanford, Brooklyn, N. Y.—Patent No. 115,644, dated June 6, 1871.

Claim.—A warming-closet in a fire-place range, when said closet is arranged directly beneath either the baking-ovens or ash-pit, or both, and at the base of the range, substantially as described.

4,527.—Sewing-Machine Table and Cover.—John J. Wheat, Wheeling, W. Va., assignor of one-eighth interest to Abraham Lash, Bridgeport, Ohio.—Patent No. 108,074, dated October 4, 1870.

Claim.—1. That part of the table marked A, in combination with the back side of the box or cover marked F, and operated as herein described.

2. The sewing-machine table, composed of the top with sinking part A and the box C, all arranged to fold up and throw back, as shown in Fig. 3, and constructed substantially as herein described.

DESIGNS.

5,209.—Coffin End.—William G. Algoo, Rochester, Pa.

Claim.—The design for a coffin end, substantially as described and shown.

5,210.—Horse Sun-Bonnet.—John Anderson, Brooklyn, N. Y.

Claim.—The design for a horse's sun-bonnet, as shown and described.

5,211.—Oblong Center-Piece.—Henry Berger, New York, N. Y.

Claim.—1. In a center-piece, the oblong rim B with broken corners, triangular ends, and segmental sides, as shown and described.

2. The wreath *c*, in combination with the oblong rim B, as shown and described.

3. The ornaments *f g* surrounding the central button C, as shown and described.

5,212.—Star Center-Piece.—Henry Berger, New York, N. Y.

Claim.—1. In a center-piece, the star-shaped rim B, as shown and described.

2. The combination of leaves C with the star-shaped rim B, as shown and described.

3. The combination of the diamonds *d* with the star-shaped rim B, as shown and described.

4. The rim or rams' horns and spear-heads surrounding the central button D, as shown and described.

5,213.—Escutcheon Center-Piece.—Henry Berger, New York, N. Y.

Claim.—1. In a center-piece, the oval center B, ornamented by radiating twists *a* and surrounded by a string of pearls, *d*, as shown and described.

2. The design of the two-cornered escutcheon C, as shown and described.

3. The combination of the oval center B and two-cornered escutcheon C, as shown and described.

5,214.—Advertising-Desk.—Lester W. Burton, Rochester, N. Y.

Claim.—The design for the advertising writing-table, as herein shown.

5,215.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,216.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,217.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,218.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,219.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,220.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,221.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,222.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,223.—Carpet.—Jonathan Crabtree, Philadelphia, Pa., assignor to Leedom, Shaw & Stewart, same place.

Claim.—The design for a carpet, as shown.

5,224.—Flour-Safe.—George Davis, Cincinnati, Ohio.

Claim.—The design for a flour-safe, as shown.

5,225.—Garment-Supporting Hook.—Cathrine A. Griswold, Willimantic, Conn.

Claim.—The design for garment-supporting hook, substantially as shown in the drawing and herein described.

5,226.—Saw.—Henry S. Miller, Philadelphia, Pa., assignor to himself and Samuel H. Davis, Jr., same place.

Claim.—The design for saw, as herein represented and described.

5,227.—Sign.—James B. Moore and John P. Robitzer, Pittsburg, Pa.

Claim.—The suspending-bar or frame, eagle, and folding or winding sign-ribbon, of the form and arrangement described and shown.

5,228.—Stocking-Fabric.—Henry Pye, Philadelphia, Pa., assignor to Fleming Brothers, same place.

Claim.—The design for stocking, as shown and described.

5,229.—Post-Office Bulletin-Board.—Benjamin F. Rogers, Cambridge, Mass.

Claim.—The design for a post-office bulletin-board, substantially as shown.

5,230.—Cigar-Box.—Charles Schmidlapp, Memphis, Tenn.

Claim.—The design for a cigar-box, as shown.

5,231.—Treadle for Sewing-Machine.—Jerome B. Secor, Chicago, Ill.

Claim.—The design for treadles for sewing-machines, as shown.

5,232.—Ladies' Satchel.—August Senne, Newark, N. J.

Claim.—The design of the oval satchel, as shown.

5,233.—Hat-Rack and Mirror.—William Vanscoyoc, Oxford, Ohio.

Claim.—The design, substantially as herein described and shown, for a combined hat-rack and mirror.

TRADE-MARKS.

424.—Newspaper.—Ford C. Barksdale, New York, N. Y.

425.—Essence of Coffee.—Butler, Earhart & Co., Columbus, Ohio.

426.—Gaiters.—Thomas R. Evans, Philadelphia, Pa.

427.—Unions, Lastings, and Serge-de-Berries.—William & Henry Foster, Denholme near Bingley, England.

428.—Harvesters.—Harris Manufacturing Company, Janesville, Wis.

429.—Brandy.—Ives, Beecher & Co., New York, N. Y.

430.—Surgeons' Instruments, &c.—S. Maw, Son & Thompson, London, England.

431.—Soaps.—Rappleye & Knight, Philadelphia, Pa.

432.—Pump.—Hiram Smith, Hilledale, N. Y.

433.—Hydraulic Cement.—Utica Cement Company, Chicago, Ill.

434.—PIPIFAX BITTERS.—Walter & Shaeffer, San Francisco, Cal.

435. — WORKING-BARRELS OR PUMPS FOR PETROLEUM-WELLS.—Woodbury, Booth & Co., Rochester, N. Y.

EXTENSIONS.

WILLIAM R. FEE, of Cincinnati, Ohio.—Letters Patent No. 17,961, dated August 11, 1857.

"Improvement in Machines for Hulling Cotton-Seed."

Claim.—A series of cutting-edges with deep intervening furrows, for the purpose of hulling cotton-seed by a cutting action, which renders both the screening process and the expression of the oil easy and complete, as set forth.

BENAIAH FITTS, of Worcester, Mass.—Letters Patent No. 17,963, dated August 11, 1857.

"Improved Arrangement of Feed-Rollers for Planing-Machines."

Claim.—The internal gear F and the external gear G, in combination with the pinion H and connecting-arms I and J, when constructed and operated as set forth and described.

JOSEPH W. BUDD, of Midland City, Mich., administrator of ISRAEL DODENHOFF, deceased. — Letters Patent No. 18,009, dated August 18, 1857.

"Improved Raking Apparatus for Harvesters."

Claim.—1. The rake H, in combination with the platform A and stationary and elastic guides, the whole being constructed and operated substantially as described.

2. The gate K, in combination with a rake, H, traveling in a horizontal endless track, the whole being constructed and operated in the manner substantially as and for the purposes set forth.

JOHN TOULMIN, Worcester, Mass.—Letters Patent No. 18,065, dated August 25, 1857.

"Improvement in Vibrating Shears."

Claim.—Hanging the movable blade of a pair of shears by two adjustable center pivots upon an adjustable pillar-block, substantially in the manner described, and for the purpose of adjusting the movable blade of said shears as to give it the most effectual shearing position in relation to the stationary blade, as set forth.

ISSUE OF AUGUST 29.

PATENTS.

118,420.—TREATING FORMS OF TYPE, ENGRAVED BLOCKS, &c.—Joseph A. Adams, Brooklyn, N. Y.

Claim.—The herein-described process of coating forms of type, engraved blocks, plates, &c., with glycerine and alcohol, substantially as described and specified.

118,421.—LAMP.—Lewis J. Atwood, Waterbury, Conn., assignor to The Plume & Atwood Manufacturing Company, same place.

Claim.—1. The barrel A, containing the screw *l*, and supported by the ring-flange *i* around the wick-tube *c*, substantially as set forth.

2. The corrugated chimney-rest surrounding the barrel A, but removable therefrom, in combination with the wick-raising wheels *d*, screw *l*, and barrel A, substantially as set forth.

3. The screw *l* made of the triangular wire coiled and soldered within the barrel A, as set forth.

118,422.—SPINDLE AND BEARING FOR SPINNING-FRAMES.—Clark L. Austin, Lawrence, Mass.

Claim.—The hollow spindle A, open at its top, and provided with the apertures H, H^1, and H^2, the bolster D, oil-cup C, and step B, all constructed, arranged, and operating as and for the purposes described.

118,423. — PAPER-TRIMMING MACHINE. — William G. Ayres and Seth L. Cole, Brooklyn, N. Y., assignors to Henry A. Snowden, same place.

Claim.—1. The arrangement and combination of one movable cutter, K, with a straight-edged steel plate, K', both being secured to one end of the movable strip or bed N, that will horizontally adjust the knife K and plate K' to suit the width of the strip or margin of wall-paper to be cut, and not the paper to suit the knife, substantially in the manner and for the purpose set forth.

2. The frame A to hold the wall-paper on a line with the cutting-edge of the movable knife K and plate K', in combination with the hinged rod R or without the same, all arranged and operating in the manner and for the purpose specified.

118,424. — BEDSTEAD-FASTENING. — Elisha T. Barlow, San Francisco, Cal.

Claim.—The rail B, with its upward-projecting hook-plate *f*, in combination with the recessed post A and under binding hook-plate *e* and button *g*, substantially as and for the purpose above described.

118,425.—PRINTER'S FURNITURE. — Benjamin B. Blackwell, Jamaica, N. Y.

Claim.—The combination of a flanged holding-plate with an ordinary column-rule, a loose stereotype or electrotype plate, and its block or bed, substantially as and for the purposes herein specified.

118,426.—MACHINE FOR MAKING CORD.—Sarah A. Boardman, Lancaster township, Pa., administratrix of Harris Boardman, deceased.

Claim.—1. The curved hook-ended levers D, held by a central pivot, *d*, on a bracket, G, upon a headpiece, C, with its bearings for the upper ends of the spindles, substantially in the manner shown, and for the purpose specified.

2. The arrangement of the disk L cast with a sectional pending flange, P, for a belt, *o*, nipples *n* for the tripper-wire M, in combination with the stops N and wire-tripper, all constructed as shown, for the purpose mentioned.

3. The combination with spindle B and disk T, with its double lugs *t t* to prevent lateral motion, and the perforated lug *u* forming a hinge for the end of the stem on the guard or guide-rings U, in the manner set forth.

4. In combination with the spindle B, the arrangement of the tension-pulleys H I, which have their bearings in a pair of plates, J, which plates are attached centrally between the pulleys by a bolt with a screw end and nut, K, for regulating the pressure of the plates on the pulleys, substantially in the manner shown and for the purpose mentioned.

118,427. — DEFECATING AND BLEACHING SACCHARINE MATTER.—Howard B. Bond, Terrebonne parish, assignor to himself and James B. Price, New Orleans, La.

Claim.—The process of defecating or bleaching saccharine liquids, substances, or matter with bisulphide or bisulphuret of carbon, either in a gaseous or liquid form, substantially as described.

118,428.—RETAINER FOR HOLDING PRESSED AND MOLDED CIGAR-BUNCHES.—William D. Brewer, Charlestown, Mass.

Claim.—A cigar-mold or retainer, provided with a helmet, *c*, substantially as and for the purpose described.

118,429.—SPIKE-MACHINE.—Frederick Bruso, Buffalo, N. Y.

Claim.—1. The inclined ways g^2 g^2 and wedge-shaped stop or guide-pieces A^3 A^3, or equivalent mechanism, in combination with the ways G G, cross-head H, cutting and swaging-tool I, and griping-dies B B', as hereinbefore set forth.

2. The arrangement of the springs *j j* with the grooves g^1, inclined ways g^2, and guides and tongues h^3 h^4 of the cross-head H, as hereinbefore set forth.

3. The recess *f'* of the bar F, constructed and arranged with head-unsetting die D and movable griping-die B' *b*, and stationary die B, as hereinbefore set forth.

4. The arrangement of the guide-plate Y with the movable die B' b^3 and bar F provided with recess *f'*, as hereinbefore set forth.

5. The arrangement of the upper die-plate W with the inclined ledge b^3 of the stationary die B and the rabbet-die *b*, and beveled surface b^4 of the movable griping-die B', as hereinbefore set forth.

6. The combination of the lever E, cam N, and reacting-spring T with the cross-head H, connecting-rod K, and heading-die and stock D D', as hereinbefore set forth.

118,430. — GLEANER-RAKE FOR REAPING-MACHINES.—James V. Bryson, Greenupsburg, Ky.

Claim.—1. The rake *i*, constructed with a joint composed of a hinge, *t*, with pintle in rear and a wooden locking-pin, *u*, to adapt it to fold to compact the machine, and to yield so as to pass obstructions.

2. The frame *g*, as represented and described, having a pivot at each end, and affording a support for the intermediate frame *l* and rake *i*.

3. The secondary frame or vertical support *l*, adjustable vertically on the face of the main frame *g*, as means for varying the depth of the rake.

4. The combination of the hinge-lugs *c*, guide-lugs *d*, pivoted main frame *g* with stems *o* and springs *p*, depth-adjusting frame *l* with slots *q* and draw-bars *s*, and hinges *m*, as means for attaching a gleaning-rake, the same being constructed and arranged substantially as represented and described.

118,431, antedated August 19, 1871. — CLOTHES-WRINGER.—Elisha P. H. Capron, Hudson, N. Y., assignor to Oscar B. Gray and Andrew Foster, New York city.

Claim.—1. The construction and arrangement of the corrugated endless web or band *a*, and corrugated shafts or rollers *b b'*, as herein shown and described, for the purposes specified.

2. Making the rubber cylinder or covering *f* of a roller, E, detachable and free from liability to become twisted by means of the corrugations on the inner surface of the said cylinder, which fit into corresponding corrugations provided on the inner roller or shaft *g*, as herein shown and described, and for the purposes specified.

3. The roller A, in combination with the roller E, both being constructed substantially as described, for the purposes specified.

4. The eccentric disks K K, provided with arms *m m*, in combination with the plate *o*, set-screw N, and frame B of the wringer, substantially as shown and described, and for the purposes set forth.

118,432.—STEAM-HEATER. — Edward Caulfield, Oswego, N. Y.

Claim.—1. The hollow-cone joints as a means of connecting the sections of radiators together, substantially as shown and described and for the purposes set forth.

2. The hollow section of a radiator whose parallel surface-plates have concavo-convex protuberances, the protuberances being placed opposite to the concavities, as described, and for the purposes indicated.

118,433. — BRACKET. — James E. Chesley, Boston, Mass., assignor to Jefferson J. Gray, same place.

Claim.—As a new article of manufacture, a bracket with dovetailed grooves and tenons, combined with back piece A, shelf B, and support C, when constructed substantially in the manner as and for the purposes hereinbefore set forth.

118,434.—PEN-AND-PENCIL CASE. — James M. Clark, Jersey City, N. J., assignor to Ephraim S. Johnson, same place.

Claim.—The pen-and-pencil case made with the tube *b* and case *a*, between which are the longitudinal strips *s* separating the space into a magazine for leads and a receptacle for the pen-slide, as set forth.

118,435.—CREEPING-DOLLS.—George Pemberton Clarke, New York, N. Y.

Claim.—1. The arm G, pins H H, the wire E, staples P *p*, and spring D, as herein combined, with the moving head B, substantially as and for the purpose shown.

2. The hooked tooth-wheel 4, in connection with the pinion J, substantially as and for the purpose herein shown.

3. The construction and application of the improved lever U with the side T, for the purpose herein specified.

118,436.—CAR-COUPLING.—Calvin M. Colby, Corinth, Vt., assignor to himself, T. A. Chase, William Standlick, Alvin H. Little, A. W. Paine, O. W. Brown, Ransom Darling, R. H. Childs, Benjamin Willis, E. S. Carpenter, and Richard Robil.

Claim.—The coupling-pin C, located within the upright B, and operated by means of the levers E E and rods H H, in combination with the buffer A, lever K, and end of the car, substantially as herein shown and described, and for the purposes set forth.

118,437.—APPARATUS FOR DRESSING ORES. Charles Frederick Collom, Calstock, Great Britain.

Claim.—1. The machine for cleansing and dressing ores, constructed and arranged to operate substantially as herein shown and described.

2. The combination of the inclined table *f*, perforated circular pipe *l* with stops l^1 l^2, connecting-pipes *m m*, perforated pipes l^3 l^4, receivers S S', brushes *g g*, and receivers *p* p^1, constructed and operating substantially as set forth.

118,438. — BARREL, TANK, AND CASK FOR TRANSPORTING ACIDS AND PETROLEUM.—James B. Davenport, New York, N. Y.

Claim.—The lining B, having its edges united together, and provided with arms or supporting-pieces C C arranged inside of a barrel or cask and secured in position, in the manner and for the purpose specified.

118,439.—PRINTER'S COLUMN-RULE. — Augustine J. H. Duganne, New York, N. Y.

Claim.—The combination of a grooved column-rule (one or more) with an electrotype or stereotype plate, and a block or bed upon which to rest such plate, substantially as and for the purposes herein specified.

118,440.—COMPOSITION FOR SOAP.—Robert Eastman, Media, Pa.

Claim.—A soap, composed of the ingredients and in about the proportions given

118,441.—Toy-Toad.—James Fallows, Philadelphia, Pa.

Claim.—1. In combination with the upright *a''*, the two projecting plates 10 11 connected together at their sides and left separate in front, substantially as and for the purpose hereinbefore set forth and described.

2. In combination with the mouth of the toad B, the springs C C, arranged to operate in relation to the penny 12 and its supporting-plates 10 11, substantially as and for the purpose hereinbefore set forth.

3. In combination with the case A and toad B, the gum-elastic strip or ring 7, cross-bar 8, and stem *b'''*, arranged to operate substantially as and for the purpose hereinbefore described and set forth.

118,442.—Wash-Boiler.—Barnard T. Fellows, Lancaster, Pa.

Claim.—The false bottom A in steam wash-boilers, when the same is centrally elevated, and corrugations D C radiate from the orifice of a pipe, G, under a deflecting-cap, H, in combination with the water-channels E under the perforations D, all arranged in the manner and for the purpose specified.

118,443.—Car-Brake.—Amos W. Filer and Llewellyn T. Hatfield, Danby, Ill.; said Hatfield assignor to said Filer.

Claim.—The combination of the double ratchet-wheel R, racks Q, sliding frame K, lever J, shaft M, pinions S T, elbow-lever G, slotted frame W Y, spring-catch H, bar I, and weighted lever D, as and for the purpose set forth.

118,444.—Rubber Boot.—Clement S. Foster, Ashland, and Oliver Saylor, Philadelphia, Pa., assignors to themselves, Walter F. Shultz, and T. C. Else, same place.

Claim.—1. The within-described method of fastening a leather outsole to the sole of a gum boot, by means of nails driven through the said sole and boot, and through an insole, B, and clinched or riveted upon the inside of the latter, substantially as herein described.

2. The within-described method of fastening a leather heel to a gum boot by means of nails passed through the said heel, through the soles D, C, and B, and clinched or riveted upon the insole, substantially as herein described.

3. A gum boot, having a leather outsole studded with clinched nails, as described, and secured to the boot at the edge of the sole by nails *h* driven through and clinched.

118,445. — Reed Musical Instrument.—Joseph Foster, Keene, N. H., assignor to himself and Ephraim Foster, same place.

Claim.—1. The reed-board or boards M, let into the wall of the wind-chest and nearly inclosed thereby, substantially as specified.

2. The valve H, having the attached lever K, made and operating substantially as described.

3. The combination of the bent lever-valve H with the tracker L and reed-board M in the wind-chest, substantially as described.

118,446.—Picking Mechanism for Looms.—Henry R. Fry, Wabash, Ind.

Claim.—The rock-shafts H H', cams E E', pulleys F F', arms G G K K', spring P, and straps J, in combination with the picker-staves I I' pivoted at or near their centers, and a spring or springs, L, attached to the upper parts of said picker-staves and secured underneath the lay, all arranged substantially as herein described.

118,447. — Hoisting Apparatus.—Emery R. Gard, Chicago, Ill.

Claim.—1. The ratchet-wheel D, constructed with the two endless ratchets *a a* upon its faces, substantially as and for the purposes herein specified.

2. In combination with the double ratchet-wheel D, the pawls E E and double lever G, arranged and operating substantially as and for the purpose herein specified.

3. The shifting-weights H H, in combination with the pawls E E, operating substantially as and for the purposes herein specified.

4. The springs or elastic blocks *f f* between the pawls E E and lever D, substantially as and for the purpose herein specified.

5. The arrangement of the pawls E E upon the lever G in relation to the ratchet-wheel D so that the vibrations of the lever will reverse the movement of the wheel and lower the weight.

118,448.—Feeding Device for Sawing-Machines.—Luther W. Green, Williamsport, Pa.

Claim.—1. The slides N N, rolls C C, links *e e*, levers G G, and cross-head L, as and for the purposes set forth.

2. The grooved plate B, slides N N, rolls C C with their connected weighted levers G G, cross-head L, and sliding plate T and adjusting mechanism, when combined as and for the purposes described.

118,449. — Apparatus for Grooming Horses.—John James Greenough, Syracuse, N. Y.

Claim.—1. The combination of the cleaning-tool with the jointed flexible driving-arm, constructed and arranged substantially as and for the purpose set forth.

2. The joint near the cleaning-tool, constructed with ring *d* and handle *e* so that it may be attached to the fore arm of the operator, substantially as described, and for the purpose set forth.

3. The jointed arm which incloses the driving-gear, provided with the globe-gears A A, journal-boxes G G, with semicircular cogged projections *m m* and links *n n*, constructed and arranged as herein shown and described.

118,450. — Sewing-Machine.—William O. Grover, Boston, Mass.

Claim.—1. The combination of the rocking feeder with an adjustable tappet for causing the feeding surface to advance and for varying the extent of movement, the said devices being constructed to operate substantially as before set forth.

2. The combination of the rocking feeding instrument with a tappet for imparting a positive backward movement to it, substantially as before set forth.

3. The combination of the reciprocating feeding instrument of a sewing-machine with a stop to limit the extent of its backward movement and the spring-tappet to impart a positive but yielding backward movement to the feeding instrument, substantially as before set forth.

4. The combination of a shuttle, constructed with a groove in one of its ends, with a hook-formed catch pivoted in the interior of the shuttle-cavity, and controlled by a spring in such manner as to hook over the outer side of the spool-journal and hold it in said groove, as before set forth.

5. The combination of the tension-adjusting spring of the shuttle with an adjusting-screw, having its head constructed and arranged, as described, so as to bear in a corresponding hole formed in the wall of the shuttle, and bearing outward therein, as before set forth.

6. The combination of the shuttle, constructed with tension-holes, with an adjustable-bar tension-spring, constructed with notches opposite said tension-holes, and connected at both ends with the shuttle, as before set forth.

118,451.—Stand for Brooms.—Edward A. Harris, Chicago, Ill.

Claim.—The revolving broom-receptacle, consisting of the platform A supporting the central shaft B, upon which revolve the disks C C', connected together by rods D, the upper disk being furnished with the springs E, and the lower disk arranged to retain the ends of the broom-handles, substantially as described and shown.

118,452. — Seat-Spring for Vehicles.—Benjamin Hershey, Erie, Pa., assignor to himself, E. Geer, Richard Dudley, and Richard F. Gaggin.

Claim.—1. The rocking-shafts D D, when constructed as stated, and so secured as to act in connection with a torsional spring, substantially as described.

2. The torsion-spring rods B B and rocking-shafts D D, when the same are so combined and arranged as to operate substantially as described.

118,453. — Bottle and Box-Opener.—George Jay Hill, Buffalo, N. Y., assignor to himself and Charles Frederick Nagel, same place.

Claim.—1. The combination and arrangement of the whole device, consisting of the handle A with recess *i*, cork-screw E, opening-knife G with claw *f*, hammer-head H, forked rod B, flanges D D', piece *n* with hook *a*, and jointed cutter *b*, operating in the manner and for the purpose specified.

2. The piece *n* with hook *a*, jointed cutter *b*, spring *d*, and flanges D D', in combination with the forked rod B C', handle A, and cork-screw E, arranged in the manner and for the purpose specified.

118,454.—Window-Blind.—Isaac H. Hobbs, Philadelphia, Pa.

Claim.—The combination of the bar F, lever I, pivot P, and plates E and J, blinds Q and Q' Q'', spring L, bolt or lock G, substantially as described, as and for the purpose hereinbefore set forth.

118,455, antedated August 18, 1871.—Rotary Pump.—Charles Emery Hutson, St. Louis, Mo.

Claim.—1. The cylinders A A', heads *a a*^{1}, packing *a*^{2} *a*^{3}, slots *g*^{1} *g*^{2}, piston C, arranged substantially as described.

2. The reverse-operating valves E E^1 E^2 E^3, valve-rest D, when arranged in pump-barrel B and discharge-chamber B' of cylinders A A', substantially as and for the purpose set forth.

3. The arrangement of cylinders A A', heads *a a*^{1} having packing *a*^{2} *a*^{3}, slots *g g*^{1}, semi-annular piston C, valve-rest D, reverse-operating valves E E^1 E^2 E^3, suction and discharge-pipes F F', when said parts are constructed and combined to operate substantially as and for the purpose set forth.

118,456. — Combined Watch-Key and Cork-Screw.—Louis J. Jenner, Chicopee Falls, Mass.

Claim.—1. The cork-screw *c*, provided with case or shell *d* and ring or handle *b*, in combination with the key *a*, substantially as specified.

2. The cork-screw *c*, provided with ring or handle *b* and case or shell *d*, in combination with opener *e*, substantially as specified.

118,457, antedated August 21, 1871.—Steam-Boiler.—William R. Jones, Cambridge, Mass.

Claim.—The combination of the tanks A, A^1, A^2, &c., with the plates B, B^1, B^2, &c., when arranged to operate substantially as described, and for the purpose set forth.

118,458.—Construction of Ships.—Henry Jordan, Liverpool, England, assignor to Fred. W. Fuller, St. Augustine, Fla.

Claim.—1. The combination, herein described, of the longitudinal frames and double planking, substantially as and for the purpose set forth.

2. The combination, in the hull of a vessel, of the longitudinal frames with the internal floor L and vertical T-iron frames C, as shown and described.

3. The combination, with the longitudinal frames herein described, of the internal vertical iron straps M, the upper ends of which form knees for supporting the main deck, as herein set forth.

4. The combination of L-irons set back to back with the bulkheads, whereby said bulkheads are made water-tight, substantially as set forth.

5. The combination, herein described, of iron bulwarks, with a wooden vessel, when secured substantially as set forth.

118,459.—Apparatus for Manufacture of Hydrocarbon Gases.—Joshua Kidd, New York, N. Y.

Claim.—1. The combination of a downward-inducing jet with a retort, into which gasoline is admitted sparingly.

2. The combination of inducing-jet B with conical needle-valve F, working through stuffing-box S, and method of operating same, as described.

3. Placing the mixing-tube P below the jet B, also the method set forth for regulating the air and vapor.

4. The combination of the spring G or its equivalent, conical needle-valve F, air-regulator D, and stuffing-box S, also the construction and mode of attaching the inducing-jet B.

118,460.—Log-Cart.—Alexander Kirkwood, Jackson county, Miss.

Claim.—The combination of the several parts of the log-cart, as shown and described.

118,461.—Fence.—Henry H. Landis, Lancaster, Pa.

Claim.—The construction of a cast-iron post-seat or chair, D, with its side supports A B C, in the manner and for the purpose specified and shown.

118,462. — Culinary Vessel. — Samuel Lee, Taunton, Mass.

Claim.—The culinary utensil, consisting of the frame A, boiler B, fry-pan C, and pivoted griddle D, constructed as herein shown and described.

118,463.—Steam-Engine.—Charles Lovey, Toronto, Canada.

Claim.—1. Constructing the steam-cylinder A A', bed-plate B, steam-jacket, steam-chest, and cylinder-face or valve-seat in two parts; the bed-plate C, lower half of cylinder A, and steam-jacket *d*, steam-ports and exhaust *a b*, and cylinder-face or valve-seat B in one part; the upper half of cylinder A', and upper half of steam-jacket *d'*, and the steam-chest D in the other part, as hereinbefore set forth, and for the purpose specified.

2. The method of constructing the bed-plate, upper and lower halves of steam-cylinder, cylinder-face or valve-seat, guide-bearings, pillow-block bearings, and steam-chest in such a manner that the whole of the parts above named, together with the top of the bed-plate, can be planed or finished at one "chucking," and thus be perfectly in line.

3. The steam-cylinder A A' divided in the direction of its length, and planing or finishing the same in that direction, as hereinbefore specified.

118,464.—Manufacture of Ornamental Articles in Wood in Imitation of Carving.—George William Ley, St. John's Road, Croydon, England.

Claim.—1. The formation of ornamental articles in wood by pressing into a mold a block of wood cut endwise of the grain, and that has been saturated with glue and dried before being subjected to the pressing operation.

2. The formation of ornamental articles in wood by pressing into a mold a block of wood cut endwise of the grain, and which has been saturated with glue or like cementing material and dried,

and also veneered on the surface to be molded or impressed.

3. The formation of ornamental articles of wood by pressing into molds veneered blocks impregnated with glue, and having the outer face of the veneer covered with parchment, which is subsequently removed, substantially as before set forth.

4. The formation of ornamental articles of wood in high-relief by pressing into molds veneered blocks impregnated with glue, and having an additional layer of veneer at the more protuberent parts of the design, substantially as before set forth.

118,465.—BRAKE FOR VEHICLES.—George W. Loomis, Torrington, Conn.

Claim.—The combination of the compound-lever mechanism, consisting of the snaffle-hook *a*, swivel *c*, rod B, buckle-joint *m*, lever *e*, bar *g*, jointed lever A A, link-bar *i i*, and brakes *k k*, when the said mechanism is so arranged as to operate the brakes on the front sides of the wheels E E, and admit of the free action of the cart-body for tilting and dumping, as herein shown and described.

118,466.—MACHINE FOR SMOOTHING MOLDINGS.—John S. Loomis, Brooklyn, N. Y.

Claim.—The gauge-bars E E, having slots *n n' n''* and adjustable heads F F, in combination with the reciprocating table A, all constructed, arranged, and operating substantially as and for the purpose specified.

118,467. — THREAD-CUTTER FOR SEWING-MACHINES. — Joseph A. Lord, Sanford, Me.

Claim.—The combination of the piece *c*, constructed as described, and having the plate *b*, spring coil *i*, the handle or pad *l*, and the rod *g* having the knife *o*, and the extensible devices, consisting of the screw *k* and the pin *m*, applied and operated as herein set forth.

118,468.—ELEVATOR.—John Macomb, Chicago, Ill.

Claim.—1. The platforms F F', hung centrally to the rope or chains E E', in combination with guide-ropes, rods, or chains J J, constructed and arranged as and for the purpose specified.

2. One or more guide-ropes, rods, or chains, J J, when employed for the purpose specified, and arranged substantially as shown.

3. The guide-ways K K, arranged and operating with the platforms F F', for the purpose specified.

4. The elevator-platform, provided with a guide-way, *f*, having an opening, *f'*, for the purpose specified.

5. The construction of the platforms F F' with the central cross-beam A, to which the platform-floor *f''* is hung by means of braces *g g* and vertical support *h*, arranged substantially as and for the purpose herein set forth.

6. The threaded rods *j j* and nuts *t t*, in combination with the platforms F F', guide-ropes, chains, or rods J J, constructed and arranged for the purpose described.

7. The anti-friction rollers or pulleys *m m*, in combination with the pulleys D D G G^1 G^2, arranged as shown and described, and for the purpose set forth.

8. The arrangement of the pulleys G G^1 G^2 so as to admit of the horse's pulling in both directions, as herein described, in combination with the rope or chain E', for the purpose specified.

9. The anti-friction rollers or pulleys *p p*, arranged upon the platforms F F', in combination with the guides J J, for the purpose set forth.

10. The elevating device as a whole, consisting of the platforms F F', the guides J J, the arrangement of the cords E E, pulleys D D G G^1 G^2, and guide-boxes K K, all substantially in the manner described and shown.

118,469, antedated August 24, 1871.—STUD FOR SUSPENDING DRIVING-WHEELS FOR SEWING-MACHINES.—Robert H. McCann, Zanesville, Ohio.

Claim.—The combination of the stud D, nuts E E, and washer *g* with the wheel B and leg A of a sewing-machine, substantially as and for the purpose set forth.

118,470.—HORSESHOE-CALK.—John J. Mervesp, New York, N. Y.

Claim.—1. In horseshoes, the U-shaped fastening, Figs. 10 and 11, in combination with a calk having a tapering shank grooved on its opposite sides to receive said fastening, as herein described and shown.

2. The solid toe-calk *p*, Figs. 13 and 14, formed with tapering holes, in combination with tapering rivets *r r*, the shoe *s* with tapering holes and fastenings for securing the rivets *r*, all constructed and arranged substantially as herein described.

118,471.—WOODEN PAVEMENT.—David H. Mulford, Saratoga Springs, N. Y.

Claim.—The clamp or hook shown in Fig. 3, one end of which is inserted in the block of one row and the other end projecting under the block of the adjoining row and thereby supporting the same, as shown and described.

118,472.—APPARATUS FOR EXHAUSTING AND PURIFYING GASES. — Peter Munzinger, Philadelphia, Pa.

Claim.—The tank or vessel A, the induction-pipe C, with or without the pump G, and the annular or other distributing-chamber E, for the purpose shown and described.

118,473, antedated August 23, 1871.—PADLOCK.—Hermon Nelsen, Jerome, N. Y.

Claim.—The circular cover *g*, with a stud, *i*, projecting from the inner side of the shackle *f* and entering a recess in the case, in combination with the circular case *a b*, that is made with openings for the shackle and with a recess for receiving the edges of the cover *g* and securing the same, as set forth.

118,474.—SHAFT-COUPLING.—Joseph Ochsner, New Brighton, Pa.

Claim.—The keys A, with their bronzed bearing-faces arranged at an obtuse angle to a line radiating from the axis of shaft B and hub C, inserted and extending through the entire hub, substantially as herein described, and for the purpose set forth.

118,475.—AEROSTATIC JACK.—Anthony V. Ojeda, San Francisco, Cal.

Claim.—The machine described, provided with the discharge-cock 2, valve L, and safety-passage P, as set forth.

118,476.—CAR-COUPLING. — James H. Oliver, Baltimore, Md.

Claim.—The pin C having projections *c* and *d*, adapted to the draw-head in the manner shown and described, and in combination with the link B provided with inclined heads A, all substantially as and for the purposes hereinbefore set forth.

118,477. — MANUFACTURE OF ARTIFICIAL STONE.—Adolph Ott, New York, N. Y., assignor of one-half his right to Thomas F. Welle.

Claim.—The process of making artificial stone from hydrate of lime, together with the ingredients herein specified, as and for the purposes set forth.

118,478.—FOLDING WASH-STAND. — David Otho Parker, Liverpool, Canada.

Claim.—A wash-stand, consisting of the three detachable hinged pieces A *a'* and the shelf B *b'*, said parts A *a'* B *b'* being constructed and arranged substantially as herein shown and described.

118,479.—CHILD'S HIGH CHAIR AND WORK-STAND COMBINED.—David Otho Parker, Liverpool, Nova Scotia.

Claim.—A combined child's high chair and work-stand, consisting of the three legs A, seat B *b'*, and the stand-top C, said parts A B *b'* C being constructed and arranged substantially as herein shown and described.

118,480.—EXCURSION-CHAIR.—David Otho Parker, Liverpool, Canada.

Claim.—An excursion-chair, consisting of the detachable hinged legs A *a'*, the top or seat B B', the button E, and the metallic hooks *f*, said parts A *a'*, B B', and *f* being constructed and arranged substantially as herein shown and described.

118,481.—MACHINERY FOR FEEDING WIRE TO MACHINES.—Edward G. Parkhurst, Hartford, Conn., assignor to The Pratt & Whitney Company, same place.

Claim.—1. The combination of the device *h i* or its equivalent with the releasing mechanism *d e f g*, the advancing mechanism L I, and the interior parts of I, so that the wire is unclasped before it is moved and clasped before the rack is pushed back, substantially as described.

2. The construction and arrangement of the sliding box I and its interior parts, as shown in Figs. 5, 6, and 7, and described herein.

3. The combination of the levers *e e'*, the collar *f*, the plunger *d*, and the jaws *c*, substantially as described.

4. The adjustable block *j*, in combination with the levers *e e'* and the plunger *d*, for the purpose of altering the position of the levers *e e'*, substantially as described.

5. The reciprocating rack L, in combination with the sliding block I and its interior mechanism, constructed and arranged substantially as described.

118,482.—MACHINE FOR GRINDING CIRCULAR SAWS. — John Pedder and George Abel, Temperanceville, Pa.

Claim.—1. One or more pairs of grinding or polishing-wheels or disks, each pair having its grinding or operative points opposite, and susceptible of motion to or from each other at pleasure, in combination with a blank-holder or mandrel so arranged as to be capable of a horizontal motion at right angles to the plane of the revolving wheels, substantially as described.

2. The blank-holder, so made as to be rotated while the grinding is being done, in combination with one or more pairs of grinding-wheels or disks, arranged and operated substantially as described.

3. The double-acting cams or eccentrics *n n*, arranged with suitable connections so as to be simultaneously operative, in combination with the grinding-wheels, substantially as described.

4. The cams *n n* and grinding-wheels of the last preceding claim, in combination with suitable pressing devices for keeping the wheels up to their work, arranged substantially as described.

118,483. — HERNIAL PAD.—William Pomeroy, New York, N. Y.

Claim.—1. The wire *w*, turning in the clasp of the plates C and C', and forming the support of the rim A, substantially as described.

2. The combination of the wire *w* and plates C and C' with the rim A, the finger-pad B, and the screw S, with or without the bar H, to form a compound hernial pad, substantially as described.

3. The combination of wire *w* and plates C and C' with the rim A, the finger-pad B, the bar H, and the screws S and S', to form a compound hernial pad, substantially as described.

4. A hernial pad, either covered or uncovered, made of rubber sponge.

118,484.—DENTAL PLATE.—Smiley Purvine and Harrison Smith, Salem, Oreg.

Claim.—In a dental plate, as a connection between the plate proper and the vacuum-chamber, the bar or bars with open spaces, as shown and described.

118,485.—DEODORIZING AND PURIFYING SEWAGE, &c. — Christopher Rawson, London, Philip Ovenden, Surrey county, James Wylde, Leamington, William McCree, Leyton, and Henry Hill, Hastings, England.

Claim.—1. The use of albuminous and albuminoid substances, in addition to the substances named in this specification or in the specifications of United States patents Nos. 91,373 and 103,664, hereinbefore referred to, or in substitution for the blood mentioned in these specifications in the treatment of sewage, urine, and refuse matters and liquids.

2. The improved mode hereinbefore described of using the substances by means of which the precipitation of the impurities contained in sewage, urine, and refuse matters and liquids is effected—that is to say, making two separate mixtures, the one hereinbefore termed the "A B C mixture," and the other the "alkaline mixture," essentially as hereinbefore described, and adding both mixtures simultaneously and separately to the sewage, urine, or refuse matters or liquids to be purified, so that the said A B C mixture and the said alkaline mixture shall simultaneously meet and mix in and with the said sewage, urine, or refuse matters or liquids.

3. The method hereinbefore described of aiding the precipitation of the impurities contained in the sewage by means of an electric current generated by voltaic, electric-magnetic, or magneto-electric action.

4. The method hereinbefore described of destroying wholly or partially the offensive gases accompanying the sewage, or given off from it during its treatment, or arising from sewage mud during its treatment—that is to say, mixing such gases with chlorine or sulphurous acid in a gaseous form.

5. The purification of the effluent water by aerating it with atmospheric air, essentially as hereinbefore described.

6. The improved apparatus hereinbefore described, and illustrated in Figs. 3, 4, and 5 of the accompanying drawing, for letting off the effluent water from the surface—that is to say, a hinged pen-stock working between wing-plates and furnished with flexible flanges and fittings, the whole constructed and arranged essentially as described.

7. The modification of the aforesaid apparatus hereinbefore described, and illustrated in Figs. 6 and 7 of the accompanying drawing—that is to say, a hinged pen-stock furnished with wing-plates working between flexible flanges affixed to the sides of the outlet-passage, the whole constructed and arranged essentially as described.

8. The improved method hereinbefore described, and illustrated in Figs. 8, 9, 10, and 11 of the accompanying drawing, of drying sewage-mud—that is to say, by the use of steam heat underneath a drying-floor, and a current of hot air above the mud spread on the said floor, essentially as described.

118,486. — BOUQUET-HOLDER. — James C. Reed, Boston, Mass.

Claim.— The button-hole-bouquet holder shown, having a button or portable head, A, and a spring, C, which latter is adapted to be inserted through a button-hole from the back, and to retain one or more flowers in the front by an elastic hold, substantially as and so as to serve the purposes herein set forth.

118,487. — WASHING-MACHINE.—John W. Ricker, Chelsea, Mass.

Claim.—The application of one or more guards or clearers, I, to the rolls H of a washing-machine, substantially as and for the purpose set forth.

118,488.—STAMP-HOLDER.—John G. Rogers, Van Buren county, Mich., assignor to himself and James C. Crandall.

Claim.—A stamp-holder, constructed as described, provided with the staple D, passing through the outer case A' and attached to the inner flexible

jaw A", substantially as and for the purpose set forth.

118,489.—DEVICE FOR CUTTING CONCAVES. Henry C. Rosin, Chicago, Ill.

Claim.—1. The non-rotating swinging arm D provided with a cutter-head, E', and mounted upon *r*, supporting-frame, so as to swing in the arc of a circle, substantially as described.

2. The swinging cutter-head E having the cutting-bit *b* and the smoothing-bit *a* arranged on opposite sides of the central radial line of the arm D, as herein described.

118,490.—STOP FOR SEWING-MACHINES.—James Billings Safford, Poughkeepsie, N. Y.

Claim.—The jointed lever B, provided with the swinging arm C, by the variable weight of which the opposite or effective end of the lever may be elevated or depressed and thereby kept free from or in contact with the periphery of the balance or driving-wheel, substantially as described.

118,491.—MECHANICAL TYPOGRAPHER.—C. Latham Sholes, Milwaukee, Wis.

Claim.—1. The combination of a cylindrical platen, C, with a slotted type-disk, T, as described.

2. The combination of a cylindrical platen, C, with an inking-ribbon, P, as described.

3. The combination of a sliding cylindrical platen, C, with a revolving axle, B, as described.

4. The combination of a cylindrical platen, C, with a bail, F, as described.

5. The combination of a cylindrical platen, C, with a wide-notched ratchet-wheel, H, as described.

6. The combination of a cylindrical platen, C, with a screw-cam, L, and with a series of pins or cog-teeth, M, as described.

7. The combination of a cylindrical platen, C, with two ratchet-wheels, G H, on the same axle B, as described.

8. The combination of a twofold vibratory ratchet, K, pivoted to the ratchet-bar I, with a onefold vibratory ratchet, J, as described.

9. The combination of a twofold vibratory ratchet, K, with a wide-notched ratchet-wheel, H, as described.

10. The combination of two vibratory ratchets, J K, with two ratchet-wheels, G H, as described.

11. The combination of two pulleys, R, on the axles of two ribbon-spools, Q, with a cord or chain, N, attached to a ratchet-wheel axle, B, as described.

118,492. — PRUNING-SHEARS.—Frank Smiley, Batavia, N. Y.

Claim.—The reversible knife C of pruning-shears, constructed with two cutting-edges, *c c*, and bearing-surfaces *e e*, in combination with the jaw A, substantially as hereinbefore set forth.

118,493. — BROOM-HEAD. — Gad Smith, Woodstown, N. J., assignor to himself and Dickinson & Bros., same place.

Claim.—In a broom-head, the combination of the leaves A and B, sides *d* and *d'*, hinges *f f'*, and the ferrule-fastening, all constructed and operating as described.

118,494, antedated August 16, 1871.—COOP FOR FOWLS.—J. Boardman Smith, North Haven, assignor to G. Edward Cleeton, New Haven, Conn.

Claim.—1. A coop constructed in separate and detached parts, as described, having its ends and sides united by rabbeted joints held by pins and sockets, and a flanged cover, substantially as set forth.

2. The specific construction described, consisting of the floor A, ends B B', front and back C C', and cover D', constructed and arranged relatively as described, for the purpose set forth.

118,495.—MANUFACTURE OF YEAST.—Henry Sommer and Albert Weiss, Massillon, Ohio, assignors to Henry Sommer & Co., same place.

Claim.—The herein-described process of manufacturing yeast.

118,496.—PETROLEUM-PUMP.—John Sparks, Rouseville, assignor of one-half his right to Allen B. Kingsland and William H. Eddy, Titusville, Pa.

Claim.—1. The cylinder H and clutch F, in combination with the barrel A, packing R, and plunger B, as and for the purpose herein shown and described.

2. The cylinder H, clutch F, and packing R, in combination with the cylinder A, plunger B, and valves D G, as and for the purpose herein shown and described.

118,497. — COFFEE-ROASTER. — Nelson S. Thompson, Richmond, Ind.

Claim.—1. The combination of the cylinder L, the break-rods *a a a*, the blower J, and the casing A, provided with slots *x* and *x'*, substantially as set forth.

2. The arrangement and combination of the blower J, cylinder L, and hot-air chamber C', in the manner and for the purpose substantially as herein described.

118,498.—SCROLL-SAW.—Benjamin D. Wallace, Boston, Mass.

Claim.—1. The combination of the arm D D with the adjustable ends B, as described.

2. The combination of the arm D D, platform G, spindle L, rest M, and lathe-heads F, as set forth.

118,499.—BOOT AND SHOE-HEEL GAUGE.—Sylvanus Ward, Westfield, N. Y.

Claim.—The oval plate B, provided with the stud C and scale D, in combination with the oval plate A, formed with a series of openings, *b b*, flange *d*, and scale D, all constructed and arranged as and for the purpose set forth.

118,500.—FOLDING CHAIR.—Edward Watkins and Andrew McConnell, Philadelphia, Pa.

Claim.—1. The spring C and lever E, operating in connection with the seat B, substantially as and for the purpose described.

2. The journals of the seat, extended to form connections with the parts *b* of the arm-rest D, substantially as and for the purpose set forth.

3. The combination, with a folding seat, of the hinged lever E, bracing at both ends, and operating in the manner and for the purpose described.

4. The catch F, having pivotal and longitudinal motions, and operating, in combination with the seat B, in the manner and for the purpose described.

118,501. — MACHINE FOR UNDERMINING COAL.—George D. Whitcomb, Chicago, Ill.

Claim.—A coal-mining machine adapted to move on ways back and forth, and having adjustable cutters arranged to plane and under-cut the coal, substantially as set forth.

118,502.—MACHINE FOR MAKING MATCHES. McClintock Young, Frederick, Md.

Claim.—1. The arrangement of a series of spaced cutters in a receding line for cutting off match-splints from a block of wood in steps, as and for the purpose herein described and represented.

2. In combination with a series of receding cutters and guides for cutting, receiving, and carrying match-splints, a traveling, clamping, or holding-bar that continues to hold the splints in the guides while it moves with said cutters and guides, substantially as described.

3. In combination with a series of cutters and receiving and carrying-guides arranged in a receding line, and with splints firmly supported in said guides, a bored strip or back for receiving and holding said splints in an oblique line without moving either block, splints, cutters, guide, or bored back in a lateral direction, substantially as described and represented.

4. In combination with a series of knives for cutting off match-splints from a block or strip of wood, a series of points or projections on the plate *i* for entering the cutters and holding the splints therein and preventing them from being carried beyond the block from which they are cut, substantially as described.

5. In combination with the top and bottom stationary guides, an adjustable frame for carrying the feeding-wheels and presser-foot, as herein set forth, so that pressure may be applied to the block to firmly hold it against the action of the cutters and then removed when the block is to be fed along for the next cut, substantially as described.

6. In combination with the series of receding cutters and guides or carriers herein described, the top and bottom receding bearing-plates *i* and I, substantially as described.

7. The cutters, constructed as herein described—that is to say, made of short rods or bars with a square transverse opening through them near one end, and with two cutting-edges filed or ground thereon, as shown and described.

8. In combination with a match-machine in which a bored back is used to receive the splints cut off by it, a feeding-pawl that acts directly against the splints stuck therein or the holes therefor, and thus feeds the back along without the use of real ratchets, frames, or guides, substantially as described.

9. Block-matches, made of separate splints stuck in a previously-bored strip, back, or frame, from which they may be drawn or broken off as used, substantially as described.

118,503.—REVOLVING-CYLINDER ENGINE.—Joseph Allonas and William Bauman, Mansfield, Ohio.

Claim.—1. In combination with the drum, the cylinder E, arranged centrally within the drum and secured thereto by means of plate G and hub or boss *g*, substantially as described.

2. The combination of the revolving drum, the shafts B B', cylinder E, crank-arm *b*, and connecting devices, substantially as described.

3. In combination with the drum and cylinder, the circular valve H, collar I provided with ports *i' i'*, and the bracket L, substantially as described.

118,504.—BRICK-MACHINE. — Frank Alsip, North McGregor, Iowa.

Claim.—1. The force-paddles D, when loosely fitted to the angular lower ends of shaft B, as and for the purpose specified.

2. The series of straight rows of parallel pins *f*, arranged at intervals upon the shaft B, in combination with stops E placed in a corner of the box, as and for the purpose specified.

3. The arrangement of the stops E upon the same upright pin *g*, but with a spring for each stop, as described, substantially as and for the purpose set forth.

4. The sweep P, constructed as described, pivoted between the flanges of plate R, substantially as and for the purpose specified.

118,505.—COMPRESSION-COCK.—Oakley N. Ames, Haydenville, Mass.

Claim.—1. In combination with the case A, plug H, and nut C, the valve D, constructed and operated substantially in the manner shown and described.

2. The combination of the plug H with rim *x* with the nut C and valve D, forming the packing-box, and having its wear taken up by the pressure of the valve, substantially as shown and described.

118,506. — PRESSURE-GAUGE FOR WATER-BACKS OF STOVES, RANGES, &c.—James Anderson, Allegheny, Pa.

Claim.—A pressure-gauge for water-back of a stove, range, or other heating apparatus, said gauge consisting of coupling-pipe *k*, valve *e*, spring *j*, adjustable pressure-disk *i*, and cap *f*, constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

118,507.—CHEESE-VAT.—Augustus B. Armstrong, Dorset, Vt.

Claim.—1. The mulching-plate or plates G, arranged within the heating apparatus of a cheese-vat, as set forth.

2. The water-vat D, placed in an inclined position, and provided with supports *a*, so that it will hold the cheese-vat level, substantially as and for the purpose herein shown and described.

118,508.—FLOUR-BOLT. — William Bashor, Johnson City, Tenn.

Claim.—1. The arrangement of the loose collars *a a¹ a²*, rods N N, shaft A with hollowed end section, pivoted arms *d d*, bars *c c*, plates *g g*, and screw *h*, all constructed and operating substantially as set forth, for the purpose specified.

2. The heads D D' provided with guide-grooves *o o*, in combination with the plates *p* of the reel-bars or ribs *c c*, substantially as and for the purpose set forth.

3. The shaft A with hollowed end section, gear *g g'*, screw *h*, loose wings *a a¹ a²*, and connecting-rods N N, in combination with the pivoted arms *d d*, reel-bars *c c*, and guide-grooves *o o* of the reel-heads, for the purpose of expanding the bolting-cloth, substantially as described.

118,509. — PRINTING-MACHINE. — Marcus Bebro, Manchester, Great Britain.

Claim.—1. A cylinder, *c*, turning on and traversing a screw, *b*, and having consecutive numbers spirally arranged on its surface, in combination with a printing-wheel, *l*, when they are arranged with their axes of revolution parallel, substantially as and for the purpose set forth.

2. The combination of the subject-matter of the first claim and the perforating or cutting-wheel *d*, as set forth.

118,510.—COMMODE AND WASH-STAND COMBINED.—Sampson P. Boone, Americus, Ga.

Claim.—The case C, sliding in and out of the chamber B of wash-stand A, when combined with the vessel D having spring-cover E F, as and for the purpose specified.

118,511.—MACHINE FOR CANCELING AND SEVERING REVENUE-STAMPS, &c.—Patrick Wilke Brown and Joseph Delarue, Richmond, Va.

Claim.—The combination, with the shaft D, of the arms E F and one or more ink-rollers *d*, when operating, in connection with the ink-plate H and knife G, for the purpose of inking the type attached to the knife, substantially as herein shown and described.

118,512.—FASTENING FOR WINDOW-SASHES. Jacob K. Butler, Yarmouth, Canada.

Claim.—The hook G, slide J, and plate I, in combination with the piece or strip D, substantially for the purposes described.

118,513.—COAL AND ASH-SIFTER.—Edmund G. Cady, Warwick, R. I.

Claim.—1. The combination of the gears B and C, the rod G, the hopper E, the lever N, the screen F, the lever P, and the conductor I, substantially as and for the purposes hereinbefore set forth.

2. In combination with the devices above describ-

ed, the rod L attached to the arm *m* of a double crank resting and turning on the cross-piece M for the purpose of elevating the lower end of the screen F, substantially as described and specified.

118,514. — Door for Railway Freight-Cars.—Horace L. Clark, Rahway, N. J.

Claim.—1. The combination, with door A, apertured at D and provided with flexible spout E, of the slide F and bar I, to enable said aperture D to be closed and the spout to be folded in the same plane with the door.

2. The slides B, stationary rods C, and buttons L, combined with and applied to the door A, as described, so as to enable said door to be turned up and supported against the ceiling, as shown and set forth.

3. The stud-pins M on the inner edge of the door, and passing into holes N in the car-floor, combined with the guides B and pawls X, bearing against the upper edges of the door to hold it firmly in position.

118,515. — Rairway-Car Truck. — John Clark, London, England.

Claim.—The central axle *a*, boxes *b*, links *e e'*, crank-levers *f f'*, connecting-rods *g g'*, end axle-boxes *h h'*, and guard-plates *i i'*, combined and arranged substantially as shown and described, to operate as specified.

118,516.—Water-Wheel. — David Craik, Church Mills, Chateaugay, N. Y.

Claim.—1. The arrangement of the buckets C in regard to the opening I, substantially as shown and described.

2. The arrangement of the chutes J with regard to each other and to the wheel, substantially as shown and described.

3. The mode of opening and closing the chutes of a water-wheel, substantially as shown and described.

4. The combination of the wheel B, upper and lower plates D and E, chutes J, rods O, and collar M, when constructed and arranged substantially as and for the purposes described.

118,517. — Insect-Destroyer. — Samuel Creighton, Lithopolis, Ohio.

Claim.—The bug-trap A B, constructed and arranged substantially as herein shown and described, and for the purpose set forth.

118,518, antedated August 17, 1871.—Car-Truck.—Frederic Dorsey Dellinger and Samuel H. Hunt, Waynesborough, Va.

Claim.—In a car-truck, the combination with the grooved axle B of the intercalated bearing-rollers E, journal-boxes *d f*, stress-blocks *h h*, packing-box I, housing D, and the braced adjustable arm G with its terminal collar *a*, substantially as herein shown and described.

118,519.—Wringing-Machine. — Whitley Denton, Amsterdam, N. Y.

Claim.—1. A spreader, adapted for untwisting and spreading tubular goods as they are drawn in between the rollers of a wringing-machine, substantially as herein specified.

2. The combination, with a wringing-machine, whether having one or more sets of rollers, of a spreader, substantially as herein specified.

118,520.—Bee-Hive.—Eugene W. Diefendorf, Moniteau, Mo.

Claim.—The combination of the post *d* with the frames B B and case C, as described, and for the purpose set forth.

118,521. — Chimney-Stop. — Charles H. Earle, De Pere, Wis.

Claim.—The spring B and bolt C applied to a chimney-stop, substantially as and for the purpose herein shown and described.

118,522.—Cultivator.—Jacob S. Fleming, Island Creek, Ohio.

Claim.—The colter F formed solid upon the forward end of the center beam A of the cultivator by bending the said forward end downward, substantially as herein shown and described, and for the purpose set forth.

118,523.—Preparation of Fermentable Saccharine Matters.—William Garton, Southampton, England.

Claim.—The employment of animal charcoal or other substance containing phosphate of lime, as and for the purpose herein set forth.

118,524.—Manufacture of Inverse Sugars for Brewing, &c.—William Garton, Southampton, England.

Claim.—The manufacture of the saccharine material herein called "saccharum" (and which is a comparatively pure inverse sugar) direct from raw saccharine juices, or from sirups such sirups being juices from which the water has been partially evaporated, or being the fluid portions of concentrated solutions separated from the early-formed crystallized sugar, or being residuary sirups obtained in the process of crystallizing sugar.

118,525.—Envelope-Machine.—Jeremiah C. Gaston, Cincinnati, Ohio.

Claim.—The series of blocks B, in combination with the clamping-box A, substantially as set forth.

118,526.—Harvester.—William F. Goodwin, Metuchen, N. J.

Claim.—The pivoted vibrating platform and cutter-frame, in combination with the adjustable main frame and hinged adjustable pole or tongue, all arranged and operating as described.

118,527. — Shank and Toe-Laster for Boots and Shoes. — Charles Leonard Graves, Osage, Iowa.

Claim.—The levers D D^1 D^2 D^3 D^4, provided with hooks *d* and arms *e*, as specified, and pivoted to the nut B and working in slots in the plate C through the medium of the screw A, as shown and described.

118,528. — Wood Pavement. — James F. Gyles, Chicago, Ill.

Claim.—1. In a wooden pavement, the combination of two or more rows of blocks, *f*, ribs *g*, and nails or spikes, as specified, and a cement applied to fill the space formed between said blocks and above the ribs, the corresponding space below the ribs being left open, as herein shown and described, for the purpose set forth.

2. An improved wooden pavement formed by the combination of the following elements, viz., rectangular blocks *f*, ribs *g* attached to said blanks by nails or spikes, a cement applied to fill the space above the ribs, and the strips or planks *b* laid transversely of the street with spaces between them, and each forming a support for one side or edge of a row of blocks, all arranged as shown and described.

118,529.—Churn-Power.—Levi A. Haight, Cairo, N. Y.

Claim.—A churn-actuating apparatus, comprising the foot-treadle F, hand-lever H, connecting-rod G, crank-shaft A, balance-wheel E, friction-roller O, slotted arm L, and walking-beam I, all arranged together, and with the supports therefor and the churns on a portable platform constituting a portable apparatus, all substantially as specified.

118,530. — Wagon-Brake. — William T. Hamilton, Luthersburg, Pa.

Claim.—In combination with the rack F, the ratchet-teeth I, pawl J, and detaching-lever K for holding the brake to the wheels and releasing the same therefrom, substantially as described.

118,531.—Apparatus for Unloading Hay, &c.—Edmund Harrison, Mountain View, Cal.

Claim.—1. The receiver A a^1 a^2 a^3 a^4 a^5 a^6 and frame B, constructed and operating substantially as herein shown and described, to adapt it to receive the hay or grain and transfer the load bodily, by means of a derrick, to the place where it is to be deposited, as set forth.

2. The jointed bars a^2, jointed bar or rod a^3, provided with bolts and lever a^4, in combination with the parts of the netting or canvas of the receiver A, substantially as herein shown and described, and for the purposes set forth.

3. The derrick formed of the shaft or pole D, bed-plate E, swiveled plate F, guy-ropes G, hinged arms H, supporting and adjusting-ropes I and J, hoisting-rope C, and pulleys K L M, whether the receiver A or fork or forks N be used with said derrick, said parts being arranged and operating substantially as herein shown and described, and for the purposes set forth.

118,532. — Paddle-Wheel. — Joseph C. Hite, Mound City, Ill., assignor to himself and Charles Le R. Moss, St. Louis, Mo.

Claim.—A right-and-left spiral wheel, C C', separated by an opening, E, constructed and arranged as described.

118,533.—Diaper-Pin.—William H. Hockensmith, Bridgeport, Conn.

Claim.—As a new and improved article of manufacture, the diaper-pin herein described, formed of the spiral body C and spiral socket D, connected by wire E and the pin A', all formed from a single wire, as specified.

118,534.—Cooking-Stove.—George E. Hopkin, Philadelphia, Pa.

Claim.—The construction and arrangement of the case A and the water-tank B in relation to each other and to any suitable stove, whereby the escape-flue draught on its way to the chimney passes outside of the tank B and in direct contact with the whole surface of the bottom and one side of the same, substantially as and for the purpose hereinbefore set forth and described.

118,535.—Fence.—Patrick J. Hynes, Stoughton, Wis.

Claim.—The arrangement of the panels A A, girders D E, braces H, hook-stakes J, and band I, either with or without the keys G, substantially as and for the purposes herein shown and described.

118,536.—Machine for Twisting Yarns.—John Henry Jackson and Samuel Leak, Putnam, Conn.

Claim.—1. The tread-guides G and H, combined with the spring I and spindle B, substantially as herein shown and described.

2. The combination of the continuous cord D with the spindle B, disk F, pins *d*, and thread-guides G H, all arranged substantially in the manner set forth.

118,537. — Electro-Motor for Sewing-Machines. — Solomon Jones, New Orleans, La., assignor to himself and E. D. Lawrence.

Claim.—1. The electro-magnets F F, lever D provided with armatures G G, needle-bar C, insulator-bar E', and sliding conductor-bar H, when combined and arranged so as to operate substantially as described.

2. The non-conducting plate E', having conductor-plates I I attached, and the sliding current-breaker bar H, when the same are so constructed and arranged as to act in connection with the battery and magnets, substantially as described.

3. The water-tubes M M, so arranged as to prevent the plates I I being unduly heated and burned by the electrical sparks.

118,538.Armature for Electro-Motors.—Solomon Jones, New Orleans, La., assignor to himself and E. D. Lawrence.

Claim.—1. The hollow armatures C C, constructed as described.

2. The hollow armatures C C, when provided with one or more openings, *c c*, substantially as described.

118,539.—Machine for Making Spikes.—Frederick J. Kimball, Philadelphia, Pa.

Claim.—In rolling-dies for making spikes, the combination of dies N O, when the former has sides *a b*, and the latter has cavity *d* and side *c*, respectively, constructed and arranged as and for the purpose specified.

118,540. — Wagon-Reach.—Thomas Laux, Bucyrus, Ohio.

Claim.—In combination with the axle A, bounds B, and reach E, the plates C D, catch F, clamp G H, and joint I, all constructed and arranged as and for the purpose described.

118,541.—Machine for Examining and Replacing Cigars.—Joseph Levy, Wolcottville, Conn.

Claim.—The combination of the base-plate A, flanged and slotted plates B, adjustable blocks C, adjustable blocks E, and slotted adjustable plates G with each other, substantially as herein shown and described, and for the purposes set forth.

118,542. — Beefsteak-Mangle. — John Locke, Lewisburg, Pa.

Claim.—In a beefsteak-mangle, the toothed cylinders *a a*, when the teeth thereof are serrated on their extremities, as shown and described.

118,543.—Washing-Machine.—William C. Marr, Joseph S. Maughlin, and George A. Davis, Onawa, Iowa.

Claim.—1. As the improvement herein described, the arrangement of the large fluted roller D below the small roller H, the same being connected so as to operate as specified.

2. The standards A A carrying the rollers D and H, and secured to the bottom K of the tub by means of rods B and recessed block C, as specified.

118,544.—Holder for Spinning-Rings.—Thomas Marsh, North Providence, R. I., assignor to himself and Henry F. Jenks, same place.

Claim.—The ring-receiver D D^1 D^2, cut as shown, and made with the springing members D^1 D^2, substantially as described, and for the purpose set forth.

118,545.—Bung-Spout.—John Marvin and William T. Hulse, Port Jefferson, N. Y.

Claim.—The bung-spout, composed of the frame A, hook *f*, pivoted spout B, and screw or binding-lever *g*, and arranged to operate as set forth.

118,546. — Water-Wheel. — Charles M. Miles, Milford, Del., assignor to himself and Solomon Matthews, same place.

Claim.—The combination of wheel A *a*, and guide-chutes B *b* having horizontal partitions *b a*, with the adjustable gate C arranged centrally on the inside of wheel, and constructed with an outward flare at the top, all as and for the purpose specified.

118,547, antedated August 25, 1871.—Harness Saddle-Tree. — Thomas George Moore, Albia, Iowa.

Claim. — The bridge A, provided with the T-shaped tenons *b*, combined with the jockeys B B which carry the sockets *a*, into which the terrets are secured, thus securing the bridge to the jockeys, substantially as herein shown and described.

118,548. —Waste-Pipe for Sinks.—James L. Oliver, Boston, Mass.

Claim.—The perforated extension of the waste-pipe above the sink-bottom and the loose ring C, combined with the said bottom, substantially as specified.

118,549.—Cultivator.—George W. Owens, Fairfield, Iowa.

Claim.—The arrangement of the cultivators A A, coupling device E E F, self-adjusting clod-fenders B C C C, and spring D, as set forth and described.

118,550.—Machine for Preparing Metal for Solder, Printers' Lead, &c.—Reuben Painter, Baltimore, Md.

Claim.—1. In combination with the kettle *a*, the stirring apparatus, consisting of the shaft *b* and spiral blades *d*, as specified.

2. The pipe *g*, provided with the feed-tubes A whose tops are at any suitable distance above the bottom of the pipe, and with the screws *j*, all combined as described.

3. The combination of the grooved wheel *f* with the flanged roller *e z*, as set forth.

4. The wheel *f*, having an inclosed annular box, *m*, in its rim, provided with longitudinal and transverse partitions *o r*, and combined with water-pipes *r r*[1], and hollow shaft *p*, as explained.

5. The combination of the roller *t* having the transverse grooves *u* and longitudinal groove *v* with the roller *t'* having the knife *w*, as specified.

118,551. — Mold-Board for Plows.—George Peacock, Selma, Ala.

Claim.—A mold-board for plows, corrugated and perforated, substantially as herein shown and described, for the purpose specified.

118,552. — Auger.—Hiram Pitcher, Fond du Lac, Wis., assignor to himself and H. & G. O. Trowbridge, same place.

Claim.—1. The cutting-spur *b*[1], constructed and arranged as and for the purpose specified.

2. A double auger, formed of the parts A B, each spirally flanged, arranged one within the other, and provided with cutters, as specified.

118,553.—Scaffold.—John Redick, Butler, Ohio.

Claim.—The loosely-supported cross-bars D, vertical rods *d*, and jointed levers E, when combined with and applied to uprights A, as and for the purpose specified.

118,554. — Apparatus for Transmitting Motion.—Samuel S. Rembert, Memphis, Tenn.

Claim.—1. The cam-groove in the drum B and the pinion F, constructed, arranged, and the pinion and drum combined, substantially as specified.

2. The chain-carriers I of the drum H, made adjustable radially, substantially as specified.

118,555.—Wooden Horse-Collar.—Zenas C. Robbins, Washington, D. C.

Claim.—1. The combination of the top section A with the inwardly-inclined upper ends of the side sections F F, substantially as herein set forth, said combination being such that it enables the said top section to be accurately adjusted to any desired upper or lower position within the inclined upper portions of the side sections, while it enables the ends of said side sections to be so adjusted as to properly proportion the width of my improved horse-collar to all variations in the length of the same, and also enables them to be so adjusted as to adapt the collar to the varying shapes of the necks of the animals that are to wear the same.

2. The longitudinally-slotted top section A, combined with the side sections F F by means of the bolt B, and secured in its proper position between said side sections by means of the set-screw *m*, substantially as described.

3. The combination of the set-screw *m* with the top section A, the screw-bolt B, and the side sections F F, substantially as and for the purpose herein set forth.

4. The inward enlargement, in an obliquely-longitudinal direction, of the bolt-holes in the side sections F F, when the shape of the outer ends of said bolt-holes is such as to cause them to loosely embrace the bolt B, substantially as and for the purpose herein set forth.

5. The combination of the side sections F F with the top section A of the connecting-bolt B, the elastic washers *g*, and the screw-nuts *e*, substantially as herein set forth.

118,556.—Gutter-Fastening.—William L. Rogers, Rochefort, Mo.

Claim.—The saddles B, provided with the loops *a* and fitted upon the bracket C, to constitute a support and fastening for a gutter or eaves-trough, substantially as herein shown and described.

118,557. — Dumping-Car.—Solomon Rousculp, Thornville, and Isaac B. Shambaugh, Scio, Ohio.

Claim.—The improved dumping-car, formed of the hinged bottom boards A A, cords or chains E B F, and belts H H, shaft D and its pulleys, shaft G provided with hand-wheel I, and the ratchets and pawls K L, all arranged as shown and described, whereby the bottom boards may be opened and closed by operation of the shaft G, as specified.

118,558. — Washing-Machine. — John Schermerhorn, Waterford, Pa.

Claim.—The side frames A A, rollers D, standards E E, slot G, stud *f*, spring *h*, axle H, connecting-links J J, handles K K, and corrugated rubbing-board L, all combined, arranged, and operating substantially as and for the purpose specified.

118,559. — Wrench. — Hiram N. Smade, Manistee, Mich.

Claim.—The fixed jaws D D, placed against the inclined edges *a* upon the shoulders *b*, and held in place by the plates E, substantially as herein shown and described.

118,560.—Post-Hole Digger.—Edward R. Sumner, Freeport, Ill.

Claim.—1. A blade, B, of a post-hole digger, formed of a single piece of metal bent into a circular form, and having sharpened teeth, *c*, on its lower edge to enable it to move freely through earth and roots, as specified.

2. A blade, B, having its edges joined together upon an oblique or diagonal line, *d*, to prevent clogging, as specified.

118,561. — Electro-Magnetic Engine.—Jacob P. Tirrel, Charlestown, assignor to Edward Gassett, Boston, Mass.

Claim.—1. The series of electro-magnets D C H, &c., arranged radially in a frame, B, in combination with a series of radial arms, *f g h i k*, placed on one or both sides of the same, the said arms being one less in number than the magnets, and connected with a shaft, I, which operates a circuit-breaker, substantially as and for the purpose set forth.

2. The frame B with its electro-magnets made adjustable, substantially as and for the purpose set forth.

118,562.—Cultivator.—Arnold Tompkins, Paris, Ill.

Claim.—The combination of the axle G, guide-pieces S, plates F, and side pieces, when operating together as described.

118,563. — Sulky-Plow. — James L. Van Gorder, Sidney, Ohio.

Claim.—1. The combination of the cranked axle A A[1], the coupling F F' or its equivalent, lever I, and the plow-beam with plow attached, substantially as described.

2. In combination with the elements of the preceding clause, the pivoted foot-piece I[2], and hinged latch K, which is linked to the foot-piece, substantially as and for the purpose set forth.

3. The combination of the vertical part A[1] of the cranked axle, coupling F F', plow-beam E, and lever G, the short arm of which is linked to the plow-beam for turning it horizontally, substantially as and for the purpose set forth.

118,564.—Corn-Shaving Machine.—Elias Watts, Key Port, N. J.

Claim.—1. The reciprocating plunger *e*, applied in connection with the feed-wheel, for supplying corn to the shaving-tools, substantially as herein shown and described.

2. The grooved feed-wheel F, receiving intermittent rotary motion for depositing the corn in front of the plunger, as set forth.

3. The spring-guides *l l*, knives *i i*, and spring-scrapers *p p*, arranged and operating as specified.

118,565.—Head-Rest for Coffins.—John P. Waugh, South Scriba, N. Y.

Claim.—The head-rest A, provided with the cavity C and with a flange, D, whereby it is secured to the walls of the coffin, as shown and described.

118,566.—Arched Truss for Bridges.—Peter L. Weimer, Lebanon, Pa., assignor to himself, J. A. Weimer, and L. E. Weimer, same place.

Claim.—As an improvement in bow-string bridges, the combination, with an upper chord formed of a central web of cast-iron stiffened laterally by wrought-iron plates, of a lower chord formed of a wide plate of boiler-iron placed horizontally, to give lateral strength to the truss, as described.

118,567. — Sulky-Cultivator. — Nicholas Whitehall, Newtown, Ind.

Claim.—The improved machine formed by the arrangement of the tooth-bars G G and L L and foot-supports or levers, center-beam I, beams J J and N N, cross-pieces H and M, bent axle C, cross-piece D, bar E, and bearing-bars B B, as shown and described, operating as specified.

118,568.—Overshoe.—Peter S. Whitman, Providence, R. I.

Claim.—A vulcanized India-rubber shoe, provided with a heel-strap, one end of which is attached to the heel of the shoe near the bottom, and the other, being carried to the top, is doubled under and fastened, leaving a loop or space between the two points of attachment, and the fastening being effected solely by the adhesion of the rubber as applied in the process of manufacturing the shoe.

118,569. — Breech-Loading Fire-Arm.—John D. Wilkinson, Plattsburg, N. Y.

Claim.—1. The combination of the notched disk, striking-pin, and spindle with the hammer and the barrel, substantially as specified.

2. The combination of ejector G with sliding-spindle C, arranged as and for the purpose specified.

118,570.—Harrow.—Josee L. Willoughby, Bowling Green, Ky.

Claim.—The combination of the harrow A B, toothed roller C D, pivoted bar E, teeth F, and pivoted handles G with each other, substantially in the manner herein shown and described, and for the purpose set forth.

118,571.—Hay-Knife. — James H. Wolfe, Lytle City, Iowa.

Claim.—The hay-knife, constructed as herein recited—*i. e.*, having the handle, stirrup, jog-off, arms, and detachable knives, as set forth.

118,572.—Mechanical Movement. — Edward E. Young's, York, Me.

Claim.—The combination of a guide-pin, *e'*, and gear-wheel G with the slotted and toothed middle part of a working beam E, substantially as herein shown and described, and for the purpose set forth.

118,573.—Blind-Slat Operator. — Quinten M. Young's, Utica, N. Y.

Claim.—1. The combination of the rod D, sliding slotted bar L, ratcheted bell-crank N, and catch-spring P, all substantially as specified.

2. The combination, with the above, of the spring S, substantially as specified.

118,574.—Harvester.—James Hazel Adamson, Auburn, South Australia.

Claim.—1. The combination of the comb I, bar *d*, connecting-rod *i*, and arm *m*, constructed and arranged substantially as and for the purpose herein described.

2. The combination, substantially as described, of the beaters *b b*, the funnel or chute J, and the adjustable rotating cone Q with its annular ribs and longitudinal vanes, as and for the purpose set forth.

3. The combination of the pulleys W and *y* on the shaft X, the supporting-chain V, and the operating-chain Z with the frame G for retaining the cone in the same relative position with the ground when the movable part of the machine is elevated or depressed, all the parts being constructed and operated as described.

118,575. — Apparatus for Generating Gases from Petroleum, &c.—Augustin I. Ambler, Washington, D. C., assignor to Henry F. Gardner, Boston, Mass.

Claim.—1. The process for the double purpose of obtaining an inflammable gas and retaining it uncondensed under pressure for combustion, and also for making a purified oil for lubrication and other purposes, by passing steam at ordinary working temperature, not superheated, through crude petroleum without the use of other heat, retaining the gaseous products under heat and regulated pressure without condensation, and leaving the residuum of a higher specific gravity and purified to be drawn off, substantially as set forth.

2. An apparatus combining in its construction the following elements, viz.: first, a close receiver containing hydrocarbon oil, with a space above the oil for retaining steam and gas under heat and regulated pressure; second, a steam-generator and a tube or tubes for passing steam at ordinary working temperature, and not superheated, through the body of the oil; third, a suitable conduit for conveying without condensation the mingled steam and hydrocarbon vapor or gas evolved from the lighter portions of the oil in regulated quantities to a point where, in combination with oxygen, (either pure or in combination,) it may be burned; fourth, a valve or valves inserted in said exit-conduit for maintaining a regulated pressure in the receiver and for retaining the mingled vapors in contact until the chemical changes may take place; and fifth, a conduit for drawing off the heavier portion of the oil for utilization.

3. The carburetor A, provided with an outer chamber, A', substantially as and for the purpose described.

4. The induction steam-pipes C' C', when used in combination with induction-pipes C C and eduction-pipes G H, as and for the purposes described.

118,576. — LANTERN. — Frederic A. Balch, Hingham, assignor to himself and E. T. Bond, Sheboygan Falls, Wis.

Claim.—1. The sliding band A and globe B of a tubular lantern, in combination with adjustable catches D, or similar devices not depending upon frictional contact for their action to secure said band and globe together, and yet render said globe easily detachable, as set forth.

2. The band A and globe B, in combination with the band C and adjustable catches or hooks D, for the purpose set forth.

3. In combination with a tubular lantern, the globe B secured to the sliding band A by means of adjustable catches, as set forth, and the diaphragm *g* secured to the lower end of the globe B, as described.

118,577. — HINGE. — Samuel W. Barber, Heath, Mass.

Claim.—The improved hinge, having the door-strip A with knuckle B, sill-piece C with lugs *d*, and enlarged knuckle-socket A′ and adjustable bolt *d*′, formed with the shoulder *d*″ and provided with the nut D and washer E or its equivalent, substantially as and for the purpose set forth.

118,578.—HAT-PRESS.—Gustav Bartel, New York, N. Y.

Claim.—1. In a hat-press, the arrangement of the hollow rotating rock-shaft D, serving as an axis for the lever E, and a water communication for the supply-pipe *l* of the water-chamber F, when the several parts operate in connection with the mold B, substantially as and for the purpose specified.

2. The water-chamber F, lever E, and weight G, in combination with the pipe *l*, rotating hollow shaft D, pipe *m*, and pump L, operating substantially as and for the purpose set forth.

3. The hand-wheel O, lever *p*, and pump L, in combination with the hollow rock-shaft D, chamber F, and mold B, as described.

4. The blow-off pipe *r*, stop-cock *s*, and rod *t*, in combination with the hollow rock-shaft D, chamber F, and mold B, as set forth.

5. The bolts *b*, lever H, and treadle K, in combination with the chamber F, mold B, arm E, rock-shaft D, and balance-weight G, substantially as described.

118,579. — MANUFACTURE OF COAL-GAS.—John A. Bassett, Salem, Mass., assignor of one-half his right to Henri L. Stuart, New York city.

Claim.—1. The manufacture of illuminating-gas from coal by the continuous process, substantially as is herein shown and set forth.

2. In carrying the above-named process into effect, an apparatus in which the coal is automatically charged into the retort and the coke is automatically withdrawn, in the manner set forth.

3. In carrying the above-named process into effect, a vertical retort, having a water-seal which communicates with an automatic apparatus for removing the coke.

4. In carrying the above-named process into effect, the combination, with a vertical retort, of a charging apparatus, which is constructed so as to deliver and regulate the coal to the retort, substantially as set forth.

5. In carrying the above-named process into effect, the method of carbonizing and decomposing disintegrated coal by the employment of highly-heated steam in a vertical retort, substantially as described.

6. Purifying illuminating-gas by means of an automatic apparatus in which the purifying material is retained between the perforated screen-plates, which receive a progressive motion in the reverse direction to the current of gas passing through the purifying-chamber.

7. A purifying apparatus, in which the fresh purifying material is retained in a close-chamber communicating with the purifying-chamber by means of valves, so that the apparatus may be charged without stopping the action of the purifier or loss of gas, and in which the spent material is removed in a similar manner.

118,580.—LIFE-BOAT. — Peter R. Beaupré, Metropolis City, Ill.

Claim.—1. In a life-boat, the combination of the end air-chambers H, the side air-chambers G, the bottom air-chambers J, the deck C, and the discharge-pipes E provided with valves, substantially as described and shown, for the purpose of automatically righting the boat and freeing it from water at the same time.

2. In a life-boat, the combination of the air-chambers H and G, both constructed and arranged substantially as described and shown, and operating in aid of each other in righting the boat when capsized.

3. The combination of the floor C, the discharge-pipes E, the valves F provided with an air-chamber, *b*, and the air-chambers J, all constructed and arranged, substantially as described and shown, for the purpose of freeing the boat from water.

4. The life-boat A provided with the air-chambers H, G, and J, the deck C, and the discharge-pipes E with valves F, the several pipes being constructed, arranged, and operating substantially as described and shown.

118,581. — ANIMAL-TRAP.—Joseph Biddle, Edinburgh, Pa.

Claim.—1. The combination of the plate *k*, bar *i*, finger *m*, latch-bar *n*, arm *p*, rock-bar *q*, platform *f*, and door *g*, as specified.

2. The combination of the trap A, loaf *r*, platform *f*, box *t*, and receiver V, as described.

118,582.—HAY-PRESS.—Oscar Bosseé, Millbrae, Cal.

Claim.—1. The rail C provided with lugs *d* and side loops *g* and the rack *e*, in combination with the side chains *f*, the rail *h*, and the rack *i*, all constructed and arranged with reference to a hay-press, substantially as and for the purpose set forth.

2. The rail *h* with its downwardly-projecting plates *k*, the said plates being provided with a hook, *l*, in combination with the racks *i* and *e*, and the rail C having the eyebolts *m*, all constructed and arranged substantially as and for the purpose set forth.

3. The curved bars or locks *j*, in combination with the rails C and *h*, and the plates *k* provided with the hooks *l*, substantially as and for the purpose set forth.

4. The hay-press herein described, and consisting of the frame and box A, door B, side slots *b*, rails C and *h*, racks *e* and *i*, side bars *k*, side chains *f*, the wheel T, and toothed wheels V, all constructed, arranged, and operating substantially as and for the purpose set forth.

118,583. — BRAKE FOR VEHICLES. —John Boyer, Fairfield township, Pa.

Claim.—The combination, with the brake-shoes E and E′ and pivoted braces G H, of the rock-shaft E″, pitman F, and operating-lever F′, substantially as specified.

118,584.—CORN-MARKER.—Austin G. Brassfield, Henry, Ill.

Claim.—The axle B, and laterally-moving reach C with its rib *f* and spring *g*, in combination with the axle A, and platform D provided with notch or recess *e*, substantially as and for the purpose set forth.

118,585.—MACHINE FOR CUTTING POTATO VINES AND DIGGING POTATOES.—Thomas E. C. Brinly, Louisville, Ky.

Claim.—1. The combination of the vine-cutter B B¹ and the frame A, when the latter is mounted upon runners A¹, substantially as and for the purpose set forth.

2. The combination of the sleigh A A¹, revolving cutters A², and handles A³, substantially as and for the purpose set forth.

118,586. — FRUIT-CAN. — Henry Callahan, Dayton, Ohio.

Claim.—The herein-described corrugated cementing-ring, made from strips of metal joined at their ends, in contradistinction to the solid ring, substantially as described, as a new article of manufacture and trade.

118,587. — TIRE-TIGHTENER. — Melvin C. Chamberlin, Wabasha, Minn.

Claim.—The cap E, provided with longitudinal slot *b* at one end and the transverse slot *a* at or near the center, and used in combination with the flanged nuts C C and spreading-bolt D, substantially as and for the purposes herein set forth.

118,588.—PROP FOR HOLDING UP THE LIDS OF BOXES, &c. — Addison Davis and Theodore Parsons, Boston, Mass.

Claim.—1. In combination with a hinged lid or cover, a prop which, upon the lifting of the closed lid, automatically assumes a position to support the lid or cover in inclined elevated position, substantially as described.

2. A prop which, upon lifting the open lid resting on such prop, is automatically thrown into position to permit the lid or cover to close, substantially as described.

3. A prop automatically thrown both into position to support the lid or cover when it is opened, and also thrown into position when the lid which it supports is released, to permit such lid or cover to close, substantially as described.

4. The combination and arrangement of the slotted or recessed prop, pin, stop, and spring with or without the trigger *k*, substantially as shown and described.

118,589. — WHEEL-HUB FOR VEHICLES.—Daniel Davis, New York, N. Y., assignor to The Davis Patent Hub and Wheel Company, same place.

Claim.—The combination of the shells B B′, the clamping-plates A A formed with annular recesses *c c* to receive and support the inner ends of the shells outside of the bolts *d d* that hold the spokes to their places, and the axle-box C arranged to bind as a screw-bolt said shells and clamping-plates together, substantially as specified.

118,590.—WHEEL FOR VEHICLES.—Daniel Davis, New York, N. Y., assignor to The Davis Patent Hub and Wheel Company, same place.

Claim.—1. The combination of the metal splines *b* with the wooden spokes D, substantially as specified.

2. The construction of the metal splines *b* at their outer ends with a wedge-shaped recess, *d*, in combination with the wedges *c* of the spokes, essentially as described.

118,591. — FIBER-CLEANING MACHINE.—Charles A. Dean, Boston, Mass.

Claim.—1. The breaker-rolls *d e*, expressing-rolls *f g*, and compacting or condensing-rolls *h i*, relatively arranged and combined, substantially as shown and described.

2. The wiper or scraper-rolls *o p*, in combination with the breaking, expressing, and condensing-rolls, substantially as shown and described.

118,592.—PAVEMENT FOR STREETS, &c.—William H. De Valin, Sacramento, Cal.

Claim.—1. A street-pavement, composed of blocks of clay molded and baked, coated or saturated with coal-tar or other hydrocarbon, substantially as herein shown and set forth.

2. The combination, with clay blocks coated or saturated with coal-tar or its equivalent, of alternate strips of wood coated or saturated with coal-tar or its equivalent, substantially as shown and described.

3. The combination, with clay blocks coated or saturated with coal-tar, as described, of concrete, substantially in the manner and for the purposes herein set forth.

118,593, antedated August 11, 1871.—CAN-OPENER.—Edward M. Dewey, San Francisco, Cal.

Claim.—A combined tool, as described, consisting of the bar 4 and sliding knife 3, ground only on one side of the blade, and held in position on the bar by the side pressure in cutting, in combination with the pivot-pin 2 and straight knife 1, all constructed and arranged substantially as and for the purpose set forth.

118,594.—STUMP-EXTRACTOR.—Alfred Dickinson, Olean, N. Y.

Claim.—The construction, arrangement, and combination of the levers A A, the tripod B, with the vertical or upright standard or jack E, and one or more sets of pulley-blocks and tackle, G and H, to be operated by men or the power of a team, substantially in the manner as herein shown and described, for the purposes specified.

118,595.—MARQUETRY.—Joseph Dill, Grand Rapids, Mich.

Claim.—A marquetry floor or other substance, when constructed of bottom pieces A, double male dovetail keys B, and sliding pieces C, substantially as herein described.

118,596.—STEAM FLUE-CLEANER.—William Doty, Circleville, Ohio.

Claim.—The water-escape channel *s*.

118,597.—METHOD OF REFINING CAST-IRON AND MAKING CASTINGS.—Zoheth S. Durfee, New York, N. Y.

Claim.—1. The continuous process, substantially as herein described, of treating iron taken directly from blast-furnaces and making castings therefrom.

2. The herein-described modes of treating iron for the manufacture of castings by first melting it in ordinary cupola-furnaces, and then, previously to founding it, tapping it into reverberatory furnaces and refining it, or in otherwise modifying its character.

3. Combining reverberatory or gas-melting furnaces with the blast-furnaces, substantially as and for the purposes specified.

4. Combining reverberatory or gas-melting furnaces and cupola-melting furnaces, substantially as and for the purposes specified.

118,598.—BRAKE FOR VEHICLES.—Franklin Fairbanks, St. Johnsbury, Vt.

Claim.—The combination of the two shafts A B, the brakes C C, the arms *d e k*, the connecting-rod *f*, and the pedal *l*, attached to the arm *k* by a rule-joint or its equivalent, provided or not with the stop *n* or its equivalent, the brakes being connected to the rear shaft A by arms *e e*, and the two shafts A B having their journals supported on hangers *a a b b* extending from the carriage-body, all essentially as shown.

118,599.—BABY-JUMPER.—John P. Faulks, Glasgow, Mo.

Claim.—1. As a support for a baby-jumper, the adjustable upright A A′ secured rigidly to its broad cap and foot, and provided with the clamp-slide *c* and the adjustable screw *c*″, substantially as and for the purpose specified.

2. The combination, with the rectangular uprights A A′, of the adjustable pivot *d*, rotating sleeve *e*′ *e*″, spring G, adjustable swivel-clamp *g*

h', and baby-jumper or belt *k l*, substantially as and for the purpose specified.

118,600. — THILL-COUPLING.—William G. Foster, Dansville, N. Y.

Claim.—The hereinbefore-described thill-coupling provided with the hood C, substantially as and for the purpose specified.

118,601.—CONDENSER FOR RECTIFYING APPARATUS.—Andre Feubert, Buffalo, N. Y.

Claim.—The condenser made of groups of tubes arranged helically, and opening at their ends into the chambers *m* at the bottom parts of such helix, as and for the purposes set forth.

118,602.—APPARATUS FOR DISTILLING AND REFINING OILS.—Andre Feubert, Buffalo, N. Y.

Claim.—1. The pipes *q* and *r*, connecting with the pipes *g*, &c., between the column *d* and the still *a*, for conveying away the liquid from the column and the tarry material, instead of its passing into the still, substantially as set forth.

2. The refrigerator *n* and condenser *k* connected by the pipes *m* and *p*, and the siphon *i* connecting with the column *d*, in combination with said column and still, the parts being arranged as and for the purposes set forth.

118,603. — ATTACHMENT TO GAS-FITTERS' GAUGES.—Henry Getty, Hoboken, N. J., assignor to Lucien Knapp, New York city.

Claim.—An attachment to gas-fitters' gauges, consisting of a body with a screwed neck, C, for the reception of a gauge, G, screw D to fasten to the pipes, ether-cup B, cock A, and coupling E, the whole combined and arranged as shown, for the purposes specified.

118,604.—GRATE AND GRATE-BAR.—John C. Grant, Salem, Mass.

Claim.—1. A grate whose under side is provided with a series of projections, *c*, substantially as and for the purpose set forth.

2. A frame provided with projections on its upper or lower side, or both, in combination with a grate, substantially as and for the purpose described.

118,605.—CORN-SHELLER.—David C. Guttridge, Pittsburg, Pa., assignor of one-third his right to Charles Ballinger, Wilkesbarre, and one-third to Robert Smiley, South Pittsburg, Pa.

Claim.—The combination of the clamp A, screw B, stationary circle C, arms D D, cog-wheel E, revolving circles H I, and the shelling mechanism, all constructed and arranged substantially as and for the purposes herein set forth.

118,606.—ELECTRO-MAGNETIC SIGNAL APPARATUS FOR RAILROADS.—Thomas S. Hall, West Meriden, Conn.

Claim.—1. The combination of visible or audible signals with raising and reversing-keys actuated by a locomotive or car, and with two electro-magnets, one for closing and the other for opening the circuit through the signal-magnet, said signals being displayed or started automatically by the action of the train on the raising-keys, and kept displayed or in action till the train has passed the point of danger, and then taken off or stopped automatically by the action of the train on the reversing-keys, substantially as described.

2. The arrangement, with a railroad track, of a series of pairs of signal-houses, the signal-houses forming each pair being placed at suitable distances apart and connected by wires 14 and 15, and operated by the action of the trains on raising and reversing-keys, substantially in the manner herein shown and described.

3. The arrangement of line-wires 11 12 13, raising and reversing-keys *a* a^1 a^2 a^3, and signal-house C^1, all constructed and operating substantially as herein set forth.

4. The combination of the line-wires 11 and 12 with the battery D^2, line-magnet *u*, and signal-magnet *o*, substantially as described.

5. The combination of the line-wires 11 and 12 with the battery D^2, line-magnet *u*, signal-magnet *o*, and alarm-bell magnet *w*, substantially as set forth.

6. The catch or latch f^2, in combination with line-magnet *u*, line-wires 11 and 12, key *r*, abutments *q* *q'*, and signal-magnet *o*, whereby the circuit through the signal-magnet is kept closed after the train has passed the raising-key of the line-magnet, substantially as described.

7. The line-wires 12 13, taking-off magnet *h*, and reversing-key to be acted on by a passing train, in combination with the catch or latch f^2, key *r*, and signal-magnet *o*, substantially as set forth.

8. The line-magnet *u*, key f^2, and battery D^1 in the signal-house C^1, in combination with wires 14 15, and with a magnet, o^x, in the signal-house C, substantially as described.

9. The combination, with a single-track road, of a signal-house F, wires 11, 12, and 13 extending therefrom in two directions and parallel to the track, or nearly so, and keys *a*, a^1, a^2, a^3, and a^4, substantially as set forth.

10. The combination, with a double-track road, of a signal-house, F^x, wires 25, 26, 27, and 28, and keys *a* a^1 a^2 a^3, substantially as described.

11. The method, substantially as herein described, of keeping the signal displayed or in action when two trains approach a crossing in opposite directions nearly at the same time, consisting of two double-circuit instruments connected to the signal or signals and to the keys *a* a^1 a^2 a^3, substantially in the manner set forth.

12. The hand-keys I, constructed substantially as described and shown in Figs. 10 and 11.

118,607.—PROPULSION OF VESSELS.—Edgar Harriott, Plainfield, N. J.

Claim.—In combination with the double set of pumps B B' placed opposite to each other, and the supply-tank C placed beneath the pumps, the branched nozzle *c c'* arranged in two sets occupying different horizontal planes, the suction-pipes *d d'*, and the steam-pipes *a a'* connecting the boiler with the two sets of pumps, all arranged as herein shown and described, for the purpose specified.

118,608.—SEAL FOR DIP-PIPES IN GAS APPARATUS.—Alonzo F. Havens, Brooklyn, N. Y.

Claim.—1. The double-acting seal interposed between the retort and the gas-main, substantially as and for the purposes set forth.

2. The water-seal connected with the cover or movable portion of the retort, substantially as set forth, so that the seal is opened automatically in opening and closing the retort.

3. The method herein specified of opening and closing the connection between the retort and main by automatic mechanism that is operated simultaneously with the closing and opening of the retort, substantially as set forth.

118,609.—APPARATUS FOR PURIFYING GASES.—Alonzo F. Havens, Brooklyn, N. Y.

Claim.—1. The purifying apparatus, made with nests of trays with purifying material, and removable from said purifying apparatus when the cover is taken off, for the purposes and as specified.

2. The nests of trays, provided with the sleeve *r* that passes over the stand-pipe *m* and guides the nest to its place, substantially as specified.

118,610.—GIRT.—William Clark Hays and John C. Pancake, Sharonville, Ohio.

Claim.—The combination of the girt A, composed of alternate layers of rubber and cloth, leather straps B B, and buckles C C, the straps being riveted to the girt, substantially as and for the purposes herein set forth.

118,611.—SNAP-HOOK.—William L. Heberling, Mt. Pleasant, and John U. Fiester, Winchester, Ohio; said Fiester assignor to said Heberling.

Claim.—A snap-hook, formed of wire or other suitable spring metal, when provided with a curved or bulged look end, *a*, and the part B with the catch-loop *b'*, and with or without the tongue C, all constructed and arranged substantially as and for the purposes herein set forth.

118,612. — CLOTHES-DRIER. — A. Harleigh Hill, Johnsbury, Vt.

Claim.—The rod *g*, when provided with the adjustable staple *j* and rigid pin *h*, and combined with the socket *e* provided with the hole *i*, as described.

118,613.—TUBULAR STEAM-BOILER.—Oliver Hyde, Oakland, Cal.

Claim.—In steam-boilers having vertical flues or heat-passages C, the surrounding shells or tubes D provided with ribs *e*, said ribs being extended so as to form legs at each end, all as and for the purpose above described.

118,614. — DRILL-REST FOR CHUCKING-LATHES.—George E. Johnson and William Boston, Biddeford, Me.

Claim.—1. The combination, with the supporting-rod A, flanges B B, the two jaws E arranged thereon at right angles to the rod A, and the right-and-left-hand screw K, as described and shown.

2. The combination of the jaws of the angular form herein described and shown, and with legs F, and combining with the same the set-screw H, substantially as set forth.

118,615.—HOSE-CARRIAGE.—Asahel A. Justin, Buffalo, N. Y.

Claim.—1. The combination, with the reel and rear-wheel of a hose-carriage, of the pulleys I I' and endless chain *i*, or equivalent motion-transmitting device, substantially as and for the purpose hereinbefore set forth.

2. The combination and arrangement, with the reel E F and shaft G, of the spindle K, clutch *k*, and notched ring L, substantially as and for the purpose hereinbefore set forth.

3. The combination, with the self-winding reel E F and rear axle B, of the frame C, side springs D, and equalizing-spring D', arranged substantially as hereinbefore set forth.

118,616.—FIELD-ROLLER.—James M. Kelly, Ellison, Ohio.

Claim.—The within-described field-roller, composed of the frame A, provided with the loosely-journaled rollers B B, one set being arranged in front of the other, as shown, and the scrapers E E' operated by the levers G G', all substantially as and for the purposes shown and set forth.

118,617.—COMBINED BUSH AND WRENCH FOR BUNGS.—John Lacey and George B. Cornell, Chicago, Ill.; said Lacey assigns his right to said Cornell.

Claim.—The combination, with the notched bung-bushing *a*, of the wrench, consisting of the bar E having the slotted plate *e* and angular projection *i*, and the removable core F, substantially as specified.

118,618.—WASHING-MACHINE.—John Lawson, Humboldt, Kansas.

Claim.—The combination of the tub *a*, flanges *i* *j*, top *b*, wash-board *c*, rubber *f*, sides *e*, shaft *d*, arms *g*, and handle *h*, as specified.

118,619. — WRENCH. — James W. Mahlon, New York, N. Y.

Claim.—The combination of the screw I, nut N, handle F G, yoke D, bar A, and jaws B and C, when the whole are arranged substantially as herein set forth.

118,620.—SHOULDER-TOOL FOR SHOEMAKERS.—Charles Malhoit, Sutton, Mass.

Claim.—A shoulder-tool for use upon boots and shoes, constructed with an iron handle part A, metallic tongues and shoulders F, C, and E, and stone shoulders B D, substantially in the manner shown and described.

118,621. — GRAIN-DRILL. — Solomon Markham, Flat Rock, Kan.

Claim.—The combination of the swinging frame D with the truck-frame A with chain *k*, and raising and locking device J and lever *h*, whereby the operator can raise the swinging frame and shut off the flow of seed, substantially as and for the purpose set forth.

118,622.—SUPPORTER FOR SPINNING-RINGS. Thomas Marsh, North Providence, R. I.

Claim.—The cut or kerfed and rabbeted ring-supporter B, when the rabbet is cut under or dovetailed, as described, and engages a corresponding part on the ring which it is intended to hold, substantially as described.

118,623.—SAD-IRON.—John C. Maxcy and Thomas Lewis, Springfield, Ill.

Claim.—A sad-iron or tailor's goose having a groove in its base, substantially as and for the purpose set forth.

118,624. — PAPER-MACHINE DECKEL.—Charles McBurney and Lyman Hollingsworth, Boston, Mass., assignors to Charles McBurney.

Claim.—1. A deckel-strap, provided with a groove, *b*, on its under or "working" side, substantially as and for the purpose described.

2. The within-described method of splicing deckel-straps before vulcanization, for the purpose set forth.

118,625.—HAIR-BLOWING ATTACHMENT FOR SHEARS.—William C. McIntire, Washington, D. C.

Claim.—The combination and arrangement, with a pair of shears, of a blowing apparatus, substantially as shown and described, for the purpose set forth.

118,626. — PACKING-BAG.—Edward Annis Merrill, New York, N. Y.

Claim.—1. A packing-bag constructed with impervious lining B and rigid ring or casing D, to form an orifice, C, substantially as and for the purpose described.

2. In combination with an outer cloth bag provided with an impervious lining, B, orifice C, and ring or casing D, the flap E provided with stopper F, substantially as described and shown.

118,627, antedated August 24, 1871.—MATCH-BOX.—L. Otto P. Meyer, Newtown, Conn.

Claim.—The combination of the box *a*, the strips *b b*, and the lid *c* with its flange *d*, substantially as and for the purpose hereinbefore set forth.

118,628, antedated August 25, 1871.—MATCH-HOLDER. — L. Otto P. Meyer, Newtown, Conn.

Claim.—The combination of the front plate *b*, grooves *c c*, box *d*, and spring *e*, substantially as and for the purpose hereinbefore set forth.

118,629.—HEATING-STOVE.—Hiram C. Miles, St. Joseph, Mich.

Claim.—1. A fire-pot and fire-chamber combined,

both of which are surrounded by hot-air pipes *b*, in combination with an air-chamber at the lower ends of said pipes and with a cooking-chamber at the upper end of said pipes, and also with an opening, *h*, a diaphragm, *k*, and perforation *e*, all constructed and arranged to form a combined cooking and warm-air heating-stove, substantially as described.

2. The opening *h* leading into the air-heating and cooking-chamber G of a stove which is constructed as herein described and shown.

118,630. — Ice-Pitcher. — Friend Miller, Wallingford, Conn., assignor to Simpson, Hall, Miller & Co., same place.

Claim.—1. The arms B B, arranged upon the pitcher and combined with the supports C, so that the bearing upon which the pitcher turns is at the front of the body of the pitcher, substantially as herein described.

2. The pan P, constructed with the projecting mouth S, and arranged in the base of the pitcher, so that the said mouth is open while the pitcher rests thereon, substantially as set forth.

118,631.—Sewing-Machine.—Adam Moltz, New York, N. Y.

Claim.—The elevator and depresser L, in combination with the cams E E, lever F, feed-bar H, and spring K, all constructed and arranged substantially as and for the purpose herein specified.

118,632. — Carriage-Step. — Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—1. A carriage-step in which the shank A is united to the step B, and divided on the step so as to form the ribs *a a*, substantially in the manner described.

2. A carriage-step constructed with the shank A and having transverse slots, two or more, as described.

3. A carriage-step constructed with the shank A and having transverse slots C C, two or more, and with ribs *d d* upon the upper surface, between the said slots, as set forth.

4. In a carriage-step constructed with transverse slots C, two or more, a pad, constructed with the projection or projections E upon the under side corresponding to the said slots and so as to be secured therein, substantially as specified.

118,633.—Manufacture of Cast-Steel.—Robert Forester Mushet and Edward Maxwell Mushet, Cheltenham, England, assignors to themselves and Zoheth S. Durfee, New York city.

Claim.—The introduction of a quantity of oxide of manganese in the manner we have described into melted steel, whether in a reverberatory or open-hearth gas-furnace, or in a Bessemer converter, near the close of the operation, shortly before the metal is tapped or run off, with the view of superseding wholly or in part the employment of spiegeleisen as at present used in the said furnaces for improving the melted steel therein, and likewise for the purpose of effecting an improvement in the quality of the cast-steel produced.

118,634.—Attachment of Band-Cutters and Thrashing-Machines.—Samuel C. Myers and James McCauley, McAllisterville, Pa.

Claim.—1. In combination with the platform B, the adjustable or movable band-cutter and conveyer D, arranged to operate substantially as set forth.

2. The combination of the band-cutter and conveyer D with the semicircular platform B, having the driving-pulley *c* located at the center thereof, as set forth.

118,635.—Stump-Extractor.—Francis M. Nash, Stockton, Minn., assignor to himself and William H. Stevens, same place.

Claim.—A hoisting-machine, consisting of a suitable frame having the inclines M mounted thereon, with the bar D, yoke F, plate G, and dogs H and I, arranged to operate substantially as described.

118,636. — Straw-Cutter. — James W. Neal, Big Lick, Va.

Claim.—The within-described straw-cutter, consisting of the box A, shaft C, disk D, crank E, adjustable cutters G, auger-wheel H, and roller I, when all of said parts are constructed and arranged substantially as and for the purposes herein set forth.

118,637. — Washing-Machine. — John K. Nelson, Mechanicstown, Md.

Claim. — The combination of the box A, adjustable hinged board C, wash-board G, perforated cross-board H, double brace I, and lever J, all constructed and arranged substantially as and for the purposes herein set forth.

118,638.—Shoe-Brush.—George R. Owen, Rome, N. Y.

Claim.—The slide-handle B, when constructed and arranged substantially as shown, as a consequence of which it is made to hold the box in its recess when in position shown in Fig. 1, and to serve as a handle when in position shown in Fig. 2.

118,639.—Water Cut-off.—William Phipps, Milwaukee, Wis., assignor to himself and James D. Pierce, same place.

Claim.—A water cut-off, consisting of body A, changeable pipe B, with cover C so constructed as to hold pipe B up when it is turned out with pivot E, on which the pipe B swings, in combination with pipe G, substantially as and for the purpose described.

118,640.—Eyelet for Attaching Buttons to Textile Fabrics.—Clark M. Platt, Waterbury, Conn.

Claim.—As a new article of manufacture, an eyelet, constructed as described and set forth—that is, of tubular stem and cap united, as specified.

118,641.—Motive Power.—Thomas J. Polson, Kilmichael, Miss.

Claim.—The arrangement of the shaft B, cog-wheels C D, pinion E, crank-wheels G K, pitmen H J, lever I, and shaft L with pulley M, all substantially as shown and described, and for the purposes herein set forth.

118,642.—Changeable-Gauge Car-Wheel and Axle.—Perley Putnam, Laconia, N. H., assignor of one-half his right to James M. Foss, St. Albans, Vt.

Claim.—1. The bearing-projections *f f* cast in one piece with the hub C of the car-wheel, and arranged to receive and securely retain the cam-shaft *g* therein, substantially as herein specified.

2. The combination of the screw *h*, formed substantially as described, and the groove *k* with its enlargement *l* in the periphery of the cam-shaft *g*, for the purpose herein specified.

118,643.—Ironing-Table.—Thomas Reed, Plainwell, Mich.

Claim.—The combination of the board A, bars *a*, loops *b b*, cross-bars B E G, legs D D D', shoulders *h h*, guides *e e*, hook *f*, and one or more staples *i*, all constructed and arranged substantially as and for the purposes herein set forth.

118,644. — Woven-Wire Bed-Bottom.—George Richardson, Milwaukee, Wis.

Claim. — 1. In combination with a woven-wire fabric, constructed substantially as shown and described, the stiffening spiral-spring cords B, when each of the latter is passed through the convolutions of one helix of wire of the fabric without being connected with such helix, in the manner and for the purpose set forth.

2. The combination of the stiffening spiral-spring cords with the woven-wire fabric, frame C, and stretching-roller C', substantially as set forth.

3. The combination of the frame C, stretching-roller C', stay-bar G, and wedge H, substantially as and for the purpose set forth.

118,645. — Abdominal Supporter.—Jennie V. Richardson, Milwaukee, Wis.

Claim.—The combination of the straps F with an abdominal supporter composed of the garment C and adjustable plate or pad A, and leggings C', or equivalent prolongations of the garment C, substantially as and for the purposes set forth.

118,646.—Beer-Cooler.—Charles L. Ridgway, Boston, Mass.

Claim.—1. In beer-coolers, the arrangement of a cooling-reservoir in a receiving-chamber intermediate between the barrel and the mouth of the outlet-pipe, substantially as and for the purpose specified.

2. The arrangement of a transparent chamber intermediate between the barrel and the mouth of the outlet-pipe, for the purpose of displaying the beer, substantially as shown and described.

3. In combination with the chamber E, the three-way cock B, constructed, arranged, and operated substantially as and for the purpose set forth.

4. In combination with the three-way cock B provided with shoulders *d* and *e*, the check-latch T provided with the spring S, all constructed, arranged, and operated substantially as and for the purpose specified.

118,647. — Journal-Box.—Joseph B. Sargent, New Haven, Conn.

Claim.—1. The cap of a journal-box, constructed with a projecting-lip, *d*, to pass through a recess, *a*, in the bed, and by a longitudinal movement of the said cap to be secured to the bed by the lip *d* passing beneath the said bed, substantially as herein described.

2. In combination with the foregoing, the cam D, constructed so as to give to the said cap a longitudinal movement and secure it in position, substantially as specified.

118,648.—Check-Spring for Vehicles.—Christian Scherich, Lisburn, Pa.

Claim.—The forked guides C C and D D, constructed and operating substantially as above described, in combination with the coiled or spiral spring E, when operating, applied, and used for the purpose specified.

118,649.—Apparatus for the Manufacture of Ice.—James E. Sears, Waco, Tex.

Claim.—1. The water-jacket J around the pump A, in combination with the worm-vessel C^2 and pipe e^1, whereby a stream of cold water is supplied to the chamber inclosed by said jacket, and the pump kept cool, substantially as described.

2. The condenser G^2, containing a worm, G^1, which communicates with the chambers in the freezer, and also with the exhaust-pipe B' of the pump, and also with the liquid-receptacle D, substantially as described.

3. The combination of the liquid-receptacle D, the freezer E, and worm-vessel C^2, when there is a communication between these vessels, and also between the worm C^1 and repulsion-pipe B of the pump, by means substantially as described.

4. The blow-off cock *f*, applied to the pipe G, which leads from the worm G^1 to the exhaust-pipe B', substantially as described.

5. The elevated reservoir R and its discharge-cock *v*, in combination with the worm-vessel C^2, pump or pumps A, and liquid-receptacle D, substantially as described.

6. The auxiliary liquid reserve N, communicating with the liquid-vessel D by means of a valve-box, A, and pipe *o*, substantially as described.

7. The combination of a carbonic-acid-gas generator with a vessel, D, an exhausting-pump, and a freezing-box, substantially as described.

8. The treatment of volatile liquids to be used in the manufacture of ice, with carbonic-acid gas, substantially as described.

118,650.—Motor for Sewing-Machines.—David H. Sherman, Waukegan, Ill.

Claim.—1. For communicating motion to sewing-machines, the driving-cone A, adjustable friction-roller D, and cones A', substantially as specified.

2. The combination, with the cones A A', of the friction-roller D, lever L, spring H, and rack O, substantially as specified.

3. The combination, with the cones A A', of the bar F, springs K, arm H, pedal I, and adjustable roller D, substantially as specified.

118,651. — Electro-Magnetic Sewing-Machine.—David M. Smyth, Orange, N. J., assignor to Henry G. Thompson, Milford, Conn.

Claim.—1. An electro-magnet and armature, applied directly to and in combination with the feeding mechanism of a sewing-machine for communicating to such feeding mechanism a direct movement derived from the armature of an electro-magnet, substantially as set forth.

2. A finger-key arranged in the electric circuit of a magnet of a sewing-machine, in combination with such sewing-machine, substantially as and for the purposes specified.

3. A circuit-closing and breaking-arm or spring, combined with the needle-arm or lever in a sewing-machine, for closing or breaking the electric circuits to electro-magnets that actuate the feeding mechanism or shuttle or looper, substantially as set forth.

118,652.—Electro-Magnetic Sewing-Machine.—David M. Smyth, Orange, assignor to Joseph W. Stickler and Theodore C. Elliott, Orange, and William H. Wilson, Montclair, N. J.

Claim.—1. A needle-bar or arm and an armature, in combination with an electro-magnet and a vibrating weight, substantially as and for the purposes specified.

2. A looping instrument connected to the needle-bar or arm by means of a sliding link that allows the needle to penetrate the material before the looper is operated, substantially as set forth, in combination with an electro-magnet and armature to give motion to the needle-bar or arm, as specified.

3. The feeding mechanism connected by a slot with the needle-bar or arm, in combination with the electro-magnet and armature, substantially as set forth.

4. The feeding-slide actuated by a right-angle lever, substantially as set forth, in combination with the adjusting-screw and actuating mechanism, substantially as specified.

118,653, antedated August 18, 1871.—Soldering-Lamp. — William H. Tallman, Amsterdam, N. Y.

Claim.—1. The cap I with small wick A, to be used in combination with the usual wick and wick-tube of a soldering-lamp, substantially as and for the purposes herein set forth.

2. The shell A, partitions *a*, *b*, *c*, and *f*, chambers B C, slate D, lips G, pocket K, and tube H, with or without the lid L, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

118,654.—Mangle.—Henry Tregellas, Calumet, Mich.

Claim.—1. In a mangle, the combination, with

the fixed central roller F'', of the slotted adjustable frame D e D' e', screw H, springs d d', and side rollers F F', substantially as specified.

2. In a mangle, the combination, with the sliding journal-seats f f', of the transverse spring d and the rubber cushions h h'', substantially as and for the purpose described.

118,655.—FOLDING SEWING-MACHINE TABLE.—Ausbert H. Wagner, Chicago, Ill.

Claim.—1. In folding sewing-machine tables, the arrangement of the driving-wheel, pitman, and treadle-shaft, so that the same may be folded together, substantially as described and shown.

2. The combination of the folding stay-rods L and L' provided with nuts g and g' with the standards C and C' provided with slots c and c', constructed and arranged substantially as described and shown, for the purpose of securing the standards in position when unfolded.

3. The folding sewing-machine table, constructed, arranged, and operated substantially as described and shown.

118,656.—CHILD'S CARRIAGE.—Henry Warner, Greenfield, Mass.

Claim.—As an improvement in a child's carriage, the bent frame B secured to the body A, as herein described.

118,657.—STEAM-ENGINE FOR SCREW-PROPELLER VESSELS.—Costantin Wegschaider and Pietro Bonetti, Trieste, Austria.

Claim.—1. The method herein described of utilizing the centrifugal force of the propeller, in the manner and for the purpose herein set forth.

2. The water-channels c c, which pass from the box of the screw outwardly along its blades.

3. The channels b b, cast in the shaft-casing where it passes the stern-tube.

4. The combination of the channels c c, the chamber a a, channels b b, tube S S, and exhauster Z, substantially as and for the purposes hereinbefore set forth.

118,658.—WATER-ELEVATOR.—William P. Wentworth, Seneca Falls, N. Y.

Claim.—1. In combination with the shaft B and ratchet-wheel F, the pivoted crank D, provided with the hooked pawl E, which remains pendent when said crank hangs downward, and follows and engages with said ratchet-wheel when said crank is turned forward, substantially as and for the purpose specified.

2. In combination with the above-named elements, the ratchet-wheel G, the pawl J, and the brake H, substantially as and for the purpose shown.

118,659, antedated August 21, 1871.—PUMP-REGULATOR. — Shepherd H. Wheeler, Dowagiac, Mich.

Claim.—1. The method herein described for regulating the supply of water or liquids to steam-boilers or other reservoirs, substantially as and for the purposes set forth.

2. As a means of applying the above-claimed method to accomplish the purposes set forth, the tube or pump herein described, consisting of the tube D, plungers i and k, rod F, valve L, pipe M, stuffing-box H, seat N, and opening O, substantially as and for the purposes hereinbefore set forth.

118,660. — DIE FOR MAKING METALLIC SHANKS FOR BOOTS AND SHOES.—Hosea F. Whidden, South Abington, Mass.

Claim.—The dies a and b, constructed and operating as shown and described.

118,661. — BRUSH. — John Lake Whiting, Boston, Mass.

Claim.—The butt B, as made separate from the handle and provided with the handle-hole b and one or more projections, a, as set forth, and the handle A made tapering to drive into the butt, as described, such being for use with the bristles D and ferrule C, essentially as explained and represented.

118,662.—BENCH-DOG.—Charles P. Whitman, Charlemont, Mass.

Claim.—The herein-described bench-hook, consisting of the body A, reversible dog B, with the bolt E having the inclined recess, and the pointed screw G, all constructed and arranged to operate as set forth.

118,663.—LAST, &c.—Henry Wight, Malden, Mass.

Claim.—A molded hollow-shell last or boot-tree made of sheet-paper, straw board, paper-pulp, or other suitable plastic or pliable material, as shown and described, and for the purposes named.

118,664.—CHURN.—James M. Yeager, Lanesville, Ind.

Claim.—The cream-box B, suspended upon two swinging-rods, a a, which are closer together at the bottom than at the top, whereby the box obtains a twofold motion, back and forth, and one end rising while the other is falling, substantially as and for the purposes herein set forth.

118,665.—CARRIAGE-CURTAIN FASTENING.—John Zimmerman, Powhatan, Md.

Claim.—1. In a carriage-curtain fastener, the metallic strips or bars D, made of a single piece or of two pieces hinged together, constructed substantially as described.

2. The combination of the holding-strips D, sliding bolts E, staples a, and hooks g, or their equivalents, substantially as described.

118,666.—BED-BOTTOM. — Otis S. Osgood, Mount Pleasant, Iowa.

Claim.—The combination of the frame A B, C-shaped springs C C, and bed-bottom D, when said springs are attached to the top of the frame, then pass downward under the same, and then upward, supporting the bed-bottom, substantially as herein set forth.

118,667.—CONSTRUCTION-TRAIN FOR RAILWAYS.—Hugh Baines, Toronto, Canada.

Claim.—The combination of a double crane, B, engine C, and rollers D, in conjunction with a locomotive and cars, for the purpose of building, economically and expeditiously, railroad tracks, substantially as and for the purpose specified.

REISSUES.

4,528. — EVAPORATING-PAN FOR SACCHARINE LIQUIDS.—Francis G. Butler, Bellows Falls, Vt., assignor to himself and James B. Williams.—Patent No. 112,319, dated March 7, 1871.

Claim.—1. Scum-arresters, applied to evaporating-pans, and operating as described.

2. The combination, with the scum-arresters, of a metal-pan bottom, having partitions, crimps, or corrugations in the metal.

3. An evaporating-pan having corrugations running across the width of the bottom sheet and having flaring sides, in combination with a system of scum-arresters forming elevated compartments upon the flaring sides.

4. The employment of flaring sides, in combination with scum-arresters, in evaporating-pans, substantially as and for the purposes set forth.

5. Flaring metallic sides, in combination with an evaporator having a crimped or corrugated bottom, with a level portion of the bottom between the crimps or corrugations.

4,529. — RUBBER AND BRUSH. — Augustus Charles, Pittsburg, Pa. — Patent No. 113,258, dated April 4, 1871.

Claim.—A rubber or brush constructed with a series of faces, in combination with a handle, to which the same is suitably attached, so as to permit the rubber or brush to be rotated and present its working faces for use in succession, substantially as described.

4,530.—COOKING-STOVE.—Eddy, Corse & Co., Troy, N. Y., assignees, by mesne assignments, of James R. Hyde.—Patent No. 35,564, dated June 10, 1862; reissue No. 2,709, dated July 30, 1867.

Claim.—The arrangement of a water-reservoir upon and against the rear end of a cooking-stove provided with descending and ascending flues, substantially as and for the purpose shown and described.

4,531.—APPARATUS FOR EVAPORATING AND CONCENTRATING BARK EXTRACTS. — Thomas W. Johnson, Jr., and Anthony W. Goodell, Windsor, Nova Scotia.—Patent No. 108,793, dated November 1, 1870.

Claim.—1. The method herein specified of concentrating bark extracts by heated air, within a chamber, acting upon the same while exposed upon revolving disks that are partially immersed in such extract, substantially as specified.

2. The buckets d, applied to and combined with the revolving disks b, substantially as and for the purposes set forth.

3. The arrangement of the heating-stove, casing e, passage-ways, vessel a, revolving disks b, and escape-flue or opening m, substantially as and for the purposes set forth.

4,532.—TELEGRAPH APPARATUS. —George Little, Rutherford Park, N. J.—Patent No. 108,496, dated October 18, 1870.

Claim.—1. A branch circuit connected with the main line and the earth, in which are placed the receiving telegraph and a resistance, substantially as and for the purposes set forth.

2. A branch circuit and resistance, connected from the main line to the earth for clearing the wire of surplus electricity, substantially as set forth.

4,533.—PLOW.—John Casper Pfeil, Arenzville, Ill.—Patent No. 76,343, dated April 7, 1868.

Claim.—1. The combination of the slotted spindle on the arm of the colter, the yoke slotted to receive the spindle, and the locking-pin limiting the vibration of the colter, all these members being constructed and operating as hereinbefore set forth.

2. The combination of the plow-beam, the clamping-bolts, the vertically-slotted arm, its slotted spindle, the yoke slotted to receive the spindle, and the locking-pin, all these members being constructed and operating in combination, as hereinbefore set forth.

3. The combination of the colter, its slotted yoke turning on a fixed spindle, and the spring-pin passing transversely through the spindle and serving to limit the vibration of the colter, as well as to connect the spindle and colter, all these members being constructed and operating in combination, as hereinbefore set forth.

4. The combination, in a plow-colter, of a vertically-adjustable arm, the downward-tapering spindle thereon, and the colter-yoke having an upwardly-flaring hole or socket therein to receive the spindle, all these members being constructed and operating, as hereinbefore set forth, to compensate wear of the spindle or socket to secure a snug joint and to prevent the wabbling of the colter-yoke upon the spindle.

5. The combination of the tapering spindle of the colter-arm with the spring locking-pin passing transversely through it parallel with the face of the arm, these members being constructed and operating as hereinbefore set forth.

4,534.—MACHINE FOR BUFFING, WHITENING, AND POLISHING LEATHER.—Albert W. Pratt, Salem, Mass., assignor, by mesne assignments, to William A. Perkins.—Patent No. 89,789, dated May 4, 1869.

Claim.—1. In a machine for whitening and buffing leather, a pulley or cylinder having one or more blades or tools, in which the cutting-plane is ground concentric with the axis of the cylinder.

2. In a machine for whitening and buffing leather, one or more blades or tools arranged in or upon a pulley or cylinder, the cutting-edge of which is ground parallel to the circle-plane of the pulley or cylinder upon which the knives are placed.

3. The process of whitening and buffing leather by means of knives or tools placed in or upon a cylinder, arranged and operated substantially as set forth and described.

4. In a machine for whitening and buffing leather, one or more knives or tools placed at an angle with the shaft of the cylinder in which the knives are placed.

5. In a machine for whitening and buffing leather, forming the seat to which the knives or tools are fastened at an acute angle, with a tangent of the periphery of the cylinder projecting inward.

4,535.—STEAM-GENERATOR.—Robert E. Rogers and James Black, Philadelphia, Pa. Patent No. 65,281, dated May 28, 1867.

Claim.—1. The combination of the boiler A with the exterior curved tubes B for the circulation of the water, and the flue-tubes C, in the manner and for the purpose substantially as described.

2. The combination of the boiler A, having the beveled enlargement a, with the exterior curved tubes B for the circulation of the water, and the flue-tubes C, in the manner and for the purpose substantially as described.

4,536.—APPARATUS AND PROCESS FOR MIXING SUGAR.—Martin L. Senderling, Jersey City, N. J.—Patent No. 60,797, dated January 1, 1867.

Claim.—1. The compound process of mixing sugars so as to produce sugar of a uniform average grade, by first reducing the sugars to be mixed to a granular state; secondly, distributing the grains in thin sheets; and thirdly, scattering them centrifugally from a common center of motion, substantially as before set forth.

2. The combination of a crushing-mill and a rotating scatterer, substantially as before set forth.

3. The combination of a crushing-mill, a rotating scatterer, and a divided hopper, substantially as before set forth.

4. The combination of the inclined vanes of the scattering-wheel with an upright shaft, so arranged that the vanes incline upward and backward relatively to the direction in which the wheel is rotated, substantially as before set forth.

4,537.—Division A.—CASTING EDGE AND OTHER TOOLS.—The Collins Company, Collinsville, Conn., assignee of Samuel W. Collins, deceased.—Patent No. 30,668, dated November 20, 1860.

Claim.—The process of casting any article partly of iron and partly of steel, or of different qualities of steel, by pouring into a mold, in a melted state, these metals one after another in immediate succession, thereby effecting a union between them by fusion, substantially in the manner and for the purpose set forth.

4,538.—Division B.—Casting Edge and other Tools.—The Collins Company, Collinsville, Conn., assignee of Samuel W. Collins, deceased.—Patent No. 30,668, dated November 20, 1860.

Claim.—The process of making edged, faced, or similar tools, with an edge, face, or similar part of steel, by first casting a blank of steel, or of steel and iron combined, the body of which closely conforms to the shape of the finished article, but with the part which is to form the edge, face, or similar part blunt and thick, and afterward, by hammering or other similar manipulation, working such blunt and thick part into the shape of the completed article, for the purpose set forth.

4,539.—Water-Wheel.—John Tyler, West Lebanon, N. H.—Patent No. 15,309, dated July 8, 1856; reissue No. 3,015, dated June 30, 1868; extended seven years.

Claim.—1. Giving the head *e* of my improved water-wheel an upward curvature from center to circumference, for the purpose substantially as herein set forth.

2. The curved bucket-head *e*, when the said head is combined with the series of segment-shaped buckets *d d*, substantially in the manner herein set forth.

3. The segment-shaped buckets *d d*, when the said buckets are formed with and project from the concave surface of the curved bucket-head *e*, substantially as herein set forth.

4. The combination of the buckets *d d* with the bucket-head *e*, when the said buckets are located in position tangential to the inner guiding-circle *e*, substantially as herein set forth.

5. The combination of the scalloped-edged rim *f* with the lower edges of the series of buckets *d d*, substantially as and for the purpose herein set forth.

6. The combination of the elevated cover D with the curb of my improved water-wheel, when the said cover is so proportioned as to receive and sustain the upper bearing-box of the shaft of the wheel, substantially as herein set forth.

7. The combination of the detachable gate-box B with the mouth of the water-way of the water-wheel, all substantially in the manner and for the purposes herein set forth.

4,540.—Cooking-Stove.—George W. Walker, Malden, Mass.—Patent No. 108,852, dated November 1, 1870.

Claim.—1. In combination with the main stove or stove-body, the removable hot closet, arranged as described, when at the end of such closet, and separated therefrom by a wall, *n*, is an ash-pit space, located under the main ash-pit A, substantially as shown and described.

2. A stove having a hot closet under the oven or oven-flues and an auxiliary ash-pit or sifting-chamber, *x*, in front of said closet and under the main ash-pit, when the bottom plate of the chamber *x* is below the plane of the bottom plate of the hot-air closet, substantially as shown and described.

3. A stove made in detachable horizontal sections, the upper one of which forms a complete stove by removing it from the lower one and placing under it a suitable bottom or base-plate.

DESIGNS.

5,234.—Mucilage-Bottle.—Louis Dovell, Newark, N. J.

Claim.—The shape or conformation of the mucilage-bottle, as herein shown and set forth.

5,235.—Spoke-Socket Rim for Hubs.—Samuel B. Hindman and William N. Matthews, Richmond, Ind., assignors to themselves, Merrick C. Weeks, and Edward R. Matthews, same place.

Claim.—The shape or conformation of the one-part spoke-socket rim, Fig. 1, adapted for staggered wheels, and formed with a cylindrical bore, *a*, tapered radial sockets *b*, and a circumferential chain of marginal flanges, *c*, as and for the purposes shown and set forth.

5,236.—Badge.—Nathan Joseph, San Francisco, Cal.

Claim.—The design for a badge, as shown.

5,237.—Badge.—Nathan Joseph, San Francisco, Cal.

Claim.—The design for a badge, as shown.

5,238.—Cushion for Backs of Chairs, &c.—Jerome Kuhlmann, Cincinnati, Ohio, assignor to himself and Henry Kuhlmann, same place.

Claim.—The design for a back cushion for chairs, sociables, &c., as shown.

5,239.—Bird-Cage.—Otto Lindemann, New York, N. Y.

Claim.—The design for a bird-cage, as shown and described.

5,240.—Carpet.—William Lochhead, Halifax, England, assignor to Firth, Williams & Co.

Claim.—The design for a carpet, as shown.

5,241.—Carpet.—William Lochhead, Halifax, England, assignor to Firth, Williams & Co.

Claim.—The design for a carpet, as shown.

5,242.—Carpet.—William Lochhead, Halifax, England, assignor to Firth, Williams & Co.

Claim.—The design for a carpet, as shown.

5,243.—Oil-Cloth.—John T. Webster, Yonkers, N. Y., assignor to Thomas Potter, Son & Co.

Claim.—The design for an oil-cloth, as shown.

5,244.—Show-Case.—Thomas E. Wood, Chicago, Ill.

Claim.—The design for show-case, as shown.

5,245.—Carpet.—George Curtis Wright, New York, N. Y., assignor to E. S. Higgins & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into tapestry, Brussels, or other carpeting in the form similar to the photographic print accompanying this specification.

5,246.—Carpet.—George Curtis Wright, New York, N. Y., assignor to E. S. Higgins & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into tapestry, Brussels, or other carpeting in the form similar to the photographic print accompanying this specification.

5,247.—Carpet.—George Curtis Wright, New York, N. Y., assignor to E. S. Higgins & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into tapestry, Brussels, or other carpeting in the form similar to the photographic print accompanying this specification.

5,248.—Carpet.—George Curtis Wright, New York, N. Y., assignor to E. S. Higgins & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into tapestry, Brussels, or other carpeting in the form similar to the photographic print accompanying this specification.

5,249.—Carpet.—George Curtis Wright, New York, N. Y., assignor to E. S. Higgins & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into three-ply or other carpeting in the form similar to the photographic print accompanying this specification.

5,250.—Carpet.—George Curtis Wright, New York, N. Y., assignor to E. S. Higgins & Co., same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into tapestry, Brussels, or other carpeting in the form similar to the photographic print accompanying this specification.

TRADE-MARKS.

436.—Mince-Meat.—Atmore & Son, Philadelphia, Pa.

437.—Paint.—Robert F. Seaman, New, York, N. Y.

438.—Laundry-Bluing.—Platt V. Viele, Rochester, N. Y.

ISSUE OF SEPTEMBER 5.

PATENTS.

118,668.—Apparatus and Process for Treating Animal and Vegetable Fibers.—William Adamson, Philadelphia, Pa.

Claim.—1. The process of treating animal and vegetable fibers and fiber-bearing vegetable substances with hydrocarbon or hydrocarbon vapor, or both, under heat and determinate pressure, substantially as set forth.

2. Treating animal and vegetable fibers and fiber-bearing vegetable substances by causing a circulation through them of hydrocarbons or hydrocarbon vapors, or both, under heat and pressure, substantially in the manner described.

3. A vaporizing-vessel, A, and condenser E, in combination with a pressure-valve in the pipe or passage through which the vapor passes into the condenser.

118,669.—Gas-Illuminator.—Matthew Andrew, New York, N. Y.

Claim.—A gas-illuminator, composed of a semi-annular disk, *a*, concave arm *b*, and pressure-clamp *c d*, all as herein shown and described.

118,670.—Sealing Cans for Preserving Fruits.—H. Mark Anthony, Providence, R. I.

Claim.—A can, provided with a groove or depression, *a*, at or near its top, in combination with a cover fitting closely the top and provided with sides partially overlapping said groove, whereby a space is formed between the groove and the overlapping edges of the cover to receive the wax or other sealing material, which will be thus surrounded and shielded by said overlapping edges, substantially as shown and set forth.

118,671.—Attachment for Sewing-Machines.—Mary E. Autrim, Philadelphia, Pa.

Claim.—A case or box adapted for attachment to a sewing-machine, and provided with a receptacle, *l*, substantially as described.

118,672.—Grain-Mill.—Ephraim H. Austin, Scott's Hill, Tenn.

Claim.—1. The runner *i*, with spiral passages *s s* leading through the same so as to deliver the grain between the stones, as shown and described.

2. In the grain-mill herein described, the hopper *b*, provided with the screen *c* and perforated plate *d*, for the purpose set forth.

3. The hopper *b*, combined with the flap *n*, rod *o*, and screw *p*, as explained.

118,673.—Mowing-Machine.—John C. Baker, Mechanicsburg, Ohio.

Claim.—A lever attached to the divider of a cutter-bar for a mowing-machine, and arranged for automatically lifting the track-cleaner in turning corners and backing the machine, substantially as herein described.

118,674.—Rotary Puddling-Furnace.—William Baynton, Pottsville, Pa.

Claim.—1. A rotary refining or puddling-chamber, constructed with corrugated or waved sides, substantially as herein described.

2. The combination, substantially as herein described, with a rotary refining or puddling-chamber, of any suitable number of internal segmental ribs *c*.

3. The formation of a number of short irregular projections or points *h* in the interior of a rotary refining-chamber, for the purpose of firmly holding the lining of refractory material to the sides of the said chamber.

4. The combination, with a rotary refining-chamber, of a stack, F, so constructed at the bottom as to permit the use of an ordinary puddling-furnace door, H, for obtaining access to the interior of the said refining-chamber.

5. The combination with and arrangement in respect to the stack and rotary refining-chamber, of an ordinary puddling-furnace door H, all substantially as and for the purpose described.

6. The combination, substantially as herein set forth, with the rotary refining-chamber and stack, of open water-vessels *m*.

7. The combination, with the rotary refining-chamber, of a water-pipe, K, and its perforated branches, the whole being arranged substantially as described, so as to discharge water in the form of a spray or jets onto the exterior of the said chamber.

8. The pivoted rocker-bar J arranged at any convenient point adjacent to the door H, for the purpose specified.

118,675.—Handle of Pocket-Knives.—Cicero Beckham, Alexandria, Va.

Claim.—As an improvement in the manufacture of pocket-knives and other instruments of that class, the formation of the spring *c* and handle *a* in one piece, substantially as herein described.

118,676.—Operating Throttle-Valve.—William Bellis, Indianapolis, Ind.

Claim.—A throttle-valve opened by the steam-pressure, and capable of being closed either by screw F or by the supplementary closing device J K L N, in the manner and for the purpose stated.

118,677, antedated August 11, 1871.—Bed-Lounge.—Albert Frederick Benten, San Francisco, Cal., assignor to himself and Farrell Jerome O'Reilley.

Claim.—1. The hinged head-piece D, in combination with the fixed seat C and back, when made adjustable by means of the set-screw E, as described.

2. The combination of the folding head-piece D', having the swinging leg G, with the hinged head-piece D having the slotted leg H, as described.

118,678.—COMBINED CARRIAGE-JACK, BAG-HOLDER, AND WEIGHING-SCALES.—Norborne Berkeley, Aldie, assignor to himself and Charles B. Wildman, Leesburg, Va.

Claim.—1. The combined carriage-jack and bag-holder, constructed and arranged to operate substantially as herein set forth.

2. The arrangement of the beam E, yoke H, toothed ring J, and standards C D with the scales K, all constructed and operated substantially as and for the purposes stated.

118,679. — FEED-WATER REGULATOR FOR STEAM-BOILERS. — Robert Berryman, Hartford, Conn., assignor to "The Berryman Regulator and Alarm Company," same place.

Claim.—The combination of a pump or injector—a series of boilers, each provided with a low-water apparatus, a series of steam-pipes, C, and a series of feed-water pipes D, each communicating with one of the boilers, and all communicating with the pump—and mechanism, substantially as described, whereby the movement of each low-water apparatus will open or close simultaneously a valve in one of the pipes C and a valve in one of the pipes D, as set forth, so that the said pump will automatically supply all the boilers with water as they may require feeding, one or more at a time, as set forth.

118,680.—PROTECTING UNSLAKED LIME AND APPARATUS THEREFOR.—Henry Bisbing, Bridgeton, N. J.

Claim.—1. The protecting of unslaked lime from the injurious effects of heat and moisture by inclosing it within a double casing, between the walls of which is packed plaster of Paris or other equivalent protecting medium.

2. The within-described casing, having one or more compartments and double doors, substantially as set forth.

118,681. — EARTH-CABINET. — William H. Bliss, Newport, R. I.

Claim.—The combination of the case A, seat-box B, receptacle C, dust-plate D, conductor-spout E, partition a^3, sliding plate F, pins b^4, hinged receiver G, plate H, earth-reservoir I, and slide J with each other, substantially as herein shown and described, and for the purpose set forth.

118,682. — SHAFT FOR SLEIGHS. — Charles Bock and Daniel Bock, Drum's, Pa.

Claim.—1. The shafts A B, double cross-bar C, draft-bar J, and curved bar K, constructed and arranged together substantially as and for the purposes described.

2. The short curved bar K, in combination with the shafts of a sleigh or cutter.

118,683. — SPECULUM ATTACHMENT. — Jerome D. Bruce, Newbury, S. C.

Claim.—The elastic tube B applied to the part of a speculum that enters the vagina, as shown and described, so that a chamber may be formed around said speculum within the vagina by injecting air through tube D, as specified.

118,684.—LOCK-NUT.—Aaron Whited Bunnell, Lineville, Pa.

Claim.—The screw-bolt with the key-seat, in combination with the key E, constructed with the arm or catch F, when constructed as described, for the purposes set forth.

118,685.—LOCK-NUT.—Aaron Whited Bunnell, Lineville, Pa.

Claim.—1. A bolt, with two screw-nuts, constructed as described, one with a coarse and the other with a fine thread.

2. The said nuts, in combination with the key D, constructed as described, for the purposes set forth.

118,686. — MEDICAL COMPOUND. — George W. Chambers, Talladega, Ala.

Claim.—A composition of matter, formed of the ingredients and for the purpose above specified.

118,687. — CHURN.—James W. Chapman, Madison, Ind., assignor to himself and Samuel J. Smith, same place.

Claim.—The air-conveyer H, when constructed and arranged as herein specified, so as to be applied on the outside of the churn, and to have mounted upon it the driving-gear of the dasher-shaft, substantially as and for the purpose set forth.

118,688.—JOURNAL-BOX FOR GRINDSTONES. Pascal P. Child, St. Louis, Mo.

Claim.—The grindstone journal-box, consisting of the counterpart reversible and transposable shells A A^2 having side lugs *b* and closely-fitting cap D, all combined and arranged substantially as described.

118,689.—ROTARY ICE-SHAVER.—Clemant C. Clawson, Raleigh, N. C.

Claim.—1. The guide partition K, in combination with the slotted feed-disk H and part A of the body of the machine, substantially as herein shown and described, and for the purpose set forth.

2. The scraper-plate L, in combination with the knife-disk F, shaft D, and body A B of the machine, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the lever I and button J with the movable half *h'* of the nut of the disk H, and with the disk H, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the body A B, swiveled screw-shaft D, crank-wheel E, slotted knife-disk F, knives G, slotted feed-disk H, and partition K with each other, substantially as herein shown and described, and for the purpose set forth.

118,690. — PRUNING-SHEARS.—William F. Clemmer and George H. Clemmer, Alexandria, Ohio.

Claim.—The two grooves H I, the brace-plate or bar J, and the two rivets G, arranged in connection with the hook A and cutting-blade D of a pruning-shears, substantially as herein shown and described, and for the purpose set forth.

118,691.—DEVICE FOR LUBRICATING CAR-AXLE JOURNALS.—Edward Collins, New York, N. Y.

Claim.—1. The roller H, covered with cloth or other lubricant-absorbing material, and suspended in spring bearings, *b*, which are placed in sockets made in the lower ends of curved hangers *a a*, depending upon the bearing G, constructed and arranged and operating in combination with the journal, substantially in the manner and for the purpose shown and described.

2. The curved hangers *a a*, secured to the bearing G by dovetailed joints or otherwise, and serving as bearings for the lubricating roller, substantially in the manner and for the purpose shown and described.

118,692.—STEAM-ENGINE.—John M. Cooper, Pittsburg, Pa.

Claim.—The throttle f and check-valve *w'*, arranged respectively in the secondary ports *e* and *n*, in combination with a cushioning-cylinder and piston, substantially as set forth.

118,693.—CASTING TOOTHED CYLINDERS.—Harmon W. Cornell, Owego, N. Y.

Claim.—The method herein described of casting metal cylinders with an uneven outer surface by means of patterns constructed and arranged substantially as herein set forth.

118,694.—WHEEL-PLOW.—Rudolph Coreth, New Braunfels, Tex.

Claim.—1. In combination with a gang-plow frame, B, pivoted in another, C, the mechanism, consisting of bent levers V, pins W, spring X, toes Y, shaft Z, and levers A', all arranged as and for the purpose described.

2. The frame-work H *h'*, bars I J L, cross-bar K, and catch-lever R, in combination with the frame C, to which the revolving plow-frame B A is pivoted, and crank-axle F, substantially as herein shown and described, and for the purpose set forth.

3. The bent bars M, pivoted cross-bar O *o'*, spring Q, and slotted standard P, in combination with the double crank-axle F, frame C, and the teeth formed upon the lower parts of the forward arms of the frames H, substantially as herein shown and described, and for the purpose set forth.

118,695.—VELOCIPEDE.—Jesse A. Crandall, Brooklyn, N. Y.

Claim.—The propelling and steering apparatus of a velocipede, consisting of the cranks *g* and *h* in connection with the axis *a*, the connecting-rods *k* and *l*, the lever *f*, and the fork *b*; also the foot-rests *m* and *n*, operating as set forth and for the purpose specified.

118,696.—COMBINED HYDRAULIC AND PNEUMATIC ELEVATOR FOR RAILROADS.—Horace H. Day, Bloomingdale, N. J.

Claim.—1. The combination of the main air-pipe containing compressed air with the air-and-water chambers *x*, the water-chambers W, the cylinders and pistons *c c* and *p p*, the platform L, the hollow guide-tubes *k k* with the ropes and pulleys E and *t*, as described.

2. The elevating and lowering persons and merchandise by compressed air applied and operated by the devices and in the manner substantially as described.

118,697.—LOG-BINDER.—Walter L. Dean, Dayton, N. Y.

Claim.—In combination with a movable truck, B, to which the logs or poles are fastened, the spiked roll C and roll F provided with intermediate chain, as described and for the purpose specified.

118,698. — EXTENSION CLOTHES-POLE. — James Denton and Whitley Denton, Amsterdam, N. Y.

Claim.—An improved extension clothes-pole, formed by the combination of the part A, foot B, guide or keeper C, part D, loop or stirrup F, teeth *d'*, guide or keeper E, and elastic bars G with each other, substantially as herein shown and described, and for the purpose set forth.

118,699.—CANAL.—William H. Doane, Cincinnati, Ohio.

Claim.—Lining the sides and bottom of a canal with smooth sheet-metal plates C, whose seams are united by rivets D, and whose upper portions are secured between and protected by the sills E E', as herein described.

118,700. — FIRE-KINDLING. — Levi Dodge, Waterford, N. Y.

Claim.—As a new article of manufacture, fire-kindling, composed of shavings, either alone or in combination with other combustible material, compressed into a compact or solid bale or bundle and bound, substantially as herein specified.

118,701.—CAR-AXLE BOX.—Davis H. Dotterer, Philadelphia, Pa., assignor to himself, M. S. Gilbert, and Melford D. Buchanan, Chicago, Ill.

Claim.—1. The combination of a metallic cage having two rims or heads connected together by cross-bars, whether cast in one piece or otherwise formed, a series of friction-rollers arranged between said bars, and a metallic sleeve extending under and supporting the cage and surrounding an axle, all substantially as and for the purposes set forth.

2. The cage herein described, cast in one-piece, and consisting of the rims C C, with downwardly-projecting flanges bearing on the sleeve B, V-shaped connecting-bars D D, and grooved projections *a a*, forming chambers or pockets for receiving and guiding the rollers E E, with their stationary or loose journals *b b*, substantially as set forth.

3. In combination with the cage C D cast in one piece, the metallic sleeve or thimble B, disconnected, and extending under and supporting the cage, and slipping loosely over the journal, substantially as and for the purposes herein set forth.

4. The combination of the loose thimble B, the cage C D, as described, and the rollers E E, all acting and operating on the journal A and within the case G, with its thrust-plate H and concave I, all constructed and arranged substantially as and for the purposes herein set forth.

118,702.—STEAM-GENERATOR.—Rus W. Dugan, Covington, Ky., and Benjamin F. Clark, Cairo, Ill.

Claim.—The combination of the cylinder A, pipes D E, coils B B' C C', supply-pipe F, and check-valve G, all substantially as specified.

118,703.—DEVICE FOR REDUCING FRICTION ON ROLLERS AND BEARINGS. — Edward Dummer, Newbury, Mass.

Claim.—The rings, constructed, arranged, and combined with the rolls, collars, or rollers, bearings and shafts, substantially as and for the purposes hereinbefore set forth.

118,704.—METALLIC HUB FOR VEHICLES.—Jacob Dump, Kingston, Ohio.

Claim.—The combination of the hub B and screw-threaded thimble A, provided with a projecting rib, *a*, and adapted to be screwed within said hub for the purpose of more firmly securing the spokes, the parts being constructed and arranged substantially as and for the purposes specified.

118,705.—LUBRICATOR FOR VERTICAL SHAFTINGS.—Lewis Fagin, Cincinnati, Ohio.

Claim.—1. The grooves C in the face of the toe B and supporting-disks E, when formed and arranged as shown and described, so as to cause streams of the lubricant to be forced to the center by rotation of the shaft in either direction, as set forth.

2. The central pit or reservoir D, in combination with the said grooves C, as and for the purpose described.

3. An improved shaft or spindle-bearing, consisting of a shaft A *a*, toe B C D, disk E, and step F, as and for the purpose described.

4. The detachable toe B, having a screw-threaded connection, *a*, with its shaft.

118,706.—MEDICAL COMPOUND OR LINIMENT. Gershom H. Fairchild, St. Louis, Mo.

Claim.—The composition above described, to form a liniment.

118,707. — GRADING AND DITCHING-MACHINE.—Joseph W. Fawkes, Maron, Ill.

Claim.—The hinged dumping-carrier K mounted on the wheel L, the stud N, catch-lever M, trip-rod O, and resetting-rod Q, combined and arranged for tripping and resetting the carriers, substantially as specified.

118,708.—WATER-WHEEL.—Daniel A. Flummerfelt, Bridgeville, N. J.

Claim.—1. The discharge-cylinder F, set up within the turbine-wheel, and provided with the chan-

nels *i* and curved bottom, substantially as and for the purpose herein shown and described.

2. The curved partitions *m*, arranged within the channels of the discharge-cylinder and combined with the horizontal partition *l* of the wheel, as specified.

3. The combination of the gate-cylinder E with the chute-cylinder D, wheel A, and discharge-cylinder F, all parts being arranged to operate substantially as herein shown and described.

118,709. — GAS-PUMP. — William Foster, Brooklyn, N. Y.

Claim.—As an improvement in gas-pumps, the cylinder A provided with the pipes *c e*, valves *c' e'*, annular valve-partitions forming valve-seats, and curved pipes *f g*, in combination with the vertical pipes h i, flanged pipes *f b* and *h d*, the annular partitions forming valve-seats for the valves *b' d'* arranged for joint action with the piston B packed with steel rings *a a*, the several parts constructed substantially as set forth.

118,710.—COFFEE AND GRAIN CLEANER AND SEPARATOR.—Richard Frisby, Cleveland, Ohio.

Claim.—The combination and arrangement of the screens C K, aprons L M, spout R S T U, screw N, and the fan-blower, substantially as specified.

118,711. — SPARK-ARRESTER. — Michael A. Glynn, Matanzas, Cuba.

Claim.—The arrangement of a globular spark-arrester B, with the curved chimney A, as and for the purpose specified.

118,712.—CHURN.—Elias Groat, Napa, Cal.

Claim.—The parallel shafts D D', with their peculiarly-arranged dashers *f* and *g*, when constructed to operate substantially as herein described.

118,713.—CHURN.—Elias Groat, Napa, Cal.

Claim.—The vertical racks E and toothed sectors F, in combination with the horizontal shafts G G provided with paddles or beaters which intersect and cross each other's path, substantially as and for the purpose set forth.

118,714.—MEDICAL COMPOUND. — Benigno Gutierrez, Santa Barbara, Cal.

Claim.—An infusion of the within-described and named herb in any vehicle suitable for administering it to the patient, substantially as and for the purpose set forth.

118,715. — STOP-VALVE. — William Haas, New York, N. Y.

Claim.—The nut *e* and guide-tube *d* secured to the hand-wheel D, in combination with the cap E, valve-stem C, cavity *e*, valve B, and shell A, all constructed and operating substantially in the manner herein shown and described.

118,716.—SEED AND FERTILIZER-DROPPER. Edward P. Harnish, Felton, Del.

Claim.—1. A laterally-pivoted handle and lever, D I, connected together and arranged, as described, to reciprocate the dropper-slides horizontally and laterally, in the manner set forth.

2. In combination with a manure hopper, M, and slide N, the limber conical wire coil *o*, arranged to vibrate and scatter broadcast the guano, bone-dust, or other powdered fertilizer.

118,717.—HOLDER FOR GRINDING SCISSORS. John Harwood and F. Le Grand Ames, Albany, N. Y.

Claim.—The arrangement and combination of lever-jaw D with stationary jaw C and thumb-screw *d*, so as to form an improved scissors-holder and guide with roller B, as herein set forth.

118,718.—EVAPORATOR FOR BRINE.—Martin Peter Hayes, Seaforth, Canada.

Claim.—1. In constructing the furnace-block A with air-chambers G and openings F, substantially as and for the purpose set forth.

2. The arrangement of the pipe H and heating-chambers G, or any modifications of the same, substantially as and for the purpose set forth.

118,719. — RECLINING - CHAIR. — William Heath, Bath, Me.

Claim.—1. The back E and the seat A, arranged with and pivoted to the leg-frame C, as set forth, and provided with the cross-bar *a* and the inclined legs D D, or their equivalents, to enable them to operate substantially as specified.

2. In combination with the back E, the seat A and the leg-frame C, the bar F, the cam G, and the arm H, and the leg-rest I, all being arranged and applied together, substantially as specified.

118,720.—VEGETABLE CUTTER. — William L. Heberling, Mt. Pleasant, Ohio, assignor to himself and John Heberling, same place.

Claim.—1. The V-shaped or zigzag cutting-edged knives K, constructed and operating substantially as shown and described.

2. The wheel F, formed with ridges on the inner side, substantially as shown and described.

3. The knives *m* or *o*, as shown and described, when combined with a cutting-wheel, for the purpose specified.

118,721.—MOUSE-TRAP.—Charles A. Hotchkiss, Bridgeport, Conn.

Claim.—The catch d^1, coil d^2, and bait-hook d^3, formed of a single piece of wire, in substantially the manner herein shown and described, in combination with the spring-loop B, catching-loop C, and recessed and perforated block A, as and for the purpose set forth.

118,722.—CONNECTING JOINT AND COCK OF GAS-BRACKETS.—Liverus Hull, Charlestown, Mass.

Claim.—The branch pipe-head A, as provided with the groove *g*, and arranged upon a tubular pivot, C, extended up from the body of the cock and concentric with the plug thereof, all being substantially as described.

118,723.—MECHANICAL MOVEMENT.—John J. Kimball, Naperville, Ill.

Claim.—The slotted slide D provided with the wheels *f f*, which are diagonally opposite each other, and combined with the crank B, substantially as herein shown and described.

118,724.—TRACE-BUCKLE.—William W. Kittleman, Bloomfield, Iowa.

Claim.—The within-described trace-buckle, composed of the frame A, cross-bar B, pin C, and rod D, all constructed and arranged substantially as shown and described, and for the purposes set forth.

118,725. — CURTAIN-FIXTURE. — A. Haydn Knapp, Newton Centre, Mass.

Claim.—1. The spring B, formed of two or more redoublings or layers, *a b c d f*, when the next outer is successively shorter than the adjacent inner layer, as and for the purpose herein specified.

2. The elastic friction-brake C and its adjusting-screw *h*, in combination with the spring B and spindle A, substantially as and for the purpose herein specified.

118,726.—HORSE HAY-RAKE.—Charles Kugler, Barnesville, Ohio.

Claim.—The combination, in a revolving horse-rake, of the trip *f* and stops *k*, constructed and operating substantially as described, for the purpose set forth.

118,727.—EGG-BEATER. — Erastus B. Knukle, Fort Wayne, Ind., assignor to himself and Emanuel Bostwick, same place.

Claim.—The egg-beater, consisting of the perforated disks of the upright plate F and self-acting valves G H, all arranged to operate as specified.

118,728. — SEWING - MACHINE. — Thomas Lamb, Philadelphia, Pa.

Claim.—1. A loop-distender, or loop-distender and bobbin-holder S, having a limited vertical motion only, held in a proper position beneath the work-plate of a sewing-machine in respect to the needle and to a rotating looper, so as to act in conjunction with the said needle and looper in forming a chain or lock-chain stitch, substantially in the manner described.

2. A loop-distender and bobbin-holder, S', having a limited vertical motion only, held in a proper position beneath the work-plate of a sewing-machine in respect to the needle and to a rotating looper, so as to act in conjunction with the said needle and looper in forming a lock-stitch, substantially in the manner described.

3. The plate I and arm J, secured to the bed-plate in respect to the needle, to the looper, and to each other, and arranged for the reception and retention between them of either of the annular plates S or S', substantially as and for the purpose specified.

4. The movable finger L, acted on by a spring or otherwise held in position, and adapted to a hole, *t'*, in either of the annular plates S or S', for the purpose of retaining said plates in position.

5. The said finger L, to which an intermittent reciprocating motion can be imparted, in combination with the projection *x* of the arm J, from which the loop-distending and bobbin-holding plates are suspended, all substantially as and for the purpose specified.

6. The brake *w*, operated by a cam, *v*, of the needle-arm, and acting, in conjunction with a spring, v^2, to retain and release the needle-thread, substantially in the manner described.

118,729. — CARRIAGE-SHACKLE. — Levi M. Lawless, Geneseo, Ill.

Claim.—1. In combination with the ear B attached to the clip A and provided with the vertical opening C and central lug *c*, the pin or axial pivot F provided with the central groove *f* and connected with the ears E and shaft-iron D, substantially as and for the purpose specified.

2. In combination with the ear B, the shaft-iron D, the ears E, and the pin or axial pivot F, the screw G provided with the semi-spherical end, and the boss *b* provided with a corresponding face, substantially as and for the purpose shown.

3. The clip A, the ear B provided with the boss *b*, the opening C, the lug *c*, the shaft-iron D, the ears E, the pin or axial pivot F provided with the groove *f*, the set-screw G, and the jam-nut H, when constructed and combined in the manner and for the purpose substantially as shown and described.

118,730.—WEATHER - STRIP FOR DOORS.—Levi M. Lawless, Geneseo, Ill.

Claim.—1. The levers D and E, constructed as described, and pivoted together and to the casing A, in combination with the lug H, substantially as and for the purpose specified.

2. In combination with a door and its frame, the hereinbefore-described device, consisting of the casing A and C, the pivoted levers D and E, the spring *f*, and the lug H, substantially as and for the purpose shown.

118,731. — WATER-WHEEL.—Alexander C. Leaner, Fonda, N. Y., assignor to himself and Abram V. Davis, New York city.

Claim.—In water-wheels, a series of gates, C, constructed with projecting tenons *b b* that fit loosely in the mortises of rings D E, as and for the purpose specified.

118,732. — MILLING-MACHINE.—William A. N. Long, Worcester, Mass., assignor to himself and George H. Coates, same place.

Claim.—The combination and arrangement of the lathe-arbor C, the puppet-head B, and the bed-frame A with a milling-wheel, *m*, and machinery for supporting an article to be milled and moving to and under the said wheel, as may be required, such machinery, as explained, consisting of the jawed carriage L, the carriages I, H, and E, and the supporting-standard D, arranged, applied together, and provided with operative screws, essentially as set forth.

118,733. — INNER SOLE FOR BOOTS AND SHOES. — Joseph Luttenchlager, New York, N. Y.

Claim.—The arrangement of the hair B and sole A, as and for the purposes hereinbefore set forth.

118,734.—INJECTOR FOR STEAM-BOILERS.—William B. Mack, Manchester, England.

Claim.—1. An injector in which the channels have the within-described taper in contrary directions from the chamber *c*.

2. An injector in which the length of the channel between the points *x x'* is proportioned, as herein described.

3. The rib or lip *n* arranged in the chamber *c* at the flaring mouth of the channel *k*, for the purpose set forth.

118,735.— STEAM-GENERATOR.—John Mann, Tuscola, Ill.

Claim.—1. The combination of the water-box A, shells B B, steam-reservoir C C, pipes *p p* and D D, substantially as and for the purpose hereinbefore set forth.

2. The arrangement of a series of steam-reservoirs inside of the cylindrical shells opening into the water-box, so that the reservoirs shall be surrounded with water, substantially as described, and for the purpose hereinbefore set forth.

3. The pipes D D D in the steam-reservoir B, so that the steam in the reservoir shall generate steam in the pipes, as and for the purpose hereinbefore set forth.

4. The damper H, in combination with a steam-generator, constructed substantially as described, and for the purpose hereinbefore set forth.

118,736.—MACHINE FOR BENDING WOOD.—Augustus F. Marshall, Black River, N. Y.

Claim.—The former A, screw F, spring Q, adjusting-blocks S, screws T, blocks P, push-bars L and K—the latter provided with rollers M—the cross-bar E, and grooved guide-ways C D, arranged and operating as shown and described.

118,737.—LOW-WATER DETECTER.—Gideon B. Massey, New York, N. Y., assignor to Massey Low-Water Detecter Company, same place.

Claim.—In combination with a low-water detecter, the tube G, arranged in relation to the expansion-tubes B B, substantially as and for the purposes described.

118,738.—COMPOSITION FOR COATING ALE-CASKS, &c. — Colin Paget Matthews, Grantham, England.

Claim.—1. The manufacture of a compound or preparation, consisting of shellac dissolved in any suitable spirit and mixed with powdered charcoal, in manner and for the purpose substantially as herein described.

2. The improvement herein described in applying the above preparation or other similar preparations containing spirits by flaming it off, as herein described.

118,739. — METHOD AND APPARATUS FOR MAKING CIGARS.—Edward A. Metz, Cincinnati, Ohio.

Claim.—1. The method of forming cigar-fillers, by means of the removable binders B and headers D, in the manner herein described.

2. The receiver C, applied and used in the manner explained.

3. The method of imparting the final set or shape to the cigar, by means of the removable wrappers F applied on the outside of the permanent wrappers, as explained.

118,740. — LIFTING-MACHINE. — Francis R. O'Connor, New York, N. Y.

Claim. — In combination with an ordinary platform, A, and handles C C, the endless rubber bands B B, arranged as and for the purpose specified.

118,741. — APPARATUS FOR RAISING SUNKEN VESSELS. — Milo Osborn, Cleveland, Ohio.

Claim. — 1. The central tube O, secured to the head of the buoy A by collars Q and plate R, the plate R being provided with the stop S, all substantially as set forth.

2. The clamp A, arresting the hooks G, having side flanges H which form the groove G', rack I, hook J, links K K, and pinion M, as arranged in relation to the buoy A and weight a, as set forth.

3. The sinker, Fig. 10, consisting of cylinder B made to fit over the buoy A, and the weights D fitting over the cylinder and resting on a flange or equivalent on its lower end, all as shown and described.

118,742, antedated August 17, 1871. — SHAFT-COUPLING. — Aurelius V. Pitts, Chicago, Ill.

Claim. — The lubricator C, constructed and arranged to operate in connection with a shaft-coupling, substantially as described.

118,743. — MACHINE FOR ATTACHING BUTTONS. — William S. Platt, Waterbury, and George J. Capewell, Cheshire, assignors to William S. Platt, Waterbury, Conn., and Samuel M. Porter, New York city.

Claim. — 1. A machine for putting buttons with eyelets or rivets onto garments, composed of a base, A, presser-head B, intermediate link d, main lever C, anvil t, springs g g, tongue f, and adjustable die e.

2. A machine for attaching buttons to garments, provided with the tongue f, constructed and operating as herein shown and described.

118,744. — NAIL-MACHINE. — Henry Reese, Baltimore, Md.

Claim. — 1. The reciprocating slide-bars G H, provided with racks b c, and combined with the shaft a, pinions F L, sector E, bar D, cam-groove d, plate C, and shaft B, as specified.

2. The bars G H provided, respectively, with the nail-dies A k, in combination with the block O, toggle-levers M N, lifter m, and shaft B, as shown and described.

3. The combination, with reciprocating bars H and G, of fixed jaw O, movable jaw p, block R, lever P, and the lifter n on shaft B, all arranged to operate with rolling mechanism, as described.

118,745, antedated August 18, 1871. — BED-BOTTOM. — George Richardson, Milwaukee, Wis.

Claim. — 1. The combination of the frame A, windlass B, and wire-cloth D upon which the mattress rests, substantially as and for the purpose set forth.

2. The combination of the frame A, metal strips A', and wire supports D', substantially as and for the purpose set forth.

118,746. — PROCESS OF TREATING AND PRESERVING HIDES. — Adolph Rock, New Orleans, La.

Claim. — 1. The within-described compound or liquid for curing hides, composed of pyroligneous acid, in which are dissolved aloes and alum, or their equivalents, substantially as herein set forth.

2. The method, herein described, of curing hides by means of soaking them in a liquid composed of the ingredients substantially as herein set forth, and packing them in salt for transportation, as described.

3. A curing compound composed of pyroligneous acid mixed with one or more ingredients poisonous to insects, for the purposes herein set forth.

118,747. — AUTOMATIC FLY-TRAP. — Frank L. Rosentreter, Des Moines, Iowa.

Claim. — 1. The trough-like oscillating beam C C, the oscillating bucket F, the tubes a a, made, combined, and operated as described, and for the purposes specified.

2. The automatic fly-trap, substantially as described, as a new article of manufacture.

118,748. — MITER-BOX. — Marvin Owen Royce, East Cambridge, Mass.

Claim. — 1. The guide C, when hinged to the revolving standard B, substantially as set forth.

2. The stops F, in combination with the standard B and swivel-guide C, substantially as set forth.

118,749. — CLOD-CRUSHER. — John Schlosser, Piqua, Ohio.

Claim. — The combination and arrangement, in a clod-crusher, of the frame A, tongue B, hangers C, cutters E E', shafts or axles D D', and arms b b, all as herein shown and described, for the purpose specified.

118,750. — BATHING APPARATUS. — George Scholl, New Philadelphia, Ohio.

Claim. — The combination of the tank B, pipe H, pan G, the folding sides D D E, and exterior door F, constructed and operating substantially as described and represented.

118,751. — TORCH. — Ira W. Shaler, Brooklyn, N. Y.

Claim. — 1. A signal-torch for marine and like purposes, substantially as herein shown and described.

2. The combination of the three following elements, constituting a signal-torch, operating substantially as herein described: first, a vessel holding hydrocarbon fluid in suspension in wicking or other absorbent material; second, a flame-tube projecting from the holder; and third, a blast-tube, all substantially as herein shown and described.

3. The hood and the method of its attachment to the stem, when the apparatus is in use, so as to afford a support to the torch.

118,752. — REVOLVING FIRE-ARM. — Christian Sharps, Philadelphia, Pa.

Claim. — 1. A revolving fire-arm, in which the barrel is hung to the frame and arranged to turn eccentrically upon a vertical axis, substantially as herein described.

2. The vertical eccentric pivot e, so arranged in respect to the centers of the barrel and revolving cylinder that the rear end of the said cylinder can be brought close up to and turned outward from the frame, without risk of striking the latter, and without involving the usual necessity of rounding off its corners.

3. The combination, substantially as herein described, of the eccentric pivot e and its shoulder or shoulders with the cartridge-extractor D.

118,753. — MILL-PICK HOLDER. — James P. Sinclair, Mottville, N. Y.

Claim. — The short, hollow, flattened, and slotted cylindrical head A, provided with a socket, C, to receive a handle, D, and the semi-cylindrical blocks B, whether faced or not, in combination with each other, to adapt them to receive and hold a pick, E, substantially as herein shown and described.

118,754. — PLANING-MACHINE. — Luther T. Smart, Centre Ossipee, assignor to himself and Samuel H. Smith, Wakefield, N. H.

Claim. — 1. The automatic guide-stops E E, arranged and operating in combination with the jointer or plane-stock C, substantially as and for the purpose herein specified.

2. The plane-stock C, moving in ways or guides, as described, when constructed with the separate removable middle part or block g bearing the plane-iron or cutter h, substantially as and for the purpose herein specified.

118,755. — FLUID-METER. — D. Brainard Spooner, Syracuse, N. Y.

Claim. — 1. A device for actuating the valves of liquid and gas-meters, composed of a cylinder or chamber surrounded by a movable or flexible sleeve resting on a coiled wire or other movable support, said sleeve or covering receiving the pressure of the water for shifting or throwing the valve, substantially as described.

2. The flexible or rubber tubing G, combined with the valve of a liquid or gas-meter in such manner that when the diaphragm or piston is moved by the pressure of water from one position in its stroke to another the said tubing is thereby increased or diminished in length or dimensions for actuating the valves, substantially as described.

3. The rubber sleeve G, forming an elastic chamber for throwing the valves of liquid or gas-meters, molded with flanges, as and for the purpose herein described.

118,756. — COTTON-PRESS. — James Templeton, Florence, Ga.

Claim. — The windlass A and bar i, arranged, in connection with the cotton-press, to operate as shown and described.

118,757. — PAPER-FILE. — Edward H. Thompson, Washington, D. C., assignor to William A. Amberg, Chicago, Ill.

Claim. — 1. The case A, with the lid a having the recess a^2, openings a a^1, and the guard or post B, all constructed and arranged to operate substantially as and for the purpose set forth.

2. The case A with the apertures a a^1, lid a, and guard B, in combination with the binding a^3, and an index, all constructed, arranged, and operating substantially as and for the purpose set forth.

118,758, antedated August 21, 1871. — PLOW. Isaac P. Tice, New York, N. Y.

Claim. — 1. A series of parallel disks, b, having a distance of from three to twelve inches from each other and projecting from the face of the roller about the same distance, more or less, according to the nature of the soil and the work to be done, as and for the purpose specified.

2. The scrapers D, when made to fit the spaces between the flanges b, and held in contact with the face of the roller by a spring, d, or equivalent, as specified.

3. The adjustability of the scraper D from c to c', as and for the purpose specified.

118,759. — RUFFLING ATTACHMENT FOR SEWING-MACHINES. — Edwin J. Toof, Fort Madison, Iowa.

Claim. — 1. The combination of the arm A, the feed-plate B, and the lever C, constructed and arranged substantially as herein shown and described, and adapted for attachment to the presser-foot or bar of a sewing-machine, leaving the bed-plate wholly unencumbered, so that the operator may form a ruffle at a distance from the edge of one piece of goods and at the same time attach it to any part of another piece of material, all as set forth.

2. The single feed-plate B, made of one piece of metal, adapted to work directly against the under surface of the presser-foot, and provided with the needle-notch r, the turned-up portions o and n, and the lugs a a, all constructed and arranged as described.

3. The index device E provided with the arm Z, in combination with the lever C, screw v, and the feed-plate B, all constructed substantially as shown, and for the purposes set forth.

118,760, antedated August 19, 1871. — DEVICE FOR PREVENTING RAILWAY AXLES FROM HEATING. — Archibald B. Tripler, New Orleans, La.

Claim. — 1. A railroad-car axle, having a central opening, intersected at or near the middle of its length by a radial receiving-opening, b, in combination with a water-tank and air-valves or gatherers, i, the latter opening and closing automatically to receive the air alone as the cooling agent, or as a motor to drive the water through said central opening, in the manner and for the purpose described.

2. A water or air-receiver, constructed with air-gatherers i and valves n or their equivalent, arranged to receive and conduct air into and through the central opening a of the axle by the motion of the car itself, as described.

3. The central opening a of the axle, sealed or closed at each end thereof, and communicating with a supply-tank centrally located, so as to produce and maintain a continuous circulation of the cooling agent within the axle, in the manner essentially as described.

4. The combination of an axle, A, constructed with longitudinal and radial openings a b, as described, the jacket D, the tank B, and the connecting supply-pipes, substantially as described.

118,761. — PULLEY. — Matthew Ward, Mount Carmel, Pa.

Claim. — The pulley herein described, consisting of the wooden sections A B recessed upon their adjacent sides, the annular rubber disk C, clamping-plates G G, nut F, and collar E or its equivalent, all constructed and arranged as and for the purpose specified.

118,762. — FIRE-GRATE. — Royal F. Weller, Albany, N. Y.

Claim. — 1. The grate B, consisting of sections, constructed as herein described, in combination with the links C C and pins D D, when arranged as and for the purposes herein specified.

2. In combination with the grate B, the perforated plate M_1 as and for the purpose herein set forth.

3. The hinged perforated plate O, in combination with the grate B, as and for the purpose herein described.

4. The drum H, having its body constructed to conform to the shape of the under side of the grate-sections, as herein described, and for the purposes set forth.

5. The combination of the grate B, drum H, and perforated plate M, when constructed and arranged as herein described, and for the purposes specified.

6. In combination with the grate B and links C C, the top plate L of the casing, as and for the purpose herein described.

118,763. — STEP FOR SPINDLES OF SPINNING-MACHINES. — Asa A. Westcott, North Scituate, R. I., assignor to George Draper, Hopedale, Mass.

Claim. — The combination and arrangement of the movable step-post G, constructed and applied to its supporting-rail H and spindle A, as described, and extending up nearly to the bolster-rail, with the said spindle, the whirl, the bolster, and the supporting-rail of the latter all disposed as explained and represented, the said post being provided at its upper end or part with a socket or bearing to receive the foot or pivot of the spindle, essentially as hereinbefore explained.

118,764.—STEAM-ENGINE.—Jerome Wheelock, Worcester, Mass.

Claim.—1. In combination with a steam-cylinder, two semi-rotary, reciprocating, double-acting valves, operated by a valve-stem and controlled by the governor in such a manner that, while the exhaust movement of the valves is even and regular, the induction movement is limited to fulfill the immediate requirement as indicated by the governor, substantially as described.

2. The combination of the valve-crank, the latch mechanism, and the valve-stem I, the three being connected substantially as shown, and arranged with relation to a tripping mechanism controlled by the governor, as and for the purposes specified.

3. The improved rotary double-acting balanced valve described, capable of receiving steam through its axis and discharging it into the cylinder through its periphery, and also capable of receiving the pressure of the exhaust steam on two exterior and opposite peripherical surfaces, substantially as described.

4. The combination of the conical rotary double-acting valve, the stud G, the expansion-spring *g*, and the fixed shaft E, as and for the purposes specified.

5. The combination of the dash-pot, dash-weight, disk, and elastic packing with a double-acting rotary valve, a latch, and tripping mechanism, substantially as described.

6. The combination of the crank-lever of a semi-rotary reciprocating valve, the valve-stem I joined to the valve-crank by a sliding connection, the latch mechanism mounted upon the valve-stem, and the spring *p*, arranged to exert a repelling force between the valve-stem and the crank-lever, as and for the purposes specified.

7. The peculiar construction, location, and arrangement of the cylinder, valves, valve-chambers, and steam-chest with reference to each other, substantially as described, by means of which the steam, after entering the steam-chest, is directed upward through the valves and thence upward into the cylinder, substantially as described.

118,765.—SCHOOL-DESK AND SEAT.—Junius F. Whiting and Elam Fisher, Eaton, Ohio.

Claim.—The within-described combined school desk and seat, consisting of standards Y Y, arms B B, arm-braces A A, top D, semicircular brace X, folding-leaf E, and slides F F, all arranged to operate substantially as and for the purpose set forth.

118,766.—MEDICINE FOR TREATING RHEUMATISM.—Alfred Whitney, Boston, Mass., assignor to himself and Frank. L. Penney, same place.

Claim.—1. The within-described medicine, composed of the ingredients herein named, in about the proportions and for the purpose set forth.

2. The within-described liniment, composed of the ingredients herein named, in about the proportions and for the purpose described.

118,767.—RAG-CUTTING ENGINE.—Edward Wilkinson, Paterson, assignor to himself and William O. Davey & Sons, Jersey City, N. J.

Claim.—1. The tapering box A, fitted into the bed B under the cylinder, and the tapered case D containing the cutters fitted into it, substantially as specified.

2. The cutters E, bars G, and adjusting-screws H, arranged with each other and the case D for adjusting the said cutters, all substantially as specified.

118,768.—PUTTING UP BAKING-POWDER.—George F. Wilson, Providence, R. I.

Claim.—1. The mode of putting up baking powders and other similar preparations, substantially as herein described.

2. A sheet-metal can for putting up baking-powders and other preparations, composed of two or more parts, each closed at the bottom, the one fitting and forming the cover of the one next below, and the top one being provided with a cover, substantially as herein shown and described.

118,769.—PLOW.—Levi S. Wilson, Wabash, Ind.

Claim.—The brace E, constructed as described, and provided with bent end *b*, pin *d*, and hook *h*, substantially as and for the purposes herein set forth.

118,770.—AXLE-BOX.—Sennitt A. Wing and Iauthus G. Johnson, Greenfield Centre, N. Y.

Claim.—The combination, with the pipe-box A, of the center box B having the axle-bearing C arranged eccentrically to its axis, all substantially as specified.

118,771.—BASE-BURNING COOKING-STOVE.—Henry E. Wolcott, Elbridge, N. Y., assignor of one-fourth his right to Nathan Munro, same place.

Claim.—1. The magazine M, situated on the back of the stove behind the griddle-holes, having upper apartments communicating with the smoke-pipe by the adjustable draught-openings *m m*, as and for the purpose set forth.

2. The corrugated or fluted inclined plane S S', in combination with the magazine M and fire-chamber L, as and for the purpose set forth.

3. The flue F, running through the center of stove at right angles to its front, and having the damper R and openings *n*, as and for the purpose set forth.

4. The combination of the magazine M, the chute S, and the fire-pot L, each divided or susceptible of division through the center, in the manner described, so that one-half of the stove may be used independently of the other, as and for the purpose set forth.

5. In a stove constructed as described, the grates G G', supported by the hinged rod *a*, and arranged for use independently of each other, as set forth.

6. The perforated doors D, hinged at *p*, as seen in drawing, to serve when open, against the sides of the stove, as a protection to the mica windows, or when closed, as dampers to the stove.

7. The drop or teat K at the corners and under the bottom plate of stove, as a permanent fixture, to receive the socket Q, as and for the purpose set forth.

118,772.—METALLIC FISHING-LINE.—Harry Camp, Covington, Ga.

Claim.—In a fishing-line, the loops D, placed at suitable distances apart, and constructed as herein specified.

118,773.—JOINT FOR SCHOOL-DESKS.—Thomas A. Galt and George S. Tracy, Sterling, Ill.

Claim.—The hinge or joint for school-seats, constructed with the segmental recess *d'* having a concave face, and with the stop *e*, and provided with the rubber washer *b'*, substantially as and for the purpose described.

118,774.—WASHING-MACHINE.—John Williamson James and Josiah Streit, Centretown, Mo.

Claim.—A rotary ribbed dasher or squeezer for washing-machine, in combination with a curved ribbed suds-box having a semicircular recess at its end, substantially as and for the purpose specified.

118,775.—REIN-HOLDER.—Henry D. Page, Morenci, Mich.

Claim.—The rein-holder herein described, consisting of the plate A having the longitudinally-recessed shoulders *b' b''* and rein-cavity D, and of the straight spring B adapted thereto, all constructed and arranged as specified.

118,776.—APPARATUS FOR FORCING FLUIDS.—Thomas W. Malone, Mason City, W. Va.

Claim.—In combination with an air-pump of the within-described construction, the descending pipe F and ascending and discharge-pipe G, when the turned-up end of the former is of the full diameter of the pipe F, and the lower end of the pipe G, which it enters, is enlarged so as to form a long narrow annular channel between the ends of the pipes F and G, as and for the purpose set forth.

REISSUES.

4,541.—LAMP-BURNER.—Hiram W. Hayden, Waterbury, Conn., assignor to Holmes, Booth & Hayden, same place.—Patent No. 106,363, dated August 16, 1870.

Claim.—1. The wick-holder *i*, with penetrating teeth surrounding and acting to hold the flat wick in a cylindrical form around the central air-tube and above the lateral inlet, and adjust the height of the wick without interfering with the capillary action of said wick, as set forth.

2. The wick-raising mechanism, acting upon the exterior of the flat wick within the tube *a* and above the lateral inlet *f*, in combination with the interior air-tube *c* and exterior tapering tube *a*, substantially as and for the purposes set forth.

3. The wick-holder *i*, with its bar *l* interposed between the flat wick and the tapering tube *a*, in combination with the tapering tube *a*, air-tube *c*, lateral inlet *f*, and the wick-raising mechanism acting upon the said bar *l* through a slot in the said tube *a*, substantially as set forth.

4. The tapering perforated guide *o* and spring chimney-holder *n*, constructed substantially as specified, and combined with the foraminous air-distributer *c* that supports the removable spring chimney-holder and guide when in place, substantially as set forth.

4,542. — PERMUTATION LOCK. — Julius C. Hintz, Jr., Cincinnati, Ohio.—Patent No. 108,481, dated October 18, 1870.

Claim.—1. In combination with wheel C and cam C', the pinion J', wheel J, clamp J'', and bolt J''', when constructed and arranged for operation as herein described.

2. In combination with wheel C and cam C', the yokes D provided with slots S and mounted on pins D' D'', substantially as and for the purpose set forth.

3. The yokes D provided with slots S and arms D', and arranged to move laterally on pins D'' D''', in combination with the projecting pins B' and bolt B.

4. The notched disk G, with its sleeve L, in combination with the swinging bolt B working on the sleeve E, and the link F pivoted to the case M, substantially as described.

5. The swinging bolt B having its front end weighted so as to fall by its gravity when released, in combination with the link F having one of its arms connected thereto, substantially as described, whereby the bolt is held suspended until the link is released, as herein set forth.

6. The combination of the weighted swinging bolt B provided with the arm B', and the sliding yokes D, constructed and arranged to operate substantially as set forth.

4,543.—WATER-TANK FOR RAILWAYS.—John Morton, Sedalia, Mo., assignor to McGowan Brothers' Pump and Machine Company, Cincinnati, Ohio.—Patent No. 63,418, dated April 2, 1867.

Claim.—1. In combination with devices for raising and lowering the supply-pipe, the connection, substantially as described, whereby the conveyer and supply-pipes of the tank may be rotated upon each other without separation.

2. The combination of swivel X and jointed rod E with the supply and conveyer-pipes, when the axes of the connecting-mouths are at right-angles with the axes of the spouts when in position for delivery.

3. The swivel-pin X, located in the axes of the supply and conveyer-pipes—when the latter are in position for delivery—when said swivel is connected by any suitable device with the supply-pipe so as to suspend the supply-pipe and permit its horizontal rotation and vertical elevation or depression.

4. The swivel X, when located on the top of the conveyer-pipe, and connected by any suitable device with the supply-pipe so as to suspend the supply-pipe and permit its horizontal rotation and vertical elevation or depression.

5. In combination with the tank A and stationary pipe B, a horizontally-adjustable connecting-pipe, D, arranged to operate substantially as and for the purpose set forth.

6. The combination of the horizontally-adjustable pipe D and the ropes and weights H and swivel-pulleys I, substantially as and for the purpose set forth.

7. The combination of the cord C², bell-crank C¹, and valve C with its stem and weights G, substantially as set forth.

4,544.—WASH-BOILER.—Charles N. Tyler, Buffalo, N. Y.—Patent No. 84,918, dated December 15, 1868.

Claim.—1. The plate B, provided with the band B', the openings G G, and the flanges F F, as set forth.

2. The plate B, in contact with or attached to the band B', except at the ends where it is provided with the openings G G, as set forth.

3. The combination, in a wash-boiler, of the perforated top D, close plate B having the openings G G, band B', and central tube C, all arranged substantially as described.

DESIGNS.

5,251.—WAGON-SEAT.—Pascal P. Child, St. Louis, Mo.

Claim.—The design for the seat-riser for vehicles, substantialilly as above set forth.

5,252.—PICTURE-NAIL HEAD. — Hubert L. Judd, Brooklyn, N. Y.

Claim.—The design of the metallic rim *a* that receives the head *a*, the same being formed with a scalloped edge, as shown.

5,253.—BURIAL-CASKET.—Wilbur F. Lane, Boston, Mass.

Claim.—As a new design, a burial-case that is octagonal in vertical cross-section.

5,254.—BIRD-CAGE.—George R. Osborn and Benjamin A. Drayton, New York, N. Y.

Claim.—The design for a bird-cage, as shown.

5,255.—BIRD-CAGE.—George R. Osborn and Benjamin A. Drayton, New York, N. Y.

Claim.—The use of crimped wires as a new style of ornamentation for the upper section, dome, or roof of a bird-cage, as herein specified and shown.

ISSUE OF SEPTEMBER 12.

PATENTS.

118,777.—BRICK-MACHINE.—Alban Anderson, Peekskill, N. Y., assignor to Homer Anderson and Euclid Anderson, same place.

Claim.—1. The hook L, in combination with the

pronged arm E, clutch *h'*, and plunger D, substantially as and for the purpose described.

2. The clutch *h'*, in combination with the hook L and cam F, provided upon its face with foot *r*, substantially as and for the purpose set forth.

118,778.—WATER-WHEEL CASE.—William Bayley and Abner P. Crowell, Wilmington, Del.

Claim.—1. The case A B B', with its flange 3, in combination with the gate D, when constructed with a chamber, *i*, communicating with the interior or discharge-chamber of the wheel, substantially as described, and for the purpose set forth.

2. The combination, with a turbine water-wheel case and gate, of a spiral pinion and rack, substantially as and for the purpose set forth.

118,779.—STEAM-HEATER.—Albert G. Bearup and Patrick Carraher, Jr., New York, N. Y.

Claim.—1. The employment of a self-acting valve, H, on the base, for the discharge of atmospheric air and water of condensation, substantially as herein described.

2. The inclined partition E and bottom A, substantially as and for the purpose hereinbefore described.

118,780.—CARRIAGE-CLIP BLANK AND DIE FOR MAKING THE SAME.—Henry M. Beecher, Plantsville, Conn.

Claim.—1. The roller-dies B B, with their peripheries molded to the shape herein shown and described, for the purpose of forming carriage-clip blocks, as set forth.

2. The carriage-clip blank D as formed therein, having its central portion reduced and thrown outward to form the heads *v v*, substantially as and for the purpose described.

118,781.—REVERSIBLE CURTAIN-FASTENER. Henry Binder, St. Louis, Mo.

Claim.—1. The hanger A, cast with bearing part A', having projections *a a'*, and provided with pawls *b b'* and spring C, substantially as and for the purpose set forth.

2. The combination of pulley D cast with cogs *d*, when arranged with hangers A, constructed as described, substantially as and for the purpose set forth.

118,782.—SPRING-SEAT. — John W. Blakeney, New York, N. Y.

Claim.—In a chair or other seat, the springs C coiled at F and G, the several coils being secured to the frame B, as shown, the springs D coiled at their ends, and the springs E coiled at one end, when the said springs C, D, and E are interwoven in the manner and for the purpose specified.

118,783.—BRICK AND MORTAR-ELEVATOR.—William Boswell, Pontiac, Mich.

Claim.—1. The construction and arrangement of the standards B B, hanger C, shaft D D', clutch-boxes *a a'*, clutch-lever R, spring S, cord T, ratchet H, pawl *b*, movable journal-boxes I I, shaft J, chain-wheels K L, endless chain M, platform N, braces O, and chain-guides P, as and for the purpose set forth.

2. The arrangement of the stops V V' in the cord T with relation to the chain-guide P and platform N, in the manner described, for the purpose specified.

118,784. — SNOW-PLOW. — Thomas Spence Brown, Greenfield, Mich.

Claim.—The devices herein named for operating the auxiliary plow C, consisting of the sway-bar *o*, eyebolt *p*, T-shaped bolt *r*, spring *s*, foot-lever *t*, tiller-ropes or chains *w*, tiller *x*, and wheel *v*, all constructed and arranged substantially as and for the purposes set forth.

118,785. — BELT-FASTENING. — George A. Brown, Reading, Mich., assignor to himself and Ebenezer L. Kelley, same place.

Claim.—The herein-described belt-fastening, composed of a buckle-plate, A, formed with a bail, *a*, and hook-studs *b* secured to the belt by rivets *c*, in the manner and for the purpose set forth.

118,786.—STEAM-TRAP.—Nelson H. Bundy, New York, assignor to Charles Gregg, Brooklyn, N. Y.

Claim.—The combination of the float G, the valves E E, the stem F, the valve-box D, the outlet C of the trap, and the cam I, made capable of operation from the exterior of the case, substantially as specified.

118,787.—MANUFACTURE OF ACETATE OF LIME.—Charles J. T. Burcey, Black Rock, Conn.

Claim.—1. In the manufacture of acetate of lime at one operation, the vapors of pyroligneous acid and slaked lime, or their equivalents, introduced into direct contact with each other while in a state of commotion, essentially as described.

2. In the manufacture of acetate of lime, the charging of slaked lime with pyroligneous-acid vapors in an agitator, substantially as described.

3. In the manufacture of acetate of lime, the process of condensing the empyreumaticated vapors formed in the production of the acetate of lime to utilize its fluid and gaseous matter, substantially as described.

4. In combination with the pipe for conducting the pyroligneous acid from the still, the inclosing-case or cylinder K for said pipe, to render the heat uniform and to protect the conveying-pipe, as described.

5. In combination with a boiler for evaporizing pyroligneous acid and a superheating-furnace, an agitator, L T T', substantially as described.

6. In combination with the agitator, a feeding-conveyer, N, substantially as described.

7. In combination with the agitator, the double-bottomed pan S, substantially as described.

8. In combination with the agitator and pan S, the space S', pipe L', condenser U U', reservoir W, and pipes W *x*, substantially as described.

118,788.—MANUFACTURE OF ACETIC ACID.—Charles J. T. Burcey, Black Rock, Conn.

Claim.—The manufacture of acetic acid by means of the combination of acetate of lime and concentrated sulphuric acid in a boiler while under direct agitation, substantially as described.

118,789, antedated September 9, 1871.—WATER-INDICATOR. —William Butterfield, Madison, Wis., assignor to William H. Worden, same place.

Claim.—A water-indicator, when constructed with the shell A in two parts, forming an open interior space, F, for the operation of floats G, when used in combination with the levers *f* and arms *g*, one moving the spindle *g* and the other moving upon it, in the manner substantially as herein set forth.

118,790.—ELASTIC WASHING-MITT. — Marvin Cadwell, Lansing, Mich.

Claim.—A washing-mitt, provided with corrugations *a* upon each side of the palm A, and with straps C and rings B, all constructed, arranged, and operating substantially as and for the purposes set forth.

118,791, antedated August 24, 1871.—DEVICE FOR ELEVATING HAY, &c.—Frank Calvert, Wabash City, Ind.

Claim.—The device herein described, consisting of the hook A, square part B, cleat C, and auxiliary hook E, when constructed as shown, and for the purpose specified.

118,792.—WHEEL-PLOW.—William J. Connor, Benton, Ill.

Claim.—1. The slotted and pivoted plow standard B, in combination with the rod *f* and hand-wheel nut *g* for adjusting the pitch of the plow, substantially as described.

2. The beam A recessed, as described, to receive the standards B of the plows, and furnished with screw-bolts and nuts which allow the plows to be adjusted laterally and serve to firmly sustain them in position, substantially as described.

3. The slotted and vertically-adjustable standards C C', wheel E, beam A, plows B *b*, and swinging-seat D, arranged substantially as described.

118,793, antedated September 11, 1871.—EXCAVATOR.—John P. T. Davis, New Trenton, Ind., assignor to himself and Samuel Davis, same place.

Claim.—1. The shovel D and colters G G connected together by a transverse piece, H, and movable vertically within guides and between uprights I I, in combination with the screw J with gearing and crank, and set-screw *j*, all constructed and operating substantially as and for the purpose described.

2. The screw P, lever M, uprights N, sliding bars L L, and roller K, in combination with the rollers Q Q', arranged and operating substantially as and for the purpose set forth.

3. The screws J and P, in combination with the colters G G, and plow D, lever M, sliding bars L L, and rollers K and Q Q', all operating substantially as and for the purpose set forth.

118,794.—MACHINE FOR WASHING WHITE LEAD. — William Davison, Baltimore, Md.

Claim.—1. The combination and arrangement of water-pipe or pipes F and revolving sweep or sweeps H H, substantially as and for the purpose herein set forth.

2. The combination, with pipes F and sweeps H H, of shaft or shafts L L, gear-wheels 5 5 and 6 6, substantially as and for the purpose set forth.

3. Forcing water, under pressure, into and through the white lead while in process of washing, for the purpose as hereinbefore set forth.

4. Forcing water, under pressure, into and through the white lead while the same is stirred and raked up by the sweeps H H, in combination and in connection with tub or tubs D D, sweep or sweeps H H, shaft or shafts L L, and gear-wheels 5 5 and 6 6, for the purpose herein fully set forth.

118,795.—EARTH-CLOSET.—Merritt E. Doolittle, Hartford, Conn., assignor to Earth-Closet Company, same place.

Claim.—1. A commode or earth-closet, provided with the excrement-chamber and the distributing mechanism, and having its earth receptacle adapted to be raised and lowered, all substantially in the manner and for the purposes set forth.

2. In combination with the box F, an oscillatory distributer, G, provided with suitable actuating mechanism, and operating substantially as herein described, for the purposes set forth.

3. In combination with a distributing mechanism constructed and adapted to throw or scatter the charge of earth, a seat, hinged at its front edge and connected by suitable means with the distributing device, the whole arranged to operate substantially as set forth.

118,796.—SCROLL-SAWING MACHINE.—Nathaniel T. Edson, New Orleans, La.

Claim.—1. Hanger L, in combination with plate B, rod M, and rod X, substantially as and for the purpose hereinbefore set forth.

2. Rubber block 2, in combination with hanger L, rod M, and plate B, substantially as and for the purpose hereinbefore set forth.

3. Set-screws 6 and 7, Fig. 2, in combination with bolt 8, substantially as and for the purposes represented.

118,797.—MACHINE FOR THRASHING AND SEPARATING GRAIN. — Samuel Filby, Lewiston, N. Y.

Claim.—The crank-shafts K K, straw-carriers and shakers B B, riddle D, inclined grain-board N, sieve E, and breaker 44, when said parts are constructed, combined, and arranged to operate substantially as and for the purposes described.

118,798.—PERMUTATION PADLOCK.—Louis H. Gano, New York, N. Y.

Claim.—The release-bolt R, operated upon the outside of the case, provided with a guard, G, which enters the slots of the tumblers, said bolt releasing the connecting-bar or catch C, all arranged as and for the purpose set forth.

118,799.—BOILER FOR HEATING BUILDINGS. Azel Gay, Rochester, N. Y.

Claim.—1. The combination of the outer casing of boiler C with the interior structure thereof, consisting of the top and sides of the combustion-chamber K, the bridges *m n*, water-back *o*, and combustion-flues *d' i''*, connected by the horizontal flanges *f*, in the manner and for the purpose substantially as described.

2. The combination of the bridges *m n* with the sides *j j* of the combustion-chamber K and outer casing of boiler C, substantially as and for the purpose described.

3. The arrangement of the flues *b b'* under the ash-box and around the ledges *a* of the fire-brick, substantially as and for the purpose specified.

4. The construction of the smoke-flues *d' i''* with zigzag upper surfaces and plane lower surfaces, substantially as and for the purposes described.

5. The arrangement of the smoke-flues *d' i''* in relation to each other and to the boiler C and doors H I, whereby the narrow water-spaces *q* are formed and free communication may be had for cleaning out the flues, substantially as and for the purposes specified.

6. The combination of the base D with the interior and outer casing of boiler C, when the parts are constructed, arranged, and used in the manner and for the purpose specified.

118,800.—SAW.—George B. Green, Staffordshire, England.

Claim.—A saw made by roughening or serrating, by any suitable means, the sides of the blade, substantially in the manner and for the purpose herein set forth.

118,801.—HEAD-BLOCK FOR SAW-MILLS.—William A. Greenleaf, Indianapolis, Ind., assignor to himself, John T. Dickson, and Edward Greenleaf, same place.

Claim.—1. An adjustable slide, X, and stop-pin T, moving upon and secured to a movable rod, O, in combination with a gauge-slide, Q, upon the knee A or carriage B, for the purpose of moving said rod by the traverse of the carriage, substantially as and for the purpose herein set forth.

2. In combination with the subject-matter of said first claim, one or more levers, R T, arranged to operate one or more pins, Y, and thereby move a cam-lever, N, on the driving-pulley K, for the purpose of liberating the said pulley from the gearing operating the carriage B and arrest the movement of the carriage, all substantially as herein described.

3. In combination with the lever T, arranged and operated substantially as herein described, a hammer, P, and bell, U, to announce the movements of said lever T, substantially as herein set forth.

118,802.—RUSTIC SEAT.—Albert G. Hawkes, Baltimore, Md., assignor to D. L. Bartlett and H. W. Robbins, same place.

Claim.—The combination of slats B B, fitted with wedge-shaped dovetailed keys *b b*, with end supports A A having dovetailed wedge-shaped recesses formed in the upper edges thereof, substan-

tially in the manner and for the purpose herein set forth.

118,803.—PAPER COLLAR.—Samuel F. Hilton, Providence, R. I.

Claim.—The double-edged collar described, in which the parts which are folded over to form the edges of the collar are cut, substantially as shown, so as to be held in place by having their ends lodge in a fold, and also by the overlapping of one fold upon the ends of another.

118,804. — BED-BOTTOM. — Samuel Hobbs, Wilmot, Ohio.

Claim.—The bed-bottom, composed of the end frames B B, constructed substantially as herein described, in combination with the springs *i i*, washers or plates *m m*, and slats C C, substantially as and for the purposes herein specified.

118,805.—BLACKING-BRUSH AND BOX COMBINED.—Hugh S. Kerr, Philadelphia, Pa.

Claim.—1. The combination and arrangement of the brush A, the blacking-box *e*, the sponge N, and cap *k*, substantially as herein described.

2. The sponge N and holder *g h* combined and operating in connection with the box *e*, as herein described.

3. The cap *k*, having one or more buttons, *m*, for the purpose of saturating the sponge, as herein described.

118,806.—AUGER.—Robert M. Lafferty and Edward P. Smith, Three Rivers, Mich.

Claim.—1. The boring-head F, constructed of one piece of metal, and provided with the bit *e*, radiating from the center of the periphery to the front end thereof, and with one or more short angular bits *e'* extending only a portion of the distance from said periphery toward said center, when each of said parts is constructed as described, shown, and set forth.

2. The guide-tube B, provided with apertures *a* and serrated edge *b*, as described, shown, and set forth.

3. The bracket A, box D, and guide-tube B, provided with apertures *a* and serrated edge *b*, constructed and combined as described and set forth.

4. The combination of the hollow auger C, the pulley E, the box D, and the guide-tube B, when each is constructed as described, and all are arranged to operate as and for the purpose set forth.

118,807.—COAL-SCUTTLE.—Emmett Mather, Chicago, Ill., assignor to Frank Sturges & Co., same place.

Claim.—1. Stamping or "setting down" the bottom and hoop of a coal-hod with the annular flange *a* of one and the same piece of metal, substantially as and for the purpose described.

2. Uniting the body to the bottom and hoop by double seaming, when said bottom and hoop are made from one and the same piece of metal, substantially as specified.

118,808. — SELF-ACTING MULE FOR SPINNING.—Peter McGovern, Lawrence, Mass.

Claim.—1. The combination of the belt K and stop N with the short arm of the lever M, controlled by the fallers, all constructed and arranged substantially as described, so that the resistance of the belt will tighten the hold of the lever upon it.

2. The incline Q, for releasing the hold of the weighted lever M upon the belt when the carriage has run in, substantially as described.

3. The fingers *i* and *d*, in combination with the shipping-rod A and cam *e*, substantially as described.

118,809.—BLACKING APPARATUS AND BOOT-JACK COMBINED.—Joseph M. McMaster, Rochester, N. Y.

Claim.—As an improved article of manufacture the apparatus herein described, consisting of the folding bootjack E, hinged foot-rest plate B, and blacking-box support *d d*, all arranged within and upon the case A, substantially as and for the purposes set forth

118,810, antedated August 24, 1871.—HAY-TEDDER. — William H. Mickle, Utica, N. Y.

Claim.—1. The combination of the tine-shaft A^1, the crank S, roller S^2, and guide E', constructed and operating substantially as and for the purpose described.

2. The combination of the driver O with binder P, pinion K, and shaft A^1, when each is constructed and all are operated substantially in the manner and for the purpose described.

118,811.—VENT-BUNG.—Charles H. Miller and William Ascough, Buffalo, N. Y.

Claim.—In a vent-bung, the recess *g* of the radial hole B', arranged with the orifice *e* or the valve-ping C, as heretofore set forth.

118,812.—MEDICAL COMPOUND OR APPLE-GINGER.—Davis Nixon, Philadelphia, Pa.

Claim.—The manufacture or preparation of a compound which is denominated "Nixon's celebrated apple-ginger," of the ingredients, in the proportions, and for the purposes set forth.

118,813. — SOLUTION OF BALSAMIC GUMS FOR MEDICINAL PURPOSES, COSMETICS, PERFUMERY, &c.—Oscar Oldberg, Washington, D. C.

Claim.—1. A beautifying, healing, and antiseptic preparation, consisting of a solution of one or more balsamic gums in a solution of boric acid.

2. The combination of a solution of boric acid and one or more balsamic gums with glycerine, to produce a smooth consistency and allow the preparation to be renewed, as described.

118,814.—WINDOW-SHADE.—John J. Phares, Whitestown, Ind.

Claim.—The combination of the curtain B, stationary frame D, movable slat E, rubber cords F F L L', drawing-cords O O' P P', guide-bars S, rings K, and knobs J, all constructed and operating substantially as described.

118,815. — WAGON-WHEEL.—Joram Preist, Detroit, Mich.

Claim.—The combination of the sections A and B, each cast in one piece, and provided with concave flanges *b* and *d*, the section B also provided with studs *f*, the wooden hub C provided with groove *g* and the spokes D, the several parts being constructed, arranged, and secured together, substantially as described and shown.

118,816.—SLATE-CUTTING MACHINE.—William H. Rayner, Springfield, Mass.

Claim.—1. The combination of the knife-bar A, springs *f f*, rods D D, and treadles T T, substantially as and for the purpose hereinbefore set forth.

2. The combination, with the knife-bar A, springs *f f*, rods D D, and treadles T T, of the bed-plate H with pins *p p* and depressible pins *t t*, &c., substantially as and for the purpose hereinbefore set forth.

118,817.—STEAM-VALVE.—Mont C. Rerdell, Clinton, Ark.

Claim.—The oscillating balance-valve herein described, consisting of the cylinder F having the eccentric steam-chamber H, steam-port *n*, central rib E, and the exhaust-way G, concentric with the wall of the steam-chamber, arranged substantially as specified.

118,818. — TOOL FOR PLUGGING LEAKY BOILER-TUBES.—James Ritchie, Detroit, Mich., assignor to himself and William J. Walsh, same place.

Claim.—The bar A, provided with two or more spring-clamps, B, for holding a flue-plug while being driven, substantially as shown and described.

118,819. — PUTTING UP POWDERS.—Henry Sawyer, Chelsea, Mass.

Claim.—An improvement in the arrangement of the sealing of the perforated package or box, such consisting either in arranging it on the inner surface of the perforated part and across the perforations, or of so arranging it and also applying a layer of it on the outer surface of the part perforated and across the perforations, all being substantially as set forth.

118,820.—WHIP-SOCKET—Ferdenand Selle, Detroit, Mich.

Claim.—Providing the lower end of a whip-socket with a screw, B, as and for the purpose set forth.

118,821. — SEED-DRILL.—Richard B. Sheldon, Canastota, N. Y.

Claim.—The shells F and inside feed-wheel G, said wheel being made in two sections, one of which is attached rigidly to the shaft B, the other sliding upon the same to admit of the adjustment described by the set-screw I *i*, substantially as set forth.

118,822. — BEE-HIVE. — William P. Shortridge, Easton, Mo.

Claim.—1. The openings *d d'*, leading to the chamber E, when formed by the inclined bottom C, the hive-bottom D, and the spout-cover K, substantially as described.

2. The detachable cover K, provided with a lighting-board, L, in combination with the independent inclined bottom C, to form the several channels of ingress or egress, and arranged to be attached to any common square bee-hive, substantially as described.

3. The arrangement of the inclined bottom C with its steps *c c'*, hive-bottom D, chamber E, tubes F, metal plate G, covers J and K, the latter provided with the lighting-board L, openings *d d'*, and pan O, all arranged to operate substantially as described.

118,823. — INSTRUMENT FOR EXTRACTING PACKINGS FROM STUFFING-BOXES.—Hiram N. Smade, Manistee, Mich.

Claim.—The construction and arrangement of the rod A provided with a hook, *a*, at one end and screw *b* at the other, sliding in the sleeve B provided with the set-screw *c*, and the handle C, substantially as described, for the purpose specified.

118,824.—CAR-COUPLING.—Olney L. Smith and James F. Utton, Providence, R. I.

Claim.—The bunter B and pin P, in combination with toggle G and link, when constructed and operating substantially as described, and for the purpose set forth.

118,825.—Suspended.

118,826. — CHURN. — George Spayd, Alma, Mich.

Claim.—1. The radial arms or dashers C, constructed, arranged, and operating substantially as described and shown, for the purposes set forth.

2. The combination of the body A, shaft B, radial arms C, pinion *b*, spur-wheel *c*, spider *a*, shaft *d*, standards *e f*, crank *g*, and arm D, substantially as and for the uses above set forth.

118,827.—BEE-HIVE.—Silas D. Stearns and George Ellsworth, Weston, Ohio.

Claim.—The construction and arrangement of the hive-section B secured to the extended base A, and provided with the inclined bottom E and clamping-bars C, and the movable hive-sections B' provided with the inclined bottom F and slide F', said section being secured to the other by the keys D, the whole being covered by a suitable cap, I, as and for the purpose set forth.

118,828.—DOOR-LOCK.—Columbus I. Stewart, Baltimore, Md.

Claim.—The sliding stump *g* attached to plate *d*, working in guides C formed on bolt B, in combination with slots *h h'* in the tumblers, substantially as and for the purpose hereinbefore set forth.

118,829.—BUNDLING-PRESS.—Carlo R. Taylor, Ionia, Mich.

Claim.—The construction and arrangement of the frame A, standards A', cross-sills B, levers C provided with plates *a*, treadles D, rods E, bars F, and ratchets *d*, as and for the purpose set forth.

118,830.—SPINDLE FOR SAFE-LOCK.—Miron G. Tousley, Mendota, Ill., assignor to Diebold & Kienzle, Cincinnati, Ohio.

Claim.—1. The combination of key B with its forked end, loose plug O with wedge-shaped end, and spindle D, substantially as herein described.

2. The plug C, provided with cap and fuse *f* and *g* or their equivalent, in combination with the spindle D, substantially as herein described, and for the purpose set forth.

118,831.—BOB-SLED.—Aaron H. Walrath, Pamelia Four Corners, N. Y.

Claim.—1. The combination and arrangement of the herein-described devices for holding the rear bob to the rack or box in the manner shown and set forth.

2. The combination of the front bob, the rack, and devices for coupling the same, and the circular rail and rollers, said parts being constructed and arranged for joint operation in the manner shown and set forth.

118,832.—AUTOMATIC FAN.—Lucius A. Walton, Byhalia, Miss., assignor to himself and Dougle McIntire, same place.

Claim.—The within-described machine, consisting of one or more fans, wheel B, trough C, hopper D, spout E, crank *e*, pitman H, and crank-shaft *f*, all arranged to operate substantially as and for the purpose set forth.

118,833.—FENCE.—Peter Chase Yost, Carthage, Ill.

Claim.—The portable fence and gate, made as set forth, with panels, trestles, and interlocking notches, and with parts sliding in sleeves R S on a portable panel, substantially as set forth.

118,834.—BED-BOTTOM.—Peter Agger, Cincinnati, Ohio.

Claim.—A compound spring, constructed with coils *g* and *h*, and seat *e* in same vertical plane with coil *h*, and operating as and for the purpose herein specified.

118,835. — PRINTING-PRESS. — Franklin L. Bailey, Boston, Mass.

Claim.—1. The yielding or supporting-rails or bearers E E, in combination with the adjustable traveling cylinder C, substantially as described, and for the purpose set forth.

2. The yielding and supporting-rails or bearers and the traveling-cylinder C, in combination with the plates L L and cleats X X, substantially as described, and for the purpose set forth.

118,836.—CAR-COUPLING.—John D. Barnard, Frostburg, Md., assignor to himself, R. C. Paul, and John M. Standish, same place.

Claim.—A draw-head cast in one piece, with an opening, *m*, and an incline, *i*, arranged as described.

118,837. — HARVESTER. — Orson Billings, Elyria, Ohio.

Claim.—The concentric rims of cog-gearing A A' and the loose bevel-pinions C C', placed contiguously upon the shaft, and having annular recesses and

slots *c* and *d* in their adjacent ends, in combination with pin *e*, arranged to slide between the recessed pinions and clutch them to the shaft, substantially as and for the purpose hereinbefore specified.

118,838. — PISTON-PACKING. — George F. Blake, Boston, Mass.

Claim.—As an improvement in pistons for pumps and engines, the combination and arrangement of the packing G, ring E, spring C, set-screw B, rod A, and nut D, all constructed and applied in the manner and for the purpose specified.

118,839.—BOOT AND SHOE-HEEL.—Mellen Bray, Newton, Mass.

Claim.—1. The leather nut *g*, arranged and confined in a recess or cup formed in or secured to the base-plate B to receive the holding-screw A, substantially as and for the purpose described.

2. The strengthening-rib *e*, formed on the under side of the plate A and extending across the same, substantially as described, for the purpose specified.

3. A boot or shoe-heel provided with a base-plate, A, having curved flange or guard *d* formed on the outer edge of its side and rear portions for the purpose of protecting the upper portion of the body of the heel, substantially as described.

118,840.—ROTARY STEAM-ENGINE.—George W. Briggs and Myron H. Denamore, Shickshinny, Pa.

Claim.—In combination, the piston-wheel A, constructed as above described, driving-shaft C, cylinder F, induction-pipe H, floating-gauge G, and wedge-shaped partition I, substantially as and for the purpose hereinbefore described.

118,841.—DUMPING-WAGON.—John Broderick and Michael Broderick, Louisville, Ky.

Claim.—A dumping-wagon, the trucks of which are coupled together by a jointed and elevated frame for supporting and operating the box, substantially as set forth.

118,842.—VARNISH FOR LEATHER.—Charles Brumby, Rochester, N. Y., assignor to himself and John Needham, Jr., same place.

Claim.—A varnish composed of gum-shellac, gum-myrrh, gum-camphor, lamp-black or some equivalent coloring matter, Prussian-blue, and alcohol, in the proportions and prepared in the manner described.

118,843.—PISTON-PACKING. — John Clark, Harrisburg, Pa.

Claim.—The combination of the wedge-ring A, recesses *e*, springs *f*, follower *d*, disk *a*, ring B, ribs *g*, and packing-rings C, all constructed and arranged as shown and described.

118,844.—FLOWER-STAND.—Elisha T. Cobb, Conway, Mass.

Claim.—The combination of the hub *e* and its series of inclined racks D with the troughs E, the rotary stand or frame C, and the standard or spindle A and series of legs B, all being constructed and arranged as and for the purpose specified.

118,845.—BROOM-TYING MACHINE.—James W. Congdon, Marietta, Ohio, assignor to F. A. Wheeler, same place.

Claim.—1. In combination with the frame A, the hollow shaft B and the pool C arranged to slide upon the revolving shaft C^1, substantially as and for the purpose set forth.

2. The combination, with the frame A, of the spool or spools arranged to slide upon their respective revolving shafts and the revolving threaded guide-roller, substantially as and for the purpose set forth.

3. In combination with the frame of a broom-tying or fastening machine, and with its hollow shaft, the arm E E′, substantially as and for the purpose set forth.

118,846.—TIRE FOR WHEELS OF VEHICLES.—William H. Davis, Lexington, Ind.

Claim.—The tire B, provided with curved flanges C C of substantially the form shown, and applied to the felly A in the manner shown, and for the purposes specified.

118,847.—DEVICE FOR BENDING TUBES OF SHEET METAL.—Horatio W. Doe, Springfield, Ohio, assignor to himself and William F. Matthews, same place.

Claim.—The process herein described of bending tubes to form nozzles, coffee-pot spouts, and other similarly-bent articles, viz., between bending-levers without the use of any interior filling or support of any kind, substantially as described.

118,848.—MANUFACTURE OF PLOW LAND-SIDES.—James Duff, Peoria, Ill., Henry Roberts and Gilbert D. Nourse, St. Louis, Mo., assignors to L. G. Pratt & Co., Peoria, Ill.

Claim.—A plate of wrought-steel or wrought-iron of the shape, in cross-section, substantially of that herein described and shown—that is to say, a plate or bar raised or thickened along one edge throughout its length, which raised portion graduates into the thinner and flat portion of the plate by an easy concave curvature commencing at the angle of the plate, said plate to be used in the manufacture of landsides of plows, as set forth.

118,849.—CARTRIDGE-LOADER.—George H. Ferriss, Utica, N. Y.

Claim.—1. The rifled-barrel piece A, in combination with a rifled cartridge or shell, substantially as herein described, and for the purposes set forth.

2. In combination with the rifled-barrel piece A, a cartridge or shell made plain—that is, without rifling—substantially as described, and for the purposes set forth.

118,850.—ROOFING COMPOUND. — Charles L. Fowler, Baltimore, Md.

Claim.—A roofing compound, composed of the foregoing ingredients in about the proportions named and mentioned, and to be called and known by the name and style of "Fowler's Egyptian Roofing."

118,851, antedated August 25, 1871.—SHANK FOR BOOTS AND SHOES.—George Goodyear, New York, N. Y.

Claim.—As an article of manufacture, the herein-described shank-piece, consisting of two or more leaves from one single solid piece of wood or similar material, substantially as set forth.

118,852. — FLY-TRAP. — Louis Grim, Fort Branch, Ind., assignor of one-half his right to Alexander I. Moore, same place.

Claim.—The cone *a* having the notches *b*, guides *c*, and orifice *d*, in combination with the sliding bottom *e*, inverted cone *f* arranged so as to form a channel, *g*, and glass cover *h* resting solely on the upper cone, all arranged as specified.

118,853.—COVERING OR HIDE FOR TOY-ANIMALS.— Henry C. Grube, New York, N. Y.

Claim.—The mode of manufacturing, applying, and using the artificial hide as cover for animal toys, as hereinbefore described, and for the purposes set forth and specified.

118,854, antedated September 9, 1871.—SAD AND FLUTING-IRON.—James K. Gulihur, Montana, Iowa.

Claim.—Providing fluting-irons, having flutes made transversely to the ironing surface, with a compound hinge, G H J K, and stop S, substantially as and for the purpose described.

118,855.—TOY-HOOP.—Albert M. Hill, New Haven, Conn.

Claim.—The arrangement of two or more radial cords or rods in a hoop, having metal disks *d* arranged thereon to fall by their own gravity to and from the center, substantially as and for the purpose described.

118,856. — SPRING-BED BOTTOM. — Porter Hill, Millport, N. Y.

Claim.—The combination of the metal springs D D, the slats or bars B B, and stirrups E E, they being so arranged with reference to each other as to form a stop for the bed-bottom, substantially as and for the purpose set forth.

118,857.—STEAM-ENGINE.—Herbert Thomas Jennings and Thomas Jennings, No. 20 Sydney Street, City Road, England.

Claim.—The combination, in a steam-engine, of the following parts, viz., the steam-cylinder, the two main exhaust-passages (one at each end of said cylinder) and the valves therefor, the two supplemental independent exhaust-passages (one at each end of said cylinder) and the independent supplementary exhaust-valves therefor, all constructed to operate substantially as before set forth.

118,858. — METHOD FOR MANUFACTURING FERRULES.—Silas E. Jeralds, Horace A. Nettleton, and Edwin R. Lawton, West Cheshire, Conn.

Claim.—The method herein described for constructing ferrules.

118,859, antedated September 2, 1871.—PUMP.—Julius Jonson, Baltimore, Md.

Claim.—1. The pump-barrel and strainer *g*, cast in one piece, and provided with the flanges and the grooved bushing *h*, as herein set forth and shown, for the purpose specified.

2. The hollow plunger *j*, with holes *l l* and lugs *k*, together with the bail-rods *m m* and yoke *s*, substantially as and for the purpose herein specified and described.

3. A valve-box, *n*, with grooves *p*, flange *q*, and bosses *r r*, as and for the purpose specified and described.

4. The combination of the pump-barrel *g*, plunger *j*, bail-rods *m m*, and yoke *s*, and the valve box *n* and chamber *u*, the whole connected and operating together substantially as herein specified and described.

118,860.—OIL-CAN. — Lawrence W. Kent, Cleveland, Ohio.

Claim.—The bow-spring E, connected to the side thumb-rod H *f*, that the latter will operate the valve vertically by the lateral action of both spring and thumb-rod, as described.

118,861.—BOY'S STILTS.—Lewis A. Kimberly, New Haven, Conn.

Claim.—1. The metallic strip C, in combination with the adjustable clasps E, substantially as described, for the purpose specified.

2. The clasps E, constructed with overlapping ends to receive the cam-buttons L, whereby said clasps are adjusted and held at any desired point upon the stick, substantially as described, for the purpose specified.

3. In combination with the step A and stick B, the fastening-strip C and adjustable clasps E, substantially as described, for the purpose specified.

118,862.—REVOLVING STEELYARD-BEAM.—Henry Kirkwood, Americus, Miss., assignor to Alexander Kirkwood, same place.

Claim.—The combination of the steelyard-beam A with the detachable cylinder B and the nut C, all arranged to operate with suitable weight, substantially as herein specified.

118,863.—VERTICAL-SCREW WATER-WHEEL.—David K. Kraatz, Ephrata, assignor of one-half his right to A. S. Bare, Bareville, Pa.

Claim.—The combination of the scroll-head C and the vertical casing-tube E with each other and with the spirally-winged water-wheel S, substantially as and for the purpose herein set forth.

118,864.—MACHINE FOR BENDING WOOD.—Edward Lacey, Chicago, Ill., assignor to himself, John Phillips, and Henry Liebenstein, same place.

Claim.—1. Pattern F, in combination with form E and movable platform D, constructed and arranged substantially in the manner and for the purposes herein set forth.

2. Pattern F, in combination with form E, gear-wheels S T, and hooks V, for the purposes herein set forth and described.

3. Bed A, in combination with rails B, grooves or channels C, platform D, form E, pattern F, plate G, posts H, gear-wheels I, L, S, Q, and T, shafts J and M, cranks K U, clutches N N, metallic strap P, endless screw R, hooks V, and upright shaft W, when constructed and operated substantially in the manner and for the purposes herein specified.

118,865. — COMPOSITION FOR STAINING STONE.—Peter B. Laird, St. Johnsbury, Vt.

Claim.—The composition described, for the purpose set forth.

118,866.—MUFF-AND-COLLAR BOX.—Henry Manneck, New York, N. Y.

Claim.—1. In a fur muff-and-collar box, a cylinder whose ends are secured together, and the same attached to the box by means of the metallic fastening having two separated ends, substantially in the manner and for the purpose set forth.

2. A box having a drawer and muff-cylinder, in combination with a shelf or brace, D, one of whose extended sides is turned down and the others turned up to the box-edge, substantially in the manner and for the purpose set forth.

118,867.—LIQUID-METER.—Henry W. Mather, New York, N. Y.

Claim.—1. In combination with the piston C and chamber A, the valve E, constructed as described, and actuated by hydraulic pressure through the auxiliary pipes *m m*, substantially as and for the purpose set forth.

2. In combination with the piston C, the oscillating frame *n n* connecting the auxiliary valves *l l′*, substantially as and for the purpose set forth.

3. The valve C, balanced by the weight *s* on the arm *t*, substantially as and for the purpose set forth.

118,868.—HUB-CLAMP.—James McClelland, Geneva, N. Y.

Claim.—As a new article of manufacture, the clamp A for embracing hubs while driving in the spokes, consisting of a flexible ring, made in a single piece, cleft at one point, and provided with heads *b b* united by a screw-bolt, B, said ring having also extensions or projections *c c* inside the heads and concentric with the ring, and nearly closing the circle, the whole arranged as described, and operating in the manner and for the purpose specified.

118,869.—WAGON-AXLE.—Nathaniel Mead, Oil City, Pa.

Claim.—1. The arm B made in two pieces, or disconnected in the center, and rigidly attached to or forming part of the wheel-hub A, and revolving in boxes *c c'* arranged in the hollow axle C, substantially as hereinbefore set forth.

2. The friction-rollers *d d'* arranged within the hollow boxes D of the hollow axle C, in combination with the revolving axles B and wheel-hub A, substantially as and for the purpose set forth.

3. The collars or flanges *a a'* formed on the inner end of the revolving axle B, as and for the purpose set forth, in combination with the boxes *c c'*, clip *f*, and hollow axle C, substantially as set forth.

4. The series of friction-rollers, arranged within the hollow boxes D and encircling the periphery of the revolving axle B, as and for the purpose set forth.

118,870.—FAN AND FLY-BRUSH COMBINED. Henry Mee, Crown Point, Ind.

Claim.—1. In combination with the crank B of the driving mechanism, the reciprocating rod G, having cross-bars attached, and supported on the frame H, as set forth.

2. The extension frame H, consisting of the supports *k* and the sliding rods *i*, held in place by set-screws, as herein described.

118,871.—BRUSH.—James Minetree, Petersburg, Va.

Claim.—1. The combination of the handle A having the groove *a* and tongue *a'*, with the bristles B and elastic strap C, substantially as and for the purposes set forth.

2. The process of manufacturing brushes, substantially as herein described.

118,872.—MEDICATED PLASTER.—George E. Mitchell, Lowell, Mass.

Claim.—The plaster herein described, when made and coated with the compound of the ingredients, in the proportions, and for the purposes set forth.

118,873.—CUT-OFF VALVE-GEAR FOR STEAM-ENGINES.—James Montfort, Newburg, N. Y.

Claim.—The arrangement of the pinion P, firmly attached to the eccentric K and working in the same plane with the eccentric, the whole situated inside a cam, M, which works the valves, and which is regulated by the action of the governor on the pinion P by means of the rod H and rack *a a*, making the cut-off variable, as specified.

118,874.—STOVE-GRATE.—George R. Moore, Philadelphia, Pa.

Claim.—1. The sliding bottom *b*, in combination with an outlying rim or grate to complete the fire-bed, substantially as and for the purpose herein set forth.

2. The shank *a*, for the double purpose of vibrating the whole fire-bed horizontally and of operating the slide *b* to let down the refuse products of combustion when required, substantially as and for the purpose herein set forth.

3. The construction of the slide *b* with journals or pivots at one side, substantially as and for the purpose herein set forth.

118,875.—REFINING SUGARS.—James A. Morrell, New York, N. Y., assignor to himself, James H. Wheatley, L. P. Williams, and George W. Baxter, same place.

Claim.—In the process of manufacturing sugar, the use of currents of rarefied air impregnated or surcharged with electricity, passed through the cane-juice, liquor, sirup, molasses, or melada while undergoing evaporation.

118,876.—SODA-FOUNTAIN.—Elisha B. Myers, Handsborough, Miss., assignor to himself and Carson Mudge, New Orleans, La.

Claim.—The within-described portable soda-fountain, when provided with a pump, D, coolers C C' having ice-receptacles *b b'* and cooling-chambers *c c'*, when all these are constructed and operated substantially as described, and for the purposes set forth.

118,877.—HALTER FOR HORSES.—Isaiah Preston Osborn and William A. Bayhan, Wilmington, Ohio; said Bayhan assigns his right to said Osborn.

Claim.—1. A "five-ring halter," constructed with the fastening-plates I, with the right cheek and crown-strap in one piece, the left cheek and buckle-strap in one piece, and the nose and chin-straps in one piece, substantially as herein shown and described, for the purpose specified.

2. The fastening-plates I, for the parts of a halter provided with an end loop, J, a central rivet-hole, and the slotted front rib or flange K, as herein shown and described, for the purpose specified.

118,878.—IRONING-TABLE.—Patrick O'Thayne, New York, N. Y.

Claim.—1. The arrangement of the ironing-board F, cord H, and weighted lever I, in combination with the table C, substantially as shown and described.

2. The brace G, in combination with the ironing-board F, cord H, weighted lever I, upright E, and board D, substantially as herein shown and described.

118,879.—DIE FOR FORMING THE HEADS OF SCREW EYEBOLTS.—Ebenezer H. Plant, Plantsville, Conn.

Claim.—As an improvement in dies for forming the heads of eyebolts, the cavities C, D, and F, of the forms substantially as shown in the die-blocks A, B, and E, represented in the drawing.

118,880.—DRAIN-PIPE MACHINE.—George Richardson, Milwaukee, Wis.

Claim.—1. The arrangement of the mold-case D, core E, trunnions G', and adjustable standards G upon a suitable base, in the manner and for the purpose set forth.

2. The combination of mold-case D, core E, and end-inclosing and securing devices, substantially as and for the purpose set forth.

3. The combination, with the mold-piece D, of the shanked core-piece F F' and hollow core E, operating substantially in the manner set forth.

4. The arrangement, upon the sectional mold-case D, of the dovetailed tapering lugs *d d*, clamps D^1, and set-screws D^2, in the manner and for the purpose set forth.

5. The mold-case, constructed with ears *e'*, in combination with the adjustable standards H' and hooks *h'*, substantially as set forth.

6. The combination, with core E, of the cross-head L^2, screw-threaded bolt or bar L, and nut L^1, constructed and arranged to operate substantially as and for the purpose set forth.

7. The combination, with core E, of the standards H' and hooks *h'* for securing the mold-case, the windlass K with rope or chain, frame I, bar L, and cross-head L^2, all arranged to operate substantially as set forth.

8. The ring M with arms *m m'*, in combination with the frame I and core E, substantially as and for the purpose set forth.

118,881.—SORGHUM-STRIPPER.—Frederick Roux, Stryker, Ohio.

Claim.—The plate *e*, having openings as described, in combination with a frame-work, and with springs *f g* extending across the openings at right angles to each other, whereby each pair of springs, in connection with each opening in the plate, forms a plurality of variable tripping orifices, substantially as herein described.

118,882.—HARDENING STEEL.—Elliot Savage, West Meriden, Conn.

Claim.—1. The process of hardening steel or similar metals by first heating to a low red heat, then coating in a suitable bath to prevent oxidation, and subsequently raising the heat sufficiently for hardening in the ordinary manner, essentially as specified.

2. A bath, composed of cyanide of potassium, chloride of sodium, and carbonate of soda, for use in the manner and for the purpose substantially as herein specified.

118,883.—SMOKE-STACK FOR FURNACES.—Benjamin F. Smith, New Orleans, La.

Claim.—1. One or more chambers, D, arranged in such relative position to the smoke-stack that it shall receive all the gases, &c., from the furnace, so that they can be separated therein, by their specific gravity, to be conveyed in different directions, substantially as described.

2. The fans E E', arranged in a smoke-stack in such manner that, through their working, an upward-and-downward draught shall be produced for the purpose stated, substantially as described.

3. The section A of a smoke-stack, provided with flues *a a*, chambers D C^1, flue C^2, and valve F, either with or without the fan E, when the same are combined so as to secure the return to the furnace of the lighter gases, &c., substantially as described.

4. The vertical section B having tubes *b b*, chamber D G H', valves *h h'*, and passage *g'*, either with or without the fan E', when the same are so combined and arranged as to operate substantially as described.

5. The smoke-stack, consisting of the sections A B having tubes *a a b b*, passage C, and chambers D G H', when the same are provided with valves and fans so as to operate substantially as described.

118,884.—FURNACE-GRATE.—Benjamin F. Smith, New Orleans, La.

Claim.—1. The grate-bars B B, having lugs or equivalent bearings C C, and detachable shaker-bar D, when provided with slots *d d' d'* of different dimensions, substantially as described, as and for the purpose specified.

2. The bars B B when the same are arranged in parallel rows and their upper faces so serrated that the ribs of one shall be opposite the recesses of the other, substantially as described.

118,885.—CONDENSING ESCAPE-PIPE.—Benjamin F. Smith, New Orleans, La.

Claim.—1. The arrangement of the exhaust-pipe D and sleeve D' with the pipe F, the vacuum-valve E at the entrance of the pipe *a* or worm A, substantially as shown, and for the purpose set forth.

2. The arrangement of the exhaust-pipe D, valve E, pipe *a* or worm A, tank C, and pipes G, *b*, *c*, and F, when combined and arranged to operate substantially as described.

118,886, antedated August 25, 1871.—AIR-PISTOL.—George H. Snow, New Haven, Conn., and Edwin H. Hawley, Kalamazoo, Mich., assignors to Edwin H. Hawley.

Claim.—1. The sight *f*, formed upon the band L by cutting and turning up the cut portion in the manner described.

2. In combination with the hammer D and trigger E, the pivot *v*, constructed as described, and arranged so as to be operated by the trigger to hold or release the hammer, substantially as set forth.

3. In combination with the cylinder B, with its air-opening *t* and valve *h*, the chambers *b* and *u* around the said opening *t*, as and for the purpose described.

118,887.—MILK-CAN.—Samuel Stroock, New York, N. Y.

Claim.—The herein-described can or vessel, consisting of an inner and an outer case with a layer of felt interposed, as a new article of manufacture.

118,888.—FENCE.—Reuben Martin Weider and Jacob Meals, Carthage, Ill.

Claim.—The combination and arrangement, in one portable fence, of the several parts of panels A B, formed of boards forming trusses, lapped beside each other at the joint, so that one may, when desired, be turned up to serve as a gate or passage, the pivot-bolt K holding all the parts at the joint together, the frames M N at the joint to support the same, and arranged so as to remain in place and support the fence if one panel is raised, as set forth.

118,889.—RICE CLEANING-AND-POLISHING MACHINE.—John N. White, New Orleans, La.

Claim.—The cylinder C, when provided with the independent-revolving rubber or leather rollers E, fans or vanes F, in combination with the open cylinder B composed of slats *d*, and chaff-opening or flue K in a removable cover, when these several parts are constructed, arranged, and operated substantially as and for the purposes set forth.

118,890.—PLOW.—Alexander H. Whittick, Clarksville, Ind.

Claim.—1. The subsoil attachment D, a section of which at *x x* presents the form substantially as shown in Fig. 2.

2. The combination of the subsoil attachment D, a section of which at *x x* presents the form substantially as shown in Fig. 2, with the beam A of an ordinary plow, and the adjustable brace E, arranged in relation to one another as set forth.

118,891.—WRENCH.—Walter S. Wilcox, Hartford, and James A. Wilcox, Rocky Hill, Conn.

Claim.—In a wrench, substantially as herein described, the arrangement of the slide or follower I within the barrel L, the said barrel serving to inclose the spring and form a bearing for the slide, as herein set forth.

118,892.—MACHINE FOR STUFFING MATTRESSES, &c.—Edwin L. Wright, Sterling, Ill., assignor of one-fourth his right to R. A. Crawford, same place.

Claim.—1. The table A provided with hinged sides having flanges *a a*, hooks *b b*, and staples *d d*, or their equivalents, substantially as and for the purposes herein set forth.

2. The tray B, open at one end, and provided with staples *f* and slots *e e* and *h h*, and used in combination with the cover D and rod I, substantially as and for the purposes herein set forth.

3. The sliding end C provided with lever *k*, staple *f'*, and catch *m*, all substantially as and for the purposes herein set forth.

4. The distributer E, constructed, as described, of square sections of equal size, with teeth *p p*, substantially as and for the purposes herein set forth.

5. The combination of the table A, tray B, end C, covers D G, rod I, distributer E, and hopper H, all constructed and arranged substantially as shown and described, to form a machine for stuffing mattresses, cushions, and other similar articles, as set forth.

118,893.—HORSE-POWER.—James M. Albertson, New London, Conn.

Claim.—The pedestal C, forming a vertical shaft or journal for the lever-wheel E and supporting

the beam I, in combination with the pinion F, shaft L, bevel-wheels M and N, and shaft P attached to the beam I, all arranged and operating substantially as herein set forth.

118,894. — BEE-HIVE. — Roberson Arnold, Suffolk, Va., assignor to himself, William B. Wellons, and Exum B. Britt, same place.

Claim.—The combination, with the brood-chamber A, of the false-bottom B with bevels *x x* on its end, passage *b*, and slide D, all constructed and arranged substantially as and for the purposes herein set forth.

118,895.—POTATO-DIGGER.—John B. Baker, Syracuse, N. Y.

Claim.—The frame-work made as described, and the main wheels E, with short axles, working between the parts A *a*, in connection with the lantern-wheel riddles C *c*, driven separately, as shown, and the shovel B, as and for the purpose specified.

118,896. — POT-COVER. — William Henry Barker, Windsor, Canada.

Claim.—A hinged safety-valve or supplemental cover, C, arranged over the perforations in the cover of a culinary vessel, as and for the purpose specified.

118,897. — BAG-HOLDER. — Oscar Barrett and Azzel D. Brooks, Dartford, Wis.

Claim.—The bag-holder herein described, composed of the forked posts B B′ C, and semicircular hoop D, constructed and applied substantially as set forth.

118,898.—CONFECTIONERY-JAR. — Jesse S. Batchelder, Fort Wayne, Ind.

Claim.—The improved cylindrical jar for confectionery, provisions, &c., having the glass front B, sliding partition C with flanges *c d*, and flanged lid D, substantially as and for the purpose described.

118,899.—CONFECTIONER'S AND GROCER'S CAN.—Jesse S. Batchelder, Fort Wayne, Ind.

Claim.—1. The box or can A having the partition D, and glass front C, and narrow space B′, as and for the purpose described.

2. The sliding partition D, with hinged lid *d*, applied to the box A having a hinged lid B, substantially as and for the purpose specified.

118,900.—BRIDLE-BIT. — Smith C. Boughton, Waterford, N. Y.

Claim.—1. The combination of the two jointed bits A B with the loose or sliding cheek-pieces C D, substantially as herein shown and described.

2. The combination of the pivoted looped bars E *e′* F *f* with the two bits A B and sliding cheek-pieces C D, substantially as herein shown and described.

118,901.—PROCESS FOR MAKING BEER, &c. Horace L. Bowker, Boston, Mass.

Claim.—1. The process, as herein described, of mixing any sirup, small-beer, water, &c., with an alkali, and drawing or charging therein carbonic-acid gas mixed with water or otherwise, for the purpose as herein fully set forth and described.

2. The process of mixing beer materials with carbonic-acid gas mixed with water, for the purpose of increasing its healthful properties, in a manner set forth.

118,902.—PANTOGRAPH.—Lucien F. Bruce and Newlan J. Wolcott, Springfield, Mass.

Claim.—1. The combination of the pivot-post *a′* and a series of bars perforated at equal distances each way from the pivot-post *a′* and points *d*, *e*, and *k*, for making temporary connections, all constructed and arranged substantially as and for the purpose described.

2. An improved delineator, wherein the fixed central point *a′*, the tracing-point *d*, and the delineating-point *k* are all in a straight line with reference to each other, and are also located at the angles where the bars are connected together, substantially as described.

118,903.—APPARATUS FOR VAPORIZING HYDROCARBONS. — Joseph Kay Caldwell, Philadelphia, Pa.

Claim.—The pipes A B, each provided with a nozzle, and connected together so as to be adjusted at any angle, and held in position by a set-screw or its equivalent, substantially as and for the purpose set forth.

118,904. — WOOD-INCASED CAN.—Orrin S. Camp, Grand Rapids, Mich.

Claim.—The herein-described wood-incased metal can, consisting of the can A, provided with the external horizontal flange B, and of the case B′, provided with the inwardly-flanged hoop E, covering the upper edge of the case B′ and soldered to the flange B, as specified.

118,905. — BLAST-FURNACE. — Israel B. B. Case, Toledo, Ohio.

Claim.—1. The combination, with the thimble of a blast-furnace, of a water-chamber to enable the thimble better to resist the action of the heat, substantially as hereinbefore set forth.

2. The combination, with the water-chamber of the thimble, of supply and discharge-pipes to promote a circulation of water through the chamber, substantially as hereinbefore set forth.

118,906. — BED-SPRING. — Hull Chandler, Bennington, Vt.

Claim.—The bed-spring A provided with the hook *a*, block *c*, and pin *d* as described.

118,907.—CUTTER-HEAD FOR MOLDING-MACHINES. — Milton W. Clark, Worcester, Mass., assignor to R. Ball & Co., same place.

Claim.—The combination, with the spindle A, provided with separate shoulders for the head B and collar F, of the cutter-head B and loose collar F, said parts being constructed and arranged in relation to each other, substantially as shown and described.

118,908. — BED AND SEAT-BOTTOM. — William F. Clark, Mt. Pleasant, Iowa.

Claim.—An elastic or spring bottom for seats, beds, &c., consisting of bars or plates D B embracing interposed spiral springs, and confined and controlled by means of stay-pins or bolts C C, in combination with transverse slats resting and confined on the upper bar or plate D, all substantially as and for the purpose herein set forth.

118,909.—SPRING-LOCK FOR VENTILATING-SASHES.—Max. Claver, New York, N. Y., assignor to A. Freutal, same place.

Claim.—The improved ventilator spring hook herein shown and set forth, composed of the combination of the frame A, hook B, spring S, and pins *c* and E, constructed substantially as specified.

118,910.—YARN-BEAM FOR LOOMS.—Albert W. Cole, West Killingly, Conn.

Claim.—A yarn-beam constructed as described, with the shaft C, beam A, slots D, adjustable heads B, arms I, hub H, and set-screws S, substantially as and for the purposes hereinbefore set forth.

118,911. — WINE-PRESS. — James H. Crandell, Upper Marlborough, Md.

Claim.—1. The box I having the hopper I′, rollers I″, gear-wheels J, and crank J′ or equivalent devices for grinding the fruit, in combination with the fruit-press having the follower C, standard C′, arm D, dogs *d*, racks C″, and hinged bar E, constructed as described, said box and press mechanism being used interchangeably, as and for the purpose specified.

2. The combination and arrangement of the strainer B′, chamber B″, and press-follower C, as and for the purpose set forth.

3. In combination with the dogs *d*, the detachable spreader, constructed as described and shown, as and for the purpose set forth.

118,912. — MACHINE FOR LEVELING CUTTING-BLOCKS. — Andrew Davis, Oxford, Mass.

Claim.—1. The combination, with the spindle A, of a cutter-supporting arm, provided with bearings F I, carriage J, cutter or cutters K, and feed-screw M, substantially as and for the purposes herein set forth.

2. A machine for leveling cutting-blocks used in cutting leather and for other purposes, consisting of the center spindle A, arm E E, bearings F I G, collars *c d e f*, brace H, carriage J, cutters K, feed-screw M, and handle N, said parts being constructed and combined for operation substantially as shown and described.

118,913.—SEWING-MACHINE.—Frederick E. Decker, Newark, N. J., assignor to Edward Simon & Brothers, New York, N. Y.

Claim.—1. The feeding and holding-rollers A B and rotary cutters E K combined together in an attachment adapted for application to a sewing-machine for operation in connection therewith, substantially as herein shown and described.

2. The roller B arranged for rising or falling relatively to the roller A and the cutter K, substantially as specified.

118,914.—MACHINE FOR FORMING HATS.—Dexter Dennis, Barre, Mass.

Claim.—1. The combination of the levers F, G, H, and K, draw-bar K′, latch I, and hanger J, for operating the block-carriage L, substantially as explained.

2. The combination of the cam-lever J^2, pivoted hanger-supports J^1, and hanger J, as and for the purposes specified.

3. The block-carriage L provided with the block-table L′, reservoir N, and pipe and valve *n n*^{1}, substantially as specified.

4. The hollow hat-block O having interior strips or corrugations o^1, with or without a supporting-spring, *o*, of spiral or other suitable form, substantially as shown and described.

5. An elastic hat-block, O^1, solid, or having its outer shell of sufficient thickness to expand and contract automatically by its own elasticity when forced into or withdrawn from a die of corresponding size and shape, and adjustable as to height above the brim or cushion o^3, substantially as explained.

6. A hat-block, O^2, composed of an elastic exterior covering, o^4, conical frustums o^5 o^6, and spring o^7, substantially as specified.

7. A tank or reservoir N having an interior flexible head n^3 and perforated top n^2, constructed and arranged substantially as described, for the purpose specified.

118,915. — ROTARY STEAM-ENGINE.—Francis Oliver Deschamps, Philadelphia, Pa.

Claim.—1. The combination of the shaft F carrying two pistons, *c c′*, the curved chamber B through which said pistons pass, and slides H H′, and steam-ports arranged as described, so that the said pistons are acted on alternately by the steam introduced between the slide and the adjacent piston, a continuous rotary movement being thus imparted to the shaft.

2. The frame, consisting of the section A with its base *a*, and the detachable section A′ adapted to a recess in the section A, as set forth.

3. The combination of the disk D, its ribs *e e*, and the packing *f f* confined between the inner edges of the sections A A′ of the frames and the said ribs, as described.

4. The said sliding heads, each consisting of two plates arranged to slide one upon the other, and having interposed between them a spring, *w*, for the purpose specified.

5. The piston C or C′, adapted to the steam-chamber B, and confined between arms *i i*, carried by the shaft F.

6. The said piston, when composed of a number of loose disks or rings, *h h*^{1} *h*^{2}, &c., strung upon a rod, *i*, substantially as herein described.

7. The cam or cams P on the shaft F, in combination with the pivoted arms *s* and *s′*, connecting-rods *p p*, and springs *q q*, the whole being arranged for operating the sliding heads H and H′, substantially in the manner described.

8. The cam or cams Q on the shaft F, in combination with the pivoted arms *s* and *s′*, connecting-rods *r r*, and springs *t t*, the whole being arranged for operating the valves L L, substantially in the manner described.

118,916.—CARTRIDGE-MAGAZINE.—William H. Elliot, New York, N. Y.

Claim.—1. The form and arrangement of the circular chambers, whereby the cartridges are held radially in relation to some point in the axis of the magazine, substantially as specified.

2. The arrangement and proportion of the circular chamber in such relation to the form of the cartridges that, as they lie side by side, they shall touch each other at both ends, in the manner shown and described.

3. The jointed arm *e f*, when constructed substantially as described.

4. The arrangement of the axis of the joint *e′*, substantially as and for the purpose set forth.

5. The combination and arrangement of the jointed arm with the double circular partition, substantially as set forth.

6. The double arm *e f*, with its stop *r* and follower *g*, in combination with two or more circular chambers, when operating substantially as and for the purpose specified.

7. The curved follower, in combination with the jointed arm *e f* with its stop *r*, when constructed and operating substantially as specified.

8. The jointed stop-lip, when constructed and operating substantially as and for the purpose described.

9. The combination of the convex plate *a′* and concave plate *a″* with the outer wall *a*, double partition *c* and *c′*, substantially as and for the purpose specified.

118,917. — BOTTLE-WASHING MACHINE.—Conrad Euler, Evansville, Ind.

Claim.—The spindles B, plugs *b b*, sliding plates D D, rods *d d*, and springs *e e*, arranged in the box or vessel A, as shown and described.

118,918.—PORTABLE CRADLE.—William R. Evans, Philadelphia, Pa.

Claim.—1. A portable supporting frame for cradles, consisting of end frames A and A′, connected together by bars B, B^1, and B^2, the whole being constructed and fitted together substantially in the manner described, so that the bars may be disconnected and folded with and against the frame, as specified.

2. The combination of a net-work or other cradle, C, capable of being folded or doubled, with a supporting frame, constructed and fitted together substantially in the manner described.

118,919.—WAGON-SEAT.—James B. Foote, Hamden, N. Y.

Claim.—The seat of a wagon-box having ends H

H, and sliding on two vertical standards, B B, combined with springs D D placed on top of said standards, and from which said seat is suspended in open slots to allow the seat to be raised, lowered, or removed, in the manner described.

118,920.—Bending-Machine.—John Forbes, Halifax, Canada.

Claim.—1. The combination of mandrel J, rest L′, and holding-levers H′ H″ with bending-levers E, operating as and for the purpose specified.

2. The combination of cams a″, rocking frames D, and stationary cams F with the levers E, as and for the purpose specified.

3. The combination of shaft c′, divided nut m m′, carriage L′, stripper N, and shaft K, as and for the purpose specified.

118,921.—Spring-Lock for Ventilating-Sashes. — August Freutal, New York, N. Y.

Claim.—1. The ventilator-sash H, provided with the lock A, in combination with the frame G and hook B, so as to operate substantially in the manner and for the purpose set forth.

2. The lock A, composed of the plate a, bridge c, latch D, and spring S, constructed and arranged substantially as shown and set forth.

3. The lock A′, constructed as shown and set forth, when used for holding closed a ventilator-window out of hand's reach, as herein specified.

118,922.—Window-Screen.—Oscar F. Frost, Monmouth, Me.

Claim.—The screen sides B B, having slots G G and grooved on the edges, mosquito-bar C, tongue E, screws H, and wires I I, all constructed, arranged, and combined, as and for the purpose specified.

118,923. — Steering Apparatus. — John Gardner, New York, N. Y.

Claim.—The counter-shaft I and bevel-gear wheels H G, arranged in connection with the steering-wheel J, shaft F, and bevel-gear wheels E D C, substantially as herein shown and described, and for the purpose set forth.

118,924. — Blacking-Box. — Edward M. Gates, Watertown, N. Y.

Claim.—As an article of manufacture, a blacking-box, in which the box and handle are made from one piece of wood, combined with a swinging cover, also of wood, as and for the purposes herein described.

118,925. — Tree-Box. — John Gibson, Jr., Albany, N. Y.

Claim.—1. An expanding tree-box, consisting of the slats S or equivalents, as described, secured to one or more bands, B B′ B″, and so constructed and arranged as to afford means for the contracting or expanding of its capacity, the said means consisting in the employment of the element of coiling or lapping one part or end of the said bands within or over the other, substantially as and for the purpose herein set forth.

2. In combination with a tree-box, the elastic impinging pieces V, (projecting downward or upward, or in both directions,) substantially as described, for the purpose set forth.

3. In combination with a tree-box, the hitching device, consisting of the rod H with its chain h or its equivalent H′, substantially as described, for the purpose set forth.

4. The twisted feet f, being a continuation of the slats S, or attached thereto, or fastened to the band B, as and for the purpose specified.

118,926. — Straw-Cutter. — Benjamin F. Grimes, Memphis, Tenn.

Claim.—1. The half-box or removable bearing H, lined with Babbitt-metal, and provided with a set-screw, h, for adjusting it, said removable bearing being arranged in a receptacle in the trough-supporting frame and held in place by the fly-wheel A, all as herein shown and described.

2. The frame-work supporting the trough, when so constructed as to include in one piece the sockets for the legs, the receptacle for the half-box H, the journals and casing for the shaft K, and a receptacle for the bed-knife D, all as herein shown and described.

118,927.—Fare-Box for Cars.—Benjamin F. Grimes, Memphis, Tenn.

Claim.—1. A cash-box, provided with a pivoted tilting lid, which stands open to receive the fares when the cash-box is in place in the fare-box, and is forced down and locked by contact with the opening in front of the fare-box when the cash-box is withdrawn, substantially as shown and described.

2. The combination of the lock-bolt d, lever D, and lid C, substantially as shown and described.

3. A spring-catch for holding back the spring-bolt of the rear lock, when arranged and operating substantially as shown and described.

4. The lamp-receptacle, consisting of the flat box or case hinged to the fare-box, and held in place by a spring-catch, as herein shown and described.

118,928.—Sewing-Machine.—Francis Elijah Hahn, Philadelphia, Pa.

Claim.—1. The shaft F, provided with conical sleeves a, secured to and turning with but adjustable on the shaft, in combination with the bearings b b, recessed to receive the said sleeves, as set forth.

2. The combination, with the needle-arms, of the plate i secured to the arm, the plate i′ adjustable on the plate i, and devices for adjusting and securing the plate after adjustment, the two plates being recessed to form a slot, A, as set forth.

3. The tapering pin m, having bearings in the stationary arm, in combination with the needle-arm and its set-screw, so that the pin may be rotated in its bearings, as and for the purpose described.

4. The shuttle-driver, connected to a rod, N, rendered adjustable on an eccentrically-slotted arm, u, secured to the crank-pin on the driving-shaft, as set forth.

118,929.—Shoe. — George B. Hall, Rising Sun, Ind.

Claim.—1. The pieces A and C having the form shown, when arranged with respect to the counter D and elastic gore B of a gaiter or shoe, as described, and for the purposes set forth.

2. The rubber elastic gore B, when placed between and on the inside of the pieces A and C, and arranged in relation to the vamp and quarter, substantially as described and for the purposes set forth.

118,930. — Combination Lock. — William N. Hall, Springfield, Tex.

Claim.—1. The combination, with a sliding bolt, of the locking and unlocking-spindles, when the latter are made to both lock and unlock the bolt and are the only means required for fastening it to the door, as described.

2. The combination of the series of locking and unlocking-spindles B with the pivoted buttons F and fixed tongue E of the bolt D, as described.

3. The combination pegs e, having different forms or shapes to distinguish them from one another, as described.

4. The combination pegs e, arranged upon the spindles B so as to lock the combination ring C therewith, in connection with a notch, f, in the door arranged to receive the proper peg of each spindle to lock and unlock the bolt upon a combination of different-shaped pegs, as described.

118,931.—Cutter-Head for Wood-Working Machines. — Eminel P. Halsted, Worcester, Mass., assignor to R. Ball & Co., same place.

Claim.—1. The combination of the curved saw-spur cutter H with the holder or supporting-plate K concentrically arranged therewith, and holding bolt M, substantially as and for the purposes set forth.

2. The disk A, with the bosses C C D E, cutters F F, saw-spurs G H, holder K, plates L, and holding-bolts I I M O, constructed and arranged as shown and described.

118,932.—Plow.—Joab Hapgood, Shrewsbury, Mass.

Claim.—1. The combination of the mold-board C and rear supporting-arm F with the bed B provided with journals or pivots G I, arranged in relation to each other, bed B, and mold-board C, substantially as shown and described.

2. The combination of the mold-board C provided with notches m with the bed B and supporting-standard E, substantially as and for the purposes set forth.

118,933.—Recoil-Obviator for Ordnance. Samuel F. Hawley, Constableville, N. Y.

Claim.—The recoil-obviator attachment to guns, consisting of the chamber a, open in rear and closed in front, and applied to the muzzle of the gun, substantially as herein shown and described.

118,934.—Elastic Wheel for Traction-Engines.—Charles W. Hermance, Schuylersville, N. Y.

Claim.—The combination, with the hub A and spokes B B, of the rim C with its series of sockets D with springs c, plungers E, pivoted shoes G, and connecting-links b, forming the periphery of the wheel, all constructed and arranged substantially as set forth.

118,935. — Apparatus for Turning the Leaves of Music.—Charles Heyer, Racine, Wis.

Claim.—1. The drum C, with journal a, cord b, weight G, pulley D, and tube H, all constructed and arranged substantially as and for the purposes herein set forth.

2. The swinging frame I, provided with hole n, slide J, and springs a d and e, all substantially as and for the purposes herein set forth.

3. The cord m with spring-catches i i attached to the drum C, and operating substantially as and for the purposes herein set forth.

4. The combination of the drum C, cord b, weight G, swinging frame I with the slide J, and the cord m with the spring-catches i i, all constructed and arranged to operate substantially as and for the purposes herein set forth.

118,936.—Gas-Retort.—John D. Higgins, Rome, N. Y.

Claim.—The combination, with a gas-retort, of a detachable plate, F, arranged to be fitted into the retort so as to form, at the lower edge, a contracted opening for the passage of gas, substantially as and for the purpose set forth.

118,937. — Device for Delivering and Receiving Mail-Bags.—George W. Hildreth, Lockport, N. Y.

Claim.—1. The combination, with a railway car, of a partially automatic swinging mail-bag delivering and receiving device, substantially as described, whereby the receiving mechanism is loosened by the operation of exchanging the bags, and permitted to swing by its own gravity to deliver the bag within the car, substantially as set forth.

2. The peculiarly constructed holder L, M, and N, as shown and described.

3. The combination, with the partially automatic swinging mail-bag delivering and receiving device upon the car, of the stationary receiving and delivering device at the station of delivery, constructed and arranged substantially as set forth.

4. The combination, with the bar C and bearings D D¹, of the catch-finger b and spring J, substantially as and for the purposes set forth.

118,938.—Lathe.—Henry R. Hill and Nelson W. Twiss, New Haven, Conn.

Claim.—A cam or eccentric sliding on the grooved shaft H, lathe-carriage F provided with the arms J J, the screw-shaft G, the cutter-slide L, spring R, friction-roller N, and circular cutter M, all constructed and arranged and operating as specified.

118,939.—Burglar-Alarm.—Mary A. Holland, Passaic, N. J.

Claim.—The combination and arrangement of the bell-cranks L, pawls I and F, ratchet-roller or wheel H, bell-arm A, tablets D, and springs C and O, all substantially as specified.

118,940.—Burglar-Alarm for Windows.—Mary A. Holland, Passaic, N. J.

Claim.—1. The combination of the cam-plates E upon the sash and the bell-cranks G, either connected by the bars N or not for the purpose of sounding an alarm, substantially in the manner shown and described.

2. The arrangement of the bell-rack-supporting arm A, notched slide Q, incline S, stop L′, springs L and T, and the bell-crank connection T, all substantially as specified.

118,941. — Signal-Light. — Alexander M. Holmes, Morrisville, N. Y.

Claim.—The combination, with the colored globe D and spring E, of the white-light lantern A, suspended by the cord A′, and provided with the opaque flanch F, substantially as specified.

118,942. — Door-Fastener. — Warren A. Howard, Dugway, N. Y.

Claim.—The bar A with claw a^1, having a hole between the prongs thereof, combined with a shoulder, a^2, perforated in line therewith, and also perforated at right angles to the bar to hold the bolt of a portable door-fastening, as specified.

118,943. — Sugar Evaporator. — William E. Jacobs, Columbus, Ohio.

Claim.—1. The cellular arch c, constructed with lugs c^2 c^2 and ears c^3 c^3, and applied to the furnace A, substantially as described.

2. The double discharge oscillating tube a applied to the evaporating pan B, substantially as described.

3. The bridge N beneath the rear compartments of the pan B, and between the fire-wall k and chimney A^2, substantially as described.

4. The swinging finishing-pans C C′, in combination with the supplementary furnace A^1 and the double discharge-pipe a leading from the pan B, substantially as described.

5. The combination of the two independent furnaces A A^1, the clarifying-pan B, the two swinging pans C C′, and a hoisting apparatus for the latter, substantially as described.

6. The partial cover d for the swinging finishing-pans C C′, substantially as described.

118,944.—Vegetable-Slicer.—Remington James, Lockport, N. Y., and John W. Currier, Springfield, Mass.

Claim.—The frame of the device, constructed in sections, as shown, and connected together and made relatively adjustable vertically by means of the tongues a, the rod K, and the thumb nut k, substantially as and for the purpose specified.

118,945.—Plow.—Ross Johnson, Lawrence, Kan.

Claim.—The combination, with the mold-board of a plow, of the shank or subsoil-hook D, upright bar A, and brace E, all constructed and arranged as described, so that the mold-board will form the point of resistance to the upward strain of the subsoiler, substantially as herein set forth.

118,946. — CULTIVATOR. — Ezekiel Pickard Jones and James Lafayette Harrell, Hertford, N. C.

Claim.—The scraper F, slotted plate E, bolts *c c*, bent lever D, head *e*, guide H, beam A, handles B B, and plow C, all constructed and arranged for operation as herein shown and described.

118,947. — GAS-FURNACE. — John Jordan, Liverpool, England.

Claim.—1. A furnace having an inner lining of fire-brick, an outer casing, intermediate air-chamber, and tuyeres or blast-openings communicating with said air-chamber, as specified.

2. The combination of the above, the tube *g*, hopper *h*, and the feeding apparatus, as and for the purpose described.

118,948.—WROUGHT-IRON COLUMN.—John P. Kennedy, New York, N. Y.

Claim.—A lattice-web, C D, combined with straight T-bars A, constructed and arranged as and for the purpose specified.

118,949. — BLOWING-ENGINE. — Lucius J. Knowles, Worcester, Mass.

Claim.—1. The combination, with the cylinder in a blowing-engine, of an oil-passage, substantially as and for the purposes set forth.

2. The combination, with the cylinder A, of the oil-passages F I I and regulating cock L, substantially as and for the purposes set forth.

3. In the combination, with the cylinder A, provided with passages F I I, of the screw-stops K, substantially as shown and described.

118,950. — DRILLING-MACHINE. — George Koch, Cass, Pa.

Claim.—In a drilling-machine, the combination, with the walking-beam D and its connecting ropes or rods, of the loose-pulley A, provided with pawls G G, the shaft B with its perforated ratchet-wheels F F, and crank E″, all constructed and operating substantially as specified.

118,951.—COTTON-CHOPPER, SCRAPER, AND CULTIVATOR.—Frank A. Leonhard, Columbia, Tenn.

Claim.—1. The arrangement of the rollers I and scraper J, in connection with the arms F, whereby they are adapted to oscillate, as shown and described.

2. The arrangement of the two sets of rollers I and scrapers J and the vibrating chopper S, in connection with the pivoted frame E, as shown and described.

118,952.—SLAT-MATTING FOR CAR-FLOORS, &c.—Samuel Lewis, Williamsburg, N. Y.

Claim.—The combination of elastic-rubber blocks or washers C with the rods B and wooden slats A of a rigid slat-mat, substantially as herein shown and described, and for the purpose set forth.

118,953. — HOT-WATER APPARATUS FOR HEATING BUILDINGS.—Ambrose Marriott, St. Louis, Mo.

Claim.—1. In a heating apparatus, substantially as described, the central heating-vessel I, having an upwardly-increasing diameter, as described.

2. The regulating apparatus, consisting of the damper Q, swivel P, elastic wire-covered tube L N, and metal tube K, containing mercury, all substantially as set forth.

3. The grate, placed above the level of the lower water-chamber E, and consisting of two semicircular tilting segments, H H′, substantially as described.

4. The combination and arrangement of the lower and upper annular water-chambers E G, connecting-pipes F, and central heating-chamber I, all substantially as and for the purpose set forth.

118,954.—GRAIN-DRIER.—Alfred W. J. Mason, New Orleans, La.

Claim.—The combination, with the cylinder-beaters and the apparatus for admitting and discharging the grain, of the hot and cold-air pipes U V, air-distributer T, distributing-pipes W W′, and the exhaust-pipe Y, all substantially as specified.

118,955.—LIFTING-JACK.—Thomas Maxon, Springfield, Ohio.

Claim.—1. The pawl E, provided with pins or journals *b*, and sliding in the slots *d* of the post A, substantially as and for the purposes herein set forth.

2. The combination of the eccentric lever D and the sliding pawl E, constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the hollow post A, rack-bar B with plate C, eccentric lever D, sliding pawl E, and pawl G, all constructed and arranged to operate substantially as and for the purposes herein set forth.

118,956.—APPARATUS FOR THE MANUFACTURE OF EXTRACTS FROM HEMLOCK AND OTHER BARKS.—William Maynard, Salem, Mass.

Claim.—1. The rollers G G arranged within the hopper H, provided with openings H^2 and pipes I I, in combination with the leaching-vessel J having a false bottom, K, and with the evaporator Q, substantially as set forth.

2. The leaching-vessels J J^2, provided with the central pipe N and false bottoms K, arranged for operation substantially as described.

3. The pipes O O extending out from the closed end of the tubes N N of the leaching-vessels J J^2 having false bottoms K K, in combination with the dome P of the evaporator Q, substantially as described.

4. The body R of the evaporator Q, surrounded by the chamber S, in combination with the heating-pipe T, radiating-pipes *b*, spiral plate U, opening W, pipe X, and chamber Y, substantially as described.

5. In combination with the evaporator Q, constructed as described, the valve Z and space *f*, as and for the purpose set forth.

6. The frame A, spiked roller C, adjusting-roller D, and guide-rollers E E, as and for the purpose set forth.

118,957.—CAR-COUPLING.—De Loss McComas, Calhoun, Mo.

Claim.—1. The box B, with guide C, the forked bar C, and spring E, all constructed and arranged, substantially as shown and described, with the draw-head of a railroad-car, for the purposes herein set forth.

2. In combination with spring E, the chains *a a*, levers *d d*, and foot-piece *e*, or their equivalents, arranged substantially as shown and described, and for the purposes herein set forth.

118,958.—VARIABLE CUT-OFF GEARING.—John E. McKay, New York, N. Y.

Claim.—The combination of a cut-off valve or valves, the intervening angular lever *f*, link *h*, and governor *k*, all constructed and operating substantially as and for the purpose set forth.

118,959.—DUMPING-CAR.—Thomas McVay, Braddock's Field, Pa.

Claim.—1. In the dumping-car the hopper B, hung, by means of vibrating arms *c c*, on pivots a little in the rear of the center, so that when the forward end is free the hopper will tip by its own weight and discharge its load, substantially as described.

2. In the dumping-car the hoppers *b b*, hung on the vibrating arms *c c* so as to swing back and tip forward, whereby the forward or open ends will be depressed and their contents discharged, substantially as described.

3. The windlass device, in combination with the hopper hung on vibrating arms, substantially as and for the purposes described.

4. The removable partition *f*, forming the fourth side of the hoppers *b b*, substantially as described.

118,960.—SAFETY ATTACHMENT FOR WATCH-CHAINS OR GUARDS.—Charles W. Mehrer, New York, N. Y.

Claim.—The combination of the slotted case, sleeve E, hooks H, sliding disk F, stem K, and the spring M, all substantially as specified.

118,961.—RAILWAY-CAR TRUCK.—John R. Mestier, Galveston, Tex.

Claim.—1. The swimming journal *d*, arranged in the axle-box C and combined with the collar *e* on the axle, substantially as herein shown and described.

2. The rubber washer *f*, fitted upon the axle and combined with the spiral spring K, which holds it against the back of the journal-box, as set forth.

118,962.—GRATE-BAR. — Joseph A. Miller, Providence, R. I.

Claim.—The brackets D D D, having thereon the projections E E E, of unequal length, and diminishing downwardly to an edge, combined with broad central bearing A and end pieces B, when constructed, arranged, and applied as and for the purpose specified.

118,963.—MACHINE FOR SPLITTING WOOD.—David Milliken, New York, N. Y.

Claim.—1. The combination of the trough A, axes C and D, arms E F, cranked arms L, springs N, and the actuating-wheel M, all substantially as specified.

2. The combination, with the pawl-lever P and the ax-arm E, of the catch-dog R, springs S, and the stop T, substantially as specified.

3. The arrangement of the catch-dog with the ax-arm F, whereby the said dog will not escape unless the ax passes to the full extent of its downward movement, all substantially as specified.

118,964.—PICKET-POINTER.—John W. Minor, Middleborough, Mass.

Claim.—The forked lever C, carrying knife *h*, vertically-adjustable fulcrum-block *d*, and the head-block D secured by screw-bolt *t* applied to the supporting-beam A, all constructed, arranged, and operating as shown and described.

118,965.—JACK FOR REPLACING CARS.—David Moritz, Black Rock, (Buffalo,) N. Y.

Claim.—1. The cross-head C, suspended by ball-joint from a screw, *z*, and connected with the bed-plate B, substantially as herein shown and described.

2. The shaft F, suspended by ball-joint from the car, and fitted loose through a pinion which hangs on the cross-head C and meshes into a rack on the bed-plate B, substantially as herein shown and described.

118,966. — SOFA-BED. — Abraham Morris, New York, N. Y.

Claim.—The folded seat C of a sofa-bed, connected by rods *s* with the sliding frame D to operate the same, substantially as herein shown and described, and combined with the folding back B, in the manner specified.

118,967.—GAS APPARATUS.—Robert Morton, London, England.

Claim.—1. The system of closing the mouths of gas-retorts and other orifices by the mere contact alone of the edge of the lid or cover with the end of the mouth-piece.

2. The construction of the lids or covers of gas-retorts with their edges turned up so as to form a metallic joint with the mouth-piece of the retort, substantially as hereinbefore described, and illustrated by the drawing.

118,968.—RIBBON-AND-VELVET CASE.—Robert L. Newton, Warren, Ill.

Claim.—The within-described cabinet for ribbons and velvets, consisting of case A, drawers B B with display-apertures *d d*, glass door H, shaft O, and spools N N, said spools so arranged and operated that the material on any one of them may be displayed independent of the others, substantially as herein set forth.

118,969. — HARNESS-OPERATING MECHANISM FOR LOOMS. — Osgood Plummer, Worcester, Mass.

Claim.—1. The concave eveners I and J or their equivalents, for the purpose set forth.

2. The hooked jacks with circular projections or equivalents, substantially as described, and for the purpose set forth.

3. The combination of the concave eveners I and J with the lifters and depressers, as and for the purpose set forth.

4. The eveners I and J, with partitions, as set forth.

5. The combination of the weighted lever R, sheaves S, with the heddles and heddle-connections, all arranged and operating as set forth.

6. The adjustable and reciprocating projection V, in combination with the tension-lever R and the evener-connections K.

118,970.—TOWEL-RACK.—Osgood Plummer, Worcester, Mass.

Claim.—The towel-rack A, B, C, and D, constructed, arranged, and secured together substantially as described and shown.

118,971.—TREADLE. — George K. Proctor, Salem, Mass.

Claim.—The crank A, constructed with recess I and ears having a screw-threaded hole in each, the screw G, and the plate H, all combined, constructed, and applied to a balance-wheel having stud K, as and for the purpose specified.

118,972.—BEE-HIVE. — Edward D. Pugh, Fort Plain, Iowa.

Claim.—The arrangement of boards W R^1 R^2 Y, passages *a b*, tube *d*, wedges *s*, bar N′, and slide X, as and for the purpose specified.

118,973. — HARROW. — William Rennyson, Norristown, Pa.

Claim.—In combination with a rotary harrow composed of the hub A, arms B, teeth C, and circle D, the draft-beam G provided with pivot holes *a b d*, and wheel E, substantially as and for the purposes herein set forth.

118,974.—DEVICE FOR OPERATING SASHES.—Silas P. Rogers, Belmont, assignor to himself, J. H. Watt, J. W. Watt, and Stewart Watt, Barnesville, Ohio.

Claim.—1. The screw-shaft C, in combination with the nut or lifting device D, said shaft being rotated substantially as and for the purpose set forth.

2. In combination with the screw C, nut D, and pin *b*, the miter-wheels *d d′*, shaft *f*, and crank E, all constructed and arranged substantially as and for the purposes herein set forth.

118,975.—GRAIN-BINDER.—Oliver B. Ross, Bowen's Prairie, Iowa.

Claim.—1. The arrangement of the bottom plate or frame A, slotted top plate or frame B, and slot-

ted pan or curved plate R with each other to adapt them to receive the operating mechanism, substantially as herein shown and described.

2. The combination of the loose ratchet and band-wheel D, spring E, crank F, slotted arm G^1, segment-arm H^1, center-wheel I, pinions h^1 l', arms L and grabbers M N n', for grasping and twisting the band, substantially as herein shown and described.

3. The combination of the latch T, spring U, pivoted latch-holder S, connecting-rod V, pivoted lever W, and cam f' with the crank F and center-wheel I, for the purpose of releasing and stopping the wheel I, substantially as herein shown and described.

4. The combination of the band and ratchet-wheel D, spring E, crank F, slotted connecting-arm G^2, segment-arm H^2, pinion O, shaft o', and tucker P, for the purpose of tucking the lock of the band between the band and bundle, substantially as herein shown and described.

5. The combination of the knife Q with the tucker P, substantially as herein shown and described, and for the purpose set forth.

6. The combination of the band-holder Z, spring Y, connecting-rod X^2, connecting-rod X^1, pivoted lever W^2, and cam f' with each other and with the crank F, substantially as herein shown and described, and for the purpose set forth.

7. The combination of the stops F^2 with the grabbers M N n', for the purpose of opening the grabber-fingers N to receive the ends of the bands, substantially as herein shown and described.

8. The combination of the lever C^2, spring D^2, and stop B^2 with the spring E, crank F, and ratchet band-wheel D, for the purpose of throwing the crank F and wheel D into and out of gear with each other, substantially as herein shown and described.

118,976.—Generating Ozone.—Phineas Allen Royce, Snapension Bridge, N. Y.

Claim.—1. Producing ozone from phosphorus, under pressure of water and air, in the manner and by the apparatus substantially as herein fully described.

2. The method of producing the current of air and current of water conjointly, to act on the phosphorus and to cleanse the ozone from impurities, by means of the reservoirs B F, pipes b b' h i i', and tank C, arranged in the manner and operating substantially as herein set forth.

3. The siphon G, in combination with the reservoir F, for the purpose herein set forth.

4. The construction of the apparatus as a whole, consisting of the reservoirs B F, tank C, glass chambers D D^1 D^2, or their equivalents, resting on the water and air-tight bottom E, the glass tubes b' i' e f, and pipes b h i, all arranged in the manner and for the purposes herein set forth.

118,977.—Single-Wheel Toy-Propeller.—William Sellers, New York, N. Y.

Claim.—1. The fixed axle C of the wheel A, carrying the pinion a, in combination with the loosely-suspended frame D carrying the clock-gearing, said frame and gearing also forming a counterpoise weight for the wheel A, the several parts arranged and operating substantially as set forth.

2. The wheel A, braces B, and axle C, carrying the profile figures and pinion a, in combination with the loosely-suspended frame D carrying the clock mechanism, all arranged to operate substantially as set forth.

3. The figure E revolving on a fixed pin, f, in combination with the cord d connected to the axle of the wheel A, substantially as and for the purpose set forth.

118,978.—Numbering-Machine.—C. Latham Sholes, Milwaukee, Wis., assignor to James Densmore.

Claim.—1. The arrangement of the spring over and directly on the foot of the clutch-bar, substantially as described.

2. The combination of the arm of the clutch-bar with the circular groove of the complementary disk, substantially as described.

118,979.—Apparatus for Lighting and Heating Purposes.—Albert Marcins Silber and Frederick White, London, England.

Claim.—1. The receiving or distributing-chamber or vessel H, containing float M for opening and closing a valve in the supply-tap G, and communicating with one or any number of burners, the said valve opening the tap when the chamber is empty and closing it when the burner is extinguished, and regulating and controlling the flow of oil to the burners, substantially as described.

2. The combination of the chamber H with the filtering-box F, as described.

3. The float M, molded of China or porcelain, to contain an internal annular hollow space or chamber, and perforated centrally through its solid core with an aperture to receive a wooden wedge-pin, all substantially as and for the purpose herein set forth.

4. The combination of a number of burners or lights with one single receiving or distributing-chamber or vessel, H, furnished with its supply-tap or cock G and float M for opening and closing the same, when actuated as described, so that one such chamber may serve any number of burners or lights.

5. The arrangement and combination of the within-described parts, whereby the continuity of the passage of oil or liquid from the tank to the burner is intercepted by the chamber H, substantially as described.

118,980.—Carpenter's Bench.—Friedrich Starke, Dayton, Ohio.

Claim.—A carpenter's bench, provided with the swivel-post B, to which the parts of the vise are connected, as and for the purpose specified.

118,981.—Stump-Extractor.—John S. Swann, Kanawha county, W. Va.

Claim.—The herein-described apparatus, consisting of the frame 1 1 with the pivoted lever 2 and the sliding lever 3, constructed and arranged to operate substantially as set forth.

118,982.—Motive-Power.—John S. Swann, Kanawha county, W. Va.

Claim.—The mechanical device herein described, consisting of the lever B provided with its pins or studs e, in combination with a rack, the whole constructed and arranged to operate substantially as and for the purposes set forth.

118,983.—Apparatus for Generating and Carbureting Hydrogen-Gas.—Hannah C. Terry, Brooklyn, N. Y., administratrix of John B. Terry, deceased.

Claim.—1. The combination of the hydrogen-gas generator, the carbureter, and the purifier, through which the gas, both before and after carburation, passes, substantially as shown and described.

2. The arrangement, in one apparatus, of the hydrogen-gas generator, the carbureter, and the gas-purifier, in the manner herein shown and set forth.

3. An apparatus for generating and carbureting hydrogen-gas, constructed and arranged to operate as herein shown and specified.

118,984.—Corn-Harvester.—Madison Thorp, Waterloo, Iowa.

Claim.—1. The husking-belts I Q R and O Q R and rollers H J and N P, constructed and arranged in connection with each other and with the fingers or teeth U and frame A, substantially as herein shown and described, and for the purpose set forth.

2. The cleaner-plates R, in combination with the teeth Q, belts I O, and rollers H J N P, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the fingers or teeth U, pulleys V, bands W, and roller X with the frame A and husking-belts I Q R and O Q R, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the pivoted or swinging frame D′ and conical rollers E′ with the fingers or teeth U and frame A, substantially as herein shown and described, and for the purpose set forth.

118,985.—Paper-Trimming Machine.—Herbert L. Todd, Corning, N. Y.

Claim.—1. The stationary guide N and movable guide O, in combination with the rollers B to which the knives C are attached, and with the frame A and slotted roller P, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the curved guides M with the rollers B to which the knives C are attached, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the pawl U, spring V, and rod, chain, or cord W with the slotted roller P and frame A, substantially as herein shown and described, and for the purpose set forth.

118,986.—Lock.—Henry R. Towne, Stamford, Conn.

Claim.—The combination of a flat metallic key having supporting-notches K K with a lock provided with the key-guide H and annular supporting-rims I I, the combination of said features serving to furnish a continuous support for the flat key during the whole of its revolution.

118,987.—Fertilizer from Sea-Weeds.—Upham S. Treat, Eastport, Me.

Claim.—As a new and improved article of manufacture and commerce, a fertilizer formed substantially in the manner described.

118,988.—Hot-Air Furnace.—William H. Turner, Indianapolis, Ind., assignor to himself and Charles E. Cardell, same place.

Claim.—1. The combination of the stove A, the drum H, the base B, the cylinders E connected by the rings C, and the register F provided with the bars s, all constructed and arranged substantially as and for the purpose set forth.

2. In combination with the furnace constructed as described, the register E, having the stationary bars s arranged to cover and obstruct the view through the openings between the revolving bars i, substantially as set forth.

118,989.—Oil-Can.—Charles O. Twining, St. Louis, Mo.

Claim.—The hereinbefore-described packing-case for oils, consisting of the can B provided with the corner face and with the opening E, the faucet C and the case A provided with the metal shield D, when the several parts are constructed and combined, substantially as and for the purpose specified.

118,990.—Ironing and Kitchen-Table Combined.—John N. Valley, North East, Pa.

Claim.—1. The combination of the connected bars A A provided with eyebolts, the pivoted cross-bars B B, bench G H, and a back, E, with or without the ironing-board D′, all constructed as set forth.

2. The combination of the ironing-board D provided with eyebolts, as described, with smaller board D′ pivoted thereto, the frame A B, as described, the connecting-rods d d, and the brace C, all constructed substantially as set forth.

118,991.—Table and Stand.—John S. Welch and Andrew A. Wheeler, Boston, Mass.

Claim.—The elongated base A having at one end a hollow post, C, in combination with the table E and rod D, with the table hung at one end of its under side, through plate a, on a fulcrum, b, of said rod D, and with said rod D arranged within said hollow post C, to be raised by a spiral spring, H, and to be secured from turning as well as in its adjusted height by a set-screw, G, and groove f, the whole as and for the several purposes described.

118,992.—Printing and Ornamenting.—Joseph Louis Wells, Philadelphia, Pa.

Claim.—The process of ornamenting or lettering non-absorbent surfaces by applying to the latter a removable coating, printing or otherwise forming the letters or figures on the surface of said coating, and then removing the coating where it is not covered, as specified.

118,993.—Rotary Engine.—William P. Wentworth, Seneca Falls, N. Y.

Claim.—In the cylinder A of a rotary engine having its interior formed upon a single circle eccentric to the piston-head F, a recess, a, which corresponds to and receives a portion of the periphery of said piston-head, substantially as and for the purpose specified.

118,994.—Sofa-Bed.—Julius Werner, New York, N. Y.

Claim.—1. The double-jointed head and foot-rests G, hinged to the ends of the sofa-back, substantially as herein set forth and described.

2. The combination of the pivoted seat B with the hinged back D, frame E, and rests F G, all arranged substantially as herein set forth and described.

118,995.—Box for Shoe-Blacking.—Gefort H. Wetjen, New York, N. Y.

Claim.—The cover C, body A, and foot B, combined and constructed substantially as and for the purpose specified.

118,996.—Harvester.—William N. Whiteley, Springfield, Ohio.

Claim.—1. The rectangular wrought-iron main frame, constructed with the side bars A extended backward and upward to form a bearing, y, for the lever which lifts the cutting apparatus, and the front bar D extended sidewise and bent to form a rectangular loop, E, for the forward end of the drag-bar, as set forth.

2. The long pinion-shaft pipe-box S, cast in one piece with the fly-wheel shield T and flanges, and attached to the main frame by the same bolts which secure the main axle-boxes, as and for the purpose set forth.

3. In combination with the seat-leg W, slotted at its lower end, the serrated plates A B A′ B′, to render the seat C′ adjustable in a horizontal plane in any direction, as set forth.

4. In combination with the segment E′ pivoted to the fulcrum y, the lever F′ pivoted in a socket made in said segment, substantially as and for the purpose set forth.

5. The extension arm J′, combined with the cutting apparatus, lifting-lever, and main frame, so that the lifting-lever may raise and lower the cutting apparatus and its pivotal point shall be between the planes of the bearing-wheels.

6. In combination with the rake-switch and the latch k', the supplemental latch p' to arrest the switch and hold it when released by the automatic latch k'.

7. The sprocket-chain wheel V′, in combination with the arm a', divider c', take-up wheel b', and adjustable tension-spring, as set forth.

8. A flexible-spring gathering-arm arranged upon the rake or reel-blade, substantially in the manner shown and described.

9. The flange k' upon the inner shoe g, arranged in connection with the lugs e f, as and for the purpose set forth.

118,997. — PIPE-WRENCH.—Henry Wilson, Tarr Farm, Pa.

Claim.—The combination of the jaw A and handle B with the forked and slotted handle C, pin *e*, and jaw D, all arranged substantially as herein shown and described.

118,998. — WASHING-MACHINE.—Joseph C. Wismer, Doylestown, Pa.

Claim.—The within-described washing-machine, consisting of the box A with double-inclined bottom B, concave slots or bars C C, roller D, levers E E, handle G, bar H, blocks I I, and lids J J, all substantially as and for the purposes herein set forth.

118,999.—VISE.—John A. Younce and George W. Smith, Hartford, Ind.

Claim.—1. The combination, with the levers D' D'' and the bar G, of the toggle-levers B B', substantially as specified.

2. The lever B, provided with the wedge-shaped enlargement *z*, to operate a bench-clamp or vise, substantially as specified.

REISSUES.

4,545. — TEMPORARY BINDER.—George W. Emerson, Chicago, Ill., assignor to John R. Barritt.—Patent No. 79,560, dated July 7, 1868.

Claim.—The flaps C C, combined with hoop-skirt wire h h, as set forth.

4,546.—GRAIN-SEPARATOR.—Simeon Howes, Alpheus Babcock, Norman Babcock, and Carlos Ewell, Silver Creek, N. Y., assignees, by mesne assignments, of Henry Montgomery and Simeon Howes.—Patent No. 23,039, dated February 22, 1859; reissue No. 2,096, dated October 31, 1865.

Claim.—1. In the wind-trunk of a grain-separator, in which the cheat and light grains are separated from the main air current while the chaff and dust pass off with the same, the arrangement of an air-inlet or opening below the point where such separation takes place and above the cheat-discharge opening of said trunk, substantially as described, whereby a counter-current of air is caused to pass up against and through the light grains and cheat after their separation, as above stated, for the purpose of removing such dust and chaff as may have escaped removal by the main current, as hereinbefore specified.

2. In the wind-trunk of a grain-separator constructed to operate substantially as described, the arrangement of the slanting-board in relation to the side opening for the counter-current of air, substantially as shown and described, whereby the escape of the light grains through said opening is prevented, and the said light grains directed so as to be acted on in the most favorable manner by said counter-current, as hereinbefore described.

3. In combination with the main wind-trunk, vertical partition *i*, and chess-hopper of a grain-separator, the side opening *k* and slant-board *k'*, substantially as and for the purpose hereinbefore described.

4,547.—INSOLE FOR BOOTS AND SHOES.—Moses A. Johnson, Lowell, Mass., assignor to Horace B. Shattuck, same place.—Patent No. 61,742, dated February 5, 1867.

Claim.—1. An insole composed of layers of paper to make it stiff, interposed layers of felted or sheet-hair to make it soft and warm, a bottom composed of paper, glazed or water-proofed, cloth, or leather, a top of Canton-flannel or cloth for exterior wear and finish, and a stiffener to prevent it from creeping under the action of the foot in walking, substantially as described.

2. An insole composed substantially of layers of paper and interposed layers of felted or sheet-hair, and a stiffener, when the layers of paper and of hair are inclosed between a bottom of glazed or water-proofed paper, cloth, or leather, and a top of Canton-flannel or cloth, and when said stiffener is laid and secured around the margin or edge of the insole, as and for the purpose described and represented.

4,548.—WOOD-BENDING MACHINE.—Hiram McDonald, Shortsville, N. Y.—Patent No. 31,182, dated January 22, 1861.

Claim.—1. The eccentric *l m*, sliding plates *o p*, slides *t u*, and the keys *r s*, either in pairs or one of each, placed at the outer parts of the beds F F, and arranged substantially as and for the purpose herein set forth.

2. The combination of the former C, beds F, levers E, and adjustable rollers *f* and straps J, all substantially as specified.

3. The combination of the former C, straps J, and beds F, when said straps are connected to the former and the beds, substantially as specified.

4,549.—Division A.—DEPILATING HIDES.—John E. Siebel, Chicago, Ill.—Patent No. 116,638, dated July 4, 1871.

Claim.—The use of refuse gas-lime as a depilatory, especially for the use of tanneries.

4,550.—Division B.—PRESERVING WOOD.—John E. Siebel, Chicago, Ill.—Patent No. 116,638, dated July 4, 1871.

Claim.—The use of refuse gas-lime in connection with either one of the three following substances, viz., sulphate of zinc, ferrous sulphate, or ferric sulphate, for the impregnation and preservation of wood.

4,551.—HEAD-BLOCK FOR SAW-MILLS.—Edward H. Stearns, Erie, Pa.—Patent No. 14,700, dated April 15, 1856; extended seven years.

Claim.—1. The eccentrics S S, when placed upon the oscillating shaft H, and operating the pawls of a head-block, substantially as described.

2. The combination of the eccentrics S S and journals *o o* with the shaft H, constructed to operate in the manner and for the purpose substantially as described.

3. The wheel L and shaft H, in combination with one, two, or more eccentrics, S, substantially in the manner and for the purposes shown and described.

4. The combination of two or more eccentrics, S on oscillating shaft H with two or more pawls, M, springs N, and rack P on the under side of the sliding standard or knee, giving a forward movement to the rack, whether the shaft is oscillated forward or backward, substantially as shown and described.

5. The cam-shaft R, for throwing the pawls M out of contact with the notches in rack P, constructed to operate substantially as described.

6. The double dog *b*, in combination with the mortise *a* of standards D and E, constructed to operate as described.

4,552.—SPOKE-TENONING AND HUB-BORING MACHINE.—John Deming, Salem, Ohio, assignor to himself and A. R. Silver, same place.—Patent No. 103,157, dated May 17, 1870.

Claim.—1. The combination of the jaw-holder *u*, the jaws V, circularly-turning plate S with the screw-bolt S' and hub *t*, having bosses, and the nut W, all in such manner that the jaws and plate are adjustable, substantially as and for the purpose set forth.

2. The segment-ratchet R, pivoted lever Q, and forked rest O, constructed and arranged as described, and combined with the arm P of the spindle-supporter, substantially in the manner described and shown.

3. The combination of the single clamp-screw I, the nut H, angular plate K K', and slotted standard D of tool-head, in the manner shown and described.

4. The improved boring device, consisting of the tool-head B provided with the ear E, as shown, the spindle C, slotted standard D, screw G, nut F, clamping-nut H, and clamp-screw I, substantially as described.

5. The self-centering chuck S U V *t* S' W, made adjustable circularly, applied in an oblong slot of the frame A, and made adjustable lengthwise of the frame in said slot, in combination with the vertical adjustable tool-head B P O and clamp Q R, substantially as described.

4,553.—WOOD-BENDING MACHINE.—Samuel Kingsland, Council Bluffs, Iowa, assignor to Henry Ocorr.—Patent No. 35,983, dated July 22, 1862.

Claim.—1. In the process of bending wood the employment of a heated metallic form, over and upon which the wood is bent and shaped, substantially as herein shown and set forth.

2. A wood-bending form, consisting of a hollow metallic structure, of suitable shape to impart the desired configuration to the wood bent over upon it, and provided with apertures or openings for the entrance and discharge of the agent by means of which heat is imparted to its metallic wall, substantially as herein shown and described.

3. The combination of a series of hollow metallic wood-bending forms, so connecting or communicating with each other that the heating agent, when introduced into one of said forms, may be free to pass or diffuse itself through the whole series, substantially as herein shown and set forth.

4. The combination, with the wood-bending form or forms, of the frame or frames for supporting the same, and the means for bending the wood upon the forms carried by said frame or frames, and constructed and arranged for operation substantially as herein shown and described.

5. A wood-bending mechanism, composed of a hollow, internally-heated form, and means for bending and retaining upon said form the wood to be shaped, as herein shown and described.

4,554.—FIRE-ALARM. — Jonathan O. Fowler, Jr., Hudson, Wis., assignee of J. R. Tunnicliffe, deceased.—Patent No. 35,050, dated April 22, 1862.

Claim.—A fire-alarm, consisting of a detachable and portable barrel loaded with powder, and provided with a fuse having its outer end saturated with a composition ignitable by hot air at a fixed temperature, substantially as herein described.

4,555. — BUR FOR KNITTING-MACHINES.—Miner Van Auken, Amsterdam, N. Y., assignor to John Warner, same place.—Patent No. 38,997, dated June 23, 1863; antedated February 16, 1863.

Claim.—1. A knitting-bur which is constructed with a closed top, A, and a hub, B, depending therefrom, irrespective of the oil-chamber around the hub, substantially as described.

2. A knitting-bur which combines in its construction a closed top, A, and a depending hub, B, in combination with a cup-shaped step, D, into which the lower end of the said hub extends, substantially as described.

3. The combination, in a knitting-bur, of the closed top-stock A, hub B with one or more passages through its side, and the oil-reservoir around the hub, substantially in the manner and for the purpose described.

4. A knitting-bur, the stud C of which is closed in at its top by a portion of the body of the bur and at its bottom by a cup-shaped step, D, all in such manner that the oil is closed in against the entrance into it of flying fibrous materials both at top and bottom of the bur, substantially as described.

DESIGNS.

5,256.—CARPET.—John H. Bromley, Philadelphia, Pa., assignor to John Bromley & Sons.

Claim.—The design for a carpet, substantially as shown.

5,257. — MATCH-SAFE AND PAPER-WEIGHT COMBINED.—George W. Brown, Louisville, Ky.

Claim.—The design above described, to be used as a match-safe, igniter, and paper-weight, as shown above.

5,258.—CARPET.—Benjamin Crabtree, Jr., Philadelphia, Pa., assignor to John Bromley & Sons, same place.

Claim.—The design for a carpet, substantially as shown.

5,259. — SCHOOL-DESK. — Thomas A. Galt and George S. Tracy, Sterling, Ill.

Claim.—The design for a school-desk frame, as shown.

5,260. — HAME-LOOP.—Josiah Letchworth, Buffalo, N. Y.

Claim.—The design for a hame-loop, as shown and described.

5,261.—ORNAMENTATION OF GLASSWARE.—John Ernest Miller, Birmingham, Pa., assignor to Sweeny, McCluney & Co., Wheeling, W. Va.

Claim. — The design for the ornamentation of glassware, as shown.

5,262.—BIRD-CAGE HOOK.—Joseph B. Sargent, New Haven, Conn.

Claim.—The design for bird-cage hook, as shown in the accompanying illustration and described.

5,263.—COOKING-STOVE.—William A. Spicer, Providence, R. I.

Claim.—The design for a stove, as shown.

5,264.—LETTER-BOX.—George Francis Topliff, Boston, Mass., assignor to The United Mail-Box Company, same place.

Claim.—The design for a mail-box, as herein set forth.

5,265. — GRATE-FRONT. — Charles Zeuner, Cincinnati, Ohio, assignor to Innes & Magill, same place.

Claim.—1. The design for the central ornament A, as herein shown.

2. The ornamental open-work B, as herein shown.

3. The ornamental open-work C, as herein shown.

4. The border D with its ornaments E, when shaped and arranged as shown.

5. The border F, shaped and arranged as herein shown.

6. The ornaments G, as herein shown.

7. The combination of the central ornament A, ornamental open-work B and C, borders D, E, and F, and ornaments G H, when arranged with relation to one another, as herein shown.

5,266.— BUSTLE.—Amos W. Thomas, Philadelphia, Pa.

Claim.—The design for the supporting-springs of a bustle, as shown.

TRADE-MARKS.

439.—ENGINE-OIL. — Harmon, Merrick & Co., Cleveland, Ohio.

440.—MATHEMATICAL INSTRUMENTS.—Heller & Brightly, Philadelphia, Pa.

441. — LEATHER. — George F. Page and Charles T. Page, Franklin, N. H.

ISSUE OF SEPTEMBER 19.

PATENTS.

119,000.—TREATING FLESH, OFFAL, &c.—William Adamson and Charles F. A. Simonin, Philadelphia, Pa., assignors to William Adamson.

Claim.—The extraction of animal oils and fats by hydrocarbon vapors, under heat and pressure, substantially in the manner described.

119,001, antedated September 2, 1871.—COTTON-GIN.—Charles N. Andrews, St. Louis, Mo.

Claim.—1. The bars of the gin-grate 3, constructed as shown and described, with a convexity, 11, at the point where the saw-teeth pass out, and fastened at the upper ends, while the lower ends are placed within the peripheries of the gin-saws and extend close to the ends of the fender-grate P, all substantially as and for the purposes herein set forth.

2. The hollow brush-cylinder G, provided with circumferential continuous lines of bristles, with holes through the cylinder between said lines of bristles, and the heads of the cylinder provided with openings 8 8, and loose disks or registers with oblique flanges 9 9, and slots and set-screws 10 10, all substantially as shown and described, and for the purposes herein set forth.

3. The combination of the hull-bar 2 and fender-grate P, when constructed and arranged substantially as and for the purposes herein set forth.

4. The combination of the fan H with the hull-arrester O, the hull-bar 2, the chute N, and the cylinder C, substantially as and for the purposes hereinbefore set forth.

5. The combination of the triangular hull-arrester O, hull-bar 2, fender-grate P, and gin-saws E, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

6. The combination of the cylinders A B C D, grates K L, and hollow partition T, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

7. The concave or semicircular grate-bars L L, constructed as shown and described, and arranged in a single tier under the cylinder D and between the cylinders B C, substantially as and for the purposes herein set forth.

8. The concave or semicircular grate-bars K K, constructed as shown and described, and arranged in two tiers, substantially as and for the purposes herein set forth.

9. The arrangement of the fender-grate P, hull-bar 2, fan H, and hull-arrester O with the space 5 between them, substantially as and for the purposes herein set forth.

10. The combination of the hopper J, cylinders A B C D, grates K L, hollow partition T, saws E, fan H, brush-cylinder G, flue I, hull-arrester O, hull-bar 2, chute N, damper 4, gin-grate 3, and fender-grate P, all constructed and arranged substantially as and for the purposes herein set forth.

119,002. — GLUE-POT. — John I. Baringer, Germantown, N. Y.

Claim.—A glue-pot provided with chimneys B B′, combined with the flues A A′, substantially as described.

119,003.—WATER-METER.—Henry M. Bartlett, South Dedham, Mass.

Claim.—1. The valve O, in combination with the channels N N′, ports M M′, valve F, and piston B, substantially as described.

2. The valve F, provided with the ports G G′ and recesses H H, in combination with the surface C′ of casing C, having ports K K′ and L L′, substantially as described.

3. The arrangement of valve-piston F, valve O, and piston B, so that water received through induction-pipe S, and passing through ports L L′ and K K′, operates the piston B, which actuates valve O, the latter, in turn, actuating valve-pistons F, in the manner substantially as described.

119,004.—WATER-METER.—Henry M. Bartlett, South Dedham, Mass.

Claim.—1. The floating valve-piston B, constructed as described, in combination with cylinder A having ports W W′, X X′, and *a a′*, substantially as described.

2. The described arrangement of valves *c c′ d d′* and their branches *e e′* of piston B with relation to ports W W′, X X′, and *a a′*, of cylinder A, passages Y Y′ Z Z, and valve F, as and for the purpose set forth.

119,005.—MANUFACTURE OF BONE-BLACK.—Charles Y. Beach, Brooklyn, N. Y.

Claim.—The treatment of bones or other animal substances, for the purpose or purposes herein specified, by direct exposure of them to burning gases or heated gaseous products of combustion, substantially as herein set forth.

119,006.—TOY-LOCOMOTIVE AND TRACK.—Eugene Begga, Paterson, N. J.

Claim.—1. The boiler A, formed with water-legs *i* at its sides, constructed to form jogs or shoulders *k* at or near the forward end of the boiler, in combination with the yoke D which carries the cylinders, substantially as specified.

2. The combination, with the yoke D and steam-exhaust pipe *l*, of the chimney F, having its cap constructed to form a nut on the upper end of the pipe, whereby the chimney and yoke carrying the cylinders are mutually supported, substantially as herein set forth.

3. The yoke D, constructed and arranged, substantially as described, to form live and spent-steam chambers *t u* for operation by suitable ports with the cylinders of the engine.

4. The arrangement of the live and spent-steam chambers or passages *t u* in the yoke D with the inlet-pipe *p* and outlet-pipe *l*, substantially as specified.

5. The tender C, having its body or lower portion constructed to form a reservoir for the fluid by which the boiler is heated, and provided with a forwardly-projecting tube or passage, *f*, to convey said fluid to the burners beneath the boiler with which said boiler is connected, substantially as specified.

6. The track, composed of curvilinearly-grooved blocks Q Q and strips *h′ h′*, combined and arranged substantially as herein described, and for use with a toy-locomotive or cars, as set forth.

119,007. — MORTISING-MACHINE. — Henry Bickford, Cincinnati, Ohio, assignor to J. A. Fay & Co., same place.

Claim.—1. The pivoted heart-shaped lever P, with or without point Q, substantially as and for the purposes set forth.

2. The operating-mechanism, consisting of chisel-shaft F, gears Z, Y, X, and V, lever P provided with point Q, and shaft K provided with projection *a* and finger N, all operated by a treadle and connecting-rod, substantially as and for the purposes set forth.

3. In combination with finger N, the pivoted lever P with or without point Q, and gear V, substantially as and for the purposes mentioned.

4. In combination with the mechanism specified in the third claim, the operating-table, substantially as and for the purposes set forth.

5. The gears Z and Y, when provided with blind-tops, for the purpose specified.

119,008.—FIRE-ESCAPE.—George W. Bishop and Hugh H. Smith, Baltimore, Md.

Claim.—1. The clamping-bar and frame A C, made with an adjustable jaw, *b′*, and provided with a pulley, F, ratchet-wheel *g*, pawl *g′*, pulleys D E, and single rope *s s*, all combined and operating substantially as and for the purpose described.

2. The friction-pulley J on shaft of pulley E, and pressure-spring K, and lever L, arranged as described, in combination with pulleys D E F, ratchet and pawl *g g′*, and single rope *s s s*, substantially in the manner and for the purpose described.

3. The spiked brace G, arranged and operating as described, in combination with the combined clamp-bar and frame A C, pulleys F E D, and single rope *s s s*, substantially in the manner set forth.

119,009. — BALING-PRESS.—George Brodie, Plum Bayou, Ark.

Claim.—1. The flattened follower-rod E, obliquely divided, as described, and toothed racks or screw segments *a a*, in combination with the nut G, substantially as described.

2. The screw follower-rod E, composed of adjustable sections for expanding it, substantially as described.

119,010. — WOOD PAVEMENT. — Closson P. Burgess, Rochester, N. Y., assignor to himself, Emmet Stafford, and James R. Stevenson, same place.

Claim.—The paving-blocks B B, having their corners at *a a* and *b b* removed, arranged to overlap in the transverse line of the street, and surrounded at their bases by open spaces to receive the cement, substantially as described, for the purposes specified.

119,011.—ROTARY PUMP.—Luke Chapman, Collinsville, Conn., assignor to himself and W. J. Wood, same place.

Claim. — The combination, in a pump, of the following elements, *i. e.*, the revolving plunger *b*, the revolving cut-off *d*, and the cylindrical valves *n*, made loose in their sockets and free to revolve, as described.

119,012.—LATHE.—Hillry Chavons, Union City, Ind., assignor to himself and William P. de Bolt, same place.

Claim.—1. The combination, with the revolving mandrel B, of the sliding gate E and revolving cutter-head F, composed of saws *f f* and knives *g g*, the whole being arranged for operation substantially as specified.

2. The combination of the upper horizontal or laterally-sliding carrier H and its revolving cutter-head G, composed of carving-cutters *q q*, the revolving mandrel B, and vertically-sliding gate E with its cutter-head made up of saws *f* and knives *g*, essentially as and for the purposes herein set forth.

3. The combination, with the gate or carrier by which the revolving cutter-head is slid up to or from the work, of the suspension frame J, the fast pulley *e′*, the belt *g′*, and the loose pulleys *h′ h′*, when arranged in relation with each other, substantially as shown and described.

119,013.—LOCOMOTIVE.—John Cooke, Paterson, N. J.

Claim.—The link I, mounted within the hollow pintle G in the center of the front of the locomotive, and supporting the equalizer M and allowing it to swing while always bearing in the center of the pintle, as herein specified.

119,014. — DRIVING-WHEEL OF LOCOMOTIVE ENGINES.—Almond F. Cooper, San Francisco, Cal.

Claim.—The covering-plates B B and hub A, with their corrugations *b c* and projections *f f*, in combination with the elastic packing C E and sleeves or thimbles *g*, the whole constructed substantially as shown and described.

119,015. — COTTON-CULTIVATOR.—Thomas Dale, Russellville, Ky.

Claim.—1. The combination of the wheels, the axle, the frame arranged above the axle, the stirrups depending from the frame and embracing the axle, the handles rigidly secured to the frame behind the axle, and the plows in rear of the axle, serving as a fulcrum on which to rock the frame, all these members being constructed and operating substantially as set forth, so that the frame, while free to be lifted by the handles, is prevented by the axle from descending below a given point.

2. The combination of the frame, the loops, the axle, and the driving-gear on the axle with a rotary chopper journaled to the frame, and driven by the gear on the axle in such manner that, when the frame is raised to pass obstructions or to be turned in its path, the chopper will be thrown out of gear and become inoperative, substantially as described.

119,016. — ICE-PRESERVER. — James Dunning, Bangor, Me.

Claim.—As a new article of manufacture, the ice-preserver described, consisting of the cylinder *a*, top *b*, the inner and outer linings *d e*, and the tube *f*, substantially as specified.

119,017.—GUDGEON FOR SHAFTS.—William W. Eastman, Meadville, and William H. H. Morris, Fairfield, Pa.

Claim.—1. Iron gudgeons for mill-work, provided with a cap-plate, B, ears *b b*, and a circular flange, D, for fastening the same to wood shafts, in the manner and for the purposes here set forth.

2. In combination with the above-described plate and flanged gudgeon A, the loop bars *d d* which surrounds the wheel-arms E E, the metal block bearings *e e*, and the screw-nuts *a a* for securing iron gudgeons to wood shafts for mill-work, substantially as herein shown and described.

119,018. — MACHINE FOR MIXING SOAP.—Charles Elling, Cleveland, Ohio.

Claim.—1. The tub or vat A, and cylindrical case B constructed with open ends, arranged in said tub so that its lower end shall be above the bottom thereof, substantially in the manner as described, and for the purpose set forth.

2. The vat or tub A, cylindrical case B, and screw H, as arranged in relation to each other, and operating in the manner substantially as described, and for the purpose set forth.

119,019. — CLIPPING-SHEARS. — George F. Evans, Norway, Me.

Claim. — In combination with the plate *a*, the piece *d* and cutters *e*, rod *f* and arm *h*, the cylinder *j* and piston *l*, the said cutters *e* to operate directly from and in the same direction with the piston *l*, as herein set forth.

119,020, antedated September 16, 1871.—GUN-LOCK.—Warren R. Evans, Thomaston, Me.

Claim.—1. The hammer, made as described, having the recess R, tongue W, notch T, and point S to strike the cartridge.

2. The combination of the bell-crank A, projection M, slot I, and rotating fluted shaft, as herein set forth, for the purpose described.

3. The breech-block G, composed of two walls with the space between the same, and having the pin V, the slot J, and shoulder I, as herein described.

4. The pivoted arm N on the breech-block with

the stud O, in combination with the depression F', to operate as herein set forth.

5. The trigger A' having the spring B', the shoulder C' to act, in combination with the shoulder F, on the trigger, as herein set forth.

6. The combination of the breech-block and pin V with the tongue W and extremity P' of the trigger, for the purposes herein set forth.

7. The combination of the hammer, Fig. 1, Plate 2, with the breech-block G arranged therein as described, and trigger A', mainspring U, lever H, all as herein described, for the purposes set forth.

119,021.—BOOT AND SHOE-HEEL.—George F. Fling, Portland, Me.

Claim.—The combination of a metallic shell, *a*, open at both top and bottom, and provided with the flanges *b c d*, arranged as set forth, with the removable filling *i* of wood and backing *l* of lead, when the same is to be affixed to a boot or shoe by the screws *e*, *f*, *h*, and *k*, as herein set forth.

119,022.—GRAIN-DRILL. — John P. Floom, Canton, Ohio.

Claim.—1. The covering-tooth *o r s*, in combination with the seed-teeth P Q P, the working part *s t t u* of said covering-tooth being of the general form shown, and being supported directly behind the seed-tooth Q and close up to the seed-teeth P P by a standard *s r o* running back nearly horizontal to a point, *r*, in the rear of the working-part *s t t u*, and then rising to the tooth-frame B, substantially as and for the purpose specified.

2. The lifting-lever L provided with the forked end *n*, eye *p*, and pin-lever T, supporting-link M provided with the slot *m* and locking-link N, in combination with the wheel-axle D and tooth-frame B, the several parts being arranged substantially as and for the purpose specified.

3. The slide-plate latch *i*, in combination with the vibrator H with upturned end *h* and frame B, said parts being so arranged that the raising of the frame acts through the rod W to raise the latch from the upturned end *h*, substantially as and for the purpose specified.

4. The within-described broadcast device *a d k*, consisting of the base *d* with notched passages *c c*, valve-pieces *a*, and guiding-flap *e*, when used in combination with the seed-teeth, substantially as and for the purpose specified.

119,023.—GRAIN-DRILL. — John P. Floom, Canton, Ohio.

Claim.—1. The combination of the two-part slide plate D H having the seed-cavities E therein, with the series of cut-off plates B B, and discharge-plate G with holes K K therein, the said slide-plate being so constructed as to admit of a change in the size of all its seed-cavities by the sliding of one of its parts upon the other, and the several parts being arranged and combined substantially as and for the purpose herein specified.

2. The cut-off plate B, provided with a narrow turned-down edge or flange, as shown, in combination with the vibrating slide-plate D H with seed-cavity E therein, whether said slide-plate be made in one or more parts, substantially as and for the purpose herein specified.

3. The herein-described slide-plate D H, consisting of the bar D with holes E E, head-block D', and cavity-blocks *d*, the bar H with holes *b b* and underlying flanges *c c*, and the adjusting-screw I, the several parts being constructed, combined, and arranged substantially as and for the purpose herein specified.

4. The combination of the discharge-plate G, tightening-screws J J, screw-blocks N N, and movable hopper-pieces A A, the several parts being arranged so as to draw the lower edges of the hopper-pieces toward the discharge-plate by turning up the tightening-screws, substantially as and for the purpose specified.

119,024. — SAP-BUCKET HOLDER. — Alvin Franklin, Galena, Ohio.

Claim.—A bucket-holder, formed by curving an elastic wire, as shown, for furnishing a horizontal and lateral support for the bucket, as herein described.

119,025, antedated August 28, 1871.—PIANO-TRUCK.—Charles Albert French, Davenport, Iowa.

Claim.—The adjustable and detachable truck or trucks B B, substantially as and for the purpose hereinbefore set forth.

119,026.—WATER-WHEEL. — John G. Garretson, West Liberty, Ohio.

Claim.—The combination of the cap B, Fig. 2, with its funnel-shaped chutes *i i*, with the wheel A, Fig. 1, constructed as described, the funnel-shaped chutes throwing the water into the wheel at nearly right angles to the axis of the wheel, while the centrifugal force of the water already within the wheel prevents the striking, splashing, or flying of the entering column, but causes it to quietly take position in the wheel and impart to the wheel the momentum with which it entered, in the manner and by the means above set forth.

119,027.—GASKET-PACKING.—William Wallace Girdwood, Barking Road, Bromley, Great Britain.

Claim.—A gasket-packing constructed wholly of metallic fabric by rolling or twisting a sheet of metallic gauze, as herein described.

119,028.—SIPHON-BOTTLE.—Claude Glover, New York, N. Y.

Claim. — The combination of the flexible diaphragm valve *d*, the socket *b*, the plunger F, the spring *e*, and the screw-cap E, substantially as herein described, the whole arranged, applied, and operating with respect to the valve-seat *a* and flanged head of the bottle, substantially as herein set forth.

119,029.—CUTTING APPARATUS FOR HARVESTERS.—Marshall Harrison, Laclede, Mo., assignor to himself and Jefferson Mizo, same place.

Claim.—In combination with the bottom plate A a^1 a^2 a^3, top plate E, and a series of cutters, D, pivoted to bar B, and fulcrumed to rib a^2, the supplementary bar C, to which the rear ends of all the cutters are pivoted, as and for the purpose specified.

119,030.—VALVE FOR STEAM-PUMPS, &c.—Joseph W. Hopkins, New York, N. Y., assignor to himself, Albert G. Bearup, and Patrick Carraher, Jr., same place.

Claim.—1. The combination of the ports *i i* in the valve E and ports *d d* in the valve C with the stationary ports *h h* and *k k*, when arranged substantially as and for the purposes herein set forth.

2. The combination, with the elements recited in the preceding claim, of the ports *u u r r s s* and exhaust-cavities *n* and *c*, arranged in relation with each other, essentially as shown and described.

119,031. — EVAPORATING SALT WATER.—James L. Humphrey, Syracuse, N. Y.

Claim.—Tubes D, provided with nozzles *d*, in combination with fan C, substantially as and for the purpose set forth.

119,032.—SPINDLE FOR SPINNING-MACHINES. Daniel Hussey, Lowell, Mass.

Claim.—The live and dead spindles A and B, constructed and pivoted together as shown, and having the bearing at *f*, and arranged with and applied to a covered bolster-reservoir in manner as set forth, all being substantially as explained.

119,033.—BRAKE FOR WAGONS.—Francis M. Kelley, Hart county, Ky.

Claim.—In combination with a slotted sliding draft-tongue, L, the rigid arm B, cranks C, adjustable rod D, crank E, shaft F, cranks G G, adjustable screw-rods H H, and brake-bar I, arranged in the manner and for the purpose set forth.

119,034.—MANUFACTURE OF ILLUMINATING GAS.—Joshua Kidd, New York, N. Y.

Claim.—1. The method described of first instantly vaporizing the liquid at a heat below its decomposing point by injecting it into the vaporizer sparingly and then passing the vapors thus generated through a red-hot retort.

2. The use of a jet of gasoline vapor or steam, escaping under pressure, for inducing air into rich gas, as described.

119,035.—METAL BINDING FOR OIL-CLOTHS, &c.—Daniel M. Knowles, New Bedford, Mass.

Claim.—The metallic binding A, with its ridge or lap B and overlapping ends D^2 and C^2 and D^2, constructed as shown and described.

119,036.—BOLT FOR LOCKS.—Theodore Kromer, Neustadt, Grand Duchy of Baden.

Claim.—1. The bolt A provided with the stud B, in combination with the latch G provided with the notches *a b* and *d e h*, when operating together, as described.

2. The arrangement and combination of casing P, row of notched sliding pins C, springs F, latch G provided with notches *a b* and *c d h*, and bolt A provided with the stud B, operating together, as described.

119,037.—LOW-WATER ALARM. — John C. Leistner and Augustus Kayser, Cincinnati, Ohio.

Claim.—1. The arrangement of the pipe C projecting into the enlarged mouth-piece D within the boiler, as described and represented, for the purpose set forth.

2. In the described combination with the elements of the preceding clause, the devices C E F G, whereby the alarm-inlet and its mouth-piece are secured at any desired elevation relatively to each other and to the boiler, for the object designated.

119,038.—SECTIONAL TUBULAR STEAM-BOILER. — James A. Maynard, Newtonville, Mass.

Claim.—1. The within-described sectional boiler, consisting essentially of a series of independent clusters of water-tubes connecting water-chambers which communicate with each other through short pipes or nozzles, substantially as and for the purpose described.

2. A furnace E, provided with internal slotted smoke-flues *m*, constructed and arranged substantially in the manner and for the purpose described.

3. The bolts *i*, in combination with the removable heads *h*, substantially as and for the purpose set forth.

4. A sectional tubular boiler, in combination with the furnace E, provided with internal smoke-flues *m*, the whole arranged and constructed to operate substantially as and for the purpose specified.

119,039. — STEAM-ENGINE. — John H. McGowan and David B. Caldwell, Cincinnati, Ohio.

Claim.—The within-described arrangement of auxiliary cylinder G, plunger H, pitman I, wrist J, and spur and pinion E F, substantially as and for the purpose set forth.

119,040.—MACHINE FOR MAKING CIGARS.—Martin V. McKinney, Louisville, Ky., assignor of one-half his right to Henry U. Frankel, same place.

Claim.—1. In combination with the slotted frame G, the adjustable upper roller A having levers R R and handle W, the lower rollers A A and header D, all constructed and arranged substantially as described.

2. The conical header D, formed of two parts, connected at their smaller ends by spring E and adjusted by set-screw F, substantially in the manner and for the purpose set forth.

3. An adjustable tobacco-trough, provided with sliding cover Y, in combination with a swinging-box Q, substantially as described.

119,041. — PRUNING-SHEARS. — John W. Mix, Batavia, N. Y.

Claim.—1. The pruning-shear, consisting of the levers A A, hook B, and blades C C', arranged as described, and operating in the manner and for the purpose specified.

2. The shifting blade C', having its edge standing above the square shoulder *c* only sufficient to cut through the bark, when combined with the main cutting-blade, C, which alone severs the limb, as herein described.

119,042.—DUST-PAN. — James B. Morgan, Davenport, Iowa.

Claim.—The construction of a dust-pan with a lid, having a thumb-piece and spiral spring, substantially as described, and for the purposes set forth.

119,043.—LIGHTNING-ROD. — David Munson, Indianapolis, Ind.

Claim.—1. A continuous cable lightning-rod consisting of any suitable number of core and outside wires, the latter being angular, substantially as described.

2. A lightning-rod consisting of any suitable number of angular, sharp-edged copper wires, twisted around a core of some other cheaper metal to form a single rod, substantially as described.

3. A lightning-rod consisting of any suitable number of angular sharp-edged copper rods twisted between, and with any suitable number of round wires of a cheaper metal, to form a single rod, substantially as described.

119,044. — COMBINED BREAST-PUMP AND NURSING-BOTTLE.—Orwell H. Needham, New York, N. Y.

Claim.—1. The combination, with the nursing or feed-bottle A, of a milking-shield attachment, B, provided with an upper nozzle, *h*, and a lower nozzle, *i*, both at right angles to the line of direction of the shield attachment for coupling to a milk-receptacle a device for exhausting the air, substantially as and for the purposes herein set forth.

2. The milking-shield attachment B, constructed of a nipple-ring or band, *d*, a tube, *f*, a connecting yielding lining, *e*, and the upper and lower lateral nozzles *h i*, which are claimed above, essentially as described.

119,045.—COOKING-STOVE. — Daniel Eldon Paris, Troy, N. Y.

Claim.—1. The two side rear flues Q Q to a diving-flue cooking-stove, so arranged as to connect with the rear central flue P by means of a damper or dampers, and so that the products of combustion, after passing into the side flues Q Q, shall immediately thereafter (when said damper or dampers are open) pass into the rear central flue P for the purpose of heating, and in combination with a water-tank or reservoir situated in rear of said flues, substantially as herein shown and described.

2. The extension of the top flues of a diving-flue cooking-stove beyond the rear vertical line of the exit-pipe, and underneath a reservoir or reservoirs, and thence back toward and into said exit-pipe, substantially in the manner and for the purpose herein shown and described.

3. A downward and upward-draught smoke-flue or flues at the rear end of the stove, connected into and in combination with a flue-chamber below the reservoir, and so arranged that the products of combustion shall pass from the top flue of the stove down one or more of said flues into and through said chamber and thence upward to the exit-pipe, for the purpose and substantially in the manner herein shown and described.

4. The damper O, or its equivalent, made to operate as follows: When open to let the heat or smoke pass into the central flue P to heat the reservoir, and, when closed, to drive it around the oven of the stove, substantially as herein shown and set forth.

5. For a diving-flue cooking-stove or range, one or more double-acting flues, made to pass each way from the exit pipe, and controlled by a damper, arranged, when passing in rear of said pipe, to heat the oven, substantially in the manner herein shown and described.

119,046. — FOUNTAIN.—George Polyblank and Joseph Parkin, Cleveland, Ohio.

Claim.—1. The flexible bag F for holding water, when arranged in relation to chamber C, jet-pipe L, and charging-pipe *b*, substantially in the manner as described, and for the purpose set forth.

2. The arrangement of the basin A, midriff B, chamber C, overflow-pipe D, and jet-pipe L, in combination with the flexible bag F, in the manner substantially as and for the purpose specified.

3. The combination and arrangement of the weight-dish J, guide-rods I, ropes K, and flexible bag F, in the manner as described, and for the purpose specified.

119,047.—FENCE.—David Rhodes, Fredericktown, Mo.

Claim.—The panel D, composed of the planks *a a* and *b b* provided with the single notches *c* and double notches *d d'*, plank *e* provided with the slot *f* and tenon *g*, and battens A, all arranged relatively one to the other, as and for the purpose hereinbefore specified.

119,048.—REVOLVING FIRE-ARM.—Charles B. Richards, Hartford, Conn., assignor to The Colt's Patent Fire-Arms Manufacturing Company.

Claim.—1. The guide-pin *p* of the pawl, in combination with the guiding-surface *q*, when arranged substantially in the manner described, for the purpose set forth.

2. The ratchet-shoe A with its wing *i*, in combination with the transverse channel in the frame, substantially as set forth.

3. The eccentric head *s* of the ejector-rod, shaped substantially as shown, in combination with the projection *v*, for the purpose explained.

119,049. — CONSTRUCTION OF PILES FOR RAILWAY RAILS. — Thomas Richardson, John William Richardson, and Adam Spencer, West Hartlepool, England.

Claim.—The arrangement of the slab *d*, bars *c*, layers *b*, of fibrous iron, and side pieces *a*, when operating together, as and for the purpose described.

119,050.—SASH-HOLDER.—James F. Rickel, Byron, Ill.

Claim.—The sash-holder described, consisting of the plate A with projections *a a'*, bolts b^1 b^1 with ends b^2 b^2 projecting through slots in the plate, and having springs *c c*, as shown, pivoted bar *d* moving in recesses *b b*, arm *d*, in combination with the racks of the sashes, as described.

119,051.—MACHINE FOR MAKING HORSE-SHOES. — Webster Roberts, Cleveland, Ohio.

Claim.—1. The vibrating beams C C^1, segments G E, and dies D F, in combination with the opening and closing-die N and reciprocating rack N', in the manner substantially as described, and for the purpose set forth.

2. The die N, consisting of two sections, forming a part of the plate L', pivoted to the bed H, in combination with the mechanism to impart to said die reciprocating motion, and with the cams R and spring O for opening and closing said die, substantially in the manner and for the purpose specified.

3. The combination of the finger T', having a segmental gear at its lower end, with the die N and rack-plate C, in the manner and for the purpose set forth.

4. The combination, with the reciprocating opening and closing-die N, of the head D', and mechanized to impart to said head the several movements, substantially as specified, and for the purpose set forth.

5. The drop F', in combination with the lever V, shear S, and head D', substantially as and for the purpose specified.

6. The flanged rollers J, in combination with the reciprocating die N and vibrating head D', in the manner and for the purpose substantially as described.

7. The combination of rectilinearly-reciprocating opening and closing female die and two rotary male dies to co-operate successively therewith, the one to mold the shoe and the other to crease and punch the shoe, thereby forming or making the said article in the manner described.

8. The movable gauge S^3 with the mechanism described to impart the desired movement to said gauge, in combination with the dies N, for the purpose substantially as described.

9. The spring O, blocks P, levers Q, provided with cams R and arms *g*, in combination with the plates L and die N, substantially as and for the purpose set forth.

10. The sleeve A', spring within said sleeve connected with the stem C^1, and head D', operated as described, in combination with the reciprocating die N, substantially as and for the purpose set forth.

11. The springs R^3 and vibrating beams C C^1, in combination with the vibrating segmental gears E G, arms M^3, and reciprocating rack N', operating substantially in the manner and for the purpose described.

119,052. — MEDICAL COMPOUND FOR THE HAIR.—Philipp Schlicher, Louisville, Ky.

Claim.—The manufacture and use of a compound for the purpose of causing the hair to grow on the human head, consisting of the ingredients in their several proportions as above described, and for the purpose herein set forth.

119,053. — MEDICAL COMPOUND FOR THE CURE OF FEVER AND AGUE.—Oscar Seidmore, Albany, N. Y.

Claim.—The medical compound for fever and ague, compounded of the several ingredients in the proportions and manner substantially as set forth.

119,054.—CHART-HOLDER. — Daniel Shryock, Hannibal, Mo.

Claim.—1. The described arrangement of rods E, eyes D, oblique wires J, and staple G, for the purpose set forth.

2. In the described combination with the above, the described mode of securing the staple G in the post.

119,055. — WINDOW-CLEANER. — George Smeaton, Brooklyn, N. Y.

Claim.—1. The combination of the frame, composed of the base and upright B, the sliding carriage F on the upright B carrying the cleaning and polishing devices, and the driving band E attached to said carriage to operate it from the base, substantially as herein described, for the purpose set forth.

2. The combination of the sliding carriage F and attached rotary polishers G G, the band E, the wheels H H, and the racks or tracks on the side of the upright B, substantially as and for the purpose herein described.

119,056.—FURNACE FOR STEAM-BOILERS.—Charles D. Smith, Chicago, Ill.

Claim.—Flues B and D, in combination with sloping false bottom C and ports E and F, the whole constructed and arranged substantially as described, for the purpose specified.

119,057. — STOP-VALVE. — August Snyder, Allegheny City, Pa.

Claim.—1. The valves A' and A'', provided with cogs *x*, in combination with pinion D and valve-stem F, as herein described, and for the purpose set forth.

2. The separating or seating pieces B' and C, suspended on the valve-stem F, in combination with the valves A' and A'', as herein described, and for the purpose set forth.

3. The valves A' and A'', provided with projections *s* for the purpose of pivoting them in the separating pieces B' and C, as herein described.

4. The arrangement of the valve-stem F, pinion D, separating pieces B' and C, and valves A' and A'' with relation to the openings *x'* in the valve-seats and valve-chamber, the whole constructed and operating in the manner hereinbefore described, and for the purpose set forth.

119,058.—OPERATING WATER-CLOSET COCK. Bennett P. Spear, Charlestown, Mass.

Claim.—The weighted arm E, provided with handle F, in combination with the quick-thread valve B of cock A, all arranged and operating substantially as described.

119,059, antedated September 16, 1871.—COMPOSITION FELTING.—Harriet N. Stimson, Lowell, Mass., administratrix of the estate of Lucius S. Stimson, deceased, assignor of one-half her right to Nelson F. Libby, same place.

Claim.—A composition felting, as described, the same consisting of a sheet, lap, or bat of animal or vegetable fibers, or their specified equivalent, saturated with a composition of oil and resin or pitch, as set forth, and earthy or mineral substance or silica, all combined substantially in the manner and for the purposes described.

119,060.—FOLDING-SEAT.—James M. Swain, Peekskill, N. Y.

Claim.—The frame C C, in combination with the jointed brace D D, pivoted arm B, and seat A, constructed as and for the purpose specified.

119,061. — LAMP-BURNER. — Alvin Taplin, Forrestville, assignor to The Bristol Brass and Clock Company, Bristol, Conn.

Claim.—The diverging ratchets C C, geared together by spur-wheels *d* at their converging ends, in combination with the inner tube A of a V or wedge-shape, the sides of which are in the plane of the axes of the ratchets, essentially as shown and described.

119,062.—ROLLING-PIN.—William Thomas, Hingham, Mass.

Claim.—As a new article of manufacture, a rolling-pin, the body of which is composed of concrete, composition, or artificial stone, substantially as herein shown and described.

119,063.—WASH-BOILER.—Joseph C. Tilton, Pittsburg, Pa.

Claim.—1. The false bottom D, having the valve H, in combination with the external tubes F F, when arranged as shown, for the purpose described.

2. The combination of the sleeve R, false bottom D, valve H, hook D, spring P, and external tubes F F with the boiler A, when arranged as shown and described.

119,064. — MACHINE FOR GRADING AND DITCHING ROADS.—George Trump, Second Fork Village, Pa., assignor to himself and George William Huntley, same place.

Claim.—The arrangement of the racks H H with their slots N, projecting eyes P P, latches J J, curved brace S, and curved iron bar T, when constructed and combined with the center draft-bar D, as herein described and set forth.

119,065, antedated September 1, 1871.—LUBRICATING LOOSE PULLEY AND JOURNAL.—Stephen Ustick, Philadelphia, Pa.

Claim.—1. A closed longitudinal oil-channel at one side of the shaft A, communicating with the journal and loose pulley or pulleys by means of suitable outlets, and with the box D or other oil-reservoir, substantially as described.

2. The combination of the tube B with the shaft A, when the oil-channel *a* is formed in the surface of the shaft or the inner surface of the tube, substantially as set forth.

3. The combination of the connecting-tube or tubes G with oil-channels *a*, as and for the purpose specified.

4. The arrangement of the fibrous material *g* in the cross-openings *a'* to convey the oil at those points to the end channels *a*, substantially as described.

5. The combination of an oil-box, D, with one or both ends of the shaft A, when its inner end forms the journal, as represented in Fig. 2, substantially as above set forth.

119,066. — PORTABLE COOKING-RANGE.—John Van, Cincinnati, Ohio.

Claim.—1. The described arrangement of rear flues H H' behind the ovens, connected at their upper portion by the breeching I, whose neck J discharges into the smoke-stack through extension *m* of the top plate.

2. The combined arrangement of rear flues and breeching H H' I, extension *m* of the top plate, and elevated back plate N to a portable cooking-range, substantially as and for the objects explained.

3. In the described combination with the rear flues H H' I and rear extension *m* of top plate, the combined back-plate guard and shelf N O o P *p*, formed and arranged as and for the purposes set forth.

4. The arrangement of detachable broiler T, bracket R, hooks Q, box U, and pipe 2.

5. The visor or broiler-door V, supported in any desired position, by means of the pinions X, curved racks Y, shaft Z, and latch 1.

119,067.—WASH-BOILER.—Henry Weidley and David Weidley, Greene Post Office, Pa.

Claim.—The arrangement and construction of the inclined deflecting cross-plates G E beneath the bevel-lipped slots *e f*, so as to cover up the under side of bottom B, except the central slot B' and tubes or pipes C, all combined and operating in the manner and for the purpose specified.

119,068.—CHURN.—Calvin S. Young, Henry Wissinger, and Thomas T. Williams, Minta, Pa.

Claim.—The combination of the cylinder G, piston-rod H, cross-piece D, uprights B, connecting-rod K, and dash I, when constructed and operating together as described.

119,069. — WASHING-MACHINE. — Peter Young and Noah Doll, Robertsville, Ohio, assignors to themselves, John Rhodes, and Frederick J. S. Wagner, same place.

Claim.—1. The levers P P, in combination with the vibrating rubber K J H, cross-bar Q, rod R, and pivoted treadle S, the several parts being arranged substantially as and for the purpose specified.

2. The sockets W having the spring Y and plungers X arranged therein, in combination with the pivoted levers P P having the vibrating rubber K J H between their upper ends, the several parts being arranged substantially as and for the purpose specified.

3. The slotted plates *h h* and springs or rubbers *e e e e*, in combination with the rubber-arms J J, and rubber H having the axial pins *k k* therein, the several parts being arranged substantially as and for the purpose specified.

4. The connecting-links M M with the cross-bar O secured between their upper ends, and with their branches L N L N attached to the ends of the cross-heads I I, substantially as and for the purpose specified.

5. The combination of the concave roller-frame F F having an elastic movement at one end, vibrating rubber K J H having an elastic movement between the rubber H and arms J J, cross-bar O, and branched arms M N L, levers P P, sockets W W with springs Y and plungers X, cross-bar Q, rod R, and pivoted treadles S, the several parts being arranged as and for the purpose specified.

119,070. — WASHING-MACHINE. — Peter Young and Noah Doll, Robertsville, Ohio, assignors to themselves, John Rhodes, and Frederick J. S. Wagner, same place.

Claim.—1. The toggle-levers K L, in combination with the rock-shaft G and rubber N, said rubber being hung on the sliding arms H H, and the several parts being arranged substantially as and for the purpose specified.

2. The cross-bar R and links Q Q, in combination with the toggle-levers K L, when arranged with respect to the cross-bar S, substantially as and for the purpose specified.

3. The combination of the rubber N, arms H H with cross-heads M M, toggle-levers K L, links Q Q, and cross-bar R, rock-shaft G, and spiral lifting-springs J J, the several parts being arranged substantially as and for the purpose specified.

119,071.—CHAIR AND CRADLE COMBINED.—Abraham Abrahams, Syracuse, N. Y.

Claim.—A cradle and chair combined, composed of the parts A, B, and C, arranged with reference to each other, and operated substantially as described.

119,072. — MASHING-TUB. — John Charles Birket, Peoria, Ill.

Claim.—1. In a mashing-tub, the chamber E provided with the semicircularly-curved pipes *a*, in combination with the hollow shaft C, joint *i*, and induction steam-pipe D, substantially as and for the purpose set forth.

2. The combination of the semicircularly-curved pipes *a* of the chamber E with blocks *b* arranged on the bottom of the tub, substantially as and for the purpose set forth.

119,073, antedated September 9, 1871.—HAT. — Abram Bogardus, Matteawan, N. Y.

Claim.—A seamless hat, cap, and bonnet, made from the skins of any animal, with the wool, hair, or natural growth remaining thereon, tanned in the usual way.

119,074. — PORTABLE WARDROBE.—Joseph P. Buckingham, Chicopee, Mass.

Claim.—The device for holding and stretching clothes, consisting of the frame A with its holes *b b*, lugs *a a*, and slots *d d*, in connection with the pins X X with their nuts *y y*, and the hook G with its upright H and disk *f*, the parts being constructed and arranged substantially as shown and described.

119,075.—TOBACCO-PIPE.—Theodore Burnham, Bridgeport, Conn.

Claim.—The bowl A, and chamber B having the passages *a* and *d*, arranged substantially as described, and combined with the cylinder D, the inner surface of which is open to the atmosphere, substantially as specified.

119,076. — LIQUID-METER. — Henry Chandler, Buffalo, N. Y.

Claim.—1. The combination, with the cylinder A, pipe b^1, and spout *a*, of the piston C C′, and valve F, substantially as hereinbefore set forth.

2. The combination, with the cylinder A, piston C C′, and valve F, of the sliding rod H, lever I, and spring K, substantially as hereinbefore set forth.

3. The combination and arrangement of the springs A A′ with the sliding rod H, spring-lever I K, valve F, piston C C′, and cylinder A, as hereinbefore set forth.

4. The combination of the spring-arm K′ L with the valve F, projection f^2, stay-rod *e*′, and piston C C′, as hereinbefore set forth.

5. The combination in a cylinder, and with the piston C C′, valve F, and induction-pipe b^1, of the hubs D D′ provided with ports *d d*′, arranged so as to operate as hereinbefore set forth.

6. The pivot-slot *f*′ in the rod *e*, arranged with the valve-shifting spring-lever I K, valve F, and sliding rod H, as hereinbefore set forth.

119,077.—SEPARATING WOOL FROM RAGS.—John F. Collins, Albany, N. Y.

Claim.—1. The process of recovering animal fiber from mixed rags, part of which have been dyed in logwood, hereinbefore described.

2. The process hereinbefore described of recovering and coloring animal fiber from rags of a mixed character, no portion of which have been dyed in logwood.

119,078.—FURNACE FOR HEATING SAWS FOR HARDENING AND TEMPERING. — Joseph Crookes, St. Louis, Mo.

Claim.—1. The adjustable rotary-bed C, constructed as described, its shaft D, bevel-gear E, pinion *e* arranged in air-chamber B′, in combination with furnace A, substantially as and for the purpose described.

2. The slide-rack H, crank-rod H′, arms h, and rack-bar I, in combination with furnace A, substantially as and for the purpose set forth.

119,079.—PARLOR-BED.—Mark Crosby, Boston, Mass.

Claim.—1. The combination of the supports *n n* with horns or projections *t t*, and bottom A with side pieces D and E, when combined and arranged with a parlor-bed which opens each way from the center, as and for the purposes substantially as hereinbefore set forth.

2. In combination with the foregoing claim the automatic pieces F F′, combined with side pieces D and E, and piece B, when all are combined and arranged with a parlor-bed which opens each way from the center, substantially in the manner as and for the purposes hereinbefore set forth.

119,080.—SOLDER.—William S. Deeds, Baltimore, Md.

Claim.—1. The combination of metallic antimony with the components of ordinary soft solder, substantially as described, for the purpose specified.

2. The combination of arseniureted lead with the components of ordinary soft solder to produce a superior solder, substantially as described, for the purpose specified.

3. The employment of the alloy of antimony, arseniureted lead, and tin as a temper to ordinary soft solder for its improvement, substantially as described, and for the purpose specified.

119,081.—NOZZLE FOR OIL-CANS.—Sharron P. Doane, San Francisco, Cal.

Claim.—1. The nozzle or spout A, slotted at *f*, and provided with the sliding cap *d* and punch *e*, substantially as and for the purpose above described.

2. The nozzle A, provided with the gauze cap or partition *b*, in combination with the sliding cap *d* and punch *e*, substantially as and for the purpose above described.

119,082.—CARRIAGE-WHEEL.—Franklin N. Draper and Aaron Danison, West Liberty, Ohio.

Claim.—The tapering metallic shells *d* and *e*, made largest at their inner ends and with flanges 2 and 3, in combination with the tapering plugs *f* and *g* inserted as specified, and the spokes set together and clamped in the manner set forth.

119,083. — MATERIAL FOR THE MANUFACTURE OF TEXTILE FABRICS.—Henry Van Phul Draper, Hannibal, Mo., assignor to James H. McConnell, Springfield, Ill.

Claim.—1. As new articles of manufacture, textile fabrics, cordage, and twine, obtained from the list of the plant *Abutilon avicennæ*, whether used alone or in combination with other substances, substantially as described.

2. The use of the list of the plant *Abutilon avicennæ* in the manufacture of textile fabrics, cordage, and twine, whether the same is used alone or in combination with other materials, substantially as set forth.

119,084.—MATERIAL FOR THE MANUFACTURE OF PAPER-PULP.—Henry V. P. Draper, Hannibal, assignor to himself, Frank Holtzclaw, John W. Hickman, Andrew B. Hopkins, and Samuel S. Boyd, St. Louis, Mo.

Claim.—1. As a new article of manufacture, a pulp suitable for the manufacture of paper, obtained from the plant *Abutilon avicennæ*, whether used alone or in combination with other fibrous substances in the manufacture of paper, substantially as described.

2. The use of the plant *Abutilon avicennæ* in the manufacture of paper, whether the same is used alone or in combination with other materials, substantially as set forth.

119,085.—DISH-WASHER.—William H. Emory, Ashburnham, Mass.

Claim.—The cloth or swab-holder A, having prongs *a a* and *b b* as constructed, and inserted in the handle B, substantially as herein shown and described, for the purposes set forth.

119,086.—TABLE-BASKET OR DISH. — John Gibson, Jr., Albany, N. Y.

Claim.—1. Mounting or supporting the table-basket or dish B on wheels, substantially as described, for the purpose specified.

2. The table-basket or dish B, constructed to be revolved upon the base A, substantially as specified and shown.

3. A table-basket or dish B, when provided with a central handle, *c*, substantially as and for the purpose set forth.

4. The receptacles *e*, *e*′, or *e*″ in combination with a table-basket or dish B, substantially as and for the purposes set forth.

119,087.—DEVICE FOR LUBRICATING RAILWAY JOURNALS. — Charles W. Harvey, Buffalo, N. Y.

Claim.—1. The combination and arrangement, with the journal and axle-box of a railroad truck, of a series of lubricating devices, each consisting of the felt G, spring I, and case H, substantially as described.

2. The partially-detached portions or wings *g* of the felt G, arranged substantially as described.

3. The arrangement, in an axle-box and with the oil-feeding devices G I H, of the blocks of felt J, substantially as hereinbefore set forth.

4. The combination and arrangement, with a series of oil-feeding devices G I H, with or without the blocks J, of the cord K, substantially as described.

5. The arrangement, in an axle-box and with the oil-feeding device G I H, of the pivoted arms L, substantially as hereinbefore set forth.

6. The guard-plate O secured to the felt G of the oil-feeding device, substantially as hereinbefore set forth.

7. The partitions F and F′, provided with openings *f* and *f*′, arranged substantially as shown and described.

119,088.—DIRECT-ACTING ENGINE.—Bradbury M. Johnson, Brooklyn, N. Y., assignor to himself and William H. M. Pye, same place.

Claim.—1. The removable valve-seat *i*, made with the respective inlet and exhaust-ports, arranged substantially as shown, for the main and secondary valves, and the cylinder that operates the main valve, substantially as set forth.

2. The cylinder *k* in the steam-chests *f* and piston *l*, in combination with the valves *o* and *g* and ports for the induction and exhaust, the parts being arranged and operating substantially as set forth.

3. The exhaust-ports *p* connected to the main exhaust *e*, and positioned in the cylinder *k* in such a manner as to be uncovered by the piston *l* as it completes its movement, substantially as and for the purposes set forth.

119,089.—WASHING-MACHINE.—Henry Elford Lea, Halfmoon Bay, Cal.

Claim.—A washing-machine having a perforated drum, C, revolving on the hollow journal *i*, in combination with the boiler F and pipes *h k*, substantially as shown and for the purposes described.

119,090.—PHOTOGRAPHIC POSING-CHAIR.—William H. Lewis, New York, N. Y., assignor to Scovill Manufacturing Company, same place.

Claim.—1. The photographic posing-chair, formed with the open or hollow back legs *b b*, in which the lower portions of the side pieces *d d* of the back slide, substantially as specified.

2. The sliding bolts *o o*, operated at the back of the chair, in combination with the rods *i i*, side pieces *d d*, and legs *b b*, substantially as set forth.

119,091. — ALLOY FOR THE MANUFACTURE OF PLOW MOLD-BOARDS.—William Magee, Jamaica, N. Y.

Claim.—The composition, consisting of the ingredients herein stated, used in such proportions as to secure the positive preponderance of copper so that this metal shall form the basis of the alloy, substantially as described, and for the purpose stated.

119,092.—COKE-OVEN.—Theodore G. Meier, St. Louis, Mo., assignor to Adolphus Meier & Co., same place.

Claim.—1. The arrangement and combination of horizontal flues C C′ and vertical flues *d d*′ to collect the gases, aid combustion, and extract heat and distribute the same to sides and bottom of the oven, substantially as and for the purpose set forth.

2. The alternate arrangement of vertical flues *d d*′, by means whereof each oven gives and receives heat and each oven can be worked separately of its neighbors, in combination with horizontal flues C C′, substantially as shown and described.

3. The trough-shaped tile B having trough *b*, substantially as set forth.

4. The trough-shaped tile E having trough *e* and vertical hole *e*′, substantially as set forth.

5. The trough-shaped tiles B and E, constructed as described, and arranged to serve as inlet to vertical flues *d d*′ or outlet to horizontal flues C C′, substantially as and for the purpose set forth.

6. The right or left skew-back tile F, having longitudinal holes *f f*′ and diagonal hole *f*″, when arranged in combination with trough-shaped tiles E

and vertical flues *d d'*, substantially as and for the purpose described.

7. The combination of pipes G G', branch pipes $g\ g^1\ g^2\ g^3$ with stop-cocks, when arranged in connection with longitudinal flues *f f'*, vertical flues *d d'*, and horizontal flues C C', substantially as shown, and for the purpose set forth.

119,093.—SUBMARINE TELEGRAPH-CABLE.—Edwin W. Newton, Franklin Grove, Ill.

Claim.—1. A telegraph-cable formed of the three parts, a conducting core of copper, an envelope of glass, or glass and other material, and an inclosing continuous iron-tube, in the manner and for the purpose described.

2. The process or method by which the glass envelope or insulator is formed on the copper wire and combined with the glass coating on the inside of the iron tube, in the manner and for the purpose described.

119,094. — BUNG AND BUNG-INSERTER.—Daniel Boone Rickey, San Francisco, Cal.

Claim.—The standard C provided with the base E, and having the hole *d* passing through its upper end, in combination with the ring *f* having the opposite inclined depressions *g* and bar *i*, substantially as and for the purpose above described.

118,095.—FUR-SET BOX.—Earle H. Smith, Bergen Heights, N. J.

Claim.—In a fur-set box, a combination of the muff and collar-compartments described, arranged within a box having an oval or like non-rectangular contour, substantially as specified.

119,096.—HOLLOW-AUGER. — James Swan, Seymour, Conn.

Claim.—In hollow augers, the arrangement of cutters in the manner described, secured by screws I upon their face, and provided with the adjusting-screws L, in the manner substantially as set forth.

119,097.—CAR-COUPLING. — James Timms and William P. Brown, Malta, Ohio.

Claim.—1. The oscillating coupling-bar J, made with arrow-heads on each end and loaded as described, in combination with the oscillating draw-heads B B, made with a flaring mouth, an oblong contracted throat, and a transverse passage or space *b*, all substantially as and for the purpose described.

2. The draw-head B made with a flaring mouth, *a*, oblong-contracted throat *a'*, and transverse space or passage *b*, in combination with the loaded lever *t*, stops *o o*, and loaded arrow-headed coupling-bar J, substantially as and for the purpose described.

3. The levers *d d* and bar *g* and the flexible attachment A, combined with the head B, and arranged substantially as described.

4. The stop N for preventing the coupling-bar turning while the draw-head is being turned, substantially as set forth.

119,098. — BREECH-LOADING FIRE-ARM.—Horace Updegraff, Fort Laramie, Wyoming Ter.

Claim.—1. The combination of the hammer D, ratcheted ring C', and pawl E with the breech-block I and lever H, substantially as described.

2. The combination of hammer D, ring C', pawl E, lever H, breech-block I, and spring *h'*, substantially as set forth.

3. In combination with the hammer D, ring C', and pawl E, provided with spur e^1, the cam or inclined way *b'* in the stock, operating as set forth.

4. The combination of the hammer D, ring C', pawl E provided with the spur e^1, and the breech-block I provided with the lip i^2 for tripping the pawl, as set forth.

119,099.—PREPARING RATTAN FOR CHAIR-SEATS.—Gardner A. Watkins, Gardner Mass.

Claim.—1. The process of strengthening and polishing strands formed from the inner wood of rattan by passing the same through rollers and subjecting them to pressure and friction.

2. The process of strengthening and polishing strands formed from the inner wood of rattan by infusing the same in cement or chemicals and subjecting them to pressure and friction.

3. The process of strengthening and forming rattan by means of pressing or rolling the same.

119,100.—PISTON-PACKING.—S. Lloyd Wiegand, Philadelphia, Pa.

Claim.—An annular jet-tube leading from one side of the piston, surrounding a jet-tube leading from the opposite side of the piston, inducing currents through each other, and thereby applying internal pressure to the packing-rings, substantially as described and shown.

119,101.—GATE.—Seymour G. Wood, Rochester, N. Y.

Claim.—1. The frame A B provided with a stop or stops, O, in combination with a vertically-folding slat gate, *a b*, and elevating-cords *d d'*, arranged to operate substantially as set forth.

2. The yielding base-board D, arranged, with relation to the gate, as and for the purposes set forth.

119,102.—GUIDE FOR SEWING-MACHINES.—Charles Armstrong, Chicago, Ill.

Claim.—The bent arm *a a'*, movable guide-plate *d*, and sliding plate *k*, all constructed and operating together substantially as and for the purposes specified.

119,103. — RAILWAY-CAR BRAKE. — Daniel Arndt and Dillingham Clark Washington, Cleveland, Ohio.

Claim.—The slotted levers D D, connected by means of the shafts or rods E E and E', in combination with the axles C C, blocks G G, chain *a*, pulley *b*, springs *d d*, and shaft H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

119,104. — EXTINGUISHING FIRE. — Jacob Autenrieth, Newark, N. J.

Claim.—1. The compound for extinguishing fires, consisting of chalk, saltpeter, sulphur, and coal-dust, compounded in the manner and about in the proportions specified.

2. A cylinder charged with a fire-extinguishing compound, as described, and having its end or ends closed by paper which is rendered combustible by being saturated or coated with a solution of niter or coal-dust, or their equivalents, as and for the purpose set forth.

3. A fire-extinguishing compound, consisting of coal-dust, sulphur, saltpeter, and chalk, arranged within a portable cylinder having its ends closed with paper rendered combustible by coating the same with a solution of coal-dust, niter, or sulphur, or their equivalents, as and for the purpose set forth.

119,105.—STAIR-PAD.—Edward H. Bailey, Brooklyn, N. Y.

Claim.—In combination with outer cloth case C and inclosed batting B the intermediate paper layers A impregnated with odor of sandal-wood, as set forth, to form a moth-excluding pad for stair or other carpets.

119,106.—IRON RUNNING-GEAR FOR WAGONS.—John Ball, Sr., Canton, Ohio.

Claim.—1. The circular bound C D E, composed of the circular hoop C, circular pieces D E with tongue-ends *d d e e*, bent tongue-plates *l m l m* united by clamping-bolts, plates, and cross-pieces, as described, the several parts being constructed and arranged substantially as and for the purpose herein specified.

2. The straight axle-piece B and arched axle piece A, in combination with the bent-iron support J and circular bound C D E, constructed as described, said axle pieces and bound being united by clamping-bolts I I, with intervening filling-blocks F F, and the several parts being constructed and arranged substantially as specified.

3. The front bolster K L, consisting of the bed-plate L, inverted arch-plate K, and bent-iron support *f'*, said bed and arch-plates being firmly united at their ends, substantially as and for the purpose specified.

4. The bolster-standard *i j k*, consisting of the base-plate *i* having the upright leg *j* and inclined brace-leg *k* bent up at the ends thereof, said legs being united at their upper ends, substantially as and for the purpose specified.

5. The trussed reach R S R S, consisting of the four bars R S R S arranged in pairs and having their front ends R' R' placed parallel and at a short distance from each other, said front ends being connected by bent face-plates U U and cross pieces *r s r s*, and the several parts being arranged and combined substantially as specified.

6. The tension-rods V V, in combination with the trussed reach R S R S and the rear axle M N, the several parts being arranged and connected substantially as and for the purpose specified.

7. The center reach T T, consisting of two plate-bars placed one above the other and united as described, in combination with the trussed reach R S R S having the parallel front ends R' R', substantially as and for the purpose specified.

8. The combination of the straight axle piece M, blocks I I I, arched axle piece N, plate-bar bolster Q, end bent-iron supports H' H', and bent-iron center support P, the several parts being arranged and connected substantially as and for the purpose specified.

9. The axle-spindle *g a b h*, formed by drawing out and uniting the axle pieces A B, and combining therewith the skein pieces G H, substantially as specified.

10. The combination of the cast-iron hub W, wrought-iron spokes X X with shoulders *x x* formed thereon, and felly-rings Y Y formed of plate bar-iron bent edgewise, the several parts being arranged and connected substantially as specified.

11. The filling piece *u* with bent end lips 23 23, in combination with the felly-ring Y Y, formed as described, and the tire Z, said tire and filling piece being connected by one or more bolts, *y*, with intervening thimbles, and the several parts being arranged substantially as specified.

12. The herein-described wheel W X Y Y Z, consisting of the cast-iron hub W, wrought-iron spokes X with shoulders *x x* thereon, felly-rings Y Y formed as described, filling pieces *u*, and tire Z, the several parts being constructed, arranged, and connected substantially as and for the purpose specified.

13. The double-tree *v w w*, consisting of the broad top plate *v*, edge plates *w w*, bent center plate *w'*, and end blocks *v' v'*, the several parts being arranged and connected substantially as and for the purpose herein specified.

119,107. — MACHINE FOR PULPING WOOD FOR PAPER-STOCK, &c. — Benjamin F. Barker, Curtisville, Mass.

Claim. — 1. The grindstone C of a wood-pulp machine, provided with a slightly-inclined grinding-edge, substantially as and for the purpose herein shown and described.

2. The plate D, affixed to the bottom of the grindstone and projecting beyond the circumference of the same, to constitute a rotating bottom of the annular chamber in which the wood is placed, as set forth.

3. The wedge-shaped blocks F, made adjustable, as set forth, and applied to the case E to crowd the wood against the stone to be ground, as specified.

4. The plate H, having the hook *d* which forms the feed-chamber over the plate D, as specified.

5. The cylinder L, suspended above the grindstone C, to feed wood to the upper surface of the same, in combination with the shell E, in which wood is fed to the circumference of the stone, as specified.

119,108.—HARVESTER-CUTTER GRINDER.—Joseph P. Barker, Vienna, Ohio.

Claim.—The springs K, guards or blocks F, and roller G, as arranged, in combination with the head D, frame C, and bar A, substantially in the manner as described, and for the purpose set forth.

119,109.—WASH-BOILER.—Joseph W. Bates and Mary A. Bates, St. Paul, Minn.

Claim.—The within-described wash-boiler, consisting of the copper and tin sections A B joined together, as shown, tubes D D, faucet E, and the removable rim G perforated and provided with the cords I I, and the funnel H, all constructed to operate substantially as described.

119,110.—GATE.—Julius S. Benedict, Bedford, Ohio.

Claim.—The construction and arrangement of the section A, provided with the extension B, eye C, and incline plane *a*, in combination with section D having an incline plane corresponding with the plane *a*, guides F G, arms J, roller I, and pintle E, operating conjointly, as and for the purpose substantially set forth.

119,111.—PHOTOGRAPHER'S CURTAIN.—Lyman G. Bigelow, Grand Rapids, Mich.

Claim.—The preparation of cheap cloth in such manner that it may, both as to its luster and folds, resemble silk or other rich fabrics, to be used in place of them, and answer all the purposes for which curtains are required in photography, substantially as described in the foregoing specification.

119,112. — HARNESS-SADDLE. — Valentine Borst, New York, N. Y.

Claim.—The skeleton-frame B, depressions C, groove M, removable braces J J, lugs K K, bolts L, and independent wooden strips A, all constructed and arranged as herein shown and described.

119,113. — DOVETAILING-MACHINE. — William G. Branch, James A. Hazeltine, Walter Branch, and Charles F. Branch, Pomeroy, Ohio.

Claim.—1. The arrangement of the frame-work D, slides E E, brace-work F, rod *b*, spring *d*, and treadle N, substantially as shown and described, and for the purposes herein set forth.

2. In combination with the frame D provided with slides E E and operated by means of the treadle N, rod *b*, and spring *d*, the corner boxes C C for guiding the slides E E, when said corner boxes are arranged substantially as shown and described, so that they may be adjusted to compensate for wear, as herein set forth.

3. The table J provided with stop K, in combination with the adjustable stops G G, frame M, sliding-nut *f*, screw *e*, adjustable gauge I, and set-screw O, all constructed and arranged substantially as and for the purposes herein set forth.

119,114.—LIQUID-MEASURING CAN.—Christopher Martin Bridges, Leon, Iowa.

Claim.—In combination with driving-pulley G, the notched disk J, pawl K, disk L, nut M, and spring N, arranged to operate in the manner specified.

119,115. — MAGAZINE FIRE-ARM.—Andrew Burgess, New York, N. Y.

Claim.—1. The combination and arrangement of the hammer D, tumbler E, link I, and breech-block C, substantially as and for the purposes described.

2. The pusher T, breech-block C, spring *s*, trig-

ger J, and lever v, arranged and operating as described.

3. The pusher T, arranged to operate the spring S and thereby release the cartridge from the magazine, as described.

4. The breech-block C and bent lever v, arranged to operate as specified, for the purpose of moving the cartridge laterally.

5. The combination of trigger J' and pusher T u, arranged to operate as specified.

119,116. — CONSTRUCTION OF BRACKETS, SHELVES, &c.—Naroy G. Burleigh, Boston, Mass., assignor to himself, Charles A. Jackson, and William H. Eaton, same place.

Claim.—The arrangement of the screws B C in the edge of a shelf relatively to corresponding slots A A in the side brackets, by which the shelf is to be received and supported, in the manner and for the purpose specified.

119,117.—COUPLING-HOOK FOR COAL-CARS. Frank Bush, Boonton, N. J.

Claim.—1. The inner hook c^2, formed upon the shank of the coupling-hook C in such a manner that its point may enter a hole in the plate D, substantially as herein shown and described, and for the purpose set forth.

2. The ring E, in combination with the links F and the hooks c^1 c^2 of the coupling-hook C, substantially as herein shown and described, and for the purpose set forth.

119,118. — WAGON-SEAT STANDARD.—William Campbell, Belleville, Mich.

Claim.—1. The construction and arrangement of the dovetail-channeled plate E, yoke E^1, dog G, and ratchet-faced standard F, as and for the purpose set forth.

2. The plate E cast with the yoke E^1, arms E^2, terminating in hooks E^3, and the lower hooked arms E^4, in combination with the strips B C, plates D, dog G, and ratchet-faced standard F, as and for the purpose set forth.

119,119.—WATER-ELEVATOR.—James Curts, Ottumwa, Iowa.

Claim.—1. The combination of the spout D, incline G, sides E, inclined slats H, tripping-bar I, and one or more pulleys, J, all constructed and arranged within a single frame, substantially as and for the purposes herein set forth.

2. In a water-elevator, the arrangement upon one shaft of the windlass K, smooth wheel L, and ratchet-wheel M, in combination with the hinged pawl O, brake P, and bar R, all constructed and arranged substantially as and for the purposes herein set forth.

119,120. — HORSE HAY-FORK. — Jacob H. Carothers, Pine Grove Mills, Pa.

Claim.—The improved horse hay-fork herein described, consisting of the S-shaped claws or prongs A a' B, slotted link C, roller C', ratchet-bar D, and trip-lever F, all constructed and arranged as specified.

119,121. — TUBE-EXPANDER. — Charles H. Clark, Laramie, Wyoming Ter.

Claim.—1. The combination of tapering screw A, rolls B, and frame C, constructed and operating as and for the purpose specified.

2. In combination with rolls B having journals b^1 b^1, screw A, and frame C, the spring-bands D, arranged as and for the purpose specified.

3. In combination with tapering screw A, frame C, and rolls B, the concave rolls G, operated as and for the purpose specified.

119,122.—CAR-DUMPING APPARATUS.—Ezra Cockill, Llewellyn, Pa.

Claim.—1. The cradle J, pivoted to a scaffold having inclined ways B, and arranged to automatically raise and tilt the car, as specified.

2. The blocks I, in combination with the cradle J and car E, substantially as specified.

3. The pendent gate L, bar m, latches n, pins o, and lugs A, arranged and operating in connection with the car E, substantially as set forth.

119,123.—MACHINE FOR DOUBLE SEAMING TINWARE.—McDuff Cohen and Robert M. Edmonds, Charleston, S. C.

Claim.—The double-grooved disk D, the double-beveled disk E, and the horizontal disk B, constructed and arranged to operate together without change or substitution, in the manner described.

119,124. — RAILWAY-SWITCH STAND AND LOCK.—Alonzo W. Cram, St. Louis, Mo.

Claim.—1. The single flanged and notched guide-bar C D d, substantially as and for the purpose set forth.

2. In combination with the guide-bar C D d, the inclined raised portions c, for the purpose described.

3. The drop-bolt, consisting essentially of the case H, bolt I, tumblers J and M, spring K, and strap F f f', substantially as set forth.

119,125.—WASHING-MACHINE. — Nathaniel Crockett, Portland, Me.

Claim.—The within described washing-machine, consisting of the box A with interior concave bottom B, standards C, shaft D, arms E, rubbers G, hinged perforated boards H, springs a, pitmen I, and crank-shaft J, all constructed and arranged to operate substantially as and for the purposes herein set forth.

119,126.—WINDLASS. — William P. Davis, Honeoye Falls, N. Y.

Claim.—The crank-arm F, provided with the dog e and brake-ring G, in combination with the ratchet-wheel E and fulcrum-arm e, arranged and operating conjointly with the cap H and segmental lugs i i, substantially as described, for the purpose specified.

119,127.—LEADER-PIPE COUPLING. — John Demarest, Mott Haven, N. Y., assignor to himself and Jordan L. Mott, same place.

Claim.—The improved leader-pipe coupling, consisting of the two parts A B, constructed, arranged, and attached together substantially as specified.

119,128.—BED AND TABLE-FAN.—William H. Downs, Jeffersonville, Ind.

Claim.—The wheel D, provided with a circumferential zigzag flange, b, in combination with one or more sets of rollers, d, arms e, shafts h, and adjustable fans E, all constructed and arranged substantially as shown and described, and operated by a cog-gearing, B, run either by a spring or weight, as herein set forth.

119,129.—RAILWAY-CAR SPRING.—George Elliot, St. Louis, Mo.

Claim.—The combination and arrangement of the case or box A, cap or cover C, and follower E with the diamond-formed leaves F G H, &c., when the said leaves have corresponding teats f and dimples e, all substantially as described.

119,130. — HARVESTER-RAKE. — Richard Emerson, Sycamore, Ill.

Claim.—The guide-frame, rake, and rake-truck or carriage, substantially as described, in combination with the endless chain, grain-platform, incline, and grain-trough or receptacle, as shown and set forth.

119,131.—BOOT AND SHOE-TREE.—Thomas R. Evans, Philadelphia, Pa.

Claim.—The combination, in a revolving shoe-tree, of the notched wheel G and a lever, H, having a projection adapted to notches in the wheel and hung adjacent to the wheel, as described, so that it can be brought against the latter or turned back and retained free from contact therewith, for the purpose set forth.

119,132. — SASH-HOLDER. — Alexander C. Faivre, Meadville, Pa.

Claim.—The combination of the bed-piece B, slotted as shown, eccentric A, posts E and F, spring C working in the recess in the rear of the bed-plate, and the pitman D, all constructed as described and shown, and for the purpose set forth.

119,133.—CARPENTER'S PLANE.—Henry N. Frederick, Hancock, N. Y.

Claim.—The toothed segment C pivoted to the plane A, and combined with the iron B, which has the toothed portion a, substantially as herein shown and described.

119,134. — MILLSTONE DRESS. — Manasseh Fries, Philadelphia, Pa., assignor of one-half his right to Kreider, Zindgraf & Co., same place.

Claim.—The millstone dress, consisting of the bunches or gangs of adjacent furrows a, with the intervening land or flouring surfaces b, when arranged with relation to each other, in the manner and for the purpose shown and described.

119,135.—APPARATUS FOR THE MANUFACTURE OF COAL-GAS. — William Gibson, Cambridge, assignor to the American Coal-Gaslight Improvement Company, Boston, Mass.

Claim.—1. An automatic dip-pipe seal and valve combined in the same chest, the gate or plug of the valve being arranged so as to close the direct passage only, without at any time closing the dip-pipe, for the purpose as fully set forth and described.

2. The construction and arrangement of the plug g, as described, with the upper side s curved sloping toward the dip-pipe k, in a manner and for the purpose set forth.

3. The soft-metal guides h h and n, in combination with a sliding plug, g, for the purpose as herein fully set forth and described.

119,136. — APPARATUS FOR EVAPORATING BRINE. — Samuel D. Gilson, Syracuse, N. Y.

Claim.—1. The deposit-chamber D within the tank of a closed-chamber, A, substantially as set forth.

2. The doors M, or equivalent port or entrance, for access to the deposit-chamber, as set forth.

3. The revolving cylinder B, knife E, and chamber D, combined and operating substantially as described.

4. The pipes K L, cylinder B, knife E, chamber D, and cover F, combined and operating substantially as described.

119,137.—ELECTRO-MAGNETIC SIGNAL FOR SWITCHES AND DRAW-BRIDGES.—Thomas S. Hall, West Meriden, Conn.

Claim.—1. The arrangement of a key, K, connected by a rod, b, to the switch-rails, and by wires 11, 12, 14, and 15 to the signal-house D and alarm-bell F, substantially in the manner herein shown and described.

2. The arrangement of a key, w, controlled by the lock-bolt H of a draw-bridge, and connected by wires 11, 12, 14, and 15 with a signal-house D and alarm-bell F, substantially as herein set forth.

119,138.—TRACTION-ENGINE. — Melvin A. Halsted, San Francisco, Cal.

Claim.—1. In a traction-engine the division of the floor on a segment line, substantially as and for the purpose described.

2. In combination with a fore carriage, constructed as stated in the first claim, the steering-gear.

3. The combination of the oscillating engines, two-crank shaft, pinions, and independent wheels, substantially as described.

4. The combination of the clutches L L, pinions K K, and independent driving-wheels, substantially as described and represented.

5. The combination of the divided floor, driving-shafts, oscillating-engines, steering-gear, disconnected driving-wheels, and clutch mechanism.

119,139.—SAWING-MACHINE.—Christian O. Hansen, Ferguson, Mo.

Claim.—The vibrating saw-frame D, driving-shaft A, notched plate H, and catch-lever I, combined and arranged together and with the table, all substantially as specified.

119,140.—COTTON-GIN ATTACHMENT.—Hiram P. Harrell, Roxobel, N. C.

Claim.—The cotton-gin attachment, formed of the rollers C and D, arranged for crushing cotton-seed, substantially as herein shown and described.

119,141.—GATE.—William Hathaway, Northbridge, Mass.

Claim.—The arrangement of the cap J, ear K, pintle L, cap M, catch N, and gate C, when constructed substantially as and for the purposes described.

119,142. — CORN-PLANTER. — Lysander L. Haworth, Decatur, Ill., assignor to himself, Mahlon Haworth, George D. Haworth, and James W. Haworth.

Claim.—The metallic stop B, constructed substantially as and for the purpose hereinbefore set forth.

119,143.—TILTING-CHAIR.—Samuel S. Hayward, Norwich, N. Y.

Claim.—1. The construction and relative arrangement of the hinge-bars G and H, spring K, the chair-seat A, and the supporting-stool, substantially as and for the purpose specified.

2. The adjustable hinge-bars G and H, constructed substantially as described, and provided with the nuts g'' and h'', respectively, and combined with the chair-seat and supporting-stool, substantially as and for the purpose shown.

119,144. — MEDICAL COMPOUND OR LINIMENT FOR RHEUMATISM, &c.—John W. Helms, Bainbridge, Ga.

Claim.—A liniment prepared of the ingredients in about the proportions herein set forth.

119,145. — BREECH-LOADING FIRE-ARM.—Alexander Henry, Edinburgh, North Britain.

Claim.—1. The general arrangement and combination of parts constituting the breech action, shown at Figs. 1 and 2, Sheets 1 and 2; at Figs 1 and 2, Sheet 3; and at Figs. 1, 2, and 3, Sheet 4 of the drawing, by which the several actions of raising or lowering the breech, extracting the spent cartridge-case, and of "cocking" the hammer or "striker," are effected by the actuating of one lever, part of which is situated on the outside of the lock-casing, substantially as hereinbefore described.

2. The actuating a vertically-sliding breech-piece by a lever contained within the lock-casing, and moved radially in a vertical plane by means of another lever centered on the axis of the tumbler-shaft and extending below the body of the fire-arm, as hereinbefore described and shown at Figs. 1 and 2, Sheet 1; at Fig. 2, Sheet 2; at Figs. 1 and 2, Sheet 3; and at Figs. 1, 2, and 3, Sheet 4; or by means of a lever situated at the side of the fire-

arm, as shown in dotted lines at K, Figs 1 and 2, Sheet 4 of the drawing, or any mere modification thereof.

3. The compound levers, constructed and arranged substantially as herein described, for indicating whether the hammer or striker is half or full-cocked, and serving as levers for half or full cocking or bolting the said hammer or striker, as hereinbefore described, or any mere modification thereof.

119,146.—MELON-SHAPED MOLD.—Charles Hodgetts, Brooklyn, N. Y., assignor to E. Ketcham & Co., New York city.

Claim.—The melon-shaped mold formed from one sheet of metal, substantially in the manner herein described.

119,147.—URINAL FOR RAILROAD CARS.—James L. Howard, Hartford, Conn.

Claim.—1. The combination of the flue E with the basin A and the tubes B and C, substantially as hereinbefore set forth.

2. The combination of the hood D, basin A, discharge-tube B, and ventilating-tube C, substantially as hereinbefore set forth.

3. The combination of the basin A, hood D, flue E, and the tubes B and C, substantially as hereinbefore set forth.

119,148.—PROCESS OF POLISHING COFFEE. George Whitney Hungerford, Chicago, Ill.

Claim.—The process herein described of polishing coffee by means of the revolving drum and gum arabic, applied as set forth.

119,149.—MACHINE FOR CLEANING COFFEE, GRAIN, &c.—George Whitney Hungerford, Chicago, Ill.

Claim.—1. The herein-described machine for cleaning coffee, &c., consisting of the bodies or cases B and D having the passages L and K and spouts I and J, and the fan C, all arranged to operate substantially as described.

3. The arrangement of the valve M, hinged deflector N, and the fan C with its adjustable deflecting-plates O O, all as herein described.

119,150.—LATERAL-MOTION CENTER-PIN FOR RAILWAY TRUCKS.—Robert B. Jewell, Dunkirk, N. Y.

Claim.—The improved lateral-motion center-pin herein shown and described, having a member composed of base B and cap C, separated by corrugated rollers D, and constructed with recess *z* with depressions *y* and corrugations *x* to receive the said rollers, or provided with an equivalent thereof, substantially as specified, for the purpose set forth.

119,151.—CLAMP FOR MAKING PICTURE-FRAMES.—Leonard A. Johnson, Candor, N. Y., assignor to himself and John O. Frost, same place.

Claim.—1. The pivoted plates or frames B B, provided with the movable self-adjusting corner pieces C, which clamp the parts of the picture-frame at the corners, substantially as and for the purpose herein shown and described.

2. The combination of the ropes D D, blocks E, and adjustable lever F with the corner pieces C and pivoted plates B, all arranged as specified.

3. The corner pieces C, provided with the bottoms *b* and projections *f*, substantially as and for the purpose specified.

119,152.—POTATO-DIGGER.—Franklin Jones, Terre Haute, Ill.

Claim.—The arrangement of crank-shaft B *b'*, fork D F, and potato-receptacles J J upon wheels C C, as and for the purpose specified.

119,153.—SPRING FOR MATTRESS, &c.—William B. Judson, Poughkeepsie, N. Y.

Claim.—The combination, with the springs A A, of the straps B and C C, metal plates D D, and rivets *a a*, all constructed and arranged substantially as and for the purposes herein set forth.

119,154.—INK FOR PRINTING.—Julius Kircher, New York, N. Y.

Claim.—A printing-ink composed of the ingredients in any desired proportions, and having for its basis common iron, as a new combination of matter, substantially as described and set forth.

119,155.—SCREW-PROPELLER.—Mathias Kolb, New York, N. Y.

Claim.—The combination, in the construction of screw-propellers, of the following three characteristic devices: First, that they are incased. Second, that they are but partly submerged. Third, that their thread or threads are produced to an extent each that is not smaller than one-third of a turn and not larger than the extent described in section 6 of my specification.

119,156.—METAL-PLANING MACHINE.—Martin Kremser, Indianapolis, Ind.

Claim.—In combination with the upright posts of a metal planer, the slides *h h*, screws *m m*, frame *b c d e*, screw *o*, and cross-head *a*, substantially as and for the purpose described.

119,157.—GRAPPLE.—Charles La Dow, South Galway, N. Y.

Claim.—1. The grapple herein described, having the swivel C constructed with the slotted end to receive the pivot *a*, substantially as described.

2. In a grappling device, the pin D having the slotted eye *d*, and pole E having the stud *d'*, in combination with the jaws A A' and swivel C, as and for the purpose specified.

119,158.—CURTAIN-FIXTURE.—Joshua D. Legg, Long Eddy, N. Y.

Claim.—The curtain D, attached to the roller A, by means of the long tapes or cords F and E, in the manner herein shown and described, whereby it may be doubled or folded upon itself so as to cover a part of the window, or extended to cover the whole thereof, as set forth.

119,159.—WINDMILL.—Isaac Lehmer, Lima, Ind.

Claim.—The combination of the slide-rods C, stationary rods E, pivoted blocks or studs F, sliding wheel G, and springs H, or equivalent, with each other, and with the fans or wings B and shaft A, substantially as herein shown and described, and for the purposes set forth.

119,160.—MACHINE FOR ROLLING METALS. Abraham Liemann, Munich, Germany.

Claim.—The helical rollers A B, constructed substantially as shown and described, for the purpose of drawing out and thinning metal plates.

119,161.—FIRE-ESCAPE LADDER.—Henry Luckenbach and George Luckenbach, Philadelphia, Pa., assignors to William F. Warburton, same place.

Claim.—1. In combination with the upper round and its projection *h* the chain-belt, suspended from the bar by an eye connected thereto at right angles, as shown and described.

2. The eyes connected to the lower round of the said ladder and adapted to receive the straps, as and for the purpose described.

3. The combination of the ladder, constructed as described, and the independent hooks *f f* connected by chains and swivel-joints to the upper end of the ladder, as specified.

119,162.—CHILD'S CARRIAGE.—Herman Lutz, New York, N. Y.

Claim.—1. A folding carriage, constructed substantially as herein described.

2. The combination of the handle E with the foot-rest, the back-rest, and the seat of the carriage, substantially in the manner set forth, so that the handle serves to retain the several sections of the carriage in the proper relation toward each other.

3. The sectional push-handle E, in combination with a folding carriage, substantially as described.

4. The combination of the straps *f* with the foot-rest, the back-rest, and the handle E, substantially as set forth.

5. The loops *k l* on the foot-rest and on the back-rest or head-rest, respectively, substantially as described.

119,163.—PLANING-MACHINE.—George H. Mansfield, Concord, N. H.

Claim.—The rack D and pinion C, in combination with the elastic bearings E, substantially as and for the purposes specified.

119,164.—TRANSMITTING POWER.—Obadiah Marland, Boston, Mass.

Claim.—An engine actuated by the pressure of atmospheric air working through the engine into a vacuum or partial vacuum, substantially as described.

119,165.—PROVISION AND MILK-SAFE.—Benjamin H. Martin, Ann Arbor, Mich., assignor to himself and Oliver M. Martin, same place.

Claim.—1. The construction and arrangement of the rotative-standard D, having the gains *a* cut in its faces, and the rack-bars F secured therein by the latch-plates *d*, as described.

2. In milk and provision-safes, the swinging table I, hinged to the door-jamb by the rod J, as and for the purpose set forth.

3. A milk-safe, A A' B C, constructed as herein described, when provided with the rotative standard D, cups E E', rack-bars F, and latch-plates *d*, as herein shown and specified.

119,166.—CARRIAGE-TOP.—Alexander McKenzie, Westminster, England.

Claim.—The combination of the head-joint A with the gearing and spring E, all arranged substantially as herein shown and described.

119,167.—COMPOSITION FOR COATING THE OUTSIDE OF BUILDINGS.—Jacob Müller, Newark, N. J.

Claim.—A compound for the outside coating of buildings, made as herein described.

119,168.—FUR-BOX.—Silas C. Nichols, Buffalo, N. Y., assignor of one-half his right to Charles N. Tyler, same place.

Claim.—A fur-box, composed of a removable tubular box, B, open at both ends, when used in connection with an outer box, A, in the manner and for the purpose set forth.

119,169.—CULINARY-STEAMER.—John S. Ogden, Johnstown, Pa.

Claim.—The culinary-steamer, consisting of the flanged channel-vessel A, the steam-cylinder B with perforated concave bottom, and the upper cylinder E with flaring perforated pan F, substantially as specified.

119,170.—HARVESTER-CUTTER.—William James Oxer, Williamsport, Ind.

Claim.—The combination of a leger-plate A with disk *a* and projections *a' a'*, and the guard B with recess *b* and openings *b' b'*, the section and guard being joined together by means of a single screw, *d*, all substantially as and for the purposes herein set forth.

119,171, antedated September 16, 1871.—LUBRICATOR FOR PICKER-SPINDLE IN LOOMS.—Thomas Parker, Shelby, N. C.

Claim.—The tubular screw E, enlarged at F, arranged in the top of picker C and above the spindle B, for the purpose of allowing a lubricating-wick, D, to be applied in the manner specified.

119,172.—HARVESTER.—Charles J. C. Petersen, Port Chester, N. Y.

Claim.—1. The main gear-wheel *k* in its relation to the driving-wheel *i* and piece *l*, and constructed and operated as herein recited.

2. The stationary shaft *w*, with the wheels and pinions and clutch thereon, arranged and operating as herein set forth.

3. The side frame *x* with the coupling-bar *f'* attached thereto, and the lever *e'*, having the top *e''*, as arranged, for the purpose of setting the sickle-bar at different angles against the grass, and for holding the cutting apparatus firmly in its place, as described.

4. The track-clearer *f''*, in combination with the adjustable divider *i''* and finger-bar, the parts being constructed and connected as described.

5. The arrangement of the oil-receptacle in its relation to the finger-bar and the pieces under the cutter-bar, as described.

119,173.—DRILL-CHUCK.—Pompeius Philippi, Beardstown, Ill.

Claim.—The chuck B having lug G thereon, and the cap D having a corresponding but larger recess therein, adapted to allow a slight and limited lateral play to said chuck, as and for the purpose described.

119,174.—FAN-MILL.—Alexander Plymate, administrator of Franklin H. Plymate, deceased, Garden City, Minn.

Claim.—The feed-board *h'*, sieves L, and two-part shoe H I, constructed and arranged in a fanning-mill, as and for the purpose specified.

119,175.—GALVANIC BATTERY.—Emile Prevost, New York, N. Y.

Claim.—1. In a galvanic battery, the combination of a carbon-cup with a conical zinc element, substantially as set forth.

2. The collar *a*, at or near the top of the carbon-cup C and opposite the top edge of the conical zinc element B, substantially as described.

119,176.—ELECTRO-MAGNET.—Emile Prevost, New York, N. Y.

Claim.—The process, substantially as above described, for treating and preparing bars for electro-magnets.

119,177.—MAGNETIC SCISSORS.—Emile Prevost and Adrien Rablat, New York, N. Y.

Claim.—As a new article of manufacture, the magnetized scissors herein described.

119,178.—RAILWAY CATTLE-GATE.—William A. Pugh and James F. Bigger, Rushville, Ind.

Claim.—The combination and arrangement of the platforms A operating by sliding contact, guards B, side pieces C, and oblique stops D, constituting an automatically rising-and-falling cattle-guard for railroads and other purposes, and operating substantially as described.

119,179.—MEDICAL COMPOUND OR LINIMENT.—Thomas B. Randell, New York, N. Y.

Claim.—The composition made of the ingredients, substantially as and for the purposes herein specified.

119,180.—Shutter-Fastener.—Edward F. Reed and John C. Grundy, Chelsea, Mass.

Claim.—The operating arm *m* upon the plate *e* of the sliding rod *d*, head *b*, and coiled spring *g*, in combination with the case *f* formed with the open seats or slots, as at *i*, all constructed and arranged as and for the purpose set forth.

119,181. — Corn-Harvester. — Albert F. Roberts, Lexington, Ky.

Claim.—1. The compound lever R, as described and shown, consisting of the bar *r'* and the slides *r r* provided with the pins *s s*, in combination with the springs *o o* and wheels *n n*, for the purposes set forth.

2. The wheels *n n* upon the shafts of the revolving tables, constructed as described, with the notches *t t* in their collars, in combination with the pins *u u* upon the frame I and springs *o o*, for the uses and purposes shown and described.

119,182.—Puddling and other Furnaces. Anthony Pollok, Washington, D. C., administrator of James Russell, deceased.

Claim.—The combination, with the said furnaces, of one or more vertical screens or protecting plates, cooled by means of spray or jets of water, substantially in the manner described and illustrated.

119,183.—Thill-Coupling. — Truman H. Ryder, Mentor, Ohio.

Claim.—The combination of plate B having hook C, spring G having finger-hold H, and inclined-head or key F with bolt D in ears on clip E, in the manner and for the purpose described.

119,184.—Attachment for Piano-Pedals. Sigmund Schoenbrun, New York, N. Y.

Claim.—The bar A formed with the slot C, and having one end working in guides F and the other resting on the treadle B, as described, in combination with the sliding foot-piece D and set-screw E, substantially as and for the purpose set forth.

119,185. — Feed-Water Apparatus for Steam-Boilers. — William C. Selden, Brooklyn, N. Y.

Claim.—The method of purifying the water and rendering it fit for reuse previous to its return to the boiler, substantially as herein set forth.

119,186.—Treating Tarred Rope, Cordage, and the like, for the Manufacture of Paper-Stock, &c.—Charles F. A. Simonin, Philadelphia, Pa., assignor to William Adamson, same place.

Claim.—Subjecting tarred rope, cordage, &c., to the action of hydrocarbon vapors, substantially as and for the purpose set forth.

119,187.—Process for Treating Textile Fabrics with Hydrocarbons.—Charles F. A. Simonin, Philadelphia, Pa., assignor to William Adamson, same place.

Claim.—1. The process, substantially as described, of subjecting textile fabrics to hydrocarbon vapors, for the purpose specified.

2. The combination of a vessel to which hydrocarbon vapors are admitted, or in which they are generated, with a system of rollers or their equivalents, by which fabrics can be caused to traverse through the vessel, substantially as described.

3. The combination of a vessel to which hydrocarbon vapors are admitted, or in which they are generated, with slats or their equivalents for holding the fabrics, as herein set forth.

119,188.—Process and Apparatus for Extracting Fatty Substances.—Charles F. A. Simonin, Philadelphia, Pa., assignor to William Adamson, same place.

Claim.—1. The within-described process of extracting fatty and oily matters by subjecting the materials to be treated to a downward current of liquid hydrocarbon combined with an upward current of hydrocarbon vapor.

2. The combination, with an extracting-still, of a cold-water reservoir, H, by which a portion of the vapor is condensed and directed onto the material.

3. A vaporizer and extractor comprised in one vessel, in combination with a condensing-tank, L, and a coil or worm communicating with the vessel, substantially as set forth.

4. The vapor-pipe M and branch pipe N, both pipes communicating with the vessel and the worm, as and for the purpose set forth.

5. The combination of the vaporising and extracting vessel, the condenser K and second condenser R, and communicating pipes.

119,189. — Filtering-Cistern. — John Q. Simonson, Graniteville, N. Y.

Claim.—The within-described stationary filter B, having a passage, *b'*, for the water through the partition *b*, elevated above the base, as shown, so as to leave pockets below the level of the communicating passage or passages for the collection of sediment, and having the filtering material in a layer or layers, M, in the middle height, arranged and operating as herein specified.

119,190. — Boiler Fire Extinguisher.—Thomas R. Sinclaire, New York, N. Y.

Claim.—The apparatus, arranged substantially as herein described, whereby steam in a boiler causes water to flow from the boiler to the furnace whenever the pressure in the boiler is sufficient to raise the safety water-valve that regulates such flow.

119,191.—Clothes-Drier.—Charles Francis Smith, Aurora, and Augustus Haerther, Chicago, Ill.

Claim.—A clothes-rack composed of two brackets, A B C D E H, when combined with removable rods J J J, &c., and arranged to fold up and hold the rods in place, as and for the purpose set forth.

119,192. — Gang-Plow. — Hoell B. Smith, Tremont, Ill.

Claim.—1. In three-horse plows, the beams M M, combined with draft-bar and block O P having long upper double-tree clevis o^1 and short lower middle-horse single-tree clevis o^2, for the purpose of enabling the middle horse to walk in the furrow, one side horse on the land, and the other on the plowed ground.

2. The vibratory guard V pivoted to the axle and applied to the beams, as specified.

119,193.—Churn.—Thomas C. Smith and Norton L. Francis, Oquawka, Ill.

Claim.—The cones C C, made with an escape at their apexes as well as with passages *c c* in their sides, applied to a vertical revolving shaft which is arranged in a rectangular box, all in the manner described and shown.

119,194.—Water-Wheel Case.—William H. Snyder, Phelps, N. Y.

Claim.—A water-wheel embracing the exterior casing, provided at its lower part with a series of angular flanges, D, independently connected and removable at will, and the interior casing provided with the chutes B, between which the flanges are arranged to control the flow of the water to the wheel, substantially as set forth.

119,195.—Press for Pressing Yarn, &c.—Thomas Stibbs, Wooster, Ohio.

Claim.—1. The open body of the within-described press, consisting of the platform *a*, the uprights or ribs *b b' c c'*, the hold-fasts or hooks *i i*, and the horizontal arms or ways *d d*, arranged substantially as and for the purpose set forth.

2. The combination of the jointly-acting carriage *e* provided with lugs *h*, the screw *f*, and the platen *g* with the uprights or ribs *b b' c c'*, horizontal arms or ways *d d*, and the hold-fasts or hooks *i i*, of the body portion of the press, substantially as and for the purpose set forth.

119,196.—Railway-Car Coupling.—James Temple, Bellefonte, assignor to L. C. Kinyon, Williamsport, Pa.

Claim.—The combination and arrangement of the open face-plate A, guiding-jaws *a a*, yoke C, drop-plate D, and bent raising-plate G with a link or coupling-bolt, in the manner and for the purpose specified.

119,197.—Necktie-Holder.—Hiram Howard Thayer, Philadelphia, Pa.

Claim.—1. The wings *b* and *b'*, composed of bent wire uniting in a loop, *d*, below, and connected to a plate, A, or to legs *x* and *x'*, all substantially as set forth.

2. A holder, in which the loop overlaps the button at one side, and in which a plate or its equivalent, attached to the said loop, also overlaps the button at the other side, substantially as set forth.

119,198, antedated September 2, 1871.—Fastener for Meeting-Rails of Sashes.—Nathan Thompson, Brooklyn, N. Y.

Claim.—1. The combination of the screw A, restricted from travel in direction of its length, the keeper B, having a locking shoulder portion, *b*, and the screw-tongue C, substantially as specified.

2. The combination of the stops *d d'* with the locking-tongue C, the screw A, and the keeper B, essentially as described.

119,199, antedated September 2, 1871.—Casing for Window-Pulleys.—Nathan Thompson, Brooklyn, N. Y.

Claim.—A pulley-shell or casing, constructed from a blank of sheet metal, cut, bent, and shaped to form the supporting ends, cheeks, and guard, substantially as specified.

119,200.—Weather-Board Gauge.—George W. Tinsley, Blakesburg, Iowa.

Claim.—In a weather-board holder the braces D hinged to the handle C, in combination with the pointed plate C' and the slotted blade A having the adjustable stud B, as and for the purpose specified.

119,201. — Loom-Shuttle. — Frederick O. Tucker, Stonington, Conn.

Claim.—The guard *a*, having a prong or arm, *d*, in combination with the catch *g*, both constructed and arranged within a shuttle and at one side of same for operation of the guard, substantially as and for the purpose described.

119,202.—Alarm-Lock for Tills.—William H. Tucker, Indianapolis, Ind.

Claim.—1. The straight tumbler or tumblers *e*, passing at will through either of the two orifices in plate *f'*, and resting upon either arm h^1 or h^2 of the lever or levers h, and operating to raise the catches *b* from the plate C, or to lower them past said plate so as to lock or unlock the till.

2. The lever or levers h combined with the screw or screws *y*, the bar *w*, rod *y*, and arm *a'*, for the purpose of checking or releasing the mechanism of the second alarm.

119,203.—Floor-Clamp.—Thomas S. Urie, Hubbardston, assignor to himself and George H. Cagwin, Carson City, Mich.

Claim.—The floor-clamp, consisting of the jointed frame A, jaw-levers B C, and operating levers D and E, all combined substantially as herein shown and described.

119,204. — Machine for Forming Wire Bails.—John P. Van Bramer, Galesburg, Ill., assignor to himself and Ellis Thompson, same place.

Claim.—1. The lever D, operating with relation to the standard L and cutters B E, substantially as and for the purposes set forth.

2. The combination and arrangement of lever D, cutters B E, plate C, sliding gange H, standard L, and post P, constructed and operating substantially as and for the purpose specified.

119,205. — Wheel-Cultivator.—John A. Viars, Sherman, Tex.

Claim.—The double frame A, composed of the frames D D, the interior frames H H raised and lowered on the cranks K, the caster-wheels C C, and main wheels B B, all constructed, arranged, and combined substantially as and for the purposes described.

119,206. — Cultivator. — James Waddell, Liberty, Ind.

Claim.—The within-described adjustable cultivator-frame, to which the plow-shanks are attached, consisting of the four beams E E E' E', the two slotted cross-beams A^1 and A secured by the headed bolts *b b'*, the connecting-bars A^2 A^3, and the oblique slotted braces G G, all constructed to operate substantially as and for the purposes herein set forth.

119,207.—Shoe.—Edward Walcott, Natick, Mass.

Claim.—A boot or shoe the upper of which is composed of a main piece and a side piece which form the top of the quarter on one side of the shoe, and is extended so as to cover and form a lapel for the slit in the front of the same, substantially as herein shown and described.

119,208.—Kitchen-Table.—Bernhard Welteck, New York, N. Y.

Claim.—1. The drawer F of the table A, carrying on its front the supporting legs E E, and having arranged within its interior the dough-trough G, pie-board H, and chopping-block I, the several parts constructed and arranged for operation, as herein shown and described.

2. In combination with a table having the drawer F, carrying the dough-trough G and pie-board H, the ironing-board L, having the hinged leg and dowels, arranged as and for the purpose set forth.

119,209. — Ditching-Machine. — David Whitesell, Mattoon, Ill.

Claim.—1. The combination of disks C to cut the sides of the ditch, the disk L to centrally incise the sod, and the horizontal bottom edges of mold-boards K K to cut the bottom, all constructed, arranged, and operating as described.

2. The movable axle-frame A D D, the lever G, links F F H, and the frame I, combined, as described, with plow-beam E, so as to raise and lower the point of the plow in the manner described.

119,210. — Diving Apparatus. — Charles Wilson, Bridgeport, Conn., assignor of one-half his right to Charles F. Mudge, same place.

Claim.—1. The face-piece A B, consisting of two

separate compartments—one for the nose and one for the mouth—in combination with two or more pipes for conveying air or sound, or both, to or from above the surface of the water in which the diver may be using the apparatus, substantially as herein specified.

2. The combination of the receptacle F' with the nose-piece A, substantially as and for the purpose herein specified.

3. The combination, with the head-armor G and pipe *f*, of the air-bag or jacket J, substantially as herein specified.

4. The combination, with the air-bag or jacket J, of an air-pump, N, substantially as and for the purposes herein specified.

5. The combination, with the water-proof clothing M M', of the suit L, ventilated in the manner substantially as herein specified.

6. The combination, with the face-piece A B and flexible pipes, of the reel mechanism P, substantially as and for the purpose herein specified.

7. The shaft *l* of the reel P, provided with internal longitudinal bores which admit of the carrying through it of the tubes C' D' E', so as to bring their ends in an accessible position, as and for the purposes herein specified.

119,211.—FLOOD-FENCE.—Joseph Leicester Wines, Hebardsville, Ohio.

Claim.—The swinging water-board E secured to the hinged upright F, carrying a projecting arm, G, in combination with a right-angled lever H, and a connecting-rod or chain, K, and operating to disengage from its staple a hook, B', coupling any two adjacent panels of a portable fence, all substantially as and for the purposes herein set forth.

119,212.—POST-OFFICE LETTER-BOX.—Silas N. Brooks, Shelburne Falls, Mass., administrator of Linus Yale, Jr., deceased.

Claim.—1. The combination of several box-frames with each other and with pigeon-holes, as described, by means of rivets passing through the frames and the wood-work entering between the said frames, the combination being substantially as described.

2. The above, in combination with the flanges making part of the frames and protecting and inclosing the exterior of the wood-work, substantially as set forth.

119,213.—BALE-HOOK.—Richard T. Yardley, Baltimore, Md.

Claim.—The construction of toothed hooks having the form substantially the same as that described in this specification.

119,214.—COMPOUND FOR PRESERVING TOMATOES.—Daniel C. Yates, Big Lick, Va.

Claim.—The within-described preserving compound, consisting of rain-water, vinegar, and alum, substantially as herein set forth.

REISSUES.

4,556.—GUIDE FOR SEWING-MACHINES.—Jacob S. Alter, Leavenworth, Kan.—Patent No. 102,469, dated May 3, 1870.

Claim.—1. The combination of coiled spring with nut C, fixed screw *b*, and washer *c* with the plate B, as described, to regulate the pressure on the material, as set forth.

2. The adjustable gauge-plate A, having notch and guiding-flange for the presser-foot and guide-shoulders for the cloth-holder, arranged with a rigid slotted ribbed plate B, held by spring-pressure, so that it can adapt itself to the thickness of cloth, and also slide out and in, a fixed pin rising from the adjustable gauge-plate, as and for the purpose specified.

4,557.—TREATING LINSEED AND OTHER OILS FOR PAINT, &c.—David E. Breinig, New York, N. Y., assignor, by mesne assignments, to Anna S. Breinig, Charles Taylor, and John H. Welles.—Patent No. 61,653, dated January 29, 1867.

Claim.—1. A compound obtained by treating linseed-oil or its chemical equivalent with an alkali, and exposing the product to the action of a solution of sulphate of zinc, or its chemical equivalent, substantially as described.

2. A compound obtained by treating the metalline gum hereinbefore described with linseed-oil or its chemical equivalent, substantially in the manner set forth.

3. A compound obtained by treating the above-named mixture of linseed-oil and metalline gum with spirits of turpentine or benzine, substantially in the manner described.

4,558.—PREPARING COLORING MATTER FROM ANTHRACENE.—Julius Brönner and Hermann Gutzkow, Frankfort-on-the-Main, Prussia.—Patent No. 97,597, dated December 7, 1869.

Claim.—The preparation of coloring matter by nitrating the product which we obtain from anthracene by oxidation (oxanthracene) and the further treatment with alkalies, substantially as described.

4,559.—CORN-PLANTER.—William Morrison, Carlisle, Pa.—Patent No. 25,435, dated September 13, 1859.

Claim.—A corn-planter constructed substantially as shown and specified, viz., with right-and-left mold-boards *m m'*, adjustable cutters or coverers *d d'*, and hopper B, when these several parts are constructed and arranged for joint operation in the manner and for the purpose herein set forth.

4,560.—Canceled.

4,561.—Canceled.

4,562.—MACHINE FOR ROLLING LEATHER.—Joel Whitney, Winchester, Mass., assignor of part interest to N. J. Simonds.—Patent No. 37,991, dated March 24, 1863: reissue No. 4,122, dated September 13, 1870.

Claim.—1. The arrangement of levers *f f* transversely to the treadle J and parallel with the axes of the rolls B and B', substantially as described and shown.

2. The combination and arrangement of treadle J, rolls B B', and levers *f f*, or equivalent intermediate devices between the treadle and rolls, whereby the motion of the treadle serves to move one roll in a direct line toward the other, substantially as described and shown.

3. In combination with the treadle devices by which one roll is actuated toward or away from the other roll, an adjusting device, as shown, or its equivalent, by which one roll may be adjusted with respect to the other roll independently of the treadle mechanism, and without changing the positions of the treadle and levers relatively to each other, substantially as described and shown.

4,563.—MACHINE FOR MAKING CEMENT PIPES.—Edward L. Baker, Boston, Mass., Henry Knight, Brooklyn, N. Y., and Edwin Dayton, Meriden, Conn., assignees, by mesne assignments, of William Goodwin.—Patent No. 49,828, dated September 5, 1865; antedated August 28, 1865.

Claim.—1. The rotary shoe or shoes F, combined with a core and flask, substantially as described.

2. The combination of the flange *f* with a revolving head, substantially as and for the purpose specified.

3. The arrangement of the crane M in combination with one or more flasks, constructed to operate substantially as and for the purpose specified.

4. The combination of the crane M, table B, and two or more flasks, substantially as and for the purpose specified.

4,564.—SPRING-BED BOTTOM.—Henri E. Bissel, Hartford, Conn.—Patent No. 94,701, dated September 14, 1869.

Claim.—1. A canvas stretcher for a bed made in sections laced together, substantially as described and for the purpose set forth.

2. The canvas stretcher for a bed made in sections *a*, laced together and attached to the head-piece *b* by means of springs and bars, substantially as and for the purposes set forth.

4,565.—FURNACE FOR SOLDERING.—Lewis Cutting, San Francisco, Cal., assignor to Francis Cutting, same place.—Patent No. 71,141, dated November 19, 1867.

Claim.—1. The arrangement, with the top F, formed of gypsum, fire-brick, or other slow conductor of heat, of heaters G of good conducting material, whose lower surfaces communicate with and are exposed to the heated gases of the fire-chamber or hot-flue, substantially as described.

2. The organization into a soldering furnace of the following elements: A top of non-conducting mineral matter whose radiating surface is not in good conducting communication with its absorbing surface, one or more heaters whose upper or delivering surface is relatively small to its lower or absorbing surface, a fire-chamber or hot-flue formed immediately below said non-conducting top and conducting heaters, along which the gases of combustion play in contact with said heaters, and a non-conducting center to the heaters, all arranged and combined substantially as described.

3. The heaters G, extending a considerable mass of conducting material into the fire-chamber or hot-flue of a soldering-furnace, substantially as described.

4. The heaters G, having their upper central surface packed with gypsum, fire-brick, or other slow conductor, substantially as described.

5. The said heaters G when provided with plates H, substantially as described.

4,566.—MACHINE FOR THRASHING, HULLING, AND CLEANING CLOVER-SEED.—Martin H. Mansfield, Ashland, Ohio.—Patent No. 56,583, dated July 24, 1866.

Claim.—1. In a thrashing or clover-hulling and thrashing-machine which employs a fan, G, for blowing away chaff, dust, and other foreign substances, the dust-chamber b^1, situated within the frame of the machine, aperture *b*, fan b^2, and a discharge-passage at a^1 leading into a space above the straw-carrier or shaker, substantially as described.

2. The shoe E, constructed with inclined planes *e e'*, and a trap, *g*, in rear of the passage *f*, substantially as described.

3. The vibrating shoe E, (irrespective of the trap *g*,) constructed with stepped inclined planes *e e'*, and arranged as shown, in combination with the vibrating intermediate screen D, straw-carrier C, and fan G, substantially as described.

4. The shoe E, irrespective of the trap *g*, having one or more stepped inclines, as specified, and the intermediate screen D, disconnected and receiving motion independent of each other, and arranged in relation to the fan G, substantially as described.

5. The tailing-box F, conveyer F', and endless elevating-apron *f'*, in combination with screen D, shoe E, fan G, a straw-carrier, C, and a thrashing-cylinder, B, arranged substantially as described.

6. The specified construction of the teeth *h h'*, and their combination with each other and the cylinder and concave, for the purpose set forth.

DESIGNS.

5,267.—SPOON-HANDLE.—Bernhard D. Beiderhase, New York, N. Y.

Claim.—The design for a spoon handle, as shown.

5,268.—BAND-SAW FRAME.—William H. Doane, Cincinnati, Ohio, assignor to J. A. Fay & Co., same place.

Claim.—The design for a band-saw frame, as shown.

5,269.—FEET FOR GLASSWARE.—John Oesterling, Wheeling, W. Va.

Claim.—The design for pressed-glass feet, as shown.

5,270.—NET FABRIC.—John Slack, Brooklyn, N. Y., assignor to Abraham G. Jennings, New York city.

Claim.—The design for a reticular fabric, as shown.

5,271.—OIL-CABINET.—Moses H. Wiley, Boston, Mass., assignor to himself, John H. B. Lang, and Thomas Miller, same place.

Claim.—The design for an oil-cabinet, consisting of the body A formed with the inclined front, the inclined cover C, and the horizontal partition B, as herein set forth and shown.

5,272.—CARPET-PATTERN.—Joseph Miller Christie, Kidderminster, England, assignor to Henry Jecks Dixon & Sons.

Claim.—The design for carpets, as shown.

5,273.—PICKLE-JAR OR CASTER.—John Hill, West Meriden, Conn., assignor to Meriden Silver-Plate Company, same place.

Claim.—The design for pickle-jars, as described and shown, with or without a cover.

5,274.—PLATE OF SHUTTER AND TASSEL-HOOKS.—Elbridge J. Steele, Wolcottville, Conn., assignor to Turner, Seymour & Judds, same place.

Claim.—The design of the shape or configuration and surface ornamentation of the plate, substantially as described and represented.

5,275.—CASTER-RING.—Elbridge J. Steele, Wolcottville, Conn., assignor to Turner, Seymour & Judds, same place.

Claim.—The design of the caster-ring, as described and represented.

TRADE-MARKS.

442.—SEEDS.—Briggs & Bro., Rochester, N. Y.

443.—SEEDS.—Briggs & Bro., Rochester, N. Y.

444.—CORDIAL GIN.—Joseph Forster, New Orleans, La.

445.—HAIR-RESTORER.—Edwin A. Warren, Worcester, Mass.

ISSUE OF SEPTEMBER 26.

PATENTS.

119,215.—ROCK-DRILLING MACHINE.—Cleophas Bernard, Florida, assignor of fifteen one-hundredths of his right to Timothy Lague, Holyoke, Mass.

Claim.—1. The carriage, composed of frame 1, bed 4, and table 5, arranged and combined substantially as specified.

2. The sliding frame 13, provided with arms 14 14 and disk 15, substantially as specified.

3. The mechanism for revolving the drill intermittently, consisting of pinion 16, shaft 18, gears 19 and 20, and toothed disk 21, arranged and combined substantially as specified.

4. The detachable head 39, provided with radial shank 40, as specified.

5. The mechanism for oscillating the hammer, consisting of racks 26 26′, pinions 27 27′, connecting-rods 29 and 30, and crank-shaft 31, arranged and combined substantially as specified.

6. The mechanism for revolving or feeding the hammer against the drill, consisting of shaft 35, gears 36 and 37, and shaft 18′, in combination with beam 24 and shaft 18, substantially as specified.

7. The fan, consisting of drum 43, fan proper 44, air-chamber 46, pipe 47, valve 48, and nozzle 49, in combination with drill 17, hammer-shaft 35, and mechanism for carrying and revolving the drill and for feeding and oscillating the hammer, all arranged, combined, and operating substantially as above specified.

119,216.—STEAM-WAGON AND PLOW.—William C. Bibb, Madison, Ga.

Claim.—1. In a steam-wagon for plowing and other purposes, the combination of cylinders F, piston-rods *a*, axle-trees D′ D, pinions B^4 and B^3, shaft C pinions B^2 and B^1, loose wheel A, pinion a^2, curved rack a^1, and carrying-wheels *w*, for the purposes set forth.

2. The horse-feet devices J J, in combination with the carrying-wheels *w*, for the purpose described.

3. The seeding and harrowing devices, consisting of cylinder *s*, apron *y*, lever *l*, slide *m*, ring *r*, and harrow-teeth, for the purpose described.

119,217. — SHUTTLE-THREADING DEVICE FOR SEWING-MACHINES.—John L. Borsch, Philadelphia, Pa.

Claim.—The sewing-machine shuttle-threader hereinbefore described, it being made in form and of style substantially as described, and for the purposes set forth.

119,218. — BREECH-LOADING FIRE-ARM.—Andrew Burgess, New York, N. Y.

Claim.—1. The toggle-joint in combination with a pivoted breech-block, B, substantially as specified.

2. The combination of the trigger J, hook I, tumbler E of the hammer D, breech-block B, and toggle H, substantially as specified.

3. The trigger J connected with the toggle H, and arranged so that it will operate the dog G simultaneously with the closing of the breech-block B, and thereby release the hammer and cause the discharge of the piece, substantially as specified.

4. The retractor-rod O, bar P bent at its rear end, and spring R, in combination with the hammer grooved and provided with the projection *q*, as shown and described.

5. The retractor-stop Z in combination with the retractor of a breech-loading fire-arm, substantially as described.

119,219.—EXHAUST MECHANISM FOR LOCOMOTIVE-ENGINES. — William A. Carns, Malden, assignor to himself and Henry Elmer Townsend, Boston, Mass.

Claim.—1. The combination and arrangement of the cylinder D and its air-induction passage C with the propeller P, the duplex valve E, and the exhaust-steam passages A A′ B, arranged as set forth, the said valve being provided with seats disposed with the air-inductor passage C and the exhaust-steam pipes or passages A A′ B, in manner as explained.

2. The combination and arrangement of the bridge or partition I and the groove *b*, or either, with the parts, as above claimed.

119,220.—WATER-WHEEL. — Joel T. Case, Bristol, Conn., assignor to National Water-Wheel Company, same place.

Claim.—1. The combination and arrangement, in the case B, of the solid wall *i* and the groups of chutes 1 2 3, substantially as and for the purpose described.

2. The wheel C, formed of the buckets *e* and ogee-shaped disks D D′, relatively arranged substantially as shown and described, and for the purposes set forth.

119,221.—HORSE-POWER.—Return J. Cheney, Petaluma, Cal.

Claim. — The brake, consisting of screw-rod *f* and plate or spring *h*, when applied to the tumbling-rod of a horse-power through the hub of one of the wheels of the power, substantially as above described.

119,222.—MACHINE FOR FORMING GLASS CHIMNEYS FOR LAMPS.—Michael H. Collins, Chelsea, Mass.

Claim.—1. The above-described organized instrumentality or apparatus, consisting of the chair A, provided with arms, or arms and tube-guides *a a′*, as specified, the skeleton-frame *b b b* or the rollers *g*, or both the frame and rollers, when the said frame or rollers, or both the frame and rollers, are mounted upon a shaft supported in suitable bearings and furnished with means of rotation, as stated, the whole being arranged and for use with a glass-blower's tube or rod, as and for the purpose set forth.

2. The skeleton-frame or series of wires *b b b*, the rollers *g*, the disk G, and the arbor E, the whole being mounted upon the frame B and combined with means of rotation, substantially as set forth, and for use with a glass-blower's pipe, as explained.

3. The series of rods or rollers *g*, the disk G, and arbor E, all mounted upon the frame B, in combination with means or mechanism for putting the same in rotation, such being for use with a glass-blower's rod or tube, as and for the purpose set forth.

4. The skeleton-frame or ribs *b b b* and the disk G when mounted upon a rotary arbor, and for use with a glass-blower's rod or tube, as and for the purpose stated.

5. The adjustable clamping mechanism, as described, in combination with the series of rollers or rods *g* and the disk G, as and for the purpose described.

6. In combination with the skeleton-frame and the rollers *g* when mounted upon a rotary shaft and provided with means of rotation, as specified, one or more supports or guides *a a′*, for centralizing the glass blower's rod or tube, when used with the same, as set forth.

7. In combination with the skeleton-frame when mounted upon a rotary shaft and provided with means of rotation, as stated, one or more supports or guides, *a a′*, as shown and described, and for the purpose set forth.

8. In combination with the rollers *g* when mounted upon a rotary shaft and provided with means of rotation, as described, one or more supports or guides, *a a′*, as and for the purpose specified.

9. In a rotary glass-forming machine in which the outer surface of a glass-blown article is formed by rotating the rollers or forming devices against such surface, the combination of one or more cutters, as and for the purpose set forth.

119,223, antedated September 10, 1871.—SHAWL-STRAP. — George Crouch, Westport, Conn.

Claim.—The metallic loops made to receive the straps, and also the rings of the handle, as set forth.

119,224.—MANUFACTURE OF PAPER-PULP.—Asahel K. Eaton, Brooklyn, N. Y., assignor to "The Eaton Fiber Company," New York city.

Claim.—The use of the sulphide of sodium as a solvent in the treatment of wood, straw, or other vegetable fiber for the purpose of producing paper-pulp.

119,225.—STEAM-GENERATOR. — Jonas Eberhardt, Conshohocken, Pa.

Claim.—The boiler *a*, constructed with the exterior circulation-pipes *b*, the interior flues *e*, and a flue-chamber, *i*, said flues *e* being attached respectively at one end to the head of the boiler, and at the other end to the shell or wall of the flue-chamber, substantially as set forth.

119,226.—LADDER-HOOK. — Silas D. Fish, Schuyler Falls, N. Y.

Claim.—The hook described, having the parts *a a′*, socket B, and friction-roller *c*, all arranged as described, for the purpose set forth.

119,227.—GAS-MACHINE.—Thomas B. Fogarty, Brooklyn, N. Y.

Claim.—1. The float B, constructed and operated substantially as set forth, in combination with the gas-holder tank A, substantially as set forth.

2. The combination of the float B, lever C, and holder E, constructed and operated substantially as set forth.

3. The combination of the air-vessel T and hook I, constructed and operated substantially as set forth.

4. The combination of the air-vessel T and holder E, constructed and operated substantially as set forth.

5. The drip-pipe and levers O and M, constructed and operated substantially as set forth.

119,228, antedated September 9, 1871.—NAIL-PLATE-FEEDING MACHINE. — John C. Gould, Oxford, N. J.

Claim.—1. The adjustable bracket *k*, in combination with the bolt *l* and the set-screw *m*, and the arm that carries the nose-piece, the bracket being hinged to the frame and the arm hinged to the bracket, substantially as described, and from which it may be lifted and moved either from or toward the machine, substantially as described.

2. The hand-lever *p*, in combination with the subject-matter of the first clause of the claim.

3. The ball-and-socket joint *r*, in combination with the said adjustable bracket, the shaft *q*, the lever that operates the segment *c*, and also the segment *c*, in the manner described.

4. The contraction of the arm *d*, the arm *e*, spring *f*, fork-spring *g*, and nipper-rod *h* for slipping the gripe of the fork-springs or rollers back on the nipper-rod for the feed while the plate is held by the knives, substantially as described.

119,229. — PRUNING-SHEARS. — Ignatius Grass, Sandusky, Ohio.

Claim.—In combination with the blades A A′ of pruning-shears, the pivot screw-bolt B provided with rectangular-shaped neck *b*, and the strap C provided with rectangular hole *c* and screw *c′* for the purpose of holding the screw-bolt B relatively stationary with the blade A′, as hereinbefore set forth.

119,230.—ELECTRIC AND VAPOR CHAIR.—Mary A. Hayward, Brooklyn N. Y.

Claim.—1. The medical chair containing a metallic lining and connections to a battery, substantially as specified, for directing electrical currents through the body.

2. The lining of sponge applied to and combined with the medical chair having a metallic lining, for the purposes specified.

119,231.—BOLT-CUTTER.—Jesse Johnson, Cochransville, Pa.

Claim.— In bolt-cutting tools of the character of those described in the patents hereinbefore referred to, the particular construction of the rack-bar with the rib extending longitudinally along its lower surface, the location of the hole for the adjusting-screw partly or wholly within said rib, and the groove in the bottom plate of the frame B for the reception and guidance of the rib and the movable cutter, as and for the purpose set forth.

119,232. — SUCKER-ROD. — Daniel Jones, Boston, Mass.

Claim.—A sucker-rod, composed of a grooved rod and recessed socket united by means of metal poured into the grooves and recesses in a molten state, as described.

119,233.—TRUSS. — Nathaniel Jones, Syracuse, N. Y.

Claim.—The foraminous metallic truss-plate and projecting presser, constructed with recesses for the slots that receive the hooks of the connecting-straps, as set forth.

119,234.—CRIMPING-MACHINE.—Martin R. Lemman, and William A. L. Kirk, Hamilton, Ohio.

Claim.—1. In combination with the roller D, guide F, and knife I, the slotted lever H *h′* and the spring L, the parts being arranged, in relation to one another, substantially as set forth.

2. In combination with the roller D and knife I, the adjustable guide F *a f* G, as described, and for the purpose described.

119,235.—SPINDLE FOR CLOTHES-WRINGER ROLLS.—Thomas E. McDonald, Trenton, N. J.

Claim.—The clothes-wringer roll-spindle above described, consisting of the journals A, metal bars B, and center bar C, united to the journals A and leaving the open space *a*, in the manner and for the purpose set forth.

119,236.—FENDER FOR GAS-BRACKETS.—William Hartley Miller, Philadelphia, Pa.

Claim.—1. In combination with a gas-bracket a fender, to prevent the flame or burner from striking the wall or other object against which the outer end of the bracket may be thrust.

2. In combination with a gas-bracket a fender having a joint at the center, allowing the fender to revolve, substantially as described.

119,237.—ANIMAL-TRAP.—John H. Mooney and George A. Lloyd, San Francisco, Cal.

Claim.—1. The longitudinally-moving rods D and E united at F, and so arranged as to have distinct motions, one in a curved and the other in a straight line, substantially as described.

2. The curved link J or an equivalent device for guiding the rod D and giving the curve, as described.

3. The adjusting device, consisting of the link J, with the transverse slot K and the holding-screw L, as described.

4. In combination with the rods D and E having different motions, as shown, the impelling-spring I or equivalent device, as described.

5. The bell-crank lever having the arms *o* and *r*, as shown, and the swinging plate M, together with the notched rod E, as and for the purpose described.

119,238.—APPARATUS AND PROCESS OF TANNING. — William Morris, Philadelphia, Pa.

Claim.—1. The tanning of hides or skins with astringent liquids by means of percolation.

2. The combination of hydraulic pressure and pneumatic exhaustion for producing percolation of fluids for tanning hides or skins, and for other uses of percolation in manufactures.

3. The apparatus, substantially as described and shown, arranged to operate as set forth.

119,239. — BOOT-AND-SHOE BLACKING.—James H. Patterson, Glen's Falls, N. Y.

Claim.—The manufacture of a powder or dry dust blacking and polish for leather, substantially as above described.

119,240.—METHOD OF BENDING WOOD FOR ROUND BOXES.—Samuel Patterson, Berlin Heights, Ohio.

Claim.—As an improvement in the manufacture of round wooden boxes, the method of bending the wood A by means of the grooved bar B, in the manner and for the purpose herein shown and described.

119,241.—GRAIN-BINDER.—Alexander Philippi, St. Louis, Mo.

Claim. — In a grain-binder, the driving-wheel B', pinion E, shaft E', bevel-wheels F F', operating apron D, in combination with slotted shift-lever f', connecting parts J' J, foot-lever H', rope attachment H, pulleys A, lever-arm g^3, shafts g g^1, part-pinions g^2 g^3, and compressing-fingers G G', all arranged, supported, and constructed to operate as and for the purpose set forth.

119,242.—ACCELERATING THE GROWTH OF PLANTS AND ANIMALS. — Augustus I. Pleasonton, Philadelphia, Pa.

Claim.—1. The method herein described for utilizing the natural light of the sun transmitted through clear glass, and the blue or electric solar rays transmitted through blue, purple, or violet-colored glass, or its equivalent, in the propagation and growth of plants and animals, substantially as herein set forth.

2. The herein-described construction of conservatories and other buildings, when the roof, walls, or parts thereof are covered with alternating portions of clear and blue, purple, or violet glass, or equivalents, as and for the purposes set forth.

119,243. — COUPLING-FAUCET.—Oliver Salgee, Brooklyn, N. Y.

Claim.—1. The valve f, with the wings 2 in the opening through the seat e, in combination with the thimble c and ring d of the faucet, as and for the purposes set forth.

2. The valve-seat e, screwed into the female coupling-screw b, and confining the elastic surface r of the seat to the ring n', in combination with the valve f, thimble c, and ring d, substantially as set forth.

119,244. — WASHING-MACHINE. — John H. Schmidt, Stockertown, Pa.

Claim.—The combination and arrangement of the concave C, elastic extension i, springs k k, and opening n in the front of the tub or box, constructed substantially as and for the purposes herein specified.

119,245. — MANUFACTURE OF DENTAL PLATES.—Francis M. Shields, Sacramento, Cal.

Claim.—1. The frame composed of the base plate A and standards B in combination with the swinging frame composed of the plate C, side arms E, and standard j, substantially as and for the purpose above described.

2. The shield-shaped flask G, divided into two or more parts and having the lugs k, in combination with the plate C and side arms E, all constructed and arranged substantially as and for the purpose set forth.

3. The curved tube M with its compression-pipe o, in combination with the crucible N and flask G, substantially as and for the purpose set forth.

4. The curved tube M, crucible N, and flask G, in combination with the indicating-standards g and compression-pipe o, when constructed and arranged substantially as and for the purpose set forth.

119,246.—FEEDING MECHANISM FOR SEWING-MACHINES. — David M. Smyth, Orange, N. J., assignor to Joseph W. Stickler and Theodore C. Elliott, same place.

Claim.—A wheel-feed for a sewing-machine, mounted so as to be moved laterally or lengthwise of its axis, in combination with a cam, ratchet-wheel, and pawl to communicate such lateral movement independently of the feeding movement given to the wheel, substantially as set forth.

119,247.—PISTON AND PISTON-PACKING.—Edward Sullivan, Mount Washington, assignor to himself and John S. McMillin, Pittsburg, Pa.

Claim.—The combination and arrangement of the body A, provided with chambers g, the wedge-shaped pieces J K, arcs k, rings c and D, arranged and operating as herein described, and for the purpose set forth.

119,248. — PISTON-PACKING.—Edward Sullivan, Mount Washington, Pa.

Claim.—A piston packing-ring constructed of metal and wood in the manner hereinbefore described.

119,249.—RAILROAD CAR-HEATER.—Benjamin D. Thompson, New York, N. Y.

Claim.—The combination of the case A with its three compartments, B, C, and D, the wick-tubes a, the wick-elevators c operated by the screw H, the whole constructed and arranged as and for the purpose specified.

119,250.—DISINFECTING-COMPOUND.—Henry A. Tilden, New Lebanon, N. Y.

Claim.—The combination of bromide of aluminium with chloride of aluminium for disinfecting and deodorizing or other purposes, produced as herein described, or in any other manner substantially the same which produces the same intended results.

119,251. — FISHING-ROD. — Thomas Tout, Cambridge, Mass.

Claim.—Constructing fishing-rods of lamina of whalebone running longitudinally, with the spaces between filled with strips of wood, all substantially as shown and described.

119,252, antedated September 25, 1871.—APPARATUS AND PROCESS FOR THE MANUFACTURE OF SALT.—Alexander C. Twining, New Haven, Conn.

Claim.—1. The refrigerator, in combination with the volatile and its vapor and the skimmer, or any combination substantially the same, as and for the purpose described.

2. The current-sweep, in combination with the circular ring and the revolving brush or scraper, with or without wire-gauze or perforations, substantially as and for the purpose described.

3. The employment in the condenser of the ice formed in the refrigerator and used for condensing the vapor of the volatile, substantially as described; also, the use of the wire-gauze or perforated-sheet compartments G in and as an attachment or part of the condensing apparatus or vessel used therefor.

4. The circulation-pump D, in combination with the vessel B or any equivalents thereof, as and for the purpose described.

5. The general combination, or any substantially the same, as and for the purpose described.

119,253.—NEST SPIRAL CAR-SPRING.—Richard Vose, New York, N. Y.

Claim.—A nest of two or more spiral springs, placed one within another, with spaces between them, constructed and arranged as described, so that by means of the terminal or dead coils of the several springs being concentrically in contact with each other, contact and consequent friction between the elastic or live parts of the springs are prevented, as specified.

119,254.—NEST SPIRAL CAR-SPRING.—Richard Vose, New York, N. Y.

Claim.—A nest of two or more spiral springs placed one within another, with spaces between them, the several springs being maintained in position so that they cannot come in contact with each other, by the means substantially as described.

119,255.—PROPULSION OF VESSELS.—Henry Waterman, Brooklyn, N. Y.

Claim.—1. The combination of the piston and plane rods with the coupling C and cups D and F, for arresting the strokes of the piston by compressed air, substantially as and for the purpose hereinbefore set forth.

2. The combination of the cylinder and piston and chamber with cock V and valve i', located to receive and discharge the exhaust-steam from one side of the piston, substantially as and for the purpose hereinbefore set forth.

3. The combination of the pipes b and c with cylinder H and the pipe n' with cylinder d' for the purpose of moving the engine-valves and cock V by compressed air, substantially as and for the purpose hereinbefore set forth.

4. The combination of the valve R with the chamber for regulating the speed of the engine, substantially as and for the purpose hereinbefore set forth.

5. The combination of the rods A and B with a fixed support in the bow of the boat, for the purpose of using them of their minimum weight, substantially as and for the purpose hereinbefore set forth.

6. The combination of the plane-plate pivots nearer the side x than the side y with the shoulder on the ends of the male hinge-pieces i i, and the distance of the axis of the pivots from the face of the plate, substantially as and for the purpose hereinbefore set forth.

119,256, antedated September 6, 1871.—RETURN-BEND FOR STEAM-GENERATOR.—S. Lloyd Wiegand, Philadelphia, Pa.

Claim.—1. The short tubes, having spherical bearing-faces, formed as described, interposed between correspondingly-shaped slats in the return-bend, and the vessels put in connection thereby.

2. The elastic bolt, or bolt and spring, in combination with the return-bend and short tubes, as described and shown.

119,257, antedated September 6, 1871.—STEAM-GENERATOR.—S. Lloyd Wiegand, Philadelphia, Pa.

Claim.—1. A boiler or steam-generator, composed of a single vessel or tank of any length, (having a small cross-sectional area,) and arranged or disposed in folds or coils, in combination with suspended tubes, substantially as shown and described.

2. The tank or vessel, formed in folds or coils with an intervening flue or flues, in combination with the suspended tubes, substantially as shown and described.

3. The oblique deflectors M, as shown and described.

4. The parallel straight tubes arranged in rows, in combination with and inclined toward the narrow and long flues intercepting the products of combustion passing through the flue to the chimney.

119,258. — LOCK-SPINDLE FOR SAFES.—Charles O. Yale, New York, N. Y.

Claim.—1. The interceptive piece of Franklinite or its equivalent inclosed in an envelope of ductile metal and occupying a larger area than the diameter of the spindle, for the purposes and substantially as described.

2. The combination, with the spindle, of one or more valves for packing the joint around the spindle, for the purposes and substantially as specified.

119,259.—MOLDING PIPE.—William D. Alford, Cuyahoga Falls, Ohio.

Claim.—The herein-described pipe-pattern, consisting of the single or one part A, and screw-part consisting of the detached sections C C', when used in connecton with the part A, in the manner substantially as set forth, and for the purpose specified.

119,260.—MOTIVE POWER.—James N. Bethune, Warrenton, Va.

Claim.—A cylinder mounted upon a carriage, and having a central shaft bearing radial blades, the carriage being furnished with means for revolving said shaft, and the cylinder being furnished with means for forming an opening at either or both sides thereof, all substantially as and for the purpose specified.

119,261. — HAND-CULTIVATOR. — David Boggs and Hermann Rohs, Cynthiana, Ky.

Claim.—The pin D, in combination with the prongs A, constructed and attached to the handle, in the manner and for the purpose as herein shown and described.

119,262. — GAME-TABLE.—Emanuel Brunswick, Chicago, Ill.

Claim.—The table A, provided with the holes a, and with the head piece C having the radial passages b, arranged substantially as described.

119,263, antedated September 23, 1871.—LATCH FOR GATES.—Charles B. Clark, Buffalo, N. Y.

Claim.—The combination with the plate C, cast with a right-angled plate, D, forming the back of the latch-housing, the front plate A, as and for the purposes set forth.

119,264. — AMALGAMATION OF GOLD AND SILVER.—Augustine B. Crosby, Greene, Me.

Claim.—The continual straining, circulation, and renovation of the quicksilver while in active use, the washing of the ore-pulp, so that the action of the free oxygen of the water may be obtained upon the particles of amalgam to purify and make them easily collected, and in such manner that but a small amount shall be lost during the collection, and the mechanical devices pertaining to and necessary for their accomplishment, substantially as hereinbefore described.

119,265. — WRENCH. — Anthony Cumberworth, Toronto, Canada, assignor to himself and William D. Little, Syracuse, N. Y.

Claim.—The above-described improved pipe and nut-wrench, having a reversible stationary head or jaw, B, constructed substantially as and for the purposes described.

119,266, antedated September 9, 1871.—BLIND-FASTENER.—Gilbert K. Dearborn, Smithfield, assignor to James Berney, North Providence, R. I.

Claim.—The arrangement and combination of the spring F, case A, hooks B and C with the extended end C', as shown, and operating substantially as described.

119,267.—PROCESSES OF UTILIZING TINNERS' CLIPPINGS.—Frederick William Dorn, New York, N. Y.

1. The separation of the tin from tinners' clippings, or waste tin by means of a combination of muriatic and hyponitric-acid gas and steam, substantially as and for the purpose hereinbefore set forth.

2. The use of muriatic-acid gas and steam, substantially as and for the purpose hereinbefore set forth.

3. The alternate application of the gaseous mixture and steam, for the purposes set forth.

119,268.—WARDROBE AND BEDSTEAD.—Oliver L. Gardner and William Gardner, Glen Gardner, N. J.

Claim.—The case or wardrobe A, supplied with the hinged lid a^2, projection d, and arm or lever d', in combination with the bedstead B B' and the bottom C, arranged and operating substantially as and for the purpose described.

119,269.—LUBRICATOR FOR STEAM-ENGINES.—James Harper, New Haven, Conn.

Claim.—1. The chamber A, provided with a means for filling, combined with the steam-passage L and passage T, the said passage T provided with a valve to open or close said passage, substantially as and for the purpose specified.

2. In combination with the subject-matter of the first claim, the indicating-tube D, as and for the purpose described.

119,270.—DAMPER.—William B. Hayden, Columbus, Ohio.

Claim.—1. The combination of an oscillating mercurial steam-balance with a damper, substantially as described.

2. The oscillating pipe C, communicating at its ends with vessels G G', in combination with steam-pipe J for conducting steam into vessel G' above the mercury therein, substantially as and for the purposes described.

3. The hollow journal p' of oscillating shaft D, as a means of communication between stationary steam-pipe N and the pipe J, which leads into the upper end of vessel G', substantially as described.

4. The pipe g, in combination with the vessel G on the highest end of oscillating pipe C, substantially as and for the purposes explained.

119,271.—COMBINED FASTENER FOR SASHES AND BLINDS.—Augustus Haye, Morrisania, N. Y.

Claim.—The tubular screw D, the tubular nut or socket-screw F, the screw-bolt C, and nut or screw-socket H, all constructed, arranged, and operating substantially as and for the purposes described.

119,272.—FLOWER-POT.—Albert D. Judd, New Haven, Conn.

Claim.—As a new article of manufacture, a flower-pot consisting of several panels or sections, the base B and cap C constructed to be united together by studs or rivets formed on said sections, substantially as described.

119,273.—PICTURE-NAIL.—Hubert L. Judd, Brooklyn, N. Y.

Claim.—The sheet-metal back, with a notched opening to form a screw-thread at the edge of the sheet metal, as set forth.

119,274.—WATER-WHEEL.—James C. Kelly, Groveland, N. Y.

Claim.—1. As an improvement upon my patent of June 21, 1870, the chutes d d of the concentric gates D E, said chutes being sharp-edged at the top to divide the water, and angular and concave on the sides to concentrate it to the discharged parts, as herein described.

2. The construction of the curb A and division-plate C in one integral part, with a cavity at the top to receive the concentric gates and a deep cavity at the bottom to receive the wheel, as herein described.

3. The curb A with division-plate C, concentric gates D E with angular chutes d d, the rods G, screw H, swivel-block A, and the lever-cam K, and screw L, all arranged as described, and for the purpose specified.

119,275.—LAMP-WICK ADJUSTER.—Levi Bennett Lathrop, San José, Cal.

Claim.—The employment of teeth short in the direction of the axes of the shafts, and terminating in edges at their outer extremities in a plane at right angles to the axis of the wheel or roller from which they proceed, in a manner substantially as hereinbefore described, and for the purposes hereinbefore set forth.

119,276.—LOOM FOR WEAVING HAIR-CLOTH AND FABRICS PRODUCED THEREON.—Isaac Lindsley, Pawtucket, R. I.

Claim.—1. The new manufacture of hair-cloth, having its weft-hairs disposed in the fabric in the manner described.

2. The combination of the nipper-box C with the devices shown, or their equivalents, by which the box is moved, so as to release the weft-hairs at different points in the web, substantially as described.

3. The presser-bar J, constructed and operating substantially as described.

119,277.—LOOM FOR WEAVING HAIR-CLOTH.—Isaac Lindsley, Pawtucket, R. I.

Claim.—1. The combination of the stationary driving-pulley H and the pulley B' on the selecting instrument with the two guiding-pulleys G G', one or both of which are movable and held by a yielding pressure to maintain a proper tension of the belt, substantially as described.

2. The combination of the lever N and the duplex cam with the wrists e and f upon the crank, co-operating, substantially as described, to produce a proper motion to drive the nipper.

3. The combination of the lever N with the nipper-staff by means of the pulley L and its shaft and the strap K, or their equivalents, substantially as described.

4. The binder P', constructed and operating substantially as described.

5. The combination of the clipping-blade with the slide that carries the selecting instrument so as to operate as often as that operates, substantially as described.

119,278.—LOOM FOR WEAVING HAIR-CLOTH.—Isaac Lindsley, Pawtucket, R. I.

Claim.—1. The selecting instrument, formed with two blades or parts, constructed and operating substantially as described.

2. The sheath or wrapper for enveloping and holding the bunch of hair so that the hairs may be drawn singly therefrom and preserved in a moist condition, substantially as described.

3. The combination of the sheath or wrapper with the selecting mechanism and the recess for holding the end of the bunch of hairs, substantially as described.

4. The arrangement of the sheath or wrapper in a curved position, in combination with the lay and selecting apparatus, substantially as described.

5. The guard R, in combination with the selecting-instrument, as substantially as described.

119,279.—HORSE-POWER.—James Marshall, New Orleans, La.

Claim.—1. The combination, in a horse-power, of the large stationary gear-wheel C upon the column B with the pinion D, shaft E, gear-wheel F, pinion G, and shaft H, all arranged substantially as and for the purpose set forth.

2. The fixed upright hollow column B having saddle-base B', in combination with the shaft H, gear-wheel C, frame N, and levers M M, all constructed and operated substantially as and for the purpose specified.

3. The arrangement of the column B, frame N, gear-wheel C, pinion D, shaft E, gear-wheel F, pinion G, shaft H, bevel-wheels I K, and horizontal shaft L, all constructed and arranged for operation as shown and described, for the purposes set forth.

119,280.—VISE.—Russell Phillips, Boston, Mass.

Claim.—1. The combination, with the leg A of a vise provided with the jaw C, of the movable jaw J with its rack and plate sliding upon said leg, and operated by the lever K and pawl L, as herein shown and described.

2. A bench-vise and hand-screw or clamp composed of the parts herein specified, constructed and arranged to operate as shown and set forth.

119,281.—AXLE-SHIELD FOR CARRIAGES.—Benjamin F. Robbins, Harwich, Mass.

Claim.—The combination of the shield, Fig. 3, with the appendage, Fig. 5, both forming the shield proper, substantially as and for the purpose hereinbefore set forth.

119,282, antedated September 11, 1871.—MACHINE FOR STONE POLISHING.—Anton Saffer, New York, N. Y.

Claim.—The oval stone-polishing machine herein described, having the means d for rapidly and easily securing and releasing the stone, and the means E for protecting the mechanism against the water and grit, in combination with the oval lathe mechanism, and with means I J for forcibly pressing against and polishing the edge of the stone, as herein set forth.

119,283.—SPINDLE-BEARING FOR SPINNING-MACHINES.—Jacob H. Sawyer, Lowell, Mass.

Claim.—1. The standard D, constructed as described, with the whirl-opening b through its base, and with the female screw c arranged in such base in manner as set forth, in combination with the spindle-step as made or provided with the connecting male screw d arranged on it, as explained.

2. The spindle-step E, the upper bearing-standard D, the live spindle B, and whirl C, constructed, combined, and arranged together and with the supporting rail F, substantially as described.

119,284.—TUCK-MARKER FOR SEWING-MACHINES.—Alvin Shattuck, Buffalo, N. Y.

Claim.—1. The combination, with the spring-crimper C provided with two spring-jaws, c c, of the stock E provided with guides f f for closing the jaws, as hereinbefore set forth.

2. The combination and arrangement, with the needle-bar and spring-marker C, of the slotted connecting-arm B, head or stock E, and piece D, as hereinbefore described.

119,285, antedated September 9, 1871.—COMBINED SEEDER AND CULTIVATOR.—William D. Stroud, Oshkosh, Wis.

Claim.—1. The levers f, h, and j, arranged as described, in combination with the seed-box A, driving-shaft B, and cut-off attachment n t u v 1 2 3 4, in the manner and for the purpose hereinbefore specified.

2. In combination with the seed-box A of a seeding-machine, a cut-off attachment constructed in sections, as 1 2 3 4, and composed of the slotted plates t provided with valves n, hooked rods u, and eyes v, all arranged as described, for the purpose hereinbefore specified.

3. The gauge-valves q secured to the bar a', provided with the needle of the indicator b', and operated by the lever c', in combination with the seed-cups of the seeding-machine, as and for the purpose specified.

119,286.—DIE FOR FORMING CARRIAGE HEAD-BLOCK PLATES.—Wales Terrell, Ansonia, Conn.

Claim.—The dies shown in Figs. 2 and 3, constructed and operating as herein described.

119,287, antedated September 15, 1871.—LUBRICATING LOOSE PULLEYS.—Stephen Ustick, Philadelphia, Pa.

Claim.—1. The combination of the longitudinal groove b in the periphery of the shaft A with the eye of the loose pulley B and the annular groove a of the bearing C, the said grooves being arranged and operating in relation to the eye of said pulley and the supply-tube D, substantially in the manner and for the purpose above described.

2. The annular groove e on the shaft A and packing d'', in combination with the groove b, substantially as and for the purpose set forth.

119,288, antedated September 15, 1871.—MODE OF LUBRICATING JOURNALS.—Stephen Ustick, Philadelphia, Pa.

Claim.—The combination and arrangement of the oil-tubes E with the chambers D of the pillow-blocks B, substantially in the manner and for the purpose above set forth.

119,289, antedated September 18, 1871.—WARDROBE.—Henry Whittemore, Orangetown, N. Y.

Claim.—The shelf or shelves B, provided with the hooks b b arranged within the part A, with the wires d d and d' d', the latter connected with the former by means of the eyes i i, and affixed to the part A by screw-rings or hooks e e, with the curtains D D, the whole combined substantially as herein shown and described.

119,290.—WASH-STAND, BUREAU, AND TOILET-TABLE COMBINED.—Henry Whittemore, Orangetown, N. Y.

Claim.—1. The combination and arrangement of the reservoir H, wash-bowl E, siphon d, and tank F with the cabinet A, with or without mirror D, substantially as and for the purposes set forth.

2. The combination of a permanent wash-bowl and reservoir, when connected by the siphon d for drawing water from that portion of the reservoir, when the said siphon is provided with the stop-cock h below the level of the top of the wash-bowl, substantially as set forth.

119,291.—ORNAMENTING LEATHER.—Louis Wolfson, Boston, Mass.

Claim.—The method described of ornamenting a leather surface, viz., by the employment of wax and a heated iron or die, and subsequently polishing or burnishing the surface, all substantially as explained.

119,292.—FLAG-HALYARD.—William Albert, Brooklyn, N. Y.

Claim.—The combination, with the flag-halyard A and the mast, staff, shrouds, or other object, whenever they are to be made fast, of a weighted traveler, B, adapted for making the said halyards fast to it, and capable of rising and falling as the halyards change in length, all substantially as specified.

119,293.—Handle-Strap for Traveling-Bags. — Arthur Alexandre, New York, N. Y.

Claim.—The arrangement of the two hooks D, two keepers, F, double strap C, and short strap E, as and for the purpose specified.

119,294, antedated September 22, 1871.—Land-Roller.—William W. Andrew, La Porte, Ind.

Claim.—1. The combination of the hollow roller B, journal or journals D, and swinging weight E, for the purposes substantially as specified and shown.

2. The employment of the false or additional heads c', in the connection specified, to compensate the weight of the frame, substantially as specified and shown.

119,295.—Hub for Wagon-Wheels.—Simeon Atha, West Liberty, Ohio.

Claim.—The hub for carriage or wagon-wheels constructed of the wooden portion A b, metal cover D with flanges E, and thin connecting-plates e, all formed in one piece, the plates e held so as to firmly press against the wooden hub by reason of their elasticity, and through the shoulders of the spokes, as herein described.

119,296.—Whip-Stock.—Horace W. Avery, Westfield, Mass.

Claim.—The herein-described whip-stock, having its upper or flexible portion a of twisted rawhide and its lower or rigid portion of the rawhide, and wedges of iron b and rattan c, the whole being bound with cord d, saturated with glue, and covered with leather strips h, all constructed as specified.

119,297. — Wagon-Tongue Supporter.—Charles J. Babcock, Rives Junction, Mich.

Claim.—The construction and arrangement of the metallic hounds A, eyebolts C, leaf-spring D adjustably secured to the hounds by the bolts c passing through its slot b, and the hinged plate E with relation to the fore axle B and tongue F, as and for the purpose set forth.

119,298.—Electric Battery.—Louis Bastet, Tarrytown, N. Y.

Claim.—1. The use of bichromate of potash, nitrate of potash or nitrate of soda, in combination with sulphuric acid in place of nitric acid in the porous cell of a carbon battery, in the manner described and for the purpose set forth.

2. The partition E in the porous cell of an electric battery, substantially as and for the purposes described.

3. One or more compartments, substantially as seen at F, in combination with the porous cell of an electric battery, for the purposes described.

119,299. — Curtain-Fixture. — John E. Baum, Philadelphia, Pa.

Claim.—The detent B, having a tooth, e, and incline g at one end, a projection, h, at the other end, and a depression, k, between the incline and projection, in combination with the slide C which lies in said depression, and the bracket A having a rack, b, the said slide C being provided with a knob, D, or other device for holding the cord E, substantially as described.

119,300. — Wash-Boiler. — Silas Bennett, Newcastle, Pa.

Claim.—The flanged and perforated bottom C, vertical pipes D d' G, longitudinal perforated tubes E H, small perforated cross-tubes I, and cross-strips F, constructed and arranged in connection with each other, and with the boiler A and cover B, substantially as herein shown and described, and for the purpose set forth.

119,301. — Medical Compound for Consumption, &c. — Thomas W. Bethel, Brooklyn, N. Y.

Claim.—A medical compound prepared of the ingredients and substantially in the manner herein set forth.

119,302. — Thill-Coupling. — Coleman Bridgman, St. Cloud, Minn.

Claim.—1. The jointed pin or key D, in combination with the coupling A, substantially as and for the purposes described.

2. The slot F in the ear C of the coupling A, in combination with the pin D, as shown and described.

3. The slotted washer H, in combination with the jointed pin D and slotted ear C, substantially as described, and for the purposes set forth.

119,303. — Cloth-Measuring Machine.—Thomas M. Brintnall, Medina, Ohio.

Claim.—1. The combination of the main frame and the receiving and transferring-roller f, and mechanism for supporting and rotating the folding-board or bolt e' on said frame, with the hinged frame and the measuring-roller and registering devices on the same, all constructed and arranged to operate substantially as and for the purpose described.

2. In combination with the movable standard q and the rail a on which it stands, the stirrup or clutch t, the cross-bar r, and angle-plate u, constructed and arranged to operate substantially as and for the purpose described.

119,304. — Shutter-Worker. — Alfred Brown, Boston, Mass.

Claim.—1. The combination of the shaft D, sector E, the box H, and the primary and auxiliary arms F G, connected by a ball-and-socket joint, as set forth, all being arranged and applied together, substantially as described.

2. The combination and arrangement of the studs or stops $e f$ with the shaft D, sector E, box H, and primary and auxiliary arms F G, all connected as described.

119,305.—Apparatus for Elevating Hods. George W. Brown, New York, N. Y.

Claim.—1. The movable frame for the upper chain-wheel of a hod-elevating apparatus, made with wrought-iron tubes between the top frame and the base, as and for the purposes set forth.

2. The hook i', applied near the middle of the hod at one side thereof, as and for the purposes set forth.

3. The two-ended hod, provided with a hook on one side near the middle, and a fork at the lower end of the shank, as and for the purposes set forth.

119,306.—Machine for Making Wedges.—Thomas B. Brown and Joshua N. Dinsmore, Kendall's Mills, Me.

Claim.—1. The rotary tool M, having a series of crotched cutters arranged to work above and below the wedge-blank as it is fed along at right angles thereto, for the purpose specified.

2. The combination of pusher L, trough K, pusher N, and guides O P, arranged, as described, to enable the blank to be successively presented to the sharpening and chamfering-tools, as set forth.

3. The chamfering-cutters Q and sharpening-tool M, when combined and arranged in a machine to receive the wedge-blank and successively act upon it, in the manner specified.

4. The feeder R and spring-rod S, when arranged between the tools Q Q and T, as and for the purpose specified.

5. The arrangement, with the cam-wheel Z and the slide L, of the lever b and rod c, substantially as specified.

6. The combination of the chamfering-cutters Q Q and slitting gang-saw T, substantially as and for the purpose specified.

7. In a wedge-making machine, the combination of sharpening-tool M, chamfering-cutters Q Q, and slitter T, when arranged to receive and operate upon the blank successively, in the manner specified.

119,307.—Paper-Bag Machine.—James M. Bryant, Joseph P. Bryant, and Samuel H. Bryant, Temperanceville, Pa.

Claim.—1. A pair of feeding and pasting-rolls, D D^1, one roll, D, being provided with raised W-shaped pasters n^3 n^3, a pasting-ring, n, and feeding-ring n^1, substantially as described.

2. A paste-vat, l, arranged under the feeding and pasting-roll D so that the paste-ring n and pasters n^3 n^3 n^3 shall dip therein, and with a transverse trough, l^1, under the feeding-ring n^1, substantially as set forth.

3. The arrangement of the feed-rollers D D', reciprocating feed-table E, vertically-moving former G, and top and end sliding folders, constructed and combined relatively to each other, substantially as described.

4. The vertically-moving former G, operated by and in combination with the cam-yoke H' and cam H, the yoke H' being bell-mouthed and enlarged back, substantially as shown, so as to receive a quick throw and be held stationary during the greater part of the time of the operation of the machine.

5. The bent arms o^3 o^4, carrying the rollers o o at their forward ends, in combination with inclines or wedges w w, for causing the rollers to engage and discharge the bag, substantially as set forth.

119,308.—Steam-Wagon.—Oliver H. Burdett, New Athens, Ohio, assignor to himself and Robert Webb, same place.

Claim.—1. The combination of the inner pivoted frame D, to which the boiler, &c., are attached and swiveled, crank-screw G with the outer frame C, with which the wheels A are connected, substantially as herein shown and described, and for the purpose set forth.

2. The arrangement, in a steam-wagon, of the cam, crank, or working shaft M at the points at which the inner frame D that supports the boiler, &c., is pivoted to the frame C of the carriage, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the shaft H, to which power is applied from the engine, spur-wheels J L, and endless chain K, or equivalent gearing, shaft M working at the pivoting-points of the frame D, cams or cranks N, legs O, swiveled crank-screw G, frame D and C, and wheels A with each other, substantially as herein shown and described, and for the purposes set forth.

119,309.—Carriage-Bolt.—Orrin C. Burdict, New Haven, Conn., assignor to Plumb & Burdict.

Claim.—A carriage-bolt, consisting of a cylindrical portion A and diamond-shaped neck A' a' a', formed by simply swaging a portion of the bolt-blank, as hereinbefore set forth.

119,310.—Steam-Generator.—Gottlieb F. Burkhardt, Boston Highlands, Mass.

Claim.—1. The arrangement of the main steam-generator boiler a, secondary boiler e, and auxiliary boiler m with the furnace c, fine-tubes b f n, and flue-spaces i g h k, substantially as shown and described.

2. In combination with the boilers and flues, arranged as described, the exhaust-pipe x opening into the flue g, substantially as shown and described.

3. In combination with the boilers and flues, arranged as shown and described, the flue-openings p v and damper v, arranged substantially as shown and described.

4. In combination with the boilers, arranged as shown and described, the stop-cock b^3 and blow-off pipes, arranged to operate substantially as described.

119,311. — Clothes-Pin. — Benjamin Burling, Whitehall, N. Y.

Claim.—The sliding clasp E, either with or without the wood G, in combination with the legs F F, substantially as and for the purpose described.

119,312.—Cabinet-Bedstead.—Sanford S. Burr, Boston, Mass.

Claim.—As a new article of manufacture, a cabinet-bedstead, composed of the book-case A provided with shelves in the usual way, and a space, B, in rear of the shelves, in combination with the bed-frame a hinged to the lower part of the case, and the wire bedding C, said parts being constructed and arranged in the manner and for the purposes shown and described.

119,313. — Projectile. — John G. Butler, Fortress Monroe, Va.

Claim.—1. The split or slitted annular band B applied to the base of a projectile, substantially as specified.

2. The double-lipped band B attached to the projectile by means of the screw-threads and metallic keys K, substantially as specified.

119,314.—Steam-Pump.—Lysander Button and Theo. E. Button, Waterford, N. Y.

Claim.—1. The arrangement of the pump-cylinder A E U, the connecting-frame or bars C C, the steam-cylinder B D P, and the bearings I N N, as shown and described.

2. The fly-wheels F F and crank-shaft, eccentric T, walking-beam H, the slide-valve, the steam-cylinder and connected bearings I and N N, the pump-cylinder and frame C C, the pistons V W, rod K, the cross-head R, and connecting-rods, all constructed and arranged as shown and described.

119,315.—Throttle-Governor for Steam-Engines. — Herman Camp and George W. McIntosh, Rouseville, Pa.

Claim.—1. The combination of the set-screw G and arm C with the valve B for giving the latter the desired lead, substantially as herein described.

2. The combination, in a throttle-governor, of the valve B, arm C, piston D, spring E, and set-screw G, constructed and operating with relation to each other substantially as herein described, and for the purpose set forth.

119,316.—Desk for School-Teachers, &c. Wesley C. Carter and James P. Emery, Galva, Ill.

Claim.—1. In combination with the desk the foot-rest B, hung in the notched bars b, to be adjustable therein, substantially as herein shown and described.

2. The adjustable shelf, provided with the pivoted supporting-bars i i, whose ends fit into the notched sides of the compartments, as specified.

119,317.—Drill and Nut-Wrench.—Thomas A. Chandler, Rockford, Ill.

Claim.—The arrangement of the sockets A B and collar E with the arms C D journaled upon the shaft a between said sockets and collar, in combination with the pawls F and springs G, as and for the purpose substantially as described.

119,318.—Frame for Drying Laces, &c.—Henry Chatain, Washington, D. C.

Claim.—1. In combination with the grooved posts A A' and the top bar C of a frame for drying laces, &c., the lower bar B, as operated by ropes f f', with the shield n and spring-clamp M, substantially as and for the purpose specified.

2. In combination with a frame for drying laces, &c., constructed substantially as shown and described, the spring-clamp M, cut out of a single piece of wood, substantially as and for the purpose set forth.

119,319. — Reversible Hinge.—Pascal P. Child, St. Louis, Mo.

Claim.—The hinge for gates, doors, &c., having

the projections B and B', and the double-ended pivot-pin F, resting in sockets in the projections, all arranged and combined substantially as set forth.

119,320, antedated September 11, 1871.—HORSE HAY-RAKE.—Archibald L. Chubb, Grand Rapids, Mich.

Claim.—1. The spring-teeth F, constructed as described, in combination with the plate G and the axle-beam A, all constructed and operated substantially as described and shown, for the purposes set forth.

2. The guides H, in combination with the plate G, axle-beam A, and spring-teeth F, all constructed, arranged, and operated substantially as described and shown, for the purposes set forth.

119,321. — CURTAIN-FIXTURE. — Herbert Clayton, Lexington, Ky.

Claim.—1. The construction of curtain-fixture brake D of plate *d*, and a wire bent into a single eye, *b*, at the doubled end and clasped at the two free ends around a pin, *c*, as shown and described.

2. A wire brake, having eye *b* and plate *d*, when combined with a weighted cord passing through said eye, as and for the purpose specified.

119,322—Suspended.

119,323.—LIGHTNING-ROD CONNECTION.—Ayres Codington, Bound Brook, N. J.

Claim.—The improved lightning-rod connection, consisting of the metal disk A with radial screw-threaded holes, and the sections and branches secured therein, all substantially as specified.

119,324. — MACHINE FOR SHAVING ICE.—William H. Collins, Boston, Mass.

Claim.—1. The cutter-disk E, carrying one or more plane-bits or cutters, arranged in slots radiating from the axis of motion thereof, and having its bearing on its outer edge on anti-friction trucks, substantially as described.

2. The cutter-disk E, constructed and operated as set forth, in combination with an ice-holding tank, J, arranged in a vertical position above the same, substantially as described.

3. In combination with the cutter-disk E provided with radiating cutters A, and arranged to revolve in a horizontal plane in or on a peripheral bearing, the conical chute D secured to the bed A and concentric to the cutter-disk E, substantially as described.

4. The curved scraper I, in combination with the conical chute D and cutter-disk E, all arranged and operating substantially as described.

5. In combination with a machine organized as herein set forth for the purpose of shaving ice, the inclosing-case M, arranged and applied substantially as described, for the purpose specified.

119,325.—SEED-DROPPER.—Lewis H. Converse and James K. Welter, Springfield, Ill., assignors to Lewis H. Converse.

Claim.—1. The dropper E, suitably pivoted at its center and provided with the openings *e* and studs G, in combination with the slide C provided with the lugs H, when said parts are so arranged as that a longitudinal-reciprocating movement of said slide shall cause said dropper to rotate intermittently in one direction, substantially as and for the purpose specified.

2. In combination with the slide C and dropper E, arranged as shown, the lugs L and stops M, substantially as and for the purpose set forth.

119,326.—STRAW-CUTTER.—John A. Cornish, Marshfield, Mo.

Claim.—1. The spring-bar *l* provided with the emery-pad *p*, and attached to the leg *m* of the box, through which passes the screw *n* for adjusting said bar, as shown and described.

2. The straight round bar *e* and the spirally-fluted feed-roller *a*, arranged to operate as specified.

3. The bar *e*, spirally-fluted feed-roller *a*, shaft *d*, and cutter-disk *c c'*, constructed and arranged as shown and described, whereby the straw or other material is cut between the intervals of feeding, as specified.

119,327.—VISE.—John W. Coyne, Madrid, N. Y.

Claim.—The combination, with the jaws A B and their screw C, of the improved self-adjusting device for preserving parallelism, composed of the rigid arm or pawl H projecting inward from the movable jaw, and the stationary rack I for the engagement of said pawl, arranged and operating as shown and described, with or without the described adaptation of the upper ends of the jaws to receive interchangeable face-plates F F' F² F³ F⁴ G for holding objects of different shapes.

119,328, antedated September 23, 1871.—WATER-WHEEL.—John M. Cress and William L. Cress, Taylorsville, Tenn.

Claim.—1. The plane circular bucket C, outwardly convex, and provided with a circular flange or guide-board, *d*, along its inner edge, as specified.

2. In combination with a water-wheel having the bucket C, the circular tapering chute F and the barrel-shaped case E, all constructed and arranged to operate as specified.

119,329.—MANUFACTURE OF ILLUMINATING-GAS.—Darius Davison, New York, N. Y.

Claim.—1. The process, substantially as herein described, of manufacturing illuminating-gas by distilling the coal or other substance in half or partial charges introduced alternately within the retort, upon opposite sides of a longitudinal partially-dividing vertical plate, at successive intervals, equal to about the time required for a half distillation of each half or partial charge.

2. The device B, composed of a horizontal bottom plate, *d*, and vertical longitudinal dividing-plate, *e*, for use in a loose or detachable manner within the retort, substantially as specified.

3. The horizontal bottom plate *d* and vertical longitudinal plate *e*, to be used together, or the vertical longitudinal division-plate *e*, to be used separately, in combination with retorts now in use and with new retorts, essentially as and for the purpose herein set forth.

119,330.—TORPEDO FOR OIL-WELLS.—Julius C. Dickey, Titusville, Pa.

Claim.—1. A torpedo, having the explosive compound inclosed in a bag or pouch which will spread or expand so as to fill the bore of the well when in position and thereby bring the charge in close contact with the rock, substantially as set forth.

2. The combination, in a torpedo, of the frame *b*, expanding sack *a*, and the inclosing case *i*, substantially as set forth.

119,331.—RAILWAY-CAR SEAT.—Alpheus B. Dinsmore, Springfield, Mass.

Claim.—A duplicate car-seat, consisting of the seats A and beveled whirl-plates B, pivoted to and turning upon the bench C, and made to operate simultaneously by means of the disks D, cranks *c*, and bars *a b*, substantially as described.

119,332.—SLATE.—Freeman D'Ossone, Philadelphia, Pa.

Claim.—The slate A, in combination with the numerals or sliding-pieces 1 2 3 4, &c., substantially for the purpose shown and described.

119,333.—SEAL LOCKING-BOLT.—George R. Dunn, Newark, N. J.

Claim.—1. In combination with a mortised locking-bolt, the locking-plates F G, beveled locking-pin J, and perforated seal-slip K, substantially as described, for the purpose specified.

2. In combination with a hollow mortised locking-bolt, the locking-plates, and the perforated seal-slip, the locking-pin L, substantially as described, for the purpose specified.

3. In combination with the stationary beveled locking-pin, the perforated seal-slip, substantially as described, for the purpose specified.

4. The locking-plate F, constructed with the outer and inner groove at right angles to each other and with the beveled locking-pin J, substantially as described, for the purpose specified.

5. The locking-plate G, constructed with the external groove H and the interior concave surface, substantially as described, for the purpose specified.

119,334. — EXCAVATOR. — John M. Dunn, Erin, Miss.

Claim.—The ditching-machine, consisting of the frame A, wheels B C, blades *b*, guard F, apron G, shaft H, and wings *d*, all arranged to operate substantially as herein shown and described.

119,335.—KEY-BOARD FOR MUSICAL INSTRUMENTS. — William D. Edgar, Ottawa, Kan.

Claim.—1. A key-board, having the two rows of keys A B arranged with the keys of one between the keys of the other, as described, to enable a full tone to intervene between every two keys of each row.

2. The slide C and plates D E, combined, as described, to serve as a register, in the manner set forth.

119,336.—BEE-HIVE. — John C. Edwards, Cattleville, Mo.

Claim.—The arrangement in a bee-hive of the dividing-sheets J, the brood-frames I supported and adjusted as described, and the inclosing-hoop L of the honey-frames, as described and represented.

119,337.—INSECT-TRAP.—Samuel Endslow, Blain, Pa.

Claim.—1. The lid B of an insect-trap, held in a raised position by the curved spring C, which forms at the same time its hinge, operated in the manner and for the purpose described.

2. The combination of the lid B, held open by its spring-hinge C, as described, the pivoted end E provided with the right-angled shoulder *e*, and the looped netting D, all arranged and operating as described.

119,338. — WASHING-MACHINE. — John P. Eshleman, West Salem, Ohio.

Claim.—The combination of the frame A having grooves cut in its sides, pivoted standards C, washer D, rollers H and I, ribs G, splash-boards K and L, and rollers M, when all are arranged to operate substantially as shown and described.

119,339. — COMBINED WHEELBARROW AND STEP-LADDER. — Henry James Evans, Christieville, Canada.

Claim.—1. The jointed step-ladder, so made that it can be converted into a wheelbarrow, and vice versa, as set forth.

2. The frames A, F, G, and H, connected and arranged substantially as herein shown and described.

3. The steps B, C, and D of a step-ladder, pivoted to the side-boards so that they may constitute bottom boards and back of the barrow, as set forth.

119,340.—FANNING-MILL. — Francis Eves, Fountain City, Wis.

Claim.—1. The adjustable slat sieve A, provided with the hinged part B, arranged and operating substantially as and for the purposes described.

2. The eccentrics E, in combination with the adjustable slat sieve A, and arranged to operate substantially as and for the purposes described.

3. In combination with the adjustable slat sieve A, the tail-piece S, cut out on its upper edge and attached to the frame by screws passing through slots in its ends so as to permit it to be vertically adjusted, as shown and described.

4. The combination of the sieves A and J and distributer N, when the same are constructed and arranged to operate as and for the purposes set forth.

119,341. — TRUNK. — Henry Saxon Farley, Sing Sing, N. Y.

Claim.—1. The bureau-trunk composed of the equal parts A B, containing drawers, respectively, said drawers being in vertical positions within the trunk, but horizontal in the bureau, as specified.

2. The mirror C and folding-rods D D, connected with the upper part B of the bureau-trunk, substantially as and for the purpose herein shown and described.

119,342, antedated September 11, 1871.—WATER-CLOSET SEAT. — Benjamin G. Fitzhugh, Frederick, Md.

Claim.—1. A water-closet seat operated from a spring, which latter, without operating the lid, is overbalanced by the weight of the lid, substantially as and for the purpose described.

2. The combination of the spring E, seat A, and slotted lid C, all arranged to operate substantially as herein described.

119,343.—STOVE-GRATE.—Cornelius O. Foley, Troy, N. Y.

Claim.—1. The bearing D, provided with wings E E, constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The combination of a grate, B, with journals C C', bearing D, and wings E E, all constructed and arranged, as shown and described, so that the grate in its movement will pass beyond the fire-box and under the bed-plate, substantially as herein set forth.

3. The bar G, forming part of the bed-plate, and extending beyond the side of the stove, for the purposes set forth.

4. The angular lever H, provided with pin A and slot *i*, and its long arm formed as a wrench, all substantially as and for the purposes herein set forth.

119,344.—SEAT FOR HORSE-CARS.—Martin T. Glynn and John L. Goodman, Boston, Mass.

Claim.—A car-seat, H, supported by the arm G, which is pivoted to the arm of the main seat, and provided with the spring *k* and notched brace I pivoted to G and operating in a stop below the seat, as shown and described.

119,345.—MARINE RAILWAY.—John H. Gosline, Hampton, Va.

Claim.—The arrangement of the rack and pinion, the cradle, and the driving mechanism of a marine railway, as and for the purpose specified.

119,346.—COTTON-PRESS.—George W. Grader, Memphis, Tenn., assignor to himself and James H. Edmondson, same place.

Claim.—1. The combination of the two engine-cylinders F I with the segment-levers E E and the platen and follower of a press, substantially as and for the purposes set forth.

2. The automatic clutch and cross-head, constructed to operate substantially as herein described, for the purposes set forth.

3. The grooves O, arms N, and rollers *n* in combination with the jaws M, substantially as described, for guiding and tripping the clutch.

4. The wrought-iron draw-bar and rack H H' A in combination with the clutch M M, substantially as set forth.

5. The double annular puppet-valves Q Q' in combination with a press, operating substantially as herein set forth.

119,347.—SEDIMENT-CHAMBER FOR LAMP-POSTS.—John W. Graham, Chillicothe, Ohio.

Claim.—The sediment-chamber B, provided with means for removing the condensed vapors or other

impurities from the chamber, substantially as described.

119,348.—TRUNK.—Nicholas Groel, Newark, N. J.

Claim.—A water-proof trunk, composed of two equal portions, A and B, provided with the hasp or bottom brace H, and having suitable provisions for the attachment of rowing and steering apparatus, substantially as shown and described, and for the purpose set forth.

119,349. — RAILROAD-CAR VENTILATOR.—George B. Hall and Joseph Shaffer, Kansas City, Mo.

Claim.—1. The double window D D′, arranged to be moved within and from its casing C to form a support for the main window B of a railway car, and by turning one of the parts of said double window at right angles to the side of the car to prevent the entrance of dust, cinders, &c., while the ventilation of said car is uninterrupted, as herein shown and described.

2. The double window D D′ provided with spring-knobs or pulls *b*, operating as and for the purpose herein described.

119,350.—DEVICE FOR SECURING HEMMERS, &c., to SEWING-MACHINES. — Henry M. Hall, New York, N. Y.

Claim.—The clamp A, constructed as shown, and combined with the bar or arm B of an attachment for sewing-machines, and with a suitable thumb-screw for confining the same to or upon the horizontal plate of a machine, substantially as and for the purpose specified.

119,351.—AUTOMATIC FAN.—Willis DeLancey Hall, Memphis, Tenn.

Claim.—The automatic fan, combining the standard G in the hollow tube I with set-screw H, clamp-jaw K with set-screw N, and the semicircular frame F supporting the clock-work A, pinion C, and axle D with the arms or wings E E′ E″ E‴ and set-screw C′, all constructed and arranged substantially as described.

119,352. — TEA-AND-COFFEE POT.—Horace J. Hammond, Newburg, Ohio.

Claim.—A tea or coffee-pot, consisting of an inner earthenware vessel, A, and an outer metallic vessel, B, the latter being sufficiently larger than the former to provide a water-space, C D, between them, except at D′ and E, and provided with a filling-passage, F, placed on the side opposite the spout H, all substantially as specified.

119,353. — GRADING-MACHINE. — John F. Hanna, Momence, Ill.

Claim.—1. The cutting-and-carrying wheel H mounted on the hinged frame A when the latter is suspended from the laterally-adjustable frame F by the vertically-adjusting bolts E and beam C, all substantially as specified.

2. The arrangement, obliquely to the earth, of the annular rotary cutter I, and, at right angles thereto, the correspondingly-shaped stationary cutter L, as and for the purpose described.

3. In combination with cutters I L, arranged as described, the curved plate M and rim O, to guide the soil, as set forth.

4. The annular cutter-flange I, rim O, and extension M of stationary cutter L, combined with pressure-plates N placed at intervals, as and for the purpose specified.

5. In combination with cutters I L and rim O, the scraper Q, obliquely arranged to discharge the dirt, as described.

6. In combination with rim O, annular cutter I, and scraper Q, the rotary dirt-receiving-and-discharging wheel R, arranged as described.

7. The arrangement of the roller V and circular track I′ upon the hinged frame and wheel H, respectively, to hold the flange I near that part of the edge which is cutting out the soil.

119,354. — MOLE-TRAP.—George W. Hardwick, Wyandotte, Ind.

Claim.—The combination of the tube *a*, pin *i*, spring *h*, pawl *h*, spindle *b*, and tooth *g*, as described.

119,355.—STREET-LANTERN.—Jacob F. Harly, Kipton Station, Ohio.

Claim.—1. The glass of a street-lantern constructed in one piece in the form of an oblate spheroid, having an upper and lower opening, and provided with an equatorial rib or groove B, for the purpose specified.

2. In combination with the glass A the hinged frame E, substantially as described, for the purpose specified.

3. The street-lamp, consisting of the oblate spheroidal glass A, provided with the top and bottom openings formed by the collars C D, and with the equatorial rib or groove B, and the hinged frame E provided with the collar J and chimney N, substantially as described, for the purpose specified.

119,356.—HARVESTER-PITMAN.—George W. Harrison, Lansing, Mich., assignor to himself and Simon Forster, same place.

Claim.—The coupling for harvesters, consisting of the inner movable box *c*, the outer box *c* attached to the knife-heel, the lug *g*, set-screw *e′*, bolt *g*, and rubber blocks *a a*, with or without the metallic linings *b b*, substantially as specified.

119,357. — CARTRIDGE-SHELL FOR DRILL PURPOSES. — Alfred Charles Hobbs, Bridgeport, Conn.

Claim.—1. The rubber disk D, secured to the shell A by means of the dovetailed recess C, substantially as described.

2. A blank cartridge, consisting of the metallic shell A having the rubber cushion D, and a bullet, B, attached, as herein described.

119,358.—TOY-PROJECTOR.—Edward V. B. Hoes, Green Bay, Wis.

Claim.—In combination with a fork, A, the rod B pivoted between its prongs, and the rubber C passing through a hole in said rod, as and for the purpose specified.

119,359.—CAR-COUPLING.—Carl L. Horack, Hastings, Minn.

Claim.—The curved and forked swinging bar D E F, pivoted on the standard B, and arranged in combination with the draw-head A and bolt C, as shown and described.

119,360.—DEVICE FOR LOCKING-NUT.—John M. Horton, Milwaukee, Wis., assignor to himself and Hiram W. Foote, same place.

Claim.—The locking-plate A having the angular perforations B B′, the slots C C′, and the locking-lips D D′, all these parts being arranged as shown and described.

119,361.— CLOD-BREAKING-AND-PULVERIZING MACHINE.—Henry H. Hull, Bergen, N. Y.

Claim.—The beams A A, constructed with rounded surfaces C C, and provided with the projecting plates D D, thus forming a reversible scraper and pulverizer, substantially as set forth.

119,362.—MOTIVE POWER.—James B. Hunter, Ashley, Ill.

Claim.—1. The tilting-frame or way mounted on the rockers C and points E and provided with the tilting-lever, connected as described, and having the shiving-stop working in connection with the notched stop-bar, all substantially as specified.

2. The transmitting wheel *a* having the zigzag groove *b*, and connected to the shaft by a spring, combined with the lever *d*, roller *e*, rod *f*, and the cross-head A.

3. The arrangement of the cross-head A on friction-rollers *e*, and with the rail *m* and guide *k*, all substantially as specified.

4. The driving-shaft E, having a separate drum, M, for the connecting-chain of each end of the car, said drum being mounted as described, and connected to a spring-winding drum, T, for automatically winding up the slack chain, all substantially as specified.

119,363.—PROPULSION OF VESSELS.—Henry Jackson, Brooklyn, N. Y.

Claim.—The rotary tube A having collar E and aperture N at the lower end, the surrounding tube B having socket F, the elbow H, and the water-pipe I, all constructed, arranged, and applied to discharge water, as and for the purpose specified.

119,364.—VALVE ARRANGEMENT FOR LIQUID-METERS.—Julius Jonson, New York, N. Y., assignor to Joseph G. Harrison, same place.

Claim.—The within-described valve arrangement for liquid-meters, composed of a series of valves, *f*, controlling a series of compartments, *c c′*, *d d′*, and *e*, and operated by pistons *h h′* by the direct action of the liquid, in combination with the valve *n*, having a positive motion, and ports or passages *o o′*, *p p′*, *r k*, and inlet and outlet-pipes *q l*, substantially as specified.

119,365.—MELTING COPPER.—Joseph Kintz, West Meriden, Conn., assignor to himself and P. J. Clark, same place.

Claim.—The process of melting copper by interposing between a black-lead crucible and the copper an intermediate lining of carbon-excluding substance, as and for the purpose specified.

119,366.—BEE-HIVE. — Alfred H. Klepper, Muscatine, Iowa.

Claim.—The front division or section of the hive, having the stationary comb-frames J K and the transparent frame M N made approachable by the removable cover C, as specified.

119,367.—COTTON-PRESS.—Jacob B. Knight, New Orleans, La.

Claim.—1. The combination of the trusses E and K, the straining-rods N, the platen C, and the bed G, all constructed, arranged, and operating substantially as and for the purposes set forth.

2. In the cotton-press herein described and shown, the arrangement of the body A, head B, platen C provided with the truss E and shoes F, the bed G provided with the truss K and shoes M, the straining-rods N, nut L, screw H, levers J, and the follower, all constructed and operating substantially as described and shown.

119,368.—SLATE-FRAME.—William Knight, Covington, Ky.

Claim.—The open recess B in the edge of a slate, in combination with the button C or its equivalent, placed at one end of the recess, and the projection K at the other end of said recess, for the retention of a ruler for said slate.

119,369.—CLOVER-HARVESTER.—Jonathan Lamburn, Boundary City, Ind.

Claim.—The draft-rods L L, attached at one end to the axle and at the other to the thill-bar N, and the adjustable slides M M having elongated openings through which said rods pass and are allowed a slight vertical play, combined with the box A, as and for the purpose specified.

119,370. — HOLD-BACK FOR CARRIAGES.—John A. Lannert, Cleveland, Ohio.

Claim.—The herein-described hold-back for carriages, consisting of the bands B surrounding the thills A, slotted bar C, tongues E E′, spring G, and hook F, arranged to operate in the manner as described, and for the purpose set forth.

119,371. — WHIFFLETREE. — John A. Lannert, Cleveland, Ohio.

Claim.—The combination of the shell or thimble A, hook B fast to and projecting from the shell, pivoted and notched tongue C, stop E, guide H, rod F, and spring G, constructed and arranged in the manner described.

119,372.—FENCE.—Hezekiah Latshaw, McKnightstown, Pa.

Claim.—The combination of the panels A B C, posts D E, locking-bars G G′, hooks *f f*, braces H H′ with clips and pins, all substantially as and for the purposes herein set forth.

119,373.—WASH-BOILER.—George J. Leach, Rome, N. Y.

Claim.—The combination of a boiler, A, bottom C with slots *a a* and ribs *b b*, perforated tubes D D′ E, and grating G in the lid B, all constructed and arranged substantially as and for the purposes herein set forth.

119,374.—GATE-LATCH.—John H. Lee, Marshall, Texas.

Claim.—1. The case A with cover B, constructed with slots *d d′* and cam surface A, bolt C with pins *c c′*, spring E, and rod D, all arranged as and for the purpose specified.

2. The catch bolt C, provided with sliding pivots and governed in its movement by the oblique guide-surface A, substantially as specified.

119,375.—PHOTOGRAPHIC FILTERING APPARATUS.—Robert M. Linn, Lookout Mountain, Tenn.

Claim.—1. The combination of the compressing apparatus F and E with the photographic bath-cup D, substantially in the manner and for the purpose hereinbefore set forth.

2. The construction and arrangement of the arms B, supports *z*, posts T, and the ring K.

3. The construction of the filtering-bowl in the manner and of the material, as described, with the attachment *a* at the bottom.

4. The discharge-pipe V, of rubber or glass, and the method of inserting it through rubber packing, as at *d*.

5. The valve M, in combination with a rubber strap or band and tension-cord P.

6. The valve-strap N, when used for the purpose hereinbefore set forth.

7. The bellows F, made and used substantially as hereinbefore set forth.

8. The grooved blocks E and S, and the manner of binding the material to the same, as represented at S and T, and the groove S and U, substantially in the manner and for the purpose hereinbefore set forth.

9. The flexible-rubber plate H, for the purpose hereinbefore set forth.

10. The slotted double arm *b*, for the purpose hereinbefore set forth.

11. The adjustable clamping device, substantially as and for the purpose hereinbefore set forth.

12. The catch Q, for the purpose hereinbefore set forth.

13. The filtering-plug W, constructed as shown at X, combined with the wrapping Y and the rubber band Z, substantially in the manner and for the purpose hereinbefore set forth.

119,376.—EARTH-CLOSET.—Joseph M. Loewenstein, New Orleans, La.

Claim.—1. The removable frame B, with hopper D, having a bolt or pin, *y*, for holding the spring sliding door E, arranged with weights H for balancing it, and provided with the conductor F having aprons *a f* arranged to close the opening therein alternately, as set forth, in combination with the case A provided with a perforated box or drawer, C, substantially as set forth.

2. The construction and arrangement of case A with perforated box or drawer C and guides I, weights H, hooks *e*, removable frame B with hopper D and bolt *y*, spring sliding door E with conductor F, and holders *d* carrying the weights H, stops *f*, rod and spiral spring G, aprons *a*, *f*, and *g*, all substantially in the manner as herein shown and set forth.

119,377—Suspended.

119,378.—SLIDING STOP-VALE.—Henry G. Ludlow, Troy, N. Y.

Claim.—1. In a sliding stop-valve in which the gate or gates have a lateral and closing movement toward the valve-seat or seats, and in direction at right angles to that of the stem or valve-rod, the combination therewith of the triangular wedge piece D and the correspondingly-inclined wedge followers C, operating to move or crowd the gates upon their seats, when closed, by a horizontal movement.

2. In combination with a stop-valve in which the gate or gates have a lateral and closing movement toward the valve-seat or seats, and in a direction at right angles to the stem or valve-rod, the combination therewith of the triangular diagonally-wedged piece D and the correspondingly-inclined and diagonally-wedged followers C operating to tighten the gate or gates on their seat or seats when the downward movement of the latter in closing the valve has ceased, and to relieve the gate or gates of friction in the opening movement.

3. The combination of the triangular wedge piece with the wedge-shaped followers arranged to operate the gate or gates, as described, by movements at right angles to each other between guides, as described.

4. The combination in a sliding stop-valve of the fixed inclines *c*, the inclined follower C, the gate or gates B with the triangular wedge piece D and the operating stem E, constructed, arranged, and operating substantially as described.

119,379.—TRUSS-PAD. — Joseph B. Marsh, Brooklyn, N. Y.

Claim.—A truss-pad composed, in part, of a marginal ring, border-plate or band, A, and in part of a front leather, back plate, and intermediate filling, all firmly secured in common by the turning in of the edges of the ring, plate, or band, substantially as specified.

119,380.—WATER-ELEVATOR. — Isaac Mayfield, Mayfield, Ky.

Claim.—The combination, with the wheels C C′, having the tapering studs *z* of the chain composed of tapering links, bearing the buckets *d* having the lateral discharge-openings *o* and the side trough *x*′, substantially as specified.

119,381.—CALENDER. — William McAdams, Newton, Mass.

Claim.—The whole inner box *e f g g h h i j k k*, in combination with the outer box *a* having the closed top *c*, the whole being combined, arranged, and constructed as and for the purposes hereinbefore set forth.

119,382. — CART-SADDLE.—William B. McClure, Alexandria, Va.

Claim.—A cart-saddle, constructed as described—that is, with a groove and with a chain provided with rollers, for the purpose set forth.

119,383.—THREAD-CUTTER.—James Joseph McLoughlin, Nashville, Tenn.

Claim. — As a new article of manufacture, a thread-cutter, constructed as herein shown and described.

119,384.—CLOTHES-WRINGER.—Charles V. Mead, Trenton, N. J.

Claim.—1. The wringer-frame, composed of the parts C C and D D, with the bars E E hinged together at *a*, substantially as herein shown and described.

2. The combination of the frame C D E, racks G, eccentrics H, and levers I with the rollers A B, all being constructed and arranged to operate substantially as and for the purposes herein set forth.

119,385.—BUTTER-WORKER.—Peter P. Meredith, Stevensville, Mont. Ter.

Claim.—1. The combination of the cam-bar H provided with hooks *d d*, the block *b* on the cross-head D, and a spring or other equivalent device suitably arranged to hold said cam-bar away from the block except when forced close to it to change the direction of the movement of the butter-box, substantially as herein set forth.

2. The arrangement of the cam-bar H, lever I, rods *e e*, pawls or feed-hands J J′, and the pivoted lever K connected with the cross-head D, substantially as and for the purposes herein set forth.

3. The butter-stamp O provided with projections *k k*, and keyed to the cross-head D so as to be readily removed, for the purposes herein set forth.

4. The combination of the inclined plane A with guides *a a*, butter-box E with lug *f*, and ratchet-bar h, and the feed-bar L with lug *f*′, all constructed and arranged to operate substantially as and for the purposes herein set forth.

119,386. — GUN-LOCK. — Absalom Miller, Daleville, Ala.

Claim.—The combination of the hair-trigger L, set-trigger J, spring M, catch K, trigger-dog H, spring I, hammer B, dog C, connecting-rod or piece E, spring F, hammer B, and frame A with each other, substantially as herein shown and described, and for the purpose set forth.

119,387.—CHURN.—Henry H. Montgomery, Greensburg, Ind.

Claim.—The within-described churn-dasher, consisting of the vertical bars C C, upper and lower connecting-bars B B, inner-placed stationary notched wings *c c*, and revolving shaft D with arms *b b*, all arranged within the box A, and operated substantially as set forth.

119,388. — ROTATING DROP-PIPE.—George C. Morgan, Chicago, Ill.

Claim.—1. A water-pipe for railroads, consisting of the parts A, B, and C, constructed and jointed substantially as described, and having a reservoir and duct arranged to convey an anti-freezing liquid to each of the joints, as set forth.

2. Supplying an anti-freezing liquid to the joints of pipes for the purpose of preventing the formation of ice therein, substantially as set forth.

119,389. — INSECT-DESTROYER.—David G. Mosher, Mosherville, Mich.

Claim.—The construction and arrangement of the insect-catching-and-destroying device, composed essentially of the sides A, back B, handle C, receptacle E, door F, and recessed or grooved tines G, as set forth and shown.

119,390. — OFFICE-DESK. — Harcourt Mott, Troy, N. Y.

Claim.—The combination of the desk A, upright case or back B provided with a recess at its top and at each end, and the sectional fan-case covering C, the sections of which are secured within the end recesses of the back at its base by pivots, as shown, so as to allow the fan-case to be folded within the recesses, or cover the desk and front of the upright B, all substantially as set forth.

119,391. — BILLIARD-CUSHION OF RUBBER AND GUTTA-PERCHA.—John Murphy, New York, N. Y.

Claim.—A billiard-cushion composed of rubber and gutta-percha, the two substances being combined, substantially as and for the purpose herein specified.

119,392.—MANUFACTURE OF CANDY WHISTLES.—August Neuhausen, Wheeling, W. Va.

Claim.—1. The improved whistle-molds, constructed and arranged substantially as specified.

2. The process of casting whistles complete in one piece on a coro-piece, and a stud arranged in the mold to form the air-passage, substantially as herein specified.

3. As an improved article of manufacture, a whistle, composed of sugar and other substance cast in one piece and having the air-passage formed on cores, substantially as specified.

119,393.—MACHINE FOR BENDING WOOD.—Henry Ocorr, Sheboygan, Wis.

Claim.—1. The combination, with one or more wood-bending forms and the bench or other support thereof, of a screw-press or follower, supported in a grooved bearing overhanging the form or forms, and arranged to slide in said bearing, so that it may be brought over any one of the forms with which it is used, substantially as shown and set forth.

2. A wood-bending form for bending the backs and rims of chairs, provided with detachable side flanges for imparting different shapes, as desired, to the ends of the bow bent over or upon the form, as herein shown and described.

119,394. — MANUFACTURE OF ARTIFICIAL STONE.—James O'Friel, Brooklyn, N. Y.

Claim.—The composition herein specified for a cement, prepared substantially as set forth.

119,395. — TOOL-HEAD FOR PLANING-MACHINES.—Seth White Paine, Williamsport, Pa.

Claim.—1. The combination of the tool-post E journaled within the head, the shaft L, the pinion M, and the toothed segment N, substantially as and for the purpose specified.

2. The tool-post E, pivoted within the head so as to be capable of an oscillating movement in a vertical plane having a line corresponding with the movement of the planer-bed, in combination with said head, the shaft L, the pinion M, and the slotted plate O provided with the toothed rack *o*′, substantially as and for the purpose shown.

3. The means employed for giving to the tool-post E an oscillating movement vertically, consisting of the trunnioned pivoted ring F, the shaft L, the pinion M, the plate O provided with the slot *o* and toothed rack *o*′, the pulleys *i* and R, the rollers Q, and the cord P, in combination with each other and with said tool-post, substantially as shown and described.

4. The means employed for giving to the journaled tool-post E a semi-rotary movement horizontally, consisting of the shaft L, the pinion M, the toothed segment N, the swiveled pulleys *i* and R, the rollers Q, and the cord P, in combination with each other and with said tool-post, substantially as shown and described.

5. The tool-post E provided with the head E′, having within its lower face the openings K and within its sides the set-screws *k*, when the same are constructed and relatively arranged substantially as and for the purpose specified.

119,396.—WASHING-MACHINE.—Joseph H. Palmer, Yonkers, N. Y.

Claim.—1. The combination of the longitudinally-corrugated beater G and frame H I J, curved bottom C having slots or openings formed in it, and inclined vertically-corrugated side-boards D having slots or openings formed in them, with each other, and with the box A, substantially as herein shown and described, and for the purposes set forth.

2. The washing-machine side-boards D, having slots therein, and arranged with respect to the false and true bottoms, as described, to form a water-course through the side-boards and between the said bottoms, for the purpose specified.

119,397.—HARROW.—Delbert A. Parkman, Union City, Tenn.

Claim.—In combination with the hinged parallel bars A B and knife-shaped teeth C C, the log G attached or connected to the bar A by means of the chains *d d*, substantially as and for the purposes herein set forth.

119,398.—HARROW.—James M. Payne, Benton, Ill.

Claim. — The combination, with the harrow-frame G, of cutters or colters applied on the ends of vertically-movable spring-spindles *c*, substantially as described.

119,399. — CLOTHES-WASHER. — Henry W. Pell, Rome, N. Y.

Claim.—1. The combination of the lobular chambers B B and puffer-pipes C C, crowned with one or more deflecting-plates or disks, substantially as described.

2. The flexible plate *b*, duplicated or otherwise, operating as described.

119,400.—MILITARY EQUIPMENTS.—William H. Penrose, Fort Lyon, Col. Ter.

Claim.—The adjustable bifurcated yoke, combined with a waist-belt to support the necessary equipments from the breast and back of the wearer in the manner described, each equipment being attached by a strap, L, with suitable connections from the front and rear of said yoke, for the purpose specified.

119,401.—ELEVATOR.—Francis B. Perkins, Boston, Mass., assignor to himself and Campbell, Whittier & Co., same place.

Claim.—In combination with the drum *g* and its gear *i*, operated by the worm *k* on the driving-shaft, the intermediate gear *m*, driven by the worm *n* on the driving-shaft, and engaging with and actuating the drum-gear *i*, substantially as shown and described.

119,402.—APPARATUS FOR POINTING HORSE-SHOE-NAILS.—Charles H. Perkins, Providence, R. I., assignor to American Horse-Nail Company, same place.

Claim.—1. The spring nail-point guide *b* and the die *a*, constructed and used in combination with any available appliance to act on the guide and nail, substantially as and for the purpose set forth.

2. The combination of the die *a*, spring nail-point guide *o*, plunger *c*, guide-block *d*, and elevating spring *e*, substantially as and for the purpose hereinbefore set forth.

119,403.—ALARM-LOCK.—Charles E. Pierce, New York, N. Y.

Claim.—1. The lever D, provided with the toothed segment D², in combination with the cog-wheel H of the alarm mechanism, and plate P′, pivoted to the bar J, substantially as and for the purposes described.

2. In combination with the toothed segment-lever D and sliding link I, bar J, with its angular slot P and mortised end R′, and plate P¹ pivoted to mortised end P² on bar J, for purposes set forth.

3. In combination with bolt K and bar J, sliding link I, having slot O in and tenon R on the same, as described, and for the purposes set forth.

4. In combination with the preceding claim, projecting pieces N, slot M, and recess L′, as described, and for the purposes set forth.

5. Bolt K and sliding link I, attached to each other, in combination with beveled ends B² of the keeper, bar J, toothed segment-lever D, and an alarm mechanism, all of which are arranged to connect with each other, and, by pressing bolt K against one of the beveled ends of the keeper, sounded while said bolt is still retained in the keeper, substantially as set forth.

119,404.—Wheel-Cultivator. — Warren M. Pitts, Holden, Mo.

Claim.—1. The detachable feet Q constructed and secured to the standards P, substantially in the manner herein shown and described, to receive the scraper-plates S, as set forth.

2. The flanges U, formed upon the sides of the bases of the feet Q to receive the cutter-plates S, substantially as herein shown and described, and for the purpose set forth.

119,405.—Automatic Governor-Valve.—Joseph B. Potter, Conneautville, Pa.

Claim.—1. The plug *d* and conical or taper valve *e*, the former having a greater area than the latter, and connected, as shown and described, in combination with the spring *m*, to operate in the manner specified.

2. The plugs *d e*, valve *e*, shoulder *n*, and spring *m*, working in connection with each other, as described.

119,406, antedated September 23, 1871.—Tempering Apparatus.—Henry H. Ray, Arena, Wis.

Claim.—In combination with the bending device described, the trough *d*, and the rods *h* and cams *g* for operating the same, as and for the purposes set forth.

119,407. — Heel for Boots and Shoes.—Charles A. Read, Bridgeport, Conn.

Claim.—The rubber A, having a canvas *a b* respectively vulcanized to the upper and lower parts thereof, and the leather layer *c* cemented to the bottom, all arranged as and for the purpose specified.

119,408.—Shifting-Rail for Wagon-Seats.—James L. Reed, Hastings, Mich.

Claim.—1. The rail B, provided with hooks *h h*, posts *p p*, and catch-posts C C, constructed substantially as described.

2. The rail B, provided with hooks *h*, posts *p*, and catch-posts C C, in combination with seat A provided with a rail or rim, *a*, perforated at its forward ends, and having springs *e e*, constructed substantially in the manner set forth.

119,409.—Car-Coupling.—Henry R. Robbins, Baltimore, Md.

Claim.—The pivoted box *m*, the pin *n* suspended in yoke *r*, and the spring-lever *t t'*, arranged as herein shown and described, in connection with the draw-head *u'*.

119,410.—Suspended.

119,411, antedated September 23, 1871.—Seed-Planter and Fertilizer-Distributer.—John Sample, Franklin county, Miss.

Claim.—The combination of the wheels E, dropping-wheels G g^1 g^2, slide I, bars K, crank-rod L, bar M, and spring J with the seed-hopper and the fertilizer-hopper, substantially as herein shown and described.

119,412.—Self-Oiling Journal-Box.—John Sault, South Manchester, Conn.

Claim.—1. The removable arms or pins *c c*, &c., attached to the journal in such a manner that a greater or less number of them can be used at a time to regulate the supply of oil.

2. The oil-box, having the feed-hole *g* placed in the position indicated.

119,413.—Manufacture of Cement.—David O. Saylor, Allentown, Pa.

Claim.—1. The process for making hydraulic cement from argillo-magnesian and argillo-calcareous limestone, substantially as herein specified and described.

2. As an improved article of manufacture, hydraulic cement produced from argillo-magnesian and argillo-calcareous limestone, substantially as herein specified and described.

119,414.—Clamp for Mortising-Machines.—Anton Schmackers, Cincinnati, Ohio, assignor to J. A. Fay & Co., same place.

Claim.—The clamp C C', provided with screw D *d d'*, and occupying slot *b* in back B or B', as and for the purpose set forth.

119,415.—Horseshoe. — Rudolph Seiffert, Chicago, Ill.

Claim.—The calk B, having the groove *c* formed in its end, with the screw-stem *b* for securing it to the shoe, as herein set forth.

119,416.—Railway-Car Coupling.—George C. Sherman, Chicago, Ill.

Claim.—The draw-head herein described, provided with the angular projection *h'''* in rear of the pin, and with the rock-shaft *d*, having loop *g* and operating-arm *e*, in combination with the pin having a globular expansion *h* at its upper portion, substantially as specified.

119,417. — Fifth-Wheel and Coupling for Vehicles.—Eugene W. Silsby, Ottumwa, Iowa.

Claim.—The combination of the circles D D', arms E E', center circles G G', and king-bolt *b*, all constructed and arranged with the front axle A, head-block B, and reach C, substantially as and for the purposes herein set forth.

119,418. — Cotton-Hoe. — Zachariah B. Sims, Bonham, Tex.

Claim.—1. As an improvement upon the patent granted me August 31, 1869, for improvement in cotton-hoes, the divided handles C D, united together by the angular metallic socket E, as and for the purpose set forth.

2. The divided handles C D, angular metallic socket E, arms B B, back A, elevated loop *a*, and cutters *b b*, when all are constructed and employed in connection with the central cutter *c*, in the manner and for the purpose heretofore set forth.

119,419.—Rolled Steel Plate for Making Cultivator-Teeth. — William W. Skinner and David D. Skinner, Des Moines, Iowa.

Claim.—The improved steel plate, as described, and for the purposes specified.

119,420.—Wagon-Hound.—Fridolin Smith, Tiffin, Ohio.

Claim.—1. The hounds B, having a piece, *b'*, removed from one side, leaving the strip or hounds B thinnest in the center and gradually increasing in thickness toward the ends, substantially as herein shown and described, and for the purpose set forth.

2. The block A, rounded upon one side to receive and hold the strip B while the piece *b'* is being removed, substantially as herein shown and described.

3. The hounds B, bent into oval form and made thinner in the middle than toward the ends, substantially as herein shown and described, and for the purpose set forth.

119,421. — Gate.—Byron Snyder, Clinton, Wis.

Claim.—The construction and arrangement of the posts A A', D, E E', and H, the heel-post B, hinged to the post A, and carrying the adjustable gate C, the brace F, latch-bar G, latch-bolt *d*, latches *e e'*, and weighted cords I, I', J, and J', all arranged and operating with relation to each other as herein described, for the purpose specified.

119,422.—Sole-and-Heel Burnishing Machine.—Vivian K. Spear, Lynn, Mass.

Claim.—1. In a machine for burnishing boot-and-shoe heels, the combination, with the boot-carrier, of the revolving wheel, under the arrangment substantially as shown and described, so that the wheel shall revolve against the heel-edge in a direction inward toward the boot, for the purposes stated.

2. In a machine containing a means of reducing or finishing and of burnishing a heel-edge, the boot carrier or "jack," constructed and applied to the machine-frame, substantially as herein shown and described, so as to permit of a boot-heel being presented to the action of either wheel, at the discretion of the operator, without removing or disturbing the boot from its position within the jack.

3. The combination of one or both of the wheels *d* or *e*, and the jack or carriage B, the whole being organized and operating substantially as herein explained.

119,423. — Combined Subsoil, Drill, and Side-Hill Plow. — William W. Speer, Allegheny City, Pa.

Claim.—The perpendicularly-sided and triangular mold-board G, pivoted at the vertex of its angle to the bolt I of subsoil-plow irons C D E, and adjustable on the arc-bar J to enable the plow to be adapted to the uses specified.

119,424.—Anti-Friction Bearing of Water-Wheels. — Bradford Stetson, Uxbridge, Mass.

Claim.—1. The friction-roller, inner-support ring F, as provided with the friction-roller pivots or journals *h*, the annular groove *g*, and the passages *i* leading from said groove into and through the pivots or journals *h*.

2. In combination with the inner-support ring F, the oil-groove *g*, ducts *i*, and pivots *h*, the outer ring K and its series of screw-pivots and clamp-nuts, all arranged and operating as set forth, with the friction-rollers J arranged between the rings K F and employed to support a water-wheel or other shaft, as described.

119,425. — Steering Apparatus.—Joseph W. Strange, Bangor, Me.

Claim.—The combination of the steering-wheel, tiller, and mechanism by which to produce a geared or direct movement, or to lock the wheel, substantially as described and shown.

119,426. — Composition for Removing Scales from Steam-Boilers.—Charles A. Sweet, Ripon, Wis.

Claim.—A compound composed of the above-named ingredients, substantially in the proportions described, and for the purpose specified.

119,427.—Balanced Valve for Steam-Engines.—John F. Sweet, Cedar Rapids, Iowa.

Claim.—1. The relative arrangement within the plug and casing of the ports *a*, a^1, a^2, a^3, *b*, b^1, b^2, and b^3, substantially as and for the purpose shown.

2. The heads E' and K, the bolts I provided with the nuts I', the step *k*, and the collar L, in combination with each other, the spindle C, and the sleeve E, substantially as and for the purpose set forth.

119,428.—Feed-Water Heater for Steam-Boilers.—John F. Taylor, Charleston, S. C.

Claim.—The perforated and hollow chamber B, of nearly the same internal diameter of the boiler, placed in the smoke-chamber and at a little distance from the tube-sheet *b*, and connected by pipe *g* with the steam-boiler, in combination with the inlet-pipe *f* rising to or above the top of said chamber B, and connected with the ordinary feed-pump, as and for the purpose specified.

119,429, antedated September 9, 1871.—Knob for Drawers, &c. — Nathan Thompson, Brooklyn, N. Y.

Claim.—A sheet-metal knob, formed with spurs or prongs *a* projecting longitudinally from its open inner edge, substantially as and for the purpose specified, as an improved article of manufacture.

119,430, antedated September 9, 1871.—Pulley, Sheave, and Wheel.—Nathan Thompson, Brooklyn, N. Y.

Claim.—1. A pulley, sheave, or wheel made in sections A A' by stamping or pressing, as described, and formed with ribs or projections and correspondingly-shaped grooves or depressions on their inner faces, arranged to hold said sections both concentrically and from turning independently of one other, substantially as specified.

2. The combination, with a pulley, sheave, or wheel constructed in sections by stamping or pressing, as described, of the attachable side hubs *d d* constructed to fit the sections A A', and to be held by the latter both concentrically and against independent movement, essentially as herein set forth.

119,431. — Railway-Car Coupling.—Eugene M. Van Hoesen and Nelson H. Brown, Syracuse, N. Y.

Claim.—The swing-head B, shaped as shown, and applied to the finger *c* of the draw-head to constitute a coupling, substantially as set forth.

119,432.—Washing-Machine.—Joseph Varney, Batavia, Ill.

Claim.—1. The combination of the octagon longitudinally-corrugated roller B, the reciprocating corrugated wash-board D, and the spring E, said spring connecting the wash-board with the operating mechanism and pressing it against the roller, substantially as and for the purposes herein set forth.

2. The combination of the box A, octagon roller B, crank C, wash-board D, spring E, block G, lever H, pitmen J M, fly-wheel K, pulley *a* L, belt *b*, crank *d*, and treadle N, all constructed and arranged substantially as and for the purposes herein set forth.

119,433.—Plow.—James Cunningham Vertrees, Gallatin, Tenn.

Claim.—A plow constructed substantially as described, and having its standard B and handle C provided with a series of holes for adjusting the beam D thereon, as herein set forth.

119,434.—Stove-Cover for Fuel-Reservoirs.—Jacob V. Vrooman, Schenectady, N. Y.

Claim.—1. Hinge C, constructed and arranged with reference to cover A, in the manner herein set forth.

2. The hinged cover A, having a spur or nib, *a*, combined and arranged with reference to cover B so as to operate in the manner and for the purpose herein shown.

119,435. — Roach-and-Mouse Trap.—William I. Webb, Philadelphia, Pa.

Claim.—The combination of the funnel-shaped glass vessel D *c*, the elevated bait-holder E, the case B, and the opening F, as and for the purpose described.

119,436. — Apparatus for Distilling.—Ernst Werner, Canton, Ill.

Claim.—1. The doubler B having the worm-pipe *d*, in connection with the pump *k*, beer-reservoir H, and pipes *f m y*, all constructed and arranged substantially as specified.

2. The arrangement of the still A and doubler B communicating through the pipes *d d'*, pump *k*, and beer-well H, all constructed to operate substantially as described, for the purpose specified.

119,437.—TRANSMITTING MOTION.—Henry F. Wheeler, Boston, Mass.

Claim.—The combination, with the reciprocating piston-rod, of the links, pawl-arms, friction-pawls, and flanged wheel, arranged and operating substantially as described.

119,438. — SELF-ACTING GATE.— Franklin Whitaker, Bel Air, Md., administrator of the estate of Samuel Whitaker, deceased.

Claim.—1. The double-armed lever G, chains I, pulleys I', and cranks J, in combination with the gate B, staple E', and pivoted sliding arm E, substantially as described.

2. The pulleys D D', chain *d'*, and lever E, in combination with the gates B B', as and for the purpose described.

119,439, antedated September 14, 1871.—MACHINERY FOR MANUFACTURING BRUSHES. George Willett, St. Albans, Vt.

Claim.—1. Rolling and casing a brush by the continuous movement of an apron, substantially as shown and described.

2. The arrangement and combination of the carriage E, cam J, apron D, and frame or table A with the parts connected therewith, substantially as and for the purposes herein shown and described.

119,440, antedated September 14, 1871.—MACHINERY FOR MANUFACTURING BRUSHES. George Willett, St. Albans, Vt.

Claim.—1. The brush-clamp L, with the elastic bed N and eccentric lever M, arranged to operate substantially as and for the purposes described.

2. The handle-clamp C, constructed and arranged to operate substantially as and for the purposes described.

3. In combination with machinery for making brushes, the wheel G and mode of operating the plunger F, substantially as shown and described.

4. The combination of the clamps C and L, plunger F, and wheel G, substantially as and for the purposes herein shown and specified.

119,441. — OIL-CAN.—George D. Winchell, Cincinnati, Ohio.

Claim.—1. The arrangement, substantially as herein described, of the partially open-mouthed oil-can A, fixed brace B, hinged cover C, and detached segmental pan G, said pan being adapted to receive a suitable pump, I, as and for the purpose explained.

4. The combination of the supporting-neck J, plate L *l l'*, spring O *o o'*, hooks S S', and pump I *i*, for the object set forth.

REISSUES.

4,567.—WHEEL FOR VEHICLES.—James R. Baird, Vincennes, Ind. — Patent No. 117,142, dated July 18, 1871.

Claim.—The combination, in a staggered-spoke wheel, of the hub A, ring B, spokes C C with shoulders *a a* and tenons *b b*, the felly D, and felly-plate E with pin D and spoke-socket G, all constructed and arranged substantially as and for the purposes herein set forth.

4,568.—COOKING-STOVE.—Mary Ann Boughton, Norwalk, Conn.—Patent No. 113,842, dated April 18, 1871.

Claim.—1. The combination, in a cook-stove, of an oven, a fire-place, and tubes *g g* arranged wholly within the oven, as described, and communicating with the flues, as set forth, so as to conduct the gases through the oven after they have passed round three sides thereof, as set forth.

2. A cook-stove in which the gases pass round three sides of the oven without being reversed, and without being divided except at the point over the upper plate where the exit-flue is situated, as set forth.

3. The combination of the exit-opening and the tubular flue communicating therewith and with upper and lower flues *h* and *h'*, furnished with slides, substantially as specified.

4. The combination, with the front plate *k* and recessed hearth-plate *k'*, of hinged doors I I' having flanges *l l*, arranged as specified.

5. A plate, E, hung to the outer casing of a stove so as to be turned to a vertical or horizontal position, substantially as described.

4,569.—MACHINERY FOR FORMING THE LIPS OF AUGERS. — James Swan, Seymour, Conn.—Patent No. 116,509, dated June 27, 1871.

Claim.—1. In combination with the projecting crimp-dies *a a* and revolving mandrel C, the sleeve N arranged upon the said mandrel and held in position by one or more trunnions, to which the lever P is attached, the said sleeve having a longitudinal movement imparted thereto, through the lever P, by means of the crank R, the internal front of the sleeve being beveled or expanded outwardly, the whole operating in the manner substantially as described.

2. The combination of a pair of holding-dies, a revolving mandrel, C, a carriage, D, cam F, shaft H, worm I, and pinion L, substantially in the manner herein described.

3. The cam F, having a rounded projection, as shown, in combination with the revolving mandrel C, substantially as and for the purpose specified.

4,570. — CLOTHES-WRINGER.—Washington Whitney, Winchendon, Mass., assignor to The Metropolitan Washing-Machine Company.—Patent No. 33,861, dated December 3, 1861.

Claim.—1. The combination, in a clothes wringing machine, of a yoke adapted to straddle or fit over the edge of a tub to which the machine is applied, with a clamping-screw carried by one of the legs of the yoke, and a self-adjusting pad on the end of the screw which will adapt itself to the curvature or inclination of the side of the tub, substantially as shown and described.

2. The projections formed upon one of the legs of the yoke, in combination with a clamping device carried by the other leg, under such an arrangement that the clamping device shall bear upon one side of the tub to which the wringer is applied at a point intermediate between those at which the projections bear upon the opposite side of the same, substantially as shown and described.

3. A clothes-wringer provided at each end with a roll-supporting metallic frame cast in one piece with a yoke or pair of legs for straddling the edge of the tub to which the wringer is applied, one of the legs of each pair being provided with a clamping device, substantially as described.

4. The combination of the lower roll and its supporting frames with the upper roll carried in brackets hinged to the frames, and the springs connected with the frames and brackets so as to draw together the rolls, substantially in the manner shown and set forth.

4,571. — MACHINE FOR OPERATING GLASS-MOLDS. — William C. King, Pittsburg, Pa.—Patent No. 114,569, dated May 9, 1871.

Claim.—1. A rotating base for carrying through the medium of operating mechanism, two or more molds into such position that a descending plunger shall form therein articles of glass-ware, substantially as described.

2. The hinged and counterbalanced drop-pan *s*, made substantially as and for the purpose described.

3. In connection with a series of revolving molds a hooked lever, F, wheel *o*, with pins *o''* or their equivalents, arranged substantially as and for the purposes described.

4. In connection with a series of revolving molds a bent lever, *m*, pin *n*, grooves *p p'*, and wheels *o*, having ratchet-teeth *o'* or their equivalents, arranged substantially as and for the purposes specified.

5. The block *i*, perforated or chambered out in the direction of the axial line of the molds attached thereto, and provided with drop-weights *x*, substantially as described.

4,572.—LAMP.—Charles B. Mann and Stephen S. Mann, Baltimore, Md.—Patent No. 114,954, dated May 16, 1871.

Claim.—1. A safety-filling attachment for lamps, consisting of a long wick and filling-tube, and a drum having an orifice for the insertion of the nozzle of an oil-can, and provided with the spring-slide *b* or other suitable device to close said orifice, and so constructed as to provide outlets for the vapor from the reservoir of the lamp while preventing its escape through the tube and drum, substantially in the manner shown and described, and for the purpose specified.

2. In a safety-filling attachment for lamps the spring-slide *b*, constructed and arranged in connection with the drum *a*, substantially as described.

3. In an attachment for lamps, the long wick and filling-tube *c*, when forming, in connection with the drum, an annular chamber, which is provided with outlets and communicates with the lamp-reservoir, substantially as described.

4. In an attachment for lamps, consisting of a drum having screw-connections and a long wick and filling-tube, ventilating-holes in the drum, and a vapor-passage in the screw-neck of the drum for the outlet of vapor from the lamp-reservoir, as described.

5. In an attachment for lamps, a long wick and filling-tube, and a drum with screw-connections, when secured together by means of a flange on the head of the tube so as to leave an annular space between the tube and the screw-neck of the drum, for the purpose specified.

6. The safety-attachment for lamps, consisting of the long wick and filling-tube *c*, and a drum having screw-connections, and which is provided with an annular gas-chamber with ventilating-holes in it, and constructed to form the space between its male screw-neck and the long-wick-tube, substantially in the manner described, and for the purpose specified.

DESIGNS.

5,276.—GROCER'S CAN. — John J. Bockee, Jr., New York, N. Y.

Claim.—A design for a grocer's can, of the shape and ornamentation substantially such as shown and described.

5,277.—CIGAR-BOX.—Andreas Lis, Covington, Ky.

Claim.—The design for a cigar-box, as shown at A B B' C D D' in the annexed illustration.

5,278.—CARPET-PATTERN. — William McCallum, Halifax, England, assignor to Joseph Wild & Co., New York, city.

Claim.—The design for a carpet, as shown.

5,279.—CARPET-PATTERN. — William McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,280.—CARPET-PATTERN. — David Paton, New York, N. Y., assignor to Joseph Wild & Co., same place

Claim.—The design for a carpet, as shown.

5,281.—CARPET-PATTERN. — David Paton, New York, N. Y., assignor to Joseph Wild & Co., same place.

Claim.—The design for a carpet, as shown.

5,282. — FRAME FOR CHURCH, HALL, AND LAWN-SEATS.—Henry M. Sherwood, Chicago, Ill.

Claim.—A design for church, hall, school, and lawn-seat frames, with ornaments of leaves, quarterfoils, and buds, substantially in the manner above described.

5,283.—KNITTED NUBIA FABRIC.—John Taylor, Philadelphia, Pa.

Claim.—The design for a knitted nubia fabric, in which are combined a fringe, A, and a body, B, of a different fabric.

5,284.—ICE-PITCHER BODY.—George Wilkinson, Providence, R. I., assignor to John P. Adams, Brooklyn, N. Y.

Claim.—The design for an ice-pitcher body, as shown and described.

5,285.—FIRE-IRON STAND.—Adolph Wunder, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for fire-iron-stand parts, together or separately, as shown and described.

5,286.—FIRE-IRON STAND.—Adolph Wunder, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for fire-iron stand, described and shown in the accompanying illustration.

5,287.—BASE FOR BIRD-CAGE BRACKET.—Adolph Wunder, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for base for brackets, substantially as described and shown in the accompanying illustration.

5,288.—FASTENER FOR MEETING-RAILS OF SASHES.—Purmort Bradford, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for sash-fastener described, consisting of an ornamented panel on the back or rear of the fastener.

5,289.—ORGAN-CASE.—Levi K. Fuller, Brattleborough, Vt.

Claim.—The design for an organ-case, as shown.

5,290.—ORGAN-CASE.—Levi K. Fuller, Brattleborough, Vt.

Claim.—The design for an organ-case, as shown.

5,291. — TROLLING-SPOON. — John Henry Mann, Syracuse, N. Y.

Claim.—The design for trolling-spoons, in which the spoon A is of a shield-shape, having shoulders *b*, and formed with the concavo-convex or spoon surfaces, as described.

5,292.—FRUIT-BOX.—Joseph Sherman, Burlington, N. J.

Claim.—The design for a fruit-box, substantially as described, and illustrated in and by the accompanying drawing.

5,293.—IRON FRAME FOR UPRIGHT PIANOS, Justin Whitney, Boston, Mass.

Claim.—The piano-forte frame design, substantially as described and represented.

5,294.—STOVE-COVER LIFTER.—Edward B. Wilbur, Raynham, Mass.

Claim.—The design for a stove-cover lifter, substantially as represented in the drawing, and as hereinbefore described.

5,295.—DOOR-BOLT.—Adolph Wunder, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for barrel-bolt and keeper, together or separately, as described and shown in the accompanying illustration.

TRADE-MARKS.

446.—LINIMENT.—William H. Adams and Frank A. Young, Bangor, Me.

447.—CHOLERA MEDICINE.—Atchison & Bro., Frankfort, Ind.

448.—MEDICINE.—Dunn & Co., London, England.

449.—LEATHER.—Eagle Tanning Works, Chicago, Ill.

450.—STRENGTHENING-PLASTER.—Charles W. Massonneau, Red Hook, N. Y.

451.—CORN-SALVE.—John McKee, New Orleans, La.

452.—MEDICINE.—Jane Scott, New York, N. Y.

453.—MEDICINE.—Thompson, Steele & Price Manufacturing Company, Chicago, Ill.

EXTENSIONS.

CHARLES WINSLOW, of Lynn., Mass.–Letters Patent No. 17,950, dated August 4, 1857; reissue No. 492, dated September 15, 1857.

"Improvement in Elastic Gore-Cloth."

Claim.—An elastic band or gore-cloth, when made not only of a fabric composed of a cement of India rubber or gutta-percha and two pieces of cloth in which the warp and weft of each piece are made to cross one another diagonally or at acute angles, but with the edges of the cloth cut and overlapped and cemented down in a line or lines out of parallelism with either the warp or weft-threads, the line of maximum elasticity in the binding making that angle with the warp as well as the weft, which is the complement of half the angle which they make with each other.

PHILIP W. MACKENZIE, of Jersey City, N. J.—Letters Patent No. 18,051, dated August 25, 1857; reissue No. 1,403, dated February 10, 1863; reissue No. 1,843, dated December 27, 1864.

"Improvement in Cupola and other Furnaces."

Claim.—1. A furnace of elongated form and having its surrounding shell concave on the sides, substantially as described, for the purpose set forth.

2. Introducing the blast in cupola or blast-furnaces in a thin sheet or sheets, substantially as described, in contradistinction to a series of round jets, whereby the blast is caused to act more uniformly on the charge.

3. A furnace, having the plan of its bosh of a shape substantially like that shown, and provided with a means for the introduction of the blast all along both sides, whereby the mass of fuel and metal is presented in a thin vertical stratum to the action of two continuous sheets of blast entering at the opposite sides of the furnace, substantially as and for the purpose set forth hereinbefore.

4. Projecting the inner edge of the bosh, or the inner lower portion of the furnace-chamber, inwardly beyond the tuyere or blast-opening to prevent the clogging of the blast-openings or tuyere-mouths, substantially as described.

JAMES A. WATROUS, of Green Spring, Ohio. Letters Patent No. 18,113, dated September 1, 1857.

"Improvement in Apparatus for Suspending Eaves-Troughs."

Claim.—The employment of a metal strap, D^1, in combination with the cross-bar B^1 and the slotted plate C^1 for securing and readily adjusting eave-troughs.

GEORGE C. DOLPH, of West Andover, Ohio. Letters Patent No. 18,141, dated September 8, 1857; reissue No. 904, dated February 21, 1860.

"Improvement in Mowing-Machines."

Claim.—Attaching the cutter-bar B and cutter A to the front of the frame of the machine by means of a plate or bar, so arranged that its front end may be raised or lowered by a lever independently of the main frame of the machine, and thus give to the cutting apparatus a tilting or rocking movement which will elevate and lower the points of the fingers, said parts being constructed and applied to the patented machine of E. Ball above referred to, in the manner substantially as described.

CHARLES MONSON, of New Haven, Conn.—Letters Patent No. 18,154, dated September 8, 1857.

"Improvement in Extension Gas-Tubes."

Claim.—1. The combination of levers and tube or tubes, substantially as set forth.

2. The use and application to a gas-tube of jointed extension-levers like (or operating substantially upon the principle of) those which I have described.

3. The use and application thereof, as an instrument for extending the reach, and for contracting the reach of a gas-tube or of gas-tubes of whatever form, and for holding and guiding the same.

4. The use of said levers as an instrument for relieving or preventing the strain of traction or of weight upon said gas-tube and upon the joints thereof, substantially as shown in the drawings C and D, with the accompanying explanations of said drawings.

CHARLES H. SAYRE, of Utica, N. Y.—Letters Patent No. 18,073, dated August 25, 1857.

"Improvement in Cultivators."

Claim.—A combined horse-hoe and double mold-board plow, constructed, arranged, and operated substantially as set forth.

THOMAS J. CHUBB, of New York, N. Y.—Letters Patent No. 18,038, dated August 25, 1857.

"Improvement in Separating Ore."

Claim.—Effecting a separation of a thin layer of finely-pulverized ore into layers or stratums of different specific gravity upon a perforated bed or its equivalent, by means of applying light minute puffs of air up through the interstices of the said bed and through a thin layer of ore evenly spread and resting thereon, as herein described, for the purpose of very gently agitating the said layer of ore and floating the lightest substance therein to the top thereof, and allowing the heaviest substances therein to gravitate to the bottom of said layer on the said bed.

HENRY W. ALDEN, of New York, N. Y., executor of the estate of TIMOTHY ALDEN, deceased.—Letters Patent No. 18,175, dated September 15, 1857; reissue No. 3,572, dated July 27, 1869.

"Improvement in Type-Setting and Distributing-Machine.

Claim.—1. The method, substantially as described, for conveying the type to and from the type-cases, and the composing and setting-tables, consisting of a type-carrier, in combination with a series of conveyers, which are capable of receiving any type indiscriminately, and also of receiving an indication representing the type so received or that required, whereby that type may be deposited into or taken from the type-cases, substantially as set forth.

2. The herein-described or any equivalent method of attaching the conveyers to the carrier-wheel, by which they are permitted to stop while delivering or receiving type without arresting the motion of said carrier, substantially as set forth.

3. Giving to the griping-end of the conveyer a motion from and toward the center of the carrier-wheel, whereby said griping-end is made to closely approach the place at which the conveyer is to receive or deposit a type, for the purposes and in the manner substantially as described.

4. The cam u^5 and lever t^5, whereby the griping-bolt o is withdrawn and made to release the type, substantially as described.

5. The latch v^5 and notch x^6 in the bolt o, to retain the bolt open, substantially as set forth.

6. The pin y^6 on the carrying-wheel, to throw back the latch and release the bolt o, substantially as described.

7. The cam d^6 on the carrier-wheel, in combination with the pusher b^6 on the conveyer, to discharge the type from the gripers, substantially as set forth.

8. The lever u^6 secured to a stationary fulcrum, to give motion to the pusher x^6 of the setting-conveyers, substantially as set forth.

9. The springs l^5, having the double function of thrusting the conveyers out and forcing them in, substantially as described.

10. The projecting piece y^6 on the conveyers, and the stationary hooks x x, for the purpose of arresting the conveyers at proper places, substantially as set forth.

11. The adjustable indicator-points o^6 on the conveyers, substantially as and for the purpose described.

12. The bar n^6, cams f^6, and spring o^6, for carrying the conveyers to the forward ends of their slots, substantially as set forth.

13. In combination with the devices or mechanism for receiving the types into and for delivering them from the type-cases, arranging the types edgewise in said cases, whereby, for all the types of a font, a uniform throw or action may be given to said mechanism.

14. In combination with the type channels or cases, the mechanism for pushing out the type, consisting of the rack, pendulum, lever, and propelling-rod, and the pusher upon the conveyers, or any equivalent thereof, as described.

15. In combination with the type-channels, the mechanism for preventing the stopping of a setting-conveyer at a type-channel when it is empty, or a distributing-conveyer at a channel when full of type, consisting of the tilting-bar s^7, the pendulum-lever, and rack or equivalents, as described.

16. The rim r^7, to lift the pawl m^7 clear of the ratchet l^7, substantially as set forth.

17. The excavated ring m^8, in combination with the conveyers and type-channels, substantially as and for the purpose described.

18. The stationary inclined pieces g^7, in combination with the grooves of the ring m^8, for restoring the indicating-points upon the conveyer to a zero or starting-point, as set forth.

19. The movable indicators e^7, in combination with the grooves in the ring m^8, and with the shifting-bars of the distributing mechanism, substantially as described.

20. The channel of excess Q, in addition to the regular type-cases K, and in combination with the conveyers d substantially as and for the purpose set forth.

21. The latch j^3 and pusher b^3, in combination with the channel Q, substantially as and for the purpose described.

22. The mechanism for feeding up the line of type, consisting of the cam w^3, spring x^3, arm u^3, and pawl q^3, substantially as set forth.

23. The mechanism for feeding up the column of type and for elevating the successive lines thereof into the channel, substantially as described.

24. The method of engaging and disengaging the feeding-pawls, consisting of the hanging-lever a^3, in combination with the frame x, with the means for depressing the bolt d^3, and with the ratchet having the engaging and disengaging wedges, as described.

25. The movable plate d^3 in the channel a, to allow of raising the top line free of obstruction, substantially as set forth.

26. The arrangement of type-levers, to act on the nicked edges of the type and produce the required set in the machine, substantially as and for the purpose described.

27. The combination of the type-levers z^3 with the distributing-conveyers, substantially as and for the purpose set forth.

28. The movable frame y^3 carrying the type-levers z^3, in combination with the graduated stop c^4, substantially as and for the purpose described.

29. The lever i^4 and apron g^4, to regulate the throw of the frame y^3, for the "thin space," substantially as set forth.

30. The hammer a^5, to keep the type down on the bottom of the channel a and insure a correct operation of the levers z^3, substantially as described.

31. The bell-crank lever e^4 and pin l^4, for relieving the frame y^3, substantially as described.

32. The arrangement of mechanism for transmitting the movements produced upon the levers z^3 by the nicks in the type, and for effecting the proper combinations upon the indicators e^7, consisting of the detaining-levers n^4, the bars p^4, bar t^4, bars r^4, bar y^4, and the connecting-levers g^4, together with the operating-cams upon the shaft j^6, or any equivalent combination whereby the same results will be produced, as described.

33. In combination with the keys, the arrangement of mechanism whereby the separate different signals represented by each of a great number of keys may be produced by a less number of indicators, as described.

34. The independent registering apparatus, constructed as described, or its equivalent apparatus, which will effect the recording of the letters or signs as indicated by the keys, independently of the type-carrying apparatus, substantially as set forth.

35. The pins o^9 placed in the rings R of the register-wheel, substantially as and for the purpose described.

36. The stationary cam s^{10}, for returning the pins o^9, substantially as set forth.

37. The radiating revolving-levers h^9, in combination with the register-wheel and with the keys, substantially as described.

38. The mechanism for transmitting the indications from the register, consisting of the detaining-levers k^9, in combination with the setting-indicators and with the register, substantially as described.

39. The springs g^9 g^9 and lever i^9, in combination with the indicator-bars f^9 and with the register and carrier-wheel, whereby the indicator-bars are caused to act on the setting-conveyers and immediately thereafter made to retreat previous to the

passage of a distributing-conveyer, substantially as set forth.

40. The toe e^9, in combination with the radiating revolving frame f^9, stop-pawl p^9, and register-wheel R, substantially as and for the purpose described.

ISSUE OF OCTOBER 3.

PATENTS.

119,442, antedated September 18, 1871.—PRESERVING THE COLORS OF DRIED FRUITS.—David Ackart, Schaghticoke, N. Y.

Claim.—Sulphuric acid with water, in the manner and for the purposes above specified.

119,443.—REVOLVING REFRIGERATOR.—Cyrus Avery, Erie, Pa.

Claim.—1. The combination of a revolving refrigerator with the base H, so constructed as to form a water-cooler, as herein set forth.

2. The construction of a revolving refrigerator with bottle-pockets, so constructed that the water shall pass on all sides of but not enter the same, in the manner and for the purposes set forth.

3. The bottle-pockets A A A, &c., constructed as described, in combination with the discharge-pipe *j* placed in the bottom of the same, as and for the purposes set forth.

4. The removable cover B B, with the centrally-located filter C constructed therein, combined with the base H, as herein described.

5. The combination of the case G with the revolving refrigerator, as herein set forth.

119,444. — DUMPING-CART. — Olof Benson and John G. Falk, Chicago, Ill.

Claim.—1. A dumping-cart, provided with a guiding-pole or rudder, C, projecting from its rear end, and a rope or chain, G, secured to the front end for the purpose of attaching a horse, arranged and operating substantially in the manner described, and for the object set forth.

2. In combination with a cart arranged as described, the stop-brace E, either with or without the cord F, as shown and described.

119,445.—DIE FOR CUTTING SCREWS.—John Carroll, Oakland, Cal., assignor to himself and Charles Wilkinson, same place.

Claim.—1. The cylinder D, provided with the guide-holes and the corresponding dies, in combination with the perforated case A, when constructed and operated substantially as described.

2. The holding device E, constructed substantially as shown, in combination with the subject-matter of the first clause of the claim, substantially as shown and described.

119,446. — THILL-COUPLING. — Jonathan Childs, West Troy, N. Y.

Claim.—The plate-hook E of the carriage-shaft, formed with the eccentric circles or curves G H and shoulder or projection I, and arranged in combination with the clip or coupling A and its bolt B and packing D, substantially as and for the purpose herein specified.

119,447.—SHOEMAKER'S PINCERS.—Arthur Clarke, Boston, Mass.

Claim.—The combination of the serration A with the upper jaw *c*, as and for the purpose hereinbefore set forth.

119,448.—STOPPING MECHANISM FOR KNITTING-MACHINES. — Richard Cook, New Hartford, N. Y.

Claim.—The combination of the endless screw *a*, gearing *c e*, and shaft *d* with the endless belt *f*, provided with the cross-bars *u*, the rod W, and the lever A, all constructed, arranged, and operating as and for the purpose described.

119,449.—CAP-SHEARING BLOCK.—Richard Cook and Thomas Hanford, New Hartford, N. Y.

Claim.—The cap-shearing block E, axle K, standard J, and platform I, arranged, combined, and operated as and for the purposes shown and described

119,450.—CARRIAGE-CURTAIN STRAP.—Horatio Cornell and Andrew H. Marshall, Wilmington, Del.

Claim.—1. The curtain-strap or holder provided with a metal link or series of links, as set forth.

2. The metal loop or section *b'*, substantially as set forth.

3. The curtain-holder, made in the manner described, of the flexible portion united to the rigid loop or section.

4. The curtain-strap, united to the carriage-frame by the pivotal connection to allow of its being turned around.

5. In combination with the carriage-curtain holder the beveled washer, as and for the purpose described.

6. In curtain-holder, consisting of the metallic hook-strap *b' h*, having the link or links *b* near the end h, said end being elbow-shaped and perforated or otherwise adapted to be pivoted to the carriage-frame, as specified.

119,451. — METHOD OF CASTING PLATE-GLASS.—Ewan Cossaboom, Lenox, Mass.

Claim.—The intermediate table for removing the glass from the casting-table to the oven, constructed, substantially as shown, on wheels, with bed or face of wood, plaster, or other material, as set forth.

119,452. — PRUNING-SHEARS. — John F. Creighton, Placerville, Cal.

Claim.—In combination with the shears A, the griping-tool or hold-fast B, secured to the shears by the bolt *c* and screws *f*, in the manner and for the purpose above described.

119,453. — REFRIGERATOR. — Henry Davis and Rinaldo Alden, Erie, Pa.

Claim.—The ice-chamber A, with shelf *d* and body B, in combination with the revolving shelves *a a a*, when arranged and operating as above described, for the purposes specified.

119,454.—WATER-GAUGE FOR STEAM-BOILERS.—Morris Doyle, Baltimore, Md.

Claim.—The combination and arrangement of one or more constricted nozzles, A, and valve W within the steam-passage, forming communication between steam-drum and water-gauge, and directed away from the boiler with the secondary chamber H, to which the transparent water-gauge is attached, substantially as described.

119,455.—APPARATUS FOR EXTINGUISHING STREET GAS-LAMPS.—George S. Dunbar, Pittsfield, Mass.

Claim.—1. The combination, with a gas-burner, of a horizontal flexible diaphragm, carrying a central open vertical duct whose interior port dips into a liquid seal, all as above set forth.

2. The combination, with a gas-burner, of a horizontal flexible diaphragm, operated on by the pressure of the gas beneath, and a liquid seal on the top of the said diaphragm inclosed between concentric cylinders, of which cylinders the inner one transmits the gas, all arranged in the manner and for the purposes above set forth.

3. The combination, with the horizontal flexible diaphragm of the latch X X, so arranged as to lock down the diaphragm by its own gravitation or diminution of pressure beneath the same, all substantially as specified.

119,456. — SIGNALING DEVICE FOR RAILROADS.—George F. Folsom, Boston, Mass., assignor of one-half his right to Albert A. Folsom, same place.

Claim.—1. The combination of the posts B B' and sockets G G' and heads M M', blind-rods D D' E E', levers *c c' f f'*, check-locks F F', rocking bar H with springs *h h'*, treadles K K', connecting-rods J J', blinds *c c' d d'*, signal-boards and windows *a a' b b'*, or the equivalents of any, substantially as and for the purpose hereinbefore set forth.

2. The signal-chamber or lantern C, combining signal-boards and windows *a a' b b'* and blinds *c c' d d'*, constructed and operated substantially as and for the purpose hereinbefore set forth.

119,457. — COMBINED SASH-HOLDER AND BLIND-OPENER.—Louis Gathmann, Chicago, Ill.

Claim.—1. The combination of the mechanism for opening and closing the blinds of a window with a sash-lock or detent, when so arranged and constructed that both may be operated by one key or spindle, substantially as specified.

2. The combination of the screws E, pinions F, sash-lock D, and spindle *g*, substantially as specified.

3. The spindle G, made with the square enlargement *a* and the square point or enlargement *b*, and intervening round spaces, substantially as specified and shown.

119,458.—MACHINE FOR CLOTHING ORGAN AND MELODEON-VALVES.—Czar D. Goodman, Cleveland, Ohio.

Claim.—1. The leaf G, consisting of a rectangular frame having arranged transversely therein a series of grooved metal bars, I, substantially in the manner as described, and for the purpose specified.

2. The leaf G, as arranged to operate, in combination with the bed A, in the manner substantially as described, and for the purpose set forth.

3. The bed A, consisting of the adjustable cleat C, cleat F, block J, and slide K, all arranged to operate in relation to each other substantially in the manner as described, and for the purpose set forth.

4. The heater I', in combination with the bars I, for the purpose specified.

119,459. — LOOM-HARNESS OPERATING MECHANISM. — Robert Burns Goodyear, Wilmington, Del.

Claim.—1. The lifting-lever o, rigidly attached to the shaft *i*, in combination with the treadle h having the movable treadle-shoe *s* pivoted thereon, all constructed and operating in the manner and for the purpose substantially as set forth.

2. The lifting-lever o, in combination with the two or more shoes, such as $s\ s^1\ s^2$, two or more treadles, such as $h\ h^1\ h^2$, and the corresponding tappets or cams, such as $n\ n^1\ n^2$, together constituting a treadle-motion for looms, all constructed and operating as set forth.

119,460. — APPARATUS FOR CLARIFYING WINES.—August Gottschalk, Napa, Cal.

Claim.—The sack C, consisting of three regular folds *b c d*, when surrounded by a case or cover, D, of less dimensions, so that it will act as a press upon the fluid to be filtered, as described.

119,461. — POTATO-DIGGER.—Isaac Hicks, Hartford, Wis.

Claim.—The combination, in a potato-digger, of a single or double mold-board plow, F, with, respectively, one wheel, A, or a pair of wheels, A A, constructed with an inner and an outer rim joined together by strips with open spaces between, such strips being placed diagonally forward and outward, each having upon its forward edge a flange for the purpose of raising and carrying the potatoes to the outside of the wheel or wheels.

119,462.—SAW-SET.—David Jones, Allegheny, Pa.

Claim.—The arrangement of the levers A B *f* A P, adjusting screws *o n*, and spring *x*, constructed, arranged, and operating as herein described.

119,463. — TRANSOM OR KING-BOLT AND ROCKER-PLATE FOR CARRIAGES.—James A. Judd, Newton, Mass.

Claim.—The transom or king-bolt B, with its head or enlargement *b*, in combination with the plate E made in two pieces and secured to the axle-bed C, operating substantially in the manner and for the purpose set forth.

119,464.—MANUFACTURE OF PAPER-PULP.—Morris L. Keen, Jersey City, N. J., assignor to Samuel A. Walsh, New York City.

Claim.—1. In the treatment of crude paper-stock thoroughly moistened or soaked in water, as described, heating the same in a close vessel until the gummy or resinous interstitial matter has been thoroughly softened or dissolved and the retention of the materials under treatment in the vessel with the volatile matter liberated during said treatment, until the mass has been cooled below the volatilizing point of interstitial matter in the materials treated or those used in the treatment, for the purpose substantially set forth.

2. The use of a neutralizing percentage of alkali equivalent to the acid of the stock treated, and the retention of same with the interstitial and fibrous portion of stock until chemically liberated at the time of coagulating and settling of the interstitial into the fibrous portion of the pulp, substantially for the purpose described, and as set forth.

3. The treatment of paper-stock in a close boiler with naphtha, turpentine, or equivalent essential oil or oils, at a temperature sufficient to soften and dissolve the resinous or gummy interstitial matter of the crude paper-stock under treatment, used alone or combined with steam or vapor, and then retaining intact the pulpy mass of materials after such treatment in the close boiler or vessel until the whole mass is cooled below the volatilizing point of the ingredients contained in stock or used in the process, substantially for the reason and purposes set forth.

4. The utilization of the crude pyroligneous spirit obtained as a concentrated extract by pressure of crude mass of materials after discharge from boiler, and the employment of the fibrous portion for the manufacture of white paper.

5. The manufacture of a cheap paper-stock by treatment, as described, by being, subsequently to its discharge from the boiler, pressed and freed from interstitial matter, and after treatment by alkali or other solvent for the manufacture of white paper-stock or pulp.

6. The treatment of paper-stock materials in a close boiler with a solvent or combinations of solvents with heat sufficient to soften some or all of the interstitial matter and tend to liberate gaseous vapors, the same being closely confined during the entire treatment and until they are cooled down below their volatilising point, all substantially as and for the purpose set forth.

7. The retention of all interstitial matter in the treatment of crude paper-stock materials, the same being treated in the manner set forth or its equivalent, for the specified purpose designated.

119,465. — MANUFACTURE OF PAPER-PULP OR STOCK.—Morris L. Keen, Jersey City, N. J., assignor to Samuel A. Walsh, New York City.

Claim.—As an improvement in the treatment of paper-stock with vapor or water, or both, the protection of the boiler and the contained material from action on each other by the means herein described, or a substantial equivalent therefor, so as to avoid the corrosion of the boiler and the staining of the stock, as herein specified.

119,466.—Iron-Arch Bridge.—Levi Kittinger, Massillon, Ohio.

Claim.—1. The rolled-iron arch-plate G, having the raised center L L on one side and the flanges A A on the other side, and with the molded edges J J outside of the flanges A A, substantially as and for the purpose herein specified.

2. The herein-described arch G K H K, consisting of the top and bottom plates G H, each having the raised centers L L, opposing flanges A A, and projecting edges J J, and of the side plates K K fitting between the plates G H and in the grooves formed by the flanges A A, the said posts being united by the suspension-rods D or equivalent clamping-bolts, substantially as is herein specified.

3. The combination of the shoe-plate C, bottom arch-plate H with divided ends *i i*, chord-plate B with upturned end *b*, filling-block N, top arch-plate G with turned-down edges *n n*, and clamping-bolts *c c*, the several parts being arranged as and for the purpose specified.

4. The branched post E F D, having its legs E F secured at considerable distances from each other between the cords A A, and welded together with a collar *d* to the arch-bolt D, substantially as and for the purpose herein specified.

5. The combination of the arch G K H K, constructed as described, branched posts E F D, chords A A, chord-plates B B, shoe-plates C C, and filling-blocks N N, the several parts being united as shown, and the whole forming a bow-string girder, substantially as is herein specified.

119,467.—Corn-Planter.—John Knull and Jason P. Pence, Saint Paris, Ohio.

Claim.—A corn-planter, having the hinged beams C D provided with standard and shovels for opening a furrow for the seed and for covering the same, as described, in combination with the hopper F provided with the tube H, and the alternating slides I and L operated by the lever *o*, as set forth.

119,468.—Medical Compound or Corn-Salve. — John McKee, New Orleans, La.

Claim.—The within-described compound, substantially as and for the purpose described.

119,469.—Apparatus for Grinding Rock, Quartz, &c.—William J. Menzies, St. Helens, England.

Claim.—The revolving cylinder, supported in a water-bath so as to relieve the pressure on the bearings, substantially as described.

119,470.—Corn-Planter.—Nelson B. Moody, Woodman, Wis., assignor to himself and John Murray, same place.

Claim.—1. The shovels *a a* with braces *b b*, arranged so that when the shovels are reversed the braces act as cutters, in combination with the wheels C, substantially as set forth.

2. The windlass K, with double arms or treadles *x x*, in combination with the chains A A′, pulleys *g g*, plow-beams E E, and rollers J J, as and for the purposes set forth.

119,471. — Combined Sad and Fluting-Iron. — Frederick Myers, New York, N. Y.

Claim.—1. The improved sad and fluting-iron, consisting of the sad-iron plate A, handled plate B, with intervening fluting-rollers to admit of a free rolling movement of the upper and lower rollers when in use for fluting, and the device for rigidly connecting the two when used as a sad-iron, substantially as and for the purposes specified.

2. The plate A, by which the fluting-rollers are heated, in combination with the vertical stud E and wedge M, substantially as and for the purposes herein set forth.

3. The handled plate B, in combination with the loose handle H, having at one end a gear-wheel, Y, connecting with the wheel K, the said wheel connecting with the upper fluting-roller and operating the same rollers in either direction, when brought in contact with each other, by rotating the loose handle in a direction to accomplish the same, substantially as shown and described.

119,472, antedated September 15, 1871.—Cider-Mill. — Newton A. Patterson, Knoxville, Tenn., assignor to himself and M. L. Patterson, same place.

Claim.—The conveyer J, attached to the bottom of the hopper, and having bifurcated and elastic prongs for a portion of its length, as and for the purpose specified.

119,473.—Heel for Boots and Shoes.—Alfred T. Perrine, Boston, Mass.

Claim.—1. The heel-tip, made of a spiked or toothed plate B, upon which a lift of leather or similar material, C, is pressed and held by friction, in combination with a metallic shell, A, secured to the shoe by a bolt or screw, substantially as described and specified.

2. In combination with the metallic shell A and plate B, secured to the shoe A by a bolt or screw, the indentation *a* and corresponding recess in the plate for adjusting the position of the tip upon the shell, substantially as described and specified.

119,474. — Breech-Loading Fire-Arm.—George R. Pierce, Grand Rapids, Mich.

Claim.—1. The pawl E and spring *b*, in combination with the bolt G and trigger H, constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The combination of the lug D, pawl E, gib *a*, spring *b*, bolt G, and trigger H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

119,475. — Railway-Car Coupling.—Seabred Dodge Pratt, Penn Yan, N. Y.

Claim.—The draw-head A, having projections *a a′* and cavities *b b*, and hinged lid B, having corresponding cavities and projections, in combination with link C, as described, and for the purpose set forth.

119,476.—Composition for Paving.—Hiram Saunders, Chester, assignor to Edward A. Price, Media, Pa.

Claim.—A composition, consisting of a mixture of lime, chalk, brimstone, bluestone, iron cuttings or clagging, and simple sand, gravel, or coal-ashes, compounded with a mixture of resin, pitch, and gas-tar in a fluid state, substantially in the proportions and for the purposes set forth.

119,477.—Water-Wheel.—Henry Shears, Merton, Wis.

Claim.—1. Wheel C, direct-acting buckets D, and reacting buckets E, operating substantially as described.

2. Rim G, gates H, pins I, and pins O, operating substantially as described.

119,478. — Self-Closing Gas-Burner.—George E. Smith, New York, N. Y.

Claim.—The compound hoop D, in combination with the catches or detents F and G, and the spring *d*, the extra gas-cock H, with the disk L, spring E, metal rod N, pin P, and lever R, all substantially as and for the purpose heretofore set forth and specified.

119,479, antedated September 16, 1871.—Shutter-Fastener. — John F. Smith, Boston, Mass.

Claim.—The combination and arrangement of the spring *e*, staple *d*, and hooks *f*, as and for the purposes hereinbefore described.

119,480.—Gas-Burner.—William B. Stofer, Memphis, Tenn.

Claim.—The tapering tube D, enlarging upward and provided with bulb K, in combination with cylinders A and C, when constructed and operating as described.

119,481, antedated September 14, 1871.—Moth Protector.—Ferdenand F. Voigt, New Orleans, La.

Claim.—The spindle *a*, circular plate *c*, revolving frame *d d′ d″ d‴* provided with hooks, as stated, and the covering or sack *m*, when the same are constructed, combined, and arranged substantially as described.

119,482.—Rotary Pump.—William Henry Ward, Auburn, N. Y.

Claim.—1. A pump having inlet and outlet openings, G and I, and oscillating valve-registers, H, arranged contiguous to and between said openings, in combination with a revolving winged cylinder, when said openings and oscillating registers are arranged in such manner as to divide the suction and pressure-chambers and cause the suction and force pressures to balance themselves, and thereby avoid all side pressure or friction, as described.

2. In a pump having oscillating resisting valves operating in connection with a revolving winged cylinder, said resisting valves made to close by a simultaneous movement upon the said cylinder by means of the pressure of the fluid in the discharging chambers T, acting through the mediums, substantially as described.

3. The auxiliary chambers E of the inlet openings G, neutralising the current into the working chamber and forming external chambers for the reception of gravels, &c., and prevent them from being drawn into the pump, as described.

4. The case A, forming side receiving chambers E, inlet and outlet ports G and H, and top and bottom pressure discharge-chambers T, as described.

119,483. — Rotary Steam-Engine.—William Henry Ward, Auburn, N. Y.

Claim.—1. Reversing a steam-engine by means of valves H, arranged to operate independently of the throttle-valves, substantially as described.

2. In a rotary engine the cams N, arranged on the outer ends of the register-shafts, as shown, in combination with rims M and teeth *m*, to operate substantially as described.

3. The rims M, when provided with a slot, *r*, in combination with a key, *s*, on rotator-shaft L, to operate substantially as described.

4. In a rotary engine the ribs E, open at alternate ends to receive springs *t*, which bear against the packing of the wings *d*, for the purposes described.

5. In a rotary engine the resisters C, when their wings *c* are provided with springs to operate the packing, and with side openings *b* to heighten the same by steam, as described, for the purposes set forth.

119,484. — Rotary Steam-Engine.—William Henry Ward, Auburn, N. Y.

Claim.—1. A perpetual open exhaust, in combination with a winged rotator, E F, and a revolving feed and cut-off valve, N, operating as and for the purpose described.

2. In a rotary steam-engine, the combination of the continuous revolving steam-feed and cut-off valves N with the continuous revolving rotator and open-hinged resisters, and arranged and operating as described.

3. The recesses I, arranged directly within the exhaust-chamber C, to receive and accommodate the swinging movement of the resisters, as described.

4. The openings in the resisters for the escape of the exhaust steam from the working-chamber, essentially as described.

5. The openings in the partitions H, in combination with the openings *e* in the resisters, to afford a constant and free communication between the chambers C and D, essentially as described.

6. The openings in the resisters and the partitions arranged to alternate with each other to form a steam-cushion between these parts to prevent their contact, essentially as described.

7. The revolving cut-off valves N, made to have a movement in advance of the speed imparted by their gearing by means of the clutch devices upon their shafts, operated and controlled by the action of the governor, essentially as described.

8. The resisters, having a movement inward simultaneously to divide the steam-chamber by means of cranks R, levers S, and plunge-rods *q*, operated by the pressure of the steam in the feed-pipe, as described.

9. The exhaust-chamber C, made to encircle and inclose the working steam-chamber for the purpose of using the exhaust steam to heat the cylinder of the working-chamber, as described.

10. The packing, halved and lapped and provided with a steam cut-off tongue, *z*, to afford longitudinal adjustment, as described.

119,485. — Grape-Picker. — Gustavus A. Warner, San Francisco, Cal.

Claim.—The implement above described, consisting of the handles A A provided with one plain jaw, B′, to the side of which a knife or blade, *c*, is fixed, and the channeled jaw B having the ridges *e* formed into teeth, all the parts constructed and operating as and for the purpose specified.

119,486.—Machine for Twisting Bars of Metal.—Arthur David Williams, Scott's Chambers, Pudding Lane, London, England.

Claim.—1. The chucking apparatus, constructed substantially as described.

2. The combination of the revolving and adjustable chucking apparatus with the traveler N′ and moving chain M, substantially as described.

3. The combination, with the chucking apparatus and the traveler N′, of the pipe T′, substantially as described.

4. The combination, with the chucking apparatus and the traveler N′, of the pipes T′ & T, substantially as described.

119,487, — Spring Bed-Bottom.—George Wilson, Chicago, Ill.

Claim.—1. The bed-bottom, substantially as herein described, consisting of the corrugated metal spring-stripe B attached to the frame-work.

2. The combination of the expansible frame-work, consisting of the end frames A, tie pieces C, rods D, screws *d* with the corrugated metal spring-stripe B, substantially as specified.

3. The combination of the corrugated spring-stripe B, frame-work A C D *d*, or its equivalent, and the straps E, substantially as specified

119,488. — Construction of Vessels.—Adam Wingard, San Francisco, Cal.

Claim.—The flat bottom B, in combination with the double-pointed ends *c d e f* and concavities D and E, as described.

119,489.—Wash-Boiler.—Elias M. Wright, Geneva, N. Y., assignor to himself and Gardner Herrick, Albion, Mich.

Claim.—1. The combination and arrangement of the water-chamber B, false bottom C, transverse passage D, distributer E, cover G, and passages *a a*, all constructed and operating substantially as and for the purposes herein specified.

2. The cover H, constructed with the horizontal or inclined condensing-tubes or passages *h h*, operating substantially as and for the purpose set forth.

119,490. — WATER-GOVERNOR FOR STEAM-ENGINES.—George Aab, Brooklyn, N. Y., assignor to himself and John McAndrews, Philadelphia, Pa.

Claim.—The combination of the float D and sleeve C, operating the double valves M M' by means of a single rod, F, crank L, and shaft J, substantially in the manner as herein shown and described.

119,491.—LATCH FOR GATES. — Henry D. Alderfer, Grater's Ford, Pa.

Claim.—The inclined latch *b*, passing entirely within the casing, combined with the rod *f* and spring *e* for operating the same, said rod and latch moving in the vertical plane of the gate, as set forth.

119,492.—ELECTRO-MAGNETIC GAS-LIGHTING APPARATUS.—Almon N. Allen and Rodney H. Dewey, Pittsfield, Mass.

Claim.—1. The combination of a magneto-electric machine acted upon by a spring with a gas-burner, substantially as described.

2. The arrangement of a diaphragm acted on by gas or air under pressure and serving to control the motion of a spring power acting on a magneto-electric machine, substantially in the manner herein set forth.

119,493.—GRAIN-DRIER. — Stephen V. Appleby, Spotswood, N. J.

Claim.—1. The corrugated spiral cylinder C, revolving upon the hot-air pipe D within the steam-cylinders B B, substantially as shown and described, and for the purposes set forth.

2. The hot-air pipe D, provided with slide-valves and having unbroken connection through both grain-cylinders, upon which said pipe the said cylinders revolve, substantially as and for the purposes set forth.

3. The connecting-tube G, in combination with the revolving grain-cylinders C, when said cylinders revolve within the steam-cylinders B B', substantially as and for the purposes set forth.

119,494.—WAGON-SHAFT COUPLING.—Seth Barnum, Whitestown, N. Y.

Claim.—1. The shaft-coupling, constructed, and the several parts connected together, substantially as and for the purpose hereinbefore set forth.

2. The bolt E and band F, arranged as shown.

3. The flanges H H upon the thill-iron B, as shown.

119,495.—GRAIN-DRILL.—Andrew P. Barry, Martinsville, Miss.

Claim.—The combination of the drum *f*, adjustable buckets *i*, connected as stated, tube O, and the planting mechanism, when the same are so arranged as to operate substantially as described.

119,496. — ATTACHMENT FOR SEWING-MACHINES.—Abel H. Bartlett, Spuyten Duyvil, N. Y.

Claim.—1. The plate A, slotted at B, having curved arm C D, long slotted arm E F, arm G H I with guide and clamp-holes, and concave-sided rib M, constructed as described, and applied as a holding device for tuckers, corders, hemmers, and quilters.

2. The hemmer *e f* and plate *s s'* combined with the arms E G and plate A C, substantially as specified.

3. The chalk-holder k, support *i*, and plate I, combined with the arms E G and plate A, substantially as specified.

119,497.—SELF-LIGHTING LAMP.—William W. Batchelder, Boston, Mass., assignor to himself and Matthew Riley, same place.

Claim.—1. In a self-lighting lamp-burner, the interior fixed barbed check-strip *i*, in combination with the feeding barbed slide *f*, pivoted link *h*, and operating lever *g*, as and for the purpose set forth.

2. The double-supporting lips *e* of the fuse-tube, in combination with the severing-instrument *j* arranged to pass over and connect with either lip *e* by a double movement to insure the ignition of the fuse in the event of the failure to produce an ignition by the first movement of the severing-instrument, as described.

3. In a self-lighting lamp-burner, the combination of the fuse-tube *d* with its fixed and sliding barbed strips *f i*, the double-supporting lips *e*, the severing-instrument *j* with its pivoted link *h* and operating handle *g*, the several parts being constructed, arranged, and operating as described.

119,498. — BRONZING-MACHINE. — Edward F. Benton, Buffalo, N. Y.

Claim.—1. In a bronzing-machine, an endless sheet-metal belt or carrier, as and for the purposes set forth.

2. The hopper F, provided with a revolving cylinder F', constructed as described, and arranged to operate as set forth.

3. The combination and arrangement of the polishing-roller G, cleaning-brush H, and comb N, substantially as and for the purposes set forth.

119,499.—TURN-BUTTON FOR DOORS, &c.—Purmort Bradford, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—1. The combination of the plate A, headed stud B, and button D, secured together substantially as set forth.

2. In combination with the above, the recess *a* in the button and the spring device therein, substantially as and for the purpose specified.

119,500.—BLOWER-STAND.—Purmort Bradford, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—A blower-stand, consisting of the two sides A B and the plate C, secured together and made detachable, substantially as and for the purpose specified.

119,501.—SETTING KETTLES FOR EVAPORATING CANE-JUICE, &c.—Francois M. Brignac, St. James parish, La.

Claim.—1. The arrangement of a set of kettles or pans for evaporating cane-juice or other saccharine liquid in the manner herein described, and for the purpose set forth.

2. The location of furnaces and formation of flues, in combination with the arrangement of kettles, substantially as specified.

119,502. — PLOW-CLEVIS. — Jerry Brison, Competine, Iowa.

Claim.—The combination of the diagonal braces B^1 B^2 of the plate B, and the adjustable and extensible brace-rod, substantially as and for the purpose described.

119,503. — APPARATUS FOR DISCHARGING EXTRANEOUS COLORING MATTERS, &c., FROM PRINTED FABRICS.—Benjamin G. Brooks, Manchester, N. H.

Claim.—The process of discharging extraneous coloring and other impurities from printed or dyed fabric by the action of jets of high-pressure steam driven against and through the fabric, when so stretched that the jets may operate against one or the other or both sides of the fabric from perforated steam-pipes or other equivalents, substantially in the manner and for the purposes herein set forth.

119,504.—MODE OF ATTACHING DRUMS TO SHAFTS.—Benjamin G. Brooks, Manchester, N. H., assignor to Waterman Smith, same place.

Claim.—1. The removable journal A provided with a male screw, C, in combination with the roller-head G provided with a female screw to fit the male screw C, substantially as described.

2. In combination with the above-claimed devices, the collar B, substantially as described, for the purposes set forth.

119,505.—REGULATOR FOR EXHAUSTERS IN GAS-WORKS.—Adam S. Cameron, New York, N. Y.

Claim.—1. The oscillating vessel A, with its partition *d*, in combination with a pipe, D, connecting with the hydraulic main or exhaust-pipe of gas-works, substantially as described.

2. The adjustable weight E, in combination with the oscillating vessel A and pipe D, substantially as set forth.

119,506. — INSTRUMENT FOR EXTRACTING CAPS FROM CARTRIDGES. — William Clews, Ilion, N. Y.

Claim.—1. The combination of the socket A and pointed lever-extractor B, operating together, substantially as and for the purpose herein specified.

2. The pivoted fulcrum-arm D with its stop *l*, in combination with the extractor B, substantially as and for the purpose herein set forth.

3. The auxiliary lever C, in combination with the extractor B, substantially as and for the purpose herein specified.

4. The curve-pointed lever-extractor B, when arranged in combination with the socket-holder A, auxiliary lever C, and fulcrum-arm D so as to operate on the cartridge-caps with the successive movements, substantially as herein specified.

119,507.—STRETCHER FOR PICTURES.—John D. Crocker and Junius A. Brand, Norwich, Conn.

Claim.—1. A metal plate consisting of a web and bar or rib, the former extending out centrally from the elongated spring-bearing rib or bar B, and the whole applied wholly within the inclosed recesses of the frame, substantially in the manner and for the purpose described.

2. The combination of the braces, springs, and staples *g*, substantially in the manner and for the purpose described.

3. The pins *p* inserted loosely through holes made through the stretcher-frame for securing the stretcher-frame into the ornamental frame, substantially as described.

119,508. — REFRIGERATOR. — David Cromwell, St. Louis, Mo.

Claim.—In combination with the provision-chambers C^1 C^2, the ice-chamber C, its slanting ice-support D, provided with stays d^2 d^3, and the L-shaped ice-receptacle d d^1, all constructed and arranged substantially as and for the purposes described.

119,509, antedated September 16, 1871.—GATE. — Samuel A. Darrach, Newburg, N. Y.

Claim.—In a gate, the arrangement of the metal stiles B B' having the flanges *a c* to receive the wooden rails C and base-board E, the projections *h j*, and the extensions *l* on the stile B', in conjunction with the cast-metal posts G G' *m n i k k*, as herein set forth and shown.

119,510.—WASH-BOILER.—William James Dodge, New York, N. Y.

Claim.—The arrangement of the rack D, in combination with the uprights or handles C, with catches *c*, cover B B with openings *b b*, and boiler A, as constructed and shown, and for the purpose herein described.

119,511. — CARRIAGE-WHEEL. — Harry E. Dodson, West Liberty, Ohio.

Claim.—The combination of the spokes, forming a solid band around the pipe-box, the metallic sections B B', with tapering apertures diminishing in diameter from the spokes outward, and the tapering wooden fillings B^2 B^3 bearing against the spokes, substantially as set forth.

119,512. — SHAVING-HORSE. — Franklin J. Eldred, Webster, N. Y.

Claim.—The clamp-head for shaving-horses, consisting of the plate A with plane and notched edges *a b*, the open flanges *c c*, and webs *d d*, arranged and operating as herein described.

119,513. — MACHINE FOR SCOURING SKINS AND HIDES.—Edward Fitzhenry, Boston, Mass., assignor to Hide and Leather Machine Company.

Claim.—The combination and arrangement of the yoke K and its cams I I with the carrier A, and mechanism, substantially as described, for supporting the brush B, pressing it downward, and regulating the action of the pressure-springs, such mechanism consisting of the frame C, the rods D, the frame E, the screw F, the nuts *d c*, the springs F, the arches H, the shaft *e'*, and rollers *f f*, all being arranged as explained.

119,514.—COOKING-STOVE.—John H. Goodfellow, Troy, N. Y., assignor to Swett, Quimby & Perry, same place.

Claim.—1. In combination with the grate A the sliding agitator B arranged on the upper side of the grate, and having on its front and rear edges inclined cinder-raising fingers *c c* in the spaces between the grate-bars, as described.

2. In combination with the fire-chambers J K and hearth-pit I having a removable cover, L, the detachable grate A and sliding-agitator B, with inclined clearing-fingers *c c* between the grate-bars and a cinder-chamber, R, above, and an ash-chamber, Q, below the removable grate, as herein set forth.

3. In combination with the fire-chamber and the hearth-pit having a removable cover, the removable grate A and sliding agitator B with inclined fingers *c c* arranged in the removable pan H, having an ash-chamber therein below the removable grate, as herein described.

4. In combination with the fire-chamber and the hearth-pit having a removable cover, the removable cinder-pan G arranged in the hearth-pit over an ash-chamber, and having its bottom formed by the grate A and sliding agitator B with clearing-fingers *c c*, as herein set forth.

5. In combination with the fire-chamber and the hearth-pit having a removable cover, the removable pan H having an ash-chamber in its lower part, and the detachable cinder-pan G arranged over the ash-chamber and having its bottom formed by the grate A and sliding agitator B with inclined fingers *c c*, as herein described.

6. In combination with the sifting-grate and sliding agitator, the shank *d* formed on the agitator and engaged with a detachable shaker-rod within the limits of the grate, and the shield *e* formed on the grate and closed over the shank of the agitator, as set forth.

7. In combination with the sliding shank *d* covered by the shield *e* and having a hole, *s*, therein for the insertion of the bent end of a removable operating-rod, f_1, as described, the lug or projection *o* or *o'* arranged on the shank and in respect to the hole *s* therein, as set forth.

119,515.—JOINT FOR SCHOOL-DESKS, &c.—Thomas Gregg, Danville, Pa.

Claim.—1. A hinge-joint, combining in its construction a stationary plate having in one of its sides a groove which forms a segmental portion of a true circle, and a movable portion or arm which has upon it a segmental portion of a circle adapted to work in the groove in the plate or stationary portion of the joint, substantially as and for the purpose set forth.

2. The within-described hinge-joint, in combina-

tion with the friction-brake D, substantially as and for the purpose set forth.

119,516. — CHUCK FOR HOLDING VALVE-COCKS TO BE DRESSED.—Joseph L. Hayden, Haydenville, Mass.

Claim.—In combination with the jaws or chuck for holding the article to be dressed or finished, the sliding-sleeve, connecting-rod or bar, pawl-plate, pawl and ratchet, for the purpose of rotating the jaws or chuck and article held by them, to bring its faces or points successively to the finishing-tool without stopping the tool, machine, or instrument, substantially as described.

119,517. — SCROLL-SAW.—Isaac Hird, Cincinnati, Ohio.

Claim.—1. An endless belt, J, working over suitable guide-pulleys to carry it out of the way of the work upon the table, combined with the saw S and branch O and slide G, substantially as and for the purpose set forth.

2. In combination with the pulley, carriage *k*, the uniform-tension spring Q, set-screw P, and tension-screw *q*, substantially as set forth.

3. The revolving head H, having notches of varying widths to admit saws of varying thicknesses, substantially as and for the purpose herein specified.

119,518. — LANTERN. — James J. Hull and Joseph Kaufman, Brooklyn, N. Y.

Claim.—As an article of manufacture, the lantern as described, for the purposes set forth.

119,519.—WOOD PAVEMENT.—Stephen H. Ingersoll, New York, N. Y.

Claim.—A wooden pavement constructed as described, and for the purpose set forth.

119,520. — RAILWAY-RAIL CHAIR. — Granville E. Jarvis, Grafton, W. Va.

Claim.—1. In combination with the brace A A′, secured rigidly to the tie so as to support the rail against lateral thrust, the adjustable chair C and draw-spike D, or its equivalent.

2. The brace-carrier A A′, provided with a recess or chamber upon its under side for the reception of the projecting portion of the chair, substantially as described.

3. The combination of the brace-carrier A A′, the adjustable chair C, and bolts E E for securing the tread of the rail to the brace-carrier, substantially as set forth.

119,521, antedated September 30, 1871.—MACHINE FOR ROLLING TAPERING FORMS. Henry Kellogg, Milford, Conn.

Claim.—1. The combination of the disks A A′ shafts B B′, pivoted tables G G′, and mechanism substantially as described for rotating said tables, substantially as set forth.

2. In combination with the subject-matter of the first claim, the reciprocating frame M and hollow mandrel N, substantially as set forth.

3. The combination of the reciprocating frame M, hollow mandrel N, cam T, pivoted jaws *t t*′, and the disks A A′, substantially as set forth.

119,522.—ALARM APPARATUS FOR STEAM-BOILERS. — Joseph Kirk, London, England, assignor to George Jordan Firmin

Claim.—1. The combination of the equilibrium-valves with a mercury-float or equivalent instrument for starting them from their seats, and a chamber in which the pressure then accumulates and lifts the valves to the full extent, substantially as described.

2. The combination of the said equilibrium-valves, mercury-float, and pressure-chamber with an alarm instrument, substantially as before set forth.

119,523. — CHILD'S CARRIAGE. — John G. Krieger, Washington, D. C.

Claim.—1. The carriage-body the rear portion or a section of the rear portion of which is constructed substantially as shown and described, so that it may be made to form a portion of a couch or support for a bed, in the manner set forth.

2. The combination and the arrangement of the swinging portion B of the body, the seat C, the swinging board D, the foot-board E, and the rod G, substantially as and for the purpose set forth.

119,524, antedated September 25, 1871.—WAGON-BRAKE. — Charles M. Lufkin, Unity, N. H.

Claim.—The combination of a movable roller, M, gudgeons *e e*, rollers *g g*, guide-staples *h h*, reach E′, cross-bar N, rub-blocks C C, suspension-rods D D, pivots *a a*, spring L, loop *s*, rod *q*, bolt *o*, and button K, the whole constructed and arranged substantially as and for the purpose set forth.

119,525.—MACHINE FOR POLISHING NEEDLES.—Francis W. Mallett, New Haven, Conn., assignor to The Mallett Manufacturing Company, same place.

Claim.—1. In combination with the plate E and the facing L, to one or both of which a reciprocating movement is imparted, the polishing brushes, arranged to operate through the perforations in the said plate, substantially as and for the purpose specified.

2. In combination with the plate E and the facing L, operating as described, the toothed racks *a d*, operating alternately to receive and guide the needles in their passage upon the plate, substantially in the manner herein set forth.

3. In combination with the hopper I and cut-off C^2, the lever P and holder R^3, as and for the purpose specified.

119,526.—MODE OF HARNESSING HORSES TO SHAFTS OF VEHICLES.—Robert McHardy, Edinburgh, Great Britain, assignor of one-half his right to John Coatsworth, London, England.

Claim.—1. The clasp or holder formed of two metal plates, Fig. 3, hinged together, and shown clasped together in Figs. 1, 2, 4, and 5, and also the studs or pins and thumb-rivets in connection with them.

2. The plate *n* with the groove *r*, Figs. 6, 7, and 8, for allowing the position of the clasp to be changed as required to slide freely in the groove.

3. The eye *x*, the pulley *y*, and chain *z*, Fig. 8, for the purpose described.

4. The strap or band *d*, in connection with a buckle and stud for forming a shaft-holder, as shown in Fig. 14.

5. The modified clasp or holder shown in Fig. 15.

119,527. — APPARATUS FOR RAISING AND LOWERING WEIGHTS. — Thomas Moore, South Stockton-on-Tees, England.

Claim.—1. The combination, in an apparatus for raising weights, of two chain-wheels (for the lifting-chains) with connecting gearing, constructed to operate substantially as before set forth, so that the said two chain-wheels are driven simultaneously in opposite directions.

2. The combination, in apparatus for lifting weights, of the two chain-wheels, (for the lifting-chains,) the connecting gearing, and the hand chain-wheel, all constructed to operate substantially as before set forth, so that the turning of the hand chain-wheel or its equivalent causes the two lifting chain-wheels to turn simultaneously in opposite directions.

3. The combination of the two lifting chain-wheels, (for lifting-chains,) the gearing connecting them so that they are caused to revolve simultaneously in opposite directions, and the spindle by means of which (and the gearing) power is imparted simultaneously to the said lifting chain-wheels, the whole operating substantially as before set forth.

4. The combination of the two lifting chain-wheels, the connecting-gearing by means of which the said wheels are caused to revolve simultaneously in opposite directions, and the two connecting chains for said wheels, the whole operating substantially as before set forth.

119,528.—HAY-AND-COTTON PRESS.—Peter L. Negley, Castleton, Ind.

Claim.—The arrangement of the spring *f*, the latch *m*, and the hinges *a* and *b*, in combination with the lever C, the rope O, the weight W, the following-block F, the hook *e*, the chain G, the helical sheaves N′ and N″, and the involute wheel H, all constructed and operated substantially as set forth.

119,529.—MACHINE FOR MAKING STAPLES.—William F. Nolker and Edward H. Morgan, Cincinnati, Ohio.

Claim.—1. The arrangement, on one and the same reciprocating slide or follower, of the benders P P′ and knife N, disposed in relation to one another and to the stationary former L, and angular perforated knife M, substantially as described and for the purpose set forth.

2. In combination with the elements of the preceding clause, the "pusher-off" S T U, connected and operating substantially as and for the purpose described.

3. In combination with the elements of the first clause of claim, the feeding mechanism W *a b c d e f g*, as described, and for the purpose specified.

119,530. — LOBE ATTACHMENT FOR EAR-DROPS. — Louis L. Northup, Johnston, R. I.

Claim.—The lobe attachment, Fig. 3, to be applied to the ear-lobe to give support for an ear ornament, substantially as described.

119,531.—THIMBLE AND THREAD-CUTTER.—James A. Pettet, Philadelphia, Pa.

Claim.—A thimble, A, having a seam-smoothing projection, B, horn *a*, and cutting-blade *c*, all substantially as described.

119,532.—HORSE HAY-RAKE. — Peter Pfeifer, Durhamville, N. Y.

Claim.—1. The combination and arrangement of the lever N, connecting-bar G, and spring-latch K with the notched quadrant-brace J, rake-head F, and bars H, substantially as shown and described.

2. The combination of the spring-button R and socket Q with the head of the rake-tooth P, as and for the purpose described.

119,533.—JACK FOR FINISHING SHOES, &c.—John E. Plummer, Binghamton, N. Y.

Claim.—The arrangement of the heel-support, provided with the bell-crank lever B, the rotating cylinder or sleeve D, the screw-rod A within said cylinder, and nut or thumb-screw C, all as and for the purpose described.

119,534.—SASH-HOLDER.—George B. Ransom, Chester, Conn., assignor to himself and James B. Clark, same place.

Claim.—The locking-bar A arranged upon the sash, and having one end supported by a fixed point, and the bar constructed and combined with one or more notches in the jamb, the movement of the said bar being by means of slots or equivalent devices made both longitudinal and vertical in the disconnection of the bar from the notch on the jamb, substantially as set forth.

119,535.—HEATING-STOVE.—William Frazier Ross, Davenport, Iowa.

Claim.—1. The fresh-air duct A, in combination with foul-air duct H and draught-duct B, or either of them, substantially as and for the purpose set forth.

2. The combination, with air-duct H, of the dampers *h* and *h b*, either or both of them, substantially as and for the purpose set forth.

3. The combination, with air-duct B, of the damper *a* and air-duct A, substantially as and for the purpose set forth.

4. The combination, with fuel-chamber C and draught-chamber *b*, of the air-ducts D F, either or both, substantially as and for the purpose set forth.

5. The combination, with fuel-chamber C, damper *b*, and duct F, substantially as and for the purpose set forth.

6. The construction and arrangement of the bottom or grate M of the fire-chamber so as to form either one opening, or grates, or a close bottom, as set forth.

119,536. — CURTAIN-RACK. — Friedrich Schmidt and William Schmidt, Cincinnati, Ohio.

Claim.—The combination of the movable serrated arm B with the stud *a*′ and permanent slotted plate A, when operating as and for the purpose set forth.

119,537.—MACHINE FOR PRODUCING STEREOTYPE MATRICES.—Alexander Shiland, Albany, N. Y.

Claim.—1. The revolving disk B, constructed as described, and provided with vertical vibrating arms *c c* bearing type-punches, or cutters *h h*, arranged so as to be capable of being brought singly over a given point, in combination with the guard G, and feed-bar H provided at one end with a bevel and the other end with a regulating-screw, *o*, operating against a stop, and made elastic by a spring, when all are constructed and arranged substantially as and for the purposes set forth.

2. The feed-bar H, when operated by the beveled or wedging pieces *i i* attached to the type-punches, or cutters *h h*, or their arms *c c*, in combination with the dog or pawl *p*, ratchet-wheel *q*, or their equivalent, and the carriage C, when all are constructed and arranged substantially as and for the purposes set forth.

3. The combination of the impressing-lever E provided with the pressing-foot described, with the revolving and vertically-vibrating arms *c c*, feed-bar H, ratchet-wheel *q*, and dog *p*, or their equivalents, substantially as and for the purpose set forth.

119,538.—BOOT-PATTERN.—Elias Shopbell, Ashland, Ohio.

Claim.—1. The side plates C and end plates D, constructed and arranged as described, and adapted to move independently of the toe-plates B B′ and the foundation-plate A, as set forth.

2. The combination of the foundation-plate A, toe-plates B B′, side plates C, and end plates D, constructed and arranged as described.

3. The combination of the plates E F F and G G, constructed and arranged as described.

119,539. — CLOTHES-DRIER. — George C. Smith, Hamilton, assignor of one-half his right to J. C. Phillips, West Chester, Ohio.

Claim.—The pulley *g*, in three parts, as described, attached to the side rail *c* and posts *b* by brackets H, in combination with the tightening device E and D and cord J, and for the purposes set forth.

119,540.—BRACELET.—James H. Sprague, Providence, R. I.

Claim.—As an improved article of manufacture, a bracelet made from hard rubber or the semi-elastic or comparatively soft substance, when such bracelet is composed of sections and hinged in the manner and for the purposes herein set forth.

119,541. — ELECTRO-MAGNETIC VALVE.—George M. Sternberg, New York, N. Y.

Claim.—1. The frictionless valve D, urged in one direction by the spring E or equivalent gentle force, and in the other direction by the lever P or its equivalent, and having a flexible diaphragm, I, mounted so as to prevent the escape of gas, as herein specified.

2. The adjusting means K^1, in combination with the valve D and its connections, mounted and operated as and for the purposes herein specified.

3. The adjusting means K^1 to limit the opening of the valve, in combination with the adjusting means K^2 to limit the closing thereof when the valve is operated through the medium of a diaphragm actuated automatically by a lever, P, or its equivalent, controlled by changes of temperature, as specified.

4. The entire combination and arrangement of parts—to wit: the electro-magnet M, controlled by changes of temperature acting through the medium of the armature N and lever P on the diaphragm I, which latter is free to move in its central portion, and tightly confined at its edge, and by its motion controls directly or indirectly the valve D, the whole being adapted to regulate the communication between the gas-pipe C^1 and the pipe C^2 to maintain a uniform temperature, all substantially as herein specified.

119,542.—ELECTRO-MAGNETIC THERMOMETER.—George N. Sternberg, New York, N. Y.

Claim.—The U-shaped thermometer, having mercury in the base and a light liquid in the bulb, with a hermetically-sealed conductor, C, and an adjustable conductor, D, combined and arranged for operation relatively to each other, and to suitable mechanism for controlling temperatures, as and for the purposes herein set forth.

119,543.—MANUFACTURE OF ELECTRO-THERMOMETERS.—George M. Sternberg, New York, N. Y.

Claim.—1. The thermometer A B, having the wire D hermetically sealed therein and projecting at the top, substantially as and for the purposes herein set forth.

2. The within-described method of hermetically sealing the thermometer-tube B around the conductor D, the same consisting in first drawing the tube B to form a fine aperture above the wire and sealing it there in the ordinary manner, and afterward sealing it again at a point opposite the wire after the mercury has cooled and withdrawn, as specified.

3. The within-described method of adjusting the position of the conductor in a hermetically-sealed thermometer by softening the glass by heat, and drawing the conductor or both the conductor and the glass, as herein specified.

4. The hermetically-sealed magnetic thermometer herein described, mounted within the perforated casing G, suspended on lugs I J, one of which is insulated from the casing G and connected directly to one of the wires, as specified.

119,544.—SPARK-ARRESTER. — William M. K. Thornton, St. Louis, Mo.

Claim.—1. The arrangement, on the stack B, of a gauze box, C, which is provided with deflectors J and combined with a spark-trap, G, substantially as described.

2. The adjustable hood E, in combination with the draught-opening *b* through the front of the gauze box C, substantially as described.

3. The upwardly-flaring head G^1 to the trap G, communicating in front with the gauze box C, and provided with deflectors L and a gauze cover, *m*, substantially as described.

4. The deflector *s*, arranged between the deflectors J and L and over the front part of the head G^1, substantially as described.

5. The inclined vacuum-tube G^2, in combination with a spark-trap, G, which communicates with the stack B, substantially as described.

119,545. — DUST-SHIELD FOR RAILWAY CARS. — William M. K. Thornton, St. Louis, Mo.

Claim.—1. A platform for one or each car of a railroad train, made in sections, which are connected or applied together so as to have independent pivotal movements, substantially as and for the purpose set forth.

2. The intermediate section D′, suspended by flexible suspenders from the car-frame, in combination with the pivotal end or truck sections suspended from the trucks, substantially as and for the purpose described.

119,546. — BARREL. — James Tomlinson, Goderich, Canada.

Claim.—A barrel composed of a series of wooden hoops the ends of which are united together by the combined fastening device, consisting of the rivets *b* and staple *c*, the latter embracing the taper lap and clinched on the under side of the hoop before placing the hoop upon the barrel, substantially as and for the purpose set forth,

119,547. — DEVICE FOR DESTROYING INSECTS.—Peter Spohn Van Wagner, Saltfleet township, Canada.

Claim.—1. An improved fan D, the wings of which stand at an angle of twenty degrees forward of the center and divided, as shown in Fig. 3, passing astride of the feed-pipe *j*.

2. A new method of discharging the dust inside a tube current of air, free from contact with the nozzle, by means of the arrangement and combination of feed-pipe *j* and worm or screw *e*, as shown, for carrying a regular supply of dust to the nozzle.

3. The arrangement and application of the oscillating agitator a^1, operated by the eccentric *m* for working the dust to the worm inside the feed-pipe.

4. The arrangement of the movable lip *s* for throwing the dust upward when necessary, operated by bell-crank *t* and connecting-rod *u*; also, hollow handle *v* for holding and elevating machine, substantially as, in the manner, and for the purpose specified.

119,548.—REFRIGERATOR. — John B. Webster, St. Louis, Mo.

Claim.—The upper ice-chamber E E′, orifices c^3 c^4, ventilating-pipes c^5 c^6, vertical chambers D D′, partition *d*, waste-pipes F F^1 F^2, and provision-chambers C C′, all combined and arranged in the manner and for the purpose set forth.

119,549. — LANTERN. — William Westlake, Chicago, Ill.

Claim.—1. The combination of the rod E with the tube D for supporting the bell and connecting it with the base, substantially as specified.

2. The combination of the hinged bar or rod F with the rod E and tube D for holding the top of the globe, substantially as described.

3. In combination with the tubes M and L, the latter being connected to the bell B by the tubes D and C, the air-deflector or regulator O, constructed and arranged to operate substantially as set forth.

119,550.—SPRINKLING ROSE-HEAD. — William Westlake, Chicago, Ill.

Claim.—The sheet-metal rose, consisting of the cap A B and neck C, united by a screw, E F, located in a concavity below the periphery, and provided with the flange D, all constructed and arranged to operate substantially as described.

119,551.—MACHINE FOR DRESSING MILLSTONES. — John I. Yount, Tippecanoe City, Ohio.

Claim.—1. In a machine for dressing millstones, the oscillating and endwise-reciprocating picks, substantially as and for the purpose set forth.

2. In a machine for dressing millstones, the endwise reciprocating and oscillating picks when the length of their arcs of oscillation is varied during each reciprocal stroke, substantially as and for the purpose set forth.

3. The combination of the picks, carrier-block C, cranked shaft D, arresting-strap L^4 or its equivalent, crank-shaft I, pitmen H H^1, and oscillating levers G G, substantially as set forth.

4. In combination with the endwise-reciprocating and oscillating picks I, the rods K K′, bar L, and oscillating levers L^1 L^3, substantially as set forth.

5. The studs N N on the frame A, in combination with the levers L^1 L^3, substantially as and for the purpose set forth.

6. The combination of the levers L^1 L^3 and adjustable suspension or slide-rods M M′, substantially as set forth.

7. The elastic strap L^4 permanently secured at one end, but adjustably fastened at the other end by a stirrup-bolt, l^2, and nut l^3, substantially as and for the purpose set forth.

8. The combination of the sockets B^1, pick B, and set-screw *b′*, substantially as and for the purpose set forth.

119,552.—LATCH FOR GATES AND DOORS.—Jesse H. Allison, Charlottesville, Ind.

Claim.—The combination of the screw C with elliptic head D, sleeve G, wing H, and flange I, all constructed and arranged as shown and described, and used with a horizontal bar, B, on the gate, substantially as and for the purposes herein set forth.

119,553. — VEGETABLE-CUTTER. — Hiram Baldwin, Nashua, N. H.

Claim.—1. The pivoted slide H, in combination with the knife frame A having grooved sides B, substantially as described.

2. The vegetable-cutter having the frame A, grooved sides B, knife D, pivoted slide H, pivoted board or handle E, rod F, and screw G, all constructed and arranged substantially as set forth.

119,554. — HOT-AIR FURNACE. — Joseph C. Barnes, Albany, N. Y.

Claim.—The cold-air chamber in sections A^1 and A^2, connected by the tubes F surrounding the fire-pot and chamber D, and either surrounding the ash-pit or not, and the said chamber surrounded by the chamber E, and the whole by an outer case, I, or not, all substantially as specified.

119,555, antedated September 16, 1871.—ATTACHMENT FOR SEWING-MACHINES.—Abel H. Bartlett, Spuyten Duyvil, N. Y.

Claim.—1. The plate B, scrolls C and D, constructed, arranged, and combined together and with the support W, and clamp-screw X, substantially as specified.

2. The adjustable scrolls D and C, combined with the support and clamp-screw X, substantially as specified.

3. The combination of the plate B and scrolls C and D with the support W and spring E, substantially as specified.

4. The scroll L, constructed and arranged substantially as specified.

5. The combination of the scroll L with the support W and spring E, substantially as specified.

6. The plate R, constructed, arranged, and combined with plates P and Q, support W, and clamp-screw X, all substantially as specified.

119,556, antedated September 30, 1871.—BACK-BAND HOOK.—Henry Beagle, Jr., Philadelphia, Pa.

Claim.—The double-slitted body A, having central bar *a′* and hook C struck up therefrom, as and for the purpose specified.

119,557.—HUB AND SPOKE.—William Beauchamp, Grayville, Ill.

Claim.—1. The construction of the hollow hub A with its straight flanges B, inside screw-threads D D, and corresponding screw-box E, when constructed and combined as herein described and set forth.

2. The slits K as sawed in the spokes J, when constructed to fit closely upon the flanges B, as herein described, and for the purposes set forth.

119,558. — TURBINE WATER-WHEEL.—Asa Bee, Lancaster, Mass.

Claim.—1. A bucket or float G, having its lower or discharge end of tubular and tapering form, terminating in an orifice of oval or reniform shape in cross section, substantially as herein represented and described.

2. The combination of the gates *i* hung and operated as described, the guides L arranged as described, and the buckets G constructed as above specified, for the purposes set forth.

119,559.—MILK-CAN.—Thomas M. Bell, New York, N. Y.

Claim.—The method of forming the hoops G H, neck C, and cover D from two disks of metal without waste, and in the manner described.

119,560.—CARRIAGE-SPRING ATTACHMENT. Orrin E. Bennett, Cannonsville, N. Y.

Claim.—The device A B C, constructed, substantially as herein shown and described, to adapt it for attachment to the cross-springs of platform-spring carriages, as and for the purpose set forth.

119,561.—APPARATUS FOR LIGHTING GAS-JETS BY INDUCED CURRENTS OF ELECTRICITY. — Abraham L. Bogart, New York, N. Y.

Claim.—1. An insulated gas-burner, having its insulating section constructed of or from glass or similar vitreous material, substantially as and for the purpose specified.

2. The glass section A, provided with the neck B and with the grooves *b* and *a′*, and combined with the metal tip C and base D, substantially as and for the purpose shown.

3. The spark-conductor E, having the form shown, and provided with the openings F, *g*, *h*, and *e*, substantially as and for the purpose set forth.

4. The spark-conductor E, provided within the opening F with the notches *f*, and within the opening *g* with the set-screw G, in combination with the insulating section A, provided with the shoulder *a*, projections *a″*, and conical depression *a‴*, substantially as and for the purpose shown and described.

5. In combination with the spark-conductor E, constructed as described, and provided with the opening *h*, the platinum-point holder H, substantially as and for the purpose specified.

6. The burner-tip C, provided with the groove *c′*, in combination with the eduction-wire J, substantially as and for the purpose shown.

7. The platinum-point I and holder H, when combined and secured together, substantially as and for the purpose set forth.

8. The lower switch, consisting of the shaft L provided with the journals M and N, the pointer P, the conductor R attached to or upon the spring S, the arm T provided with the roller *t*, the wire-holders U, and plates *u*, the ratchet-wheel V, the pawl W, the chain X, and the weight Y, when the several parts are constructed as described and combined with each other, the case O, and the dial Q, substantially as and for the purpose specified.

9. The upper switch, consisting of the shaft L provided with the journals M and N, the conductor R attached to or upon the spring S, the arm T provided with the roller *t*, the wire-holders U, and plates *u*, the wheel A′ provided with the studs B′, the pivoted lever C′ provided with the roller D′, lugs *c′*, and pivoted pawl E′, the stops F′, the chain

G′, the coiled spring P′, and the detent M′, when the several parts are constructed as shown, and combined with each other and with the case O, substantially as and for the purpose set forth.

10. The indicator, consisting of the shaft N′ provided with the pointer P′ and sprocket-wheel Q′, the lever R′ provided with the hinged pawl S′ and with the stud U′, when the several parts are constructed as described and combined with each other, the dial T′, and the case O′ provided with the slot V′, substantially as and for the purpose shown.

11. The combination of the upper switch and indicator, substantially as and for the purpose specified.

119,562. — Fire-Plate for Boiler-Furnaces.—Etienne Boileau, St. Louis, Mo.

Claim.—The fire-plates F F^2 F^3, having narrow slits or slots *g*, terminating at the upper end in air-passages g^2, substantially as set forth.

119,563.—Ornamenting Labels and Hat-Linings, &c.—Thomas W. Bracher, New York, N. Y.

Claim.—1. A label for hats and caps ornamented by variegated Dutch or other metal leaf, as herein set forth.

2. A hat-lining, having a paper center, in combination with designs produced on said lining by means of leaf, substantially as described.

119,564. — Buggy-Spring and Attachment. — George A. Brown, Reading, Mich., assignor to himself, Samuel C. Dodge, and Henry F. Doty, same place.

Claim.—The combination of spiral springs, in connection with pulleys and other attachments, as herein set forth and described, and for the uses and purposes inferred herefrom.

119,565.—Screw-Cutting Device.—George W. Brown and A. T. Gifford, Providence, R. I.

Claim.—In combination with the stock A, the circular plate B pivoted to said stock and constructed with a series of holes near its edge, and with the metal intervening between each hole and the edge filed out or otherwise removed, as described, to form cutting-teeth that may be sharpened by grinding, all as set forth.

119,566. — Ram for Naval Warfare.—William Brown, Portsmouth, England.

Claim.—The reciprocating shaft, working watertight in the bow of the ram, in the manner and by the means described, when the said ram is provided with the intermediate water-space formed by the two bottoms H I, whereby the shaft is depressed to work below the surface of the water, as and for the purpose set forth.

119,567. — Water-Wheel.—Orrin Bryant, Chesterfield, Mass.

Claim.—The spider H with the rim K, chutes E and L, combined and arranged to operate in connection with a water-wheel, substantially as and for the purpose herein shown and described.

119,568.—Curtain-Fixtures.—William N. Bulkley, Brooklyn, N. Y.

Claim.—The double pawl K′, single pawl M, ratchet L, and loose pulley K, in combination with the conical friction-pulley H, and partition-plate *c*′, arranged and operating substantially as and for the purposes described.

2. The rotary screw-shaft E, traveling-nut F, spiral pressure-spring G, reversed ratchet I, double pawl K′, and reversible double pawl I′, in combination with the hollow conical cylinder-head C and partition-plate *c*′, substantially as described.

3. The swinging-bracket P and cord-catch U, constructed as described, in combination with the double suspension-cord W, substantially as described and set forth.

119,569. — Bread-Cutter.—Isaac S. Bunnell, Carbondale, Pa.

Claim.—The combination, as described, with knife A, of the straight lever B and nearly right-angled lever C, each pivoted at opposite ends of the knife, and also to the frame, for the purpose of giving a backwardly-drawing cut to the knife from heel to point when forced down.

119,570.—Cooper's Croze and Howel.—Anthony Busenger, Mount Solon, Va.

Claim.—The cooper's plane, composed of the parts A, D, and G, and the irons *a*, B, and E, substantially as and for the purposes described.

119,571.—Stove-Pipe Thimble.—Cephas A. Buttles, Milwaukee, Wis.

Claim.—A stove-pipe thimble in which the upper head is provided with strengthening-ribs *c* that project beyond its inner edge and support a flange, *n*, upon which the band is secured, the lower edge of said band being fastened to a flange, *n*, supported by arms *c*′ projecting from the lower head, substantially as and for the purposes herein set forth.

119,572. — Elevator. — Patrick Byrne, Nashville, Tenn.

Claim.—The arrangement of the posts A C, beams H J, drum E, shaft D, pinion T, wheel M, and hoisting-wheel L, substantially as specified.

119,573.—Baling-Press. — Nathan Chapman, Hopedale, Mass.

Claim.—1. The combination and arrangement of the follower K, hung to the endless chain I by an eyebolt so as to be turned on and off the press-box automatically, substantially as and for the purpose described.

2. In combination with the short pawls U and V, the pin *a* and latch *z* for holding the pawls clear from the ratchet-wheel when not working.

3. In combination with the eyebolts J and follower K, the blocks E′, with rounded ends, which govern the motion of the eyebolts and follower when turning in and out of the press.

4. The end doors J′ of the press-box, in combination with the side doors M′, constructed and arranged, as shown, to release the end doors when the side doors are opened, substantially as described.

119,574.—Coal-Elevator.—John C. Clifford, Yonkers, N. Y.

Claim.—1. The endless chain-conveyer L, constructed substantially as described.

2. The arrangement of the conveyer L and spout K of the elevator-leg, whereby their relative distance is unchanged and the fall of the coal on the conveyer maintained at its minimum when the leg is more or less elevated, substantially as set forth.

3. The pivoted mouth-piece O, in combination with the receiving-hopper N, arranged and operating as and for the purposes set forth.

4. The arrangement of the radial arms G G, in combination with the shaft *a*′ of the elevator-leg, whereby the position of the latter when raised and lowered is maintained at the same radius from the central axis E E, substantially as set forth.

119,575. — Butter-Worker. — George S. Coleman, Alexandria, Va.

Claim.—1. The bowl H, formed with a square cast-iron bottom L and with the center aperture J, as described, and for the purposes set forth.

2. The bowl H and the center-pin K, upon the head of which the bowl rests, in combination with the cross-piece U and guides V V, when arranged and operating as described, for the purposes set forth.

3. The hollow spindle M with its square head fitting into the iron bottom L of the bowl H, having a top plate with apertures P P, a square bottom fitting into the receptacle T, incline boards S S, and receptacle T, when constructed, combined, and operating as described, and for the purposes set forth.

4. The curved and jointed handle D, ladle E, bowl H, spindle M, center-pin K, guides V V and W, and receptacle T, when constructed, combined, and operating as described, and for the purposes set forth.

119,576.—Mechanical Movement.—John H. Cooper, Philadelphia, Pa.

Claim.—1. A mechanical movement, in which a disk or slide is adapted to an arm having a pin and segmental hub, substantially as described, so that by the uniform rotation of the arm definite intermittent movements are imparted to the disk or slide and the latter locked during the interval between the movements.

2. The blocks D, rendered adjustable, substantially in the manner described.

3. The arm G, having its segment detachable and adjustable, as specified.

119,577.—Potato-Digger.—William Cousens, Orono, Me.

Claim.—In combination with the beam B, braces G, and rollers D D′, the hood, formed and applied as set forth.

119,578, antedated September 27, 1871.—Strap-Cutter.—Richard Crocker, Marshalltown, Iowa.

Claim.—In a strap-cutting machine, the comb *f*, combined with a series of rotary knives, D, arranged to pass severally through the slots thereof, as and for the purpose specified.

119,579.—Carriage.—John Curtis, Cincinnati, Ohio.

Claim.—As a new article of manufacture, the metallic plate A B C D D′ *d d*′, when constructed as herein described, and for the purpose explained.

119,580, antedated September 22, 1871.—Water-Wheel.—John F. Daniels, Foxborough, Mass.

Claim.—1. Combining the chain of buckets H H^1 H^2, having the projecting flanges O O, with the wheels D and E, arranged and constructed substantially as described, and for the purpose set forth.

2. The pivot K, in combination with the bucket when so arranged as to form a rivet for the chain, and also as a connection to attach the chain to the upper part of the bucket, and by means of its inwardly-projecting point *k* to serve to confine the lower part of another bucket.

119,581. — Cleaning Boiler-Flues by Steam-Jets.—Charles Dasenbrock, Cincinnati, Ohio.

Claim.—The arrangement of the steam-pipe or pipes E and nozzles G in relation to the boiler B and flues C, as herein shown and described, so as to leave a space between the ends of the nozzles and the flues and thus permit the passage of the gaseous products of combustion without exposing the nozzles to excessive heat.

119,582.—Railway-Car Brake. — Marmaduke F. Daughtrey, Portsmouth, Va.

Claim.—The combination of the spring G, chain H, and rollers I with the rod D, all substantially as specified.

119,583, antedated September 18, 1871.—Corset. — Rebecca De Baun, Chicago, Ill.

Claim.—1. The shoulder-straps F F, with divided front ends *f f*′, adapted to hold the two parts of a side-lacing corset, substantially as specified.

2. The combination of the front A, back C C′, and brace E, substantially as and for the purpose specified.

119,584.—Rudder for Vessels.—Alphonse De Man, Ghent, Belgium.

Claim.—1. The combination, in a hollow tubular rudder, of two tubes, one inside the other, joined at their forward ends, as shown, with an annular space, M, between said tubes, the rear end of which is closed by the ring N, substantially as set forth.

2. In tubular rudders constructed as described, the solid ring, O, for the purposes set forth.

3. The screw-wheel, constructed, arranged, and operated substantially as described and shown, for the purposes set forth.

4. The combination of the propeller-wheel with the tubular rudder, each of said parts being constructed, arranged, and operated substantially as set forth.

119,585.—Horse-Collar and Hame.—Alexander Dunbar, Woodstock, Canada.

Claim.—1. The skeleton horse-collar frame, formed of a continuous wire and covered and padded, substantially as herein shown and described.

2. The draft-hooks E, fitted over the front wire of the collar and applied against the boards C, substantially as herein shown and described.

119,586.—Gas-Retort.—Henry H. Edgerton, Fort Wayne, Ind.

Claim.—1. The interior tile D, set up within the retort in line with the supporting-tile, as and for the purpose specified.

2. The tiles C, so constructed as to support the retorts and the upper tiles above, so that the upper tiles will not rest on retorts, as specified.

119,587.—Horse-Power.—Charles M. Erwin, Winona, Miss.

Claim.—1. The levers C C, united to the horse-power wheels by means of the radial arms B B′ and connecting-bar D, as described.

2. The wheel described, with king-post A, arms B B′, levers C C, connecting-bar D, and standards E, combined and arranged as described.

119,588.—Cultivator.—Charles Escudier, Parish of Iberia, La.

Claim.—The arrangement, in a cultivator, of the main frame *a*, bearing-wheel and frame *e*, standard plates *d*, shoe *h*, lever *g*, rods *i*, and draft-beam *l*, all constructed to operate as described.

119,589.—Tension-Regulator for Sewing-Machines.—Edward M. Estabrook, New York, N. Y.

Claim.—The combination of the bar A A′, clamp B, wheel C, spring D, lever G, and slide *f*, all constructed, arranged, and operating substantially as and for the purposes herein set forth.

119,590.—Valve-Gear.—Thomas E. Evans, William R. Thomas, and Joshua Hunt, Catasauqua, Pa.

Claim.—1. The bell-cranks *p p*′, applied indirectly against the ends of the rods E and E′ so as to move the main valve A to the middle position, as set forth.

2. The combination of the valve A with the rods E E′, pistons F F′, ports *h j*, exhaust-pipe *n*, and auxiliary valve C, all arranged to operate as specified.

119,591. — Locomotive-Engine.—Robert Francis Fairlie, Victoria Chambers, Westminster, England.

Claim.—1. The pendent, vibratory, and longitudinally-sliding pipe C, attached to the tube-sheet of a locomotive-boiler by a flexible elbow-joint, a D E F, and to steam-chests H of the cylinders that drive the wheels by a ball-and-socket joint, G H′, combined with a swiveling or bogie-frame working on center pivots under the boiler, as and for the purpose specified.

2. The hollow swivel-pin K, the steam-supply

pipes L, the hollow and swiveled ring E having branch pipe projecting therefrom, and rigid pipe C, combined and arranged in a bogie-engine, as and for the purpose specified.

119,592. — ANIMAL-TRAP. — Thomas Fell, New York, N. Y.

Claim.—The combination of the plates A B C and detachable pins D, all being constructed and arranged substantially as specified.

2. The arrangement, with the falling doors, of the holding and tripping wire K Q, substantially as specified.

119,593. — TURN-TABLE FOR RAILWAYS.—Charles H. Fisher, Albany, N. Y.

Claim.—The combination of the tie-rods m m m m and n with the stringers *g g*, the struts h h, and the braces h *k* and *s s*, substantially as and for the purpose hereinbefore set forth.

119,594.—ANIMAL-TRAP.-Henry Foust, Mill Village, Pa.

Claim.—The animal-trap, consisting of the body A and water-vessel I, hinged together, the former provided with the entrance E, exterior bait-box F, and the tilting-platform D, and the latter with the inclined rear end, as herein shown and described, for the purpose specified.

119,595, antedated September 18, 1871.—TURN-TABLE FOR TRANSFERRING FREIGHT.—George French, Alexandria, Va.

Claim.—The combination of the turn-table T, cog-rim R, screw-posts P P^1 P^2 P^3, and pinions *o o o o*, when constructed to operate substantially as described.

119,596.—WRENCH.—John Gates, Portland, Oreg.

Claim.—The construction of the adjusting-screw of a movable wrench-jaw with two sections cut therefrom on opposite sides of the end, as and for the purpose specified.

119,597.—SURFACE-BLOW FOR STEAM-BOILERS.—John Gates, Portland, Oreg.

Claim.—The surface-blow, consisting of the inverted cup A and pipe B, and arranged within a steam-boiler, substantially as and for the purpose herein shown and described.

119,598.—RAT AND MOUSE-TRAP.—Levi F. George, San Francisco, Cal., assignor of two-thirds of his right to Algernon S. Austin, same place.

Claim.—The turn-table A B in the trap or box R R R, working on the axis X by means of the clock spring C, in combination with the hooks H and H′, and the fixed springs K K′, substantially as and for the purpose herein set forth.

119,599.—BANK-NOTE. — John Gibson, Jr., Albany, N. Y.

Claim.—1. In bank-notes, checks, bonds, and other monetary papers or documents of value, the arrangement of perforations *s s* or *s′ s′* to form or constitute figures or characters expressing the true denomination, amount, number, date, name, or other essential matter, whereby such perforated figures or characters are rendered indelible, ineffaceable, or unchangeable, substantially as and for the purpose set forth.

2. The arrangement of figures or characters formed by perforations made in the paper, constituting a note, check, bond, or other instrument or document, with the written or printed essential features or characteristics of such note, check, bond, &c., whereby a correspondence and corroboration of the true and originally-intended expressions will be had in the same in an unalterable manner, for the purpose substantially as set forth.

3. The arrangement of the blocking or limiting perforations *z z* or *z′ z′* with the figures or characters expressing the original and true denomination, amount, registering-number, date, name, or other essential characteristics of a note, check, bond, or other instrument or document, whereby the fraudulent insertion of additional figures, letters, or other characters or matter will be effectually prevented or detected, substantially as set forth, and for the purpose specified.

119,600.—BED-BOTTOM.—Samuel Gissinger, Pittsburg, Pa.

Claim.—The arrangement of the frame, consisting of side pieces A and cross-bars B, rollers D *c*, ratchet-wheel *i*, pawl *j*, hooks *n*, guides *f*, and canvas C, arranged and operating as herein described, and for the purpose set forth.

119,601.—MANUFACTURE OF PIPES, ROOFING, FLOORING, AND OTHER ARTICLES FROM DISINTEGRATED WOOD. — James Kent Griffin, Waterdown, Canada.

Claim.—1. The process of disintegrating, dividing, reducing, and seasoning refuse or other wood or fibrous matter for the purpose of forming the same into various articles of manufacture.

2. Woodphalt, produced, by disintegrating, dividing, reducing, and seasoning the fiber of refuse or other wood or fibrous matter, and afterward compressing the same for the purpose of affording ready material for manufacture.

3. The combination of the steam-chest A, chamber L, chutes *n n*, and cutters, arranged and operating substantially as described.

4. The endless apron a^1 arranged between each of the cutters, as described, in combination with the chutes *n n*, steam-chest A, and the heating cylinder F, substantially as described.

5. The alternate pressing and oscillating rollers *d d*, in combination with the rotating steam-cylinder F, apron a^1, and cutter *a′*, substantially as and for the purpose set forth.

6. The automatic-delivering screw-core *h* arranged so as to produce continuous pipe, substantially as described.

7. The double automatic-delivering cores *h h′* arranged so as to produce a continuous sheet for roofing, flooring, &c., substantially as described.

8. Embossed or ornamental surfaces produced out of the material hereinbefore described, by means of revolving pressing-rollers geared together, and having irregular, corrugated, embossed, ornamental, or varied surfaces.

9. The case M, provided on its inner surface with spring-guides or ribs *s s*, in combination with a rotating cylinder, N, chute *n*, and cutter *a′*, substantially as described.

10. The combination, in one and the same cylinder, of a centrifugal drying-cylinder, for expelling the water or sap, a rotating heating-cylinder, and a rotating disintegrating-cylinder, substantially as and for the purpose set forth.

11. The rotating drying, heating, and disintegrating-cylinder, formed with a series of perforations, in combination with case M, substantially as described.

12. The pipes O O′ and case M, in combination with the rotating centrifugal drying, heating, and disintegrating-cylinders N, operating substantially as described.

13. The double conical-shaped core, composed of the sections Z *z*, arranged and operating in connection with the presser-rollers T T′, substantially as described.

119,602, antedated September 27, 1871.—SPRING BED-BOTTOM.—George C. Grut, Chicago, Ill.

Claim. — The braces C C′, united by a single knuckle-joint, and pivoted to frames A and B, in combination with stop-pins *c*, when covered with leather or rubber, substantially as and for the purpose described.

119,603. — COMPOSITION BOX. — Thomas Brian Gunning, New York, N. Y.

Claim.—A box formed of elastic material, with the outer face *e* of the body and the inner face *e* of the rim of the cover correspondingly beveled, as and for the purpose specified.

119,604. — PAPER WASHER, — Edmund S. Hanna, Pittsburg, Pa., assignor to himself and Columbus West, same place.

Claim.—As a new article of manufacture, a paper washer for use on wagons, carriages, and other vehicles, and on operative machinery, as hereinbefore described.

119,605.—FURNACE FOR STEAM-BOILERS.—Charles J. Harris, Bloomington, Ill.

Claim.—1. In a furnace for steam-boilers, the combination of the grates C and D, the latter being arranged in rear of and below the former, and the former composed of hollow bars to convey the outside air to and above the rear grate, all substantially as and for the purposes herein set forth.

2. The combination, in a furnace for steam-boilers, of the grates C and D, constructed and arranged as described, and a pipe for conveying the exhaust steam from the machinery to and beneath the rear grate D, substantially as and for the purpose herein set forth.

119,606.—CASTER FOR SEWING-MACHINES. Warren D. Hatch, Antrim, N. H., assignor to himself, Shepard Russell, Boston, and Henry O. Goodrich, Worcester, Mass.

Claim.—The combination of the jointed rod G hinged to upper part of the frame, long lever F, short lever E, swiveled casters D C, and lugs B with each other to adapt them for attachment to a sewing-machine frame or other article, substantially as herein shown and described, and for the purpose set forth.

119,607. — CONCRETE PAVEMENT. — James M. Hawes, Covington, Ky.

Claim.—1. The process of preparing a pavement substantially in the manner herein set forth.

2. A pavement composed of the ingredients specified, and prepared and laid substantially as herein set forth.

119,608.—SCARF OR NECK-TIE HOLDER.—James Hayden and William H. Hart, Jr., Philadelphia, Pa.

Claim.—As an article of manufacture, a scarf or neck-tie holder, A, with or without the tongue B, (strengthened or not,) constructed substantially as shown and described.

119,609.—STOVE-PIPE DRUM.—Ben James Hobson, Covington, Ky.

Claim. — The improved air-heating apparatus herein described, formed of the cylinder *a*, provided with air-entrance and exit-pipes *g* and *h*, located as specified, the series of horizontal tubes *b* and connected vertical cylindrical drums *c* and *d*, and the pipes or elbows *e* and *f*, all constructed and arranged as and for the purpose described.

119,610, antedated September 23, 1871.—EARTH-CLOSET.-Chester D. Holmes, Boston, Mass.

Claim.—In general combination, the three compartments, *g*, *a′*, and *b′*, of the structure, the valve B with its ports *l* and *n*, and the seat *c* operated by the carriage and weights, under the arrangement and for operation as herein specified.

119,611.—BOB-SLED.—Dennis Holtz, Tiffin, Ohio.

Claim.—The reach C, connected by king-pin *a* and jaws *s* to a circular flanged plate, G, supported by a yoke, B, and provided on its rear end with a swivel-coupling, substantially as described, and for the purpose set forth.

119,612.—DERRICK.—William M. Howland and George L. Howland, Topsham, Me.

Claim.—1. The combination of the keeper or guide L with the chain and chain-wheel, substantially as specified.

2. The arrangement, with the pawls G and pawl-levers F, of the rods *a*, springs *c*, and adjustable plate *f*, substantially as specified.

3. The foot-piece P, hook-headed bolt Q, case S, and spring T, combined with the shore and socketed stake-holder of a car, all substantially as specified.

4. The combination, with levers K and rods I, of the rod *i* and springs *k*, substantially as specified.

119,613.—EGG-PACKING BOX.—Nathan L. Janney, Wilmington, Del., assignor to himself and William L. Gilbert, same place.

Claim.—The improved case for receiving or holding eggs, formed of the box *a*, provided with vertical grooves, the series of vertical partitions *b b′*, the horizontal perforated shelves *c c′*, and the double egg-pouch and ring, arranged in the manner shown and described.

119,614.—PORTABLE FENCE.—Abram Jewett, Sanford's Corners, N. Y.

Claim.—A portable fence-post, consisting of the base bar *d*, the crossed bars *a*, bar *f*, the band *e*, and vertical bars *g*, when constructed and arranged substantially as herein described.

119,615.—FOUNDATION FOR PLASTERING.—James John, Chicago, Ill.

Claim.—1. The combination of the line-wires B with the supporting-strips A and clamps, substantially as described, to form a foundation for plastering.

2. Iron wire, applied substantially in the manner specified, as a substitute for wood laths or other material as a foundation for plastering upon ceilings and walls, for the purposes set forth.

119,616. — THILL-COUPLING. — Erastus D. Johnson and Edward A. Cowan, Thorntown, Ind.

Claim.—The thill or pole-iron E having the hook *e*, in combination with the flanged block D′ and clip B, as and for the purpose specified.

119,617.—MECHANICAL MOVEMENT.—Daniel E. Keating, Oswego Falls, N. Y.

Claim.—The combination of the eccentric miter-wheels D and D′, the shafts A and B, the face-plate E, and the levers F, G, and G′, all constructed, arranged, and operated as described and shown, for the purposes set forth.

119,618.—COMBINED PLOW AND STOCK FOR CULTIVATORS.—Martin Kennedy, Chicago, Ill.

Claim.—1. The stock *a*, constructed with the double chamfered flange *b*, point *a′*, sockets *r*, and lugs *p*, whereby it is adapted for the attachment of various implements necessary to the performance of different functions, as shown and described.

2. In combination with the stock A, provided with the double chamfered flange *b* or beveled ridge *c*, the mold-board *g*, provided with the corresponding flange *f*, as specified.

119,619. — HORSE HAY-FORK. — John C. Lampman, Baltimore, Mich.

Claim.—An improved horse hay-fork, consisting of the tines A C, shank or standard B, notch or shoulder *b′*, loop or link F, trip-lever G, hoisting-rope E, and guide-pulley I, said parts being constructed

arranged, and operating substantially as herein shown and described, and for the purpose set forth.

119,620.—MEDICAL COMPOUND FOR CURE OF CONSUMPTION. — James E. Larkin, Newark, N. J.

Claim.—The above medical compound, substantially as described, for the purpose set forth.

119,621. — PIPE-ELBOW. — Isaac Leas and William H. France, Terre Haute, Ind.

Claim.—The method of forming stove-pipe knees from a single piece of metal by cutting from a rectangular sheet eight triangular pieces, four on each side of a central longitudinal strip, and then bringing together the parts into the form of a curved tube as described.

119,622.—ELECTROTYPING. — William Augustus Leggo, Montreal, Canada.

Claim.—1. The process described, consisting of heating the type before making the impression in the wax, as and for the purpose set forth.

2. The press described, consisting of the screwed posts *f*, toothed wheels *g*, worm *h*, spindle *i*, bed-plate *a*, and steam-space *b*, or its equivalent, all combined and arranged as described.

3. The arrangement of two or more tables about the press, as described.

119,623. — PRINTING-TELEGRAPH. — Landy Tunstall Lindsey and Horace Horatio Curtiss, Jackson, Tenn.

Claim.—1. The mechanical circuit-changer, composed of the vertical axis M, arms N, insulated rims *m m'*, and the electrical connections therewith, as described, the arrangement acting upon the principle of centrifugal force for changing the direction of an electrical current.

2. The combination of the magnet C, armature-lever B, escapement E, ratchet-wheel F, axis A propelled by a weight or spring and bearing the toothed-wheel W, in conjunction with the spring R and electrical connections described, for acquiring an automatic movement of the instrument.

3. The device consisting of the sleeve O, arm *o*, roller I, feed-hand *i*, studs *c d*, lever L, for insuring the movement of the paper in the manner as described.

119,624, antedated September, 30, 1871.—RAILWAY RAIL-CHAIR.—Allen P. Lord, Friendship, N. Y., assignor to himself and Johnson Higgins, same place.

Claim.—A chair for railroad rails constructed from flat wrought-iron plates or bars in parts A B C, each formed specifically as herein described, and the whole combined and arranged to operate together in the manner shown and specified.

119,625.—BLIND-SLAT OPERATOR. — Henry B. Lum, Sandusky, Ohio.

Claim.—The combination, with the slotted arm D connected to the slats, of the bent rod E passing through the window-frame, and otherwise arranged, substantially as specified.

119,626.—METALLIC SIEVE FOR GRAIN-SEPARATORS. — James A. Maloney, Georgetown, D. C.

Claim.—1. A sheet-metal sieve, A, for grain-separators, provided with apertures *b*, formed and arranged as described and shown, for the purpose set forth.

2. In combination with a sheet-metal sieve, constructed as described, the guard-plate C, substantially as and for the purpose specified.

119,627.—HAY-RACK.—Jeremiah Mandigo, Wayland, Mich.

Claim.—The construction and arrangement of the sill A, sides B, girts *a*, stripe *b*, arms C C', wings D, pintles *c*, and hinges *c'*, as and for the purpose set forth.

119,628.—GROUND-MARKER AND FURROWER.—George W. Martin, William G. Parrish, and James A. Petrie, Elizabeth, N. J.

Claim.—The beams of the three furrowing-plows, combined, as described, with the same rigid and end slotted bar M, and the rod L to which they are pivoted, for the purpose of enabling the two end beams to be adjusted toward or from the central one, and all to be lifted together.

119,629.—WASHING-MACHINE. — William Martin, Orford, Iowa.

Claim.—1. In combination with the rubber F attached to pivoted arms K, the crotched arm M, brace N, link P, and lever Q, all constructed and arranged as and for the purpose specified.

2. The beater F, having the oscillating motion on its own axis while swinging on the arm K, substantially as specified.

3. The combination, with the rubber B and the springs, of the buttons G H, substantially as specified.

119,630.—ROCKET. — Cornelius E. Masten, Boston, Mass.

Claim.—1. A rocket having opposite sticks, *b c*, rigidly affixed to the rear of the rocket, and inclined relatively to its axis, substantially as shown and described.

2. In combination with such opposite inclined sticks *b c*, the guiding-vanes or blades *d* on the rear end of the sticks, substantially as shown and described.

119,631. — PAPER-BOX MACHINE.—Charles A. Maxfield, New York, N. Y.

Claim.—1. The folders C C and the pairs of folders F F, in combination with the plunger A, substantially in the manner described and specified.

2. The combination, with the plunger A and folders C C with their pairs of folders F F, of the spring-folders D D, constructed and operated substantially as described and specified.

3. The combination, with the plunger A, folding devices C C, F F, and D D, as described, of the rollers E E, constructed and operating substantially as described and specified.

4. The construction of the spring-arms D D so that they shall serve the twofold purpose of holding the blank smooth upon the end of the plunger to prevent the bottom of the box from "bagging" and folding the two sides of the box, substantially as described and specified.

119,632. — CUTTER-HEAD.—Charles E. McBeth, Hamilton, Ohio.

Claim.—The quadrant-shaped segments A A' B B' and hub C D furnished with the cutters and bits *a b c d*, in combination with the graduated series of gauging-collars 1 2 3 4 5, constructed and operating in the manner shown and described, for the purpose specified.

119,633. — DITCHING-MACHINE.—John W. Metz, Stout's, Ohio.

Claim.—In combination with the main frame B and its pivot-bolts *b*, the slotted sheaths C C' *c c'*, ratchet-bars F F' *f f'*, rock-shaft G *g g'*, treadle H, shaft K *k'*, pinions L L', racks M, and retaining devices N *n*, for the purpose stated.

119,634. — HEATING-STOVE. — John D. Miller, Detroit, Mich., assignor to Detroit Stove-Works, same place.

Claim.—1. The construction and arrangement, with relation to the shell B, base A, top C, and base-plate O, of an internal combustion-chamber, composed of the bottom plate H, flanged front and back plates E, side plates F G, and top plate P, provided with the damper Q and the diagonal deflector or flue-strip R in the base-chamber, as and for the purpose set forth.

2. The arrangement, in the double top composed of the plates P and S and casing C, of the chute T, as described.

3. In heating-stoves, the sectional swinging cover, the lower section U being provided with an opening, *e*, and pivoted at the periphery to the top C, the upper section U' being in like manner pivoted to the lower one, and provided with any suitable means for locking the sections together, substantially as described.

4. The construction and arrangement of the base A, shell B, top C, front and back plates E E, side plates F and G, bottom plate H, door I', base-plate O, diving-flue J, up-take flues L L, base-chamber K, top chamber M, smoke-pipe N, covering-plate P, damper Q, diagonal flue-strip R, top plate S, feed-chute T, draught-tube V, and sectional swinging-cover U U', as shown and set forth.

119,635. — ELEVATOR.—Charles E. Moore, Boston, assignor to himself and Martin L. Wyman, Melrose, Mass.

Claim.—1. In combination with or as a part of an elevator mechanism, a rope-winding drum having a toothed gear loose upon its shaft, and which drives the drum by a pawl upon said gear, substantially as described.

2. The winding-drum, arranged substantially as shown and described, so that the weight of the drum or its downward movement when released from the strain of the car exerted upon the rope effects the stoppage of the motive power that drives the drum.

3. A drum hung so that it drops when the car is arrested and shipe the belt by dropping.

119,636.—MACHINE FOR COVERING WRINGER-ROLLS.—Joel Moulton, Boston, Mass.

Claim.—1. In combination with the shaft-rotating chuck or holder *g*, the sliding cross-head *h* and the gear-rack or bar *k*, extending from the cross-head in the vertical plane of the axis of the chuck, substantially as shown and described.

2. In combination with the cross-head *h* and gear-bar *k*, the shaft *n* and pinion *m*, the pulley *p* and weight *r*, ratchet and pawl *t u*, and the handle *w* and its ratchet and pawl, substantially as shown and described.

3. The removable bunters or bunter-heads d^2 on the ends of the shanks or pins c^1, substantially as described.

4. The guide-rolls g^2 h^2, made adjustable for materials of varying thickness, substantially as described.

119,637, antedated September 18, 1871.—BRONZING-MACHINE.—John H. Nevins, Williamsburg, N. Y.

Claim.—1. The combination of the fountains F' and F'', the brush *h*, and roller R'', when the roller R'' is rotated in the fountain F'' for the purpose of taking up the bronze powder evenly on its surface, as set forth.

2. The slides S S S, in combination with the fountains F' and F'' when inserted between the same, for the purposes set forth.

3. The fountain F'' and roller R' in combination with the applying-roller R'', and operating as described.

4. The applying-roller R', moved from the spreading-roller R'' and the sheet-drum C by the lifters L L, operated by the cams C'' C'' for the purpose of stopping the application of bronze, and dropping to the same by its own weight, for the purpose of applying bronze to the passing sheet.

5. The case of the fountain F''', constructed with the slide S' moving co-ordinately with the roller R' to open and close the lower bronze-fountain F'''.

6. The rubbing-and-polishing rollers R R, constructed as shown, and given both rotary and end motion, the last by the slotted cams M M.

7. The combination of the sliding segment S' and the arms *a a*, by which it is carried and kept in position.

8. The combination of the lifting-arms L L, the actuating-arms L', and the sliding-segment S'.

9. The cams C'' C'', when operating to throw the applying-roller R' out of function.

119,638. — APPARATUS FOR EXTINGUISHING FIRES.—Gorton W. Nichols, Chicago, Ill.

Claim.—1. The exhaust and charging-cock B or equivalent, operating as and for the purpose specified.

2. The employment of a cock or equivalent, other than that to which the hose is attached, as a vent by which the contents of fire-extinguishers may be drawn off, as specified, for the purpose as set forth.

3. An air-vent, opening and closing simultaneously with and by the same means as the main passage to the reservoir, as set forth.

4. Attaching to fire extinguishers a receptacle for holding charges, substantially as specified.

5. The combination of these several parts, as specified, for the purpose set forth.

119,639. — CULTIVATOR. — John S. Nolan, Paulsborough, N. J.

Claim.—1. The oblong and eight-sided shovels P, adapted to be reversed or changed in position so as to adapt the implement for use as a harrow or cultivator, as specified.

2. The improved agricultural implement formed of the central beam A, hinged adjustable side beams B, and adjusting devices H I G J F, the oblong reversible teeth P provided with self-sharpening teeth Q, the vine-lifters L L and N N, all constructed and arranged as shown and described, to operate as specified.

119,640.—CUTTING APPARATUS FOR HARVESTERS. — James T. Polson, Laclede, Mo.

Claim. — The arrangement of the covering-plate of the rotary cutters upon hinges on a projection from the fingers, as and for the purpose specified.

119,641.—PNEUMATIC PUMP.—James Powell, Cincinnati, Ohio.

Claim.—1. The arrangement and combination of the valve J and valve-seat S, the axial projection T, spring L, screw-socket K, and screw-nut F, when the said parts are arranged for locking the otherwise automatically-operated valve and adapted to an air-pump, substantially as and for the purpose described.

2. In combination with the subject-matter of the first claim, the arrangement of the shoulder W, sliding cap G, elastic packing P, and screw-nut F, substantially as described.

3. The combination of the foregoing with the pump B and air-chamber or reservoir A, as and for the purpose described.

119,642.—GAUNTLET-GLOVE.—Virgil Price, New York, N. Y.

Claim.—A glove having the projecting bead *c*, combined with a detachable gauntlet having the projecting bead *d*, with the continuous spring *e* therein, as and for the purpose specified.

119,643.—DIE FOR MANUFACTURING CLIP KING-BOLTS.—Franklin B. Prindle, Southington, Conn., assignor of one-half his right to John Deeble, same place.

Claim.—1. The blank B, constructed in the manner and for the purpose substantially as specified.

2. The dies C and C', constructed as shown, and combined with each other and with suitable operating mechanism, substantially as and for the purpose described.

3. The lower forming-die F, made cylindrical horizontally and provided with the central perforated

bushing F', substantially as and for the purpose shown.

4. The shaping-dies L and M, constructed and combined substantially as and for the purpose set forth.

5. The series of dies C, C', E, F, I, K, L, and M, when constructed and combined substantially as and for the purposes specified.

6. In combination with the trimming-die I the gauge O and o pivoted to or upon the supporting frame of the press, made adjustable by means of the set-screw R, and connected with the press-treadle, in the manner and for the purpose substantially as shown.

119,644, antedated September 23, 1871.—COTTON-CULTIVATOR.—Richard H. Prunelle, Beulah, Miss.

Claim.—1. The arrangement in one machine for cultivating cotton of a barring-off, *a*, a scraping, *c*, a cutting-out, *p*, and a throwing-on mechanism, *a'*, as specified.

2. The combination of the frame A, cutters *p*, bars *q*, spring *v*, cams *w*, and wheels *x*, as described.

119,645.—ANIMAL-TRAP.—Niels Rasmussen, Chicago, Ill., assignor to himself and William Hessemer, same place.

Claim.—An animal-trap, consisting of the vessel A, cover H with tubular projection F, and trap-doors D provided with the finger-bars *a*, when constructed and arranged to operate as herein shown and described.

119,646.—STOVE-PIPE DRUM.—Thomas R. Renwick, Grand Rapids, Mich., assignor to himself and Josiah A. Osgood, and said Osgood assignor of one-half his right to Charles M. Weiss, Watertown, Mass.

Claim.—In connection with a stove-pipe, or the smoke-pipe of a furnace, the draught-promoter, consisting of the drum B and registers C D, arranged as specified.

119,647.—MACHINE FOR MAKING EYELETS. John C. Rhodes, South Abington, Mass.

Claim.—1. The combination, with a machine to mold a cup-shaped eyelet blank, such substantially as that represented at A, to the shape of a finished eyelet, but with or without a bottom, as represented at B and C, of a hopper with an orifice at bottom opening into a passage or chute leading toward the molding instruments, said orifice being of such shape and dimensions as to permit the passage through it of the cup-shaped blank, when and only when said blank is right-side up in regard to the molding instruments, and mechanism to agitate said hopper or the blanks within it, in order thereby to cause said blanks to assume severally the position proper to enable them to pass through the orifice of the hopper, substantially as described.

2. The combination, with the chute, matrix, and follower, of mechanism to impart to said chute a vibratory movement, and to the follower two distinct forward movements separated by the interval of time required to retract the chute, substantially as set forth.

3. The combination of the hopper, chute, vibrating lever J, rotating cams *e* and *k*, springs *s* and *o*, holder *b*, follower *d*, and matrix *f*, substantially as described.

119,648, antedated September 30, 1871.—PICTURE-NAIL. — Thomas C. Richards, New York, N. Y.

Claim.—A driving-shank, screw-threaded upon its upper end, a nut into which the shank is screwed, and a glass or porcelain scalp properly recessed to receive the nut, which is secured therein by lead or its equivalent, substantially as set forth and shown.

119,649.—TRAP FOR WASH-BOILERS.—Henry R. Robbins, Baltimore, Md.

Claim.—1. The trap *a*, provided with internal partitions which terminate in curves that form contracted throats, as described, and having a tube *d*, for the purpose set forth.

2. The trap *a*, provided with the tube *d*, and combined with the pipe *g* by means of the lantern-joint *e f*, as specified.

119,650.—PUMP.—John Roberts, New Madison, Ohio.

Claim.—The mode of securing the valve E in the cylinder by means of an annular plate, h, spring *i*, and knobs *g*, substantially as described.

119,651.—KNITTING-MACHINE NEEDLE.—S. H. Roper, Boston, Mass.

Claim.—1. A knitting-machine needle the hinged latch of which has journals integral with itself, and secured in bearings sunk or indented in the walls of the slot, but not extending through to the outer surface of the shank, all substantially as described.

2. The complete needle, having all its parts constructed and combined as herein described.

119,652.—STEAM-BOILER.—E. H. Rümmele, Glenbeulah, Wis.

Claim.—The cylinders A and C, connected, by the rear passage *b*, with the system of fire-passages D, *j*, *k*, *l*, and *m* within and around the said cylinders, all in combination substantially as and for the purpose described.

119,653. — CIGAR-MOLD AND PRESS.—John Ryan, Detroit, Mich.

Claim.—The arrangement of the matrix-plate A having the matrices A', the die-plate B provided with the dies B', said plates being pivoted together by the hinges C in the manner shown and described, and in connection therewith the standards D, shaft E, lever F, and eccentrics G, as and for the purpose set forth.

119,654. — CORN-HUSKER. — Daniel Sager, New York city, assignor to James A. Robinson, Brooklyn, N. Y.

Claim.—1. The endless apron B and shaker C, combined with a common revolving shaft, E, for the purpose of making their relative movements always correspondent to one another.

2. The shaker C, having its sides *a b c* slatted, as and for the purpose specified.

3. The arrangement of the slatted shaker C and the fan-blower M, as shown and described, for the purpose set forth.

119,655. — WAGON-BRAKE. — Henry Sager, Penn Station, Pa.

Claim.—The arrangement, in combination with the wheels of a wagon or car, of the brake D, bell-crank H, rod K, and brake-lever E, substantially as and for the purposes described.

119,656.—SCREW-DRIVER FOR FIRE-ARMS.—George W. Schofield, of the United States Army.

Claim.—An improved double screw-driver for fire-arms, having the two blades A and B pivoted together so that they may slide longitudinally one upon the other, and secured in position relatively with each other by means of the stud *b* and notches *c* and *c'*, substantially as described.

119,657.—CAN FOR HYDROCARBON LIQUIDS. Ira W. Shaler, Brooklyn, N. Y.

Claim.—1. The combination, with a can for holding hydrocarbon liquids, of a stopper-receiving tube or socket closed by a wire-gauze screen or cap, substantially as shown and described.

2. A can for holding hydrocarbon and other inflammable liquids, provided with a discharge-spout and filling-orifice or stopper-receiving tube, combined with protecting diaphragms of wire-gauze, as herein shown and set forth.

119,658.—VISE.—John Simpson, Cleveland, Ohio.

Claim.—1. The box *a*, provided with the rack C, and having its mouth contracted, substantially in the manner and for the purposes herein set forth.

2. In combination with the box *a* having a contracted mouth, and provided with the rack C, the box *b*, and screw E, constructed and arranged substantially as and for the purposes herein set forth.

119,659.—CURRY-COMB AND BRUSH.—Howard C. Smith, Coxsackie, N. Y.

Claim.—The horse-brush herein described, having the transverse-channel combs D and the elastic cushions B, substantially as specified.

119,660. — SLEIGH. — Hugh Smith, West Gray, Me.

Claim.—1. The runner-fronts B, made of metal, with arm D, both grooved to receive dasher-board, and constructed at O and S for attachment, respectively, to the runner and sleigh body, substantially as described.

2. The brackets W of the runner-fronts, each constructed with the recess *p* and notch *r*, in combination with the shaft extension T, formed with the disks *n* and lug *o*, the whole arranged to operate in the manner substantially as herein shown and described, for the purpose set forth.

3. The rail a^2, start b^2, and lug c^2, substantially as and for the purpose specified.

4. The brace-rods F F, arranged between the body C and the runners A of the sleigh, in combination with the stanchions E, when the stanchions are formed substantially as described.

119,661. — GATE. — Samuel Smyth, East Bridgewater, Pa.

Claim.—The revolving gate hung on trunnions, as described, and provided with sliding weights, in the manner specified.

119,662.—HORSE-HOLDER FOR SLEIGHS.—Henry A. Sprague, Charlotte, Me.

Claim.—1. The device A a^1 a^2 D E F, constructed substantially as herein shown and described, to adapt it for attachment to a sleigh-runner for holding the reins, as and for the purpose set forth.

2. The combination of a short chain, G, with the holder A a^1 a^2 D E F, substantially as herein shown and described, and for the purpose set forth.

3. The grooves *b'*, formed in the sides of the runners B just above the shoes C, to adapt said runners to receive the holder A a^1 a^2 D E F, substantially as herein shown and described, and for the purpose set forth.

119,663. — GAS-MACHINE. — Theodore G. Springer, Fayette City, Pa.

Claim.—1. The process herein described for manufacturing illuminating gas, consisting of the mixing of carbureted hydrogen and atmospheric air, and passing the same through a jet of hydrocarbon, substantially as herein set forth.

2. In a gas-machine where carbureted hydrogen and atmospheric air are mixed together, creating a suction for taking in the atmospheric air by means of compressed carbureted hydrogen, substantially as herein set forth.

3. Feeding hydrocarbon liquids to the point where they are mixed and formed into illuminating gas by the action of compressed hydrogen, substantially as herein set forth.

4. The combination of the tank C, cylinder D, tube E, and perforated bottom H with the air-chamber formed above the cylinder, all substantially as and for the purposes herein set forth.

5. The arrangement of the small tube *b'*, large tube J, and branch J' with valve *e*, all substantially as and for the purposes herein set forth.

6. The device for operating the valves *a a'*, consisting of the connecting-rod P, lever O, with roller *i*, springs R S, rock-shaft *k*, and lever N, the latter connected with the gas-holder, all constructed and arranged substantially as and for the purposes herein set forth.

119,664.—TURBINE WATER-WHEEL. — Stephan Stevenson, Dansville, N. Y.

Claim.—In combination with the chute-frame A, provided with the downwardly-tapering and inwardly-inclined chutes C, the wheel having the elliptical and outwardly-inclined bucket C', substantially as specified.

119,665.—HINGE FOR SEWING-MACHINES.—Roswell H. St. John, Bellefontaine, Ohio.

Claim.—A hinge, one or both of whose members is clothed with resilient material on those portions which come in contact with the object to which it is attached to perfectly isolate it therefrom, for the purpose described.

119,666.—KETTLE. — David Stuart, Philadelphia, Pa.

Claim.—1. A preserving or other kettle provided with a bail, which, after being raised to an upright position, is retained, substantially in the manner and for the purpose described.

2. In a preserving or other kettle, a bail restricted in its movements, substantially as described, in combination with a lip, *b*.

3. A kettle provided with an annular flange, *c*, in which are recesses *y*, as and for the purpose specified.

119,667. — BRICK-MOLD.—Rudolpf Stuckwisch, Terre Haute, Ind.

Claim.—The cap B, provided with openings, as described, said cap being detachable and arranged with relation to mold A for operation, in the manner and for the purpose set forth.

119,668. — GRAIN-BINDER. — Martin Summers and Samuel B. Lane, Zionsville, Ind.

Claim.—1. The band-holder E, dropper arms *f*, shaft *d*, pinion A'', rack-bar C''', and wheel O'', combined as specified.

2. The jaws L, tucker Z, bar W, wedge 8, suspension-bar 6, bar 7, and wheel O''', combined as described.

3. The vertical shaft O provided with the pinion 4 and flange o^2, the cam-wheel O', the jaws L, braces S, flange a^4, bar 14, and rod P, combined as set forth.

4. The jaw L, bisected as shown in Fig. 3, in combination with the springs L', shaft O, and wedge 8, as explained.

5. The butt-holder, consisting essentially of the bent rod H and connecting-bar H' connected with the shaft *t*, as described, so that the butt-holder may vibrate therein, as specified.

6. The arms *k*, rods *m*, bar V^6, and wheel O''', combined as described.

119,669. — HORSE HAY-RAKE. — George Sweet, Dansville, N. Y.

Claim.—1. The combination, in a horse-rake having wheels B B and axle A, of a series of rake-teeth, D, attached to a cross-bar, C, rigidly connected parallel with and in rear of the axle, shaft J with cranks *e e* and lever L, rods *f f*, guide-standards *m m*, and brake-blocks K acting on the periphery of the driving-wheel for unloading the rake, all substantially as herein set forth.

2. The lock-lever, composed of the three parts I, I^1, and i^6, when said parts are constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the lever L with cam f and pivoted bar n for breaking the joint of the lock-lever, substantially as herein set forth.

119,670.—FENCE.—John D. Tifft, Cuyahoga Falls, Ohio.

Claim.—1. In a wire-fence, the wire ends encircling each other by means of the sliding loops e e, in combination with the rubber sleeve E and the washers F F, all constructed as specified.

2. In a wire-fence, the combination, with the wires A A, of the slats B B, inclined supports D D, and foot D', all attached to said wires by means of staples, as specified.

119,671.—WATER-METER.—Daniel L. Tower, New York, N. Y.

Claim.—1. The wings L L, abutments N N, and chambers M M arranged in a water-meter, substantially as and for the purposes described.

2. The flange G and ports K and O, when arranged to operate substantially as and for the purpose described.

3. The arrangement of the valve F between the valve-plates D and E, thereby relieving it from undue pressure, substantially as described.

4. The crank-lever R, fingers T T, and pins U.

5. The disk V and pins X X combined with crank-arm R and spring S, substantially as and for the purpose specified.

119,672.—RAILWAY SWITCH.—Edward A. Trapp, San Francisco, Cal., assignor of one-fourth his right to Henry J. Huttner, same place.

Claim.—1. The cams A and B, with the faces curved outwardly, for giving at first a slow motion and then a more rapid motion, in combination with a set-bar, d, attached to the car for operating said cams.

2. In combination with cams constructed with the faces as herein described, the arrangement of the cogged sector f with chains or ropes, shafts h h, pinion i, drum j, cogged sector k, pinion l, countershaft m, worm-screw n, and toothed lever o, for the purposes set forth.

119,673.—COMBINED LATCH AND LOCK.—Martin P. Warner and Edwin W. Payne, Morrison, Ill.

Claim.—The bolt A provided with a long notch, D E, and the notch G, and pivoted on a spindle so as to be thrown out of the case by its own gravity, in combination with the pawl H constructed to be operated by hand and by a key, as specified.

119,674.—MECHANICAL MOVEMENT.—William Weaver, Greenwich, N. Y.

Claim.—1. The arrangement of the belts D, two or more, with respect to the driving-pulley or drum B, loose pulleys E equal in number to the belts D, and driving-shaft F, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the levers H, provided with a spring sliding weight or other adjusting device, in combination with the loose pulleys E, belts D, driving-shaft F, and driving-pulley or drum B, substantially as herein shown and described, and for the purpose set forth.

119,675.—SHOEMAKERS' JACK.—Franz Weissenborn, Egg Harbor City, N. J.

Claim.—The notched teeth s, spring-bolt f, and lever g, arranged with respect to the frame A and beam B, as and for the purpose specified.

119,676.—PLATFORM FOR STOVES.—William Westlake, Chicago, Ill.

Claim.—The herein-described zinc-boards for stoves, consisting of the zinc cover A spun over the flange c and under the edge e, as shown, whereby the parts are firmly united and held in place without the use of nails or screws, and the sheet provided with a solid bearing around its edge, as set forth.

119,677.—CLUTCH-MECHANISM.—David M. Weston, Boston, Mass.

Claim.—1. In combination with the pulley a, the friction-clutches, normally controlled by the springs e, and thrown into engagement with the pulley-rim i by centrifugal force and the stress of the springs combined, substantially as described.

2. The pulley a having a split hub, c, secured upon the sleeve or bushing by the bolt g and nut h, substantially as shown and described.

119,678.—SAW FOR SAWING FRET-HOLES IN FAN-STICKS.—Joseph W. White, Weymouth, Mass.

Claim.—A saw, curved in its transverse section and having both its edges toothed and tapering, substantially as shown and described.

119,679.—BUCKET FOR CHAIN-PUMP.—Joseph S. Wilcox, Ypsilanti, Mich.

Claim.—The construction and arrangement of the plates B B', tube d, and link C with the elastic bucket A, of the form shown, as and for the purpose set forth.

119,680.—OVEN.—Abner Willson, Buffalo, N. Y.

Claim.—1. The combination and arrangement, in a baking-oven, of the shield-plate C, legs D D, and rack F E, as hereinbefore set forth.

2. The arrangement, with the shield C, legs D D, and rack E E, of the secondary shield c, arranged so as to leave an air-space, f, between them, as hereinbefore set forth.

3. The combination, with the radiating-plate A, rack E E, and shield C, of the tin cover or inclosing-case B, as hereinbefore set forth.

4. The shield-plate C, when made convex on its under surface, and arranged over a radiating-plate A and within a case, B, of a baking-oven, as hereinbefore set forth.

5. The tin case B and legs b b, combined and arranged with heating-plate A, as hereinbefore set forth.

6. The construction and arrangement of the legs D and recesses c^2 with the case B and shield and rack C E so as to facilitate the proper adjustment of the inclosing-case and leave space for the ascent of the heat, as hereinbefore set forth.

119,681.—MACHINE FOR THREADING BOLTS.—Sheffield H. Wright, Lowell, Mass., assignor to American Bolt Company, same place.

Claim.—The combination of the bolt-holder A, rods and levers L, O, S, and P, adjustable collars M N, spring R, and clutch I, as and for the purpose set forth.

119,682.—MANUFACTURE OF SOFT-IRON AND STEEL CASTINGS.—Richard Yeilding, New York, N. Y.

Claim.—1. The process of making soft annealed castings by casting in hot closed molds and cooling the same and the contained metal down slowly in a heated oven or furnace allowed to cool gradually, all substantially as specified.

2. The combination of the carbonizing substances with a mold for casting steel for the decarbonization of the steel simultaneously with the casting, substantially as specified.

119,683.—COG-GEARING.—Luther R. Faught, Philadelphia, Pa.

Claim.—Arranging in one of a pair of wheels the revolving cylindrical cogs or rollers A A or B B, in combination with flanges C C', for protecting the wearing-surfaces and for supporting the axles a a or b b, and containing, also, the channels f f or g h h for lubricating the frictional end surfaces from within, the whole operating in the manner and for the purpose set forth.

REISSUES.

4,573.—MILK-COOLER.—Anna E. Baldwin, Newark, N. J.—Patent No. 93,583, dated August 10, 1869.

Claim.—1. The combination, in a milk-cooling apparatus, of the vessel A, central tube B, and agitating-paddles D, substantially as and for the purpose described.

2. The agitators of the milk and cooling-chambers, when attached to and operated simultaneously by one and the same cover, a b, as described.

3. The milk-cooling apparatus, consisting of vessel A, tube B, lid a b, when provided with paddles C D, handle E, and faucets c c', substantially as and for the purpose described.

4,574.—CLOTHES-WRINGER.—Charles A. Cummings and Freeman M. Swallow, Worcester, Mass., assignors, by mesne assignments, to Metropolitan Washing-Machine Company, Middlefield, Conn.—Patent No. 34,395, dated February 11, 1862.

Claim.—1. Making the rolls self-adjustable by means of the straps and spring, when constructed and operating substantially in the manner and for the purpose above set forth and described.

2. As a means of attaching clothes-wringers to tubs, a vertically self-adjusting two-legged yoke in combination with a holding or pinching device, substantially as described.

3. A clothes-wringer in which the clamping or holding-yokes are adjustable to varying distances from each other so that the machine may embrace a greater or less segment of the tub, substantially as shown and described.

4. The combination, with the frame of a clothes-wringer, of two-legged yokes or holders adjustable both vertically or upon a vertical axis, and toward and away from each other, substantially as herein shown and described.

4,575.—STEAMING AND COOLING-CLOTH.—Luke M. Heery, Hinsdale, Mass.—Patent No. 115,200, dated May 23, 1871.

Claim.—1. The mechanism substantially such as is herein described for steaming the roll from both ends at the same time.

2. The process of cooling the roll by forcing cold water through it from the interior of the hollow perforated cylinder by means substantially such as are herein described.

4,576.—BOBBIN-WINDER FOR SEWING-MACHINES.—Charles H. Palmer, New York, N. Y., assignor to The Palmer Automatic Bobbin-Winder Company.—Patent No. 105,363, dated July 12, 1870.

Claim.—1. The turning-frame C, the abutment piece B B', and spring P, arranged for joint operation in connection with the friction-wheel H and suitable devices for engaging the bobbin-winding mechanism with the driving-wheel of the machine, and for releasing it therefrom, as herein specified.

2. The combination of the trip-lever E E' with the movable frame C, the disk B, the pressure-lever D, and spring P, all constructed substantially as described, and operating to hold the wheel H in contact with the driving-wheel of the sewing-machine for winding bobbins, and to automatically release them from contact with each other when the bobbin is full, as specified.

3. The combination, with the movable frame C and disk B B', of the adjusting set-screw V, which regulates the extent of horizontal rotatory motion of the frame C, as described.

4,577.—BINDING INVOICE-BOOKS.—John L. Rile, New York, N. Y.—Patent No. 115,896, dated June 13, 1871.

Claim.—The method of making file, sample, and scrap-books by the use of strips placed therein, and afterward taken therefrom in the process of manufacture, to be further employed in the making of other similar file, sample, or scrap-books, as specified.

4,578.—PROCESS OF EXTRACTING OILY AND FATTY MATTERS.—Louis S. Robbins, Rye, N. Y., assignor to Ann D. Brewton.—Patent No. 75,980, dated March 24, 1868.

Claim.—The process, substantially as herein described, of extracting fatty and oily matters from substances in which such matters are contained by treating such substances with the light vapors obtained from the distillation of hydrocarbons such as petroleum, naphtha, or other equivalent hydrocarbons.

DESIGNS.

5,296.—AGITATING PLATE FOR EGG-BEATERS.—Emanuel Bostick, Fort Wayne, Ind., assignor to himself and Erastus B. Kunkle, same place.

Claim.—The design for the agitating-plate of an egg-beater, as shown.

5,297.—WIRE-FENCE.—Marcellin Dupuy, New York, N. Y.

Claim.—The design for a wire-fence, as shown.

5,298.—SPOON-HANDLE.—Joseph Fradley, Brooklyn, N. Y.

Claim.—1. The design A B C D E for the rear side of the upper part of a spoon-handle, substantially as herein shown and described.

2. The design A B C D E F for the front side of the upper part of a spoon-handle, substantially as herein shown and described.

3. The design H I, in connection with the design A B C D E, for the rear side of a spoon-handle, substantially as herein shown and described.

4. The design G, in connection with the design A B C D E F, for the front side of a spoon-handle, substantially as herein shown and described.

5,299.—PARLOR-ORGAN CASE.—Levi K. Fuller, Brattleborough, Vt., assignor to J. Estey & Co., same place.

Claim.—1. The design for an organ-case, consisting of the pilasters D D, in combination with the ends, as described.

2. The design for an organ-case, consisting of the curved projections A A and consoles C C, in combination with the front, as described.

3. The design for an organ-case, consisting of the curved projections A A, consoles C C, and the front, in combination with the pilasters D D and the end, as described.

4. The design for an organ-case, as shown and described.

5,300.—CARPET-PATTERN.—John Magee, New York, N. Y., assignor to Bigelow Carpet Company, Clinton, Mass.

Claim.—1. The design for a center-piece A, as shown.

2. The design for the surrounding scroll-work B, as shown.

5,301.—HEATING-STOVE.—John D. Miller, Detroit, Mich., assignor to Detroit Stove Works, same place.

Claim.—1. The design for the legs or feet, substantially as shown.

2. The design for the base, substantially as shown.

3. The design for the door, substantially as shown.

4. The design for the stove, substantially as shown.

5,302.—THILL-COUPLING.—Henry Newby, Avondale, Ohio.

Claim.—The design for a thill-coupling, as shown and set forth.

5,303.—HOOD.—Charles Rich, Henry Crow, and Marcus Rich, New York, N. Y.

Claim.—The design for hoods above described, and illustrated in drawing.

5,304.—HINGE.—Charles Suedekum, Newport, Ky.

Claim.—The design for a hinge, as shown and specified.

5,305. — UPRIGHT STEAM-ENGINE.—Albert A. Wilson, New Haven, Conn., assignor to himself and The Yale Iron Works, same place.

Claim.—The design for upright steam-engine, as described and shown in the accompanying illustration.

5,306.—THILL-COUPLING—David E. Wolff, Welsh Run, Pa.

Claim.—The design for thill-coupling, substantially as herein described and shown.

TRADE-MARKS.

454. — SMOKING-TOBACCO. — William T. Blackwell, Durham, N. C.

455. — COFFEES, SPICES, MUSTARD, AND CREAM-TARTAR.—Butler, Earhart & Co., Columbus, Ohio.

456.—HAIR AND FACE DRESSINGS.—Orion Clark, Brattleborough, Vt.

457. — LABEL AND SHOW-CARD. — Samuel Crump, New York, N. Y.

458.—FLOUR.—William M. Galt, Washington, D. C.

459. — CONDITION-POWDER.—Charles Garlick, Montreal, Canada.

460.—SHIELD FOR NECK-TIE, CRAVATS, &c. William H. Hart, Jr., & Brother, Philadelphia, Pa.

461.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

462.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

463.—WHISKY.—Mills, Johnson & Co., Cincinnati, Ohio.

464.—PREPARED COTTON FOR MATTRESSES, CUSHIONS, &c.–Patent Elastic Felt Company, New York, N. Y.

465. — MEDICINE. — Albert F. Shannon, Quincy, Ill.

466.—POLISH FOR METAL WARE.—William S. Witherspoon, Thomas S. Witherspoon, and Thomas Wern, Fairview, W. Va.

467.—TOBACCO.—William A. & Frederick R. Brown, Dickinson, Va.

468.—REED-ORGAN.—J. Estey & Co., Brattleborough, Vt.

469.—PAINT.—Holden, Tascott & Co., Chicago, Ill.

470.—PAINT.—Holden, Tascott & Co., Chicago, Ill.

471.—PAINT.—Holden, Tascott & Co., Chicago, Ill.

EXTENSIONS.

WILSON AGER, of Washington, D. C.—Letters Patent No. 18,177, dated September 15, 1857.

"Improvement in Machines for Cleaning Rice."

Claim.—The method of cleaning rice by submitting the mixture of grain and husk resulting from the hulling process to an alternate packing and loosening action, produced by surfaces dressed and operating substantially as hereinbefore set forth.

CHAUNCEY THOMAS, of Boston, Mass.—Letters Patent No. 18,254, dated September 22, 1857; reissue No. 1,331, dated August 26, 1862.

"Improvement in Carriage Props."

Claim.—The improved carriage prop, as constructed with a screw or a loose shoulder-cap, D, combined with a joint bar-standard, A, and arranged between the leather L, and the joint bars G H, all placed on the standard or the leather passing through them, and secured in position by the nut I, substantially as described.

ISAAC A. DUNHAM, of North Bridgewater, Mass.—Letters Patent No. 18,237, dated September 22, 1857; reissue No. 4,454, dated July 4, 1871.

"Improvement in Edge-Planers for Shoemakers."

Claim.—1. The above-described sole or welt-trimmer as composed of a cutting-blade, *d'*, a guard, *d d*, and stock *c c*, constructed, arranged, and combined together, substantially as set forth.

2. In combination with the cutter *d'* and guard *d d*, the nipple or projection *e*, as and for the purpose set forth.

JOHN BUTLER, of New York, N. Y.—Letters Patent No. 18,184, dated September 15, 1857.

"Improvement in Gas-Generators."

Claim.—Generating illuminating gas in a retort over the surface of melted lead or other fusible metal, in the manner set forth in the specification.

GEORGE E. BURT, of Harvard, and ABRAM WRIGHT and GEORGE F. WRIGHT, of Clinton, Mass.–Letters Patent No. 18,232, dated September 22, 1857.

"Improvement in Horse-Powers."

Claim.—The method by which we are enabled to unerringly give such a shape to the ends of the tracks of said machine that closely fitted platform-chains may be operated upon them without producing any variation of tension or irregularity in the movements of said chains, substantially as herein set forth.

T. J. ROBERTSON, of Washington, D. C.—Letters Patent No. 18,249, dated September 22, 1857.

"Improved Hand-Stamp."

Claim.—The construction of hand-stamps in the manner herein described and represented.

ISSUE OF OCTOBER 10.

PATENTS.

119,684.—TUG FOR HARNESS. — Isaac H. Alexander, Newfield, N. Y.

Claim.—1. The thill-holder described, made of the external part or plate A, the internal metal part E, held together by the strap B, with the arrangement of the holes C C' and tongues D D', substantially as set forth.

2. The plate A and strap B, arranged together for a thill-holder without the part E, substantially as described.

119,685.—STEAM AND AIR-ENGINE.—John F. Alexander, Shelby, N. C.

Claim.—1. The combination of the steam-chamber, the valve, the oscillating piston, the pin on the rock-shaft of the piston to move the valve, the vibrating crank on the rock-shaft, the link-rod connecting the vibrating and the revolving crank, and the fly-wheel, all these members being constructed to operate in combination, substantially as herein-before set forth.

2. The combination of the parallel steam-chambers, the pistons oscillating independently of each other, each in its respective chamber, the valves, a vibrating crank on each piston-shaft, and a link-rod connecting each vibrating crank with the corresponding crank of the fly-wheel, all these members being constructed to operate in combination, substantially as set forth.

3. The interposed lining-plate of the steam-chamber, constructed as described, curved on one side to correspond with the traverse of the piston and on the other with the shape of the steam-chamber, to secure it firmly while working and yet allow it readily to be removed.

4. The combination of the steam-chamber, the steam-valve, and the exhaust-passage leading around the valve and connecting with a single exhaust-passage, substantially as hereinbefore set forth.

5. The combination of the valve-seat, the valves moving parallel to each other in alternately-opposite directions, the oscillating reversing-lever pivoted between and connecting the two valves, substantially as hereinbefore set forth.

6. The combination of the reversing slide, the perforated diaphragm, and the slide-valve, operated by the direct action of the steam to reverse the engine, substantially as hereinbefore described.

119,686.—SEWING-MACHINE TREADLE.—Richard N. Allen, Pittsford, Vt.

Claim.—1. The foot-rests or sandals D, having the heels thereof hinged to the vibratory links E, and the toes of the sandals connected to cranks C for operating the same, in the manner substantially as described, and for the purpose set forth.

2. The foot-rests or sandals D so arranged, in combination with the vibratory links E and cranks C, that said sandals shall have a transverse swinging motion, and, at the same time, a vertical vibratory or treadle movement, as and for the purpose specified.

3. The combination of the sandals D, vibratory links E, cranks C, and band-wheel G, substantially in the manner as and for the purpose set forth.

119,687, antedated September 30, 1871.—POTATO-PLANTER.—L. Augustus Aspinwall, N. Y.

Claim.—1. The arms V, or their equivalents, provided with the radial spears S, substantially as and for the purpose set forth.

2. The metallic perforated hopper bottom M M, having an increased pitch, substantially as and for the purpose set forth.

3. The arrangement of the supplementary frame E with the main frame F at O, as and for the purpose set forth.

119,688.—SPRING BED-BOTTOM.—Frederick P. Baldwin and Charles T. Segar, Utica, N. Y.

Claim.—A spring bed-bottom, constructed as hereinbefore set forth and described, where the India-rubber cushions *c c* are used in combination with the springs B B and the metallic strips *s s*, the short wooden slats *c c*, and the support D, all for the purpose specified.

119,689. — SPIKE-MACHINE. — Moody Belknap, Philadelphia, Pa.

Claim.—1. The adjustable arm C and rack D, in combination with the eccentric cylinder *a'* (which forms the fulcrum of the griping-lever A) and with the lever A and its die 3, substantially as and for the purpose hereinbefore set forth.

2. The springs 4 and 5, in combination with the adjustable die in the griping-lever A, substantially as and for the purpose hereinbefore set forth.

3. The adjustable controller of the lateral movement of the header E, the same consisting of the tongue *f'*, jam-nuts *f' f''*, and stationary parts F and 7, arranged to operate substantially as and for the purpose hereinbefore set forth.

4. The cutter or knife G, consisting of a short bar of steel having the groove *g'* made across near the lower end of its front side, as described, and with the side *g*[4] as cut back to form the described angle of the cutting-edge *g''*, the said cutter or knife G being inserted in the carrier H, so that as the latter moves forward the groove *g'* of the said cutter or knife will be in front and the side *g*[4] thereof pass in close contact with the beveled face *b'* of the stationary die B, and with the middle part of its cutting-edge *g''* directly opposite to the recess for the point of the spike in said die, substantially as and for the purpose hereinbefore set forth and described.

119,690.—FEEDING MECHANISM FOR SEWING-MACHINES.—Richard Blees, Brooklyn, N. Y.

Claim.—1. The feed-bar F, connecting-bar B, levers V and L, and cams K and C, all constructed, arranged, and operating substantially as described.

2. In combination, the levers L and V V', when provided with means, substantially as described, for regulating the amount of motion imparted by each to the feed-bar.

119,691.—METALLIC HEEL FOR BOOTS AND SHOES. — Edward P. Bray, Elizabeth, N. J.

Claim.—The nut *i* made with a head and a left-hand screw upon the outside, and a hole for receiving the right-hand screw *e* inserted through the metallic heel *b*, for the purposes and as set forth.

119,692. — SADDLE-BOX FOR RELIEVING PRESSURE FROM ROLLS IN ROLLING-MILLS.—William Henry Brough, Coatesville, Pa.

Claim.—The combination and arrangement of the double-acting wedges B and C moving in planes at right angles to each other and the intermediate key D with the saddle-box A having a recess, *a*, and incline *d*, and with the housing, substantially in the manner and for the purpose above described.

119,693. — ROLLING-MILL. — William H. Brough, Coatesville, Pa.

Claim.—The combination and arrangement of the chain-roller C, chain G, and drag-bar H with the rolls B and B', the stationary table J, movable

table J', lever L, and friction-clutch I for the return of the iron to the front of the rolls, substantially in the manner above described.

119,694. — APPARATUS FOR EVAPORATING AND CLARIFYING SACCHARINE LIQUIDS.—Francis G. Butler, Bellows Falls Vt.

Claim.—1. Elongated elevated scum-arresters extending from opposite sides of the pan and reaching nearly across its bottom.

2. Corrugations, crimps, or partitions connected at alternate ends to the flaring sides by the scum-arresters or an extension piece.

3. The combination, with two adjacent elevated scum-arresters reaching nearly across the bottom of the pan, of a cross-gate connecting the same about midway of the pan.

4. The combination, with corrugations, crimps, or partitions extending across the bottom sheet, of sides set off from such bottom and from the partitions or crimps, substantially as shown and described.

5. An evaporating-pan constructed with a series of pairs of contiguous elevated scum-arresters, alternating with a series of pairs of corrugations, crimps, or partitions, the ends of each such corrugations being alternately connected to the sides, substantially as set forth.

6. The scum-arresters, in combination with an evaporator having partitions or crimps arranged to produce a continuous transverse channel.

119,695.—MACHINE FOR TURNING AND POLISHING. — Rollin M. Clapp, Vergennes, Vt.

Claim.—1. The combination of the revolving hollow cutter-head C having cutter *c*, revolving feed-rollers d^3 and d^4 with the revolving hollow-shaft F' and revolving polishing-cylinders H'', substantially as described.

2. The combination of the band-wheels B'' and B''', bands *b'* and *b''*, pulleys F and G with the hollow revolving and slotted shaft F', gear-wheels *g g' g''*, frame H, and polishing-cylinders H'' H''', in the manner and for the purpose substantially as described.

3. The turning and polishing-machine herein described, consisting of the hollow cutter-head C, feed-rollers d^3 and d^4, hollow revolving and slotted shaft F', revolving pulleys B', B'', B''', b^4, F, and G, bands *b b' b''*, gear-wheels *g g' g''*, and revolving frame H with polishing-cylinder H'', constructed and arranged to operate in the manner shown and described.

119,696. — BUCK-SAW FRAME. — William Clemson, Middletown, N. Y.

Claim.—The saw-frame above described, composed of end pieces A, fulcrum-brace B, strain-rod C, and brace-screws *a a*, in the manner and for the purposes set forth.

119,697.—HAME FOR HARNESS.—Charles H. Drury, Osceola, Ill., assignor of one-half his right to Isaac M. Spencer, same place.

Claim.—The springs B B, formed by separating a strip from each hame on the inner edge, or by inserting an equivalent metal spring, operated by a screw, *g*, or equivalent, the upper end of each spring being slotted, and respectively secured by bolts or pins to the hames, substantially as and for the purposes described.

119,698.—CANOPY.—Joseph Ellisdon, Liverpool, England.

Claim.—1. The carriers *b*, runners *c* and *g*, and protector-sheet *d*, in combination with the operating cord *e* or its equivalent, for the purpose set forth.

2. The housing *i*, in combination with the parts *b*, *c*, *g*, *d*, and *e*, for the purpose set forth.

3. In combination with the above, the gores *f* in the protector-sheet *d*, arranged to serve therewith in contracting and expanding in a drooping position, as and for the purpose set forth.

119,699.—LIQUID-METER.—Nicholas Finck, Elizabeth, N. J., assignor to himself and Edward P. Bray, same place.

Claim.—The shaft *r*, arm *u*, and weight or spring *v* actuated by the link *p*, in combination with the four-way cock *l*, arms *f* and *o*, and swinging piston *d*, substantially as and for the purposes set forth.

119,700. — SAUSAGE-STUFFER. — Charles Forschner, New York, N. Y.

Claim.—1. The rod C, connected through the rod Q with the piston P, in combination with two racks, V and W, placed at right angles to each other, substantially as described.

2. The movable frame K supporting a shaft, J, provided with a worm-wheel, N, and a pinion, M, and operating the rod C either direct, through the combination of the pinion M with the rack W, or through the combination of the worm-wheel N, wheel H, pinion E, and rack V, substantially as and for the purpose hereinbefore set forth.

119,701.—SAWING-MACHINE.—John Groat, Peru, Ind.

Claim.—A sawing-machine composed of the parts herein shown and described, all constructed and arranged as and for the purpose set forth.

119,702.—MACHINE FOR BENDING WOOD.—Gustaf Gustafson, Chicago, Ill., assignor to himself, John Phillips, and Henry Leibenstein, same place.

Claim.—1. Hinged pattern B, for the purpose herein described.

2. Table A, provided with slot C, in combination with pattern B, pivoted shaft E, lever F, pulley G, rope and weight H or chain I, lugs J, and pins K, M, and N, the whole constructed and arranged substantially in the manner and for the purposes herein described.

119,703, antedated September 25, 1871.—IRONING-TABLE.—Charles C. Hardy, Rutland, N. Y.

Claim.—The construction and arrangement of the leg B, table A, and hinge C, when the said hinge is formed by the combination of the plate c^1, projecting staples c^2 c^2, hooks *d*, and projections d^1, as and for the purpose herein described.

119,704, antedated September 30, 1871.—RAISIN-SEEDER. — Jackson Harrington, New London, Conn., assignor to himself and Ralph Wheeler, same place.

Claim.—The combination of the bows A A and shanks C C with the seeding-needles *a a a* and the concave cup D, all constructed and arranged substantially as herein shown and described, and for the purposes set forth.

119,705.—CUSPADORE. — Eugene A. Heath, New York, N. Y.

Claim.—A metallic cuspadore having a heavy base, A, and a light upper portion, B C, formed and combined substantially as and for the purposes herein set forth.

119,706.—CUSPADORE. — Eugene A. Heath, New York, N. Y.

Claim.—A cuspadore composed in part of light material A, in the form substantially as shown, with a weight, B, of lead or analogous material embedded in the base and adapted to serve therewith, in the manner and for the purposes herein specified.

119,707.—BOOT-AND-SHOE-HEEL POLISHER. Charles H. Helms, Poughkeepsie, N. Y.

Claim.—The heel-polishers, constructed of two or more parts, B and C, in combination with the elastic pressure-springs K and reciprocating slide D, substantially as described, and for the purposes set forth.

119,708.—CLOTH-PRESSING MACHINE.—Patrick Howe, Boston, Mass.

Claim.—1. The construction of the bracket *d*, having the sole-plate *e* and sides *f f i i* cast in one piece, in combination with the levers *g* and *k* and link *n*, for the purpose set forth.

2. The combination of the lever *k*, fulcrum *l*, connection *n*, lever *g* with its fulcrum *h*, and the arms *s* and *u*, in a manner as herein set forth and described.

119,709, antedated September 22, 1871.—WATER-METER.—Hyam Jacob Hyams, Pittsburg, Pa., assignor of one-half his right to N. B. Hatch, same place.

Claim.—An improved liquid-meter, provided with a central measuring-chamber, B, projecting cylinders C' C'', reciprocating pistons *s s* connected by forked links *n' n''* to separate cranks *d' d''*, set on an upright shaft, E, at an angle to each other equal to one-sixth of their revolution, and with a valve-chest, A, furnished with a valve-seat, P, and circular valve R, operated eccentrically upon said seat by means of a short revolving crank, *t*, so as to open and close the induction and eduction-ports alternately in the manner described, when all the specified parts are constructed, combined, arranged, and made to operate with respect to each other as shown, for the purposes set forth.

119,710, antedated September 27, 1871.—INLAYING.—John W. Hyatt, Jr., Albany, N. Y., assignor to Embossing Company, same place.

Claim.—The process of inlaying in wood by first applying the paint, enamel, or other suitable material to the surface thereof on the ends of the grain, and then depressing the portions to be inlaid by a stamp or punch of the required design and removing the coating from the surface surrounding the design, as hereinbefore set forth.

119,711.—STAPLE-MACHINE.—Wesley Malick, Erie, Pa.

Claim.—1. The feeding-rollers A' and W, in combination with the rollers *u u*, the shears U U, the guide V and gauge *v*, and the revolving arm T, when the same are arranged and operated as set forth.

2. The revolving arm T, constructed with sockets and set-screws, and removable pieces S, as described.

3. The hopper K, jointed, slotted, arranged, and operated in the manner and for the purposes as set forth.

4. The combination of the jointed and slotted hopper K and rollers G G', the latter being provided, respectively, with the finger *e'* and grooves *i i*, and the socket *o'* and die *i' i'*, as set forth.

119,712.—HARVESTER.—Leander J. McCormick and William R. Baker, Chicago, Ill., assignors to C. H. McCormick & Brother, same place.

Claim.—1. The combination of the driving-wheel, the main frame, the lever K, the thrust-bar acting directly on the periphery of the driving-wheel, and the pivoted guide-link *l*, all these parts being constructed for joint operation, substantially as hereinbefore set forth.

2. The combination of the adjustable slotted socket-plate I, the adjustable bearing of the grain-wheel, and the grain-wheel axle, all constructed and operating, as hereinbefore set forth, to adjust and hold the wheel by means of the nut on the axle.

3. The combination of the main frame, the driving-wheel, the sprocket-wheel on the main axle, the sliding box moving with the main axle, and the shipping-lever on the sliding box, as set forth.

119,713, antedated September 30, 1871.—FIRE-ALARM.—Joseph Nelson Pitts and John Edson Russell, Niagara Falls, N. Y.

Claim.—The combination of the bar *c*, sliding bolt or hook *d*, and connecting catch-bar *g* with the sliding inclined bars E E and their connections with the lineal mediums *e e* extending to all rooms, substantially as herein specified.

119,714.—WATER-METER.—Arthur O'Leary, Iowa City, Iowa.

Claim.—The case A, pipes B and C, rotating wheel D, valves E, pitmen H, and cams I, all arranged and operating substantially as and for the purposes set forth and described.

119,715. — IDENTIFYING-STAMP. — George Pardy, San Francisco, Cal.

Claim.—The use of a so-called operating-sign, which shall depend for its value or meaning upon its position or relation to the base-signs, as and for the purposes as herein set forth.

119,716.—MACHINE FOR BENDING TIRES.—Douglas F. Pomeroy, Painesville, Ohio, assignor of one-half his right to Findley McGrew, same place.

Claim.—The combination of the frame A, main roller B, gauge-rollers C C, standards I, slide blocks *b*, right-and-left-handed screw D', index *d*, and gear-wheels E and F, substantially as and for the purpose as hereinbefore set forth.

119,717.—Suspended.

119,718.—HEATING-STOVE.—Alonzo C. Rand, Chicago, Ill.

Claim.—1. The distributing-compartment G, in combination with one or more spiral flues for supplying air heated in the manner described to the gases arising from burning coal.

2. The hollow grate D, with its axial passage *d*, in combination with the spiral air-passage b^2, as specified and shown.

3. The air-heating and distributing-device, as a whole, consisting of the spiral air-passages b^2 b^3, the dampers E F, the distributing-compartment G, the hollow grate D with its tubular axle *d*, all arranged and operating substantially as shown and set forth.

119,719. — HEATING-STOVE. — Alonzo C Rand, Chicago, Ill.

Claim.—1. The coal-magazine C having closed top D and doors *d*, in combination with the flue C, deflector F, and air-tube H, as set forth and described.

2. The air-tube H penetrating upward through the layer of coal on the grate G, and opening into the flue C, substantially as and for the purpose described.

3. The heat-deflector F, when combined with the coal-magazine B having a central flue, C, for the object described.

4. The heating-compartment A', in combination with the tube H, grate G, flue C, and deflector F, substantially as described.

119,720.—BURNING HYDROCARBON ON LOCOMOTIVES.—Alonzo C. Rand, Chicago, Ill.

Claim.—1. The hydrocarbon-reservoir or generator C, having one or more flues or smoke-passages *c c*, arranged and operating for the purpose set forth.

2. The smoke-pipes *a a'*, dampers *b b'*, in combination with the reservoir C, arranged and operating as set forth.

3. The burners F F, consisting of the nipples *f f*, and chimney-tube *f' f'*, in combination with the vapor-pipe E and reservoir C, arranged for operation as set forth.

4. The draught-plate G, in combination with the burners F F, for the purpose of regulating the amount of air admitted to the tubes *f' f'*.

5. The jacket P, in combination with the reservoir C, for the purpose described.

6. The coil of pipe D, with its stop cock *d*, in combination with the reservoir C, for the purpose specified.

7. The liquid-fuel apparatus and arrangement as a whole, consisting of the reservoir C, the smoke-pipes *a a'* with their dampers *b b'*, the vapor-supply pipe E, the burners F F, and the draught-plate G, all arranged substantially as described, for the purposes set forth.

119,721. — HORSE HAY-RAKE. — Martin C. Remington, Weedsport, N. Y.

Claim.—The open standard-guides *k k* having ribs *t t*, ribs or projections *u u*, and recesses *t t* in their tops, in combination with the key *s* for securing the springs *m* in their places, and also for coupling and bracing the whole series of guides together, as herein specified.

119,722.—FRAME FOR THE GLASSES OF CARRIAGE - CURTAINS. — Washington H. Rhodes, Lancaster, Pa.

Claim.—The combined arrangement of a fixed foundation-plate or frame, A, on curtains of vehicles, when intermediate between the ordinary frame and glass B D, and counterpart E secured by the nut and screw-bolt G F, substantially as shown, for the purpose specified.

119,723.—COMPOSITION FOR FIRE-BRICK.—Edward F. Rogers, Chelsea, assignor to himself, Stoughton B. Holden, Woburn, and Luther L. Holden, Boston, Mass.

Claim. — Fire-bricks composed substantially of the several ingredients specified herein, and in the manner substantially as described.

119,724. — SEWING - MACHINE TREADLE.—Henry C. Smith, Cleveland, Ohio.

Claim.—The combination of the treadle G with the treadle E, substantially as shown and described, and for the purpose set forth.

119,725, antedated September 23, 1871.—APPARATUS FOR PRESSING HOLLOW-WARE. — Nathan Thompson, Brooklyn, N. Y.

Claim.—The combination of the plunger B, plug E, matrix A, and rubber packing C, for operation substantially as set forth.

119,726, antedated October 7, 1871.—PLIER. Nathan Thompson, Brooklyn, N. Y.

Claim.—1. The combination, with the limbs A A', of the cutting knuckle-plate C and detachable cutter D, arranged in relation to each other, to the jaws *a a'*, and to the pivot *d* of the pliers, essentially as described

2. The limbs A A', constructed to lie, at their knuckle portions B B', the one within the other, and provided with cavities *e* and *i*, in combination with the cutters D and cutting knuckle-plate C, fitted to said limbs substantially as described, and secured, in common with the limbs, by the rivet or pivot *d*, about which the whole works, essentially as specified.

3. The combination, with the cutting knuckle-plate C, of the adjusting-screw or stop *u*, the pivot *d*, the cutter D, and the limbs A A' having holding-jaws *a a'*, substantially as specified.

119,727. — BED-BOTTOM. — Cornelius Van Densen, Clarksville, N. Y.

Claim.—The combination of the cross pieces A A, elastic webbing B B, strips *b*, staples *a*, and slats C, substantially as described, and for the purpose set forth.

119,728.—MACHINE FOR SETTING BUGGY-TOPS.—John Baittee Weller, Bellbrook, Ohio.

Claim. — The machine for setting buggy-tops, substantially as shown and described.

119,729.—GRAPPLE.—Henry Whitall, Philadelphia, Pa., and James Burson, Yates City, Ill.

Claim.—1. Upright U, constructed substantially as described, and for the purposes set forth.

2. The combination of the cord *r r*, upright U, hooks H H, and the trip-cord *c*, substantially as described.

119,730.—SASH-HOLDER.—Edwin S. Wills, Philadelphia, Pa.

Claim.—1. The combination and arrangement of the prop F, cam C, and pedestal E with the meeting-rail A, arranged in relation to the stile B' for locking the sashes in their closed position, substantially as described.

2. The combination of the catch H with the pedestal E, arranged and operating in relation to the cam C for fastening the sashes in their adjusted position, as above set forth, thereby serving to prevent the cam being turned over.

119,731. — COMBINED COTTON-PRESS AND HORSE-POWER. — James M. Albertson, New London, Conn.

Claim.—1. The combination of the wheel F with the nut D, attached to the press-frame Y, and operated by the levers Q Q, when constructed and arranged as shown, and for the purpose specified.

2. The arrangement, in the cotton-press herein described, of the pinion G, vertical shaft W, bevel-wheels L and M, shaft K, and pulley N, all constructed and operating substantially as and for the purpose set forth.

3. In combination with the screw C, the lever B, stand I, hook S, and nut D, when arranged as shown, and for the purpose set forth.

119,732. — DEVICE FOR PRESSING CHAIR-SEATS INTO THEIR FRAMES. — William Aldrich, Proctorsville, and Alfred F. Spaulding, Northfield, Vt., assignors to Cyrus Wakefield, Wakefield, and Calvin S. Greenwood and Levi Heywood, Gardner, Mass.

Claim.—1. A machine for attaching the bottom fabric to chair-seat frames, consisting of the bed-plate A, former B, follower C, folding frame D, and stretcher-plate F, substantially in the manner and for the purpose as hereinbefore described.

2. The combination of the bed-plate A, follower C, spline G, in combination with a chair-seat or other frame, substantially in the manner and for the purpose described.

3. The combination of the bed-plate A and follower C with the folding frame D, substantially in the manner and for the purpose described.

4. A folding-frame with the folders *e e¹ e² e³*, and levers *m*, substantially in the manner and for the purpose described.

5. The combination of the folding frame D with a spline and chair-seat or other frame, for the purpose and in the manner described.

6. A stretcher-plate, F, with cam-plate K, cam H, lever M, and stretchers *e e e e*, substantially in the manner and for the purpose described.

7. The combination of said stretcher-plate with a spline and chair-seat or other frame, as and for the purpose described.

8. The combination of the bed-plate A, folding frame D, and stretcher-plate F, in combination with a spline, substantially in the manner and for the purpose described.

119,733.—VEGETABLE-CUTTER.—Charles C. G. Armerling, Philadelphia, Pa.

Claim.—The arrangement of the sliding frame S F, knives K, K¹, and K², rubber cushion *r*, set-screws S, joint J, treadle D, shaft H, lever R, shaft M, pinion N, wheel W, shaft F, feed-box F B, and sliding end S E, all combined and operating as specified.

119,734.—HOOF-PARER.—Isaac Baker, Long Branch, Mo.

Claim.—An improved hoof-parer, formed by the combination of the curved bars A *a'* and B, connecting end-bars or rods C, center-bar or rod D *d'*, and double-edged curved blade E F with each other, substantially as herein shown and described, and for the purpose set forth.

119,735.—MECHANICAL MOVEMENT.—Albert Benneckendorf, Hoboken, N. J.

Claim. — The slotted oscillating semicircle, arranged to embrace the roller F, substantially as described, to convert reciprocating or vibrating into rotary motion, as specified.

119,736.—WAGON-BRAKE.—George M. Bennett, Burlington, Iowa.

Claim.—1. The combination and arrangement of the brake-bar E, lever F, rods G H I, tongue D, and quadrant J, substantially as specified.

2. The combination of the quadrant J, sliding plate M, rod *n*, and lever N, as specified.

119,737.—DEVICE FOR CUTTING STENCIL-PLATES.—Henry Bolthoff, Central City, Col. Ter.

Claim.—The brass plate A, having tenon *a* and perforations *c c*, constructed as described, to serve as a stock for cutters B and to fit handle C, as set forth.

119,738. — COAL-SCUTTLE. — John A. Bragaw, New York, N. Y., assignor to himself and Nelson Ingram, same place.

Claim.—1. The swinging hood A of a coal-scuttle, when rigidly affixed to the bail B, so that it can thereby be controlled, substantially as specified.

2. The cross-rod D, affixed to the swinging hood A in front of the scuttle, substantially as and for the purpose herein set forth.

119,739. — SHEET-METAL KNOB FOR TEA-POTS.—James Britton, Williamsburgh, N. Y.

Claim.—The method of forming a tea-pot knob, A *a b*, by first striking up the center of a star-shaped piece of sheet-metal; secondly, bending the head *b* and arms *a* into the shape shown in Fig. 2 of drawing; and thirdly, crowding the arms together in a conical die to produce the form shown in Fig. 3 of drawing, all as specified.

119,740, antedated July 26, 1871. — CURTAIN - FIXTURES. — Nathan Campbell, Rochester, N. Y.

Claim.—The clamping-lever B, in combination with a suitable frictional rest, when the former is arranged to be operated by the weight of the curtain through the medium of the elevating-cord, for the purposes set forth.

2. In combination with a locking and releasing-clamp or lever, B, the yielding frictional bearing *d*, for the purposes set forth.

3. In combination with the pivot of a curtain-roller, the cushioning bearing *g*, for the purposes set forth.

4. A clamping side bracket, composed of the lever B provided with side pivots *e*, and the plate or socket C having an open center, into which the extremity of the lever is introduced, substantially as and for the purposes set forth.

119,741.—SHANK-LASTER FOR BOOTS AND SHOES. — Orrin R. Clark, La Fayette, Ind.

Claim. — 1. The combination of the handle A, strap B, and pinchers composed of the jaws C and C', the latter of which is constructed with a loop through which the strap passes, substantially as and for the purpose set forth.

2. The combination of the handle A, strap B, pinchers C C', constructed as described, and spring D, substantially as and for the purpose set forth.

119,742. — DEVICE FOR RAISING SUNKEN VESSELS. — Thomas Collier, New York, N. Y.

Claim.—1. The hatch-stopper, consisting of the two pieces A B of plank and the India-rubber sheets clamped to the under side of the hatch, the rabbeted edges of the said pieces being lapped with rubber packing between, all substantially as specified.

2. The employment of a sack, O, of flexible material, impervious to air and water, the guards R, a sheet or ring N, and the inflating tubes Q, substantially in the manner described, for stopping holes in the ship's hull, all substantially as specified.

119,743. — MACHINE FOR BOARDING, PEBBLING, AND GLOSSING LEATHER.—Owen Coogan, Pittsfield, Mass.

Claim.—1. The two boarding-rolls A B, supported on shafts which have each a spur-wheel on the end thereof, combined with an intermediate idler spur-wheel, whereby the said rolls are moved in the same direction and enabled to carry the ends of a folded sheet of leather in opposite directions.

2. In combination with the supporting-shaft of the bottom one of a pair of boarding-rolls, A B, which has pulleys on one end and worm on the other, the worm-wheel *e* having the pin *f*, the levers *g h*, and the connecting-rod, all as and for the purpose specified.

119,744.—PROPULSION OF CANAL-BOATS.—Owen Coogan, Pittsfield, Mass.

Claim. — 1. The propelling-rope D, stretched above a water-course or road and suspended from springs or yielding jaws, so that it can be wound over a drum on the vehicle to be propelled, and used substantially as described.

2. The springs E E, arranged in pairs to close under the rope D and support the same, but so that the rope can be conveniently withdrawn, as and for the purpose set forth.

3. The replacing-roller *e*, arranged on the vehicle within the shuttle *f*, which will open the supporting-springs or jaws and deposit the rope, as set forth.

4. The towing-drum F, arranged on a vehicle in connection with the main propelling-drum *a*, substantially as and for the purpose herein shown and described.

119,745.—BROOM-NEEDLE.—Collin M. Cowardin, Gardner Station, Tenn.

Claim.—A broom-needle, having the socket or cavity C surrounding the eye on one side and a groove, E, on the other side extending from the eye to the heel, all substantially as specified.

119,746. — GRINDING-MILL. — William H. Culver, West Troy, N. Y.

Claim.—1. The metal plates A and B, provided with the tangential furrows *b b* and intervening spaces *c c* cut with file-teeth, as shown and described, for the purpose set forth.

2. The combination and arrangement, in the mill herein described, of the plates A and B with the curb O, plates C D provided with perforations *l* and *m*, space *k*, and shaft K, when all these parts are constructed substantially as shown and described, for the purpose set forth.

119,747.—DRYING-ROOM.—Robert Dalrymple, Galt, Canada.

Claim. — 1. The drier, constructed as described, with the perforated floor B placed at a distance above the lower floor about equal to one and a half (1½) times the width of the room F, when the base of the same is square; when rectangular, the height of the aforesaid floor to be formed by dividing the

area of its base by half the sum of two sides thereof, and provided with the furnace, a compartment, E, and draught-regulator, e, substantially as and for the purpose specified.

2. In combination with the drier, constructed as described, the deflector D, as and for the purpose set forth.

119,748.—Inhaler and Vaporizer for Administering Anæsthetics.—Ethelbert E. Duncanson, Chicago, Ill.

Claim.—1. The inhaler A, constructed, arranged, and combined with a vaporizer and a connecting-tube, substantially as herein specified.

2. The inhaler A, provided with an air-induction passage and a regulating slide, substantially as specified.

119,749.—Stud or Button.—William R. Dutemple, Providence, R. I., assignor to himself and I. M. Hopkins, same place.

Claim.—In combination with a button and post, the plate C, having tube D and wings e e arranged thereon at right angles, and the stop d on its surface, and the plate F having nib g, constructed and arranged as and for the purpose specified.

119,750.—Cultivator.—David B. Eberly, Pine Village, Ind.

Claim.—1. The device formed by the shovel O provided with the spring-cap P, the standard K having a vertical and horizontal portion with an open slot, L, at its front end, pivoted at M and clamped at N, in combination with the beam H, constructed to operate as hereinbefore described.

2. The slotted angular arms D D, loop F, with nuts and screws d, slotted braces G G, perpendicular journals E E, and plow-frames H H, arranged relatively one to the other, as and for the purpose hereinbefore set forth.

3. In combination with the double-pointed shovel O, the spring-cap P secured thereto by the rivets i i, and screw-bolt j, for the uses and purposes hereinbefore set forth.

119,751.—Lubricator.—Erick Ehlin, San Francisco, Cal.

Claim.—The conical valve E, having prolongation F and wire-coil G, arranged, as described, in connection with a lubricator, to form a gradual conveyer of lubricating material to the journal of a rotating shaft or axle.

119,752.—Helical Wire-Brush.—Francis F. Field, Stapleton, N. Y.

Claim.—An improved wire-brush, in which the adjacent wires C, singly or in pairs, are arranged between the binding-wires B at right angles with each other at their centers, substantially as herein shown and described.

119,753.—Apparatus for Fixing Photographs.—Charles A. Gale, Piqua, Ohio.

Claim.—The fixing apparatus, as herein described, for the purpose of protecting the operator from inhaling the fumes from the poisonous fixing solution while fixing the picture, and also preventing the diffusion of the fumes through the dark room and gallery.

119,754.—Folding-Chair.—William Gardner, Glen Gardner, assignor to himself and O. L. Gardner, Orange, N. J.

Claim.—In combination with the pivoted seat C having the projections c and recesses c' c', the back legs A A and front supports or legs B having the projections b b, all constructed and arranged to operate substantially as and for the purpose described.

119,755.—Valve Movement.—Frederick Glasson, New York, N. Y., and William Gilfillan, Paterson, N. J.

Claim.—The flexible metallic plates L, in combination with the rod and arm K J that operate the valve I, and with the recessed heads or ends d of the steam-chest D, substantially as herein shown and described, and for the purpose set forth.

119,756.—Deodorizing Excrements.—Pierre Nicolas Goux, Rue De Longchamps, Paris, France.

Claim.—The lining, with the said absorbents or their equivalents, by the aid of molds or mandrels or otherwise, the interior of the vessels or receptacles intended to receive human excreta, substantially as hereinbefore described.

119,757.—Valve or Bottom for Separating Slate from Coal.—Samuel E. Griscom, Mahanoy Plane, Pa.

Claim.—The artificial valve or bottom, constructed as herein described.

119,758.—Door-Lock.—Florent Gyss, New York, N. Y.

Claim.—1. The combination of the locking-brace F with a door-lock, substantially in the manner shown and described.

2. The lifter D, in combination with the locking-brace F, substantially as described.

3. The combination of the lock-bolt B and lifter D with the brace F, substantially as described.

4. The night-bolt B', in combination with the locking-brace F, substantially as set forth.

119,759.—Ditching-Machine.—Oscar F. Hale, Irvington, Iowa.

Claim.—1. The combination of the frame-work A B D, platform F, mold-boards H, plow-point M, lever N, pivoted adjusting-bar O, bars G I, knives J, knives R, tank K, and pipes L with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the horizontal knife S, inclined apron T, carrier U, and carrier-frame C with the knives R J, mold-boards H, and frame-work A B D, substantially as herein shown and described, and for the purpose set forth.

119,760.—Piano-Forte.—Azariah Horace Hastings, New York, N. Y.

Claim.—1. The plate A, provided with the oblique grooves a at the top or back for holding the screws B, substantially in the manner herein shown and described.

2. The travelers D D, made prismatic, with necks d, heads e, and slots f, substantially as herein shown and described.

3. The guide-stripe h h, applied to the prismatic travelers, substantially as herein shown and described.

119,761.—Gas-Heater.—John P. Hayes, Philadelphia, Pa.

Claim.—1. The combination of the naphtha-tank B with the vaporizing-cylinder C, the said parts being constructed and arranged to operate together substantially as and for the purposes hereinbefore set forth.

2. In combination with the tank B and vaporizing-cylinder C, the suspended stripe of felt G G or their equivalent absorbents, arranged to operate substantially as and for the purposes hereinbefore set forth.

3. The vaporizing and mixing-chamber C, heater D, water-tank E, oil-tank B, and the suspended stripe of porous fabric G G, the said parts being constructed, arranged, and combined within the exterior case A, substantially as and for the purpose hereinbefore set forth.

4. The removable heater D, in combination with the chamber c'', the said heater being constructed and applied substantially as and for the purpose hereinbefore set forth and described.

5. The removable cap F when used in combination with the water-tank E and the upper part of the cylinder C, substantially as and for the purpose hereinbefore set forth.

119,762, antedated September 25, 1871.—Street-Lantern.—Mark Antony Heath, Providence, R. I.

Claim.—1. In a street-lantern, as described, the glass globe as made with a supporting-neck as set forth, and the brackets C as arranged and provided with elastic cushions a b to receive and support the neck and globe, all being as set forth.

2. The lantern made of the instrumentalities as described, arranged as represented—that is, of the cross-head D, the series of standards or brackets C, their connecting-ring E and elastic cushions a b, and the glass globe A provided with the neck B and surmounted by a dome, H, all as set forth.

119,763.—Electric Battery.—Vitalis Himmer, New York, N. Y.

Claim.—1. The inverted vessel C, having the pendent tube b, and applied as a cover to the cup of an electric battery, substantially as herein shown and described.

2. The electric battery composed of the cup A, pot B, inverted vessel C, pipe b, and elements D E, all arranged substantially as herein shown and described.

3. The tube b, supplying the exciting solution to the copper-plate of a battery, made lengthwise adjustable to regulate the strength of the battery, substantially as herein shown and described.

119,764.—Water-Ram.—Christopher Hodgkins, Marlborough, N. H.

Claim.—1. A hydraulic ram, provided with two supply-pipes, A B, which communicate with the same air-chamber F and discharge-pipe E, substantially as specified.

2. The double valves C D of a hydraulic ram, when suspended from one beam, d, so that the closing of one will open the other, and vice versa, as specified.

3. The drive-valve of a hydraulic ram, when perforated, and provided with the projecting-shoulder l above the ring of perforations, as and for the purpose specified.

4. The air-chamber F of a hydraulic ram, provided with three apertures and two check-valves to communicate with two supply-pipes and one discharge, as set forth.

5. The beam d, holding the two valves C D, and made vertically adjustable, substantially as and for the purpose herein shown and described.

6. The combination of the pipes A, B, and E with the air-chamber F, valves f f, C, and D, and beam d, all arranged to operate substantially as herein shown and described.

119,765.—Sling for Packages.—Friedrich Hohorst, New York, N. Y.

Claim.—1. A sling for packages, composed of a netting A, provided with eyelets a and side ropes b, said side ropes being made to pass through the eyelets a, and also through eyelets c at the ends of the supporting-straps d, substantially in the manner herein shown and described.

2. The combination of side ropes b with a netting, A, and its corner eyelets a, substantially as set forth.

3. The combination of self-adjusting straps d with the side ropes b, corner eyelets a, and netting A, substantially as described.

119,766.—Railway-Car Safety Apparatus.—Katharine E. Holmes, Cambridgeport, Mass.

Claim.—1. The combination of the hanger D provided with adjusting-screws e' e' and nuts f f, as specified, with the railway carriage and the guard, and applied thereto, as set forth.

2. The arrangement and combination of the slotted plate m, and its support-pin n, and the lifter-bar E, as described, provided with screws and nuts, as shown, with the carriage A or B, the hanger D and the guard C, applied together, substantially as explained.

3. The combination and arrangement of the two guards C C, as described, and the mechanisms, substantially as described, for adjusting them vertically, as set forth, with the two railway carriages A B, connected as explained.

119,767.—Lock-Nut for Railway Joints.—William P. Horton, Milwaukee, Wis., assignor to himself and John B. Smith, same place.

Claim.—The plate B or E, held in position by means of its ends turned inward and driven under the fish-bar, as described.

119,768.—Dust-Ring for Watches.—George Hunt, Springfield, Mass.

Claim.—The movable spring-band C, combined with and arranged on the edge-beveled top plate A, as described, to crowd the band against the incline of the plate, form a self-closing wedge-joint, and thus more perfectly exclude the dust.

119,769.—Balanced Slide-Valve.—Charles H. Hutchinson, Concord, N. H.

Claim.—1. The combination, with shield H, of the cylinder G having a square flange, M, and working directly against the under side thereof, as and for the purposes specified.

2. The arrangement of fixed cylinders E G and slide-valve F in a steam-chest, when all are constructed as shown in Fig. 4 of drawing, and for the purpose specified.

119,770.—Spike-Extractor.—William H. Ives, Luzerne, N. Y.

Claim.—In combination with claw-bar A, the fulcrum-block C, arranged to slide on said bar and to bring its heel D under the heel B of the bar, as and for the purpose specified.

119,771.—Press for Stamping Pans, Dishes, &c.—John B. Jones, Williamsburg, N. Y.

Claim.—1. In combination with dies B C, the plunger M and hollow die D arranged therein so as to move with a differential velocity after coming in contact, the said plunger M having the greatest velocity, so as to complete the pan when they have reached the end of their throw, and at a single operation.

2. The water-reservoir H and chamber F, applied to the press for regulating the descent of the movable die, as specified.

119,772.—Soap.—Carl R. Kicherer, Brooklyn, N. Y., assignor to Doscher & Co., same place.

Claim.—The improved soap compound herein described, whether used separately or in combination with common soap, all substantially as specified.

119,773.—Chandelier Center.—Joseph Kintz, West Meriden, Conn., assignor to himself and P. J. Clark, same place.

Claim.—The arm connected to the center piece by the tenons C and a nut or key, and having a projection on the shoulder fitting into a socket in the center piece to prevent turning, all substantially as specified.

119,774.—Horse-Power.—James W. Knox, Winona, Miss.

Claim.—The sweep attachment to the overhead power-wheel, comprising the two branches D D, brace F, and the hooked part E, the branches D being bolted to the under side of the rim of the wheel and the brace bolted to one of the arms, all substantially as specified.

119,775.—Flanged Collar for Brooms.—Henry A. Lee, New York, N. Y.

Claim.—As a new article of manufacture, the cap D, corrugated, as shown, and applied to the brush A and wires C C, as and for the purpose specified.

119,776.—Fruit Packing-Box.—Elisha D. Lewelling, San Lorenzo, Cal.

Claim.—The supplementary packing-box A, having a skeleton or open bottom, and provided with bales or handles C, in combination with the false bottom B and fruit-box D, substantially as and for the purpose above described.

119,777.—Double-Tree.—Alfred Lomax, La Porte, Ind.

Claim.—The double-tree above described, consisting of the pivoted eveners A A′, pendent standards C C, and stay-rods E F, substantially as specified.

119,778.—Tanners' Rinsing-Wheel.—Philo Lull, Norwich, N. Y.

Claim.—The combination of stone or earthenware plates *b* with the wooden pins *a* of a tanner's wheel, as specified.

119,779.—Sap-Bucket Cover.—Robert Marshall, Hobart, N. Y.

Claim.—The cover A, concaved at B, flanged at C, and having eyes D E, combined with cord F and a staple driven into the tree, to embody a new mode of protecting the bucket from snow, rain, leaves, and other foreign matter descending through the air.

119,780.—Chandeliers' Center.—John Meab, Meriden, Conn., assignor to Meriden Malleable-Iron Company, same place.

Claim.—A ring having notches B, and arms D having shanks C, combined, as described, with pintles F and sockets E, arranged under each of said notches B, to form a chandelier which may be centered more cheaply and accurately, while the arms are less liable to twist, than in chandaliers now known to the public.

119,781.—Suspended.

119,782.—Medical Compound for Sore Throat, &c.—Francis Matilda Moore, Chico, Cal.

Claim.—A medical compound or sirup composed of the ingredients named, mixed and prepared in about the manner specified, for the purpose above described.

119,783.—Flour-Bolt.—Thomas G. Morgan, Murfreesborough, Tenn.

Claim.—In combination with cams C the revolving weight D arranged on end of the pivoted lever H, as and for the purpose specified.

119,784.—Means for Mounting Sewing-Machines upon their Tables.—Charles Parham, Philadelphia, Pa.

Claim.—1. In combination with a table or stand-top and its supports A, and a sewing-machine arranged over but isolated from said top, the horizontal brace C, when serving to brace said top and supports and supporting the sewing-machine isolated therefrom, substantially as described.

2. In combination with a table or stand and a sewing-machine supported by an insulating or isolating-brace attached thereto, the hinged connections formed part on the brace and part on the bed of the sewing-machine, so that the latter may be swung and held up in a vertical, or nearly so, position for oiling and other purposes, or be detached and removed therefrom, substantially as described.

3. In combination, with the table sewing-machine, and brace, as herein described, the oil-pan or receptacle *f* under the sewing-machine and upon the brace, as set forth and represented.

119,785.—Candle-Burner.—Julius A. Pease, Catskill, N. Y.

Claim.—1. The cap D, wick-tube E, guides G, and chimney-holder I, combined and operating as shown and described.

2. The burner, as specified, in combination with the candlestick A and rods H, as and for the purposes described.

119,786.—Cultivator.—Francis L. Perry, Canandaigua, N. Y.

Claim.—1. Beveling the ends of the side bars H H at different angles, and arranging them to be reversed to make the cultivator wide or narrow, substantially as described.

2. The outriggers N N attached to the cultivator, substantially as described, and provided with rigid or spring-teeth made of round or oval wire, for the purpose set forth.

119,787.—Stove-Grate.—John A. Price, Scrantoff, Pa.

Claim.—The fire-pot A, provided with the vertical bars *a* and combined with the inclined grate *b*, as specified.

119,788.—Wheel for Vehicles.—William F. Ray, Fort Wayne, Ind.

Claim.—The curved plate D, arranged on the inside of felly A, and receiving at each end a spoke, C, as and for the purpose specified.

119,789.—Balanced Slide-Valve.—John Rigby and Joseph Holt, Marquette, Mich.

Claim.—The hanger N, rollers *m*, weighted lever J, and steam-cylinder G, in combination with a steam slide-valve, arranged substantially as and for the purposes set forth.

119,790.—Conveyer of Smoke and Cinders for Locomotives.—Augusta M. Rodgers, Brooklyn, N. Y.

Claim.—The combination of one or more fan-blowers, E, with the conveyer D, which extends from the cap C on the top of the smoke-stack of a locomotive-engine, substantially as shown and described.

119,791.—Pan-Scraper.—Gottlieb Scherer, South Boston, Mass.

Claim.—An improved pan-scraper formed of iron rings interlocked with each other, substantially as herein shown and described, as a new article of manufacture.

119,792.—Propulsion of Canal-Boats.—Cornelius Schilling, New York, N. Y.

Claim.—The arrangement of two or more propeller-blades, *d d*^{1} *d*^{2}, said blades being secured to levers D D^1 D^2, which are pivoted to rods *e* and links *a*, in combination with the crank-shaft A, all constructed and operating substantially in the manner herein shown and described.

119,793.—Piano-Stool.—Charles A. Schindler, West Hoboken, N. J.

Claim.—The brand F and brace-arms B cast solid in one piece, in combination with the pedestal C and legs B, substantially as herein shown and described, and for the purposes set forth.

119,794.—School-Desk.—August Schlag, Brooklyn, N. Y.

Claim.—1. The combination of the seat A, hinged to links *a*, which connect the legs B B′, which are jointed together by pivots *f* and provided with recessed slots *g*, substantially in the manner shown and described.

2. The swinging book-rack D, in combination with the folding legs B B′, hinged seat A, and sliding desk F, substantially as set forth.

3. In combination with the legs B B′, the extensions B″ provided with slots *f* and logs *l*, the back-rest C, sliding desk F, and top strip E, all arranged substantially as described.

119,795.—Ice-Machine.—Charles A. Seely, New York, N. Y.

Claim.—1. The process of refrigeration wherein chloride of calcium or its equivalent is employed as an absorbent of ammonia, substantially as described.

2. The generator A, constructed and operated as herein described.

3. The combination of the generator, the condenser, and the freezer.

4. The combination of the generator with the combined condenser and freezer.

119,796.—Endless-Traveling Sidewalk.—Alfred Speer, Passaic, N. J.

Claim.—The combination, with the endless-traveling sidewalk and the permanent way, of the transfer-cars I, substantially as specified.

119,797.—Rotary-Engine.—John Stott, Burlington, Iowa.

Claim.—1. The combination of the piston E, toothed ring D, hub F, and the pinion O, substantially as specified.

2. The steam-gate G, swinging on its center within steam-chest C, in combination with weighted arm I, thereby dividing the pressure of steam and lessening the friction on the piston.

119,798, antedated September 25, 1871.—Weft-Stop Mechanism for Looms.—John J. Switzer, Boston, assignor to himself, Edwin H. Fitz, Northborough, Willard Comey, Westborough, and Edward B. Pendleton, Westerly, Mass.

Claim.—1. The combination of the weft-detectors C^1 C^1 with the levers F, sliding bar F^1, and swinging bar F^2 of the stop-motion, all arranged and operating as set forth.

2. The hanger D, latch D^1, and latch D^2, in combination with the weft-detector C^1, operating substantially as described, and for the purpose set forth.

119,799.—Mode of Dumping Grain.—John Sypes, Fairbury, Ill.

Claim.—The peculiar construction and application for the purposes intended, of the driveway G, the grooves B B, the rails A A, the safety-wedges D D, the stops C C, the trap-door F, the lock I, and the lever K, with its attachment.

119,800.—Elevator-Brake.—Theodore Thorn, St. Clair, Pa.

Claim.—A cage, B, having downwardly-converging posts which slide in guides J, and the long wedge-shaped brake-blocks, the said cage and blocks being both attached to a common hoister, G, in combination, as described, with mechanism K L, for the purpose specified.

119,801.—Peat-Machine.—William S. Tisdale, New York, N. Y.

Claim.—1. The propeller-screw *a* provided with the flange *c* on the blade *b*, in combination with the hopper A and cylinder B, substantially as and for the purpose described.

2. In combination with the propeller-screw *a*, constructed as described, the saw-knives *e* and the stationary knives *g*, substantially as and for the purpose described.

3. In combination with the propeller-screw *a*, constructed as described, the revolving saw-knives *e* and the knife-screen *d*, substantially as and for the purpose set forth.

119,802.—Bottle-Opener.—Charles B. Trimble, New York, N. Y.

Claim.—A device for removing the yoke from the top of a bottle-cork, consisting of plate C, ears D D, and lugs E E, constructed and arranged as described.

119,803.—Hub for Vehicles' Wheels.—Oliver Vanorman, Fond du Lac, Wis., assignor of one-half his right to Judson A. Archibald, same place.

Claim.—The combination of two rings or bands, B B, with slotted faces, together with the hub A, substantially as and for the purpose set forth.

119,804.—Sleigh.—Rice Webb, Star Prairie, Wis.

Claim.—An improved cutter or sleigh, consisting of the runners A, raves, knees, or braces B, beam C, braces D, box or body E, cross-bars F, rod G, and draft-bar H, said parts being constructed and operating in connection with each other substantially as herein shown and described, and for the purpose set forth.

119,805.—Shutter for Hot-Beds, &c.—James Weed, Muscatine, Iowa.

Claim.—1. A hot-bed frame, with a cover or shutter which is hinged to it, and is made in sections, which fold upon or against one another, substantially in the manner and for the purpose described.

2. The combination of the lever G and cord *g* with the hinged folding-shutter B B′ and a hot-bed frame A, substantially as and for the purpose described.

3. The combination of the arm *a*, prop C, hinged folding-shutter B B′, and the hot-bed frame A, substantially as described.

4. The combination of a spring or weight, or both a spring and a weight, with the hinged folding-shutter B B′, and the hot-bed frame A, substantially as described.

119,806.—Fruit-Box.—Charles W. Weston, San Francisco, Cal.

Claim.—The veneers or other thin flexible strips *a b* having the lengthened ends *e* doubled over a wire or other stiffening-rim, *d*, in order to form a rim to the box, substantially as above described.

119,807, antedated October 3, 1871.—Tool-Handle Fastener.—James G. Wilbur and Hiram H. Hulbert, Kilbourne City, Wis.

Claim.—A metallic key, C, having an oblique side provided with reversely-obliqued barbs *d* thereon, for the purpose of allowing the elastic fiber of a wooden helve to return, after lateral compression, over the shoulders of said barbs and thereby prevent the wedge from working out.

119,808.—Smoke-Stack of Locomotives.—Edwin H. Winchell, New York, N. Y.

Claim.—The combination of a wide-mouthed air-funnel with the additional vertical funnel surrounding the smoke-pipe of the locomotive, constructed, arranged, and operating substantially in the manner and for the purposes described.

119,809.—Railroad-Car Ventilator.—Edwin H. Winchell, New York, N. Y.

Claim.—1. The combination of a reversible hood or funnel, having a dividing-plate, *c*^{1}, in the movable collar, with the flattened air-chamber and the fixed dividing-plate D, constructed in the manner, and operating for the purposes described.

2. The device and operation of sliding plate G on the side of a railroad car, for the purpose of adjusting and holding in place deflectors E at the sides of the window in the angles and positions and for the purposes shown.

3. The deflectors or leaves E, constructed in the manner and for the purposes shown.

4. The combination of hood and air-chamber on the roof, constructed substantially as described, with or without the dividing-plates *c*^{1} and D, with the deflectors at the windows, constructed and operating substantially as described.

119,810.—APPARATUS FOR TURNING LEAVES OF MUSIC. — Augustus Altenburg and George J. Lambrix, Buffalo, N. Y., assignors to Charles Spark, same place; said Spark assignor to himself, Augustus Altenburg, and Charles Louis Massing.

Claim.—1. The combination and arrangement of the series of spring arms E with the guide-rod *i* and oscillating escapement J *j j'*, operated by a pedal, substantially as and for the purpose hereinbefore set forth.

2. The separating blocks or flanges *e*, attached to the arms E, combined with the pins *j j'* of the oscillating shaft J, as and for the purpose hereinbefore set forth.

119,811, antedated October 7, 1871.—WHEEL FOR VEHICLES.—Ephraim Ball, Jr., Canton, Ohio.

Claim.—1. The bisected bushing B provided at its inner end with a double shoulder, *x y*, in combination with the hub A and axle, constructed as shown, substantially as and for the purposes herein set forth.

2. The within-described wheel for vehicles, consisting of the hub A, bisected bushing B provided with shoulders, as described, spokes C and V-shaped felly or fellies D having tire shrunk around the same, all substantially as set forth.

119,812.—MEDICAL COMPOUND FOR TREATING CHILLS, FEVER, &c.—Robert Bevill, Bowie county, Tex.

Claim.—A chemical compound, of the ingredients and for the purpose set forth.

119,813. — MACHINE FOR CURVING SAW-BLADES.—Bela S. Bishop, Menasha, Wis.

Claim.—The combination of the frame A, standards B, girt B', cross-head C, set-screw D, shaft E, wheel F, peen-wheel G, and table H, all constructed and arranged substantially as and for the purpose set forth.

119,814, antedated September 25, 1871.—FELLING ATTACHMENT FOR SEWING-MACHINES.—Charles C. Blakemore, Zanesville, Ohio.

Claim.—As an article of manufacture, the seamer and feller herein described, consisting of the scroll A made of a single piece of metal, all as set forth.

119,815.—BLACKING-BRUSH.—Charles Brintzinghoffer, Philadelphia, Pa.

Claim.—The handle G formed with the dovetail H and carrying the thumb or set-screw J, in combination with the back A of the polishing-brush formed with the dovetailed slot or groove D, all constructed and operating substantially as and for the purpose specified.

119,816. — STEAM-HEATER. — Gottlieb F. Burkhardt, Boston Highlands, Mass.

Claim. — The series of horizontal water-chambers, horizontal flue-pipes, vertical flue-spaces, and horisontal air-chambers, having the relative arrangement and respective connections, substantially as shown and described.

119,817, antedated October 7, 1871.—STEAM-CONDENSER, &c. — Alfred Cail, Paris, France.

Claim.—1. The combination, with the condensing-tubes, arranged substantially as described, of the tanks O and U, pipes X and Y, and water-pump V, as set forth.

2. The combination of the said condenser G and reservoir O with distributing-pipe R and perforated trough T, substantially as set forth.

3. The combination of the evaporating-condenser G with the condenser H, substantially as and for the purpose specified.

4. The combination of the condensers G and H with the air-pump I, reservoir J, and feed-pump K, substantially as specified.

5. The combination of the connecting-pipe *c*, the pipe Y, and reservoir J, for the purpose specified.

6. The combination of the box D, reservoir E, condenser G, pipes F, escape-pipe *i*, and valve-pipe *h*, all as set forth.

7. The pipe *h* with its cock *f*, arranged substantially as described.

8. The arrangement, in respect to the generator and elevated tank O, of the pipes *m* and *o*, with their cocks *l* and *n*.

119,818. — LARD-COOLER. — Ambrose E. Camp and Charles L. Reid, Louisville, Ky.

Claim.—The steam-pipes C and G in combination with a lard-cooling apparatus, substantially as described.

119,819.—RUNNING-GEAR FOR BUGGIES.—Egbert P. Carter, Arcade, N. Y.

Claim.—1. The compound spring C composed of a single strip, *a*, of spring-metal, and the backing *b* of wood, rigidly connected at or near the center and loosely attached near the ends by means of suitable clips *d*, substantially as and for the purposes set forth.

2. In combination with the springs C extending from axle to axle, the supporting-plates *f* and bars D, constructed and arranged as herein set forth.

3. A running-gear for buggies, embracing in its construction the following instrumentalities: The springs *a*, the attaching-plates *b*, and the brace-rods *c*, arranged with reference to each other and the axle, substantially in the manner set forth.

119,820. — MACHINE FOR CUTTING AND PUNCHING SHINGLE-BANDS.—Charles B. Choate, East Saginaw, Mich.

Claim.—1. The combination, with the punches L, rising and falling vertically through the table I, of the fixed cutter C of the rock-shaft B, bearing the oblique cutter C' and adjustable press-brackets *y*, substantially as specified.

2. The combination with the rock-shaft, bearing the oblique cutter C' and press-brackets *y*, of the fixed blade C, punches L, arms P O, and the sliding gauge D', substantially as specified.

119,821.—MECHANICAL MOVEMENT.—Alexander Clark, Albany, Ill., assignor to Stephen G. Perkins, same place.

Claim.—1. The weighted hand-lever B, in combination with the buffer or recoil springs O, arranged to operate as herein described.

2. In combination with the above the lever C, link D, pitman G, and crank-shaft E, provided with suitable gear-wheels, when arranged to operate as set forth.

119,822.—TANNING APPARATUS.—Joseph W. Coburn, East Walpole, and Elisha F. Winslow, South Dedham, Mass.

Claim.—In combination with a tanning-vat, the air-tubes, side chambers, and partitions and passages, combined and relatively arranged, substantially as described.

119,823.—RAILWAY-CAR SPRING.—John W. Cochran, New York, N. Y.

Claim.—The cylinder B, constructed with an internal flange, *b*, about midway of its length, in combination with the rubber core A, sleeves *a*, spiral spring D, and caps C C, all arranged substantially as shown and described.

119,824.—FEED-PIPE OF STEAM-BOILERS.—Jonathan Cone, Bristol, Pa.

Claim.—The combination, substantially as described, of the external feed-pipe of a steam-boiler with a series of two or more smaller internal pipes the aggregate areas of which are equal to, or nearly equal to, the area of the main pipe, the said pipes passing through the steam space of the boiler and terminating below the water-level of the same.

119,825. — INDUCTION-COIL. — Daniel McFarland Cook, Mansfield, Ohio.

Claim.—The combination of two or more simple or compound helices, in the manner and for the purpose set forth.

119,826.—ANIMAL-TRAP.—John F. Coppock, Dexter, Iowa.

Claim.—The bow A armed with arms B B' B', the clasps C C, toggle-arms D D', trigger-bar E, lug H, dog I, tripper-lever J, and disk K, when combined and arranged to operate substantially as described, and for the purpose specified.

119,827.—PAPER-CUTTING MACHINE.—Edwin Cowles, Cleveland, Ohio.

Claim.—1. The combination of a pressure-bar, C, with an inclined table, A, supporting-gauge, and a cutting instrument, substantially as described.

2. A stud or its equivalent applied to the cutter-carrying stock P, in combination with toes *h* on the pressure-bar C, whereby the latter will be lifted automatically at the termination of each stroke of the said stock, substantially as described.

119,828.—MACHINERY FOR MAKING WOODEN TRAYS.—Daniel M. Cummings, Enfield, N. H., assignor to himself and Lewis Kimball, Jr.

Claim.—1. The combination of the laterally movable plate *a* and the set-screw *b* with each other and with the pivoted frame B, substantially as and for the purpose herein set forth.

2. The combination of the laternally-movable plate *a*, the set-screw *b*, and the wrench C with each other and with the pivoted frame B and the pivoted shaft S, substantially as and for the purpose herein set forth.

3. The combination of the laterally-movable plate *a*, the set-screw *b*, the wrench C, and the pivoted frame B with the peculiarly-shaped cutters *f f* and *g g* on the rotary shaft A, substantially as and for the purpose herein set forth.

4. The combination of the doubly-curved cutters *g g* with the shaft A, the laterally-movable plate *a*, the set-screw *b*, and the pivoted frame B, substantially as and for the purpose herein set forth.

5. The combination of the supports D D' and the clamping-bars E E with each other and with the rectangular frame G G H H, the bars L M, the bridle-pieces N N *k k*, and the set-screws *n* and *q*, substantially as and for the purpose herein set forth.

6. The combination of the cutter-shaft F with the supports D D', the clamping-bars E E, the rectangular frame G G H H, the bars L M, the bridle-pieces N N *k k*, and the set-screws *n* and *q*, substantially as and for the purpose herein set forth.

119,829. — MACHINE FOR DRESSING RAILWAY TIES.—John P. Dirner, Honesdale, Pa.

Claim.—The combination of the oblique cutters G G, the parallel cutters H H having reciprocating motion, and a feeding apparatus, substantially as described, for the purpose set forth.

119,830.—COMPOSITION FOR REMOVING INCRUSTATION IN STEAM-BOILERS.—Charles G. Dodge, Marshall, Mich.

Claim.—The compound for the removal and prevention of steam-boiler incrustations, composed of the ingredients, in the proportions, and applied substantially as set forth.

119,831.—RAILWAY-CAR AXLE.—Ellis Doty and George W. Miltimore, Janesville, Wis.

Claim.—1. The combination of the fixed axle A, the hollow and revolving axle B, and wheels E E' loosely mounted thereon, substantially as and for the purpose described.

2. The combination of the fixed axle A, the hollow axle B, chamber D communicating with the fixed axle A, wheels E E', and chambers F communicating with the bearings of axle B, substantially as and for the purpose described.

119,832. — SMOKE-CONSUMING APPARATUS FOR FIRE-BOXES.—John Durand, Columbus, Ohio.

Claim.—1. The provision, in the fire-box of a locomotive, of a deflector composed of a tile having longitudinal channels or ducts that are adapted to receive atmospheric air through the tube *d* or its equivalent, and to discharge said air, when heated, into the upper portion of the fire-box, substantially as herein shown and described.

2. Such longitudinally-channeled deflector, when made of two or more tile-sections, for the purpose herein explained.

3. The said deflector in a locomotive fire-box, supported upon tubes which communicate with the water-spaces of the boiler, for the object stated.

119,833.—PROGRAMME-CLOCK.—Samuel F. Estell, Chicago, Ill.

Claim.—The jointed detent D, in combination with the shaft *h*, or its equivalent, for throwing the detent into or out of operation, substantially as specified.

119,834. — BREECH-LOADING FIRE-ARM.—George H. Ferriss, Utica, N. Y.

Claim.—1. The projecting piece W, wherever it projects beyond the rear end and below the center of the barrel, in combination with a bent lever, as C, substantially as and for the purposes specified.

2. The bent lever C, operating within or partially within the slot Z in the break-off upon the projecting catch W, substantially as and for the purposes herein described.

3. The thumb-piece E, in combination with lever D, pin T, and bent lever C, substantially as and for the purposes specified.

4. A cartridge, without reference to its interior shape, the bottom and sides only of which are cut away at or near its rear end, in a concave or other form, so as to facilitate the grasping of the cartridge while permitting attachment of the nipple upon its top near its rear end, substantially as and for the purposes set forth.

5. The recess R in the rear end of the barrel, to give room in drawing the cartridge, substantially as herein described.

6. A curb surrounding a cone or nipple, provided with a slit for the purpose of withdrawing the percussion-cap from the cone after fire.

7. The piece F, when made separate from the break-off or piece A, for the purpose of holding the pivoted levers C and D.

119,835. — FEED-WATER APPARATUS FOR STEAM-BOILERS. — Charles G. Fisher, Washington, D. C.

Claim.—1. The feed-water pipe or pipes P P, with distributer or distributers attached, when arranged as herein shown, substantially as and for the purpose described.

2. The combination of the feed-water pipes P P with distributers *f f* and feed check-valve O, substantially as and for the purpose shown and described.

119,836, antedated September 23, 1871.—WOOD PAVEMENT.—Maurice Fitzgibbons, New York, N. Y.

Claim.—A pavement constructed of truncated wedge-shaped blocks having grooves in their sides;

the spaces between the sides of the block being filled with concrete, as described.

119,837.—BLACKSMITH'S TOOL.—Samuel J. Forbes, Marshalltown, Iowa.

Claim.—The improved tool, consisting of the levers A, jaws B, shears C and *h'*, punch *h*, slotted bar D, and slotted head K.

119,838. — PIPE-WRENCH. — David Frank and Theophilus Snyder, Allentown, Pa.

Claim.—1. The side pieces A A, attached to a handle, B, and provided with graduated hooks *a a*, and used in combination with a hook or other suitable device to grasp and hold pipe of various sizes, substantially as herein set forth.

2. The hook C provided with teeth *c c*, and pivoted between and used in combination with suitable side pieces, and a device for forcing the hook upon the pipe to hold the same, substantially as herein set forth.

3. The combination of the side pieces A A with graduated hooks *a a*, the hook C, and a spring, *d*, suitably arranged to throw the hook C down upon a pipe laid in the hooks *a a*, substantially as herein set forth.

4. The combination of the side pieces A A with hooks *a a*, hook C with teeth *c c*, handles B B', tooth *f*, and with or without a spring, *d*, all constructed and arranged substantially as and for the purposes herein set forth.

119,839, antedated September 25, 1871.—VAPOR-BURNER.—Thomas S. Gates and Alexander H. Fritchey, Columbus, Ohio.

Claim.—The band *m*, constructed and operating as and for the purposes hereinbefore set forth.

119,840. — CHURN. — John Gire, Louden City, Ill.

Claim.—The combination of the four removable dasher-wheels G H H H, springs *i*, movable sleeves *b*, and short journals *a a'*, all constructed as described and arranged within the box A, with partition B and cog-wheels C and D D, as set forth.

119,841. — CARRIAGE-WHEEL. — Joseph S. Graves, Lima, N. Y., assignor to himself and Charles W. Harman, same place.

Claim.—1. The annular wedge D, jointed nut C, loose collar H, and head-nut I, arranged and combined, as herein described, for the purpose of expanding the spokes against the felly.

2. The loose collar H, screw-nut I, and collar G in combination with the solid head B of the pipe-box A having the screw-thread *a* upon its periphery, substantially as described.

3. The combination, with the nut C and loose collar H, of the longitudinal tongues and grooves *f g*, as herein shown and described, and for the purpose specified.

4. The wedge D arranged upon the pipe-box A for forcing outward the spokes, in combination with the clasp K formed with a slot to receive a wedge for expanding the felly, substantially as and for the purpose set forth.

119,842, antedated October 6, 1871.—LAMP.—Franklin T. Grimes, Liberty, Mo.

Claim.—1. In a fountain-reservoir lamp, the valve-seat or plate V, upper-valve Q, lower-valve I, perforated plate or valve-seat X, tube H, the guide-plate, and the rod P provided with a spiral spring and a screw-nut, arranged as herein shown and described, for the purpose specified.

2. The small tube L, arranged to project into the wick-chamber K, as herein shown and described, for the purpose specified.

119,843.—MANUFACTURE OF WRAPPING-PAPER.—Benjamin E. Hale, New York, N. Y.

Claim.—1. The process, substantially as described, for producing printed wrapping-paper.

2. As a new article of manufacture, printed wrapping-paper produced in subdivisions from sheets which are multiples of such subdivisions, substantially as described, for the purpose specified.

119,844, antedated September 30, 1871.—METALLIC HOOP.—Edgar C. Hamlin, Pavilion, N. Y.

Claim.—The metallic hoop-lock, provided with overlapping lips *b* and indentations *a*, arranged to act conjointly for the purposes set forth.

119,845.—WASHING-MACHINE.—James W. Hampton, Mount Pleasant, Iowa.

Claim.—1. The combination of the casing D, casting E' with brace G, elongated pinion E, eccentric cog wheel H, and movable lever I, all substantially as and for the purposes herein set forth.

2. In combination with the casing D, casting E' with brace G, elongated pinion E, and eccentric cog-wheel H, all secured to the hinged lid of the box A, the cross J with pins *i i*, arms K K with round bars L L, and the pinion-journal *a* with nut *d* substantially as and for the purposes herein set forth.

119,846.—RIFLED FIRE-ARM. — Alexander Henry, Edinburgh, North Britain.

Claim.—The system or mode of rifling or grooving fire-arms in which a series of planes or flat surfaces are combined with angular curved or rectangular ridges or lands, either intervening between the planes or intersecting the same, as hereinbefore described and shown in the accompanying drawing.

119,847.—REFRIGERATING-CAR.—Claudius L. Hong and Ellsworth Ely, Lockport, N. Y.

Claim.—1. A vehicle provided with the preserving-chamber A, the refrigerating-chamber B, and the observing-compartment D, combined with the air-passage E extending over their top, sides, and bottom, substantially as described, for the purposes specified.

2. In a railroad car, the air-passage G and ventilator *f*, in combination with the air-passage E, substantially as described, for the purposes specified.

3. A railroad car or other vehicle, packed as herein described, and provided with the chambers A B, the air-passage E all around them, and the valves *e e'*, *o o'*, and *v v'*, all constructed, arranged, and operating substantially as and for the purposes herein specified.

119,848, antedated October 3, 1871.—WARP-SHEDDING MECHANISM FOR LOOMS.—Joseph Holding and James Eccles, Manchester, Great Britain.

Claim.—1. The combination, with the warp-beam and breast-beam of a loom, of a shaft, *f*, to which are connected wires or guides *e*, bent to the form substantially as described and alternately coupled to form a zigzag space, as set forth.

2. The combination of the subject-matter of the first claim and the disks *l*, arms *m*, or equivalent devices, whereby the within-described movements can be imparted to the shaft *f* and its guides.

119,849. — FOLDING-CHAIR. — Charles A. Jackson, Boston, Mass.

Claim.—1. The combination of the back B' of the chair with the legs L, controlling the front of the chair, and forming a back at different angles by means of the combination at the points marked A A A, and the combination at the front of the chair, marked B, by which the front legs L' are controlled and put into proper position to enable the chair to be used as a seat, all as shown and described.

119,850.—CONCRETE PAVEMENT.—Richard A. Jackson and Samuel Gissinger, Pittsburg, Pa.

Claim.—A pavement or road constructed of the material herein described, said material being treated and used in the manner and for the purpose as set forth.

119,851. — KEY-HOLE GUARD.—Ferdinand Jenny, Parkersburg, W. Va.

Claim.—1. The slotted tube A, provided at its outer end with movable disks *b b*, flange B, and on the inner side with the springs *f f*, said springs having one or more lugs near their outer end, and all arranged to operate substantially as set forth.

2. In combination with the above, the slotted key E, for the purpose set forth.

3. In combination with the slotted tube A, as shown, the head C, shank D, and lugs *d d d*, substantially as and for the purpose set forth.

119,852.—PUMP-PISTON.—Daniel Johnson, Ashland, Ohio.

Claim.—The piston herein described, provided with the conical leather buckets J J', and the block I having conical ends *k k* connected by cylinders *m* to the center stem *l*, tapering from each end toward its middle portion, as specified.

119,853.—SPRING FOR MATTRESSES, &c.—William B. Judson, Poughkeepsie, N. Y.

Claim.—A series of springs, A A, fastened together by means of the blocks *b b* and *d d*, and the connecting-straps B B with or without the lining *a*, substantially in the manner and for the purposes herein set forth.

119,854.—HORSE-NAIL MACHINE.—Edward Watson Kelley, Hamilton, Scotland.

Claim.—1. The construction and arrangement of the bevel-gear *f*, inclines *g g g*, rollers *e e*, springs *n n* or their equivalents, and the punches *a a*, and dies *d d*, for the purpose set forth.

2. The combination of the toothed racks *r r*, projection 5, finger 2, bolt 3, coiled springs 4 and 6, slotted bearing 1, pawl 7, arm 8, and connection 9, with the toothed wheel *a*, as and for the purpose set forth.

3. In combination with the table *o* the arched frame 10, eccentric 11, and the arm or lever 12, as and for the purpose set forth.

4. The combination of the polygonal head 24 with its fixed male dies A A and movable male dies B B, stationary female dies C C, shaping-rollers 20 21, pointing-rollers 22 23, and the guide-way 19, when all are combined, as and for the purpose set forth.

119,855. — GALVANIC BATTERY. — Jerome Kidder, New York, N. Y.

Claim.—1. The close bath or vessel containing the solution, having its plates or pairs arranged in relation to the one side of the battery, as described, whereby, on turning it so as to present one or other of its adjacent sides uppermost the battery becomes charged or thrown out of action, substantially as specified.

2. The cork or stopper C carrying the pairs or plates D D', arranged to occupy a position relatively to the side or sides of the battery or vessel containing the solution, essentially as described.

3. The combination of the pivots *b b* with the body of the battery, having its pairs or plates arranged to occupy a lateral position relatively to said body, substantially as specified.

4. The combination of the bath or legs A A', composing the same, the body B, the stopper C, and the pairs or plates D D, the whole arranged in relation with each other for operation, essentially as described.

5. The orifice G, arranged substantially as herein described, for the escape of gases and for charging the solution without removing the stopper C to which the elements are attached.

119,856.—DUMPING-CAR.—Sidney D. King, Middletown, N. Y.

Claim.—1. The combination, with a sliding dumping-car provided with the pulleys F and the adjustable plates *m*, of the automatic gate R, and the connecting chains N, substantially as specified.

2. The combination, with the sliding platform C, of the hinged car-body D, and the motive-screw W working in the female screw X, substantially as specified.

119,857. — TRUCK FOR LOCOMOTIVE ENGINES.—Chancy H. Lathrop, Jersey City, N. J.

Claim.—1. The center-box frame E E, constructed with curved slots *e e* at its ends of an inverted V-form at their centers *s s* on their upper edges, in combination with the rollers *d d* carried by the cross-frame C C of the truck, within which the center box and its frame are fitted to slide laterally, essentially as shown and described.

2. The combination of the slotted guides D D with the cross-frame C C of the truck, the rollers *d d*, and the self-centering slotted center-box frame, when the whole are constructed and arranged for operation substantially as herein set forth.

119,858.—STEM-WINDING WATCH.—Jacques Laurent, New York, N. Y.

Claim.—1. The combination of the pendent bow C and its attached sleeve *c*, constructed so as to be capable of turning around the axis of the stem with the obliquely-grooved portion *h* of the sleeve *i*, for moving the stop or shifter *o* by such turning action of the bow, substantially as and for the purposes herein set forth.

2. The attachment of one end, *b*, of the bow to the rotating sleeve *c* so as to be capable of springing in or out, in combination with the holes *d d'* in the fixed portion *e* of the stem, into which said free end of the bow is made to snap, essentially as described.

119,859. — WASHING-MACHINE. — John H. Lee, Marshall, Tex.

Claim.—The construction of the rotary barrel-case for washing-machines herein described, wherein the wire bars extend from end to end of the case, resting upon a ring, B, and form two frustums of a cone, substantially as specified.

119,860.—BREAST-PIN FASTENER.—John A. Lehman, Philadelphia, Pa.

Claim.—1. The catch *b*, formed with a tube to receive the tip of the pin, and a spiral rib or groove adapted to secure the catch to the hook, substantially as and for the purpose set forth.

2. The same when formed with a square or polygonal head adapted for a key to operate the same, substantially as shown and described.

119,861. — BREAD-CUTTER. — Carl Lemke, Cincinnati, Ohio.

Claim.—The combination, as herein described, of bed-plate A, slotted standard B E, vibrating arm C D, knife H I J, latch F, and pivot G *g*, for the object stated.

119,862.—BED-BOTTOM.—George D. Leonard, Chicago, Ill.

Claim.—The combination and arrangement of the slats B, blocks C and C', and the springs D when the springs D have bearings and operate substantially as shown and described.

119,863, antedated September 29, 1871.—HOLLOW AXLE FOR WAGONS AND CARRIAGES. — William A. Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company, Mishawaka, Ind.

Claim.—An improved hollow axle for wagons, carriages, &c., composed of a properly-shaped me-

tallic sheet, *a*, combined with the thimbles *b* and with suitable journal-screws or screw-plugs *c*, substantially as herein set forth.

119,864. — PROCESS OF MAKING HOLLOW METALLIC AXLES AND OTHER HOLLOW METALLIC ARTICLES.—William A. Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company, Mishawuka, Ind.

Claim.—1. The within-described heating, shaping, and welding process of producing hollow axles or other hollow articles from previously-prepared sections of the same.

2. As a new manufacture, the within-described wrought-metal hollow axle, said axle having substantially the shape of a metal-trimmed and complete wooden axle.

119,865.—APPARATUS FOR WELDING.—William Arnold Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company, Mishawaka, Ind.

Claim.—1. The combination and arrangement of the furnace I, oven J, and dies L M, substantially herein represented and described, and for the purposes set forth.

2. The combination of the dies L M, frame N, bed-plate O, guide-ways P, and operating device Q R S with the heating-furnace or oven, substantially as and for the purposes set forth.

119,866. — HOLLOW AXLE FOR RAILROAD CARS.—William A. Lewis, Chicago, Ill., assignor to Hollow Axle Manufacturing Company, Mishawaka, Ind.

Claim.—The within-described jointless wrought-metal hollow axle for railway cars, &c.

119,867.—CAR-WHEEL.—William A. Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company, Mishawaka, Ind.

Claim.—1. As a new manufacture, a jointless sheet-metal hollow car-wheel, of substantially the shape herein set forth.

2. Jointly, the three sections hereinbefore described, and which are represented in Figs. 1, 2, and 3 of the drawing, of which to construct a car-wheel.

119,868.—WROUGHT-METAL AXLE FOR WAGONS AND CARRIAGES.—William A. Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company, Mishawaka, Ind.

Claim.—1. As a new manufacture, a parallel-sided wrought-metal tube, the end portions of which are taper-swaged, by substantially the process herein described, to such shape as will enable said tube to be used as a constituent in the construction of axles for wagons, &c.

2. The combination of my within-described taper-swaged wrought-metal tube with the requisite stock and trimmings to form a wagon or carriage-axle of any usual or desired shape.

119,869. — TUBULAR DOUBLE-ARCH AXLE FOR WAGONS.—William A. Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company, Mishawaka, Ind.

Claim.—1. As a new manufacture, my improved double-arch and tubular axle for wagons, carriages, &c., constructed of the tube *a*, the journal-shoulders *g g*, the arches *b c*, and the embracing-clamps or clips *d e*, substantially in the manner herein set forth.

2. The exterior shape given to my said improved axle by the arch *c* and the exposed portion of the tube *a*, substantially as herein represented and described.

119,870.—CHURN.—William H. Link, Shanesville, Ohio.

Claim.—The compound churn-dasher herein described, consisting of the two parallel horizontal shafts C C, adapted to be rotated in the same direction, and carrying the spirally-arranged blades D D, beveled diagonally, and so placed that the faces as they pass each other in the center shall be parallel, substantially as and for the purpose specified.

119,871.—BALANCE.—Christopher C. Marsh, New York, N. Y.

Claim.—The combination of the beam A, adapted for the reception of the weights F, the hanger D secured removably to the standard by means of the cap E, and the pivot B fixed in the hanger D and passing through an aperture in the beam, the whole being constructed and adapted, as herein described, to constitute an instrument for averaging commercial and other accounts.

119,872.—FRUIT-BOX.—Joshua H. Marvil, Laurel, Del.

Claim.—As a new article of manufacture, a ventilated fruit or berry-box, when the same is formed from two or more perforated sheets of pasteboard or thin sheets of wood, arranged and crossing each other at right angles, and are constructed and secured in position substantially as described.

119,873.—COMBINED TABLE, BUREAU, CUPBOARD, AND SINK. — Martha J. Miller, Bloomington, Ill.

Claim.—The combination of the frame A, sink B, top C, drawers D D, cupboard E with door G, leaves H H', and the hinges I, all constructed and arranged substantially as and for the purposes herein set forth.

119,874.—RUDDER ATTACHMENT. — Joshua H. Moore, Deep River, and James B. Clark, Chester, Conn.

Claim.—The longitudinally-divided metal socket composed of stripe A A', provided with interlocking lugs *e e* and ears *g g*, for adjustment and connection of the stripe which receive the rudder-blade B in between them, substantially as specified.

119,875.—DIVIDER. — Charles M. Nichols, West Greenwich, R. I.

Claim.—The dividers constructed with pointed legs of equal length having grooves *c c* arranged in each leg, as described, and provided also with the adjustable clasps *c c* to hold the pens or pencils within the grooves, as herein shown and described, for the purposes specified.

119,876. — MANUFACTURE OF SPLIT NEEDLES. — Charles H. Palmer, New York, N. Y.

Claim.—In the method of forming a split by means of two saws arranged to cut from opposite surfaces toward each other, the arrangement of the saws upon their arbors relatively to each other, so that the teeth of one saw shall interlock with those of the other, in the manner described, in virtue of which arrangement I am enabled to made a clear and continuous cut entirely through the material.

119,877.—CAR-AXLE BOX.—William G. Parr, Normal, Ill.

Claim.—A cover or cap for car-axle boxes, working on a curve and held in place by a rim on the box, in combination with a catch or other fastening on top, substantially as and for the purposes herein set forth.

119,878.—TRACTION-ENGINE. — Robert C. Parvin, Philadelphia, Pa.

Claim.—1. The steering apparatus, consisting of the wheels I I having independent axles, the lever I^2, shaft I^3, toothed-wheel L, and worm L^2, substantially as specified.

2. The endless shoe-bearing band for traction-engines, consisting of the short side plates E', the pivot-bolts *e*, and the long links E encircling at each end said bolts *e*, substantially as specified.

119,879.—PERCUSSION-CAP CARRIER.—Richard Paulson, Washington, D. C.

Claim.—1. A cap-supplying device for sportsmen's use, consisting of a series of cellular spring cap-seats, *n*, arranged in a row or rows on one or both sides of and against a rigid disk, *a*, and in positions, as shown, to be readily applied to the nipple of the arm, essentially as described.

2. The radial section *e* of the cap-seats, having a depth equal to or greater than the length of the caps, and held in rigid contact against a metal plate which forms the backs of the seats, so that the latter will inclose them and shield the caps and prevent their dropping out or loss, and the necessity of outside covers, as described.

3. The sectional disks or spring-arms secured between a rigid central disk-plate, *a*, and two outer disks, *f*, and supported between side arms *c* upon an axle to allow the cap-carriers to turn thereon, as described.

4. The arrangement and combination of the cleaning-pins with the arms of the frame and the cap-holder, as described.

119,880.—MACHINE FOR FITTING AND BORING FELLIES.—William Lawrence Perry, Jonesville, S. C.

Claim.—1. The combination of the arms B B pivoted to the common center P, and the boxes F F, adjustable lengthwise of said arms, substantially as and for the purpose herein set forth.

2. The combination of the race D and its set-screws with the said arms B B, substantially as described, for the purpose of securing them in position.

3. The carrier E containing the forward bearing of the spoke-auger H, and provided with a set-screw, T, the race D, and the sector-like plate C which contains the rear bearing of said auger, the whole being arranged relatively to the boxes F F and arms B B, substantially as and for the purpose herein specified.

4. The combination of the dowel auger-slides S S with the boxes F F, substantially as and for the purpose herein set forth.

5. The combination of the miter-boxes M M with the boxes F F, substantially as and for the purpose herein described.

6. The combination of the gates I I, the abutment pieces K K by which the same are secured, and the set-screws J J with the boxes F F, substantially as and for the purpose specified.

7. The arrangement of the dowel-auger slides S S, the miter-boxes M M, gates I I and their abutment pieces K K relatively to each other on the boxes F F, substantially as described.

119,881. — SMOKE-CONSUMER. — Charles Plumb, Montreal, Canada, assignor to himself and Robert Mitchell, same place.

Claim.—1. The process described of consuming smoke, consisting in causing the smoke to revolve over the furnace by means of an eddy, created substantially as described.

2. The pipe *f*, nozzle *g*, lip *i*, steam or air-pipe *b*, or their equivalents, arranged for operating substantially as and for the purpose set forth.

3. The adjustable lip *i*, in its parts of projection i^1, set-screw i^2, depression i^3, arranged and working substantially as set forth.

4. The nozzle *g*, with elongated opening *h*, arranged and operating with a blast, substantially as set forth.

119,882.—FRAME FOR SCHOOL-DESKS AND SEATS.—John L. Riter, Brownsville, Ind.

Claim.—The improved supports for a combination school-desk and school-seat, consisting of the S-shaped strip of wood A and slightly-curved strip B, bent to the forms described, and notched at *a a'*, and fitted together, substantially as specified.

119,883.—PREVENTING THE CLOGGING OF OIL-WELLS.—Edward A. L. Roberts, Titusville, Pa.

Claim.—The mode of cleaning oil-wells which have become clogged, by the use of heated salt-water, substantially as and for the purposes hereinbefore set forth.

119,884. — PROCESS OF PREVENTING THE CLOGGING OF OIL-WELLS.—Edward A. L. Roberts, Titusville, Pa.

Claim.—The mode hereinbefore described of preventing the clogging of oil-wells by extracting the benzine from the oil at the well and returning it into the well, substantially as and for the purposes hereinbefore described.

119,885, antedated September 25, 1871.—CHIMNEY-COWL. — John G. Roth, New York, N. Y.

Claim.—A ventilator or chimney-cap having funnel H, in combination with funnel K and flange B, and constructed as above described, arranged and operating substantially in the manner and for the purposes set forth.

119,886. — PROCESS OF OBTAINING SUGAR FROM MOLASSES.—Julius Schroeder, Petschek, Austria, assignor to L. Weinrich, same place.

Claim.—1. The process herein described, of obtaining sugar from boiled-sugar mass by exposing it in a chilled and molded condition to centrifugal action in a centrifugal sugar-machine, substantially as specified.

2. In combination with the treatment of the mass, as described in the preceding clause of the claim, the use of warm water in a mist or spray as produced by a mixture of air and steam within the revolving cylinder of the centrifugal machine, essentially as and for the purpose herein set forth.

119,887.—LAMP.—Ira W. Shaler, Brooklyn, N. Y.

Claim.—1. In lamps of otherwise ordinary or suitable construction, the combination, with a tubular wire-gauze wick provided with a wire-gauze diaphragm, as described, of a surrounding tube forming part of the cap or cover of the fluid-vessel, said tube inclosing the wire-gauze wick up to or about its diaphragm, substantially as herein shown and set forth.

2. The combination, with the tubular wire-gauze wick, its diaphragm, and surrounding tube, of a wire-gauze diaphragm, closing the orifice of the fluid-vessel around the wire-gauze wick, substantially as shown and described.

119,888. — UMBRELLA. — Josiah Shepherd, New Britain, Conn.

Claim.—A re-enforcing rib, connected at one end to a rib of an umbrella and at the opposite end free, but self-affixing to the rib and stretcher, all substantially as set forth.

119,889.—STEM-WINDING WATCH.—Harry R. Smith and Rufus Folsom, Cincinnati, Ohio.

Claim.—1. In combination with the mainspring wheel and hand-setting wheel of a stem-winding watch, an intermediate wheel, rotating in a plane parallel to the watch-plate, and shiftable in a direction perpendicular thereto, for the purpose of transmitting motion to either the winding or setting mechanism, as desired.

2. The described arrangement of pusher D E F, double-wheel G H I, (whose upper member I gears with the mainspring wheel,) and shiftable pinion N

gearing with the member G, and with the cannon pinion-wheel, in the described combination with the shifting-devices M, m, m', m'', L, K, P, and Q, for the purpose set forth.

119,890.—Lamp-Chimney Cleaner.—Isaac Smith, New York, N. Y.

Claim.—The lamp-chimney cleaner, made of lamb-skin, a body of shellac, and a wire handle, prepared and attached together in the manner substantially as set forth.

119,891.—Office-Time Indicator.—James S. Smith, Middletown, Conn.

Claim.—In an office-time indicator, the movable and turnable buttons A B C, &c., adapted to be connected and disconnected and changed to various positions in the slot m, as and for the purposes specified.

119,892.—Broiler.—Othniel J. Smith, Wauwatosa, Wis.

Claim.—The double reversible broiler herein described, consisting of the sections A A' having bars B B, and respectively provided with the inclined and centrally-divided lug F, and the dovetailed stud E, and with the stud connections d' d'', substantially as specified.

119,893.—Fire-Kindler.—Rachel P. Smith, Dubuque, Iowa.

Claim.—The combination of the metallic can C, rod B, fire-kindler compound A of the ingredients substantially as described, secured by the wire-basket a, and the handle D forming the stopper for the can, all constructed and used substantially as set forth.

119,894.—Book-Binding.—David M. Smyth, Orange, N. J. assignor, by mesne assignments, to Henry G. Thompson, Melford, Conn.

Claim.—The manner, substantially as herein described, of connecting the sheets constituting a book by means of the interlacing-thread and the series of locking-threads interlocked with each other and with the series of sheets, substantially as and for the purpose set forth.

119,895. — Device for Tapping Gas and Water-Pipes.—Leander Spaulding and Elias E. Guy, Norfolk, Va.

Claim.—As an improvement in machines for tapping gas and water-pipes and water-mains, the improved tool, constructed as shown, consisting of the set-screw J, drill-chuck I, yoke H, drill G, stuffing-box K, sleeve L, cock F, clamp A, fitting B, and clamping-screws C.

119,896. — Tonguing-and-Grooving Machine. — Deloy F. Sutton and Bernard Meilink, Toledo, Ohio.

Claim.—1. The oscillating heads I I carrying the parallel shafts m m, upon which the male and female cutter-heads are placed, substantially as and for the purposes herein set forth.

2. The combination of the oscillating heads I I, shafts m m, cutter-heads J J, and double wedge-shaped slide K, all substantially as and for the purposes herein set forth.

3. The combination, with the double wedge-shaped slide K, of the connecting-rod p, arm r, shaft L, and lever M, all substantially as and for the purposes herein set forth.

4. In combination with the main frame A and carriage B, the adjustable guide-bar g, and set-screws f f, substantially as and for the purposes herein set forth.

5. The combination of the posts t t', slide v, angular lever H, lug s, and swinging bearing-bar d, all substantially as and for the purposes herein set forth.

119,897.—Railway-Car Coupling.—Joseph B. Tracy, Lincoln, Del.

Claim.—The combination, with the bumper A, of the angular piece B having pins b b' and rack-bar C, and the link-pawl D, when arranged as and for the purpose set forth.

119,898.—Churn.—Alvah Traver and Philip Nichols, Troy, N. Y.

Claim.—The combination of the box A, uprights H H, cross-bar I, crank-shaft C D resting on the friction-wheels M M, the connecting-rods a a' a'', dasher-rods b b' connected to the dasher E provided with a crucial slot in its center, and the dasher-rod b' provided with the crucial-cross dasher F, which operates through the dasher E, all constructed as set forth.

119,899. — Electro-Magnetic Motor.—Maurice Howell Utley and Alexander Ross, Montreal, Canada.

Claim.—1. Two sets of magnets, d d', each having their poles in a pair of soft-iron plates, d², and all arranged upon a brass cylinder, e', combined with corresponding sets of magnets f f', having their poles in soft-iron plates f², and arranged upon rings b b', whose circumference is greater than that of cylinder e', so that, when the magnets d and f are opposite, the magnets d' and f' are intermediate, as and for the purpose specified.

2. The insulating material g on shaft e, the two pieces of metal g' g² not touching each other, the wire e, and pair of springs h h', combined and arranged as a compound commutator, in the manner described, and for the purpose specified.

3. The plate i', provided with studs M M', N N', and P P' arranged thereon at equal distances apart and from the center k, and the pair of plates k' fixed on insulating arms l, when all are applied to springs h h and the negative and positive poles of the battery, to form an improved switch, as and for the purpose specified.

4. The magnets d d' and f f', having their poles in soft-iron plates d² f², the compound commutator e g g' g² h h' e, the switch i M M' N N' P P, k k' l, the governor q q' r r' r² s² s, and the ordinary condenser, combined and arranged in an electrical motor, as and for the purpose specified.

5. The governor, composed of spindle q, cylinder q², rings r r', springs r² and s², and weights s, arranged and operating substantially in the manner and for the purpose described.

119,900. — Punching-Machine. — William H. Van Cleve, Ypsilanti, Mich.

Claim. — The combination of the bed-plate C, punch A, stripper D, and spring B, substantially as and for the purpose specified.

119,901. — Dredging-Machine.—Israel D. Vandecar, Chicago, Ill.

Claim. — 1. The combination of the scoops A, bails B, arms C, shaft D, and braces U, when constructed and arranged substantially as shown and described.

2. In combination with the scoops A, bails B, arms C, and shaft D, the jointed connecting-rods F F and sliding head H, substantially as described.

3. In combination with the scoops A, bails B, arms C, and shaft D, the rubber blocks S and T, as and for the purpose shown and described.

4. The combination of the pulley K, connecting-links L, hooks J, sliding block I, and cord N, constructed and arranged as and for the purposes set forth.

5. The combination of the sliding block I, the pulley Q, and chain O, constructed and arranged as described.

119,902.—Method of Removing Submarine Rocks.—Alexey W. Von Schmidt, San Francisco, Cal.

Claim.—1. The method of entering a rock partially or wholly submerged by means of a cylinder composed of suitable material and the connection therewith formed in the manner substantially as shown and described.

2. The method of removing the rock by forming therein a chamber or cavity of sufficient capacity to receive the shell thus formed, supporting said shell by stone pillars during the excavating process, afterward substituting for them wooden supports, charging the cavity with blasting agents, filling the cavity with water as a tamp, and then igniting the explosive agents, all substantially as herein fully described and shown.

119,903. — Drier. — Charles H. Wakelee, San Francisco, Cal.

Claim.—1. The box D with its inclosed coiled pipes e, wire-gauze f, and opening g, in combination with the chamber A and stack H, substantially as and for the purpose above described.

2. The connecting-lever m, in combination with the weighted bell-crank n pivoted at o substantially as and for the purpose above described.

3. An apparatus for desiccating purposes, having the chamber A, horizontally-moving endless skeleton band B, heating-box D constructed as described, stack H, and automatically-feeding hopper I, all combined and arranged as above specified.

119,904.—Cultivator.—Henry Weld, Black Walnut, Ill.

Claim.—The combination of the double-tree C, single-tree d, the lever e, the L-shaped adjusting-plates e, and the plows E, all mounted upon the beams A and arranged to operate as set forth.

119,905. — Insect-Trap. — Thomas Wier, Lacon, Ill.

Claim.—An insect-trap, constructed of piece a grooved and fastened together substantially as shown and described.

119,906.—Boot for Horses' Hoofs.—Romeyn Williams, Philadelphia, Pa.

Claim.—The combination of the belt B, of leather or other pliable material, provided with pad or pads H, inner projecting pin G, straps C C', and buckle D, and the steel band E encircling the exterior of the strap B, all constructed substantially as shown and described, and for the purposes set forth.

119,907. — Carriage-Spring. — David D. Wisell, Zanesville, Ind.

Claim.—The spring-leaves A B C, provided with elongated slots a a' and holes b b', and connected together by means of headed rivets d d' covering the slots, substantially as and for the purposes herein set forth.

119,908.—Cut-off for Steam-Engines.—William Wright, New York, N. Y.

Claim.—The combination of the cams K¹ K² on the shaft H with the valve-stems R¹ R², the toes L¹ L², and the intermediate pieces N N, with their oblique sides corresponding with the oblique sides n n of the cams, for the purpose as set forth.

119,909. — Horse-Power. — William R. Wright, Barnwell county, and David A. Warnock, Beaufort county, S. C.

Claim.—1. In combination with the lengthened pinion I and the mechanism driven by the same, the shaft E having a uniform size within and outside of its bearings, and the spur-gear F attached to said shaft, substantially as and for the purpose specified.

2. The construction and relative arrangement within the supporting-frame of the shafts E, G, and K, the gear-wheels F and H, the pinions I and L, and the band-pulley M, substantially as and for the purpose shown.

119,910, antedated September 25, 1871.—Machine for Cutting Stone. — Hugh Young, Stamford, Conn., and James L. Young, New York, N. Y.

Claim.—1. The frame of a diamond-tool stone-cutting machine, consisting of the horizontal or inclined part P P' P P'', upon which is mounted the diamond-tool or tools, and the mechanism imparting motion thereto, of the vertical slide pieces S S S S, between which the platform for receiving the stone to be cut is guided in its perpendicular movement, and of the supports W W W W, between which the stone to be cut may be passed entirely under the machine, substantially in the manner and for the purpose set forth.

2. The combination of the frame P P P' P'', arbor A, pillow-blocks a a, wheels M M, and pitmen C C, with the saw-sash frame F F' F F'', and blade or blades B, substantially as and for the purpose specified.

3. The combination of the arbor A, cams C', cam-yoke C'', rods t'', levers t', cam-levers t, boxes G', and slides G, or substantially the same, with the saw-sash frame F F' F F'', the whole arranged so as to operate in the manner and for the purpose herein set forth.

4. The variable feed-motion mechanism, consisting of the arrangement of the platform T, screws N, wheels D, levers d, dogs d', bars d'', and rods e, connected to the adjustable wrist j, the graduated sector-levers J, arbor H, lever E'', eccentric yoke E', eccentric E, and arbor A, when used in combination with the frame or sash F F' F F'', and operating substantially as and for the purpose specified.

REISSUES.

4,579. — Machine for Cleaning and Scouring Rice, Coffee, and other Grains.—Wilson Ager, Washington, D. C.—Patent No. 18,177, dated September 15, 1857; extended seven years.

Claim.—The method of cleaning and scouring rice, coffee, and other grain by means of the mechanism herein described, consisting chiefly of the shell S provided with the cavities p and ridges r on its interior surface in combination with burr-cylinder B, provided with similar cavities and ridges p' r' upon its outer surface, as specified and shown, constructed and arranged to operate as described, whereby the grain after being hulled is subjected with the husk to an alternate packing and loosening action while being cleaned and scoured, resulting from the peculiar form and dress of the scouring surfaces above described, substantially as set forth.

4,580.—Harness-Trimmings.—John Bauer, Newark, N. J.—Patent No. 116,536, dated July 4, 1871.

Claim.—A terret, ring, or similar article of harness-trimmings lined with a cast-metal ring or piece, D, fitting the interior of said terret, or ring, substantially as and for the purpose herein specified.

4,581.—Cultivator.—Theophilus F. Bertrand and Peter Sames, Rockford, Ill.—Patent No. 60,916, dated January 1, 1867; reissue No. 4,309, dated March 28, 1871.

Claim.—1. The cross-piece E, attached to tongue D and bracket a, substantially in the manner and for the purpose described and shown.

2. The standards c and c', having pulleys x and x', when arranged upon and attached to the axle C, in combination with the chains and rods 7 and 8, and the hinged inclined auxiliary frame H and H', arranged to operate substantially as shown and described.

3. The curved notched bars d d', secured at their upper ends to the standards c and c' by rods 5 and

6, and to the cross-piece E by rods 3 and 4, in the manner and for the purpose set forth.

4. The combination of two supporting-levers F and F', with their spring-bolts and curved notched bars *d* and *d'*, with the hinged inclined auxiliary frame H and H', when constructed and arranged to operate in the manner shown.

5. The adjustable foot-rest M, notched standards L, and holding-wedge 9, when constructed and arranged to operate together in the manner and for the purpose described.

6. Adjusting the auxiliary frame H and H', with the plow-standards, to different widths, by means of the arched coupling-bar K and screw staple-clamps *k*, as described and shown.

7. The chains or rods 7 and 8, when their pendent ends are connected to bearings or supports that project outside of and are not affected by the adjustment of the beams H and H', as described and shown.

8. The screw-eyebolts P, and socket-plate or block Q, in combination with bed-plate R, constructed and arranged to operate as shown.

9. The standard O, screw-eyebolt P, socket-plate or block Q, and bed-plate R, in combination with beams H and H', substantially as shown and described.

10. The safety-pin *i*, in combination with the standards O, screw-eyebolt P, rings *l*, brace-rod *k*, and auxiliary frame H and H', in the manner and for the purpose described.

11. The combination of the rigid frame, consisting of the tongue D and axle C, the hinged auxiliary frame H and H' carrying the plows, and their means of adjusting the same laterally, consisting of the arched bar K and screw-staples *k*, with the foot-supporters M and M, and the lifting and holding devices supported upon the tongue and axle, in the manner and for the purpose shown and described.

4,582.—HARVESTER.—E. D. Buckman, Philadelphia, Pa., and Samuel A. Sisson, Hoosick Falls, N. Y., executors of Samuel L. Allen, deceased, assignors to J. Russell Parsons.—Patent No. 16,957, dated April 7, 1857; extended seven years.

Claim.—1. The combination of the following devices or elements, viz.: First, a draft or upper frame; second, a lower frame, free to rise and fall, and supporting the finger-bar and cutting apparatus; third, a device to which the power of the team to draw the machine is applied, and which is movable forward and backward relatively to the draft-frame; fourth, a flexible connection connected at one end with the lower frame, and at the other end with the said movable device; all these elements of a machine being and operating in combination, substantially as described.

2. In combination with the four devices or elements claimed in combination in the first claim, an apparatus, substantially as herein described, whereby the driver can press down the lower frame when mowing matted grass.

4,583.—MECHANICAL MOVEMENT FOR SEWING AND OTHER MACHINERY. — James Hanley, New York, N. Y.—Patent No. 18,845, dated December 15, 1857.

Claim.—The employment of a roller, or equivalent, so constructed and arranged that it shall be free to revolve with or be carried away from the balance or driving-wheel of a machine when moved in the proper direction, and to impinge upon or jam against the periphery of the wheel by being forced into or upon an inclined surface or recess, substantially as described, and for the purpose specified.

4,584. — WAGON-AXLE. — William Arnold Lewis, Chicago, Ill., assignor to Hollow-Axle Manufacturing Company.—Patent No. 108,607, dated October 25, 1870.

Claim.—1. A wagon axle made from tubing by swaging taper spindles upon the ends.

2. The combination of the clip *m*, bolts *o*, king-bolt *i*, and axle *a*, constructed and arranged substantially as and for the purposes set forth.

3. The combination of the collar *c*, hinge *r*, and axle *a*, constructed and arranged as and for the purposes set forth.

4,585.—Division A.—BASE-BURNER.—Dennis G. Littlefield, Albany, N. Y.—Patent No. 30,333, dated October 9, 1860; antedated July 3, 1860; reissue No. 1,303, dated April 22, 1862.

Claim.—1. The combination of the cold air-chamber H, the perforations S S S S, the register S', and the damper R, as described.

2. Combining, in hot-air furnaces, the shell or covering L, the register S' for opening and closing the top of the shell, as set forth, the perforations S S S S, opposite or near the fire-pot, and the cold-air channel H, substantially as above described.

4,586.—Division B. — GRATE. — Dennis G. Littlefield, Albany, N. Y.—Patent No. 30,333, dated October 9, 1860; antedated July 3, 1860; reissue No. 1,303, dated April 22, 1862.

Claim.—The mill-grate, constructed and operating substantially as and for the purpose described.

4,587. — PISTON-ROD PACKING. — William Hartley Miller, Philadelphia, Pa.—Patent No. 73,454, dated January 21, 1868.

Claim.—1. In a fibrous packing, composed of a series of concentric braids, applying or introducing the lubricant during the course of construction, in distinction to saturating it after all the braid has been applied.

2. As a new article of manufacture, a piston-packing, composed of a series of concentric layers of fibrous material with suitable lubricants interposed or laid on each braid before the succeeding braid is woven or braided thereon, substantially as described.

4,588. — INDUCTION-COIL APPARATUS AND CIRCUIT-BREAKER. — Priscilla Webster Page, Washington, D. C., administratrix of the estate of Charles Grafton Page, deceased, assignor to The Western Union Telegraph Company, New York, N. Y.—Patent No. 76,654, dated April 14, 1868.

Claim.—1. An induction-coil apparatus, consisting of a primary and secondary circuit, when said secondary circuit is many times—that is to say, two, three, or more times—the length of the primary circuit, having the connections so arranged that shocks, sparks, and electrostatic results may be obtained from the secondary circuit alone, or from the combined primary and secondary circuits, or from the primary alone, or from portions of either circuit, substantially as set forth.

2. The combination of an automatic circuit-breaker with either a primary coil alone, or a primary and secondary coil combined, substantially as set forth.

3. The combination of a mechanical circuit-breaker with a primary and secondary coil combined, substantially as set forth.

4. The combination of both a mechanical and automatic circuit-breaker with a primary and secondary coil combined, substantially as set forth.

5. The combination of a primary and secondary coil, inclosing an electro-magnet, with an automatic circuit-breaker, substantially as set forth.

6. The combination of a primary and secondary coil, inclosing a compound or divided electro-magnet, with an adjustable automatic circuit-breaker, substantially as set forth.

7. The combination of a primary and secondary coil, inclosing a compound electro-magnet, with an attached hammer circuit-breaker, substantially as set forth.

8. The spark-arresting circuit-breaker, whether used with a primary coil alone or a primary and secondary combined, substantially as set forth.

9. The spark-arresting circuit-breaker, whether used with a coil or coils, inclosing an electro-magnet, substantially as set forth.

10. The spark-arresting circuit-breaker, whether attached to or independent of the primary or primary and secondary coils, substantially as set forth.

11. The adjustment of the retractile force of an automatic circuit-breaker, substantially as set forth.

12. The combination of an electro-magnet, armature, and adjustable retractor.

13. Adjusting or regulating the length of vibration of the armature of an electro-magnet by means of a set-screw or any mechanical equivalent for substantially the same purpose, substantially as herein set forth.

14. The employment of one electro-magnetic instrument to open and close the circuit of another electro-magnetic instrument, using either one battery for both or separate batteries for each, substantially as set forth.

15. The employment of separate and independent batteries to operate an electro-magnetic circuit-breaker and the circuit which is broken by it, substantially as set forth.

4,589. — TRUSS-SPRING. — John W. Riggs, Brooklyn, N. Y., assignor of one-half interest to John J. Diefendorf.—Patent No. 22,674, dated January 18, 1859.

Claim.—As a surgical appliance, a steel spring covered with vulcanized India rubber.

4,590.—STREET-SPRINKLING CART.—Leonhard Rodenhausen, Philadelphia, Pa.—Patent No. 67,805, dated August 13, 1867.

Claim.—1. In a sprinkling-cart, the valve F, located at the junction of the eduction-pipe and sprinkler, substantially as and for the purpose described.

2. A sprinkling-cart having the following characteristics: a closed body, A, having an inclined bottom, *b'*, induction-pipe C, eduction-pipe G, sprinkler H, and a suitable valve, substantially as and for the purpose described.

4,591.—MANUFACTURE OF ARTIFICIAL ASPHALT ROCK.—Archibald B. Vandemark, Jersey City, N. J.—Patent No. 117,946, dated August 8, 1871.

Claim.—1. An artificial asphalt rock, made substantially in the manner herein described.

2. Combining bitumen and paraffine oil, or their chemical equivalents, and calcareous substances, substantially in the manner and about in the proportions herein set forth.

DESIGNS.

5,307.—SUGAR-TONGS.—Joel Hall, 2d, Wallingford, Conn., assignor to Hall, Elton & Co., same place.

Claim.—The design for sugar-tongs, substantially as described and shown.

5,308.—SASH-HOLDER.—Alexander W. Lawrence, Raleigh, N. C.

Claim.—The design for a window-sash lock and holder, as herein shown and described.

5,309. — FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Lyon's Farm, N. J., assignor to Edward C. Sampson, New York city.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

5,310. — FLOOR OIL-CLOTH PATTERN.—Charles T. Meyer, Lyon's Farm, N. J., assignor to Edward C. Sampson, New York city.

Claim.—The design or pattern for floor oil-cloths, carpets, and other fabrics, shown and described.

5,311. —FLOOR OIL-CLOTH PATTERN. — Charles T. Meyer, Lyon's Farm, N. J., assignor to Edward C. Sampson, New York city.

Claim.—The design or pattern for floor oil-cloths, carpets, or other fabrics, shown and described.

5,312.—TABLE-CASTER.—Daniel Sherwood and George D. Dudley, Lowell, Mass., assignors to Edward P. Woods, Daniel Sherwood, and Cyrus H. Latham, same place.

Claim.—The design for a table-caster or stand, substantially as shown in the accompanying drawing.

5,313. — SEWING-MACHINE COVER.—John Wilson, Boston, Mass., assignor to Wilson & Hughes, same place.

Claim.—The design for a sewing-machine cover in five pieces, each of which is provided with an imitation panel, substantially as shown and described.

ISSUE OF OCTOBER 17.

PATENTS.

119,911, antedated September 30, 1871.—STOVE-PIPE DAMPER.—James Ash, Sterling, Ill.

Claim. — The washer or sleeve B, rod *b*, and thumb-screw *b'*, when applied to a stove-pipe damper, as and for the purpose specified.

119,912.—FRUIT-CAN TONGS.—Abel T. Atherton, Lowell, Mass., assignor to himself and Fitz Henry Winter, same place.

Claim. — The tongs, for handling and holding fruit-cans and jars, having the pivoted vertically self-suspending jaws B B with the concave India-rubber or soft frictional inner surfaces, substantially as herein specified as a new article of manufacture.

119,913.—STEAM-ACTUATED CAR-BRAKE.—John T. Bassett, Galesburg, Ill., assignor to himself, John Bassler, and Marcellus S. Matthews, same place.

Claim.—1. The eduction J, operated in the manner substantially as described, by pipes D, G, H, and I, and valves L and M, for the purpose of allowing the steam or air to escape from each cylinder of the steam or air-actuated car-brakes, substantially as set forth.

2. The valve devices D G H L M, when interposed between and arranged to operate with the brake-cylinder A B and pipe E, for the purpose specified.

3. The combination of pipes D, G, H, and I and valves L M with the brake-cylinder A B and eduction J, substantially as and for the purpose specified.

119,914. — HARNESS-TRIMMING. — John Bauer, Newark, N. J.

Claim. — In covered harness-mountings, the groove G for reception of the sewed seam E of the covering D, and pressing the seam E into said groove G below or even with the facial surface of the covering D of harness-mountings, substantially as and for the purposes hereinbefore set forth.

119,915.—PAPER-BAG MACHINE.—Benjamin S. Binney, Somerville, Mass.

Claim.—1. The combination of the dovetail plate d and supporter E with the adjusting-screws a b, box g^3, and screws e^2 f^2, the whole being combined, arranged, and constructed as and for the purposes hereinbefore set forth.

2. The sliding doctors M M, arranged as and for the purpose above set forth.

119,916.—MACHINE FOR CUTTING SCREWS. James M. Carpenter, Pawtucket, R. I.

Claim.—The combination of one or more cutters for forming a tapering thread on the point of the screw with the dies for forming the thread upon the body, substantially as described.

119,917, antedated September 27, 1871.—PAPER-FILE.—Case Chapman, Chicago, Ill.

Claim.—In combination with the front and back plates A A′, constructed as described, the supports B with side guides and turned-down ends formed thereon, the whole constructed and applied substantially as and for the purposes set forth.

119,918.—COMBINATION SCISSORS.—Edson Clapp, Boston, Mass.

Claim.—The combination, with a pair of scissors of the offset or bar g, the cutter-block A, and cutter f, arranged and operating as herein shown and described.

119,919.—HYDRAULIC MAIN OF GAS-WORKS. Charles Collier, Selma, Ala.

Claim.—1. The dry-main or receiver G and the arch-pipe H, in combination with the hydraulic main C, substantially as herein shown and described.

2. In combination with the above, the valve I with its pipe-connections J J′ with the dip-bridge and stand-pipe, the rods i k, lever j, and weights m and n, or their equivalents, for operating the same in the manner as and for the purposes herein set forth.

119,920. — LANTERN. — Michael B. Dyott, Philadelphia, Pa.

Claim.—1. The arrangement of a readily-removable fountain-reservoir, A, of a lantern, chandelier, or lamp, at any suitable point above the horizontal plane of combustion, so as to supply the contained fluid to the burner or burners by pressure of the said fluid, when the said fountain-reservoir is distinct and readily-removable by lifting, at any time, from the conduit-tube or tubes between it and the burner or burners below, as and for the purpose hereinbefore set forth and described.

2. The combination of the conduit-tube or tubes b'', the respective supply and stop-off cock or cocks c', and the burner or burners C, with the top or roof B of a lantern, irrespective of the distinct and independently-removable fountain-reservoir A which supplies the said tube or tubes and burner or burners, as and for the purpose hereinbefore set forth and described.

3. The arrangement of the inverted conical annular reflector D above the burner or burners C of a lantern, in combination with the roof B, the perforated hot-air flue d', the deflecting plate b^6, and the cold-air chamber which is between the said deflecting plate and the fountain-reservoir A when in position, as and for the purpose hereinbefore set forth and described.

4. The construction and arrangement of the perforated cylinder d', in connection with the central opening in the reflector D, and the open hot-air space or chamber between the said reflector and the partition b^6 above it, substantially as and for the purposes hereinbefore set forth.

5. The capacious opening g' in the side of the collar G of a lantern, in combination with the inside concentric slide g'', when the said parts are constructed and arranged substantially as and for the purposes hereinbefore set forth and described.

6. In combination with the slotted cylinder or mouth and throat of the fountain-reservoir A, the spring a', and the catch-projection or pin a'' in the valve-stem a^3, arranged to operate in relation to each other, as and for the purposes hereinbefore set forth and described.

119,921.—HEMMER FOR SEWING-MACHINES. Henry Allyn Ellis, Greenbush, assignor to himself and George S. Weaver, Albany, N. Y.

Claim.—1. The hooked strip C and right-angular stripe D J in combination with a holder, B, substantially as and for the purposes described.

2. The strips C, D, and J, constructed substantially as described, and adjustably connected to the holder B.

3. The combination of a folding and guiding tongue, J, a retaining-hook, c, and a turning device, b, substantially as described.

4. The curved bridge A on the holder B, arranged so as to lie in front of the turner, in combination with the folding-tongue J, substantially as described.

119,922. — TRACTION-WHEEL. —George W. Fitts, Oberlin, Ohio.

Claim. — A traction-wheel, constructed and arranged substantially as and for the purposes herein set forth and described.

119,923.—PROPULSION OF CANAL-BOATS.—Patrick Henry Fontaine, Reidsville, N. C.

Claim.—The offset blocks i on chain g, in combination with the pivoted poles C and supports F, substantially as described.

119,924.—COUNTERPOISE GUN-CARRIAGE.—John G. Foster, Boston, Mass.

Claim.—1. The carriage D having the gun mounted to rise and fall therein, as described, and provided with the pulleys over which cords pass for elevating and lowering the gun, as set forth.

2. In combination with a gun mounted as above described, the bars P or their equivalents, whereby the gun can be supported independent of the counterpoise, substantially as and for the purpose set forth.

3. The combination of the gun-carriage D and the chassis having the shafts B with their sliding drums mounted thereon, and arranged to operate substantially as described.

4. The combination of the counterpoise K and its frame L having the device for loosening the chains M applied thereto, and the shafts B having the sliding drums mounted thereon, with the supports P and the gun F arranged to move up and down, all arranged to operate substantially as described.

5. The counterpoise K made in the form of a shield, and arranged to protect the gun and men, substantially as described.

6. In combination with the carriage D having a gun mounted thereon, as described, and the shafts B with their sliding drums, the counterpoise or weight O, whereby the gun can be operated in case the counterpoise K or its frame is disabled, as set forth.

119,925.—MACHINE FOR MAKING SPIKES.—Morrison Foster, Cleveland, Ohio.

Claim.—1. The adjustable cutters f' and W arranged in relation to the revolving griping-jaws, in the manner and for the purpose specified.

2. The combination of the cam-I with the pointing-rollers m' and m'', and their spindles q and q', and jaws k k', as and for the purpose set forth.

3. The combination of the frame B, pin g, slotted yoke e, cam b, cross-head d, and header e, as and for the purpose described.

4. The guides or arms A, in combination with the cross-head d and shaft e, to keep the header and heading die pointed toward the shaft e, substantially as described.

5. The combination of the segment J, bar i, and the revolving griping-jaws k k', arranged and operating in relation to one another as described.

6. The combination of the clearer r with the jaws k k' and slotted plate t', arranged and operating as described.

7. The guard or shield S, constructed as described, and operating in connection with the griping-jaws, in the manner and for the purpose specified.

119,926. — COMBINED BREAD-BOARD AND DOUGH-TRAY.—Bennington Fulton, Pulaski, Iowa.

Claim.—A bread-board and dough-tray, provided with a raising-chamber, constructed, arranged, and combined as hereinbefore described.

119,927, antedated September 29, 1871.—TOY.— Henry N. Gallagher, Worcester, Mass.

Claim.—A toy, composed of a moving portion, whose weight is supported wholly above a track on which it runs, and is retained by the guards D D and clasps E E, and a track with handles so placed as to allow the moving portion to pass freely, when constructed and operating in the manner and for the purpose above described.

119,928. — SPARK-ARRESTER FOR LOCOMOTIVES.—Benjamin Garvin, Oshkosh, assignor of one-half his right to Henry Hull, Fond du Lac, Wis.

Claim.—1. The conical deflector E, constructed with an annular plate, I, as described, for the purpose specified.

2. In a locomotive smoke-stack, the combination of two chambers connected by diving-flues, one chamber, J, formed by the annular plate I and the deflector E, being arranged to receive the live sparks from the exhaust, and the other chamber, formed by the diaphragm H, being arranged to receive the spark-cinders after they have passed through the first chamber, substantially as described, for the purpose specified.

3. The diaphragm H, annular plate I, and flues K, in combination with the stack A, deflector E, and smoke-pipe B, substantially as described, for the purpose specified.

119,929.—EVAPORATOR FOR SAP, &c.—William F. Gibson, Ryegate, Vt.

Claim.—The arrangement and combination of the auxiliary fire-place D, flue E, and chamber F with the evaporating-pan A and the main fire-place B, one or more tubes, I, and the smoke-chamber C, arranged substantially as specified.

119,930.—MECHANISM FOR OPERATING SEWING-MACHINES.—Elijah L. Howard, Hingham, assignor to George A. Whiting, Charlestown, Mass.

Claim.—1. The combination of the movable inclined plane K with the pedal H, the frame E, (provided with the arm e or its equivalent,) and the driving-wheel F, to operate with the wheel C, as described, all being arranged and applied together substantially as and for the purpose as set forth.

2. The combination of the brake L and the inclined plane K with the pedal H, the frame E, and the wheel F, to operate with the wheel C, the frame E being provided with the arm e or its equivalent, and all being arranged essentially in manner as shown and explained.

119,931. — FIRE-EXTINGUISHER. — Elias Jones, Pierrepont, N. Y.

Claim.—The combination of the pipe a, receptacle A, pipes c, case B, and funnels C, as specified.

119,932.—BRAKE FOR VEHICLES.—Henry B. Lee, Maryville, Mo.

Claim.—1. The combination of a rub-block and step for vehicles, constructed and arranged as set forth.

2. The combination of the lever D with the connecting-rods C and B, lever b, and rub-block x, as described.

119,933. — WASH-BOILER. — Eli F. Lewis, Winsted Lake, Minn.

Claim.—The boiler A, supporting-rim B, faucet C, and rack E, when combined and arranged as and for the purpose shown and described.

119,934. — COTTON-PRESS. — Lewis Lewis, Vicksburg, Miss., assignor of one-half his right to George M. Barber, same place.

Claim.—In combination with the levers E E, rods F F, follower D, sheaves L L, and windlass H, the ropes or chains J and K, when constructed and arranged substantially as shown, and for the purposes set forth.

119,935.—PENCIL-CASE.—William A. Ludden, Flushing, N. Y.

Claim.—The sleeve s around the cylinder c, and connected with the exterior case t, in combination with the extension r and screws i and o, substantially as and for the purposes set forth.

119,936.—FIRE-EXTINGUISHER. — John H. Manning, Chicago, Ill., assignor to Edwin L. Buttrick, same place.

Claim.—1. The curved pipe F′, provided with faucet J and united to pipe F, as described, whereby the water is discharged into the case in a descending direction, substantially as and for the purpose described.

2. The combination of pipes F, F′, and G, cylinder B, valve D, plate m, and case A, all arranged substantially as and for the purpose described.

119,937.—HARVESTER.—Leander J. McCormick and William R. Baker, Chicago, Ill., assignors to C. H. McCormick & Bro., same place.

Claim.—The combination of the rocking shoe, the rake-post, the extensible sectional brace connecting the rake-post and frame, and the rack, pinion, and detent for adjusting and holding the brace, these members being constructed and operating in combination, substantially as hereinbefore set forth, to enable the driver to rock the guard-fingers without leaving his seat and while the machine is working.

119,938.—CLOTHES-PIN. — Henry Mellish, Walpole, N. H.

Claim.—The prongs of a clothes-pin when consisting of the springs E E in connection with the spring-bars C C, with the elliptical openings B B through them, and the ends of the spring-bars C C, separated at the point D from the body of the pin, substantially as and for the purpose hereinbefore set forth.

119,939. — BREECH-LOADING FIRE-ARM.—George Merrill, East Orange, N. J.

Claim.—1. The extractor-bar E secured to the breech-plug D by means of the collar c, the latter being provided with the incline r for forcing back the firing-pin as set forth.

2. The combination of the sliding breech-plug D, the firing-pin having the eccentric or shoulder h, and the ring or collar c having the incline r thereon, all constructed and arranged to operate as set forth.

3. The sliding breech-plug D in combination with the eccentric firing-pin, and the hammer H arranged in rear of said breech-plug, whereby the end of the firing-pin is thrown out of line with the hammer, and the hammer is cocked by the movements in opening the breech.

119,940. — BREECH-LOADING FIRE-ARM.—George Merrill, East Orange, N. J.

Claim.—1. The ring J applied to the rear end of the barrel and arranged to turn with the extractor A, substantially as described.

2. The combination of the breech-plug C with its groove *s* and spring *e*, and the loose sleeve R with its notch *o* and incline *n*, and the firing-pin *e*, all constructed and arranged to operate as set forth.

3. The combination of the breech-plug C with the extractor-hook A and the ring J, all constructed and arranged to operate substantially as and for the purpose set forth.

119,941.—TOBACCO-PIPE.—Joseph M. Mur, New York, N. Y.

Claim.—As an improved article of manufacture, a tobacco-pipe provided with a separate and detachable ash-cup, *c*, placed loosely between the fire-proof tobacco-bowl B and the outer case or shell A, substantially as and for the purposes shown and described.

119,942.—CONDENSER OR COOLER FOR ALCOHOLIC AND OTHER LIQUIDS.—James R. Neil, Brooklyn, N. Y.

Claim.—The septum *d* between the concave disks *a* and *b* and within the chamber *c*, in combination with the inlet and outlet connections *e* near the center of the disks, and the passage-ways *f f* near the edges of such septum *d*, as and for the purposes set forth.

119,943.—APPARATUS FOR RECTIFYING ALCOHOLIC SPIRITS.—James R. Neil, Brooklyn, N. Y.

Claim.—The rectifying-column, made of chambers united to each other, and each chamber having a convex bottom, *b*, a concave top, *a*, a diaphragm, *d*, with openings around its edges, and a pipe, *f*, leading from one chamber to the other, substantially as set forth.

119,944.—HINGE.—Alfred A. Oat, Philadelphia, Pa., assignor of one-half his right to Charles D. MacQueen, same place.

Claim.—The pawl D pivoted to an inclosed recess, S, formed in the leaf L′ of the hinge, and provided with a spring, C, pin N, and sliding bolt T, in combination with the ratchet R on the leaf L, all constructed and operating substantially as and for the purpose described.

119,945. — MACHINE FOR MAKING BLIND-HINGE HOOKS. — Galen Orr, Needham, Mass.

Claim.—In combination with the jawed dies *a b* provided with mechanism for operating on one of them, as described, the grooved roller *c* and its slides I N provided with mechanism for actuating them, substantially as set forth, so as to move the roller with reciprocating vertical and horizontal movements in manner and with respect to the dies, and for the purpose or objects as explained.

119,946.—APPARATUS FOR THE MANUFACTURE OF CHOCOLATE-DROPS AND OTHER CONFECTIONS.—Sanford A. Parker, Cambridge, Mass., assignor to himself and Frederick G. Cass, same place.

Claim.—1. The frame C with its wires *d d*, operating substantially in the manner and for the purpose set forth.

2. The stripper G with its division-plates *l l* and slots *m* or equivalent device for holding down the wires *d d*, in combination with the frame C and its wires *d d*, operating substantially in the manner and for the purpose described.

119,947.—FILE.—Isaac N. Patten, Memphis, Tenn.

Claim.—As an improved article of manufacture, a flat file, whose teeth have the strike and dip, as described and shown, and whose ends terminate in tangs and handles, as set forth.

119,948.—COMBINATION LOCK.—George H. Peacock, Webster, N. Y.

Claim.—1. The bolt A having the incline X, and the lever consisting of the cross-plate C and arms D, in combination with the finger-bars E E E and E′, substantially as and for the purpose set forth.

2. The bolt A having the incline X, spring B, cross-plate C, arms D, and guards F, in combination with the finger-bars E E E and E′ provided with slots G G, shoulders H H, and indentures K, substantially as and for the purposes set forth.

119,949.—COOKING-STOVE.—John S. Perry and Andrew Dickey, Albany, N. Y.

Claim.—Combining with the hearth of a stove removable ash-pans, one of said pans being seated within the other, and the uppermost pan having a removable vibrating grated bottom, substantially as and for the purposes described.

119,950.—CORN-PLANTER.—Francis A. Ramey and Ransler R. Cross, Woodstock, Va.

Claim.—1. The hooked cams N N′, the latter adjustable, and both constructed and arranged, as described, in combination with the slides *d d′*, arms *e e′*, rocking-shafts D D′, studs *i f*, lever *y*, stop *y′*, the bar D′, and springs *s s′*, all substantially in the manner and for the purpose described.

2. The combination of the levers *b′ b′*, notched standards *b*, independent beams F F, shovels G G′, coverers *q*, beams J, seed-tube *f′*, and the seed-dropping mechanism, all constructed, arranged, and operating as described.

119,951.—SHIFTING RAIL FOR BUGGY-TOPS.—John F. Regan, Chicago, Ill.

Claim.—The wooden shifting rail for carriage-seats, constructed as described, and attached to the back of the seat so as to bear thereon at all points, substantially as and for the purposes specified.

119,952. — SAP-BUCKET COVER. — Daniel Smith, Gilsum, and Elbridge Smith, Keene, N. H.

Claim.—1. The wire-fastening D, clasping or encircling the spout, on which it is held by a cam, H, or by the elasticity of the wire, and hooking into the cover by the bent extremities F F, substantially as and for the purpose described.

2. The cover A and the wire D, when used together, as and for the purpose described.

119,953.—DISH-WASHER.—William Linton Thompson, Stanstead, Canada.

Claim.—The cylindrical dish-holder H with the floats B, as described, placed at different angles, in combination with the vessel I and cover G, as and for the purpose specified.

119,954.—HORSE-POWER.—John Valentine, Buffalo, N. Y.

Claim.—1. The bridge-tree B provided with socketed arms, combined with the central shaft H and toothed rim A cast with hubs *a a*, substantially as hereinbefore set forth.

2. The bolts *b′*, rim and hubs A *a a*, bridge-tree B, and bed-pieces C C, arranged substantially as hereinbefore set forth.

119,955.—HOT-AIR FURNACE. — James G. Weldon, Pittsburg, Pa.

Claim.—Generating steam and introducing it into the air-passages of an air-heating apparatus by passing the water for the production of such steam into a hollow arm, F, so extending through the walls T of the furnace A and into the fire-box as to be acted upon by direct heat, and conveying the steam so generated, by means of suitable pipes H, into the air-passages E leading to and around the outside of said furnace, in the manner shown and set forth.

119,956.—SULKY.—Jesse Winecoff, Berlin, Pa.

Claim.—The combination described in the foregoing specification, viz., 1 2 3 4 5 6 7 8 9 10 11 12 13 14, for the purpose of producing an agreeable riding-sulky, substantially as set forth.

119,957.—PHOTOGRAPHIC TENT.—I. Fletch Woodward, McMinnville, Tenn.

Claim.—The adjustable elevating half A B along with the partition C and the side curtains E E, substantially in the manner and for the purpose set forth in my specification.

119,958. — MACHINE FOR WASHING AND FULLING CLOTH.—Satterlee Arnold, Philmont, N. Y.

Claim.—1. The combination of two or more tanks for containing cleansing, or cleansing and fulling solutions, each tank having a system of rollers rotating together therein, as described, through which the cloth is continuously carried automatically through all the tanks and subjected to repeated squeezings, substantially as herein described.

2. In combination with the said tanks A, B, and C, or any two of them, provided with rollers, as described, the squeeze-rollers pertaining to said tanks respectively, substantially as shown and described.

3. In combination with rollers arranged in vertical tiers, as described, so that each pair in the same vertical series will squeeze the cloth, as described, rubber, or other elastic substance between the journal-bearings of the rollers and set-screws to press said bearings together or allow them to spring asunder to adjust the squeeze of the rollers to the thickness of the material operated upon, substantially as described.

119,959.—COFFEE-ROASTER.—John B. Ashcroft, Brooklyn, N. Y., assignor to Sarah Jane Ashcroft, same place.

Claim.—1. In an apparatus for roasting coffee, a hollow heating-iron, H, arranged to communicate with a reticulated inclosed cylinder, G, so as to receive the deposit of oil or condensed moisture from the coffee therein and send it back in highly-heated vapor to be absorbed by the dry coffee by the action of the heating-iron, as described.

2. A hollow heating-iron, H, connected with a revolving coffee-holder, A G, by hollow-couplings d^2, so as to be turned up out of the fire when the roasting is finished, as described.

3. The pipe H and its several connections in combination with the axial perforated pipe D and cylinders A and G, as and for the purpose set forth.

4. The guard or jacket *d* in combination with the perforated pipe *c*, as and for the purpose set forth.

5. The auxiliary pipe P in combination with the perforated pipe E, as and for the purpose set forth.

6. The combination and arrangement of the pipes P H and connections, perforated pipe D, jacket *d*, and cylinders A and G, for the purpose set forth.

119,960. — HAIR-CURLER. — C. Henry Barney, Providence, R. I.

Claim.—1. The improved curling-rod provided with a suitable atmospheric port or ports and a longitudinal interior flame-chamber, adapted to receive a vertical flame at or near its base, substantially as shown and described.

2. In combination with the improved curling-rod described, the vertical socket E provided with a lateral-projecting gas-burner punctured for a vertical flame, as and for the purpose specified.

119,961.—COMBINED BOILER AND STEAMER. Joseph P. Bradford, Calamus, Iowa.

Claim.—The herein-described apparatus, consisting of the box A, with the removable perforated bottom G, supply-pipe E, and furnace B, all constructed and arranged to operate substantially as described.

119,962.—TABLE AND DRAWER ATTACHMENT FOR SEWING-MACHINES.—De Witt Clinton Breed, Medina, N. Y.

Claim.—1. The frames C C and drawers D D, or their equivalents, attached by opposite edges, as described, to the leaf B and rod E, or their equivalents, so that said drawers always retain their upright position as the leaf is lowered or raised.

2. The construction of the whole device, consisting of the hinged leaf B, frame C containing drawer D, hinged at *a* to the leaf B and hinged at *b* to rod E, the middle drawer or drawers having a pin, *c*, working in slot *d* of rod E, all in combination with the table A of a sewing-machine or other device having the stop-pieces *e f*, substantially as and for the purpose described.

119,963. — PARING-AND-SLICING KNIFE.—Heman P. Brooks, Waterbury, Conn.

Claim.—The herein-described device for attachment to knife-blades, consisting of a bar, A, supports B, rests D, and securing-hooks C or their equivalent, substantially as and for the purpose set forth.

119,964, antedated September 25, 1871.—COMPOSITION FOR WATER-PROOFING WALLS.—Robert May Caffall and Daniel Miller, Alton, England, assignors to William Gowers Monk, Brooklyn, N. Y.

Claim. — The enameling composition or paint composed of the ingredients known as gum shellac, gum benzoine, linseed-oil, and spirit, prepared in the manner hereinbefore described, for the purpose of preserving brick and stone.

119,965.—WASHING-MACHINE.—Almon H. Calkins, Lineville, Ind.

Claim.—1. The construction of the hinge-frame D with its connecting-rod F to contract or expand it, spring E, and base *a* of the frame A, as shown and described.

2. The construction and application of the journal rod d^1, extended through roller C and through slots b^3 of the uprights A A, serving as a holder and guide, in combination with the rollers *c c c* and B, as shown and described.

3. In combination with the devices claimed in the first and second claims, the devices G H, arranged and operating in connection with the hooks *g h*, tub I, shaft *b*, crank b^1, and handle b^2.

119,966.—PREPARING PIGMENTS FOR WATER-COLOR PAINTING.—Edward R. Campbell, New York, N. Y., assignor to himself and James H. Campbell, same place.

Claim.—The preparation of pigments used in water-color painting with a vehicle composed of glycerine and gum arabic, substantially in the proportion and manner set forth.

119,967.—BACK-SAW. — William Clemson, Middletown, N. Y.

Claim.—The back-saw herein described, when formed with the saw-blade A, grooved back-bar B, and handle C, and connected together in the manner herein described.

119,968, antedated September 30, 1871.—GATE FOR GANGS FOR MARBLE-SAWS.—Lucius B. Clogston, West Rutland, Vt.

Claim. — In combination with ordinary crossbars and side tubes A C the plugs B fast to the former and working loosely in the latter, as and for the purposes specified.

119,969. — TRAVELER FOR VESSELS. — David N. B. Coffin, Jr., Boston, Mass.

Claim.—The sliding traveler-rod *a*, bent at each

end, as set forth, in combination with the supports *b r*, springs *c*, and sliding ring *e* or its equivalent, for the attachment of the sheet-block, operating substantially as specified.

119,970, antedated September 30, 1871.—ROLLING AND FELTING HAT-BODIES.—James Crisp, Bloomfield, and Viner V. Dodd, Orange, assignors to themselves and Emmons B. Corby, Orange, N. J.

Claim.—1. The frame A having mounted therein a pair of reciprocating beds B and D provided with the loose rollers C, and arranged to be operated longitudinally by means of the rock-shaft *f* and pitmen *g* and *h*, in combination with the frame E, levers F, and links *b* for operating one of the beds vertically, substantially as and for the purpose of felting hat-bodies, as set forth.

2. In combination with the beds B and D, constructed and arranged to be operated reciprocally, the adjustable frame E, levers F, and links *b*, substantially as and for the purpose set forth.

3. The beds B and D provided with the closely-arranged loose rollers C, when constructed and arranged to operate as herein described, for the purpose of felting hat-bodies, as set forth.

119,971.—WINDMILL.—Montgomery Crossman and Pratt A. Spicer, Marshall, Mich.

Claim.—1. In a windmill, the winged and weighted governor-lever E, so hung to the shaft or turn-table as to oscillate in a plane parallel with that in which the wind-wheel revolves, substantially as and for the purposes specified.

2. The arrangement of a wind-wheel A on its shaft in such relation with the vane D so that said wheel will be impelled to face the wind behind its vertical axis or pivot *p*, substantially as and for the uses described.

3. The winged and weighted governor-lever E, in combination with the shaft A, turn-table *e*, bent rod F, and small vane D, all constructed and arranged relatively with each other and with the wind-wheel A, substantially in the manner and for the purpose set forth.

119,972.—WINDMILL.—Montgomery Crossman and Pratt A. Spicer, Marshall, Mich.

Claim.—In a windmill, the winged and weighted governor-lever E, so hung to the turn-table as to oscillate, by the power of wind and gravity, in a plane more or less oblique with the face of the wind-wheel, substantially as and for the purposes set forth.

119,973. — COMBINED WHEELBARROW AND HAND-PLOW. — Benjamin G. Fitzhugh, Frederick, Md.

Claim.—The divided hand-frame A having a supporting-wheel, C, an inclined division-bar, *a*, link *c*, and locking-pin *b* adapted to receive and hold the projecting tongue or hold-fast of a barrow-box, D, or the shank of a tilling device, as described.

119,974.—BROILER.—Benjamin G. Fitzhugh, Frederick, Md.

Claim. — The roasting, toasting, and broiling-utensil, consisting of the back A, rims B, dripping-trough D, handle F, and spits *a b*, substantially as described.

119,975. — WINDOW-SHADE AND CLOTHES-DRIER.—Benjamin G. Fitzhugh, Frederick, Md.

Claim.—A combined window-shade and clothes-drier, consisting of the frame A and cords *a* and *c* (or the frames A A′) and shade D, so constructed as to be used in a window-frame for either purpose, as described.

119,976. — DUMPING-CART. — Benjamin G. Fitzhugh, Frederick, Md.

Claim.—1. A dumping-cart so arranged that the tilting of the body is effected by backing the cart, substantially as described.

2. The combination of the pieces B and bars D with the tail-board of a dumping-cart, arranged to operate substantially as described.

3. The device G H *i* when arranged so as to either lock the front of the body of the cart to the draft-frame or act as a brake, when desired, substantially as described.

4. The lever G and rod H *h* when arranged to lock the front of the body of the cart to the wheels, so as to effect the tilting by means of frictional contact with the wheels in backing, substantially as described.

5. The brake device G H *h* when so arranged that the frictional force of braking the wheels prevents the backward tilting of the body of the cart, substantially as described.

6. The combination of the tail-board C, pieces B, levers D, rod H *h*, lever G, projections *i*, and draft-frame E with the wheels and body of the cart, all arranged to operate substantially as and for the purpose described.

119,977.—PORTABLE FURNACE.—Benjamin G. Fitzhugh, Frederick, Md.

Claim.—1. A portable furnace having a pendent central grate, F, open sides and central openings in its top, and the side openings thereof closed by toasting or broiling-shields H or other detachable covers, I, adapted to receive sad-irons, and the central top opening closed by detachable covers adapted for preserving or cooking, as described.

2. The combination, with a central suspended grate, F, of a removable side-toasting or broiling device, H *b*, arranged substantially as described.

3. In a portable furnace, the combination of the centrally-suspended grate F with the sad-iron supports G and the slotted covers I, arranged as shown and described.

4. In a portable furnace, the removable top J with its annular rim *e* and smoke-flue *f*, adapted to receive a preserving-kettle, as described.

119,978. — MINING-SLUICE AND RIFFLE.—Converse J. Garland, Gwin Mine, Cal.

Claim.—1. The irregular diagonally-corrugated plate D, as and for the purpose described.

2. The frame *b*, in combination with the plates B C D E, all constructed and arranged substantially as and for the purpose set forth.

119,979.—MACHINE FOR MAKING EYELETS.—Thomas Garrick, Providence, R. I.

Claim.—1. The combination, in an organized machine, of the series of dies and punches or instruments as described for cupping, intermediately drawing, eyelet-shaping, end-punching, and delivering eyelets from a planchet, and the transferring mechanism, as described, for transferring and presenting the several shapes into which the planchet is by such means wrought successively from one set of instruments to the next in order, substantially as herein specified.

2. In combination with such organized machine, a preliminary cutting-punch and die and a transferring device for cutting out and delivering planchets to be operated upon by the said cupping and succeeding instruments of the said series, substantially as shown and described.

3. In combination with a suitable punch and die, as describe , mechanism which, besides operating to force said punch into the die and turn over the flange of the eyelet, has also a further movement to give a supplemental pressure to swage and reduce the thickness of the eyelet's flange, substantially as specified.

4. In combination with an organized machine for making eyelets from planchets, as described, a supplemental punch and die for finally trimming the edge of the eyelet's flange vertically to the proper size, substantially as specified.

5. The elastic carrier K, as described, and in combination with the endless belt or band, substantially as and for the purpose specified.

6. As an improvement in the art of making eyelets, the reduction of thickness of the flange after the same has been turned, and the subsequent trimming of the margin of the flange, substantially as and for the purpose described.

119,980.—CHURN-DASHER.—Demas L. Grover, Groton, N. Y.

Claim.—The dasher-staff of a churn, composed of the parts A and B, connected together by tube A′ having holes a'' and a^4, vertical slot a''', and within which is tube a' of a thermometer and a scale of degrees marked on said tube, constructed in the manner and for the purpose substantially as described.

119,981.—DIFFERENTIAL PULLEY-BLOCK.—Charles Hall, New York, N. Y.

Claim.—1. The combination of the short-link chain-sheave, grooved hook, block-frame, and lateral-grooved guide-sheave, substantially as before set forth.

2. The combination of the differential-grooved chain-sheave, hook, block-frame, and differential-grooved guide-sheave, substantially as before set forth.

119,982. — RAILROAD-CAR VENTILATOR.—George A. Hines, Brattleborough, Vt., assignor of one-half his right to John F. Vinton, same place.

Claim.—1. The ventilating-plate C combined with hood D, and so divided longitudinally as to afford an induction and eduction-draught, substantially as shown.

2. The induction-ports H, in combination with hood D and chamber G or their equivalents, substantially as shown.

3. The deflecting surfaces *h*, *h′*, and I, or their equivalents, in the combination shown and described.

4. The combination, with the foregoing ventilating apparatus, of the door *f* or its equivalent.

119,983. — CURTAIN-FIXTURE. — Franklin Hobart, Mount Pleasant, Iowa.

Claim.—1. The herein-described arrangement of the cords *a a* and *c c* for hanging a window-curtain or map and operating it from the center, when the cords *c c* are passed through a ring-bolt, c^3, in the center of the stick C, substantially as and for the purposes set forth.

2. In combination with the ring-bolt c^3 in the curtain-stick C and the cords *c c*, the adjustable clamp *c*, substantially as and for the purpose set forth.

119,984, antedated October 10, 1871.—BOAT-HOISTING, LOWERING, AND DETACHING APPARATUS.—Joseph Humphries, Washington, D. C.

Claim.—1. In combination with the davits B the supplemental davits or shores C, whereby a boat may be lowered and held away from the ship's side, as set forth.

2. The combination of eyebolts H H and K K with triggers I I and rods J J, as described in the annexed specification and drawing.

119,985.—CULINARY SHELF.—George Troutman Hunsaker, Carthage, Ill.

Claim.—The detachable shelf A, with its upward hook E and its downward leg and foot G H resting on a horizontal part or base to keep the hook E up securely under a projecting and descending point of support, all substantially as shown and set forth.

119,986.—GARDEN-HOE.—Thomas V. Kimble, Indianapolis, Ind.

Claim.—A cultivator cast in one piece of steel, whose blade is curved both longitudinally and transversely, so that the concave of the longitudinal curve and the convex of the transverse curve are both on the same side, and which is provided with a handle-socket consisting of a cylindrical tube cast on the convex side of the transverse curve, and so constructed that the cavity of the said socket will not perforate the shell of the blade, all substantially as set forth.

119,987. — MACHINE FOR MAKING LIGHTNING-RODS.—George S. Knapp, Winona, Minn.

Claim.—1. The combination of the rotating shaft B, provided with arms for carrying a series of bobbins and with holes or guides *o*, with the guide-plate M and die N, all arranged to operate substantially as and for the purpose set forth.

2. The adjustable rollers H in combination with the radially-arranged bobbins G, guide-plate M, and die N, all constructed and arranged to operate substantially as described.

3. The guide-plate M and die N, arranged to swing or move laterally on the bed, in combination with the take-up shaft or drum E, whereby they are permitted to adjust themselves to the varying position of the rod, as set forth.

4. The shaft or drum E provided with the eccentric lever *e* for holding and winding up the finished rod, as set forth.

5. The guide-plate M having a central hole for the core, with a series of holes for the surrounding wires arranged radially therefrom, and the circular slit for guiding the covering arranged outside of the latter, as herein described.

119,988. — HOISTING-MACHINE.—George R. Long and Samuel King, Lanark, Ill.; said King assigns his right to said Long.

Claim. — The cruciform bars *a a*, standard B, socket *af*, cap E, and journal *h*, in combination with the lever D and cord or chain *d*, the several parts arranged and operating substantially as set forth.

119,989. — REAMING-TOOL.—James B. Miller, Pittsburg, Pa., assignor to himself and Thomas W. Bell, same place.

Claim.—A reamer having a thread cut on its forward or entering end, and having also longitudinal grooves or flutes, substantially as shown and described.

119,990.—GLASS CLOCK-CASE.—Charles A. Moore, Westbrook, Conn., assignor to himself and M. Hartley, New York city.

Claim.—As a new article of manufacture, a clock-case made of glass pressed in a mold, substantially as herein described.

119,991.—BEE-HIVE.—Elizabeth O'Connor, Philadelphia, Pa.

Claim.—A hive united by rods, and having each separate part detachable from the adjacent parts in order that the hive may be taken to pieces and be laid flat for transportation, the joints being so formed that when the hive is set up the securing-rods will firmly unite the whole in one complete hive, as described.

119,992. — SUBMARINE-EXCAVATOR. — Robert R. Osgood and Ralph R. Osgood, Troy, N. Y.

Claim.—Combining, with the handle or lever of a dredging-machine, or with the handle or lever to be substituted therefor, a cutter or pick for grooving or loosening the earth below the surface of the water, substantially as and for the purpose set forth.

119,993.—SUSPENDER AND SHOULDER-BRACE COMBINED. — Thomas O. Potter and Joseph William Smith, Boston, Mass.

Claim.—1. The combination of the straps A A′ and B B′ with the strap D D′ and the attachments E E′ and F F′, the whole arranged and operating substantially as described.

2. The combination of the slide E and strap D by means of the web *b*, passed around the bar *a* and secured to the strap D, in the manner described.

119,994, antedated October 7, 1871.—MANUFACTURE OF SOLUBLE PHOSPHATES FOR FERTILIZERS.—Daniel W. Prescott, Edinburgh, Va.

Claim.—The solution of bone-dust by the use of soda-ash, which, uniting with the gelatine of the bone, forms a soapy compound, acting upon the particles of bone, forming a soluble compound thus fitted for prompt action as plant-food.

119,995.—CARD-RACK. — L. Corydon Prindle, Chicago, Ill.

Claim.—The springs B, constructed, arranged, and applied to the card-board A, or its equivalent, substantially as herein shown and described.

119,996.—ELECTRO-MAGNETIC WATER-ELEVATOR. — Silas G. Randall, Providence, R. I., assignor to Amelia A. Randall, same place.

Claim.—In combination with the electro-magnet, the armature and the pump, the latter being operated automatically by the movement of the armature attached to a suitable circuit-breaking device, as and for the purposes specified.

119,997.—FIRE-ESCAPE.—Thomas C. Rice, Worcester, Mass.

Claim.—The combination, with the slide-block C, constructed as described, of the combined friction-lever and hand-support D, as shown and described.

119,998, antedated September 30, 1871.—SAW.—De Witt Riker, San Francisco, Cal., assignor to himself and Frederick W. Runge.

Claim.—The division or block B, provided with a cutting-tooth and planing-knife, as described.

119,999. — COOKING-STOVE. — George Roberts, Montreal, Canada.

Claim.—1. The novel combination of the plate *d* and fire-pot *e* with pipes *g* and *h*, arranged and operating substantially in the manner and for the purpose described.

2. The perforated division *b*, partitions *c*, diaphragms *f*, and air-ducts *i*, constructed, arranged, and operating substantially as described.

3. The novel damper *l* with pivot l^1 and ledge l^2, constructed as and for the purpose described.

4. The novel combination of the pipes *g* and *h* with mouth-pieces h^3 and apertures k k^1 k^2, constructed, arranged, and operating as and for the purpose described.

120,000.—TELEGRAPH APPARATUS.—James Rowe, Paterson, N. J.

Claim.—1. The lever L, provided with the two pallets p^7, engaging the pins of an escapement-wheel, such lever being operated by a magnet and armature.

2. The ratchet-wheel r^1 operating the escapement-wheel of a telegraph instrument by means of a spiral or a convolute spring in a state of compression between them.

3. The lever L, provided and operated as above, and also provided with the pawl *r*, operating the escapement-wheel by means of a ratchet-wheel and compressed spring.

4. The dog p^5 operating to maintain the compression of the spring S between the ratchet r^1 and the escapement-wheel W.

5. The pendent lever l^3 provided with the V-shaped cam v', co-operating with the V-shaped cam *v* on the lever L, and also provided with the circuit-closing pin *i* or other equivalent device.

6. The sliding latch A provided with the lip a^3, and the pendent lever l^3 provided with the ledge *a*, operating co-ordinately to close and open the circuit of the printing-magnet M'.

7. The counter-weight C and spring S^4 operating upon the latch A to permit or break the connection of the printing-circuit, as described.

8. The counter-weight operated by an impulse derived from the printing lever L^1, substantially as shown.

9. The lever L arranged and operating to complete the printing-circuit through the screw-stops g^1 and g^2 or their equivalents.

10. The pointed feed-bar E sliding in guides provided in the perpendicular slide d^1, operated by the link A^3 from the printing-lever L^1 to feed the slip of a printing-telegraph.

11. The cork printing-pad of a printing-telegraph.

12. The overbalanced locking-lever L^2, provided with locking-lip *k* and the stop h^1, and operating to lock the escapement-lever L.

13. The pin i^4 operating to carry the elbowed arm *j* of the collar *d* and to compress the spring S.

14. The elbowed arm *j* operating upon the stop h^1 of the lever L^2 for the purpose of locking the levers L and L^2.

15. The same operating in conjunction with the pin i^4 and the stop h^1 to secure unison.

16. The bevel-pointed pin *n* located on the printing-lever and operating upon the bevel-edged collar *d* to cause the elbowed arm *j* to escape the pin i^4 by sliding the same on the type-wheel shaft.

17. The spring S^7 receiving compression during the revolution of the escapement-wheel, and operating to return the elbowed arm *j* to the stop h^1, and also to return the arm *j* into position to engage the pin i^4.

18. The slotted link t^4, block J, spring S^4, pawl p^5, and toothed wheel R in combination.

19. The adjustable block J on the slide *l* in combination with the spring-connection block *k*.

120,001.—THILL-COUPLING.—Cyrus W. Saladee, St. Catharine's, Canada.

Claim.—1. Passing the connecting-bolt D through the ears F of the shaft-clip J and the elastic tube H, or its equivalent, in such manner that the action of the bolt upon the tube shall expand it, substantially as and for the purpose set forth.

2. The combination of the elastic tube H, or its equivalent, confined within the ears F, with the connecting-bolt D and shaft-head B of the shaft-clip J, substantially as and for the purpose set forth.

3. Protecting the ends of the elastic tube H, or its equivalent, by means of the collars C and C, and which, in combination with the bolt D, compress the tube longitudinally and expand its diameter within the shaft-head B, substantially as and for the purpose shown and described.

4. Broadly, the use of a metallic guard, P, constructed and operating substantially as and for the purpose shown and described.

120,002.—THILL-COUPLING.—Cyrus W. Saladee, St. Catharine's, Canada.

Claim.—1. The detachable and adjustable ears F and F, in combination with the shaft-head B, connecting-bolt D, or its equivalent, substantially as and for the purpose shown and described.

2. The combination of the cross-head T with the shaft-clip J, substantially as and for the purpose set forth.

3. The interposition of an elastic block, H, when placed on the top side of the cross-head T, and between the ears F and F and under the shaft-head B in such manner that the elastic block H is compressed by means of the ears F and F and screw-taps S and S, substantially as and for the purpose shown and described.

4. In combination with the thill-coupling described, the friction-plate I and the elastic block H, as and for the purpose set forth.

5. The T-headed clip-bar K, substantially as and for the purpose of receiving the ears F and F, as shown and described.

6. The combination of the parts C, D, E, F, and H, Sheet 2, or their equivalents, in connection with thill-couplings, in the manner and for the purpose substantially as shown and described.

120,003. — PACKING FOR STEAM-ENGINES, GAS-PIPES, WATER-PIPES, &c. — Alonzo J. Simmons, Indianapolis, Ind.

Claim. — The manufacture or preparation of a compound to be used as steam, hydraulic, or gas-packing, of the ingredients in the proportions, and for the purposes set forth.

120,004.—CARRIAGE-NUT.—Justin P. Skinner, Plantsville, Conn.

Claim.—As a new article of manufacture, the herein-described nut, consisting of the nut B and cap A united and secured together by the projection *d* on the cap, substantially as set forth.

120,005, antedated October 3, 1871.—METALLURGIC FURNACE.—John Y. Smith, Pittsburg, Pa.

Claim.—1. A revolving furnace, A, the inclined heads of which are supported against friction-wheels *B'*, substantially as and for the purpose set forth.

2. A revolving furnace, A, when lined on the interior by a solid tube of homogeneous material formed by the action of heat, substantially as set forth.

3. In combination with a revolving furnace, adjustable rings of refractory material for forming the joints between the necks of the furnace and the parts connected therewith.

4. The formers D, when used in combination with the shell of the furnace to form the lining thereof, substantially in the manner set forth.

5. In combination with the blast-pipe and spiral fuel-feeder M, a fan and case, I, when respectively so constructed and connected that the blast shall operate the feeder, substantially in the manner set set forth.

6. In combination with the combustion-chamber L, a chamber, N, filled with incandescent lumps of a pure carbonaceous substance, such as coke or anthracite coal, through which chamber the gaseous products of combustion are forced, substantially as set forth.

7. In combination with an apparatus for feeding finely-pulverized fuel to be burned while floating in the air, a chamber, N, filled with incandescent lumps of such carbonaceous substances as aforesaid, through which the carbonized air is forced, substantially as set forth.

120,006.—LINING FOR METALLURGIC FURNACES.—John Y. Smith, Pittsburg, Pa.

Claim.—1. A solid continuous furnace-lining of silex, substantially as set forth.

2. The process of forming a furnace-lining by fluxing pulverized quarts or silex, substantially as set forth.

120,007.—APPARATUS FOR FEEDING FUEL INTO FURNACES.—John Y. Smith, Pittsburg, Pa.

Claim.—1. An apparatus for feeding pulverulent fuel into a furnace, combining in its construction the following elements, viz., an induction and an exhaust-pipe, an intermediate wheel arranged to be revolved by the action of the current of steam, air, or gas passing through said pipes, and a shoe or other feeding mechanism regulating the discharge of the pulverized material connected with said wheel so as to be moved by it, substantially as set forth.

2. In combination with a pipe or series of pipes for passing a current of steam or gas into the furnace or combustion-chamber, a hopper or pipe for delivering into such current of gas or steam the pulverized fuel, and an opening or series of openings for introducing air mingled with the steam or gas and pulverized fuel into the furnace or combustion-chamber, when, and only when, further combined with mechanism for regulating the quantities, respectively, of the steam or gas, pulverized fuel, and air so admitted, substantially as set forth.

3. In such an apparatus, in combination with the induction and exhaust-pipes and wheel H, an opening, as at I^1, for regulating the flow of steam into the furnace while maintaining the uniform action of the wheel, substantially as set forth.

4. The slide K^1 or pipe K^2, when arranged to receive the stream of entering pulverulent fuel, and when so supported that the passing current shall impart to them a tremulous motion, substantially as and for the purpose set forth.

120,008. — APPARATUS FOR FEEDING PULVERIZED FUEL TO METALLURGICAL AND OTHER FURNACES. — John Y. Smith, Pittsburg, Pa.

Claim.—1. In combination with the fuel-feeder for supplying comminuted fuel, the fans C E and F, arranged to operate in separate compartments in relation to each other, substantially in the manner set forth.

2. In combination with the hopper, fan-case, and fan for driving forward the pulverulent fuel, a pipe, L, for connecting the hopper with the fan-case, substantially as set forth.

3. The arrangement of the pipes M and E' in relation to the fan E and its case, substantially as and for the purpose set forth.

4. In combination with the case and fan E, and exit-pipe E', openings O^1, &c., arranged substantially as and for the purpose set forth.

5. The combination and arrangement of the hopper, pipe L, fan E and its case, pipe E', and openings to allow the intermingling of air, &c., in regulated quantities with the pulverulent fuel only after it has passed out of the case, substantially as set forth.

120,009. — WOOD-PRESERVING COMPOSITION.—Richard Sutphen, Freehold, N. J.

Claim.—1. The composition for preserving wood, consisting of asphaltum, coal-tar, resin, and Japan, substantially as described.

2. The combination of coal-tar, resin, and Japan to form a wood-preserving compound, substantially as and for the purpose specified.

120,010.—SASH-TIGHTENER. — William E. Swett, San Francisco, Cal.

Claim.—The plate *c*, hinged or otherwise loosely secured at one side to the window-sash frame, in combination with the spring *e*, substantially as and for the purpose above described.

120,011. — SAD-IRON HANDLE.—Alexander Tait, Sonora, Cal.

Claim.—The single standard A provided with the screw *c*, either with or without the rod *b*, in combination with the handle D and ferrule *f*, substantially as and for the purpose above described.

120,012.—SMUT-MILL AND GRAIN-CLEANER. Benjamin T. Trimmer, Rochester, N. Y.

Claim. — 1. In a smut or grain-cleaner, the arrangement of the stationary beaters P and revolving beaters P' provided with the corrugations *o o* and *p' p'* alternately in a vertical and circumferential direction, as herein described.

2. In a smut or grain-cleaner, the revolving beaters constructed, as described, with the rings *p p*, fans or beaters *q q* with or without the fan or beaters *r r*, when operating in connection with the stationary beaters, substantially as described.

3. In a smut or grain-cleaner, the arrangement of the revolving beaters P' provided with the hub *m* and vertical rings *p p*, in combination with the fans *q q* and beater P, as set forth.

4. In a smut or grain-cleaner, the arrangement of the exhaust-fan D, induction air-tube *c*, flour *s*, spouts *t u*, and scraper or fan E, all constructed and operating substantially as described.

5. In a smut or grain-cleaner, the arrangement of the brush-bars G G, springs *v v*, and their holding-screws and flanges *w* of the fan or scraper E, constructed and operating as shown.

6. In a smut or grain-cleaner, the arrangement

of the perforated cylinder B, made up of a series of sections and carrying the beaters P, in combination with the bolts *g* and tube-sections *h*, all constructed substantially as described.

7. In a smut or grain-cleaner, the angle-irons K K, in combination with the cylinder B made up of a series of sections or rings and united together by the bolts *g* and sections *h*, substantially as and for the purpose set forth.

8. In a smut or grain-cleaner, the arrangement of the air-trunk, the same made of two parts, H and I, communicating at top and bottom, the interior part being also divided by the double chutes *b' b'*, and having the swing-valve *d'*, and the whole communicating at the top by port *f* with the jacket-space between the perforated cylinder and outer casing, as herein described.

120,013. — RAILWAY-CAR TRUCK.—John G. Wetmore, Winsted, Conn.

Claim.—The bearing-plate F, constructed and arranged upon the truck-frame, as described, and adapted to act in combination with a recessed car-wheel, as set forth.

120,014.—CONCENTRATING SILVER ORES.—Thomas Wren, Hamilton, Nev.

Claim.—The above-described method or process for concentrating the ores by passing the rock through a crusher and then over the screens, in the manner and for the purpose specified.

120,015.—LATHE-CHUCK. — Charles E. Albro, Fulton, N. Y.

Claim.—The shank having bar B, the two movable jaws C C, the right and left-swiveled screws D D, and the spur-wheels E F E, all constructed, arranged together, and operated as described, and for the purpose specified.

120,016.—HEATING AND PREPARING STONE FOR PAVEMENTS, &c.—Campbell Allen, Albany, N. Y.

Claim.—1. The heating and drying of broken stone or gravel for roadways, pavements, sidewalks, roofing, or other purposes by the direct application of steam upon such stone or gravel, in a closed retort, at a temperature and pressure so much above that required for the stone or gravel when ready for use that, when the pressure is relieved and the steam allowed to escape, the water remaining upon the surfaces of the stone or gravel will be at once converted into steam by the heat stored up in the mass, and the material left drying at the temperature required, substantially as specified.

2. The utilization of the surplus heat by discharging the steam from a retort in which the heating has been completed into another retort similarly charged, substantially as described.

3. The combination and arrangement of retorts, substantially as described, for the purposes set forth.

120,017. — POWER-HAMMER. — Isaac Althouse, Columbus, Ohio.

Claim.—The combination, with the hammer-stem and the crank, of the two links E and F, in the manner substantially as described.

120,018. — HORSE-POWER.—Starns S. Ammons, Winona, Miss.

Claim.—1. The arrangement of the levers D D, spring-bar E, rods G G and H H, in combination with the shaft A and wheel B, substantially as and for the purposes described.

2. The draft-rods H H and push-rods G G for applying horse-power to driving-wheels, substantially as set forth.

3. The spring-bar E, in combination with the levers of a horse-power, substantially as described.

120,019. — DOUBLE-TRANSMITTING PRINTING-TELEGRAPH.—George L. Anders, Boston, assignor to himself and E. B. Welch, Cambridge, Mass.

Claim.—1. The transmission of electrical currents in one circuit, a current in one direction securing the selection and impression or printing of a letter, sign, or character of a telegram, and transmitted in opposite direction, securing the selection and impression of a letter, sign, or character of another and separate telegram, substantially as set forth.

2. The transmission of electric currents transmitted through a circuit, effecting the operation of one or the other of two printing or impression mechanisms, according to the direction of the currents, in a printing-telegraph instrument, substantially as specified.

3. Two impression mechanisms, or their equivalents, attached to one or more type-wheels in a printing-telegraph instrument operating in one circuit, substantially as set forth.

4. The use of two strips of paper, or their equivalent, on a printing-telegraph instrument, substantially as shown and described.

5. The printing of two separate and distinct messages simultaneously, in a printing-telegraph instrument, by means of one circuit, substantially as set forth.

120,020.—INSECT-TRAP.—John James Armstrong, Kings county, N. Y.

Claim.—The cup B, of concave-convex sides, and provided with the apertures F and bottom D, in combination with the receiver A, substantially as and for the purpose specified.

120,021.—COFFIN.—Samuel Avery, Phœnix, N. Y.

Claim.—The keys H and plates A having flanges B B, combined with a side, C, and end D having grooves E E, as and for the purpose specified.

120,022, antedated October 14, 1871.—WHEEL FOR VEHICLES. — Albert Ball, Canton, Ohio.

Claim. — The within-described carriage-wheel, the same consisting of the elastic hub E C G, composed of the box-piece E, head-piece G, hub-ring C, and elastic packing-ring D, the iron spokes B B provided with the clips H, the bent wooden felly A, and the iron or steel tire K, the several parts being constructed and combined substantially as and for the purpose specified.

120,023. — MACHINE FOR CUTTING THE TEETH OF WHEELS. — Henry Belfield, Philadelphia, Pa.

Claim.—The combination of the adjustable slide F, adapted to receive and retain the blank to be cut, the rotating spindle A, and the wheel B having an external screw-thread and transverse recesses forming a series of serrated cutting-edges, as specified.

120,024.—STOVE-PIPE DRUM.—Edward E. Blinn, Brewerton, N. Y.

Claim.—The oven A *a'*, in connection with the stove-pipe B, the pipe passing eccentrically through the chamber of the oven, so that it can be revolved around said pipe, as and for the purpose described.

120,025. — WAGON OR CARRIAGE-BODY.—Michael C. Boyer, Norristown, Pa.

Claim.—A wagon or carriage-body, consisting in part of one or more wrought-iron frames braced by cross-bars, wire-netting, or its equivalent, so as to form a girder or girders, substantially as described.

120,026, antedated October 3, 1871.—SHORTENING FOR CULINARY USES.—Henry W. Bradley, Plainfield, N. J.

Claim.—1. The improved process for rendering cotton-seed oil suitable for culinary use, the same consisting in subjecting the oil to heat and oxidizing chemical substances, substantially as described.

2. The new article of manufacture, consisting of cotton-seed oil treated so as to be suitable for culinary use.

3. The new compound for shortening or other culinary use, consisting of deodorized cotton-seed oil and suet or other suitable fat.

120,027.—HARVESTER.—Harry H. Bridenthall, Jr., New Derry, Pa.

Claim.—1. The combination of the rake E¹ F¹, lazy-tongs J', shaft K', grooved guide-plate L' l', guide-pin or roller M', pulley N', chain O', guide-pulleys P', and pulley Q', with each other, and with the platform A' and driving-shaft B, substantially as herein described, and for the purpose set forth.

2. The combination of the clutch R' *a'*, constructed as described, and foot-lever S', with the tongue A, shaft B, driving-wheel D, and pulley Q', for the purpose of throwing said wheel D and pulley Q' into and out of gear with each other, substantially as herein shown and described, and for the purpose set forth.

3. The arrangement of the bars R S, the pivoted bar F², and arm A², with the finger-bar Q, shoe T, and box E, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the lever Z', arm A², pawl C² D² E², segmental ratchet-wheel B², and bar or lever F² with the bars R S, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the lever T', ratchet U', pawl V', segmental pulley W', chain X', and lever Y' with each other, with the tongue A, bar R, and finger-bar Q, substantially as herein shown and described, and for the purpose set forth.

120,028.—CULTIVATOR.—John T. Brittain, Springfield, Ohio.

Claim.—1. The frame of the cultivator, when constructed of flat tire-iron, as herein described, by combination of the handles C with the bent front and side beams A by means of the bolts *e* and the hinges D, and again with the side beams A by means of the connecting-bar E, the short bars H, and the adjustment F, substantially as and for the purposes hereinbefore set forth.

2. The herein-described construction of the two solid land-side rear plows I from a single square plate of metal without any waste of material, so as to make each plow adjustable and reversible right or left, formed from a right-angled triangle without casting or forging, in combination with the said described frame, substantially as hereinbefore set forth.

120,029.—FIRE-ALARM.—Henry L. Brower, New York, N. Y.

Claim.—1. The bar G, by means of which two or more alarms are connected, substantially as described.

2. The lever C, with the pin *e* and connecting-rod N, substantially as and for the purposes described.

3. The bent lever K with short arms, operating the bar G, setting-lever I, and spring-rod T, when the same are arranged to operate as and for the purposes described.

120,030. — IRONING-BOARD. — Benjamin D. Brown and Daniel Moyer, Philadelphia, Pa.

Claim.—1. The combination, with the ironing-board, of legs B B' hinged to the same, a brace, C, hinged to the leg B, and a swivel-button, *d*, on the board, as set forth.

2. The combination of the subject-matter of the first claim with the hook *f* and staple *g*, arranged as described.

120,031. — CHIMNEY. — Charles H. Brown, Atlantic, Iowa.

Claim.—The combination of the arched metal chimney A A, the guard B B, the cylinder C C, the pipe D D, and the register composed of the bottom *c*, the plate *d d* and its handle, in the manner described and for the purposes specified.

120,032.—HINGE.—Ira Buckman, Jr., Williamsburg, N. Y.

Claim.—1. The knuckle-joint I, having a flat face, L, and curved sides, forming an eccentric cam, the said knuckle serving to hold the door closed by its action on the follower J, and relieving it from pressure when the door is opened either way, after the points *i* pass the center of the follower.

2. In combination with the cam-knuckle I, as above, the torsion-springs R R connected with the sockets *r r* of the middle hinge and the socket-heads S S of the upper and lower butts, to retain the door after it passes to one side, and so hold it either open or shut.

3. The movable box-plate P provided with recesses *p p p*, in which the yielding substance K is secured, in combination with the plate N and set-screws *q q* for adjusting the spring, so that the follower J may have any required degree of pressure on the knuckle I, as shown and described.

4. The movable socket-head S provided with a serrated disk, *e e*, to fit corresponding serrations in or on the knuckle of the hinge F, in combination with the sleeve *e* and screw-nut E within the knuckle of the hinge, for adjusting the torsion-spring R, substantially as herein shown and described.

120,033. — VALVE FOR STEAM-ENGINES.—Henry L. Butler, Pittsburg, Pa.

Claim.—1. The combination of the double-inclined cross-bar or disk D, the valve B, valve-stem C, dies or pushers E E, and spring F, operating substantially as described.

2. The valve-stem C, having its collars or parts operating the valve B, arranged as described, so that the one can move independently of the other, substantially as and for the purpose specified.

3. The bevel surfaces b^1 and *k*, arranged to check the movement of the valve, substantially in the manner described.

4. The arrangement, entirely within the steam-chest, of the herein-described mechanism for completing the throw of the valve, so that no stuffing-box shall intervene between the valve and the spring imparting the terminal movement.

120,034.—GALVANIC-BATTERY. — Jean Armand Callaud, Nantes, France.

Claim.—1. The zinc disk B provided with arms *a*, and suspended within the center of the cup or jar A, and so arranged as to admit of a vertical adjustment, substantially as and for the purpose described.

2. The combination of disk B, wire D, bar C, and binding-post *d*, the whole arranged substantially as and for the purpose described.

3. The plate E, so folded as to form a series of radial wings, substantially as and for the purpose described.

120,035.—WAGON-SEAT FASTENING.—Ezra Caswell, Lyons, N. Y., assignor of one-half his right to A. H. Towar, same place.

Claim.—1. The hooked locking-bar I working vertically within suitable guides H, and the wedge working horizontally through a recess within said locking-bar, in combination with each other, with the seat-foot G, and with the supporting-rail C, substantially as and for the purpose specified.

2. The locking-bar I', when jointed and combined with the straps H, the wedge K, the seat-foot G, and the supporting-rail C, substantially as and for the purpose shown.

120,036.—ROCK-DRILL. — John Chapman, Amsterdam, N. Y.

Claim.—The stationary cam-tracks *g i* and *i j* combined, as described, with the pawl-rollers *f*, so that the latter will move on and between the former, as and for the purpose specified.

120,037.—ROLLER-CLEARER FOR SPINNING-MACHINES.—Linneus Cheetham, Lewiston, Me.

Claim.—A scavenger-roll provided with grooves filled with woolen cord or its equivalent, as described.

120,038.—MUSIC LEAF-TURNER. — Georg Carl August Claus, Chicago, Ill.

Claim.—1. The swinging arms A B, connected with the elastic band D and with the treadles F G, and provided with the elastic fingers *m*, to operate substantially as herein shown and described.

2. The spiral springs H H applied to the music leaf-turning apparatus for holding the leaves the requisite distances apart, as specified.

3. The paper-holding apparatus, consisting of the pinchers *i i*, elastic cork *j*, wire *k*, slide *l*, and sheet I, all arranged substantially as herein shown and described.

120,039.—SLATE-FRAME. — Henry M. Clay, Easton, Pa.

Claim.—The elastic corner-pieces C constructed with apertures and wings *b b* to adapt them for application to a slate-frame, as and for the purpose specified.

120,040. — PRINTING-PRESS. — Robert J. Coons, Greensburg, Pa.

Claim.—1. The jointed rods *j j*, connecting the vibrating type-bed with the pivoted platen, and made adjustable at the ends, substantially as and for the purpose herein shown and described.

2. The sliding pawl H, secured to the back of the vibrating type-bed, and combined with the arched guide I, to be operated by the motion of the bed, substantially as herein shown and described.

3. The inking-rollers J J, hung to swinging arms *t t*, and resting, by their own weight, on the surface of the type to be moved over the same by the motion of the bed, as set forth.

4. The vibrating type-bed D, combined with the jointed rods *j*, sliding pawl H, rotary slab G, and roller-arms *t*, to operate all by its own motion, as set forth.

120,041.—PRINTING-PRESS.—Calvert B. Cottrell, Westerly, R. I.

Claim.—The air-compressing devices employed in printing-presses for compressing air to arrest the table, when arranged for allowing some of the air to escape, and controlled by an automatic regulator, substantially as specified.

120,042.—BITTERS.—Edouard Edmond Crady, Sioux City, Iowa.

Claim.—The herein-described compound, composed of the ingredients named, substantially as and for the purpose set forth.

120,043. — APPARATUS FOR CLEANING AND PRESERVING PRINTERS' ROLLERS.—Samuel Crump, Brooklyn, N. Y.

Claim.—An apparatus for cleaning and preserving printers' rollers, consisting of the racks C C, guides or ways *a a*, and bath A for containing oil or other liquids, the whole combined, arranged, and organized substantially as and for the purpose herein set forth.

120,044.—MACHINE FOR MAKING MACHINE-SCREWS. — Francis Curtis, Brattleborough, Vt.

Claim.—1. The combination, with the gear-wheels K L and shaft H, of the bar and wedge I J N O, crank-rod A, and lever P, substantially as and for the purposes herein set forth.

2. The combination of the lever P, hooked lever R, rod T, and mechanism to reciprocate the same, arm V, and springs *k*, *m*, and *w*, all substantially as and for the purposes herein set forth.

3. The combination of the rod T, by means of its hooks *t*, with the tube S, grooved and otherwise constructed as described, the tapering collar or plug *u* within said tube, the hooked rod *y*, and reciprocating jaws for grasping said rod and feeding it forward to the screw-making instrument, substantially as herein set forth.

4. The hollow spindle E and springs *x*, the chuck W sliding on said spindle over the springs and provided with elongated hub, grooved collar Z, pins *f*, buttons h^1, levers k^1, and jaws i^1, all constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The combination, with the subject-matter of the fourth clause, of the forked arm *y*, shaft X, spring *z*, and wedge *y*, and mechanism to reciprocate said wedge, substantially as and for the purposes herein set forth.

6. The combination of the chuck W, collar Z, arm C^1, pin d^1, sleeve D^1, spring-jaws e^1 e^1, and slide A^1, all constructed and arranged to operate substantially as and for the purposes herein set forth.

7. The combination of the burrer n^1, rocking arm G^1, shaft H^1, spring r^1, and guide-pin p^1, all constructed and arranged as described, and operated by means of the wedges I^1 I^1 on the slide A^5, substantially as and for the purposes herein set forth.

8. The combination of the die J^1, shaft K^1, spring y^1, reciprocating carriage L^1, shafts M' and P', arm N', spring s^1, and reciprocating wedge O', all substantially as and for the purposes herein set forth.

9. The combination, with the carriage L^1, shaft K^1, and spring y^1, of the cog-wheel s^1, dogs t^1 and v^1, and their springs w^1, the gauge d^2, and incline e^2, all constructed and arranged to operate substantially as and for the purposes herein set forth.

10. The combination, with the die J^1 and chuck W, of the knife R', standard S', slide A^4, and cam and spring B^1, substantially as and for the purposes herein set forth.

11. The combination of the header f^2, shafts T' and W', arm V', springs k^2, reciprocating wedge X', spindle E, and the gear-wheels connecting shaft T' with said spindle, substantially as and for the purposes herein set forth.

12. The combination of the screw-driver i^2, shafts C^2 E^2, connecting-arm D^2, spring m^2, reciprocating wedge G^2, cog-wheel H^2, and the cog-wheel on the header-shaft T', substantially as and for the purposes herein set forth.

13. The combination of the reciprocating carriage L^1, die J^1, mechanism for operating said die as described, the vertical revolving shaft y^1, and the horizontally-operating saw h^2, substantially as and for the purposes herein set forth.

14. The combination of the screw-driver shaft C^2, cog-wheel H^2 with notch n^2, cogs p^2, and spring r^2, the collar I^2, pawl t^2, pin s^2, and reciprocating arm J^2 with hook v^2 and shoulder w^2, all substantially as and for the purposes herein set forth.

15. The combination of the collar L^2 with notch s^2, lever y^2, and reciprocating arm K^2 with hook x^2, all substantially as and for the purposes herein set forth.

120,045, antedated October 11, 1871.—BALE TIE.—John Spraguen Davis, Louisville, Ky.

Claim.—The combination, with the band D, of the keys C C and the buckle herein described, having curved side bars A A and cross-bars B B, the latter provided with lips *b' b'*, when all are constructed and arranged as and for the purpose specified.

120,046.—CHURN-DASHER ROD. — Marion G. Decrow, Newark, Ohio, assignor of one-half his right to Joseph P. Decrow, Jr., same place.

Claim.—The combination of the rod *a*, lever *d*, pin *c*, and hook *e*, as specified.

120,047.—POWDER-FLASK.—Andrew Diezel, Omaha, Neb.

Claim.—The screw-top, provided with tubes C and F, the tube D, apertures E E, spring G, bridge K, screw M, slot L, screw N, chamber R, and posts P P, arranged substantially as shown and described.

120,048. — BALING-PRESS. — Levi Dodge, Waterford, N. Y.

Claim.—1. A machine for baling hay, straw, and other material, in which the following elements are combined, substantially as herein shown and described: First, a cylinder or case in which the bale is formed, so constructed as to permit the bale, when formed, to be bound while in and removed from it. Second, rollers or other feeding and compressing devices arranged to progressively feed and compress successive portions of the hay or other material into the cylinder or case until the bale is built up and formed therein. Third, a platform or support within the cylinder or case, upon which the bale, during the process of its formation, will rest, said platform and the feeding and compressing devices being arranged substantially as stated, so that the one may have a motion away from the other in proportion as the bale is built up and compressed.

2. The combination, with the cylinder or other case in which the bale is formed and the devices by means of which successive portions of the material to be baled are progressively fed and compressed into said cylinder or case, of a sliding base or support for the bale, arranged substantially as shown and described within the cylinder, and so as to offer a yielding resistance to the compressing devices and to move away from the said devices as successive parts of the bale are formed and compressed.

3. The combination of the feed and compressing-rollers and their skeleton supporting-frame with the ring in which said frame is held and moves, and the devices interposed between the ring and frame for reducing friction, substantially as shown and set forth.

4. The arrangement in a baling-press, constructed and operating substantially as described, of the bale-forming cylinder or case so that it may be adjusted up and down with relation to the feeding and compressing devices, as shown and set forth.

5. The combination and arrangement of the cylinder, the platform, and the feeding and compressing devices with the surrounding frame by which they are carried, substantially as herein shown and set forth.

6. A press for baling hay, straw, and like material, constructed and operating substantially in the manner shown and set forth.

120,049. — HARNESS. — George W. Dutton, Tomales, Cal., assignor to himself and John Ashton, same place.

Claim.—The collar or breast-plate *a*, having its upper ends flattened and padded to adapt itself to the shoulder-blades or where the draft should come upon the horse, and supported by straps B from the saddle D, in the manner shown and described.

120,050.—HOE. — Augustin Ellis, Canton, Ind.

Claim.—In a hoe or spade, the combination, with the curved slotted shank B, of the blade D, bolt *c*, plano-concave washer G, and plano-convex washer H, substantially as specified.

120,051. — SAWING-MACHINE. — James Anthony Elston, Elston Station, Mo.

Claim.—1. The jointed saw-frame L, constructed to receive the saw on the end of either arm, and provided with a vertical arc-bar, M, on which the arms of the saw-frames are adjustable toward each other, all arranged for the purpose of adaptation to large or small timber, as set forth.

2. The frame or table A, combined with wheels E' E' and adjustable braces D, both arranged on the outside of the table to give a firm support to the table, while the braces may be turned over the top thereof, when the wheels are used to transport the machine.

120,052.—FEEDING SAWDUST TO FURNACES. Andrew J. Emlaw, Grand Haven, Mich.

Claim.—1. The construction and arrangement of a blower, K, and chute G, in the manner and for the purpose set forth.

2. The employment of the distributing-plates P under the boilers, in connection with the feed-chutes G, through which the fuel is blown into the furnace, as and for the purpose set forth.

3. The arrangement of the chain M and chain-wheels N N' with relation to the box F for distributing the fuel to the feed-chutes G, as set forth.

4. The arrangement of the slides H, lever I, and rod J with relation to the box F and chutes G, as and for the purpose set forth.

5. The traps O in the chutes G, as described, for the purpose specified.

120,053. — TOBACCO-PIPE. — Henry C. Finlayson, New York, N. Y.

Claim.—In combination with the wooden shank B of the pipe, the wooden joint-coupling C and the removable metallic tube, D, the short metal cylinder F and metallic flange E, arranged within the stem, as herein set forth and shown, for the purpose specified.

120,054. — PUMP-PISTON. — Amos H. Foe, Strathroy, Canada.

Claim.—1. The valve-seat frame or "sucker," of the three sections A B C, in such a manner as will admit of nailing on the valve and collar, substantially as herein set forth.

2. The arrangement of said sections A B C with the valve D, rod F, and straps G, and collar H, substantially as set forth.

120,055. — PLOW-COLTER. — David D. Gibson, Springville, Iowa.

Claim.—1. The quadrilateral colter C provided with rings *a a*, said rings being formed on the ends of small screw-bolts and fastened by nuts on the opposite side of the colter, substantially as and for the purposes herein set forth.

2. In combination with the quadrilateral colter C having rings or eyes *a a*, as described, the rod *b* formed on the lower end of the shank D, substantially as and for the purposes herein set forth.

3. In combination with the quadrilateral colter C having rings or eyes *a a*, and the shank D with rod *b*, the concave and convex wedges *d d'*, straight wedge *m*, stirrup *f*, bar E, rod *h*, and set-screw *k*, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

120,056.—LUBRICATOR FOR STEAM AND AIR-ENGINES.—Samuel N. Goodale, St. Louis, Mo.

Claim.—1. The lubricator, consisting of a fibrous material, E, supported between plates D G, all arranged substantially as and for the purpose set forth.

2. In combination with the lubricator D E G, the collar I, pawl J, and ratchet K, as and for the purpose set forth.

120,057.—MAGNETO-ELECTRIC MACHINE.—Zenobe Theophile Gramme and Eardley Louis Charles D'Ivernois, Paris, France.

Claim.—1. The employment, in magneto-electric machines, of one or more cylinders, rings, or large endless bobbins arranged and constructed in the manner as has been above described, viz., made into a circular or other suitable endless shape, and consisting of a series of small bobbins or wires enveloping a core of soft iron or other good magnetic material, and connected together end to end in a continuous series, the said endless large bobbin or bobbins or cylinders situated between or in opposition to the poles of fixed or movable permanent or electro-magnets, for the purpose of allowing the production of continuous induction-currents in the conducting-wires, strips, or ribbons of brass or oth-

120,037.—Roller-Clearer for Spinning-Machines.—Linneus Cheetham, Lewiston, Me.

Claim.—A scavenger-roll provided with grooves filled with woolen cord or its equivalent, as described.

120,038.—Music Leaf-Turner. — Georg Carl August Class, Chicago, Ill.

Claim.—1. The swinging arms A B, connected with the elastic band D and with the treadles F G, and provided with the elastic fingers *m*, to operate substantially as herein shown and described.

2. The spiral springs H H applied to the music leaf-turning apparatus for holding the leaves the requisite distances apart, as specified.

3. The paper-holding apparatus, consisting of the pinchers *i i*, elastic cork *j*, wire *k*, slide *l*, and sheet I, all arranged substantially as herein shown and described.

120,039.—Slate-Frame. — Henry M. Clay, Easton, Pa.

Claim.—The elastic corner-pieces C constructed with apertures and wings *b b* to adapt them for application to a slate-frame, as and for the purpose specified.

120,040. — Printing-Press. — Robert J. Coons, Greensburg, Pa.

Claim.—1. The jointed rods *f f*, connecting the vibrating type-bed with the pivoted platen, and made adjustable at the ends, substantially as and for the purpose herein shown and described.

2. The sliding pawl H, secured to the back of the vibrating type-bed, and combined with the arched guide I, to be operated by the motion of the bed, substantially as herein shown and described.

3. The inking-rollers J J, hung to swinging arms *t t*, and resting, by their own weight, on the surface of the type to be moved over the same by the motion of the bed, as set forth.

4. The vibrating type-bed D, combined with the jointed rods *f*, sliding pawl H, rotary slab G, and roller-arms *t*, to operate all by its own motion, as set forth.

120,041.—Printing-Press.—Calvert B. Cottrell, Westerly, R. I.

Claim.—The air-compressing devices employed in printing-presses for compressing air to arrest the table, when arranged for allowing some of the air to escape, and controlled by an automatic regulator, substantially as specified.

120,042.—Bitters.—Edouard Edmond Crady, Sioux City, Iowa.

Claim.—The herein-described compound, composed of the ingredients named, substantially as and for the purpose set forth.

120,043. — Apparatus for Cleaning and Preserving Printers' Rollers.—Samuel Crump, Brooklyn, N. Y.

Claim.—An apparatus for cleaning and preserving printers' rollers, consisting of the racks C C, guides or ways *a a*, and bath A for containing oil or other liquids, the whole combined, arranged, and organized substantially as and for the purpose herein set forth.

120,044.—Machine for Making Machine-Screws. — Francis Curtis, Brattleborough, Vt.

Claim.—1. The combination, with the gear-wheels K L and shaft H, of the bar and wedge I J N O, crank-rod *h*, and lever P, substantially as and for the purposes herein set forth.

2. The combination of the lever P, hooked lever R, rod T, and mechanism to reciprocate the same, arm V, and springs *k*, *m*, and *w*, all substantially as and for the purposes herein set forth.

3. The combination of the rod T, by means of its hooks *t*, with the tube S, grooved and otherwise constructed as described, the tapering collar or ring *n* within said tube, the hooked rod *p*, and reciprocating jaws for grasping said rod and feeding it forward to the screw-making instrument, substantially as herein set forth.

4. The hollow spindle E and springs *x*, the chuck W sliding on said spindle over the springs and provided with elongated hub, grooved collar Z, pins f^1, buttons h^1, levers k^1, and jaws i^1, all constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The combination, with the subject-matter of the fourth clause, of the forked arm *y*, shaft X, spring *z*, and wedge *y*, and mechanism to reciprocate said wedge, substantially as and for the purposes herein set forth.

6. The combination of the chuck W, collar Z, arm C^1, pin d^1, sleeve D^1, spring-jaws e^1 e^1, and slide A^1, all constructed and arranged to operate substantially as and for the purposes herein set forth.

7. The combination of the burrer n^1, rocking arm G^1, shaft H^1, spring r^1, and guide-pin p^1, all constructed and arranged as described, and operated by means of the wedges I^1 I^1 on the slide A^4, substantially as and for the purposes herein set forth.

8. The combination of the die J^1 shaft K^1, spring y^1, reciprocating carriage L^1, shafts M′ and P′, arm N′, spring s^1, and reciprocating wedge O′, all substantially as and for the purposes herein set forth.

9. The combination, with the carriage L^1, shaft K^1, and spring y^1, of the cog-wheel s^1, dogs t^1 and v^1, and their springs w^1, the gauge d^2, and incline e^2, all constructed and arranged to operate substantially as and for the purposes herein set forth.

10. The combination, with the die J^1 and chuck W, of the knife R′, standard S′, slide A^4, and cam and spring B^4, substantially as and for the purposes herein set forth.

11. The combination of the header f^2, shafts T′ and W′, arm V′, springs k^2, reciprocating wedge X′, spindle E, and the gear-wheels connecting shaft T′ with said spindle, substantially as and for the purposes herein set forth.

12. The combination of the screw-driver i^2, shafts C^2 E^2, connecting-arm D^2, spring m^2, reciprocating wedge G^2, cog-wheel H^2, and the cog-wheel on the header-shaft T′, substantially as and for the purposes herein set forth.

13. The combination of the reciprocating carriage L^1, die J^1, mechanism for operating said die as described, the vertical revolving shaft y^1, and the horizontally-operating saw h^2, substantially as and for the purposes herein set forth.

14. The combination of the screw-driver shaft C^2, cog-wheel H^2 with notch n^2, cogs p^2, and spring r^2, the collar I^2, pawl f^2, pin s^2, and reciprocating arm J^2 with hook v^2 and shoulder w^2, all substantially as and for the purposes herein set forth.

15. The combination of the collar L^2 with notch z^2, lever y^2, and reciprocating arm K^2 with hook s^2, all substantially as and for the purposes herein set forth.

120,045, antedated October 11, 1871.—Bale Tie.—John Spraguen Davis, Louisville, Ky.

Claim.—The combination, with the band D, of the keys C C and the buckle herein described, having curved side bars A A and cross-bars B B, the latter provided with lips *b′ b′*, when all are constructed and arranged as and for the purpose specified.

120,046.—Churn-Dasher Rod. — Marion G. Decrow, Newark, Ohio, assignor of one-half his right to Joseph P. Decrow, Jr., same place.

Claim.—The combination of the rod *a*, lever *d*, pin *c*, and hook *e*, as specified.

120,047.—Powder-Flask.—Andrew Diezel, Omaha, Neb.

Claim.—The screw-top, provided with tubes C and F, the tube D, apertures E E, spring G, bridge K, screw M, slot L, screw N, chamber R, and posts P P, arranged substantially as shown and described.

120,048. — Baling-Press. — Levi Dodge, Waterford, N. Y.

Claim.—1. A machine for baling hay, straw, and other material, in which the following elements are combined, substantially as herein shown and described: First, a cylinder or case in which the bale is formed, so constructed as to permit the bale, when formed, to be bound while in and removed from it. Second, rollers or other feeding and compressing devices arranged to progressively feed and compress successive portions of the hay or other material into the cylinder or case until the bale is built up and formed therein. Third, a platform or support within the cylinder or case, upon which the bale, during the process of its formation, will rest, said platform and the feeding and compressing devices being arranged substantially as stated, so that the one may have a motion away from the other in proportion as the bale is built up and compressed.

2. The combination, with the cylinder or other case in which the bale is formed and the devices by means of which successive portions of the material to be baled are progressively fed and compressed into said cylinder or case, of a sliding base or support for the bale, arranged substantially as shown and described within the cylinder, and so as to offer a yielding resistance to the compressing devices and to move away from the said devices as successive parts of the bale are formed and compressed.

3. The combination of the feed and compressing-rollers and their skeleton supporting-frame with the ring in which said frame is held and moves, and the devices interposed between the ring and frame for reducing friction, substantially as shown and set forth.

4. The arrangement in a baling-press, constructed and operating substantially as described, of the bale-forming cylinder or case so that it may be adjusted up and down with relation to the feeding and compressing devices, as shown and set forth.

5. The combination and arrangement of the cylinder, the platform, and the feeding and compressing devices with the surrounding frame by which they are carried, substantially as herein shown and set forth.

6. A press for baling hay, straw, and like material, constructed and operating substantially in the manner shown and set forth.

120,049. — Harness. — George W. Dutton, Tomales, Cal., assignor to himself and John Ashton, same place.

Claim.—The collar or breast-plate *a*, having its upper ends flattened and padded to adapt itself to the shoulder-blades or where the draft should come upon the horse, and supported by straps B from the saddle D, in the manner shown and described.

120,050.—Hoe. — Augustin Ellis, Canton, Ind.

Claim.—In a hoe or spade, the combination, with the curved slotted shank B, of the blade D, bolt *c*, plano-concave washer G, and plano-convex washer H, substantially as specified.

120,051. — Sawing-Machine. — James Anthony Elston, Elston Station, Mo.

Claim.—1. The jointed saw-frame L, constructed to receive the saw on the end of either arm, and provided with a vertical arc-bar, M, on which the arms of the saw-frames are adjustable toward each other, all arranged for the purpose of adaptation to large or small timber, as set forth.

2. The frame or table A, combined with wheels E′ E′ and adjustable braces D, both arranged on the outside of the table to give a firm support to the table, while the braces may be turned over the top thereof, when the wheels are used to transport the machine.

120,052.—Feeding Sawdust to Furnaces. Andrew J. Emlaw, Grand Haven, Mich.

Claim.—1. The construction and arrangement of a blower, K, and chute G, in the manner and for the purpose set forth.

2. The employment of the distributing-plates P under the boilers, in connection with the feed-chutes G, through which the fuel is blown into the furnace, as and for the purpose set forth.

3. The arrangement of the chain M and chain-wheels N N′ with relation to the box F for distributing the fuel to the feed-chutes G, as set forth.

4. The arrangement of the slides H, lever I, and rod J with relation to the box F and chutes G, as and for the purpose set forth.

5. The traps O in the chutes G, as described, for the purpose specified.

120,053. — Tobacco-Pipe. — Henry C. Finlayson, New York, N. Y.

Claim.—In combination with the wooden shank B of the pipe, the wooden joint-coupling C and the removable metallic tube, D, the short metal cylinder F and metallic flange E, arranged within the stem, as herein set forth and shown, for the purpose specified.

120,054. — Pump-Piston. — Amos H. Foe, Strathroy, Canada.

Claim.—1. The valve-seat frame or "sucker," of the three sections A B C, in such a manner as will admit of nailing on the valve and collar, substantially as herein set forth.

2. The arrangement of said sections A B C with the valve D, rod F, and straps G, and collar H, substantially as set forth.

120,055. — Plow-Colter. — David D. Gibson, Springville, Iowa.

Claim.—1. The quadrilateral colter C provided with rings *a a*, said rings being formed on the ends of small screw-bolts and fastened by nuts on the opposite side of the colter, substantially as and for the purposes herein set forth.

2. In combination with the quadrilateral colter C having rings or eyes *a a*, as described, the rod *b* formed on the lower end of the shank D, substantially as and for the purposes herein set forth.

3. In combination with the quadrilateral colter C having rings or eyes *a a*, and the shank D with rod *b*, the concave and convex wedges *d d′*, straight wedge *m*, stirrup *f*, bar E, rod A, and set-screw *k*, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

120,056.—Lubricator for Steam and Air-Engines.—Samuel N. Goodale, St. Louis, Mo.

Claim.—1. The lubricator, consisting of a fibrous material, E, supported between plates D G, all arranged substantially as and for the purpose set forth.

2. In combination with the lubricator D E G, the collar I, pawl J, and ratchet K, as and for the purpose set forth.

120,057.—Magneto-Electric Machine.—Zenobe Theophile Gramme and Eardley Louis Charles D'Ivernois, Paris, France.

Claim.—1. The employment, in magneto-electric machines, of one or more cylinders, rings, or large endless bobbins arranged and constructed in the manner as has been above described, viz., made into a circular or other suitable endless shape, and consisting of a series of small bobbins or wires enveloping a core of soft iron or other good magnetic material, and connected together end to end in a continuous series, the said endless large bobbin or bobbins or cylinders situated between or in opposition to the poles of fixed or movable permanent or electro-magnets, for the purpose of allowing the production of continuous induction-currents in the conducting-wires, strips, or ribbons of brass or oth-

er good conducting metal enveloping the magnetic material, in which wires, strips, or ribbons a continuous displacement of the magnetism takes place without demagnetising.

2. The arrangements described for allowing of giving rise to alternate or opposite instead of continuous currents.

3. The general arrangement and combination of parts of the various above-described magneto-electric apparatus to be employed for any industrial, physiological, or other purposes for which electric currents may be made use of, substantially as described and illustrated in the annexed drawing, and for the purposes set down.

120,058. — Gas-Lamp. — Joshua Gray, New York, N. Y.

Claim.—The cap E provided with a perforation, *e*, in combination with the reservoir A, bonnet D, pipe B, and perforations *a b*, substantially as herein shown and described, and for the purposes set forth.

120,059. — Spark-Arrester. — John Greacen, Jr., and Stanley Greacen, New York, N. Y.

Claim.—1. The hinged inclining stack A, in combination with the smoke-conveying tubes, whereby the smoke, cinders, steam, &c., are carried directly into the bell-mouth D without change of direction, for the purpose set forth.

2. The combination of automatic gates G G with the draught-boxes F, substantially as described, for the purpose specified.

120,060.—Seal-Bolt.—Fred C. Hamilton, New York, N. Y., assignor, by mesne assignment, to Franklin W. Brooks, same place.

Claim. — As an improved lock for shackle-pins, the catches D, in combination with the holder F, carrying a seal of variegated glass or analogous frangible material, so applied that it must be broken in order to release the pin.

120,061.—Seal-Bolt.—Fred C. Hamilton, New York, N. Y., assignor, by mesne assignment, to Franklin W. Brooks, same place.

Claim.—1. The combination of the shackle-pin A B, bar C, sliding dog D, and spring-catch E, substantially as and for the purpose specified.

2. The shackle-pin A B and flanged cross-bar C, in combination with a spring-catch, E, seal e^2, and dog D, substantially as and for the purpose specified.

120,062. — Animal-Gag. — W. H. Harrison Hallock, Mattituck, N. Y.

Claim.—1. The combination, with the ring A, of the adjustable cross-bar C, substantially as and for the purpose herein set forth.

2. The handle D combined with the cross-bar, substantially as described.

3. The combination of the adjustable bearers F and rod G with the ring A, substantially as and for the purpose herein set forth.

120,063.—Animal-Trap.—George R. Harding, Manchester, Va.

Claim.—1. The notched bait-hook J, in combination with the dog H, rock-shaft G', arms G, ways F, and doors E, operating together, substantially as described.

2. The tripper K rising from the platform D, operating in combination with said platform and with the notched hook J, dog H, and doors E, substantially as described.

3. The trap-door L with arm M and the connection N, in combination with the rock-shaft G', dog H, hook J, arms G, and doors E, substantially as and for the purpose described.

120,064. — Chair. — William W. Haupt, Mountain City, Tex.

Claim.—1. The combination of the frame A, back B, bottom S, foot-rest F, bars O C H, side pieces m, and grooves G G', as specified.

2. The combination of the devices of the first claim with the head-rest R, operating as described.

120,065.—Device for Discharging Grain from Railway Cars.—Samuel W. Hawes, Jersey City, assignor to Richard W. Hawes, trustee, Hohokus, N. J.

Claim.—1. A discharge-spout, B E, placed at the bottom of a grain-transporting car, combined with an endless carrier-belt, F, as and for the purpose specified.

2. A discharge spout for grain-transporting cars, consisting of the tube B, combined with the double and jointed tubes E, as described and shown in Fig. 3 of drawing.

120,066.—Horse-Power.—David S. Heebner and Josiah D. Heebner, Norristonville, Pa.

Claim.—A link, *a*, for the endless chain of a horse-power, when such link is made higher at one end than at the other, as specified.

120,067.—Trunk-Lid Guide.—Louis Hillebrand and Daniel Wolf, Philadelphia, Pa.

Claim.—1. A hingeless hasp, provided with a handle, B, substantially as and for the purpose described.

2. The sockets D within the lock-casing, in connection with the lugs E of the hasp, substantially as and for the purpose described.

120,068.—Picker-Staff Check for Looms. Cyrus Augustus Hooper, Lewiston, Me.

Claim.—1. The finger A, in combination with the bolt B, spring D, and the holding-frame *c*, as described.

2. The bolt B provided with a square end, in combination with frame *c* provided with a square socket, and the finger A and spring D, as described.

120,069.—Tobacco-Dressing Machine.—James H. Howe, Utica, N. Y.

Claim.—1. The hopper A, with a flexible bottom, C, and the rotary beaters E combined, substantially as specified.

2. The combination, with the hopper A C and rotary beaters, of the flexible sheet D, substantially as specified.

120,070.—Pump-Piston.—John Humphrey, Keene, N. H., assignor to Bridgeport Manufacturing Company, Bridgeport, Conn.

Claim.—A piston for pumps, provided with a diametrical valve-chamber or passage, G, extending through the piston and opening on opposite points of its periphery, and with a hollow piston-stem or eduction-pipe, B, communicating with said valve-chamber, substantially as herein described.

120,071.—Steam-Plow.—Oliver Hyde, Oakland, Cal.

Claim.—The frame I, connected with the frame A by means of the hinged arms or braces J, in combination with the box K and driving-shaft E provided with the bevel-wheel *f* and sleeve *g*, all constructed and arranged substantially as and for the purpose herein described.

120,072.—Panoramic School Apparatus. A. Perley M. Jeffers, Allegan, Mich., assignor to himself, Milton C. Jeffers, and Eugene F. Beecher.

Claim.—1. The panoramic curtain a mounted upon rollers *b* and *c*, in combination with the screens moving horizontally to cover portions of the panoramic curtain, substantially as and for the purposes set forth.

2. The panoramic curtain and vertically-moving frame *l*, in combination with the box containing the apparatus and the horizontal moving screens, as and for the purposes set forth.

3. The plate *d* covered with Canton-flannel or equivalent material, in combination with the panoramic curtain, for the purposes specified.

120,073.—Cultivator.—Philip R. Jenkins, Cottonville, Iowa.

Claim.—The arrangement of the frame D E at an elevation above the axle in the rear, and at a depression below the same in front, while rigidly supported on the axle at about one-third the distance from the front of said frame, as and for the purpose specified.

120,074. — Medical Compound for Cure of Rheumatism, &c. — Joseph Keiser, York, Pa.

Claim.—The within-described compound, composed of the ingredients, substantially for the purposes herein set forth.

120,075. — Means for Uncapping Cartridges.—Charles A. King, Springfield, Mass.

Claim.—1. The process of removing caps or primers from empty cartridge-shells, substantially as herein described.

2. The combination of the tube A with the piston B, and plate *d* having a recess, *e*, therein, substantially as and for the purpose described.

120,076, antedated October 14, 1871.—Well-Auger.—Hillery R. King, Poplar Bluff, Ark.

Claim.—The short spiral web E, formed on the lower end of the hollow stem A, and arranged, with relation to the main spiral B, as shown and described, for the purpose specified.

120,077. — Neck-Tie Retainer. — Henry Laurence, New Orleans, La.

Claim.—1. In a cravat or neck-tie retainer, the combination of a hinged metallic loop, B, with the hinged wings A, substantially as described.

2. The spring-hinged loop B, arranged with respect to the pivot of the wings that its expansive force will act to return the depressed wings to their proper positions under the folds of the collar, as described.

120,078. — Revolving Flower-Stand.—Thomas Leslie, Brooklyn, N. Y.

Claim.—1. The arrangement and combination of the reservoir A, tank B, revolving columns D D, and limbs E, substantially as described.

2. The cups F, in combination with the limbs E, as shown and described.

3. The combination of the tubular limbs E with the revolving columns D D, as described.

120,079, antedated October 5, 1871.—Body-Loop for Carriages. — Henry Augustus Luttgens, Paterson, N. J.

Claim.—The movable or adjustable plate *g* or *h*, bolted firmly to the bottom face of spring-bars B and also to the carriage-body A or body-loop *d*, adapted to varied relative heights of the spring-bars B and carriage-body A, substantially in the manner and for the purpose described.

120,080. — Cylinder-Cock. — Matthew B. Mason and John S. McCrum, Kansas City, Mo.

Claim. — The combination, substantially as described, of the barrel A *b* L, detachable head C *c d*, valve E F *f*, support H, ridge or stop J, and operating bell-crank G, for the object stated.

120,081. — Seeding-Machine.—Samuel O. Masters, Corning, N. Y.

Claim.—1. The hopper I, pivoted to the frame D, as and for the purpose set forth.

2. The combination of the pivoted hopper I with frames D D', standards M, and cleats *m*, substantially as and for the purpose specified.

120,082. — Means of Lighting Gas.—Edwin D. McCracken, New York, N. Y., assignor to Lucius A. Bigelow, trustee, Boston, Mass.

Claim. — 1. The combination, substantially as herein described, with a system of main and service-pipes for supplying illuminating-gas to burners, and valves for letting on and shutting off said gas to and from the burners, of a separate system of main and service-pipes supplying, at a higher pressure than the illuminating-gas, a gas which produces both the operation of said valves and that of igniting the illuminating-gas, substantially as herein set forth.

2. The combination of the illuminating-gas chamber B *b*, the high-pressure gas-chamber C *c*, each divided into two compartments, the flexible diaphragm or its equivalent D, and the two valves *e* f^2, when arranged substantially as herein set forth.

3. The combination, substantially as herein described, with the high-pressure gas-chamber having two compartments, of the two valves *f* f^2, opening and closing in opposite directions, as and for the purpose herein set forth.

4. The combination, with the flexible diaphragm D or its equivalent, and the valves *e* and f^2 closing in opposite directions, of the stronger spring *j*, operating to close the valve *e*, and the weaker spring operating to close the valve f^2, substantially as and for the purpose herein set forth.

5. The adjusting-screw *i*, in combination with the valve-stems *e'* and f^1, substantially as and for the purpose herein described.

120,083.—Gas-Lighting Apparatus.—Edwin D. McCracken, New York, N. Y., assignor to Lucius A. Bigelow, trustee, Boston, Mass.

Claim. — 1. The combination, substantially as herein described, of the illuminating-gas pipe E, air or high-pressure gas-pipe G, chambers B and C, diaphragm D, single valve J, and spring K, and stop L, operating as herein set forth.

2. In combination with the above, the spring N, applied and operating substantially as and for the purpose herein set forth.

120,084.—Flocked Fabric for Hats, Bonnets, &c.—Chauncey L. Mitchell, Westborough, assignor of one-half his right to William Heckle, Boston, Mass.

Claim.—As an article of manufacture, a flock fabric made by fixing the flock with India-rubber cement directly upon buckram or other material, in the piece, made susceptible, by its stiffening-material, of being molded into form upon dies without fracture, substantially as and for the purposes described.

120,085. — Sewing-Machine Case.—Otto Nauen, New York, N. Y.

Claim.—1. The links *b c*, in combination with the table A and case B, constructed and operating substantially in the manner herein shown and described.

2. The combination of the lock F on the front section of the case with a catch attached to or forming part of one of the links on which the rear section of the case swings, substantially in the manner set forth.

120,086. — Shield and Towel-Rack for Washstands. — John M. Oakley, Green Point, N. Y.

Claim.—The combination of the shield A B C and

hinged racks or frames D E with each other, to adapt them to be used with an ordinary washstand, substantially as herein shown and described, and for the purpose set forth.

120,087. — MACHINE FOR BENDING AND CHANNELING HORSESHOES.—Adolf Oehme, Rock Island, Ill.

Claim.—1. The pendulum I, carrying the rollers r^1 r^2 and a disk, *s*, in combination with a cam, H, acting on the rollers r^1 r^2, and with the forming-die, all constructed and operating substantially in the manner herein shown and described.

2. The cam A acting on a roller, *g*, in the lever *f*, which connects, by rods *m i*, with a lever mounted on a rock-shaft, *l*, to which motion is imparted by the starting-bar U, in combination with the shaft E carrying the forming-die *u*, and with the cog-wheels which impart motion to the shafts E and G, substantially in the manner and for the purpose herein set forth.

3. The toggle mechanism K, constructed substantially as shown, in combination with the jaws *s t* and the forming-die *u* mounted on the shaft E, as specified.

4. The roller-creasing die r^3, mounted on a rod, g^1, in combination with the mechanism for reciprocating said rod longitudinally to bring the creasers to and from the shoe, and mechanism to draw the creasers down upon the shoe, as and for the purpose set forth.

120,088.—MACHINE FOR PUNCHING HOLES IN AND BENDING THE CALKS ON HORSESHOES.—Adolf Oehme, Rock Island, Ill.

Claim.—1. The disks F and G, provided, respectively, with noses *m n* and recesses *r s*, in combination with the starting-bar *k*, levers *i f*, click *q*, elbow-lever *d*, clutch E, cog-wheel *a*, and main shaft C, all as shown and described.

2. The cams I K, in combination with the lever O, punches *w*, guide *w'*, and table R, and with the main shaft C, the motion of which is controlled by a disk, F, provided with noses *m n*, substantially in the manner herein set forth.

3. The combination of benders *y* and hammers *z* with each other and with cams I K, receiving motion from a shaft, C, the motion of which is controlled by a disk, F, provided with noses *m n*, substantially as described.

120,089.—LIFE-PRESERVER.—Marcus Ormsbee, Brooklyn, N. Y.

Claim.—1. As an improvement in life preservers, a buoy, constructed in annular form, in combination with an elastic collar adapted to spring to the neck, substantially as and for the purposes specified.

2. In combination with the annular buoy A, one or more respiration-tubes, D, substantially as and for the purposes specified.

120,090, antedated October 12, 1871.—BRUSH AND SCRAPER FOR SINKS.—James H. Osgood, Boston, Mass., assignor to himself and Samuel H. Hall, same place.

Claim.—The combined scraper and brush described, consisting of brush A, back B, plate C, rivets *d*, all arranged together, substantially as and for the purpose described.

120,091.—THILL-COUPLING.—James W. Oulton, Amherst, Canada.

Claim.—The thill cross-head C c^1 c^2 and clip B b^1 b^2, when combined and arranged with the axle-yoke A, as and for the purpose specified.

120,092.—THIMBLE-SKEIN. — Charles Paddock, Alton, Ill.

Claim.—The octagonal shoulder B upon the end of the skein and the octagonal washer C, and their use together as described, for the purposes herein specified.

120,093.—VULCANIZING RUBBER SACKS FOR STOCK-PUMPS.—John S. Patric, Rochester, N. Y.

Claim.—1. The method of forming and vulcanizing rubber sacks for stock-pumps, by means of the wholly or partially-hollow mold A, composed of a suitable fire-proof material, over the edges of which the flaps *a* of the sack are turned, for the purposes set forth.

2. In combination with the hollow vulcanizing-mold A, the clamping-rings *b*, operating substantially as described.

120,094, antedated October 7, 1871.—APPARATUS FOR COMPRESSING AIR.—John S. Patric, Rochester, N. Y.

Claim.—1. The tilting air-compressing vessel A provided with locking-links *i n* at its extremities, in combination with the oscillating water-receivers G G', the parts being arranged to operate the water-valves *a a' b b'*, substantially in the manner set forth.

2. In combination with the inlet-valves *a* and *a'* and outlet-valves *b* and *b'*, the counter-weighted valve-stems N and N', arranged to be operated by the oscillation of the vessel A, for the purposes set forth.

120,095, antedated October 7, 1871.—APPARATUS FOR CONDENSING AIR.—John S. Patric, Rochester, N. Y.

Claim.—1. The vessel A, provided with compressing-chambers B and C, centrally-located water-box D, and suitable inlet and outlet water and air-valves, for the purposes set forth.

2. The oscillating water-receivers G G', arranged to operate the inlet and outlet water-valves *a a' b b'* conjointly, substantially as and for the purposes set forth.

3. The oscillating water-receiver G in combination with the locking-links *i*, whereby the receiver is locked in its upward position to be automatically released when filled, for the purposes set forth.

4. In combination with the oscillating water-receiver G and its locking device, the tilting water-chamber K, operating substantially as described.

5. In combination with the oscillating water-receivers G G', the balancing-beam H, connected and operating substantially in the manner set forth.

6. The oscillating receivers G G', balancing-beam H, and toes L L', in combination with the rock-shafts *f* and attachments, outlet-valves or valves *b b'*, and inlet-valves or valves *a a'*, when the parts are so arranged that said valves shall operate conjointly for the purposes set forth.

120,096.—MAKING RUBBER STEREOTYPES.—Henry D. Perky, Washington, D. C.

Claim.—The process herein described for producing flexible printing-forms from vulcanized rubber composition by the combined agency of pressure and dry-heat, applied as above set forth.

120,097.—CHURN-DASHER.—Henry S. Potter, Hawley, Pa.

Claim.—1. The improved churn-dasher, having the shaft A with beveled protuberance *a*, and the slatted removable paddles with the beveled holes A', shoulder a^2, elongated slots a^1, and blunt arms a^3, said paddles being arranged relatively in the manner and for the purpose described.

2. In a churn-dasher, as described, the shaft A having the beveled protuberance *a*, recess a^4, and shoulder a^2, in combination with the slatted paddles having the beveled holes A', as and for the purpose specified.

120,098.—CASTER FOR SEWING-MACHINES.—George K. Proctor, Salem, Mass.

Claim.—The levers D and E pivoted to two of the end legs of frame, and furnished with casters, in combination with the lever B pivoted to the opposite side of the frame, carrying the fulcrum car-

ter K, and journaled in levers D E, as shown and described.

120,099.—FLUX FOR REDUCING ORES AND REFINING METALS. — William Quann, Philadelphia, Pa., assignor to himself, John W. Thackara, and Edward L. Spain, same place.

Claim.—A flux composed of the within-described ingredients, combined in about the proportions specified.

120,100.—COW-MILKER. — William Reading, Offutt's Cross-Roads, Md.

Claim.—As a means of milking cows, the herein-described device, consisting of the tube A provided with the elastic fingers *a a*, open at their smaller ends, substantially as described.

120,101.—IRONING-TABLE. —Thomas Reed, Plainwell, Mich.

Claim.—The ironing-board C with straight bars *a a*, hook *b*, legs D D E, guides H H, pin *i*, and groove in the leg E, all combined and arranged substantially as and for the purposes herein set forth.

120,102.—STEAM-BOILER.— Richard L. Robertson, Jr., New Orleans, La.

Claim.—The within-described boiler A, constructed as described, for the purposes of applying thereto gasoline or other equivalent fuel for the generation of steam within the said boiler A, as and for the purposes specified.

120,103, antedated October 13, 1871. — CHURN.—Lewis Runyon, Newark, N. Y.

Claim. — In combination with the horizontal churn-barrel A, thermometer T, and tempering-chamber D, the agitator B having the flights *h* arranged as described, and each formed or set as herein set forth, when said barrel is provided with a small auxiliary cover, H, for the purpose of giving access to the thermometer without exposing the cream to the atmosphere, substantially as and for the purposes set forth.

120,104.—BALE-TIE. — Joseph F. Rusling, Lawrenceville, Pa.

Claim. — The lever D provided with the hook-shaped fulcrum end E, and having its free end made in spiral form, as shown, to adapt it to be tucked under the band and hold itself in position, as set forth.

120,105. — CANDLE. — Henry Ryder, New Bedford, Mass.

Claim.—The combination, in one candle, of two or more common braided wicks, arranged with relation to each other as described, so that while burning they will spread outwardly in opposite directions, and thereby produce a broader and more uniform flame, and give a maximum of light from a given weight of material.

120,106.—CARRIAGE. — Cyrus W. Saladee, St. Catharine's, Canada.

Claim.—1. In vehicles without perch, the half-elliptic or C-spring B, in combination with the body-loop A and stirrup L, substantially as and for the purpose shown and described.

2. Extending the body-loop A and binging it upon the rear end of the half-elliptic spring B, as and for the purpose shown and described.

3. In combination with the stirrups L, the cross-braces O and O, seen in Fig. 3, in the manner and for the purpose substantially as shown and described.

4. Rigidly securing the front springs B 1 and the thills or pole to the axle, substantially as and for the purpose set forth.

5. The stirrup K, in combination with the front ends of the springs B 1 and the thills or pole of the vehicle, substantially as and for the purpose set forth.

6. The combination of the cross-brace P with the cross-bar E, Fig. 4, as shown and described.

7. Interposing the joint S, Fig. 1, between the fifth-wheel D and the cross-bar E and body-loop A 1, substantially as and for the purpose shown and described.

8. The combination of the ears T, Figs. 1, 4, and 6, with the cross-bar E or its equivalent, friction-plates *v*, rubber-block X, and the fifth-wheel D, the whole constructed and operating substantially as shown and described.

120,107.—TOP-PROP AND JOINT FOR CARRIAGES.—Cyrus W. Saladee, St. Catharine's, Canada.

Claim.—1. In top-props, the T-plate R with raised collar S, loose washer 2, and prop *m*, combined and operating in the manner and for the purpose substantially as shown and described.

2. Broadly, as a new article of manufacture, the adjustable top-joints A B, constructed and operating substantially as and for the purpose shown and described.

3. The combination of the tap E, open-socket C, set-bolt D, Figs. 2 and 3, with the top-prop *m* and ends B' of the top-joints A B, or their equivalents, substantially as and for the purpose shown and described.

120,108. — VENTILATING GRAIN-VESSELS.—William S. Sampson, New York, N. Y., assignor to himself, Ruth Ann Van Bunschoten, and Harriet Van Bunschoten, same place.

Claim.—The upper and lower perforated pipes A D, having inlets B, outlets C E, and covering-plates F, when all are constructed and arranged in the hold of a vessel, as described.

120,109.—VENTILATING GRAIN-CARS.—William S. Sampson, New York, N. Y., assignor to himself, Ruth Ann Van Bunschoten, and Harriet Van Bunschoten, same place.

Claim.—1. A grain-car having wire-covered inlet-openings A B in the bottom and outlet-openings C near the top, applied in combination with the perforated pipe D, as and for the purpose described.

2. One or more perforated tubes, D, open at each end, arranged longitudinally in a grain-car to draw the air through as the car moves and disseminate it among the grain, as and for the purpose set forth.

3. The openings E E in front and rear of the car, to produce a draught, and the perforated pipe D, combined with side and bottom openings A F C, to induce lateral currents of air therefrom, and thereby aerate the grain in all parts.

120,110.—PHOTOGRAPHIC POSING-CHAIR.—Charles A. Schindler, West Hoboken, N. J.

Claim.—1. In combination with the chair A B C, the removable arms H I and keepers J, substantially as specified.

2. The combination of the sliding slotted back D and arms E E with the chair-seat A and legs B C, as shown and described.

120,111. — MILK-SAFE.—Edmund F. Sevy, St. John's, Mich.

Claim.—In combination with a milk-safe, A, one or more vertical pivoted triangular standards, B, provided with radial rack-arms *e*, substantially as and for the purpose specified.

120,112. — SEED-DROPPER. — Frederick Sleight, Warren county, N. J.

Claim.—1. The tube E, apron F, and bar B, in combination with the hopper G and slide C, by

which the seed may be sown in drills, or broadcast, or both at the same time, substantially as set forth.

2. In combination with the hopper G and slide C, the bar A with its attachments and screw-rods I I and thumb-nuts D D, for the purpose described.

120,113.—CULTIVATOR.—Arthur C. Smith, Fayetteville, N. C.

Claim.—The combination of the land-marker L′ adapted to slide along the pivoted arm L, and rendered adjustable by means of the arms N N N and adjusting-plate n, with the stirrup K, cord m, and post L′, all arranged and operating as described.

120,114.—CHANDELIER.—Edgar M. Smith, New York, N. Y.

Claim.—1. In combination with a chandelier, a sliding center or drop-light that moves and is supported upon two guide-rods, c d, one of which, at least, shall be a gas-pipe, substantially as and for the purpose described.

2. In combination with the chandelier and sliding drop-light moving and guided by at least two rods or pipes, as described, the compound gearing and weight and auxiliary guides i i and m, as and for the purpose set forth.

120,115. — WAGON-STANDARD. — Jacob W. Smith, Dixon, Iowa.

Claim.—The stakes c c and braces f f, in combination with the bolster a having a series of transverse perforations, as and for the purposes shown and described.

120,116.—PRINTING-TELEGRAPH.—John E. Smith, New York, N. Y.

Claim.—1. The combination of the magnet M′ with the ratchet-wheel r of the type-wheel shaft, and shifting devices or connections, whereby said magnet is made to throw the ratchet-wheel into and out of gear with its pallet p to bring the type-wheels of the several instruments in circuit into unison, substantially as specified.

2. The combination, with the transmitting portion of the instrument, of a resistance, R, arranged to vary the strength of the current from a distant battery to control the action of the printing-lever, essentially as herein set forth.

3. The combination, with the resistance R, of the arm a, the frame F, the plate P, and blank and letter keys of the instrument, whereby the contact of said arm with any of said keys completes a shunt to the resistance R, substantially as specified.

4. The combination, with one of the keys of the instrument, of the spring S, or its equivalent, whereby on depressing said key it is made to check the motion of the arm a and circuit-wheel C; also, by holding the circuit open to release the armature A of the magnet M′, essentially as described.

5. The lever and switch L in combination with the key K and points d and e, whereby said lever serves to hold down the key and to close the circuit at d, so as to compensate for the interruption at e by the depression of the key, substantially as specified.

6. The combination of the spring S, the lever L, the resistance R, the arm a, the circuit-wheel C, the keys K K¹ K², &c., the magnet M′, the ratchet-wheel r on the type-wheel shaft, and the pins h h′, essentially as and for the purposes herein set forth.

120,117.—HUB-MORTISING MACHINE.—Peter Snyder, Grand Rapids, Mich.

Claim.—1. The traveling-table S formed with the boxes 2 2 and adjustable posts 6 6, box 8, screw-rod and crank F, arranged and operated substantially as described.

2. The dodge C, with the shafts x x and w w playing in the boxes 2 2, substantially as described.

3. The lever O, shaft N, projecting arm N, in combination with the bar y, for the purpose of giving a lateral motion to the dodge C, substantially as described.

4. The construction and arrangement of the hollow bolt r, bolt s, and block D, substantially as described.

5. The combination of the screw E with the block D, bolts r and s, and slot 5, for the purpose of varying the radius or sweep of the dodge C, substantially as described.

6. The dish B, constructed with the slot 5 and connected with the dodge C by the bolts r and s and gibs, as set forth.

7. The arrangement of the set-screws S′ S″ and T T′ in combination with the projections 11 or their equivalents, formed on the dish B, substantially as described.

8. The combination of the lever K provided with hinge 16 and spring 17, the ratchet-wheel M, and index-wheel I, stop-rod L′, latch 3, and tooth on spring H, and arm G, all arranged and operating substantially as described.

9. The auger-shaft e, formed with a feather-key working in a screw-pinion, L, so that the shaft e can pass longitudinally through the pinion at the same time that it revolves the pinion L, substantially as described.

10. The combination of the traveling chisel-box F F with the revolving auger-shaft e, substantially as specified.

11. The movable box n′ in combination with the bent lever p, lever-rod k, lever k′, rod l, and treadles x′ x′, for the purpose of connecting and disconnecting the friction-wheels a and b′, substantially as specified.

120,118. — HARNESS. — Jonas C. Spooner, Houlton, Me.

Claim.—The breast-yoke A, having the martingale C attached to its middle part, and provided at its ends with rings B and at its center with the snap-hook D, substantially as herein shown and described, and for the purposes set forth.

120,119. — HORSE-SHOEING REST.—George Stansel, St. Johnsville, N. Y.

Claim.—The combination of the base A, hollow standard B, springs C, lever D, bar F, and pivoted arms G with each other, substantially as herein shown and described, and for the purpose set forth.

120,120. — VARIABLE EXHAUST FOR LOCOMOTIVE-ENGINES. — Orlando Stewart, East Cambridge, Mass.

Claim.—1. The casing, composed of the base A, sides B, ends C, and combined with the pivoted wings E, when the several parts are constructed and arranged substantially as and for the purpose specified.

2. In combination with the elements above named, the shaft G, double arms H, and connections I and K, substantially as and for the purpose shown.

120,121. — PRIVY-SEAT COVER.—William Street, New York, N. Y.

Claim.—In combination with privy-seat A, cover B pivoted to an arm, C, and on each side thereof, which arm is itself pivoted to the seat A for the purpose of enabling the bottom side to be turned from the person of the sitter.

120,122. — BROOM-BRIDLE.—Joseph H. Subers and James H. Troup, Philadelphia, Pa.

Claim. — As a new article of manufacture, a broom-bridle having two or more metallic strips, B, combined with the bands A and A′, substantially in the manner and for the purpose set forth.

120,123. — SAW-FRAME. — William H. Sullenberger, Harrisburg, Pa., assignor of one-half his right to John Kerper, same place.

Claim.—The combination of the angular lever P P¹ P² pivoted at d and d′, the middle brace B, the top brace A, and the standards Q Q¹ Q², when these parts are constructed as set forth and arranged to act in regulating the tension of the saw S S′, mounted in revolving stocks Z Z′, substantially in the manner as and for the purpose hereinbefore set forth.

120,124. — THILL-COUPLING. — Otto Tackmann, Yonkers, N. Y.

Claim.—The loop-clip B having recess for the rubber spring, as described, the clasp H having loop J together with the strap-loop K and strap I, constructed and arranged substantially as and for the purpose specified.

120,125. — ALARM-LOCK.—Jackson T. Taylor, Newnan, Ga.

Claim.—1. The combination of nuts H with the tapering spindles D D and conically-perforated cog-wheels F F, to enable the wheels to be forced down upon the spindles, and the combination to be changed, in the manner described.

2. The quadrant-latch J, spindle K, handle L, and catch M combined, as described, with catches I I and slotted wheels F f, so that all must be moved into a certain position before the door can be opened.

3. The combination, in a door-lock, of cog-wheels F f and catches I I, alarm and detent mechanism M N O P Q, knobbed spindles D having points R and the points S, and the latch mechanism J K L M, all operating as and for the purpose specified.

120,126.—KNIT-FABRIC.—Samuel Thacker, Snenton, England, assignor to John S. Cropper, Hackensack, N. J.

Claim.—The manufacture of fabrics of the character herein refered to upon knitting-frames, aided by the after process of dressing and stiffening, substantially in the manner herein described.

120,127. — RECLINING-CHAIR. — Hopkins Thompson, New York, N. Y.

Claim.—The links a and straps e, in combination with the seat B, back-rest C, and pivots b c d f, substantially in the manner herein shown and described.

120,128.—HEAD-REST.—Thomas D. Thompson, Providence, R. I.

Claim. — The arm J, with the hinged jaw or clamp i and cam-lever k, in combination with ball c as attached to head-rest a and ball d, in combination with hinged jaw or clamp g, set-screw f, and slide A, as operated on tenon e, all substantially as described, and for the purpose specified.

120,129.—PERMUTATION LOCK.—Daniel L. Tower, New York, N. Y.

Claim.—1. In combination with jointed bolt E F the pinion G, rack-bar H, pinion I, bar P having arm R and finger S thereon, and the disk J having cam-groove T, all arranged and operated together as described, and for the purpose specified.

2. The grooved disk-shaft K, in combination with the spring-staple X, when said staple is secured to and turns with the disk-wheel J, substantially as and for the purpose specified.

120,130. — PROCESS OF ATTACHING TEETH TO PYROXYLINE DENTAL PLATES.—James A. Troutman, Seneca Falls, N. Y.

Claim.—1. The process of attaching the teeth to the plate by means of the solid material, substantially in the manner as herein described.

2. Coating the parts of the material to be protected from the action of the solvents with mucilage or its equivalent, as specified.

3. The backing-up and filling-in pieces, when made of the solid material, as herein described, and for the purposes set forth.

120,131.—WARPING-CHOCK FOR VESSELS.—Hans Trulsen, Painesville, Ohio.

Claim.—The two sheaves with vertical axles, in combination with the two rollers with horizontal axles.

120,132.—CIRCUIT-CLOSER.—William Unger, Newark, N. J.

Claim.—A cam placed diagonally to the movement of a spring-arm, actuated by a magnet, in combination with a metallic plate contiguous to said spring-arm, and acting therewith to close an electric circuit automatically and break the same, substantially as set forth.

120,133. — PRINTING-TELEGRAPH. — Henry Van Hoevenbergh, New York, N. Y.

Claim.—The method herein specified of causing one type-wheel to set the adjacent type-wheel by moving it around to the designated point, and there leaving the same, substantially as set forth.

120,134.—CARD-RACK.—Cornelius A. Wall, Grand Rapids, Mich.

Claim.—The card-holder herein described, consisting of the rigid frame C and the single piece of paper or cloth A folded to form a series of horizontal pockets, B B′, substantially as specified.

120,135.—SPOOL-HOLDER.—Andrew W. Warren, Annapolis, Md.

Claim.—1. The combination of the wire-frame A with the points B B B B B B B, more or less, and fastened at the end by the hook C and eye D, substantially as and for the purpose hereinbefore set forth.

2. The improved spool-holder, constructed of a single piece of wire, and operating as specified, substantially as and for the purpose hereinbefore set forth.

120,136.—PHOTOGRAPHY. — Frederick Augustus Wenderoth, Philadelphia, Pa.

Claim.—1. A carbon photographic picture made on a metal surface and sealed, all substantially as set forth.

2. The employment, for the purpose specified, of water and alcohol for moistening the gelatine prior to applying it to the plate.

3. The employment, in making a picture, of a plate or plated surface ribbed, substantially in the manner described.

4. The preliminary coloring of the face of the plate or plated surface, for the purpose specified.

120,137.—MILL-BOLT.—Benjamin C. White, Des Moines, Iowa.

Claim.—1. In a flour-bolt the ribs D, when curved and converging at the head of the reel, substantially as and for the purposes set forth.

2. The combination of the shaft B, radial arms C, converging bisected ribs D, and bolting-cloth box E, and conveyer I, all constructed and operating substantially as set forth.

3. The packing a, attached, as described, on the inside of the head of the reel and operating on the outside of the box or spout E, substantially as and for the purposes herein set forth.

120,138, antedated October 4, 1871.—VENTILATOR.—Reuben White, Boston, Mass.

Claim.—The foraminous reservoir A, in connection with the air-conduit B, when made and arranged substantially as described, and for the purpose set forth.

120,139, antedated October 5, 1871.—GAS-FLAME EXPANDER.—Hiram Whitney, Watertown, Mass.

Claim.—The double plate A, consisting of the perforated part a and solid part a′, constructed, arranged, and operating substantially as described.

120,140.—HARROW. — James Wigle, West Point, Ill.

Claim.—In combination with the harrow-frames or sections A A A, the cross-bars C C, standards D D, eyes E F, and pivoted rod G, passing vertically through said bars, as shown and described.

whereby each harrow has vertical movement independent of the others, for the purpose specified.

120,141. — CORNER FOR PHOTOGRAPHIC PLATE-HOLDERS. — Joseph L. Winner, Elizabeth City, N. C., assignor to Louis W. Gulager and Robert M. Robinson, Philadelphia, Pa.

Claim.—1. The corner for camera-holder, for the purpose described, constructed of non-corrosive metal with side flanges E, so as to be screwed or nailed to the kit or frame and adapted to brace the corners of the latter, all substantially as set forth.

2. The flange or ledge C on corners for camera-holders, for preventing the displacement of the plate, substantially as and for the purpose described

120,142.—SPRING BED-BOTTOM. — William H. Woodworth, Pewamo, Mich.

Claim.—The combination and arrangement, in a spring bed-bottom, of a series of slats, B, suspended from the rails A by elastic webs C, when said webs are secured to the rails and slats in the manner herein described, shown, and set forth.

120,143.—CANE-STUBBLE HOE.—Gustavus H. Wright and Amory K. Johnson, New Orleans, La.

Claim.—As a new and improved article of manufacture, the hoe A, consisting of the plate B, teeth or tines C, eye E, and cutting-blade D, arranged substantially as and for the purposes described.

120,144.—PINCHERS.—Daniel Zeiler, Marlborough township, Pa., assignor to himself and Daniel Miller, same place.

Claim.—A pair of pinchers or pliers, consisting of jaws A and A', connected together by a pin, *b*, and operated by a cam-lever, D, pivoted to one of the said jaws, and acting on an arm, B, secured to the other jaw, all substantially as specified.

120,145.—UNIVERSAL SAFETY-COUPLING.—Gustavus H. Zschech, Indianapolis, Ind.

Claim.—The ball-and-socket joint having the segmental recess G, segmental die H, and pins F E, as and for the purpose set forth.

REISSUES.

4,592.—TREATING VEGETABLE AND ANIMAL SUBSTANCES SO AS TO DRY AND PRESERVE THEM.—Charles Alden, Newburg, N. Y., assignor of part interest to Alden Fruit Preserving Company.—Patent No. 100,835, dated March 15, 1870; reissue No. 4,011, dated June 7, 1870; reissue No. 4,287, dated March 7, 1871.

Claim.—1. The within-described process of evaporating the moisture from animal and vegetable substances by exposing said substances on rising and falling platforms to a current or currents of air, substantially as set forth.

2. Saccharified fruit, obtained by exposing fruits to a saccharifying or supermaturing process, substantially such as herein described.

4,593.— LUBRICATOR. — John Broughton, New York, N. Y., assignor, by mesne assignments, to Henry Moore, same place.—Patent No. 45,694, dated January 3, 1865.

Claim.—1. The base or shank B and cap C connected firmly and rigidly together by the interior projections or connection, substantially as and for the purposes herein specified.

2. The independent detachable cup or reservoir A, in combination with the rigidly centrally-connected base B and cap C, substantially as and for the purposes herein specified.

3. The combination of the valve G with the tubular connected projections *a f* of the cap and base, in the manner and for the purpose herein specified.

4. The cup or reservoir A, with its bottom aperture arranged in combination with the base or shank B, with its shoulder *d* and packing-gasket or washer thereon, substantially as and for the purpose herein specified.

5. The lubricator, composed of the reservoir A having a simple bottom aperture, the base B having a shoulder, *d*, and packing-washer, on which the reservoir rests, the cap C rigidly connected with the base inside of the reservoir, and the valve G operating in the connection of the cap and base, substantially as and for the purpose herein specified.

4,594.—AXLE-BOX.—David Dalzell, South Egremont, Mass. — Patent No. 106,469, dated August 16, 1870.

Claim.—An axle-box for the hubs of carriage and wagon-wheels, constructed of two parts, A B, substantially as set forth.

4,595.—HEATING-STOVE.—John M. French, Rochester, N. Y., assignee, by mesne assignments, of David L. Stiles.—Patent No. 40,663, dated November 17, 1863; reissue No. 4,004, dated May 31, 1870.

Claim.—1. In combination with a stove having a cylindrical body, B, revertible flues located directly within and inclosed by the cylinder, but partitioned from the cylinder-space, said flues connecting with the hollow bottom *i*, by which a circuit is produced, and the whole so arranged as to form an oblong fire-chamber within the cylinder, for the purpose specified.

2. The flue-plate C, constructed with the draught-pipe *h*, formed in one piece, said pipe opening through the cylinder, as herein described.

3. The register G having air-holes *l l* only in the upper portion, and its closed part *m* situated opposite the draught-opening of the stove, substantially as and for the purpose set forth.

4,596.—PERMUTATION LOCK. — Lyman F. Munger, Rochester, N. Y. — Patent No. 17,804, dated July 14, 1857; reissue No. 62, dated April 2, 1861; extended seven years.

Claim.—1. A series of wheels, W, revolving on a common center, and provided with teeth or indentations at their peripheries for changing their position relatively with other wheels V or their equivalents, when each of the wheels W aforesaid has a pin projecting from its side or sides, so placed as to interlock with similar pins in the wheel or wheels next adjoining it, to operate substantially as and for the purpose herein set forth.

2. In a "combination" lock, the combination of two sets of wheels or their equivalents, capable of engagement and disengagement, when one set has interlocking-pins *n n* for driving the wheels of that set, and the other set has slots *t t* for releasing the bolt, the relative position of said pins and slots being changed to produce new "combinations," by simply disengaging and changing the relative positions of the wheels, and re-engaging them, as specified.

3. In combination with the two sets of wheels W and V, which are capable of engagement and disengagement, the eccentric arbor *r*, passing through the wheels V, for throwing one set away from and toward the other, as herein described.

4. In combination with the wheels V and eccentric arbor *r*, the notched disk *o* and pawl *d*, for holding the wheels in or out of engagement, as described.

5. In combination with the arbor or spindle of a combination lock, a friction-clutch, *a*, so arranged that the lock-works may be driven by the frictional connection, but if any undue resistance is met the said arbor or spindle may turn free, as described.

6. The combination, with the clutch *a* and arbor K, of the notch *k* and point *z*, for the purpose of restoring the position of the wheel W on its arbor, as described.

4,597.—PLOW-COLTER. — William Warren Stillman, Mount Hawley, assignor to Ralph Emerson, Rockford, Ill.—Patent No. 57,007, dated August 7, 1866.

Claim.—1. The clamp, constructed as hereinbefore described, with jaws to embrace the upper and lower sides of the plow-beam, pinch-screws to clamp the beam, and eyes for the colter-spindle, to adjust the colter laterally, as set forth.

2. The combination of the eyes on the clamp, the colter-spindle adjustable endwise therein, the collar embracing the spindle between the eyes, and the pinch-screw clamping the collar on the spindle, substantially as set forth, to adjust the spindle vertically.

3. The combination of the colter, its spindle, the collar, the clamp, and the set-screw, all these parts being constructed and operating in combination, substantially as set forth, to limit the vibration of the colter.

4. The combination of the laterally-adjustable clamp, the vertically-adjustable swiveling-colter, and the set-screw or stop to limit the vibration of the latter, while allowing it to conform to the line of draft; these members being constructed to operate in combination substantially as before set forth.

4,598.—Division A.—PAINT FOR SHIPS' BOTTOMS.—James G. Tarr and Augustus H. Wonson, Gloucester, Mass.—Patent No. 40,515, dated November 3, 1863; reissue No. 2,722, dated August 6, 1867.

Claim.—A paint, consisting of oxide of copper with a suitable vehicle or medium, substantially as described.

4,599.—Division B.—PAINT FOR SHIPS' BOTTOMS.—James G. Tarr and Augustus H. Wonson, Gloucester, Mass.—Patent No. 40,515, dated November 3, 1863; reissue No. 2,722, dated August 6, 1867.

Claim.—A paint, made of oxide of copper with a basis and medium, substantially as described.

4,600.—CULTIVATOR.—Benjamin Tinkham, Cameron, assignor to Hapgood & Co., Chicago, Ill.—Patent No. 30,897, dated December 11, 1860; reissue No. 4,231, dated January 10, 1871.

Claim.—In a straddle-row cultivator, the tongue C rigidly secured to axle B, in combination with bars D D rigidly secured to the axle, serving as braces to the tongue, and having their rear ends or two equivalent bars extended to the rear to support the plow-beams E E with their gangs of plows above the ground when required, substantially as set forth.

4,601. — LANTERN. — William Westlake, James F. Dane, and John P. Covert, Chicago, Ill., assignees, by mesne assignments, of William Westlake. — Patent No. 48,858, dated July 18, 1865; reissue No. 2,337, dated August 14, 1866.

Claim.—1. The combination of the globe *c* and base *d* with the guard *a*, the latter being extended down and connected directly to the base by means of springs or their equivalents, whereby the use of lateral flanges is dispensed with and the globe can be removed through the lower end of the guard, substantially as described.

2. The flange *g*, provided with an opening, *h*, and a slide, *i*, substantially as and for the purpose set forth.

4,602. — LUBRICATOR. — John B. Wickersham, Philadelphia, Pa.— Patent No. 82,667, dated September 29, 1868.

Claim.—1. The sleeve *f*, formed with a swell upon one side, in combination with the tube *e* and reservoir *a*, substantially as specified.

2. A lubricator formed with the tube *e* of white metal, for the purposes and as specified.

3. The combination of the glass reservoir *a* and screw-neck at its lower end with the socket *c* and washer *d*, rendered permanently tight by cement, as set forth.

4. A capillary-feeder formed by metal wires or rods, or a tubular strip of metal inclosed in a fibrous covering, so as to form a siphon, as and for the purposes set forth.

5. The cock *h* and chamber *k*, in combination with a capillary-feeder and oil-cup, substantially as set forth.

6. A lubricator with a glass reservoir and two necks, having pewter or white-metal connections wherever the oil comes in contact with the metal to prevent discoloration, as set forth.

7. A lubricator having a glass reservoir and contracted neck at the upper end, in combination with a cap or cover surrounding and covering the said neck, substantially as set forth.

8. A glass oil-holder for a lubricator, made with contracted necks at both ends, with screws upon their outer surfaces for the caps or sockets, as set forth.

9. A removable sleeve, *f*, upon the feeding-tube *e*, in combination with the capillary-feeder *i*, substantially as set forth.

4,603.—ICE-MACHINE.—Franz Windhausen, Brunswick, Germany, assignor to Louis Schneider, Christian T. Buddecke, and John A. Blaffer, New Orleans, La.—Patent No. 101,198, dated March 22, 1870.

Claim.—1. The process herein described for increasing the intensity of cold produced, the same consisting in returning a part of the compressed air after expansion so as to cool the air still under compression, as set forth.

2. The combination of the cooler and the temperature regulator, to operate substantially as herein described.

3. The double-acting cylinder jacketed and having its covers or heads divided into compartments fitted with valves, organized and operating as herein specified.

4. In combination with the freezing-cells of the refrigerator, the serrated dividing-plates H^2, whereby the current of air is impeded and caused to impinge against the sides of the said cells, as and for the purposes specified.

5. In combination with the refrigerating-chamber of an ice-making machine, the expansible chamber Z, connected therewith and operating substantially as described, for the purposes specified.

6. In combination with the refrigerating-chamber of an ice-making machine, the valve R and antechamber R R, provided with perforated inner walls, substantially as described.

7. The air-conducting pipes, located within a cooling-chamber supplied with air at a low temperature, in combination with a compression-pump of an ice-machine, for cooling the compressed air within the pipes, substantially as described.

DESIGNS.

5,314. — COFFIN-TOP.—William G. Algeo, Rochester, Pa.

Claim.—The lid or cover, having in its upper outer edge moldings alternating with a plain finish, as described and shown.

5,315. — ESCRITOIRE. — John F. Birchard, Milwaukee, Wis.

Claim.—1. The ornamental work B, substantially in the manner above described.

2. The hanging mirror C, in combination with the ornamental work E, substantially as described.
3. The drawer F and cover on the top of the escritoire, in combination with the ornamental work G, substantially as described.
4. The shelf H, in combination with the ornamental work I, substantially as described.
5. The design of the general contour of the escritoire, substantially as described.

5,316.—WATCH-HAND.—Bardwell A. Goodell, Waltham, Mass., assignor to E. Howard & Co.

Claim.—The crescent-shaped piece A and a diamond-shaped piece, B, arranged on the bar each side of said piece A, substantially as specified.

5,317.—ORGAN-CASE.—John R. Lomas, New Haven, Conn., assignor to B. Shoninger, same place.

Claim.—1. The design for the upper part of an organ-case, with the stationary book-rack set between and back of two posts, *j*, as shown.
2. The design for a book-rack, *a*, as shown.
3. The design for lamp-brackets *b*, as shown.
4. The design for an organ-case having a clock, *c*, as shown.
5. The design for the clock-case *e f*, as shown.
6. The design for the head piece *d*, as shown.
7. The design for the lid *i*, as shown.
8. The design for the end and corner molding *g*, as shown.

5,318.—ORNAMENTATION OF GLASS-WARE.—John Oesterling, Wheeling, W. Va.

Claim.—The design for the ornamentation for various pressed or blown-glass vessels as shown.

5,319. — SOCKET FOR LIFTING-HANDLE.—William M. Smith, West Meriden, Conn., assignor to The Meriden Britannia Company, same place.

Claim.—The design for socket for lifting-handle, as herein described and shown in the accompanying illustration.

TRADE-MARKS.

472.—WATCHES AND JEWELRY.—Aikin, Lambert & Co., New York, N. Y.

473.—SOAP.—George Baker and Isaac Bullock, Lima, Pa.

474.—CLOCK-SPRING.—Wallace Barnes, Bristol, Conn.

475.—BRONCHIAL TROCHES.—John I. Brown & Sons, Boston, Mass.

476.—FISH.—Andrew T. Carew, Bayport, N. Y.

477.—EDGE-TOOL.—Dunn Edge-Tool Company, West Waterville, Me.

494.—PAINT.—Walter & Fielding, New York, N. Y.

ISSUE OF OCTOBER 24.

PATENTS.

120,146.—FORK-TINE SCOOP FOR GATHERING STONES.—Noble S. Barnum, Bridgefield, Conn.

Claim.—A shovel, the rear portion thereof being a scoop, and the front or working portion tines or prongs, substantially as herein shown and described, and for the purposes set forth.

120,147, antedated October 3, 1871.—ROLLER-SKATE.—John L. Boone, San Francisco, Cal., assignor to himself and Milton A. Wheaton, same place.

Claim.—1. The longitudinal side springs G, secured to the arms A of the bolster I so as to connect the two axles A and B, substantially as and for the purpose above described.
2. The axles A and B with their spindles *d*, in combination with the hub *g* having the arms A and the springs G G, all arranged and operated substantially as and for the purpose described.
3. The forked lever J, constructed as described, in combination with the springs G G and the hinged reach I, all arranged substantially as and for the purpose set forth.

120,148.—MACHINE FOR BENDING CHAIN-LINKS.—Henry Boyd, East Bridgewater, Mass.

Claim.—1. The combination of the mandrel E and four reciprocating bearing-surfaces, D D' H H', when the bearing-surfaces are so arranged together, in the manner described, that they can be adjusted, as described, the whole being substantially as above specified.
2. The combination of the mandrel E and its spiral flange *e* with four reciprocating bearing-surfaces, D D' H H', substantially as described.
3. The combination of the mandrel E, gauge G', four reciprocating bearing-surfaces D D' H H', and clearers J J, all substantially as described.
4. The combination of the mandrel E and its spiral flange *e* with the inclined and reciprocating rollers D D' or their equivalents, all substantially as described.

120,149.—BOLT-CUTTER.—James R. Brown, Cambridgeport, Mass.

Claim.—1. The combination of the levers D D, stirrups E E, and the carrier B, constructed as described, with the plate H, substantially as and for the purpose set forth.
2. In combination with the subject-matter of the above claim, the stationary cutter-head A provided with cutter *a*, the movable cutter *b*, the nut *c*, and holding-screw *b'*, substantially as set forth.

120,150.—HUB FOR CARRIAGE-WHEELS.—Joseph Y. Burwell, Worthington, Pa.

Claim.—The above-described arrangement and combination of the thimble D, provided with the rectangular-shaped end D', with the box B and divided hub A and A', substantially as set forth.

120,151, antedated October 6, 1871.—MANUFACTURE OF COAL-GAS.—Darius Davison, New York, N. Y.

Claim.—1. The process herein described of manufacturing coal-gas by dividing the usual whole charge into two equal parts, or thereabout, and depositing each fresh supply of a divided charge in rear of the retort and successively distributing a series of such partial whole charges within the retort at intervals in a progressive manner from the rear toward the mouth of the retort, essentially as herein set forth.
2. The slide *c*, constructed for operation within the retort, to pass the one charge or partial charge over and in rear of another, substantially as specified.
3. The charger, composed of a sliding scraper, *b*, and hod *c*, constructed and arranged for operation in relation with each other and the retort, essentially as shown and described.

120,152.—CAP AND OTHER PAPERS.—Dennis D. Foley and John J. Johnson, Washington, D. C.

Claim.—As a new article of manufacture, writing cap or manuscript paper punctured or perforated so that the holes in two or more sheets will register, and may be fastened together by tape or other device, as set forth.

120,153.—ROOFING-MACHINE.—Charles L. Fowler, Baltimore, Md.

Claim.—The roofing-machine hereinbefore described, consisting of the combination of the movable bed I I, car T, material hopper A, double hoppers C C, and rollers G G, and all the parts constructed and arranged to operate substantially as herein described, and for the purpose of manufacturing as set forth, constituting a reciprocating double-acting roofing-machine.

120,154.—SPRING MATTRESS.—Henry Gardner, Rodger Lowe, Joseph Wood, James Wood, and James Pickering, Manchester, Great Britain.

Claim.—The combination and arrangement of parallel series of springs, when connected together in the manner and for the purposes hereinbefore described and set forth.

120,155.—MACHINE FOR NAILING SHOE-SOLES.—Louis Goddu, Boston, Mass., assignor to Elmer Townsend, same place.

Claim.—1. The wire-transferring passage *z*, and the movable cutter *y*, arranged and combined in one sectoral gear-lever, L, disposed within and pivoted to the guide-nose, substantially in manner and so as to operate as described.
2. The combination of the sectoral gear-lever X, as described, and its grooved cam or rear groove of the cam G with the nail-transferrer passage *z*, the movable cutter *y*, and their common sectoral gear-lever L, arranged and combined with the guide-nose B or its passage *a*, as described.
3. In the nailing-machine, as described, the combination of the arm *c'* of the sectoral gear-lever X with the fulcrum-shaft of such lever by means of a friction-clamp, as described, such being for the purpose specified.
4. The adjustable crossed stops U V, as arranged and combined, as explained and represented, with the carrier M and the pendulous supporter T, provided with stops *w' x'*, as set forth.
5. The pawl-gauge *o'* and the stop-lever *p'*, combined in manner as described, and arranged on one shaft, and with the adjustable stops *r' r'*, as set forth.
6. The adjustable fulcrum *q*, provided with a clamp-screw, *s*, as described, in combination with the slotted feeder H and its operative eccentric *o*, all being arranged in the head A, as explained or represented.
7. The nailing-machine, as constructed with a stationary head, A, a movable feeder, H, and a movable jack-supporter or carrier, all substantially as described.
8. In the nailing-machine, the stationary head A, as made or provided with the beveled bottom or circular curved gauge *v'*, and bearing *r²* therefor, arranged substantially as described and represented, such being for the purpose as specified.
9. In the nailing-machine, the chip-discharging passage *a²*, arranged in and combined with the nose-piece and the cutters, all substantially as explained and represented.

120,156, antedated October 6, 1871.—HOOK FOR HATS, COATS, &c.—Albert J. Goodrich, Wolcottville, Conn., assignor to Turner, Seymour & Judds, same place.

Claim.—The base *c* of the hook *d*, made with notched edges, in combination with the separate plate *a* containing the screw-holes, the parts being constructed in the manner and for the purposes set forth.

120,157.—BUCK-SAW FRAME.—William Hankin, Williamsburg, N. Y., assignor to himself, William H. Hankin, and H. W. Peace, same place.

Claim.—In the buck-saw frame, the braces D E crossing each other diagonally, and united at their intersections by the pin *e* working in elongated slots to allow them to slide upon each other, as specified.

120,158.—STEP-LADDER.—William Huey, Galena, Md.

Claim.—The combination of strip K, table L, cross-piece E provided with the staple H, platform G, and spring-tappet P, when operating together, as and for the purposes described.

120,159.—WHEELBARROW.—William McKibbin, San Francisco, Cal.

Claim.—1. The scoop-shaped box *c*, mounted upon the side pieces *a* and *b*, so that when the handles are raised the box shall be level, for the purpose specified.
2. A wheelbarrow constructed as above described—that is, having the side pieces *a b*, wheel *j k l*, and scoop-shaped box *c*, all constructed and arranged substantially as above set forth.

120,160.—HORSE HAY-FORK.—Peter J. Moose and Jonathan Kuhn, Dansville, N. Y.

Claim.—1. The combination of the grapple-irons I provided with segmental slots *d d* arranged to overlap each other and be operated by their connecting-pin in frame A, and chains *g g* attached to bar B, substantially as and for the purpose described.
2. The draft-bar B provided with its ribs, in combination with the frame A, chains *g g*, and grapple-irons I, operating substantially as and for the purpose described.
3. In a horse-fork or hay-elevator, the combina-

tion of segmental slotted grapple-irons with the frame A, chains *g g*, draft-bar B, and their locking and connecting mechanism, constructed, arranged, and operating in the manner and for the purpose specified.

120,161.—TURN-TABLE AND RAILWAY TRACK FOR CHANGING GAUGE OF CARS.—William Kerr Muir, Hamilton, Canada.

Claim.—1. In combination with turn-tables D and E, the intermediate turn-table F, substantially as described.

2. In combination with the turn-tables D E F, the main lines of the track A B and the sidings A^1 B^1.

120,162.—PUNCH.—Robert J. Mullen, Providence, R. I., assignor to The Providence Tool Company, same place.

Claim.—That improvement in punches which consists in combining the supplemental cutting-shoulders *a*, which extend entirely around the punch, with the punch proper B, as described, for the purposes set forth.

120,163. — HAT-VENTILATOR. — Edgar G. Nichols, Beaufort, S. C.

Claim.—The ventilator herein described, formed of a fillet fixed below the hat, having openings through the upper edge of the fillet, or between it and the hat, substantially as and for the purposes set forth.

120,164.—BRUSH-MAKING MACHINE. — Joseph Pickering, Philadelphia, Pa., assignor to himself and Joseph M. Pickering, same place.

Claim.—1. The reciprocating blade D having a slot, *b*, constructed substantially as described, in combination with the hopper B, as and for the purpose above set forth.

2. The combination and arrangement of the adjustable slide G with the blade D and slot *b*, for regulating the size of the knots, substantially as set forth.

3. The shoe U, in combination with the hopper B and blade D, for separating the knots contained in the slot *b* from the body of bristles in the hopper B, as above set forth.

4. The combination and arrangement of the clamps F F for holding the stock E, with the frame A and hopper B, substantially as set forth.

5. The combination and arrangement of the swinging frame J, connecting-rod L, endless band M, and rollers N N with the frame A and reciprocating blade D for drawing the knots out of the hopper B, and after they have been transferred to the loop V inserting them in the stock E, substantially in the manner above described.

6. The needle R having three eyes, *u u u*, constructed either in a single piece or with a jointed piece, R^1, substantially in the manner and for the purpose set forth.

7. The combination and arrangement of the spool T provided with wire S, and the needle R with the standing-frame A and swinging frame J, for drawing the knots *r* into the holes of the stock E, substantially as described.

120,165. — FURNACE FOR ROASTING AND SMELTING ORES.—William Quann, Philadelphia, Pa., assignor to himself, John W. Thackara, and Edward L. Spain, same place.

Claim.—1. The arrangement, beneath and in combination with the outlet-flue or stack of a roasting or smelting-furnace, of a body of water flowing freely and constantly, and over which the gases are caused to pass, all substantially as and for the purpose specified.

2. A smelting-furnace in which an arched or curved roof, *m*, and descending flue *n* are combined with and arranged in respect to the basin and bench of the said furnace, substantially as herein described.

120,166, antedated October 7, 1871.—SOLDERING-IRON.—John C. Reynolds, Taunton, Mass.

Claim.—As a new article of manufacture, a soldering-tool formed of the copper or composition point *a*, secured to a soap-stone, *c*, and provided with a metallic handle, *f*, as and for the purpose described.

120,167, antedated October 14, 1871.—COMBINED THRASHING AND HULLING-MACHINE.—Henry Ries, Norwalk, Ohio.

Claim.—1. In combination with the lower separating-table F, perforated as shown, and cone-shaped shell G, the hinged guide-flaps *f f g*, substantially as described, for the purpose set forth.

2. The combination, in the thrashing and hulling-machine herein shown and described, of the adjustable endless belts C D, separating and receiving-tables E F provided with perforations *m*, *m*, and *n*, the hinged guide-flaps *f f g*, conical cylinder and shell H G armed with teeth, as shown, and sieve K, when said parts are arranged in relation to each other and to the fan and thrashing-cylinder in the manner and for the purpose substantially as specified.

120,168. — CURTAIN-FIXTURE. — Anthony Roelofs, Philadelphia, Pa., assignor to himself and Daniel Bergin, same place.

Claim.—1. The combination and arrangement of the bracket A, spurs *d* and *d'*, and guide H, all constructed and operating substantially as and for the purpose set forth.

2. The arrangement of the arbor G and guide H on the bracket A, in the manner and for the purpose herein specified.

120,169, antedated October 14, 1871. — STONE-DRESSING MACHINE. — Thomas Ross, Rutland, Vt.

Claim.—1. In combination with the driving-shaft and rotary cutter-head, the adjusting sleeve D carrying the driving-shaft, cutter-head, and bevel-gearing herein described, constructed and arranged substantially as set forth.

2. In combination with the driving-shaft, cutter-head, and bevel-gearing herein described, two swivel-joints between the driving-shaft and cutter-head, to allow the said cutter-head to be set and operated at any desired angle to the slab, substantially as set forth.

3. In combination with the adjusting sleeve carrying the driving-shaft and cutter-head, the screw-thread thereon, and the adjusting nut-wheel C^2, substantially as and for the purpose described.

4. In combination with the revolving cutter-head, the traveling pattern-plate with a single or double rack thereon conforming to the shape of the molding to be cut, and a circular guide-roller or disk, *x*, concentric with the feed-pinion, and fitting into a groove in the pattern-plate also conforming to the shape of the molding to be cut, substantially as described.

5. In combination with the cutter-head the traveling pattern-plate with a double or single rack corresponding to the shape of the molding to be cut, and a pinion or pinions engaging with said rack or racks, the worm-gear herein described for operating said pinion or pinions, substantially as set forth.

120,170.—MACHINE FOR EDGING BOARDS.—Jesse K. Sanborn, Sandy Hill, N. Y.

Claim.—The combination of the grooved rollers F and the fluted rollers G, when constructed, arranged, and operating in the manner and for the purpose substantially as described.

120,171. — BURIAL-CASKET. — John Scott, , Philadelphia, Pa.

Claim.—A burial-casket, constructed of angle-irons and interwoven wires, coated with asphaltum, with or without the addition of black resin or pitch, substantially as described.

120,172, antedated October 7, 1871.—LAMP. George W. Thompson, New York, N. Y.

Claim.—1. An atmospheric lamp consisting of two essential parts, viz., the body in which the oil-font and mechanism are located, and the combustion-chamber, in which the wick-tube and air-passage are located, the whole connected, one with the other, by the tubes for the passage of oil and of air, substantially in the manner and for the purpose set forth.

2. The combination of the train of wheels placed horizontally, with the wick-tube placed vertically in a combustion-chamber, substantially in the manner and for the purpose specified.

120,173.—RUFFLING ATTACHMENT FOR SEWING-MACHINES. — Edwin J. Toof, Fort Madison, Iowa.

Claim.—1. The arm A bent and flanged, as shown, and adapted to be secured to the presser-bar, when combined, as described and shown, with the actuating arm C and the feed-plate B which reciprocates on the arm, as set forth.

2. The single feed-plate B adapted to work directly against the under surface of the presser-foot, and provided with the needle-notch *r*, the turned-up portions *o* and *n*, and the lugs *a a*, all constructed and arranged as described.

3. The index device E provided with the arm Z, in combination with the lever C, screw *v*, and the feed-plate B, all constructed substantially as shown, and for the purposes set forth.

120,174. — FEATHER-RENOVATOR. — John Wellfare and Fred Champagne, Aurora, Ill.

Claim.—1. The reservoir for containing feathers, consisting of the ends A and B, the hinged side C, the fixed side D, the hinged cover E, the metal cover T, and the metal bottoms F and F', when the several parts are constructed and combined substantially as and for the purpose specified.

2. The means employed for admitting steam to the interior of the reservoir, consisting of the chamber *z*, the nipples *h*, the perforated diaphragm I, and the pipe O, substantially as and for the purpose shown.

3. The means employed for removing the volatile or gaseous impurities from the feathers, consisting of the pipe R communicating with the reservoir and with a smoke-flue, in combination with the steam-admitting devices above named, substantially as and for the purpose set forth.

4. The means employed for removing from the reservoir the solid impurities separated from the feathers, consisting of the chamber *z*, the perforated diaphragm I, the pipes K and L, and the funnel M, substantially as shown and described.

5. The means employed for removing moisture from the cleansed feathers, consisting of the metal bottoms F F', the chamber G, and the steam-pipe P, in combination with the pipe R, substantially as specified.

6. The device as a whole when each of its parts are constructed and combined substantially as and for the purpose shown.

120,175. — WASHING-MACHINE. — Stephen Williams and Henry McNeill, Philadelphia, Pa.

Claim.—The clamps C C', in combination with the rails F and H and central shaft J, forming a convenient frame for a washing-machine, easily applicable to any washing-tub of ordinary construction.

120,176. — LEG-AND-FOOT REST. — Elijah Withall, Rochester, N. Y.

Claim.—The foot-rest having the shelf B and its supports C and C' hinged to the standard A, and arranged to fold together, substantially as and for the purposes set forth.

120,177.—LOCK FOR POST-OFFICE BOXES, &c.—Silas N. Brooks, Bernardston, Mass., administrator of Linus Yale, Jr., deceased.

Claim.—The combination of the pin *c* attached to the bolt *d*, and operating in slots *e f* in the bolt-case, with the bent arm *a* of the lock, the combination and arrangement being substantially as described, and for the purpose specified.

120,178.—FENCE.—Peter Chase Yost, Carthage, assignor to himself and William B. Raper, Ferris, Ill.

Claim.—The portable fence and gate, made as set forth, with panels, trussels, and interlocking notches, and with parts sliding in sleeves R S on a portable panel, substantially as set forth.

120,179, antedated October 11, 1871.—APPARATUS FOR DISCHARGING ORDNANCE.—Henry Arden, Brooklyn, N. Y., assignor to John C. Smith, same place.

Claim.—1. An electric circuit-breaking and closing apparatus, operated by gravity, combined with means for firing a gun, substantially in the manner and for the purposes specified.

2. The combination of the suspended weight or arc E and an adjustable electric conductor, F, with a stationary electric conductor, G, all arranged and operating substantially as described.

120,180. — LOCOMOTIVE. — William D. Arnett, Denver City, Col. Ter.

Claim.—The combination of the pitmen-rods *e e b b*, crank-shaft *c*, frame B, and inclined cylinders C C, all arranged and operating on the driving-wheels D D, substantially as described.

120,181. — MACHINE FOR PICKING MILL-STONES. — Stephen A. Bell, Newtown, Ohio.

Claim.—In combination with the herein-described handle of a millstone-pick, composed of the bars K K' and adjusting joint M N, the roller-frame P R, operating in the manner and for the purposes set forth.

120,182. — ROCK-CHANNELING MACHINE.—M. C. Bullock, Rutland, Vt.

Claim.—The combination of the cutter A with its guide-piece *a*, substantially as and for the purpose set forth.

120,183.—ROTARY ENGINE.—Warren Case, Troy, Ill.

Claim.—1. The arrangement in the cylinder A of the four steam-inlets *a a a' a'* and the four steam-outlets *b b b' b'*, substantially as shown and described, so as to change the direction of the wheel at will and always have a double entry and a double exit, as set forth.

2. The combination of the casing A, heads B B, inlets *a a a' a'*, outlets *b b b' b'*, wheel C, valves D, rollers *e e*, and blocks E, said blocks and parts B' of the heads being provided with packing, all substantially as and for the purposes herein set forth.

120,184.—STEAM-HEATER.—Edward C. Clay, Malden, Mass.

Claim.—In a radiating apparatus composed of pipes, each of which is divided by a central longitudinal partition, *a*, extending nearly its whole length, the screw-threaded nipples *f g* of each pipe, made with their axes in the same line with each other and with that of the coupling-tube *h*, substantially as shown and described.

120,185. — ELECTRIC CLOCK. — William M. Davis, Cincinnati, Ohio.

Claim—1 The combination of the regulating-

pendulum B and its impulse power M with the impelling-pendulum C and its moving power—the electric magnet D.

2. The combination of the lifting-arm S on the pendulum-rod J and the impulse power M, whether that be the force of gravity or of a spring, with the arm L *l*, or its equivalent, on the rod *b*.

3. The combination of the regulating-pendulum B and an electric circuit with impelling-pendulum or pendulums C, whether near or distant.

4. The combination of the pendulum B having an impulse-arm, L *l*, and the circuit-breaker N O with the impelling-pendulum C having a lifting-arm, S *s*, and weight M, and the attached armature G and magnet D, or the essential equivalents of these separate parts, operating in unison, substantially as and for the purpose described.

5. The combination of the check-bar Z and the impelling-pendulum C, for the purpose described.

6. The described combination of the elements G, C, D, J, L, M, and S with an electric circuit, so as to telegraph time from the regulating-pendulum B to any number of clock-dials, whether near or distant.

7. The combination of the impelling-pendulum C, as above described, with the feed-hand Q and bridle X or its equivalent, and the wheels of an ordinary clock movement, for the purpose of indicating time.

8. The method of communicating motion to and of controlling the motions of an impelling-pendulum, C, whether near or distant, by means of an attached armature actuated by an electro-magnet which is charged at isochronous intervals by a regulating-pendulum, B.

120,186.—PROCESS OF REMOVING OBSTRUCTIONS IN OIL-WELLS.—James Dickey, Oil City, Pa.

Claim.—1. The improved process of clearing obstructions in oil-wells by dropping onto the liquid in the well a rocket, which will fire the contained charge on striking the surface of the liquid in the well, thereby using the momentum of the falling apparatus to resist the upward force of the discharge, substantially as and for the purpose set forth.

2. In the apparatus above described, the case for containing the powder, in combination with the movable bottom and the sliding hammer for firing the charge when it strikes the liquid in the well, substantially as and for the purpose specified.

3. The combination of the case for containing the charge of powder with the chamber for containing chlorate of potash or equivalent chemical agent, and the means for firing the charge, substantially as and for the purpose specified.

120,187. — BUCKLE. — Elliott F. Driggs, Brooklyn, N. Y.

Claim. — A double buckle, constructed of two pieces, A B, united by a twist or coil of one part upon the other, substantially as specified.

120,188.—GRATE-BAR.—Alexander W. Foster, Jr., Pittsburg, Pa.

Claim.—1. The heavy middle bar B, when made with the heaviest side from the fire, substantially as and for the purpose hereinbefore set forth.

2. The supports *b b*, substantially as and for the purpose hereinbefore set forth.

3. The elongated holes *d* for the reception of the bolts *c*, substantially as and for the purpose hereinbefore set forth.

120,189. — HOD-ELEVATOR. — Edward H. Garrignes, St. Louis, Mo.

Claim.—1. The combination of the upper frame E, provided with jack-screws G and flanged pulleys F, with endless chain H and hoisting apparatus A provided with flanged pulleys C and T-bolts D, substantially in the manner and for the purposes set forth.

2. The jack-screws G with pronged foot-bearings *g'*, in combination with frame E, substantially as and for the purpose set forth.

3. The T-bolt, consisting of screw-rod D and bar D', in combination with hoisting apparatus A, as and for the purpose set forth

4. The flanged pulleys C and F, endless chain H, frame E, key *e*, jack-screws G, pronged bearings *g'*, hoisting apparatus A, screw-rod D, bar D', spring-dog *i'*, hods I with double hooks *i*, all combined and constructed to operate in the manner herein shown and for the purposes set forth.

120,190. — NAIL-PLATE-FEEDING MACHINE. John C. Gould, Oxford, N. J.

Claim.—The combination of the vibrating lever *a*, the push-rod *b*, the pair of clamps or forks *c* and *d*, the latter constructed substantially as described, with the bolt A and roller *i*, as and for the purpose specified.

120,191. — LOTION FOR PROTECTING ANIMALS AGAINST FLIES. — James Greene, Providence, R. I.

Claim.—The lotion for animals, to prevent the attacks of flies, made of the materials hereinbefore stated, substantially as described.

120,192. — FASTENING FOR BOXES, &c.—John James Greenough, Syracuse, N. Y.

Claim.—The curved lip button A with notch *a*, constructed as described, and turning on a pivot, in combination with a catch of suitable construction, substantially as and for the purposes herein set forth.

120,193, antedated October 14, 1871.—MACHINE FOR DRIVING WEDGES IN PAVEMENTS.—William J. Harris, Elizabeth, N. J., assignor of one-half his right to Samuel Stewart, Potsdam, N. Y.

Claim.—1. The combination of a vertical drop-hammer with the lever D, clutch E, and trip H, to operate either in connection with the swages I I or with the leveling-plate M.

2. The combination of the swages I I or of the leveling-plate M, when either are in use, with the levers K and L, cams *a*, guide-rods *b*, and friction-pulleys C, all constructed and arranged substantially as shown and described, for the objects herein set forth.

120,194.—ALARM-PUMP FOR VESSELS.—Ezra Haskell, Dover, N. H.

Claim.—The improved pumping and alarm apparatus, constructed substantially in manner and to operate as described, viz., of the three pump-barrels A B C, their pistons D, induction and eduction-pipes *k l m*, air-opening *r*, stop-cock K, valves *k*, air-fountain H', steam-whistle I', and its valve *p*, and key *q*, all arranged in manner and to be operated by a cranked shaft, all as set forth.

120,195. — HARROW. — Edward W. Heltendeen, Geneva, N. Y.

Claim.—A harrow for pulverizing the soil and for cultivating growing crops, composed of two or more sections provided with small teeth inserted obliquely through the frame, substantially as and for the purposes set forth.

120,196.—PRIMER FOR CARTRIDGES.—Alfred Charles Hobbs and Jerome Orcutt, Bridgeport, Conn.

Claim. — 1. A disk-shaped anvil inserted edge wise into a percussion-cap, substantially as and for the purpose set forth.

2. The method of securing the anvil B upright within the cap and holding it therein by indenting or nicking the edge of the cap and compressing it against the anvil, substantially as described.

120,197.—VERMIN EXTERMINATOR.—Thomas W. Houchin, Morrisania, N. Y.

Claim.—The combination of a reservoir D, provided with a projecting lip, F, and guard G, with a frame-work, B, and handle C, substantially as and for the purposes set forth.

120,198.—BRAN-DUSTER AND FLOUR-BOLT. James H. Jones, Yellow Springs, Ohio, assignor of one-third his right to Joseph S. Parrott, same place.

Claim.—1. The eccentric arm or shaft H, in combination with the block or ledge L and notched bumper K, when applied to a bran-duster or flour-bolt, as and for the purposes herein set forth.

2. In combination with the eccentric arm H the adjusting device herein shown, consisting of the lever *b*, guide *d*, and set-screw *m*, when arranged as and for the purpose of regulating the inclination and vertical agitation of the screen, as set forth.

3. The combination of the screen or duster E, flour-bolt D, discharge spout C, intermediate spout M, conveyer N, and the secondary screen or bolt Q, substantially as and for the purposes set forth.

4. The combination of the screen or duster E, flour-bolt D, discharge-spout G, intermediate spout M, conveyer N, and the secondary screen or bolt Q, substantially as and for the purposes set forth.

120,199.—CAR-COUPLING.—James H. Kenworthey, West Point, Ind.

Claim.—1. The combination and arrangement of the bar A, guide B, short vertical shaft D, and cam E, substantially as and for the purpose set forth.

2. The combination and arrangement of the bar A, guide B, shafts C and D, cam E, and arm F, substantially as and for the purpose set forth.

3. In combination with the bar A and shaft C with arm F, the lever C', rod G and coupling-pin suspended therefrom, substantially as and for the purpose set forth.

120,200. — TREADLE-MOTION. — Eben W. Keyes, Charlestown, and Charles K. Bradford, Boston, Mass.

Claim.—1. In combination, the vibratory lever or frame D, suspended substantially as explained, the treadle F pivoted to this frame, and finally the two rods or pitmen I and G, and the swinging pivot or frame H, the whole being combined and operating in respect to each other and the crank and driving-shaft as to produce results herein stated.

2. In combination with a compound driving-motion, such as is herein explained, the pawl *g* and ratchet *h*, for purposes stated.

120,201.—THERMOMETRIC STEAM-GAUGE.—George Lightbody, New York, N. Y.

Claim.—The sheath B, tube A, and plug D, in connection with the thermometer A and the conducting material C, when arranged and operating together, substantially as and for the purpose described.

120,202. — BRICK-KILN. — Thales Lindsley, New York, N. Y.

Claim.—1. A water-smoking, burning, and cooling-kiln, having the constituent parts herein described and shown, disposed with respect to each other, substantially as described, and performing, severally and co-operatively, substantially the functions set forth.

2. A kiln-chamber, 1, Sheet 3, in which the upper half of the fire-flue and the bars of the fire-grate are arranged on a cycloid curve, said grate being provided with hinge and latch, all substantially as herein described.

3. The combination, with the fire-grate S'', of the fuel-bin S provided with the close-scuttle S', throat T, and throttle-valve, all constructed and arranged substantially as herein shown.

4. A system of triple walls used throughout the entire structure, the middle division of which being provided with the system of horizontal and vertical hot-and cold-air passages *c c' c''*, &c., O' O'', &c., *f f' f''*, &c.—the outer and inner divisions provided with the slots and apertures *n'*, &c., for passage-ways or flues, all arranged and operated substantially as and for the purposes set forth.

5. The combination of the triple walls and buttresses, substantially as and for the purposes set forth.

6. The centrally-located smoke-stack provided with an independent foundation, certain ports, a man-hole in bottom of smoke-stack flue, and a grained arch, double passage-way, substantially as and for the purposes set forth.

7. The arrangement of horizontal and vertical hot-and-cold-air-flues O' O'' O''' O, *e e'*, &c., *f f' f'*, &c., *c'*, &c., provided with dampers Q'' *n x*, &c.

8. The arrangement, with relation to the kiln and furnace and cold-air flues, of the ash-pits provided with the air-tight cover, substantially as described and shown.

9. Combination of perforated floors *a*, solid floor *c*, and interposed system of sleepers, stringers, and flues, substantially as shown and described.

10. The flue-damper provided with the annular flange-seat and blade, as shown and described.

11. A kiln-chamber, combining the several parts above described, constructed and operating as set forth.

120,203.—HYDRAULIC PUNCHING-MACHINE. Robert Livingston, Albany, N. Y.

Claim. — 1. The coupling-piece G, constructed with the lesser chamber E' and provided with the shoulder *g'*, in combination with the arm *a'* provided with the major chamber E and plunger C, when all are arranged to operate substantially as and for the purpose set forth.

2. The combination of the lesser chamber E', loose piston F, screw D, with the major chamber E, plunger C, and body A, when all are arranged to operate substantially in the manner set forth.

120,204.—HARROW.—James Mathison, Fremont, Neb.

Claim.—1. The handles H H, pivoted over the center of each harrow, with adjustable rods G having hooks *e*, arranged and operating substantially as and for the purpose set forth.

2. The draft-pole L, in combination with clevis K, adapted to be applied to either cross-bar C', or to either of the adjustable side bars N N, substantially as and for the purpose set forth.

120,205.—HARVESTER-CUTTER GRINDER.—Edwin Robert McCall, Simcoe, Canada.

Claim.—The adjustable standard C and D, the jointed arms or frame E and F, and the hand-lever H, as arranged, in combination with the grinding-wheel G and the driving mechanism I and J or their equivalents for sharpening cutter-blades for mowers and reapers, as shown and described.

120,206.—FIRE-LIGHTER.—John McCallum and Jacob Hartzell, Alliance, Ohio.

Claim.—The fire-lighter, hereinbefore described, made of the ingredients combined in the proportions specified.

120,207.—SPINDLE FOR WRINGER-ROLLS.—Thomas E. McDonald, Trenton, N. J.

Claim.—The clothes-wringer roll spindle herein described, consisting of the journals A and metal bars B, united together in the manner and for the purpose set forth.

120,208.—SUN-SHIELD FOR HORSES.—Hugh D. McGovern, Brooklyn, N. Y.

Claim.—The shield or horse-bonnet A, provided with an elevated part or cap, B, having a large open aperture, D, on the front, in combination with a fan-wheel, E, placed in the cap B, substantially as and for the purpose described.

120,209.—ROVING-FRAME.—Eustis P. Morgan, Saco, and James H. McMullan, Biddeford, Me.

Claim.—1. The combination, with the eccentric E, the fork F, the shaft G, and the dogs D D', of the fingers I I', the plate-jaws J J', or their equiv-

alents, for the purpose of setting in operation the mechanism for causing the reversal of the bobbin-rail R in case of the breakage or non-action of the spring l.

2. The combination of the shipper S, the shipper-lever X X′ X″, the trigger Y Y′, the vertical rod U, the tumbler T, and the friction-stud 2^d, or their equivalents, for stopping the frame automatically when the last coil on the outside of the bobbin of roving is near to the conical or beveled end of the bobbin, substantially as herein described.

120,210.—MANUFACTURE OF WOODEN PIPES FROM VENEERS.—Adolph Müller, Brooklyn, N. Y.

Claim.—1. The combination and arrangement of the mandrel and hot-air roller, constructed and operated substantially as and for the purpose set forth, with a suitable bed on which to place and arrange the prepared wood and move the same to the action of the mandrel and roller.

2. The combination of the mandrel and hot-air roller, as aforesaid, with a bed and endless chain-feed.

3. The combination of mandrel, hot-air roller, a bed with a trough and heating appliances, and feeding or carrying device, substantially as shown, and for the purpose stated.

4. The cutters, constructed and operating substantially as shown and described, in combination with the bed, mandrel, and roller.

5. The combination of a bed, feeding device, cutters, mandrel, and roller, substantially as and for the purpose described.

6. In combination with the parts last aforesaid, the furnace, hot-air chamber, pipes, and bars, all arranged and operating substantially as shown, and for the purpose set forth.

7. Providing one end of the mandrel with a bevel or beveled collar, substantially as and for the purpose specified.

120,211.—FIRE-ESCAPE AND HOSE-ELEVATOR.—William Henry Nobles, St. Paul, Minn.

Claim.—1. A series of telescopic sections, which is extended and retracted by cogged wheels engaging with racks upon the sections when they are so arranged that the section upon which the cogs are acting will be operated by the direct action of the cogs upon the section, all as herein described.

2. In combination with extending and retracting sections, the locking arrangement herein described, consisting of the spring-latch v and catch z, when constructed as shown, and made to unlock by the pressure of a cog or the periphery of a wheel upon the latch v.

3. In combination with the platform A, the three pivoted trucks B, C, and C′, as and for the purpose specified.

4. The spring-clamps *f f*, as arranged, for holding the tongues of the trucks C C′.

120,212.—CARPENTER'S PLANE.—Russell Phillips, Boston, Mass.

Claim.—1. The combination, with the central plane L, of the rabbeting-plane A attached to said central plane in the manner and by means herein shown and described, in order to adjust it both vertically and horizontally in relation thereto.

2. The combination of the three planes A, I, and L in the manner shown and described, so that either or both of the latter two planes may be removed from the former for the purposes stated.

3. The combination, with the plane A, of the adjustable gauge D and the rod or support *b* under the arrangement shown and set forth.

4. The combination, with the plane L, of the spurs applied thereto in the manner shown and described, to allow them to be adjusted separately or jointly with respect to the cutter of the plane.

5. The combination, with the plane A and its cutter-iron, of the lever n, pivoted to the cap-plate m, fulcrumed to the post o, and provided with the elevating device q, substantially as herein shown and set forth.

6. The combination, with the clamping-key, of the plow-plane I and its abutment of the right-and-left-threaded screw t, in the manner and for the purposes shown and set forth.

120,213, antedated October 11, 1871.—LUBRICATOR AND ANTI-FRICTION BEARING.—Thomas Foddick, Stranraer, James Lockhead, Glasgow, Scotland.

Claim.—1. The construction and arrangement of the anti-frictional rollers *g g*, movable in the frame *d* and adjustable by the set-screws *e e* or their equivalents, as fully set forth and described.

2. In combination with the anti-frictional rollers *g g*, the grooves *k k′*, channels *l l′*, and cup *c*, in the manner and for the purpose as fully shown and described.

120,214.—LAMP-BURNER.—Samuel Ross, Washington, D. C.

Claim.—The herein-described air-tube, composed of the parts F F′, constructed as set forth, and perforated flange E, with crescent-shaped openings *e e*, substantially as specified.

120,215.—PROCESS OF RESTORING WASTE INDIGO.—Francis A. Sawyer, 2d, Boston, Mass.

Claim.—The process, substantially as described, of restoring waste indigo, as set forth.

120,216.—WELL-BOTTOM.—Henry Smith, Southington, Conn., assignor to himself and Frederick Sutliff, same place.

Claim.—1. The false and removable well-bottom B, substantially as and for the purpose described.

2. The combination of the bottom B and chain bails *c c*, as and for the purpose described.

120,217.—STOVE-DRUM.—George T. Spaulding, Broadhead, Wis.

Claim.—1. The funnel-shaped drum, so constructed that when attached to the stove its front shall be at a right angle or nearly so with the top of the stove, and also at a right angle with its own top, as and for the purpose described.

2. The construction and arrangement of the damper within the drum, as and for the purpose set forth.

3. The attachment of the top of the drum to the funnel, and of both to the stove, by the rods R, substantially as described.

120,218.—FOUNTAIN FOR WASH-BOILERS.—George F. Stone, Baltimore, Md.

Claim.—1. The fountain for wash-boilers, constructed as described, so that the water entering at its center flows through an exterior channel to the discharge-pipe, substantially as and for the purpose specified.

2. The plate A provided with a concavo-convex disk, D, suspended beneath its central opening, substantially as described, for the purpose specified.

3. In combination with the plate A and flange B the suspended disk D and inner flange F provided with the cut-off C, substantially as described, for the purpose specified.

4. In combination with the channel G, partition C, and flange F, the discharge-spout I, substantially as described, for the purpose specified.

120,219.—CLOTH-SHEARING MACHINE.—John A. Thurston, Providence, R. I., assignor to himself, Thomas Sampson, and William Langhoff, same place.

Claim.—The combination of an emery-roller with the requisite rest and feeding apparatus, for the purpose of enabling the surface of cloths to be thereby preserved for the action thereupon of the appropriate shearing apparatus in any usual or proper manner.

120,220.—LOG-ROLLING MACHINE.—John Torrent, Muskegon, Mich.

Claim.—The combination of the toothed bar A, guide B, and hangers C, when operating together as described.

120,221.—STEAM-ENGINE.—Samuel Van Emon, Covington, Ky.

Claim.—The combination of valve-face N L L′ M M′ Q, reversing-valve P *p* S S′ R R′, slide-valve T, and intermediate valve-seat V *a b c*, operating substantially in the manner and for the purpose described.

120,222.—PITMAN-CONNECTION FOR STEAM-ENGINES.—Samuel Van Emon, Covington, Ky.

Claim.—The herein-described swiveling-connection for pitman and piston-rod, consisting of socket G gibs H H′, key I, and circular center *d d′ d″*, the parts being combined to operate substantially in the manner and for the purpose specified.

120,223, antedated October 21, 1871.—COPING.—Cyprian Willcox, New Haven, Conn.

Claim.—The fence-base described, provided with transverse strengthening-plates *b b* and ears *c*, the latter being attached to the inner surfaces of the sides *a′* in order that the sections may be united to each other, as and for the purpose described.

120,224.—STEREOSCOPIC PICTURE-CASE.—I. Fletch Woodward, McMinnville, Tenn.

Claim.—The constructing of an album, its leaves A A being capable of receiving, retaining, and exhibiting stereoscopic pictures on both sides, along with the adjustable folding eye-piece B B, that contains the lenses, being easily removed or replaced or attached to either lid by a slider, C, that slides into a socket in the lids at D, giving it a perfect adjustable focus, substantially in the manner described, and for the purpose set forth.

120,225.—PRINTING-PRESS.—John B. Adt, Baltimore, Md., assignor to himself and August Hoen, same place.

Claim.—The cylinder *b*, combined with the arms b^2, shaft b^3, rods *e*, cross-pieces *d f*, arm *e*, counterweight *m*, rollers *o*, drum *a*, and cams *h*, as and for the purpose specified.

120,226.—AUTOMATIC GAS-LIGHTER.—Almon N. Allen and Rodney H. Dewey, Pittsfield, Mass.

Claim.—1. The combination of a diaphragm, B, with a gas-burner, a spring-power, and a percussion mechanism, substantially as described, so that by the action of the gas on the diaphragm gas is admitted to the burner, the spring-power is released, and a fuse or match is exploded by the action of the percussion apparatus.

2. The lever *q*, ratchet-wheel *h*, and cam *e*, in combination with the sleeve F, diaphragm B, spring-power H, and with a percussion mechanism constructed substantially in the manner herein set forth.

120,227.—PAPER-FILE.—Henry J. Asthalter, Pittsburg, Pa.

Claim.—A bill and paper-file, consisting of a swinging-bar, *b*, hinged at one end to a plate, *a*, in combination with a spring, *d*, and stems *c c′*, which overlap or slide past each other, constructed and arranged substantially as described.

120,228.—GIRDER.—Zephaniah S. Ayres, New York, N. Y.

Claim.—The within-described construction of compound girder, the same having a cast-metal part, A^1 A^2 A^3, with a plain under face and a wrought-metal tie, B, let up into the casting so as to lie just within the plane of the lower face and flush therewith, as herein specified.

120,229.—BASE-BURNING STOVE.—Rodman Backus, Albany, N. Y.

Claim.—1. The hopper *t*, connecting with the upper end of the magazine *u* and arranged in the manner specified, so that the hopper *t* is in the top of the stove and over the oven and the magazine *u* extends down to the fire-pot below the oven, as set forth.

2. A removable bottom to the oven, containing an opening, and bars or grates depending below that opening for sustaining cooking utensils, as set forth.

120,230.—SEED-DROPPER.—Joseph C. Barlow, Quincy, Ill., assignor to Vandiver Corn-Planter Company, same place.

Claim.—1. The arrangement of the two angular plates in juxtaposition to one another in a corn-planter, as and for the purpose specified.

2. The combination of the plate or plates B, cap-plate C, pivoted angular plates E, and spring or springs F with each other, substantially as herein shown and described, and for the purpose set forth.

120,231.—ROTARY ENGINE.—John W. Barriger, Omaha, Neb.

Claim.—1. The case A, provided with the abutments *d e*, and combined with the rotating cylinder D, sliding pistons E, and with the heads *a b*, which have the cam-grooves and four pairs of ports, as specified.

2. The sliding pistons E, provided with the projecting tenons *k k* and with the shallow steam-grooves *m m*, as set forth.

120,232.—HORSE-POWER.—Sanford Basket, Crittenden county, Ark.

Claim.—The attachment of the lever to the rim of the main driving-wheel by means of the hangers and braces, and the setting of the lever at an angle to the upright main shaft instead of its axis being in the same plane as the axis of the main shaft, substantially as and for the purposes hereinbefore set forth.

120,233, antedated October 17, 1871.—COMBINED HEATER AND STAND FOR TABLE PURPOSES.—Emilie A. Beardsley, Binghamton, N. Y.

Claim.—The combination of the block of steatite or other heat-retaining stone A with the metal stand B for table use, substantially as and for the purpose herein set forth.

120,234.—DESK OR TABLE ATTACHMENT FOR CHAIRS.—Samuel L. Bligh, Pit-Hole City, Pa.

Claim.—The improved adjustable desk or table attachment for chairs, having the legs B, pivoted arms *b*, pivoted leaf *c*, and adjustable clasps or fastenings D, as described.

120,235.—MANUFACTURE OF BOILERS, STEAM-CYLINDERS, FITTINGS, &c.—George W. Bollman, Pittsburg, Pa.

Claim.—The manufacture of steam-boilers, cylinders, and fittings from a mixture of cast-iron and steel or carbonized iron, substantially as hereinbefore described.

120,236.—CONCRETE AND STONE PAVEMENT.—Samuel B. Brittan, Newark, N. J.

Claim.—The pavement herein described, constructed of the materials and by the mode specified.

120,237.—MACHINE FOR MAKING PAVING-BLOCKS.—Samuel Wallace Brooks, Brownsville, Tex.

Claim.—The tubular block-cutter D, top-beveled

and tubular support E, and the downwardly-inclined spout F, combined, as described, with a drop-weight, G, for the purpose specified.

120,238. — CHECK-REIN FASTENER.—Born L. Budd, Fairfield, Conn., assignor to James S. Mott, same place.

Claim.—1. The tongue-pivot bearings *f f*, formed by striking up in the plate, from the under side, cavities of a form substantially as herein described, not only to receive but to cover the ends of the pivots.

2. The spring-plate B, slit to form the spring, and covering the whole bottom of and combining with the base-plate A and tongue C, substantially as and for the purpose herein set forth.

120,239. — CHECK-REIN FASTENER. — Born L. Budd, Fairfield, Conn., assignor to James S. Mott, same place.

Claim.—The combination of the recessed base-plate A, the spring B, and tongue C, substantially as and for the purpose herein set forth.

120,240.—CIGAR-CLAMP.—Nicholas A. Buhle, New York, N. Y.

Claim.—1. The finger-ring B formed with the screw-socket *d*, in combination with the clamp A formed with the jaws *a a*, substantially as and for the purpose set forth.

2. The finger-ring B formed with the screw-socket d, arranged to operate in connection with the filling piece *e* and clamp A, as set forth, when all are constructed substantially as described.

120,241. — SEED-PLANTER.—Ezra E. Cheney, Bushnell, Ill.

Claim.—1. The frame E *d e f* jointed to the end of tongue D, and resting movably upon beam C, combined with sliding seat F, as and for the purpose specified.

2. The forked post E provided with the cross-piece *f*, and combined with the tongue D, seat-support *d*, and beam C, substantially as herein shown and described.

120,242.—DRIER.—Solon L. Cheyney, Springfield, Ohio.

Claim.—1. The removable non-conductors D D, secured to the plate *s* provided with feet *z*, and used in the dry-house, constructed substantially as and for the purposes herein set forth.

2. The combination in the dry-house and oven, constructed substantially as described, of angular strips *a a*, the lower set of which is provided with apertures *b b*, substantially as and for the purposes herein set forth.

3. The combination of the drier A, having its floor provided with the removable cooking-stove top E and boiler, all constructed and arranged to operate substantially as and for the purposes set forth.

120,243.—SAW-SET.—Erastus Y. Clark, New York, N. Y.

Claim.—In combination with a saw-set, the supporting slide N, substantially as and for the purpose specified.

120,244.—COOKING-STOVE.—James H. Codding, Taunton, Mass., assignor to Dighton Furnace Company, same place.

Claim.—The detachable shelf A, provided with spurs or projections D D, in combination with dovetails C C on the stove-plate, all as shown and described.

120,245.—PHOTOGRAPHIC PRINTING-FRAME. John George Coffin, Portsmouth, Ohio, assignor to Sensitized Paper Company, same place.

Claim.—The hollow chamber, covered with a perforated top, under the negative.

120,246.—BARK-MILL.—Owen Coogan, Pittsfield, Mass.

Claim.—1. In combination with the rolls B C, constructed as described, the feed-table F, when provided with the hinged leaf *b*, as and for the purpose set forth.

2. The arrangement of the spring H, rods *d d*, levers G G, and feed-roller C with relation to the table, as shown and described.

120,247.—HASP-LOCK.—George Crompton, Jersey City, N. J.

Claim.—The combination of the pivoted lock-bar F and spring *b'* with the pivoted jaws E, recessed hasp B, and plate C, substantially as herein shown and described, and for the purpose set forth.

120,248. — PLOW. — Thomas Cuming, Jr., Brookhaven, Miss.

Claim.—The combination, with the mold-board and land-side of a turn-plow, of share D, arranged and adjustable between them, as and for the purpose specified.

120,249.—CORN-HARVESTER AND SHOCKER. Elijah Culp, Hilliard Station, Ohio.

Claim.—1. The combination of the shocker-gate I, cords *d*, and spring-cylinder N for the purpose of holding the stalks of corn in a perpendicular position till the shock is completed.

2. The combination of the shocker-gate I, cords *d*, spring-cylinder N, and gathering-shaft G for the purpose of collecting the cut stalks of corn from the sickle into a perpendicular position to form a shock of corn.

3. The combination and arrangement of the forked tongue B, center-cutting circular sickle F, shocker-gate I, spring-cylinder N, front and rear guards O and J, cords *d*, and ratchet-crane L and tongs K', substantially as and for the purpose specified.

120,250. — WOODEN MAT FOR PICTURE-FRAMES.—Harrison W. Curtis, Philadelphia, Pa., assignor to Hale, Goodman & Co., same place.

Claim.—As a new article of manufacture, a rectangular wooden mat having an oval or circular opening, and consisting of four strips or segments cut so that the joints shall be at the top, bottom, and sides of the mat, and joined so that the grain in adjacent sections shall be at different angles, as and for the purpose set forth.

120,251.—LIGHTNING-ROD COUPLING.—David W. Demorest, Newark, N. J.

Claim.—The coupling C and screw D, combined with the locked sections A B of a lightning-rod, as specified.

120,252.—INDIA-RUBBER SHOE.—Lewis Elliott, Jr., New Haven, Conn., assignor to L. Candee & Co., same place.

Claim.—An India-rubber shoe made with knitted elastic uppers of the character specified, an elastic binding to the edge of the same, and India-rubber foxing between such elastic uppers and the sole, the same forming a new article of manufacture.

120,253.—APPARATUS FOR DRYING FRUITS, MEATS, &c.—Hermann Endemann, New York, N. Y.

Claim.—The combination of an air-exhauster and an air-heating apparatus with a drying-chamber and with valves J M, which allow of regulating the temperature of the air made to pass through the drying-chamber by the action of the exhauster, substantially as herein shown and described.

120,254.—COMBINATION OF DEVICES AND FURNACES FOR THE MANUFACTURE OF SPIKES.—David Eynon, St. Louis, Mo.

Claim.—1. The combination, substantially as described, of a furnace, reducing-rolls, and a spike or bolt-machine.

2. The combination of the furnace with its movable roof.

120,255.—MACHINE FOR SPINNING WOOL.—Luther W. Felt, Keene, N. H.

Claim.—1. The combination of a removable tube, K', and hook, h, constructed substantially as set forth, with a spring, h', for the purpose described.

2. The combination of a removable tube, K', with a twisting-hook, h, secured as described.

3. A tubular flier, N, provided with a slit, *r*, cap-piece *l*, and depression *p*, in the manner substantially as and for the purpose set forth.

4. A tubular flier, N, constructed as described, when provided with a wire, *s*, and hook *s'*, for the purpose set forth.

5. The combination of a tubular flier, N, constructed as described, with the draw-rolls L L and M, for the purpose set forth.

6. The combination of a tubular flier, N, provided with a cap, *l*, and depression *m'*, with a retractible spindle, S, for driving the same, as set forth.

7. The combination of a tubular flier, N, provided with a cap, *l*, depression *m'*, and retractible spindle S, with a sliding frame, O, for carrying the latter, as set forth.

8. In combination with the tubular flier N, spindle S for driving the same, and sliding frame O, the sliding frame P and spool or bobbin-carrier T, substantially as and for the purpose set forth.

9. The combination of a tubular flier provided with a cap-piece, *l*, depression *m'*, and retractible spindle S for driving the same, with the draw-rolls L L and M, substantially as described.

10. The combination of a retractible spindle, S, for driving the flier, with a loose spool, T, and bobbin R, substantially as set forth.

11. The combination of a sliding frame, P, hinged cruse-piece V, cam W, spring X, rod 9, and yoke Y with a loose spool, T, carrying the bobbin, for the purpose set forth.

12. A friction-yoke, Y, formed in two parts and hinged at one end, when provided at the other with rods 9 and 10, attached in the manner and for the purposes set forth.

13. The combination of a tubular flier, N, and retractible spindle S for driving the former and carrying the spool and bobbin, as set forth, with a frame, O, for adjusting the spindle, and frame P for adjusting the bobbin, when so arranged and constructed that the spindle may be withdrawn from the flier and both frames simultaneously tilted forward, for the purpose described.

14. The combination of the tilting spindle S with the wire Z and bobbin R, substantially as and for the purpose herein described.

15. The combination of a flier, N, tilting-spindle S, and wire Z, substantially as described.

16. The combination of a flier, N, tilting-spindle S, wire Z, bobbin R, and spool T, as described.

17. In combination with the drawing-rolls of a spinning-machine, an air-tube, 13, provided with a slit or series of openings, for the purpose set forth.

120,256. — MECHANISM FOR DELIVERING ROVING IN SPINNING-MACHINES.—Luther W. Felt, Keene, N. H.

Claim.—1. The combination of the wheels D and E with mechanism, substantially as described, for delivering a quantity of roving between the griping points of said wheels, greater in length than the direct distance between the adjoining rods *b*, as set forth.

2. The combination of the wheels D and E and mechanism substantially as described, for furnishing an increased length of roving between their griping points, as set forth, with a twisting-tube, K, whereby the necessary amount of twist is imparted to the roving to give it the requisite strength in its weaker portions to withstand the strain before being drawn to the required degree of fineness.

3. The combination of the wheels D and E, mechanism substantially as described for furnishing an increased length of roving between their griping points, and twisting-tube K with the draw-rolls L L and M, for the purpose set forth.

120,257.—HOT-AIR FURNACE.—Reuben R. Finch, Peekskill, N. Y., assignor to Union Stove Works, same place.

Claim.—The truncated cone *k* and shield *i* in combination with the chamber *f* and air-tubes *g* above the furnace or fire-pot *e*, substantially as and for the purposes set forth.

120,258.—HAND-GRINDER FOR HARVESTER-CUTTERS. — Henry C. Fisk, Wellsville, N. Y.

Claim.—1. The shaft, consisting of the section D and adjustable section D', in combination with the pinion I I', spur-wheel J, latch-bar or equivalent F, and grinding-wheel B, substantially as described.

2. The construction and arrangement of the loop-handles A'', having their grasp parallel with the main bar, substantially as and for the purpose set forth.

120,259. — APPARATUS FOR DISCHARGING ACID CARBOYS.—William Gee, New York, N. Y.

Claim.—1. The combination of the suspending-chains E E and the frames C C provided with cams arranged in relation to the attachments of the said chains E E, substantially as and for the purpose herein set forth.

2. In combination with the above, the yoke D, lever F, standard G, and stay or brace I, substantially as and for the purpose described.

3. The combined mouth-piece B and vent-pipe a provided with an elastic socket, *g*, for its attachment to the neck of the bottle, substantially as and for the purpose herein specified.

120,260.—ADVERTISING-ALBUM. — George W. Hawes, New York, N. Y.

Claim.—The method of applying cards or hand-bills to pictorial advertising-books, substantially as above described.

120,261, antedated October 13, 1871.—COMBINED BURGLAR AND FIRE-ALARM.—Louis Giebrich, Ottumwa, Iowa.

Claim.—1. The bells C C, pivoted frame D, and shaft F, combined as described, and for the purpose specified.

2. The combination of the pins *h h* on the wheel *e* with the levers G, H, and I, all arranged to operate substantially as herein shown and described.

3. The T-head rod *j*, combined with the bell-crank I, forked lever H, lever G, hook *l*, and cord *m*, all arranged substantially as herein specified.

4. The barrel L and hammer *q*, combined with the alarm-setting-apparatus G H I, substantially as herein shown and described.

5. The cord *m* secured with one end to the lever I, and with the other to the hook *n* of the rock-shaft J to operate the alarm whenever said rock-shaft is turned, as set forth.

6. The levers M M, combined with the cords *w*, springs *v*, rod *t*, and rock-shaft J, to constitute the alarm-discharging-apparatus, as specified.

7. The alarm C, arm a^2, and knob *z*, combined with a cord, *w*, operated by the levers M M and rock-shaft J, in the manner specified.

120,262.—TELEGRAPH APPARATUS. — Webster Gillett, Allegheny City, Pa., assignor to himself and Paul Hugus, Pittsburg, Pa., and Charles M. Gillett, Cleveland, Ohio.

Claim.—1. A local battery, arranged in the direct main line, in combination with a local circuit, which shall leave and return to the main line outside of the local battery so as to operate as a feeder to the main line, substantially as described.

and tubular support E, and the downwardly-inclined spout F, combined, as described, with a drop-weight, G, for the purpose specified.

120,238. — CHECK-REIN FASTENER.—Bern L. Budd, Fairfield, Conn., assignor to James S. Mott, same place.

Claim.—1. The tongue-pivot bearings *f f*, formed by striking up in the plate, from the under side, cavities of a form substantially as herein described, not only to receive but to cover the ends of the pivots.

2. The spring-plate B, slit to form the spring, and covering the whole bottom of and combining with the base-plate A and tongue C, substantially as and for the purpose herein set forth.

120,239. — CHECK-REIN FASTENER. — Bern L. Budd, Fairfield, Conn., assignor to James S. Mott, same place.

Claim.—The combination of the recessed base-plate A, the spring B, and tongue C, substantially as and for the purpose herein set forth.

120,240.—CIGAR-CLAMP.–Nicholas A. Buhle, New York, N. Y.

Claim.—1. The finger-ring B formed with the screw-socket *d*, in combination with the clamp A formed with the jaws *c c*, substantially as and for the purpose set forth.

2. The finger-ring B formed with the screw-socket *d*, arranged to operate in connection with the filling piece *e* and clamp A, as set forth, when all are constructed substantially as described.

120,241. — SEED-PLANTER.—Ezra E. Cheney, Bushnell, Ill.

Claim.—1. The frame E *d e f* jointed to the end of tongue D, and resting movably upon beam C, combined with sliding seat F, as and for the purpose specified.

2. The forked post E provided with the cross-piece *f*, and combined with the tongue D, seat-support *d*, and beam C, substantially as herein shown and described.

120,242.–DRIER.–Solon L. Cheyney, Springfield, Ohio.

Claim.—1. The removable non-conductors D D, secured to the plate *x* provided with feet *z*, and used in the dry-house, constructed substantially as and for the purposes herein set forth.

2. The combination in the dry-house and oven, constructed substantially as described, of angular strips *a a*, the lower set of which is provided with apertures *b b*, substantially as and for the purposes herein set forth.

3. The combination of the drier A, having its floor provided with the removable cooking-stove top E and boiler, all constructed and arranged to operate substantially as and for the purposes set forth.

120,243.—SAW-SET.—Erastus Y. Clark, New York, N. Y.

Claim.—In combination with a saw-set, the supporting slide N, substantially as and for the purpose specified.

120,244.—COOKING-STOVE.—James H. Codling, Taunton, Mass., assignor to Dighton Furnace Company, same place.

Claim.—The detachable shelf A, provided with spurs or projections D D, in combination with dovetails C C on the stove-plate, all as shown and described.

120,245.–PHOTOGRAPHIC PRINTING-FRAME. John George Coffin, Portsmouth, Ohio, assignor to Sensitized Paper Company, same place.

Claim.—The hollow chamber, covered with a perforated top, under the negative.

120,246.—BARK-MILL.–Owen Coogan, Pittsfield, Mass.

Claim.—1. In combination with the rolls B C, constructed as described, the feed-table F, when provided with the hinged leaf *b*, as and for the purpose set forth.

2. The arrangement of the spring H, rods *d d*, levers G G, and feed-roller C with relation to the table, as shown and described.

120,247.—HASP-LOCK.—George Crompton, Jersey City, N. J.

Claim.—The combination of the pivoted lock-bar F and spring *b* with the pivoted jaws E, recessed hasp B, and plate C, substantially as herein shown and described, and for the purpose set forth.

120,248. — PLOW. — Thomas Cuming, Jr., Brookhaven, Miss.

Claim.—The combination, with the mold-board and land-side of a turn-plow, of share D, arranged and adjustable between them, as and for the purpose specified.

120,249.—CORN-HARVESTER AND SHOCKER. Elijah Culp, Hilliard Station, Ohio.

Claim.—1. The combination of the shocker-gate I, cords *d*, and spring-cylinder N for the purpose of holding the stalks of corn in a perpendicular position till the shock is completed.

2. The combination of the shocker-gate I, cords *d*, spring-cylinder N, and gathering-shaft G for the purpose of collecting the cut stalks of corn from the sickle into a perpendicular position to form a shock of corn.

3. The combination and arrangement of the forked tongue B, center-cutting circular sickle F, shocker-gate I, spring-cylinder N, front and rear guards O and J, cords *d*, and ratchet-crane L and tongs K', substantially as and for the purpose specified.

120,250. — WOODEN MAT FOR PICTURE-FRAMES.—Harrison W. Curtis, Philadelphia, Pa., assignor to Hale, Goodman & Co., same place.

Claim.—As a new article of manufacture, a rectangular wooden mat having an oval or circular opening, and consisting of four strips or segments cut so that the joints shall be at the top, bottom, and sides of the mat, and joined so that the grain in adjacent sections shall be at different angles, as and for the purpose set forth.

120,251.—LIGHTNING-ROD COUPLING.—David W. Demorest, Newark, N. J.

Claim.—The coupling C and screw D, combined with the locked sections A B of a lightning-rod, as specified.

120,252.—INDIA-RUBBER SHOE.—Lewis Elliott, Jr., New Haven, Conn., assignor to L. Candee & Co., same place.

Claim.—An India-rubber shoe made with knitted elastic uppers of the character specified, an elastic binding to the edge of the same, and India-rubber foxing between such elastic uppers and the sole, the same forming a new article of manufacture.

120,253.—APPARATUS FOR DRYING FRUITS, MEATS, &c.—Hermann Endemann, New York, N. Y.

Claim.—The combination of an air-exhauster and an air-heating apparatus with a drying-chamber and with valves J M, which allow of regulating the temperature of the air made to pass through the drying-chamber by the action of the exhauster, substantially as herein shown and described.

120,254.—COMBINATION OF DEVICES AND FURNACES FOR THE MANUFACTURE OF SPIKES.—David Eynon, St. Louis, Mo.

Claim.—1. The combination, substantially as described, of a furnace, reducing-rolls, and a spike or bolt-machine.

2. The combination of the furnace with its movable roof.

120,255.—MACHINE FOR SPINNING WOOL.—Luther W. Felt, Keene, N. H.

Claim.—1. The combination of a removable tube, K', and hook, A, constructed substantially as set forth, with a spring, *h'*, for the purpose described.

2. The combination of a removable tube, K', with a twisting-hook, A, secured as described.

3. A tubular flier, N, provided with a slit, *r*, cap-piece *l*, and depression *p*, in the manner substantially as and for the purpose set forth.

4. A tubular flier, N, constructed as described, when provided with a wire, *s*, and hook *s'*, for the purpose set forth.

5. The combination of a tubular flier, N, constructed as described, with the draw-rolls L L and M, for the purpose set forth.

6. The combination of a tubular flier, N, provided with a cap, *l*, and depression *m'*, with a retractible spindle, S, for driving the same, as set forth.

7. The combination of a tubular flier, N, provided with a cap, *l*, depression *m'*, and retractible spindle S, with a sliding frame, O, for carrying the latter, as set forth.

8. In combination with the tubular flier N, spindle S for driving the same, and sliding frame O, the sliding frame P and spool or bobbin-carrier T, substantially as and for the purpose set forth.

9. The combination of a tubular flier provided with a cap-piece, *l*, depression *m'*, and retractible spindle S for driving the same, with the draw-rolls L L and M, substantially as described.

10. The combination of a retractible spindle, S, for driving the flier, with a loose spool, T, and bobbin R, substantially as set forth.

11. The combination of a sliding frame, P, hinged cross-piece V, cam W, spring X, rod 9, and yoke Y with a loose spool, T, carrying the bobbin, for the purpose set forth.

12. A friction-yoke, Y, formed in two parts and hinged at one end, when provided at the other with rods 9 and 10, attached in the manner and for the purposes set forth.

13. The combination of a tubular flier, N, and retractible spindle S for driving the former and carrying the spool and bobbin, as set forth, with a frame, O, for adjusting the spindle, and frame P for adjusting the bobbin, when so arranged and constructed that the spindle may be withdrawn from the flier and both frames simultaneously tilted forward, for the purpose described.

14. The combination of the tilting spindle S with the wire Z and bobbin R, substantially as and for the purpose herein described.

15. The combination of a flier, N, tilting-spindle S, and wire Z, substantially as described.

16. The combination of a flier, N, tilting-spindle S, wire Z, bobbin R, and spool T, as described.

17. In combination with the drawing-rolls of a spinning-machine, an air-tube, 13, provided with a slit or series of openings, for the purpose set forth.

120,256. — MECHANISM FOR DELIVERING ROVING IN SPINNING-MACHINES.—Luther W. Felt, Keene, N. H.

Claim.—1. The combination of the wheels D and E with mechanism, substantially as described, for delivering a quantity of roving between the griping points of said wheels, greater in length than the direct distance between the adjoining rods *b*, as set forth.

2. The combination of the wheels D and E and mechanism substantially as described, for furnishing an increased length of roving between their griping points, as set forth, with a twisting-tube, K, whereby the necessary amount of twist is imparted to the roving to give it the requisite strength in its weaker portions to withstand the strain before being drawn to the required degree of fineness.

3. The combination of the wheels D and E, mechanism substantially as described for furnishing an increased length of roving between their griping points, and twisting-tube K with the draw-rolls L L and M, for the purpose set forth.

120,257.—HOT-AIR FURNACE.—Reuben R. Finch, Peekskill, N. Y., assignor to Union Stove Works, same place.

Claim.—The truncated cone *k* and shield *i* in combination with the chamber *f* and air-tubes *g* above the furnace or fire-pot *e*, substantially as and for the purposes set forth.

120,258.—HAND-GRINDER FOR HARVESTER-CUTTERS. — Henry C. Fisk, Wellaville, N. Y.

Claim.—1. The shaft, consisting of the section D and adjustable section D', in combination with the pinion I I', spur-wheel J, latch-bar or equivalent F, and grinding-wheel B, substantially as described.

2. The construction and arrangement of the loop-handles A'', having their grasp parallel with the main bar, substantially as and for the purpose set forth.

120,259. — APPARATUS FOR DISCHARGING ACID CARBOYS.–William Gee, New York, N. Y.

Claim.—1. The combination of the suspending-chains E E and the frames C C provided with cams arranged in relation to the attachments of the said chains E E, substantially as and for the purpose herein set forth.

2. In combination with the above, the yoke D, lever F, standard G, and stay or brace I, substantially as and for the purpose described.

3. The combined mouth-piece B and vent-pipe a provided with an elastic socket, *g*, for its attachment to the neck of the bottle, substantially as and for the purpose herein specified.

120,260.—ADVERTISING-ALBUM. — George W. Hawes, New York, N. Y.

Claim.—The method of applying cards or handbills to pictorial advertising-books, substantially as above described.

120,261, antedated October 13, 1871.—COMBINED BURGLAR AND FIRE-ALARM.–Louis Giebrich, Ottumwa, Iowa.

Claim.—1. The bells C C, pivoted frame D, and shaft F, combined as described, and for the purpose specified.

2. The combination of the pins *h h* on the wheel *e* with the levers G, H, and I, all arranged to operate substantially as herein shown and described.

3. The T-head rod *j*, combined with the bell-crank I, forked lever H, lever G, hook *l*, and cord *m*, all arranged substantially as herein specified.

4. The barrel L and hammer *q*, combined with the alarm-setting-apparatus G H I, substantially as herein shown and described.

5. The cord *m* secured with one end to the lever I, and with the other to the hook *n* of the rock-shaft J to operate the alarm whenever said rock-shaft is turned, as set forth.

6. The levers M M, combined with the cords *m*, springs *v*, rod *t*, and rock-shaft J, to constitute the alarm-discharging-apparatus, as specified.

7. The alarm O, arm a^2, and knob *z*, combined with a cord, *w*, operated by the levers M M and rock-shaft J, in the manner specified.

120,262.—TELEGRAPH APPARATUS. — Webster Gillett, Allegheny City, Pa., assignor to himself and Paul Hugus, Pittsburg, Pa., and Charles M. Gillett, Cleveland, Ohio.

Claim.—1. A local battery, arranged in the direct main line, in combination with a local circuit, which shall leave and return to the main line outside of the local battery so as to operate as a feeder to the main line, substantially as described.

2. In single circuit-lines, a working battery arranged in the line of both the main and local circuits, whereby a single battery may be made to work both the main and local circuits, substantially as described.

120,263. — OIL-TANK. — George W. Glass, Pittsburg, assignor to himself and William J. Brundred, Oil City, Pa.

Claim.—1. The valve-stem A passing down through the dome B of the tank C, substantially as herein described, and for the purpose set forth.

2. The detached nut D, in combination with the valve *e* and its stem A, substantially as described.

3. The screw *f* provided with cap *h*, and used in combination with valve *e*, substantially as herein described, and for the purpose set forth.

120,264. — PROPULSION OF VESSELS. — Joseph S. Godfrey, Leslie, Mich., assignor to himself, Sears M. Loveridge, and James Irwin, Pittsburg, Pa.

Claim.—A water-trunk or passage, B D, leading from the bow of the vessel to the case of the centrifugal pump and entering the case at the axis of the pump, in combination with a water-passage, G, from the periphery of the pump-case to the stern of the boat, substantially as described.

120,265.—PAPER-PULP ENGINE.—Simeon L. Gould, Skowhegan, Me.

Claim.—1. The case A *g*, in combination with the centrifugal disintegrator B, substantially as described.

2. The partitions *p*, arranged in the case A *g*, in combination with a centrifugal disintegrator, substantially as described.

120,266. — DIE FOR CUTTING SCREW-THREADS. — John J. Grant, Greenfield, Mass.

Claim.—The combination, with the stock and dies and the set screws or equivalent external adjustment of the dies, of the interposed taper or taper-headed screws, applied to operate substantially as herein specified.

120,267.—WINDOW-SASH. — John Groves, New York, N. Y.

Claim.—The double-studded and reversible catch E F H pivoted to the stile B, and operating to lock the sash to the stile and the stile to the frame, as set forth.

120,268.—PAVEMENT.—Hermann A. Gunther, New York, N. Y.

Claim.—A pavement formed of artificial stones or concrete blocks, separated by a filling of gum or other equivalent water-repellent substance capable of being hardened and remelted, substantially as and for the purpose specified.

120,269.—VALVE FOR STEAMBOAT ENGINES. Andrew M. Haley, Sioux City, Iowa.

Claim.—1. A steam supply-pipe, A, and exhaust-pipe C, combined with a chamber, B, communicating with steam-cylinder and with said exhaust-pipe, as described.

2. The combination with said chamber B of the open-ended tube D, movable therethrough, and the exhaust C having valve-seat *b*, for the purpose specified.

3. The combination, with said chamber B, open-ended tube D, and exhaust C having valve-seat *b*, of the circular valve E, all constructed to operate in the manner described.

120,270. — COMBINED LOUNGE AND BEDSTEAD.—John C. Hall, Cincinnati, Ohio.

Claim.—The provision in a lounge-bedstead of the folding boards K K', strap L, and buckle M, or their equivalents.

120,271.—BED-BOTTOM.—James W. Hampton, Mount Pleasant, Iowa.

Claim.—The combination of the clevises G G, attached to the under side of the bed-slats, supporting-bars B B, the stationary bars D D, the springs C C, and the slats A A, all substantially as and for the purposes herein set forth.

120,272. — APPARATUS FOR RELEASING HORSES. — James Harrison, New York, N. Y.

Claim.—1. The arrangement of the chains B D H and rings F I with the pins or nails C, eye-bolts E, long hooks G, and the stalls of a stable, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the whiffletree K, traces L, and breast-collar M with the chains B D H, substantially as herein shown and described, and for the purpose set forth.

120,273.—HAY-ELEVATOR.—Theodore Harter, Ilion, N. Y.

Claim.—The lever F, having the beveled end *f* and diverging arms G G', in combination with the bar *f*, pulleys C D', and rope D, substantially as specified.

120,274.—CULTIVATOR.—Julius W. Hatcher, Bethesda, Tenn.

Claim.—In a cotton-chopper, the arrangement of the cam-wheel G H so that its axis is above that of the internally-toothed transporting-wheel C E, the same being geared together, as shown, and the chopper O, rod L, spring K and arm or rod, all as shown and described, for the purpose specified.

120,275.—SUSPENDED LIFTING-JACK.—Hector C. Havemeyer, New York, N. Y.

Claim.—1. The hydraulic jack provided with the rods *h h*, cross-piece *j*, and hook *k*, substantially as specified.

2. The lifting-jack provided with the projecting trunnions *d d*, and combined with the ring B having the pins *e e*, substantially as described, so that a universal joint is thus produced, for the purpose specified.

3. The combination of a hydraulic jack with the ring B and truck C, to operate substantially as herein shown and described.

120,276.—WATER-CLOSET SEAT.—David L. Hawkins, Poughkeepsie, N. Y.

Claim.—1. The movable cover C for water-closets, consisting of a piece of cloth having the opening, as described, and adapted to be drawn through the slot *d*, as and for the purpose specified.

2. The combination, with the water-closet seat A, of the cover C, cylinder D, coiled spring G, and shaft E, as and for the purpose specified.

3. The combination of the cover C, cylinders D D', spring G, cloth I, and gear-wheels D^2 D^3 applied to the seat of a water-closet, as and for the purpose set forth.

120,277.—SHUTTLE FOR SEWING-MACHINES. James C. Hervey, Newport, Ky.

Claim.—1. The lid C, washer D', spring F, pin D, and nut E, in combination with the cylinder B and shuttle A, substantially as specified.

2. The combination and arrangement of the hinged slotted cylinder B, spool G, hinged lid C with eye *g''*, washer D', spring F, nut E, loop *g'*, and shuttle A, substantially as set forth.

120,278. — BLAST-ATTACHMENT FOR LIME-KILNS.—William Hollenbaugh, New Germantown, Pa.

Claim.—In connection with a kiln for burning lime, the combination of a fan-blower and the telescopic-pipe H H' with the terminal-box J provided with slides or valves K K' for distributing the heat equally, as described, under and throughout the kiln.

120,279. — ROCK-DRILL.—Simon Ingersoll, New York, N. Y.

Claim.—The spiral bar A having the grooves *a' a' a'* cut as described, in combination with the nut B when applied to a rock-drill, and operated substantially as and for the purpose set forth.

120,280.—GAS-REGULATOR.—John Keeling, New York, N. Y.

Claim.—The counterpoise vessels E and F, when provided with the air-cocks J and K, and connected by the flexible tube G, in combination with the walking-beam C and valve or bell of the gas-governor B.

120,281.—SHUTTER-WORKER.—Lester Bradner Kenney, Charlotte, Mich.

Claim.—The combination of the beveled pinion D with its cam *a* with the beveled pinion E having a groove, *b*, all constructed to operate substantially as set forth.

120,282.—BRIDGE.—Lancelot Kirknp, Brooklyn, N. Y.

Claim.—1. The upper chord or arch formed by combining the plates *a*, constructed as shown in Figs 2 3, 4, and 5 of the drawing, for the purpose specified.

2. The combination, with the upper and lower chords A and B, of the vertical suspension-rods C and diagonal braces D, when the same shall be constructed and operate substantially as and for the purposes set forth.

120,283. — SOFA-BED.—George Knell, Philadelphia, Pa.

Claim.—1. The combination of the plates D and D' at each end of the sofa, when constructed and arranged substantially as herein described, so as to form hinges for the back, braces for the latter and for the arms of the sofa, and bearings for the ratchets and their operating rods.

2. The supporting lugs *f* on the plates D, in combination with the subject-matter of the first claim.

3. The ratchets *f f*, hung to the back of the sofa so as to be operated together, in combination with fixed pins upon which the ratchets are adjustable, as set forth.

120,284.—TOY-GUN.—Jacob Lair and Jacob F. Rawzell, Indianapolis, Ind.

Claim.—1. The sliding guard G provided with the projection h, and operating substantially as and for the purposes herein set forth.

2. The combination of the stop-block C, drive-pin D, springs *f f*, sliding-guard G, and trigger H, all constructed and arranged substantially as and for the purposes herein set forth.

120,285. — GRAIN-SEPARATOR.—William H. Lawrence, Baltimore, assignor of one-half his right to D. A. Edie, Morrisville, and one-fourth his right to H. C. Karr, Baltimore, Md.

Claim.—The combination of the rotating elliptical cams h, springs H, pin h, and arms I, substantially as and for the purpose specified.

120,286. — WASHING-MACHINE. — George Leach, Union, N. Y.

Claim.—The cylinder B with sides formed of the diamond-shaped slats *e e*, and bars *g g* with internal projections *i i*, in combination with the inclosing-reservoir A and gearing *d e*, with or without the connected boiler H, substantially as and for the purposes set forth.

120,287.—COFFEE-MILL.—Antoine Lepage, Woodhaven, N. Y.

Claim.—1. The notched collar A arranged on the spindle B between the spindle-standard E and the adjusting-nut D, for which it forms the bearing, in combination with the rigid horn G on the crank H, substantially as and for the purpose herein set forth.

2. The combination of the notches *n n* in the hopper, the projections *g g* on the base-ring J, the projecting portions of the spindle-standard E, the stops *h h* on said ring and those on the female cone, and the lugs *d d* on the latter, substantially as and for the purpose described.

120,288.—AUTOMATIC TELEGRAPHIC TRANSMITTER.—George Little, Rutherford Park, N. J.

Claim.—The rounded circuit-closing points *i e*, combined with mechanism for drawing along a strip of perforated paper, substantially as and for the purposes set forth.

120,289.—TELEGRAPH-RECORDING INSTRUMENT.—George Little, Rutherford Park, N. J.

Claim.—1. The ink-marking pen, extending nearly horizontally from a vibrating armature and contiguous to a roller over which the strip of paper passes, for the purposes set forth.

2. An ink-fountain with a discharge-hole above and contiguous to the vibrating-pen, in combination with a swinging armature and electro-magnet, substantially as set forth.

120,290.—TELEGRAPH APPARATUS.—George Little, Rutherford Park, N. J.

Claim.—1. An electro-magnet operated by earth currents and combined with an electro-magnet and armature, for the purposes specified.

2. An adjustable resistance or rheostat, combined with a retractile electro-magnet for the armature of an electro-magnet, and with the branch-circuit connections, substantially as and for the purposes set forth.

120,291.—AUTOMATIC CIRCUIT-CLOSER FOR TELEGRAPH APPARATUS.—George Little, Rutherford Park, N. J.

Claim.—1. The circuit-closing roller, made of one or more ranges of headed pins inserted through the shell of said roller and pressed outwardly by a spring, ring or rings, substantially as set forth.

2. The circuit-closing roller with spring-pins combined with the roller *a*, and acting to feed the paper, as set forth.

3. The non-conducting disks *u* forming the sides of the circuit-closing roller, for the purposes set forth.

120,292.—STOP-VALVE. — Fred. D. Livingston, Norwich, Conn.

Claim.—The screw J having valve I, double valve D E F having rod K forming part thereof, and valve-seated and recessed plug G combined with a shell having the parts A parallel to each other, all being constructed, arranged, and applied together, as and for the purpose specified.

120,293.—AUTOMATIC FAN.—Martin Lochner, Newark, N. J.

Claim.—The fan-wheel G, shaft C, and water-wheel E, arranged to operate in connection with the flume D, supply-pipe F, and exit-pipe or opening H, substantially as and for the purpose set forth.

120,294, antedated October 11, 1871.—WATER-COOLER, FILTER, AND ICE-CHEST COMBINED. — Richard Long, Pittsburg, Pa.

Claim.—1. The wings *j j*, rotating with the central ice-chamber C and within a water-chamber *c* to agitate and thereby more rapidly cool the water.

2. The ice-chamber C, the water-chamber *c* surrounding it, and the filtering-chamber *b* surrounding the latter, all combined as described, so that the water first passes through the charcoal, then in-

to the water-chamber, and is finally cooled without contact with the ice.

3. The combination of the cover B and pin *i* with the swiveled agitator, ice-chest, and loop A, substantially as described, to operate as set forth.

120,295.—RAILWAY RAIL.—John Maitland, Newburg, Ohio.

Claim.—A railway rail, consisting of the sections B B' having a dove-tailed groove, as described, and beveled edge *c c'*, head A provided with a tongue or feather, D, of the shape and size to fit into said groove, substantially as and for the purpose set forth.

120,296, antedated October 13, 1871.—IRONING-TABLE.—James H. Mallory, La Porte Ind.

Claim.—The combination of the ironing-table A with the short supports *e e'*, sliding supports h h', adjustable brace *g*, and pins *f* and L, substantially as specified.

120,297.—BALING-PRESS.—Thomas E. Marable, Petersburg, Va., assignor to himself, Joseph B. Dunn, and Starke A. Plummer, same place.

Claim.—1. The followers a b, when pivoted to their bars, as specified.

2. The combination of the beam *c*, hinged nuts *g*, screws h, and upper follower *a*, as described.

120,298.—STEAM AND OTHER ENGINES.—Robert Mudge Marchant, London, England.

Claim.—1. The combination, with the cylinder of an engine, of an exhaust-chamber loaded to and maintained at an inferior pressure to that of the spent gas or vapor passing from the engine to said chamber for the further utilization of the exhaust gas or vapor, substantially as specified.

2. The exhaust-tank or chamber D provided with a safety or pressure-regulating valve, E, a perforated partition, I, an exhaust-inlet, C, and outlet K, a water-inlet, F, and outlet H, all arranged for operation in relation with the cylinder of the engine, the exhaust-pipe from which connects with said chamber, essentially as herein set forth.

120,299.—GAS-AND-SMOKE-CONSUMING APPARATUS.—George Marlow, Chicago, Ill.

Claim.—1. The retort A, provided with the respective series of openings J and K, so arranged as to admit the flame through the said retort around the distributing-cylinder E, substantially as and for the purpose described.

2. The perforated distributing-cylinder E, in combination with pipes H and H', substantially as and for the purpose described.

120,300.—WASH-BASIN.—Christopher C. Marsh, New York, N. Y.

Claim.—The suspended wash-basin A, in combination with the hopper B having a perforated bottom, as described.

120,301.—SIDING-GAUGE.—John Mason, Buffalo, N. Y.

Claim.—The combination of the block A with offset B, curved holder C, pin E, metal slide D with point *a*, and the set-screw *b*, all substantially as and for the purposes set forth.

120,302.—GAS-MACHINE.—Hiram S. Maxim, Brooklyn, N. Y., assignor to Myron H. Strong, same place.

Claim.—1. The retort for vaporizing the liquid hydrocarbon, made with a water-jacket surrounding such retort and heated by the burners *a*, substantially as specified.

2. A water-vessel interposed between the retort for liquid hydrocarbon and the heating flame, in combination with the mechanism, substantially as specified, for regulating the supply of the inflammable material to the flame in proportion to the heat and pressure, substantially as set forth.

3. The supply-pipe *g* for liquid hydrocarbon passing through the retort into the vessel *g'*, in combination with the tube S and dip-pipe 9, for the purposes set forth.

4. The plug h' and strainer, removable, as shown, and applied between the generating-retort and the jet *i*, for the purpose set forth.

5. The air-vave *l'* upon the stem of the jet-valve 15, and allowed a slight movement, so that the two valves act together in the manner set forth.

6. The rock-shaft 16, arm *n*, and spring-finger 17, in combination with the air-valve *l'* and jet-valve 15, substantially as and for the purposes set forth.

7. The valve *m* in the gas-pipe *l* leading from the mixing-chamber k, for the purposes set forth.

8. The lever *r*, arm *o*, and toggle 27 *o'*, constructed and applied substantially as set forth, to give motion to the rock-shaft 16, as specified.

9. The dash-pot *s* and rock-shaft 16, in combination with the valves *l'* and 15 and actuating-toggle and lever *r*, as and for the purposes specified.

10. The gasoline-vessel *i* in the gas-holder, and an air inlet-pipe and outlet-valve for filling the gas-holder with inflammable gas by drawing the same up, substantially as set forth.

120,303.—AXLE-SKEIN.—Lorenzo Mayhew, Rock City Falls, N. Y.

Claim.—The axle-skein, swaged up from a single plate, doubled over the shouldered end of the spindle at C and provided with the concave arms B B, substantially as specified.

120,304.—WRENCH.—Thomas D. McBride, Philadelphia, Pa.

Claim.—The head A a^1 a^2 a^3 a^4 and handle B, constructed substantially as herein shown and described, to adapt them to be used and adjusted in connection with each other, as and for the purposes set forth.

120,305.—WOOD-BENDING MACHINE.—Hiram McDonald, Shortsville, N. Y.

Claim.—1. The combination, with the former A, of the yokes Q R, connecting-pin S, and binding-screw T, substantially as specified.

2. The combination of the said former A with the strap G, bed I, and bending-lever J, all constructed substantially as specified.

3. The arrangement, with the lever J and roller Y, of the slides Z, screws *a*, pinions *d e*, and shaft *f*, substantially as specified.

120,306.—WOOD-BENDING MACHINE.—Hiram McDonald, Shortsville, N. Y.

Claim.—The construction of dies C F of thin plates with a downward and overlapping projection, G, on the top-plate, and a corresponding recess to receive it in the bottom plate, for the purpose of preventing any elongation at the end.

120,307.—LIME-KILN.—John Q. Merriam and Abram J. Dietrick, Fort Scott, Kan.

Claim.—The removable and adjustable sliding bottoms D d^1 d^2, constructed substantially as herein shown and described, in combination with the plates C, lower part A, and flue or chimney E, as and for the purpose set forth.

120,308.—FENCE-POST.—William A. Middleton, Harrisburg, Pa.

Claim.—1. The triple socket B, constructed substantially as shown and described for fencing or other purposes, as set forth.

2. The combination of the ground-post A, triple socket B, and fence-post C D E, constructed and arranged substantially as and for the purposes herein set forth.

120,309.—APPARATUS FOR EXHIBITING CARDS, &c.—Isaac M. Miller, Huntsville, Ala.

Claim.—The combination of the endless belts, the cylinder, the chute, and concave glass front of the case, all substantially as specified.

120,310.—WASHING-MACHINE.—Thomas W. Miller, Montezuma, Ind.

Claim.—1. The wire spring I, constructed as shown and described, and arranged upon the rubber H, substantially as and for the purposes herein set forth.

2. The combination of the levers D D, rubber H, slotted arms J J, and springs K K, all constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the box A, wash-board C, rubber H, levers D D, arms J J, and springs K K and I, all constructed and arranged to operate substantially as and for the purposes herein set forth.

120,311.—STOP-COCK.—Hermann Müller, Vienna, Austria, assignor to Francis Telbinger, same place.

Claim.—1. The construction of a double valve with grooved radial ribs H and axial hubs K K arranged in cavities thereof, as and for the purpose specified.

2. Two internal aligned and internally-threaded hubs, K K, of a two-part valve, F F, combined with a right and-left screw, I, centrally swiveled, and passing through the axis of each cone so as to regulate the extent of opening in the valves, as described.

3. The combination, with a swiveled right-and-left-screw, I, moving the hubs K K of a double valve on the ends thereof, of a worm-wheel, M, double worm-shaft O P, and dial-wheel T, whereby the spacing of the valves apart can be adjusted with absolute exactitude.

4. The combination, with a two-part valve, F F, of a raised valve-case, C E, provided with a removable cap, R, fitted water-tight into an opening, Q, as and for the purpose specified.

5. A stop-cock, provided with conical valves, arranged and operating substantially as herein shown and described, whereby the pipes may be closed and access given to the interior of the stop-cock without emptying the pipes.

120,312.—SHIFTING-SEAT FOR VEHICLES.—Henry Nagle, Carlisle, Pa., assignor of one-half his right to Benjamin Smeltz, same place.

Claim.—The arrangement of the two seats C and B with the grooved sill D *d*, so combined that the hind seat C can be moved to occupy the space of the front seat B, and which latter, with its folding back *b*, so hinged as to turn over and under to form a partition across the forward part of the vehicle, all operating jointly, substantially in the manner shown, for the purpose specified.

120,313.—BURGLAR-ALARM.—Robert William Newbery, New York, N. Y.

Claim.—1. The detonating cracker, furnished with attaching arms or strips, and used as a burglar-alarm, substantially as shown and described.

2. The protecting-shield B applied to the cracker, substantially as and for the purpose herein shown and described.

120,314.—STRAW-CUTTER.—John K. O'Neil, Kingston, N. Y.

Claim.—1. The arrangement of the cutting-knives B B, in combination with the feeding-box C, so as to cut the straw, hay, or stalks in doubly-oblique directions, substantially as and for the purpose herein specified.

2. The two sets of comminuting cutters *a a* and *b b*, one set being knife-edged so as to slit longitudinally, and the other set chisel-edged so as to sever transversely, in combination with the main cutting-knives B B, as and for the purpose herein specified.

3. The pin-disk D, reciprocating ratch-bars E H, ratchet-wheels G I, and retracting-spring *n*, constructed, arranged, and operating in combination with the knives B B and cutters *a a* and *b b*, in the manner and for the purpose herein specified.

120,315.—BED-BOTTOM.—Otis S. Osgood, Mount Pleasant, Iowa, assignor of one-half of his right to S. B. Freeman, same place.

Claim.—The combination of the frame A B, C-shaped springs C C, and bed-bottom D, when said springs are attached to the top of the frame, then pass downward under the same, and then upward, supporting the bed-bottom, substantially as herein set forth.

120,316.—BRAKE FOR RAILWAY CARS.—Joseph Paradis, Brooklyn, N. Y., assignor to himself, William H. Drew, and Charles Parker, same place.

Claim.—The brake-blocks *g h*, applied in pairs to opposite sides of the wheels and suspended by the springs *i* or yielding arms, in combination with the clutch-drum *m* and its lever *t* for bringing the brake-blocks into action, as set forth.

120,317.—SUCTION-AND-BLAST FAN.—Chester R. Patterson, Pittston, Pa.

Claim.—1. A suction-and-blast fan, having a box, C, on either or both sides of the casing, and the fan-shaft bearings on the outside of the entire casing, all substantially as and for the purposes herein set forth.

2. The curved wings H H set backward from the arms of the fan-shaft and concave on their fronts, substantially as and for the purposes herein set forth.

120,318.—FURNACE FOR THE MANUFACTURE OF IRON.—Edgar Peckham, Antwerp, N. Y.

Claim.—1. The combination of the forge B, horizontal flue C, and pit or trap C^1, substantially as and for the purposes hereinbefore set forth.

2. The combination of the retort E, chamber D connected by the openings N N', substantially as and for the purposes hereinbefore set forth.

3. The combination of the hearth K and forge B, substantially as and for the purposes hereinbefore set forth.

4. The combination of the dampers F and G and flues C^2, substantially as and for the purposes hereinbefore set forth.

5. The combination of the doors H, one or more, and the passage I, substantially as and for the purposes hereinbefore set forth.

6. The combination of the retorts E, one or more, and the passage I and table K, substantially as and for the purposes hereinbefore set forth.

7. The combination of the door O and the table K, as and for the purposes hereinbefore set forth.

120,319.—BRIDGE.—Oliver H. Perry and William H. Allen, Beloit, Wis.

Claim.—The coupling clamping-seats D, E, and F, arranged to receive and support the adjacent ends of the arched rods C and form a connection for the brace-rods, thus dispensing with separate or tubular couplings for this purpose, as shown and described.

120,320.—CLOTH-STRIP BRISTLES.—Arthur P. Peyroux, New Orleans, La.

Claim.—The cloth-strip bristles, constructed substantially as herein shown and described, and for the purpose set forth, as a new article of manufacture.

120,321.—MACHINE FOR BENDING WOOD.—John Phillips, Chicago, Ill.

Claim.—Table A, in combination with form B, levers C, patterns D, pins E, H, and I, slots F, and metallic straps G, constructed and arranged substantially in the manner and for the purposes herein set forth.

120,322.—SELF-OPERATING GATE.—William H. Phillips, Staunton, Ind.

Claim.—1. The bell cranks I I, cranks K K and M, and rods J and L, arranged and operating substantially as described, for the purposes set forth.

2. The combination of the hinges G G and guides *q* and R with the bell-crank I, cranks K K and M, and rods J and L, substantially as shown and described.

120,323.—METALLIC CARTRIDGE.—George R. Pierce, Grand Rapids, Mich.

Claim.—1. The cup or striker A, when combined with a cartridge-shell, to operate on an anvil or nipple, and a cap carried by the same, substantially in the manner shown and described.

2. The combination and arrangement of the cup or striker A, movable and adjustable nipple B, and shell, substantially as described.

120,324.—ATTACHMENT FOR PROTECTING SLEEVES AND CUFFS OF GARMENTS.—James C. Reed, Boston, Mass.

Claim.—The within-described new article of manufacture, having a stiff ring, A, a thin and highly-yielding ring, B, and a contractile cord or edge, C, all formed of rubber, and adapted to serve as herein set forth.

120,325.—AIR-ENGINE.—Alexander K. Rider, New York, N. Y., assignor to himself and C. H. Delamater, same place.

Claim.—1. The mode of operation of the valve M to allow the escape of air during a portion of the stroke and to close and compel the delivery of the air through the valve R during the remainder of the stroke, so as to make the main cylinder A^1 and main piston H serve as the compressing-pump for delivering a smaller volume of air than the capacity of the cylinder, as specified.

2. The adjustable pieces P or their equivalent, operated by the engine, and serving to hold open the induction-valve M during a variable portion of the return-stroke, substantially as herein specified.

3. The construction and arrangement of the heater A^4 and the adjacent parts, and tangential passage through which the air is delivered, so that the air shall traverse around in the space provided, for the purposes specified.

4. The passages G, D, and C, arranged, as represented, relatively to the valve F and to the working parts of an air-engine, so that the cool air shall be only partially introduced into the top of the furnace, as specified.

5. The broad flanges a^1 a^3 bearing at or near their outer edges, as represented, to prevent the conduction of the heat between the parts while maintaining a firm union thereof, as specified.

6. The tightening means V, mounted on the sliding bolt U, and the whole arranged to traverse on the hinge-joint *t* and to secure and liberate the door T, substantially in the manner as herein specified.

7. The beam I, links J, connecting-rod K, parallel-motion links J^1, and brackets A^5, arranged as represented, relatively to each other and to the piston-rod *h*, and to the valve-operating means Q *q* P N, for the purposes set forth.

120,326.—SCROLL-SAW.—Isaac R. Ritter, Reading, Pa., assignor to himself and Jacob R. Ritter, same place.

Claim.—1. A tension device for gig-saws, consisting of a coiled spring, J, and of levers L and M, the whole being arranged in respect to each other, and connected together and to the saw by means of straps or their equivalents, substantially as herein described.

2. The combination of the saw-frame, the levers connected to and operating the saw, and the coiled spring J, its spindle K, and pawl and ratchet *m*, all arranged and operating as described.

3. The levers L and M hung to the bar E^1 by means of straps *j* and j^1, substantially in the manner described.

4. The combination, with the straps j^1, of the bolts *r* and adjusting-nuts *s*, all substantially as and for the purpose specified.

120,327.—GALVANIC BATTERY.—Joseph A. Robbins, Medford, Mass.

Claim.—The employment or use of the tin basicle or cylinder B in a galvanic battery, when constructed substantially in the manner as and for the purposes hereinbefore set forth.

120,328.—BLOWER.—Timothy Rogers, Fredericktown, Ohio.

Claim.—The within-described blower, consisting of the casing A with central opening C and outlet-pipe B, fan D E G with cups I I, and the outside suction-pipe J, all substantially as and for the purposes herein set forth.

120,329.—GAS-FITTING.—Gustav Rosenthal, Pittsburg, Pa.

Claim.—The ratchet and pawl, combined with the horizontal stem *e* of the raising and lowering joint, substantially as described.

120,330.—HAIR-CLOTH.—William Rossnagel, Newark, N. J.

Claim.—The invention of a union hair-cloth, consisting of the articles above named, and manufactured substantially as set forth and described.

120,331.—IMITATION HAIR-CLOTH.—William Rossnagel, Newark, N. J.

Claim.—The invention of an artificial or imitation hair-cloth, the filling being composed entirely of Sisal hemp or Manila, and manufactured substantially as herein set forth and described.

120,332.—STREET-CROSSING.—John Schley, Savannah, Ga.

Claim.—The two pairs of cogged tracks G G G G, continuous over the whole arch D, and each pair equally depressed below the other on opposite sides of the arch, so that a vehicle having four cog-wheels may be moved from one end of the arch to the other without stoppage.

120,333.—MEDICAL COMPOUND FOR PURIFYING THE BLOOD.—Paul Henry Schmid, New York, N. Y.

Claim.—The within-described compound, made substantially as set forth.

120,334.—SASH-HOLDER.—Sylvanus H. Shaw, Lynn, Mass.

Claim.—The combination of the case *a*, gear *b*, arm *k*, spring *i*, pawl *f* formed with the arms *n o* and *q q'*, and screw *p*, all arranged as specified.

120,335.—REPLACEABLE PIVOT FOR WATCHES.—Simon B. Simon, New York, N. Y.

Claim.—As a new article of manufacture, a repair-pivot, B, having a tubular socket to receive the end of a watch-spindle or stem, substantially as specified.

120,336.—COAL-HOD.—Charles Smith, Brooklyn, N. Y.

Claim.—The two pieces of sheet metal, each being a counterpart of the other, properly formed and united together by the front and rear joints *a b* and the top spout-joint *c*, to produce the body of the coal-hod, as herein shown and described.

120,337.—LUBRICATING CAR-WHEELS.—Cyrus Smith, Irwin's Station, Pa.

Claim.—1. The three oil-cups B, C, and D, provided with the oil-vessels *a*, perforated plates or pieces *b*, covers *d*, and screws *e*, applied to the sides of a wheel-hub, A, as shown and described, to operate as specified.

2. The combination of the adjustable wedge-shaped clevis H and screw *n* with the lead ring *m* and collar *j*, as and for the purpose specified.

120,338.—METALLIC CARTRIDGE.—William S. Smoot, Ilion, N. Y.

Claim.—A cartridge-case strengthened by means of lead or other similarly soft and pliable metal, pressed and upset into the head and under the flange of the cartridge, as described and represented.

120,339.—DREDGE-BOX.—Charles F. Spencer, Cleveland, Ohio.

Claim.—The body A having the internal bead *a*, in combination with the lid B having the perforated rim C provided with a stop or projection, *h*, as and for the purpose set forth.

120,340.—CORN-PLANTER.—Abraham H. Stark and John C. Mitchell, Nevada, Iowa.

Claim.—1. In corn-planters, the combination of a hopper having a single hole in its bottom P; a measure, *m'*, of the quantity of grain to be planted; a case, K, arranged thereunder, having two holes and a slot in the top, and having one central discharge-hole in bottom; plates M N, rigidly connected, movable together, and having two holes apiece therein; and the tubes L L extending not quite to the bottom of the case, all constructed and arranged as and for the purpose specified.

2. In combination with an adjustable shoe, C, the clasp D' and the arm E', to fasten the said shoe detachably to the frame of the planter and the runner thereof.

120,341.—CAR-BRAKE AND STARTER.—William M. Starr, Washington, D. C., assignor of one-eighth of his right to John A. Rollings and George W. Wright, each of same place, and one fourth of his right to William Penn Clarke, Davenport, Iowa.

Claim.—1. In combination with the ratcheted car-wheels, bar A, pawl C, and pawl P, operated by the driver, substantially as set forth.

2. The combination of the ratcheted car-wheels, bar A, pawl C, hand-wheel E, shaft G, drum F, and chain B, substantially as set forth.

3. The combination of the ratcheted wheels, the bar or frame A, pawls C, hand-wheel E, shaft G, drum F, chain B, and the brakes *a' a' a'*.

4. The combination of the bar A, pawls C, hand-wheel E, shaft G, drum F, chain B, and chains D, substantially as set forth.

120,342.—WATER-GRATE FOR STEAM-BOILERS.—Thomas Stone, Carbondale, Ill.

Claim.—The construction and arrangement of mud-pipe A, placed across the bottom of ash-pit B, the series of curved grate-bars C, and the transverse pipe D, connected together and with the boiler-pipe E, as and for the purpose specified.

120,343.—RAILWAY CATTLE-GUARD.—Samuel Strack, Dover Township, Pa.

Claim.—The improved cattle-guard, consisting of the sectional springs B, central hinged sleeves C C, and flexible fence H, substantially as specified.

120,344, antedated October 21, 1871.—SINGLE HARNESS.—Charles Richard Stuart, Winslow, Me.

Claim.—1. The bar B *b'*, bolt D, bar E, and breast-pads F, when all are constructed and arranged together as and for the purpose specified.

2. An improved harness, formed by the combination of the bar B, pivoted bar E, breast-pads F, supporting or neck-strap G, belly-band H, springs I, and strap J, in combination with each other, to adapt them for attachment to a pair of thills, substantially as herein shown and described, and for the purposes set forth.

120,345.—WATER-WHEEL.—Samuel D. Taylor, Hazleton, Pa.

Claim.—The series of movable arc plates H and arc extensions *d* of stationary chutes D *s*, combined concentrically and closely with the wheel and each other, so that the course of the water will not be changed (as where the chutes move) nor the velocity impeded, after passing the throats, by any adjustment of the gates.

120,346.—WASH-BOARD.—William H. Towers, Boston, Mass.

Claim.—The combination of a frame having mounted within it a series of rolls covered with an apron or belt, substantially as and for the purpose set forth.

120,347.—BALING-PRESS.—Justin D. Towner and General J. Harris, Murfreesborough, Tenn.

Claim.—1. The combination, with the press-case and follower, of the ropes E, pulleys D G, and capstan H, all arranged substantially as specified.

2. The combination, with the follower, of the ropes M, pulleys N, roller L, and hand-crank, when arranged relatively to the press-case and the horse-power apparatus, as described.

120,348.—OIL-BLACKING FOR LEATHER.—O. K. Tripp, Rochester, N. Y.

Claim.—The oil-blacking, composed of the materials in the proportion specified, and compounded in the manner herein set forth.

120,349.—REFINING HYDROCARBON OILS.—Herbert W. C. Tweddle, Pittsburg, Pa.

Claim.—1. The method, substantially as described, of agitating petroleum by the introduction of carbonic-acid gas or other non-inflammable gas into the oil within the agitating-tank.

2. The introduction of carbonic-acid gas or other non-inflammable gas into tanks or vessels containing petroleum, for the purpose of preventing the formation of explosive mixtures of hydrocarbon vapor and oxygen, substantially as described.

3. The agitation of petroleum in an air-tight tank by means of any gas, gaseous fluid, or mixture of gases under pressure, or by means of a vacuum, substantially as described.

120,350.—SCRUBBING-BRUSH.—John N. Valley and John A. Stetson, Jr., North East, Pa.

Claim.—The within-described scrubbing-brush, consisting of the head E with suitable brushes or rubbers, or both, the circular plate D forming an annular groove, the perforated plate B having a handle-socket, A, and the springs G, all as shown and described.

120,351.—HOLDER FOR SCREW-CUTTING DIES.—Benjamin L. Walker, Sing Sing, N. Y.

Claim.—1. The combination of the frame A with its end screws *g g*, the clamping-strips C C with their side-adjusting and clamping-screws *f f*, and the rocker D, adjustable as by screws *i i*, substantially as specified.

2. The frame A, constructed with a swinging opening end piece, *e*, slotted as at *e*, and secured by a bolt or bolts, in combination with the adjustable clamping-strips C C', essentially as herein set forth.

120,352. — COFFER-DAM. — John E. Walsh, New York, N. Y.

Claim.—1. In a coffer-dam, the projecting metal keel or hold-fasts A''' attached to the bottom O, for the purpose described.

2. The combination of the square timber or metal piles C and metal sheet-piles D with the sections A' of a coffer-dam, when constructed to operate as herein described.

3. The adjustable sections or parts A' having the square piles C and sliding piles D thereto attached, in combination with the hinged and removable gates or doors B and B' provided with compartments and piles, in the manner and for the purpose described.

4. The coffer-dam herein described, consisting of the adjustable parts A' having compartments therein, piles C and D, keels or hold-fasts A''', end gates B and B' attached, and rail-tracks G thereon, constructed and arranged to operate in the manner described.

120,353. — VESSEL FOR CARRYING LIQUID CARGOES.—William Gray Warden, Philadelphia, Pa.

Claim.—1. A vessel having its engine and boiler-room between double bulkheads, to which steam or water can be admitted.

2. A space, Y, arranged between the sheathing and inner lining of a vessel and communicating with a steam or water-pipe, as set forth.

3. A tunnel, M, extending from the rear bulkhead E to the stern of the vessel, and formed by two casings to the space, between which steam or water can be admitted, all substantially as specified.

4. A vessel for carrying liquid cargo, in which the deck is lined at the under side and the hatchways are sealed, as herein described, so as to render the cargo space gas-tight, as set forth.

120,354.—COMBINED SEEDER AND CULTIVATOR.—Jacob W. Webb, New Athens, Ohio.

Claim.—The wheel-and-axle frame A, three transverse bars, B, notched plates C D, and spur-wheel M', combined, constructed, and arranged to receive at different times the cultivator, drill, and planting mechanism, in the manner described.

120,355.—PROCESS OF DISINFECTING BUILDINGS, SHIPS, &c.—Henry M. Wells, New York, N. Y.

Claim.—The method of purifying vessels, buildings, &c., by injecting disinfectants in a spray by steam, said disinfectants being atomized and volatilized, substantially in the manner described.

120,356. — HORSE-COLLAR FASTENING.—Caleb Wheeler, Warsaw, Ohio.

Claim.—1. The collar-pieces a b, combined with the hinged folding plates c d, as specified.

2. The plate c, combined with the plate g, springs h h', and lugs j, as described.

120,357.—ANIMAL-POWER.—Myron G. Wood, Church Corners, Mich.

Claim.—The within-described folding power, consisting of the frame A B E, legs C C', disk G, wheels H I, pitman J, cross-head K, and slides L, all constructed and arranged to operate substantially as and for the purposes herein set forth.

120,358.—GATE.—Robert J. Wood, Hancock, Mich.

Claim.—1. The tilting-plate C, provided with connecting-stud I, for actuating bar N, at each end, substantially as specified.

2. The prongs E and the tilting-plate, arranged for shifting the latter toward or from the axis of the hinges, substantially as specified.

3. The part J of the hinge, arranged for the attachment of the roller M, substantially as specified.

4. The arrangement of the part J of the hinge and the part F of the bracket, whereby the latter is extended above said part of the hinge for being supported on the end D, all substantially as specified.

120,359.—MEAT-CHOPPER.—Nathaniel True Worthley, Brunswick, Me.

Claim.—1. The combination of the rotary shaft H, wheel I^2, spring I, pitman G, and crank-shaft E, as and for the purpose set forth.

2. The rod F, head-block g, screw k^1, pitman G, and shaft E, in combination with the shaft H, provided with the toothed wheel I^2 and loose collar k, as and for the purpose set forth.

3. The treadle M, hinged to the sill B, and connected to the collar g^2 by the rod N, in combination with the shaft E, pitman G, and rod F, as described.

120,360.—ROTARY STEAM-VALVE AND CUT-OFF.—Hugh Wright, Warren, Ohio.

Claim.—1. The steam-chamber C, valve E, and cylinder-head B, combined and arranged substantially as and for the purpose described.

2. In combination with the valve E, the variable cut-off O, arranged and operating as described, for the purposes set forth.

REISSUES.

4,604.—TUBE-WELL.—Solomon L. Bignall, Chicago, Ill.—Patent No. 92,569, dated July 13, 1869.

Claim.—1. A tube-well, A, provided with a point, G, and wings C, said wings being provided with lips E for loosening the earth and with flanges D for packing the walls of the hole, as set forth.

2. In combination with the tube A the rings M and wire-cloth I, said cloth being formed over the rings and the rings formed to fit the periphery of the tube, to which they are soldered, as set forth.

3. The wire-cloth I, secured to the tube A by a ring of solder, with the wire ring, as set forth.

4,605.—HOSE-COUPLING.—James C. Cooke, Bridgeport, Conn., assignor to Albert F. Allen, Providence, R. I. — Patent No. 22,166, dated November 30, 1858; reissue No. 4,344, dated April 18, 1871.

Claim.—1. The male and female locking devices a a and c c, attached alternately to the connecting faces of a hose-coupling, as and for the purposes specified.

2. The corresponding annular projection and recess m and n, arranged with relation to each other on the holding-band and neck of a hose-coupling, as and for the purposes specified.

3. In combination with the exterior and interior holding annular surfaces between which the hose is compressed, the annular projection m for engaging with the surface of the hose, substantially as described.

4,606.—MANUFACTURE OF ALCOHOLIC LIQUORS FROM THE RHUBARB PLANT.—Joseph H. Deacon, Lumberton, N. J.—Patent No. 86,284, dated January 26, 1869; reissue No. 3,837, dated February 15, 1870.

Claim.—1. The described process of manufacturing an alcoholic liquor from the juice of the rhubarb plant, substantially as set forth.

2. An alcoholic liquor manufactured from the juice of the rhubarb plant, substantially as described.

4,607.—COOLING AND VENTILATING BUILDINGS.—Theodore Krausch, New York, N. Y.—Patent No. 108,707, dated October 25, 1870.

Claim.—1. In a refrigerator-building, an ice-chamber surrounded by an air-space so as to permit a circulation of air around and over the ice-chamber, substantially as described.

2. One or more air-trunks, connecting the several chambers of a refrigerator building with the space surrounding the ice-chamber, so as to distribute the cold air, as set forth.

3. Air-supply pipes m, in combination with the trough g, which receives the water from the ice-chamber, so that the air as it enters is cooled by the waste-water from the ice-chamber.

4. The flue or trunk e passing through the building, and connected, by means of suitable openings, to one or more apartments, and provided with a steam-jet or other equivalent ventilating device, so that the air may be changed in any of the apartments of the building at will, substantially as set forth.

5. The main trunk C, provided with openings and valves on different floors, in combination with ventilating-flues e or their equivalent.

6. The flues k k' with suitable side openings on different floors, so as to circulate the air from the ice-chamber to the several rooms of the building, as described.

7. The method described of arranging the flaps or shutters so that they will close by their own weight, and open automatically by an increase of pressure on their inside.

8. The pipe E, inclosed within the air-trunk C, and communicating with the latter, as described, with the air-space f surrounding the ice-chamber B, said air-space and ice-box being arranged in the top part of the building and operating in connection with the lower rooms, substantially as and for the purpose described.

9. The vertical air-trunks k k', central pipe E inclosed within the air-trunk C, in combination with the air-space f surrounding the ice-chamber B, and operating with reference to the lower rooms, as herein shown and described.

10. In combination, the air-space f surrounding the ice-chamber B arranged in the top of a building, and the central pipe E of a steam-jet, applied and operating as herein set forth.

11. The pipe m with openings n, in combination with stand-pipe p of the waste-chamber, for the purpose of cooling the incoming currents of air.

4,608.—CRUCIBLE FOR MELTING STEEL AND OTHER METALS.—Arthur Pickering, Boston, Charles R. Vickery, Charles R. Atwood, and The Phœnix Manufacturing Company, Taunton, Mass., assignees of George Nimmo.—Patent No. 49,141, dated August 1, 1865.

Claim.—A crucible of the kind known as plumbago crucibles, with a lining of clay or clay and sand, or similar material, for the purpose specified.

4,609.—FURNACE FOR THE MANUFACTURE OF IRON AND STEEL. — Henderson Ross and John H. Clemens, Pittsburg, Pa.—Patent No. 113,279, dated August 22, 1871.

Claim.—1. A furnace so constructed that the flame in its neck and in the lower end of its stack shall be brought in direct contact with water and subjected to its decomposing and mellowing action, substantially as hereinbefore described.

2. A furnace for the manufacture of iron and steel provided with a water-box, substantially as hereinbefore described, and for the purpose set forth.

4,610.—CULTIVATOR.—William S. Weir, Jr., Monmouth, Ill.—Patent No. 37,251, dated December 23, 1862.

Claim.—1. The combination, in a walking straddle-row cultivator, of the following instrumentalities, viz.: Two wheels, C C, tongue A, axle B, and two plow-beams, F F, independently hinged to the axle by means of joint-pieces K K so constructed as that the plow-beams, with their gangs of plows, may be moved independently and freely in a lateral or vertical direction, and be retained, during the operation of the plows, in an upright position, without the aid of other connection or support, substantially as and for the purpose set forth.

2. The combination, in a walking straddle-row cultivator, of the following instrumentalities, viz.: Two wheels, C C, tongue A, axle B, and two plow-beams, F F, hinged, as aforesaid, with a bar, D or equivalent device, projected in rear of the axle, by means of which the plow-beams, with their gangs of plows, can be suspended clear above the ground when not in use, substantially as set forth.

3. The joint-pieces K K, constructed as described, with perforated plates b b and bolts c and c, in combination with the plow-beams F and uprights B' of the axle, for the purposes set forth.

4,611.—CASE FOR RIBBONS, LACES, &c.—Samuel Whitaker, Macon, assignor to himself and Aaron Ruth, Decatur, Ill.—Patent No. 113,827, dated April 18, 1871.

Claim.—1. In a case for ribbons, laces, &c., constructed, substantially as described, with a series of springs, washers, and caps on the shaft and between the spools, the washers and caps provided with projections that fit in a slot in the shaft, so that they will revolve with the shaft, and that the material can be wound upon each spool separately or upon two or more of them at the same time without disturbing the other coils, as set forth.

2. In a case for ribbons, laces, &c., constructed, substantially as described, with a series of springs, washers, and caps on the shaft and between the spools, the washers and caps provided with projections that fit in a slot in the shaft, and with a ratchet-wheel and pawl, so that one or more of the coils of ribbon, &c., can be uncoiled at the same time, as set forth.

3. A series of spools, E E, with the points e e, and a series of openings, O O, with the points e' e', substantially as described, and for the purpose set forth.

4. The feeder L, provided with the points l l, for the purpose set forth.

5. The spring tape-measure S sliding in the rod R, for the purpose described.

DESIGNS.

5,320.—LAMP-SHADE.—Charles Binzer, New York, N. Y.

Claim.—The design for a lamp-shade, substantially as described and represented in the drawing.

5,321. — GRATE-FENDER.—George Buchanan, Washington, Pa.

Claim.—The design for a grate-fender, as described and shown in the accompanying drawing.

5,322. — BILLIARD-TABLE. — William H. Griffith, New York, N. Y.

Claim.—The vertical part b and moldings c d, combined, as described, with the ordinarily-inclined part a to form a new design for the side and end pieces of a billiard-table.

5,323.—SHAWL FABRIC.—Joseph Hodgson, Philadelphia, Pa., assignor to Thomas Dolan, same place.

Claim.—The design for a shawl pattern, consisting of plain stripes alternating with plaid stripes, and having illuminating stripes arranged substantially as described.

5,324. — STEAM-ENGINE CYLINDER AND FRAME.—James R. Maxwell, Cincinnati, Ohio, and Ezra Cope, Covington, Ky.

Claim.—The design for steam-engine cylinder and frame, substantially as shown and described.

5,325.—CHAIR.—John G. Strain, Delaware, Ohio.

Claim.—The design for splint-bottom chairs, comprising the back posts made in the form known as the Grecian square and the front posts round.

TRADE-MARKS.

495.—MINERAL-WATER.—George Riker Bishop, New York, N. Y.

496.—LOOM-TEMPLE.—Dutcher Temple Company, Hopedale, Mass.

497.—KNIT GOODS AND FABRICS.—Philip M. Hardee, Philmont, N. Y.

498.—SHIRTING.—William E. Joslin, Nashua, N. H.

499.—MEDICAL COMPOUND FOR CATTLE.—David P. Mathews, Winthrop, Mass.

500.—ADVERTISING MEDIUM.—Kennedy Palmer, Richmond, Va.

501.—FIRE-PLACE HEATER.—Richardson, Boynton & Co., New York, N. Y.

502.—GIN.—Frederick Schuchardt, New York, N. Y.

503.—GIN.—Frederick Schuchardt, New York, N. Y.

504.—SPLIT-BOTTOM CHAIR.—John G. Strain, Delaware, Ohio.

505.—SHEET OR PLATE-IRON.—Alan Wood & Co., Philadelphia, Pa.

EXTENSIONS.

J. D. WEST, of East Orange, N. J.—Letters Patent No. 18,309, dated September 29, 1857.

"Improvement in Pumps."

Claim.—The combination of the air-chamber with two inner cylinders and duplicate foot-valves, substantially in the manner and for the purposes set forth.

SAMUEL DARLING, of Providence, R. I.—Letters Patent No. 18,327, dated October 6, 1857; reissue No. 2,869, dated February 18, 1868.

"Improvement in the Manufacture of Metallic Squares."

Claim.—1. A hardened-edged tongue, united by soldering to a beam, constructed substantially as described.

2. A tongue for squares, which is hardened at the edges and soft in the center, substantially as described.

3. The mode or process described of hardening the edges of the tongue by pressure between plates of cold iron.

4. The mode or process described of hardening the edges of the tongue by confining it between pieces of iron and then heating and tempering, as described.

WILLIAM PLUMER, of Boston, Mass.—Letters Patent No. 18,352, dated October 6, 1857; reissue No. 3,368, dated April 13, 1869.—Division A.

"Improved Rock-Channeling Machine."

Claim.—1. Feeding the cutter laterally in a direction at right angles to the cut, or nearly so, whether the cutting-tool be situated horizontally, vertically, or at any angle, by the devices herein described, or their equivalents, so arranged that the cutter or drill can be turned at right angles to the straight track of the machine, and also the requisite feeding motion be obtained, as set forth.

2. The slotted arms c' d' and e' f', so arranged and constructed as to permit the whole cutting apparatus to be turned at right angles to the cut, and to communicate, when fastened together, the lateral feeding motion to the frame r r.

3. The arrangement of devices herein described, whereby I am enabled to feed the cutter, working vertically, in a circular direction, and set the cutter at any desired distance from the center upon which the machine turns, by which blocks or pillars of any desired diameter can be cut out, as set forth.

4. A stone-cutting or channeling-machine which moves upon a straight track mounted upon a circular track, the standards supporting the drill or drills resting upon a turning plate, all so constructed that the drill or drills may be operated on either side of the straight track in circular lines, or fed forward in parallel lines, substantially as set forth.

5. The arrangement, under a stone-drilling machine, substantially as herein set forth, of flanged rollers for keeping the frame and mechanism in place upon the track, substantially as specified.

WILLIAM PLUMER, of Boston, Mass.—Letters Patent No. 18,352, dated October 6, 1857; reissue No. 3,369, dated April 13, 1869.—Division B.

"Improved Rock-Channeling Machine."

Claim.—1. A stone-channeling or grooving-machine which is constructed to move upon a track, and provided with a reciprocating cutter or cutters so arranged as to cut seams or grooves outside of frame and track and in a line with the track, substantially as herein set forth.

2. A stone-channeling or grooving-machine which is constructed to move upon a straight track, which is provided with reciprocating cutters, which are arranged to cut seams or grooves between the tracks or ways, in the manner set forth.

3. A stone-channeling or grooving-machine which runs upon a track, and which is provided with a cutter or cutters attached to a cutter-holder, which cutter-holder moves freely on standard guides, the holders being operated upon by suitable mechanism for raising the cutter or cutters, substantially as set forth.

4. The arrangement of the cutter-holders with cutter or cutters attached to slide freely on standard guides, confined to a frame or plate, which is hung on trunnions, substantially as and for the purposes set forth.

5. A stone-cutting or grooving-machine, with chisels or drills, that are operated upon a frame and track, when said frame is supported upon trunnions and held by adjustable braces for giving the cutting-instruments any desired angle, substantially as herein set forth.

6. In combination with a stone-grooving or channeling-machine, a horizontal rack-bar, placed either in the inner or outer surface of the track, and a pinion attached to the mechanism of the machine, whereby the same is fed along, substantially for the purposes set forth.

7. Operating the feed-mechanism, as well as the cutting-mechanism, of a stone-grooving or channeling-machine by a crank-shaft and eccentric or equivalent device, substantially as set forth.

8. In a stone-grooving, drilling, or channeling-machine that is moved along upon a track or way, a double-acting pawl, acting upon a ratchet, or their respective equivalents, whereby the pinion is caused to feed into the rack-bar on the track, substantially as set forth.

9. A slotted arm, lever, or elbow, or their equivalents, connected with the feed-mechanism of a stone-drilling, cutting, or channeling-machine, whereby I may regulate the progress of the machine and its cutters on the stone so as to feed the mechanism faster or slower while the cutters are operating, substantially by the means and for the purposes specified.

10. Also, the hanging frame E', which carries the cutters on trunnions, and the adjustable brace Y, or its equivalent, for the purpose of giving any desired angle to the cutters, substantially as set forth and described.

11. Giving a forward or backward movement to the stone-cutting machine at pleasure, and simultaneously with the upward stroke of the reciprocating cutters, and confining said machine positively in position upon its track during the descending stroke of the said cutters, substantially by the means as herein set forth.

12. The employment of an air-cylinder, in a stone-cutting or channeling machine, for the purpose of assisting the force of the cutter or cutters on their descent to the stone, substantially as set forth.

13. The upright screw-shaft Q, arranged upon the frame E', for the purpose of feeding down the frame H and the cutting-mechanism, substantially as specified.

14. The vertical screw-rods O' O', between the standards D D, on each side of the plate C', for the purpose of allowing the frame E', which is supported upon trunnions, to be raised or lowered between the standards, and set at any desired angle by the braces Y Y, or their equivalents, and stationed in position, substantially as herein specified.

ERASTUS B. BIGELOW, of Boston, Mass.—Letters Patent No. 18,320, dated October 6, 1857.

"Improvement in Power-Looms for Weaving Wire-Cloth."

Claim.—1. The mode of constructing and operating the shuttle and combining it with the selvage-forming apparatus, whereby the filling-wire is straightened, the certain action of the shuttle secured, and the width and selvages of the wire-cloth preserved, substantially as specified.

2. The mode of arranging the parts which connect the selvage-forming apparatus with the loom shipper, whereby the loom is thrown out of gear when the filling-wire fails, as above set forth.

3. The mode of giving a double action to the lathe, substantially in the manner and for the purpose specified.

4. The mode of constructing and arranging the parts of the warp-wire stop-motion and combining it with the loom-shipper for stopping the loom when a warp-wire breaks, substantially as specified.

ISSUE OF OCTOBER 31.

PATENTS.

120,361.—FURNACE AND FURNACE-BAR.—Emmet R. Austin, Norwalk, Conn., assignor to N. L. Austin & Co., same place.

Claim.—1. The arrangement herein described of the furnace A, perforated bars B, pipe H, and cone D, all constructed and operating as and for the purpose set forth.

2. The grate-bottom, consisting of the perforated grate-bars B locked in close contact with each other, substantially as shown and described, for the purpose set forth.

120,362.—ATTACHING KNOBS TO THEIR SPINDLES.—Mills W. Barse, Olean, N. Y.

Claim.—The spindle E, formed of two bars, C and C', one of which is provided with a notch, *e*, and the other with a series of notches, *a a*, in combination with the key-pin *e*, knobs A A, and stems B and B', in which are sockets *b b* for the reception of the outer ends of the bars, substantially as shown and described.

120,363.—BOTTLE-FASTENING.—William S. M. Beal, Baltimore, Md.

Claim.—The herein-described bottle-lock, composed of a jointed ring, A, which contains a lock for fastening its sections together, and a yoke, B B C, rigidly connected to one of the sections of the jointed ring, substantially as set forth.

120,364.—DRAWING-STAND.—William Bell, Buffalo, N. Y.

Claim.—1. The combination of the ball B, clamp C, and the adjustable standard or rest D, substantially as and for the purposes described.

2. The collar F, substantially as and for the purposes shown.

120,365.—APPARATUS FOR ELEVATING HAY.—Julius Bolles, Jackson, Ohio.

Claim.—1. The combination of the beam A with the slide-block B, pulley, and ropes, arranged as described.

2. The combination of the main beam A and slide-block B with the auxiliary beam D, the block E, pulleys, and ropes, all constructed and arranged as described.

3. The block E, in combination with the beam D, the former being adapted to be shifted upon the latter, as described.

120,366.—GOVERNOR FOR STEAM AND OTHER ENGINES.—Charles P. Bowen, Silver City, Idaho Ter.

Claim.—1. The adjustable valve, constructed of the two hollow cylinders *b* and *c*, when constructed to move each to and from the other and thus close or open the passage, substantially as herein described.

2. The adjustable valve, constructed in two parts, as shown, in combination with the solid and hollow operating-spindles *f* and *g*, one within the other, together with the arms *j* and *m* of the governor, when the whole is constructed substantially as herein described.

3. The semi-globe or cone *d*, in combination with the vertically-moving double valve *b c*, when constructed to operate substantially as and for the purpose herein described.

120,367.—EARTH-CLOSET.—William J. Bradshaw, Cleveland, Ohio.

Claim.—1. The grating F, in combination with the dispenser A and grate B, substantially as described.

2. In combination with the dispenser A and grate B, the connecting-joints *b b*, as described, and for the purpose set forth.

3. The grating F, dispenser A, grate B, connecting-joints *b b*, bar E, and brackets H, all arranged as described.

120,368.—COMPOSITION TO RENDER FABRICS IMPERVIOUS TO GAS.—George L. Burnham, Providence, R. I.

Claim.—The compound made of the ingredients and in the proportions named, for the purpose specified.

120,369.—MANUFACTURE OF ARTIFICIAL STONE.—Isaac Coleman, New York, N. Y.

Claim.—The composition for the manufacture of artificial stone, substantially as herein described and set forth.

120,370.—WARDROBE.—Anna Davis, Reno, Nev.

Claim.—The folding wardrobe, consisting of the frames A A, ribs *b*, and cover *m*, hinged together as described, in combination with a swiveling-bracket having hinged arms *c c*, substantially as and for the purpose above described.

120,371.—Propulsion of Canal-Boats.—Nathaniel T. Edson, New Orleans, La.

Claim.—1. The combination of the cylinder D, and the timbers A and the wheel B, substantially as and for the purpose hereinbefore set forth.

2. The combination, with the cylinder D, timbers A, and wheel B, of post C, drum and windlass *J* and rope K, substantially as and for the purpose hereinbefore set forth.

3. The combination, with the cylinder D, timbers A, and wheel B, of post C, drum G, and rope H, substantially as and for the purpose hereinbefore set forth.

120,372, antedated October 14, 1871.–Shaft-Coupling.—John Eisele, Philadelphia, Pa.

Claim. — 1. A shaft-coupling produced by the combination of the sleeve *c*, part of whose exterior surface is concentric with its bore and shafts *a a'* and part of it cam-shaped or eccentric, the sleeve *b*, recesses *e e*, shoes *i i* or their equivalents, adjusting-screws K K, and shafts *a a'*, substantially as and for the purpose set forth.

2. A shaft-coupling produced by the combination of the sleeve *c* whose exterior surface is concentric with its bore throughout its whole length, the sleeve *b*, part of whose inner surface is concentric with the sleeve *c* and part of it eccentric, and cams *c' c'*, substantially as and for the purpose herein specified.

3. A shaft coupling produced by the combination of the sleeve *c*, part of whose exterior surface is concentric with the bore, as 6 5 3 7, and part of it cam-shaped or eccentric, as shown by circles 1 2 3 4 and 6, 8, 10, and 9, sleeve *b* having cam-shaped or eccentric and concentric surfaces corresponding with those on *c*, substantially as and for the purpose herein specified.

4. A shaft-coupling produced by the combination of the sleeve *b* whose entire inner surface is concentric, sleeve *c*, part of whose exterior surface is concentric with its bore and part of it cam-shaped or eccentric, cams *c' c'*, and shafts *a a'*, substantially as and for the purpose specified.

5. A shaft-coupling produced by the combination of the concentric sleeves *c* and *b*, circular recess *e*, cam *c'*, and shafts *a a*, substantially as and for the purpose herein specified.

120,373. — Washing-Machine.—Frederick A. Farley, Pine Meadow, Conn.

Claim.—1. The construction shown of the chutes *c d e*, and of the buckets at the top of the agitator, as parts of a washing-machine, and used and operated substantially as set forth.

2. The combination of the parts specified in the immediately-preceding clause with the part-circular end pieces *b b*, substantially as and for the purposes set forth.

3. The combination of the agitator, made substantially as described, with the arm *g*, and the arm *h* jointed thereto, substantially as and for the purposes set forth.

120,374, antedated October 17, 1871.—Sofa-Bedstead. — William Farson, Philadelphia, Pa.

Claim.—1. The combination and arrangement of the double levers H H with the back-board C and catch-levers G G for locking and unlocking the back-board, substantially in the manner and for the purpose above described.

2. The combination of the slip-hinges *a*, composed of the parts 1 and 2 and vertical wire *F*, with the arms B D, the said parts being constructed and arranged to operate substantially as and for the purpose above set forth.

120,375. — Animal-Trap.—Henry S. Frost, Watertown, Conn.

Claim.—1. An animal-trap provided with means for violently striking its support, when sprung, for the purpose of producing a bounding action, substantially as described.

2. A trap provided with a pair of rings actuated by a spring, substantially as described.

3. The trap described, consisting of the rings A A, bar *b*, spring *c*, and bait-platform *d*, the parts being combined substantially as described, for the purpose set forth.

120,376.—Apparatus for Regulating the Speed of Machinery.—William L. Gebby, New Richland, Ohio.

Claim.—The combination of the crank-shaft A provided with the rod E and ball F, the spur-wheel C, pinion D, fly-wheel shaft G, lever H, and strap K, when relatively arranged and operating together as described.

120,377.—Printing-Press.—George P. Gordon, Rahway, N. J.

Claim.—1. Supplying the ink to the form-inking rollers by or with two ink-distributing surfaces, between which the form-rollers shall pass and receive their ink from each distributing-surface in turn for each impression, substantially as described.

2. Revolving in opposite directions to each other, the inking-surfaces placed as shown, for the purposes fully described.

3. The combination of the two opposite ink-distributing surfaces with the movable form roller-bearers, substantially as and for the purposes set forth.

120,378, antedated October, 10, 1871.–Lime-Kiln.—Michael Groh and J. V. Weitz, Cleveland, Ohio.

Claim.—The lime-kiln herein described, consisting of the sheet-iron section A lined with fire-brick and provided with the furnaces C C and chute H, and the upper double section B forming a steam-boiler, and connected by a steam-pipe, J, with the ash-pits F F, when all these parts are constructed and arranged as shown, and for the purpose set forth.

120,379, antedated October 21, 1871.—Motor.—Peter Guzman, Paris, France.

Claim.—Using as a motor the inertia of balancing masses, compensated, as to their weight, by an elastic action, as explained above.

120,380. — Method of Utilizing the Waste Chloride of Zinc in Treating Paper. — Daniel W. Hanna, Pittsburg, Pa., assignor to Edmund S. Hanna.

Claim. — The hereinbefore-described method of saving and utilising the waste or surplus mother-water of the chloride of zinc in the treatment of paper, as described in the Letters Patent hereinbefore referred to.

120,381.—Whip-Socket.—John Heberling, Mount Pleasant, Ohio.

Claim.—1. The sections A B, formed with the curved flaring jaws A' B' and lugs C C, and hinged together by the lugs *a b*, when made in the form and operating in the manner herein shown and described.

2. The strip E, in combination with the bar D for securing the socket to the dash-board, as herein shown and described.

120,382.—Tilting-Chair.—Levi Heywood, Gardner, Mass., assignor to Heywood Brothers & Company.

Claim.—1. The span or spider B with the springs *b b* and stops *c c* and *d d*, when applied to a tilting-chair constructed in the manner and for the purposes hereinbefore described.

2. The application of one or more torsional rod-springs to a tilting-chair, substantially in the manner and for the purposes set forth.

3. The combination of the span or spider B with the springs *b b* and plates E E.

120,383. — Lamp-Burner. — Thomas Hipwell, Camden, N. J., assignor to himself and Henry Coulter, Philadelphia, Pa.

Claim.—The springy bearing-plate *f*, in combination with the axles of the spur-wheels F F and the bottom *a'* of the central air-tube A, substantially as and for the purpose hereinbefore set forth and described.

120,384. — Gang-Plow. — James M. Huie and Elisha Card, San Francisco, Cal.

Claim.—The combination, in a wheel gang-plow, of the frame H H, cross-timber A, pole J, wheels B E, plate M with their guiding-prongs *n n*, shaft *o*, bar *q*, plate *r*, lever *s*, and link *v*, arranged and operating as described.

120,385, antedated October 27, 1871.—Compensation-Pendulum.–Henry B. James, Trenton, N. J.

Claim.—1. In combination with a pendulum-bob, the convoluted or coiled compensator C composed of laminæ of two metals differently affected by changes of temperature, and arranged adjustably on its support, to operate substantially in the manner set forth.

2. The adjustable coiled compensator C, constructed as described, in combination with a weight or weights, C', carried by an extended arm thereof, substantially as set forth.

120,386, antedated October 14, 1871.—Snap-Hook.—Erasmus M. Kinne, Cuba, N. Y.

Claim.—The hook A with recesses *f*, and with the slot C opening directly into the loop, the detachable tongue D, and the detachable spring G, all constructed, arranged, and operating substantially as described, for the purpose specified.

120,387.–Top for Sirup-Pitchers.–George Ph. Lang and Peter Lauster, Allegheny City, Pa.

Claim.—A drain-ring, C, and spout E cast in one piece with the neck B, substantially as described.

120,388.—Gun-Lock.—Thomas James Massie, Arrington, Va.

Claim.—1. The bent or T-lever E, in combination with hammer G, for the purposes hereinbefore set forth, so that, by one single motion or pressure upon the rear end B of the lever, the hammer is raised and secured so as to avoid all practical danger from a premature discharge of the gun.

2. The spring, in combination with the rear end of the lever B, whereby the said lever is thrown upward and held in such position while the gun is at full-cock, to serve as a guard against careless handling of the gun, as herein described.

120,389.—Rein-Holder.—Charles A. Messenger, Syracuse, N. Y.

Claim.—A rein-holder, composed of the upright standard A provided with jaw *a*, pivoted lever B provided with jaw *b* and treadle B', and spring D, the whole being combined, constructed, and arranged to operate in the manner and for the purpose set forth.

120,390. — Lather-Brush. — William H. Miles, Jr., New York, N. Y.

Claim.—As a new and improved article of manufacture, a lather-brush, constructed as shown and described, consisting of the handle A, the bristles B, and the pin C.

120,391.—Not issued.

120,392. — Composition of Madder for Dyeing.—Alfred Paraf, New York, N. Y., assignor to The Madder Color Company, same place.

Claim.—The new article of manufacture hereinbefore described, and denominated alizaride.

120,393.—Dyeing and Printing Madder Colors.—Alfred Paraf, New York, N. Y., assignor to The Madder Color Company, same place.

Claim.—The compound process, substantially as hereinbefore set forth, of applying madder colors in solution to an article and precipitating the color in the said article.

120,394.—Dough-Board.—Nils B. Petterson, McGregor, Iowa.

Claim.—A dough-board, A, constructed with hinged rims B B' B², substantially in the manner and for the purposes set forth.

120,395.—Fire-Alarm and Police Signal-Box.—William J. Philips, Philadelphia, Pa., assignor to J. Bernard Brinton, same place.

Claim.—1. The lever *k* and its arm *l*, said lever projecting through an aperture in the door *p* of the inner box, said arm being inside the box, both lever and arm being arranged on the shaft *m* of the clock-work, as set forth, in combination with the circuit-wheel *a*, circuit-spring *b*, insulated stop *s* throwing-back spring *u*, switch *h*, plate *i*, connecting-wires *c' f' g'*, *k' a' a²*, and signal-key *g* projecting through an aperture in the door *p* of the inner box, substantially as set forth, for communicating alarms of fire and verifying the correctness of the same.

2. The signal-key *g*, the switch *h*, and sounder-magnet *f*, in combination with the connecting-wires *a' g' f'*, insulated stop and binding-post *c*, arm *l*, and connecting-wire *a²*, all arranged as set forth, whereby the apparatus is adapted to the sending and receiving of police and other concerted signals when the door *p'* is open.

120,396.—Permutation Lock.—Oliver E. Pillard, New Britain, Conn., assignor to Frederick H. North, same place.

Claim.—1. The pin *n*, extending from the case F transversely over the edge of the tumblers A to the plane of the outside tumbler, in combination with the index-marks *m m'* and dial G, substantially as described.

2. The key K, provided with shaft P and round neck *r*, in combination with the bridge *u*, substantially as described, whereby the whole of the set of tumblers A is necessarily unlocked and locked simultaneously with each other.

120,397.—Composition for Polishing and Scouring. — Jacob B. Rand, Concord, N. H.

Claim.—The incorporation and combination of ground quartz with pulverized alkali for polishing purposes, substantially as set forth in the specification.

120,398. — Type Setting-and-Distributing Machine.—D. Brainerd Ray, New York, N. Y.

Claim.—1. A series of distributing-keys, E, constructed and arranged so that they will all work or converge to or toward one common point for the purpose of receiving the type therefrom, substantially as shown and described.

2. The trough C, provided with the bent lever D, slide *c*, arm *d*, and spring *f*, in combination with the keys E and incline *h*, substantially as shown and described, and for the purposes set forth.

3. A series of setting-keys, G, constructed and arranged so that they will all work or converge to or toward one common point, for the purpose of delivering the type thereat, substantially as shown and described.

4. The setting-keys G provided with the arms *m*, in combination with the type-holders F F', hinged plate *k*, and spring *o*, substantially as shown and described.

3. The setting-keys G provided with the spring-catch *r*, in combination with the slide *s*, rock-shaft Q, arms *t* and *u*, and spring *w*, substantially as shown and described.

120,399. — BURGLAR-ALARM. — Abbott Q. Ross, Cincinnati, Ohio, assignor to Alfred H. Brooks, Philadelphia, Pa.

Claim.—1. In combination with the hinged frame Z M and alarm-bell mechanism, the finger or pin *a*, match-socket S T, and spring piston-rod and cross-head V U Q, the parts being connected and operating substantially in the manner and for the purpose set forth.

2. In combination with the elements of the preceding clause, the spring-lever and chain P P′ *p* governing the gas-jet, in the manner and for the purpose set forth.

3. In combination with the stretched wires *b* and hinged frame Z, the slides *d*, connected and operating substantially as described, and for the purpose specified.

120,400.—GRAPE-CRUSHER.—Ferdinand B. Schoenstein and August Klein, San Francisco, Cal.

Claim.—1. The semi-circular box A, in combination with the perforated concave B having teeth *d* and toothed cylinder E, substantially as and for the purpose above described.

2. The basket H, composed of bent bars *l l l*, in combination with the hopper M and toothed cylinder E, substantially as and for the purpose set forth.

3. The shaft O with its curved teeth X, in combination with the toothed cylinder E and basket H, substantially as and for the purpose above described.

120,401.—TREADLE FOR SEWING-MACHINES. Henry C. Smith, Cleveland, Ohio.

Claim.—The foot-levers D D, the supports F F′, the oscillating lever G connected by the links A and *i* to the levers D D, when the same are constructed, arranged, and combined to operate substantially as described, and for the purpose set forth.

120,402.—LIFTING-JACK.—Louis P. Smith, Middletown, Pa.

Claim.—1. The rack-cogs *b b* when sunk nearly or quite into the center of the lifting-bar B, substantially as and for the purpose herein specified.

2. The two pawls D E, acting the one before the other, in combination with the lifting-bar B and lever C, substantially as and for the purpose herein set forth.

3. The sliding prop or box H, in combination with the lifting hook or arm G, as specified.

4. The wings *r r*, in combination with the sliding prop or box H having edge projections *s s*, substantially as and for the purpose herein set forth.

120,403.—METALLIC CARTRIDGE. — George R. Stetson, New Haven, Conn., assignor to The Winchester Repeating-Arms Company, same place.

Claim.—The combination, with a cartridge-shell, of a swaged projectile, in which an annular groove is formed and the metal displaced thereby is raised against the end of the shell after the insertion of said projectile, substantially as and for the purpose described.

120,404. — INSTRUMENT FOR MEASURING POWDERS.—William Thomson, Jr., Madison, Wis.

Claim.—The stationary frame A, the movable frame B, the receptacle C, the stopper D, the set-screw E, the bolts F and G, the spiral spring H, the finger-guard I, the cover J, and the guards K and L, all substantially as and for the purpose herein-before set forth.

120,405. — PANEL-RAISING MACHINE. — Dwight F. Walker, Minneapolis, Minn.

Claim.—1. The adjustable perforated guide B having hood B″ attached, in combination with the table B, constructed and arranged to operate in the manner shown and described.

2. The vertically-adjustable presser-foot or guide H, constructed and arranged to operate with relation to the cutter and panel, as herein described.

3. The double cutter-head D having cutters C′ and C″ attached thereto, constructed in the manner herein described, for the purpose set forth.

4. The arrangement of the presser-foot H on the bed G of the outer cutter-head to be opposite to the cut of the cutter on the inclosed cutter-head, and at the same time act as a guide to the finished part of the panel, as shown and described.

120,406, antedated October 27, 1871.—HOT-AIR FURNACE.—George W. Walker, Boston, Mass.

Claim.—In combination with the main combustion-chamber *c*, the auxiliary dome or flue-chamber *d* connecting with the combustion-chamber by pipes *k k* at and only at the front of the fire-pot, and with the main flue by a pipe, *l*, at and only at the rear of the dome, the arrangement being such that all of the volatile products of combustion pass from the main combustion-chamber at the front thereof, traversing the auxiliary dome-chamber and around the air-pipes *m m*, and escaping therefrom only at the rear thereof.

120,407.—HARVESTER. — John D. Wilber, Poughkeepsie, N. Y., assignor to Eureka Mower and Reaper Manufacturing Company, same place.

Claim.—1. The combination of arm E jointed to shoe *f*, and shoe *f′* jointed to arm E′, substantially as described.

2. The stirrups *s*, suspended by a chain, *k*, from a raising and lowering device, in combination with the jointed arm E and frame D, substantially as described.

120,408.—WEEDING-HOE. — Ebenezer Wilcox, East Cleveland, Ohio.

Claim.—The herein-described weeding-hoe, consisting of the blade D, cutting-wings E, and bows C C, substantially in the manner as described, and for the purpose specified, as a new article of manufacture.

120,409.—MANUFACTURE OF ILLUMINATING GAS FROM PETROLEUM. — William C. Wren and George W. Wren, Brooklyn, N. Y.; said George W. Wren assigns his right to William C. Wren.

Claim.—1. The combination of a retort, divided into two or more compartments, with a still or stills, to be used separately, alternately, or together with the retort, each still to be in separate furnaces or fires from the retort, as described.

2. The combination of the safety-valve or valves and condensing vessel with the still or stills, as described.

3. The combination of the condensing-vessel C, the pipes H, the stills A and B, the retort D, and the condenser F, as described.

4. The plug K, with a combination of a screw and a bevel or groove on the flange, for the purpose as described.

5. The partition of a retort, with a curved instead of a straight line, for the purpose as described.

120,410.—APPARATUS FOR MATURING RAW OR GREEN COFFEE. — John Ashcroft, Brooklyn, N. Y., assignor to Sarah Jane Ashcroft, same place.

Claim.—1. In an apparatus for maturing coffee, the openings *d d*, for the purpose as shown and described.

2. The perforated steam-pipes *y c c*, or their equivalents, for the purpose as set forth and described.

3. The rack A′, as shown and described, and for the purpose set forth.

4. The apparatus for maturing and refining the raw or green coffee-berry, substantially as shown and described.

120,411.—ROTARY STEAM-ENGINES.—George V. Atwood, Mount Hope, Ala.

Claim.—1. The piston-wheel J provided with the disks L and pivoted within a revolving cylindrical wheel, in combination with the spiral groove in the cylinder, as and for the purpose specified.

2. The steam-wheel D, cylinder C, and piston-wheel J, combined and arranged substantially as and for the purposes described.

120,412.—TILT-HAMMER.—Patrick Breen, Auburn, N. Y.

Claim.—1. The combination of the cam B, having the long arm K and the short arm L, with the beam C and lever D, for the purpose of arresting and holding up the drop E on its rebound, as specified.

2. The combination of the latch *a* with the jointed pawl I, spring *c*, ratchet-wheel H, notched disk G, cam B, and shaft A, in the manner and for the purpose specified.

120,413. — HARNESS-BUCKLE. — Othniel Brown, Albia, Iowa.

Claim.—The buckle-frame A D having studs or ears F F and tongue B, in connection with the lever E having the longer arm X inwardly curved and the arm G pierced to receive pin B, the whole being arranged and operating in the manner and for the purpose set forth.

120,414, antedated October 17, 1871.—PROPULSION OF VESSELS. — John P. Bruce, Brooklyn, N. Y.

Claim.—The combination and arrangement of the screw D, water-wheels B B, water-tubes F F, and pumps N N on a marine vessel, substantially as and for the purposes described.

120,415.—BELL-PIANO.—Carl Gustav Buttkereit, Toledo, Iowa.

Claim.—1. The sliding pawl D, hook-shaped, and having the recess *f* to operate and move over the lug *i*, substantially as herein shown and described.

2. The combination of the key A, toggles B, and slide D with the oscillating post E, hammers *g*, and spring *h*, substantially as and for the purpose herein shown and described.

3. The damper G and the rod *p* combined with the bell F and key A, substantially as and for the purpose herein shown and described.

4. The slide H carrying the lever f^3, connected with the spring-plate I having the nose *o*, all arranged as described for transmitting motion from the key A rapidly to the hammer g^1 on the lever f^3, as set forth.

120,416, antedated October 14, 1871.—GAS-REGULATOR.—John B. Coolidge, Boston, Mass.

Claim.—1. The combination and arrangement of the adjustable pipe *a* having a valve-seat, *v*, to which is attached the valve *f* and the lever *e*, operating so as to cut off the flow of the gas at the orifice *g*, substantially in the manner and for the purpose described.

2. The steel spring-plate *h* in its connection and arrangement with the flexible metallic top of the chamber *i*, and the lever *e* operating upon the valve *f*, substantially in the manner and for the purpose described.

120,417. — COFFEE-POT. — Joseph Cragg, Baltimore, Md.

Claim.—1. The strainer B having the internal cylinder or partition C, perforated metal D, bevel rim *a a*, arms *c c c*, and handle *b*, substantially as herein set forth.

2. In combination with the foregoing, the pot A, substantially as described.

120,418.—AXLE FOR VEHICLES.—Joseph W. Cremin, New York, N. Y., assignor of one-third his right to George H. Fairchild, Jersey City, N. J.

Claim.—Tubular axles having one or more internal strengthening-webs, *a b*, constructed substantially in the manner described.

120,419.—FASTENER FOR MEETING-RAILS OF SASHES.—James M. Crossman, South Orange, N. J., and George Sam. Rice, Tarrytown, N. Y.

Claim.—The combination of the swinging bolt D, the spring *o*, the plate *e* with upright guides and the push-pin *s*, arranged substantially as described, and for the purpose set forth.

120,420, antedated October 14, 1871.—FIRE-ESCAPE.—John W. Davis and James Vermillion, Washington, D. C., assignors to themselves and George R. Edwards; and said Vermillion assignor of his right to said Edwards.

Claim.—1. The combination of grappling hook or claw B, lanyards L and M, pawl N, spring *n*, staves E and F F F, friction-rollers C C, and stock or body A, substantially as and for the purposes hereinbefore set forth.

2. The combination of pulleys *g g g*, rope G G, chairs or baskets H H with guy-rope *d*, substantially as and for the purposes hereinbefore set forth.

3. The combination of ladder I I, hooks J J, bar *k*, and falls K, substantially as and for the purposes hereinbefore set forth.

120,421.—RAILWAY RAIL-CHAIR.—Thomas Donahy, Empire City, Nev.

Claim.—The chair A, constructed with an opening to receive blocks D between rails B C, and with a detachable piece, a^2, in the side thereof, and with a stop, a^1, so that said pieces D may be removed or inserted, in the manner described.

120,422. — ROCKING-CHAIR. — John W. H. Doubler, Darlington, Wis., assignor to himself and William Logue, same place.

Claim.—The combination of short rockers D D, stool A, and seat C with springs F, in the manner described, to gradually retard the movement of the chair in either direction, finally stop it at the proper point, and then assist, by their stored-up power, in reversing the motion of the chair.

120,423. — WALKING-PLANTER. — Nathan Earlywine, Centerville, Iowa, assignor to himself and Charles A. Davis, St. Louis, Mo.

Claim.—1. The frame, constructed as described, and suspended adjustably from the axle by the bangers D, brackets E, and bolts F, substantially as specified.

2. The plow G, stock H, and weighted metal runner K, combined and arranged with the frame, substantially as specified.

120,424.—CORN-PLANTER.—Thomas M. Edgar, Paris, Tenn.

Claim.—In a grain-planter having two wheels, D D, connecting-arms F, and removable bars *b*, the spring-lever *c*, feed-slide *d*, feed-gauge plate G, spout H, hopper B, plow K, concave coverer L, double ratchet R R, and fenders S S, all as constructed, arranged, and combined, substantially as described.

120,425.—Coffee-Pot Stand.—Oliver Ferris, Pawling, N. Y.

Claim.—The plate D, stays G G, and lever H, substantially as and for the purpose described.

120,426.—Wood-Planing Machine.—Newton C. Freck and Solomon Strock, Millersburg, Pa.

Claim.—The combination of the cutter-heads E F F, guide G, and feed-rollers C of a planing-machine, substantially in the manner herein described, for planing and edging two or more boards simultaneously.

120,427.—Stench-Trap.—Michael Gafney, Newark, N. J.

Claim.—A stench-trap, composed of the large vessel A and the sections of pipe B and C, the said vessel being provided with an opening in the bottom for cleaning it out, and a stopper, D, therefor, substantially as specified.

120,428.—Spark-Arrester for Steam-Boilers.—John Gates, Portland, Oreg.

Claim.—The arrangement of an air-tight well in an opening through the bottom of a steamboat, and connected with the smoke-box thereof, as described, for the purpose of receiving and discharging the coals, water, and mud from the blow-off pipes, in the manner described.

120,429.—Mode of Operating the Brakes of Railroad Cars.—Samuel N. Goodale, St. Louis, Mo.

Claim.—The arrangement herein shown of the steam-chest B, pipe I, couplings E E, connection G, branches T, and hot-air chest C, all constructed and operating substantially as shown and described, for the purpose set forth.

120,430.—Railway Car-Coupling.—William F. Grassler, Muncy, Pa.

Claim.—1. A draw-head in which both the bar A and mouth A′ are constructed with a series of corresponding chambers one above another, substantially as and for the purpose set forth.

2. The combination of the gravitating bar G and sliding plate H, arranged to operate substantially as and for the purpose set forth.

120,431.—Harvester.—George S. Grier, Milford, Del.

Claim.—The studded carrier E F of a self-raking harvester, combined, as described, with a gear-shifting bar, Q, having an inclined end, T, so that the carrier is automatically thrown out of connection with its operative mechanism and thrown in again by the driver at the times and in the manner described.

120,432.—Railway Car-Wheel.—James Baird Handyside, Glasgow, Great Britain.

Claim.—The connecting of the tire and the hub of a wheel by a pair of annular plates bolted together, when such plates are shaped and made to grasp between them ribs formed on the hub and tire or periphery of the wheel, as herein set forth.

120,433.—Milling-Machine.—William Hawkins, San Francisco, Cal.

Claim.—1. The sleeves or tubes K when made as described, in combination with the cutters G and screws H, as and for the purpose herein set forth.

2. The pair of cutters when constructed, as described, with recessed ends, as and for the purposes recited.

120,434.—Friction-Clutch.—George W. Hedges, San Francisco, Cal.

Claim.—1. The disk C with its peculiarly-shaped pawls *d*, in combination with the ratchet-flanges A, substantially as and for the purpose herein described.

2. The pawls *d*, holding alternately on one side and the other of the disk C and the operating ratchet-teeth D, each standing opposite to a space between those on the other flange, substantially as described.

120,435.—Sulky-Cultivator.—Philip Hewitt, Farmland, Ind.

Claim.—1. Fenders, formed of spiral-wire coils R, and attached to plates Q, on the inside of the cultivator-plows, as and for the purpose specified.

2. The combination of frame S provided with levers V V and having slots thereon, the beams I I provided with levers U U passing through said slots, and the frame D having seat F on the rear thereof, all constructed and arranged as and for the purpose specified.

120,436.—Paper-Box Machine.—Henry R. Heyl, Philadelphia, Pa., assignor of one-half his right to C. S. Patterson; and said Heyl and Patterson assign their right to American Paper-Box Machine Company, same place.

Claim.—1. The plunger C, constructed with corner sections 1 1, two or more in number, and with nippers 2 2, operating substantially as and for the purpose set forth.

2. The combination of the plate 3 and slide-bars 4 6 8 for operating the nippers 2, substantially as described.

3. The pasting-wheel E, having an adjustable periphery made up of sections, and provided with a nipper, 21, substantially as described, and for the purpose set forth.

4. The pressing-wheel or roller F, operating substantially as described, to take the wrapper or covering-paper from the pasting device and apply it to the body or sides of the box.

5. The combination, operating as shown and described, of a pasting-wheel, a reciprocating pressing device which takes the covering-paper or wrapper therefrom and applies it to the box, and a support for the said box.

6. The combination of the double belt 33 and pulleys 31 32, operating substantially as described, in connection with a suitable spring to restore the parts to their normal or central position when moved in either direction.

7. The receiving or folding-frame G, adjustable in dimensions, and supported adjustably by screws 35, which are connected so as to move simultaneously, substantially as described.

8. The expanding plunger H, provided with grooved and beveled feet attached to pivoted arms, and operating to catch the upper edges of the wrapper and carry them down within the box, in the manner explained.

9. The combination, operating as shown and described, of an expanding-and-contracting plunger with the beveled frame or receptacle for the box.

10. The combination of the arms 43, expanded by suitable springs, and the contracting devices consisting of the socket 48, hooks 49, and spring-bolt 54, operating in connection with the hollow plunger-shaft 51, substantially as described.

11. The paste-roller J, having two or more grooves, 59, in combination with a lifting-rack, adapted to operate substantially as described, and for the purpose set forth.

12. The lifting-rack L, with the cross-wires 56 56 56, the movable cross-bar 57, and the tension-spring 58, substantially as described, and for the purpose set forth.

13. The platform K with its flexible curved face 47 and the nippers 60 60, substantially as described, and for the purpose set forth.

14. The combination, operating substantially as herein described, of two reciprocating plungers and a receiving or folding-frame capable of being rocked or turned to receive said plungers in succession.

15. The combination, operating as shown and described, of the reciprocating plunger with the vibrating platform and automatic pasting and lifting devices for applying the label.

120,437.—Neck-Tie.—Adolphus Hoffstadt, New York, N. Y.

Claim.—The cross-piece E, loop F, and hook G, in combination with the shield A and flaps B B, substantially as and for the purpose described.

120,438.—Blasting-Plug.—Julius Hopkins Holsey, Butler, Ga.

Claim.—As a new article of manufacture, the hollow blasting-pin A, made in two sections, *a b*, substantially as and for the purpose herein shown and described.

120,439.—Cooking-Stove.—Garrett Z. House, New York, N. Y.

Claim.—1. The dampers O O hinged centrally, and arranged so as to operate as herein described and set forth.

2. The dampers Q Q arranged, in combination with passage N and M and oven I, so as to operate as described and set forth.

3. The cap-door D hinged to the drum C, arranged and operating as described and set forth.

4. The combination of the cap-door D and drop-lid E, as described and set forth.

5. The combination and arrangement of the movable drum C, the stationary drum H, the movable oven I, the cap-lid D, the drop-lid E, constructed and arranged as described and set forth.

6. The combination of fastening-hooks and handle on drop-lid E, arranged to operate as described and set forth.

120,440.—Horse Hay-Fork.—Charles A. Howard, Pontiac, Mich.

Claim.—1. In combination with shanks C C, the crossed coupling-braces D D′, forming the only pivotal connection between said shanks, and adapted to be used in the manner specified.

2. The combination of the parts A B, connecting-bars D D′, the tripping device E, and lever F, substantially as and for the purposes described.

120,441.—Fastener for Meeting-Rails of Sashes.—George M. Hubbard, New Haven, assignor to The Parker & Whipple Company, West Meriden, Conn.

Claim.—A sash-fastener, consisting of the rear plate C and the lower and upper flanges A B, and the lever F, having the seat for the fulcrum of the lever formed by a recess, *a*, in the upper and lower flange, and combined with a spring, F, between the said flanges and in the rear of the said lever, as and for the purpose specified.

120,442.—Dinner-Pail.—Horace C. Ketcham and Willie W. Ketcham, Newark, N. J.

Claim.—1. The curved bolt *a* and loops *b c* on body A, combined with the oil-reservoir B to render it removable, as set forth.

2. The side flue E and passage *h*, when combined with the discharge-flue F, as and for the purpose specified.

120,443.—Clothes-Drier.—Hiram Knight, Westminster, Mass.

Claim.—The clothes-drier composed of the side pieces A A, B B, and G G, and of the rods C, D, E, F, H, and *a*, all arranged and combined as herein shown and described.

120,444.—Adjustable Buggy-Seat.—Daniel Kroninger and Noah Kroninger, Eagle Point, Pa.

Claim.—The backwardly-sliding hind seat *b*, provided with the eyes *f* placed at or near its rear side, and combined with the guide-rods *g* located above the cover, removable standards *i*, nuts *j*, and sloping cover *k*, all arranged as specified.

120,445, antedated October 21, 1871.—Harness, — Arthur W. Lawton, Rochester, N. Y.

Claim.—1. The cross-bar C to which the spring bow-piece D is pivoted, made removable by its connections *a* in the manner and for the purpose described.

2. The flexible or spring bow-piece D, in combination with the removable cross-bar C to which it is pivoted, and the connected cross breast-strap E, as and for the purpose described.

120,446, antedated October 21, 1871.—Earth-Pulverizer and Harrow.—James Lefeber and George W. Shults, Cambridge City, Ind.

Claim.—1. The two sets of star-wheels A B, having straight blades, with their broad ends spread out in planes at right angles to each other, for the purpose specified.

2. In combination with a set of star-wheel pulverizers, A, the rod H and lever I, arranged on the frame, as and for the purpose specified.

120,447.—Drier.—Alfred W. J. Mason, New Orleans, La.

Claim.—1. The combination, with the drying-case A arranged in separate compartments, of the endless carrying-belts, substantially as specified.

2. The separate compartments of the case A, each provided with a supply-conductor and an exhaust-spout, substantially as specified.

120,448.—Planing-Machine.—Charles E. McBeth, Frederick Bentel, and William C. Margedant, Hamilton, Ohio, and Henry Climer, Muscatine, Iowa.

Claim.—1. The arrangement of the spring-pawls with racks *i j*, table-tops *f f′*, and frames *g g′*, as specified.

2. The front table-tops *f f′* placed upon the front frames *g g′*, and locked thereto by the spring-pawls and racks *i j*, as set forth.

3. The longitudinally-adjustable carriages G, carrying the inclines K K, and combined with the front tables F F′, rods *m*, and pivoted tubes *n*, all arranged to operate substantially as herein shown and described.

4. The gainer-frame L, provided with the guide-rest *t* and end-rest *u*, substantially as herein shown and described.

5. The adjustable saw-board M, slotted as described, and combined with the front frames *g g′* and table-tops *f f′*, in the manner specified.

120,449.—Fly-Trap.—Samuel F. McGown, Rockville, Ind.

Claim.—A trap for catching flies, consisting of the revolving wheel C, angular flue E, tank D, and glass top I, when the same are constructed and arranged to operate substantially as described.

120,450.—Self-Heating Sad-Iron.—Joseph Melder, München, Bavaria.

Claim.—1. A self-heating sad-iron provided with the heating-bar *a* and wire-screen *b*, or either, for consuming the products of combustion, in the manner specified.

2. The pocket G arranged on a self-heating sad-iron for receiving and heating the curling-tongs, as set forth.

3. The crimping-irons I J arranged on the cover of a self-heating sad-iron, for the purpose and substantially as herein shown and described.

120,451.—Medical Compound or Salve for the Cure of Rheumatism.—Joseph Mickel, East Birmingham, Pa.

Claim.—The improved salve compound, substantially as herein described.

120,452.—CLOTHES-DRIER.—Daniel Miller, Marietta, Ohio, assignor to himself and Jacob Miller, same place.

Claim.—The board B with slots *b*, overhanging portion *s*, and supporting portion *s'*, in combination with the board A and bar C, with notch *c* and shoulder *c'*, as described.

120,453.—CIGAR-LIGHTER.—Joel B. Miller, Rondout, N. Y.

Claim.—1. The pendent cigar-lighter, consisting of a pivoted wick-tube and oil-reservoir, substantially as herein shown and described.

2. The pin *d* and ratchet-wheel *f*, fastened to the arm D, and combined with the pivoted wick-tube so as to automatically regulate the wick when the tube is swung on its pivot, as specified.

120,454.—MACHINE FOR WIRING BLINDS.—James H. Nelson, Little Falls, N. Y., assignor to himself and Byron K. Houghton, same place.

Claim.—1. The vertical punch E, combined as described with a bifurcated punch, D, working on supporting flange *d* so that one staple will be forced horizontally into the edge of the slat and a second (immediately thereafter) forced vertically down into said slat so as to straddle the first.

2. The common actuating-lever C having strap *h* and circular rack-bar L on the power-arm, the segment *g*, and the rod *f*, combined with the two punches, as and for the purpose specified.

3. The lever L pivoted to the frame of a blind-wiring machine, as set forth, and provided with an angular bar, M, at one end to hold the slat, as described.

4. The click *e* pivoted to the end of lever L, combined with pin *t* of lever C, as and for the purpose specified.

5. The combination, in a blind-wiring machine, of the vertical punch E, horizontal punch D, flange *d*, rails F G, and slat-holder M, operating together in the manner specified.

120,455.—DESK AND CHAIR COMBINED.—Archibald A. Porter, Griffin, Ga.

Claim.—1. The arms C D, swiveled socket E, and spring-catch G H I or equivalent catch, with the chair A and desk F, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the ring or socket B, so constructed as to receive an ink-well, J, with the arms C D and perforated desk or writing-board F, substantially as herein shown and described, and for the purpose set forth.

120,456, antedated October 11, 1871.—THILL-COUPLING.—Thomas W. Porter, Boston, Mass.

Claim.—1. The loop *f*, formed as a constituent part of plate B, substantially as described and shown.

2. The arrangement of tip A, shackle-plate B, elastic buffer J, and screw-bolt *g*, substantially as described and shown in Figs. 1 and 2.

3. The arrangement of shackle-clip C having ears D formed as part thereof, the eye-strap E, yoke H, rubber *n*, and screw-bolt *l*, substantially as described and shown in Fig. 3.

4. In combination with the shaft and shaft-shackle, an elastic shield, arranged to operate substantially as described and shown at I, and for the purposes specified.

120,457.—LIGHTNING-CONDUCTOR.—Othniel Preston, South Dansville, N. Y.

Claim.—1. The tubular lightning-conductor A, constructed of wires B twisted together, substantially as shown and described.

2. A lightning-conductor composed of wires B twisted together in the tubular form, inclosing a metallic tube, C, substantially as shown and described.

3. A tubular lightning-conductor, constructed of wires twisted together either with or without an inclosed metallic tube.

120,458.—FORK-TINE.—William H. Rodden, Toronto, Canada.

Claim.—A fork-tine having the upper half cylindrical and the lower half an acute parabola, as herein shown and described.

120,459.—COOKING-RANGE.—Edward P. Rogers, Chelsea, Mass.

Claim.—1. The division-plate E, between the top of the oven C and the top plate D, in combination with the flues around the oven and the inclined division plate A, substantially as and for the purpose described.

2. A grate-bar, B, provided with projections *d*, and having its area in cross-section larger at its middle than at its ends, substantially as and for the purpose described.

120,460.—SHOE.—James A. Rose and George J. Mason, Prairie City, Ill., assignors to themselves and Adam Harshberger, same place.

Claim.—A shoe having a dirt-excluder, B, of the form shown, attached below the lacing holes or buttons *i i i* by the seam *f f f*, and arranged in relation to the lappel C, as and for the purposes set forth.

120,461, antedated October 18, 1871.—TREADLE.—Al B. Shaw, Medford, Mass.

Claim.—The rack-bar C, operated by the spring foot plate D, in combination with the cog-wheel *e*, pawl *g*, and fly-wheel A, operating substantially in the manner and for the purpose set forth.

120,462.—SHIRT-BOSOM.—Solomon Sibley, Boston, Mass.

Claim.—A shirt-bosom re-enforced or strengthened by the application of stripe *f* of linen, cotton, or other suitable material at the points where the plaits meet, substantially as and for the purpose set forth.

120,463.—OYSTER-DREDGE.—Thomas P. Sink, Fairton, N. J.

Claim.—1. The tooth-bar of an oyster-dredge, constructed with set-screws for the purpose of regulating the pitch of the rake, as herein shown and described.

2. A float fixed to the frame-work of an oyster-dredge, as herein described, and for the purpose set forth.

3. The float J, the set-screws H, and links D, in combination with an oyster-dredge, substantially in the manner set forth and shown by the drawing.

120,464.—CHURN-THERMOMETER.—James Harvey Smiley, Caroline, N. Y.

Claim.—1. The air-chamber I, constructed about the bulb B, extending upward and back of the register-plate F to the upper part of the handle D, where it opens to the atmosphere by the holes H, substantially in the manner set forth.

2. In combination with and constructed within the handle of a churn-cover, the thermometer J B, the register-plate F, the air-chamber I, and the glass face-plate E, substantially as set forth.

120,465.—BLIND-STILE BORING-MACHINE.—Edward H. Smith, Whitestown, N. Y., assignor of one-half his right to Robert Gibson, same place.

Claim.—The frame A, in combination with the table B, the markers *a a*, the movable bar *c*, the levers *d d*, the rods *e*, the lever *f*, the spindles C and boxes D, the rods E E and levers F F, and working-gear G, substantially as and for the purpose hereinbefore set forth.

120,466.—SOLDERING APPARATUS.—Luke Albert Smith, Kansas City, Mo.

Claim.—The combination of the cylinder E, slotted plate G, bar M, and pins L, all being arranged substantially as specified.

120,467.—PRESSING CAST METAL.—John Blake Tarr, Fairhaven, Mass.

Claim.—1. The cylinder and plunger, arranged below the mold-bed B and combined with a movable mold, substantially as described.

2. The cylinder A and its open head A', arranged below the mold-bed B, substantially as described.

3. Pipes *f f b b' d d'* and three-way cocks *e e'*, combined with the cylinder A of the press, substantially as described.

4. The combination of an expansible collar with the plunger C and mold G, substantially as described.

5. The arrangement of an expansible plunger-collar on the upper side of a mold-bed, having a pressing apparatus arranged beneath it, substantially as described.

120,468.—MACHINE FOR SAWING SPOKES.—Thomas J. Tolan, Delphos, Ohio.

Claim.—The combination of the spring P with the disks F and rod D, substantially as specified.

120,469.—APPARATUS FOR LIGHTING GAS BY ELECTRICITY.—John Vansant, San Francisco, Cal.

Claim.—1. The combination, with a single fixed coil, of two tubular magnets, one fixed and the other movable, as set forth.

2. The combination of two magnets, G H, with the single helix I, substantially as herein shown and described.

3. The cap D made larger in cross-section than the empty space around and within it, for effecting an increased motion and pressure of the mercury, as specified.

4. The radiating coils of bad heat-conducting wire, supported by pins V on the insulating-pipe, as and for the purpose specified.

5. The insulated spring *u*, connected with one end of the helix wire, and so arranged as to effect a ground connection when required, as set forth.

120,470.—ROTARY ENGINE.—Gilbert M. Venable, Memphis, Tenn.

Claim.—1. A rotating steam-chest formed within or partially within a rotating piston of an engine, said chest having formed in it steam induction-passages arranged to act as cut-offs for the steam, substantially as and for the purpose set forth.

2. The within-described method of balancing the pistons of a rotary steam-engine by admitting steam to the interior of its pistons, substantially in the manner described.

3. The arrangement of the induction-passages F F with reference to the rotating steam chest and to the abutments D^2, substantially as and for the purpose set forth.

4. The arrangement of the exhaust-passages G G, substantially as and for the purpose set forth.

5. The cavities in the outer ends of the pistons, substantially as and for the purpose set forth.

120,471.—SUPPORT AND ADVERTISING MEDIUM FOR STREET-CARS.—Mahlon Warne, Philadelphia, Pa.

Claim.—The improved hand-support for passenger-cars, formed of the hollow circular frame A, composed of grooved sections, as specified, the endless cord E, and sliding handle F, substantially as shown and described.

120,472.—PERMUTATION LOCK.—Samuel C. Weddington, Jonesborough, Ind.

Claim.—The lever R, spring S, and adjustable block T for varying the pressure of the pulley *q* on the tumbler C.

120,473.—CAR-AXLE BOX.—Christopher Williams, Adrian, Mich.

Claim.—The housing cap E, plate D, and box B, the same being respectively constructed with cavities and projections, as specified, so as to fit together and co-operate, as shown and described.

120,474.—LACE-KNITTING MACHINE.—Henry Williamson, Williamsburg, N. Y.

Claim.—The lace-knitting machine herein described, having its thread-guides all arranged on a single guide-bar, working uniformly with each movement of the needles, and the needles worked independently of each other by Jacquard patterns for forming the pattern of the goods, all substantially as specified.

120,475.—PIPE-WRENCH ATTACHMENT FOR MONKEY-WRENCHES.—Andrew H. Woodruff, Lansing, Iowa.

Claim.—The toothed block A and spring shouldered bars B *b'*, in combination with each other to adapt them for attachment to an ordinary monkey-wrench, substantially as herein shown and described, and for the purpose set forth.

120,476.—LUBRICATOR FOR STEAM-VALVES AND PISTONS.—Almon N. Allen and Rodney H. Dewey, Pittsfield, Mass.

Claim.—The combination of one or more tubular pistons, E E', with oil-cups F F' and cylinders D D', formed in or on the slide-valve of a steam-engine, substantially in the manner herein shown and described.

120,477.—HOLD-BACK FOR SHAFTS OF VEHICLES.—John Armstrong, Newark, Ohio, assignor of one-half his right to Marion G. Decrow.

Claim.—The hold-back, consisting of the wide bearing-loop A, the end braces B, and the center-pin C, all cast in one piece, the ends of the braces being either cast with barbed spurs or provided with holes for the passage of screws or nails, substantially as described, for the purpose specified.

120,478.—COTTON-PICKERS' VELOCIPEDE.—Lewis Monroe Asbill, Edgefield county, S. C.

Claim.—1. The cotton-pickers' velocipede, as described.

2. The basket-holder E or equivalent.

3. The propelling-handles C, convertible into the basket-support.

4. In combination with the above, the umbrella-holder.

120,479.—STEAM-HEATER.—Benjamin T. Babbitt, New York, N. Y.

Claim.—The combination and arrangement of the tapering arms B with the hollow post or stem A provided with an inlet and outlet at or near its opposite ends, substantially as specified.

120,480, antedated October 18, 1871.—SAD-IRON HEATER.—Benjamin T. Babbitt, New York, N. Y.

Claim.—The iron having a hollow body, A, and provided with nozzles *b* and *a* or analogous connections for flexible steam and eduction-pipes, substantially as and for the purpose herein set forth.

120,481.—WOOD PAVEMENT.—William Oscar Barton, Elizabeth, N. J.

Claim.—In combination with the blocks A A provided with recesses *a a*, the key B constructed substantially as described, and for the purposes herein set forth.

120,482, antedated October 21, 1871.—Stone-Dressing Machine.—Thomas W. Baxter, Chicago, Ill.

Claim.—1. In machinery for dressing or facing stone, the devices hereinabove described, or the equivalents thereof, by which the feeding motion is imparted, in combination with a diamond or diamonds, or equivalent cutter or cutters, on a rotating stock, when the diamonds are connected with the rotating stock by chucks or holders which are adjustable thereon, substantially as and for the purpose described.

2. In machinery for dressing stone, the chuck or holder described, or its equivalent, for griping and firmly holding the diamond or equivalent cutter, when combined with the rotating stock, so that it can be adjusted on the rotating stock, substantially as described.

3. In combination with the rotating stock and the means for griping and firmly holding the diamonds or equivalent cutters, the means, substantially as described, for adjusting the diamonds relatively to each other, substantially as described.

4. A series of diamonds or equivalent adjustable cutters set in a rotating stock, arranged substantially as hereinabove described, so that the cut of each shall be adjacent to or slightly overlapping the cut of another one of the said series, as described.

5. The arrangement in a series of two or more of stocks, each armed with a series of cutters, substantially as described, whereby the width of the aggregate cut or the depth thereof may be increased.

6. A series of stocks each armed with a series of cutters, as described, and each independently adjustable in the manner described, so as to regulate the form and extent of the aggregate cut of all the stocks, substantially as set forth.

7. The combination of one or more rotating stocks, each armed with a series of cutters, as described, with the slides and adjusting devices, and the means for holding and moving the material to be operated upon, substantially as hereinabove described.

120,483, antedated October 27, 1871.—Bird-Cage.—George J. Bolz, Michael Grebner, and Julius M. Jagel, New York, N. Y.

Claim. — The drop-bolt *e* having a projecting point sliding up and down on the wires of the cage, in combination with the single fixed loop *d* inside the body of the cage, and the fixed hooks *c*, which are secured to the bottom B outside the body of the cage, all arranged as herein shown and described.

120,484.—Gate.—George C. Bovey, Cincinnati, Ohio.

Claim.—1. As a shiftable support for the lower hinge of a gate, the sliding step-bar G supported on anti-friction rollers, and arranged and operated as described.

2. The catch *c*, latch N, cord O, and staple *e*, when arranged to operate in connection with the shiftable gate A and fixed post B, in the manner herein explained.

120,485.—Photographic Posing-Chair.—Nelson S. Bowdish, Richfield Springs, N. Y.

Claim.—1. The photographic posing-chair made with a metal frame, *a*, to which the wooden legs *b*, sides *c*, and front *d* are attached, as set forth.

2. The arm *e*, attached to the under side of the frame *a* and carrying the adjustable head rest, in combination with the segment *i*, lip 3, and clamp, substantially as and for the purposes specified.

3. The segmental back, supported by and movable upon the bars *l* and segment *n*, in combination with the slides *i*, as and for the purposes set forth.

4. The movable arms *r*, connected when in place by the eyes 7, and hooks to the upper parts of the back legs of the posing-chair, as and for the purposes set forth.

120,486.—Brush-Handle.—Charles Brintzinghoffer and George Eckert, Philadelphia, Pa.

Claim.—The spring C, rigidly secured at one end within the slot H of a brush-back A, and arranged to operate in connection with the handle B formed with the recess A, substantially as and for the purpose set forth.

120,487. — Muff-Tassel. — Samuel Brody, New York, N. Y.

Claim.—The removable muff-tassel provided with the button and loop, as and for the purposes set forth.

120,488.—Car-Truck and Axle.—George B. Bryant, Pottsville, Pa.

Claim. — The combination of the axle A, constructed as described and shown, with a car-truck having the large inner beam *b* and the small outer beam *b'*, and with the bent supporting-bar *f*, all arranged as herein set forth.

120,489. — Railway Car-Wheel.—George B. Bryant, Pottsville, Pa.

Claim.—1. A cast-iron car-wheel having a chamber, *b c*, provided with the feed-opening *c* and outlet *d*, and containing within it a packing of cotton-waste or other fibrous substance, *f*, a plate, *m*, which holds the fibrous substance in place, and a spring, *s*, which presses the plate upon the fibrous substance, all constructed and arranged as and for the purposes described.

2. A cast-metal car-wheel, provided with a lubricating-cavity, *b*, within it, and a re-enforcement of solid metal, *g*, on the outside opposite to the cavity, substantially as herein set forth.

120,490.—Fire-Place Grate.—John Caven, Indianapolis, Ind.

Claim.—1. The divided journal-bearings *h i*, in combination with the hinged sections *b c* of a revolving coal-grate, for the purpose of retaining the sections closed without fastenings while being revolved, as described.

2. The seats D of the extensions A, arranged to form a combination of the journal-bearing seats to support one of the hinged sections of the grate when opened, as described.

3. The combination of the hinged revolving grate *b c* with the divided journal-bearings *h i*, the supporting side frames *a d*, the curved extensions A with their openings B and seats D, the several parts being constructed and arranged for use as described.

120,491. — Milk-Refrigerator. — John Chappel, Chenango Forks, N. Y.

Claim.—1. The arrangement of the lined vat A with its ice-box, division B in said ice-box, the ward C, and water-gauge D, all substantially as shown and described, for the purposes herein set forth.

2. The pan K, provided with the spout G, which is surrounded by the thimble E and packing F, substantially as and for the purposes herein set forth.

3. The pin H and U-shaped wedge I, when used in connection with the spout G, pan K, and vat A, substantially as and for the purposes herein set forth.

4. The combination of the lined vat A with its ice-box, division B, ward C, water-gauge D, pan K, spout G, thimble E, packing F, pin H, and wedge I, all constructed and arranged to operate substantially as and for the purposes herein set forth.

120,492.—Hinge for Gates, &c.—Pascal P. Child, St. Louis, Mo.

Claim.—The combination and arrangement of the double-ended pintle F, its two sockets, *b b'*, and the open-ended inclined slot C *c*, allowing the connection and disconnection of the pieces of the hinge when detached from the gate, substantially as set forth.

120,493.—Carriage-Curtain Fastening.—Alvin B. Clark, Richmond, Ind.

Claim.—1. The combination of the spring *b* with the knob A, substantially as and for the purpose set forth.

2. The combination of the knob A, spring *b*, collar *d*, and plate D, substantially as and for the purposes set forth.

120,494. — Coal-Box. — Charles W. Coffin, Pittsburg, Pa.

Claim.—As an article of manufacture, the metal box *a*, having the riveted angle-irons *b* and the bolted handles *c*, as described.

120,495. — Wagon. — Frederick W. Cole, Philadelphia, Pa.

Claim.—1. The semicircular sliders, comprising plate and frame and central standard D, where the same are so constructed and arranged as to extend rearward and serve as a support for the wagon-body, substantially as specified.

2. The combination and arrangement of the bolster F, king-bolt K, sill H, sliders A A' B B', and standards C D E, as shown and described.

120,496. — Combined Flour-Chest and Cupboard. — Thomas Jefferson Corr, Bloomington, Ill.

Claim.—The combination of the flour-chest A, partitions C D, boxes E with lids G, and tills H, sifter L, hooks *b*, dough-tray M, leaf O with bracket P, drawer R, and cupboard S, all constructed and arranged substantially as and for the purposes herein set forth.

120,497. — Cooking-Stove. — Augustus P. Corse, Troy, N. Y., assignor to Eddy, Corse & Co., same place.

Claim.—1. A grate, E, resting within or upon suitable bearings between the upper and lower sides of an ash-pan, D, and capable of a horizontally-reciprocating movement from front to rear, substantially as and for the purpose specified.

2. A sifting-grate, formed of two longitudinal sections hinged together and resting within or upon suitable bearings between the upper and lower sides of an ash-pit so as to be capable of a horizontally-reciprocating movement from front to rear, substantially as and for the purpose shown.

120,498.— Adjustable Bolster.—George Couch, St. Louis, Mo.

Claim.—1. The arrangement of an extension head-pillow, D, in combination with an adjustable pillow, substantially as and for the purpose set forth

2. The arrangement of supporting-rods B B^1 B^2 B^3, sliding rod C, thumb-screw C', in combination with the hinged frames A A^1, constructed to operate substantially as and for the purpose described.

120,499. — Gig-Saddle.—John W. Crouch, Rushville, Ohio.

Claim.—The combination of the screw C, nut-piece D, and plates B with the saddle A, substantially as set forth.

120,500. — Sawing-Machine. — Jacob D. Culver, Catlin Station, Ind., assignor to himself and Samuel D. Carmichael, same place.

Claim.—1. The combination, with the axle B and wheels C C, of the standard A, frame P, shafts S S^1, gears E F, crank *e*, slotted lever M, rod L, and saw P, the whole arranged and operating substantially as and for the purpose herein specified.

2. The tail-piece *p*, formed on the rear end of the saw, in combination with the socket *f* on the rod L, and the hinge-joint *v*, for the purpose of securing the saw and rod rigidly together or allowing them to fold as desired, substantially as herein described.

120,501.—Cut-Nail Machine.—Ferdinand Davison, Liberty, Va.

Claim.—1. The relative arrangement of the pivot which connects the feed-box to the reciprocating slide, and on which said box is free to turn, and the four set-screws *n n* n^1 n^1 for arresting the lateral movement of said box, the former being at or near the middle of the bottom of said box, and the latter located at the two ends and on opposite sides thereof, as described.

2. The combination, as described, with the cutter-head, of the spring-nipper I, adapted to and arranged to have a sliding movement therein, springs *g g'*, and lever H, substantially as specified.

3. The spring A, arranged below the fixed cutter and between the griping-dies of the machine so as to operate, in conjunction with the movable cutter and spring-nipper, in feeding the blanks to the gripers and headers, and so as, also, to serve as an ejector for the finished nail.

120,502. — Stone-Crushing Machine.—Claude Léon Desmolins, Avallon, France.

Claim.—The mortar *a* provided with openings *t t* and a series of denticulations, *a'*, in combination with the pestle *b* provided with a denticulated face, when the same are constructed, arranged, and operate in connection with each other, substantially as described.

120,503.—Stove-Pipe Elbow.—Ferdinand Dieckmann, Cincinnati, Ohio.

Claim.—A pipe-elbow formed of a single piece of sheet metal, bent to a cylindrical form, and subjected to a succession of double-lapped or folded crimps, substantially as set forth.

120,504.—Washing-Machine.—William James Dodge, Syracuse, N. Y.

Claim.—A cylinder with concentric peripheries H H and I I, clothes-chamber A A, trap B, lifters L N, guards N N, and opening O, constructed as and for the purpose herein described.

120,505. — Millstone Dresser. — Henry Dolmetch, Canton, Pa.

Claim.—1. The millstone dress herein described, its V-shaped channels having their inner straight portions tangential to the eye but oblique to the radius, and their outer portions curved, as specified.

2. In combination, the runner B having the dress herein described, and the scrapers and the bed-stone A having a similar dress, and the depressed ledge *k*, as specified.

120,506.—Portable Fence.—Thomas Donehoo, Richmond, Mo.

Claim.—The combination of the sills A, inclined braces C, inclined stationary posts B with brackets I, notched rails 1, 2, and 7, and the loose rails 3, 4, 5, &c., all constructed as shown and described.

120,507. — Walking-Planter. — Andrew Wilson Dunlevy, Fair Play, Ohio.

Claim.—The combination of the frame A B with wheel E, shovels N L, front C, adjustable shovel D, hinged bar O, draft-bar P, seed-box H and its operating mechanism, and standard R, all constructed and arranged substantially as and for the purposes herein set forth.

120,508. — Steam-Boiler Flue-Joint.—Addison C. Fletcher, New York, N. Y.

Claim.—1. The tube-foot of hollow annular construction, substantially as herein described, where

by it forms at the connection which it makes between the tube and tube-sheet an annular space around the end of the tube.

2. The projection of the annular water-space *b* of the flue-foot beyond the outer face of the tube-sheet, substantially as herein described.

120,509.—ARTIFICIAL TEETH.—Thomas Alder Dickson Forster, Philadelphia, Pa.

Claim.—1. An artificial denture, consisting of porcelain teeth mounted on a base composed in whole or in part of oxychloride of zinc, as set forth.

2. An artificial denture in which single plain teeth are embedded in a base consisting of a composition of the character described, and which surrounds the fangs and forms the gum, as set forth.

3. An artificial denture in which the gum or surface of the base above the teeth is coated with enamel, applied as specified.

120,510.—LOOM.—William V. Gee, Philadelphia, Pa.

Claim.—The bar E″, cam B″, cord *i*, link E′, arm *b*′, and pulley I, in combination with the cord *g*, pulleys G′ G″, finger F″, and hook F‴, arranged to operate substantially as described.

120,511. — LIFTING-JACK. — William H. Greenwalt, Strickersville, Pa.

Claim.—The lever D, link E, slide B′, and lock-roller F, constructed and arranged as described, in combination with the adjustable standard B of a wagon-jack, as and for the purpose set forth.

120,512.—CLOTHES-WRINGER.—Luke Hale, Hollis, N. H.

Claim.—In a clothes-wringing machine, the arrangement of the bracket G′ hinged to the wringer-frame, and provided with the roller G, spring H, lever I, and connecting-rod A, constructed and applied in the manner substantially as set forth.

120,513.—BINDER FOR SEWING-MACHINES.—Henry M. Hall, New York, N. Y.

Claim.—As a new article of manufacture, the hereinbefore-described binder, when constructed substantially as and for the purpose specified.

120,514.—SAW-MILL HEAD-BLOCK. — Samuel W. Harris, Jamestown, N. Y., assignor to himself and Josephus H. Clark, same place.

Claim.—1. The arms C C attached to the bail-blocks A A and matching each other, substantially as and for the purposes herein set forth.

2. The combination of the bail-block A, die G with thread *b*, and the lever H with eccentric hook *c*, all constructed and arranged substantially as and for the purposes herein set forth.

3. The within-described double-screw set-works when all its parts are constructed, arranged, and combined to operate substantially in the manner and for the purposes herein set forth.

120,515. — LUBRICATOR FOR AXLES AND OTHER SPINDLES.—Willard H. Harvey, Bangor, Me.

Claim.—The lubricator herein described, having the reservoir E, syringe F, communicating orifice H, and the piston G, as and for the purposes specified.

120,516.—STEAM-BOILER.—Jacob F. Hayen, Buffalo, N. Y.

Claim.—1. The boiler herein described, consisting of the shell A, reservoir B, cast-iron fire-pot B′, vertical flues D, deflecting-plate F, radial water-legs *a a*, and furnace C, all substantially as shown and described, for the purposes specified.

2. The inclined annular deflecting-plate F, in combination with the fuel-reservoir B, upper chamber C′, flues D, and the inner shell of the boiler, substantially as described, for the purpose specified.

3. The damper G, arranged within the upper chamber C′ above the deflecting-plate F, and fuel-reservoir B, substantially as described, for the purposes specified.

120,517.—FOLDING-STEP FOR VEHICLES.—William Henry, New York, N. Y.

Claim.—1. The castings A B, forming the tread and rise of the folding-steps, arranged and operating as set forth.

2. The improved metallic folding-steps for carriages, &c., consisting of the tread A having the rib C, in combination with the rise B provided with the ribs E and arms F F, the said tread and rise pivoted together and arranged to operate substantially as described.

120,518.—WATER-HEATER FOR STOVES.—George Hibberd, Wheeling, W. Va.

Claim.—As a new article of manufacture, the cast-metal water-back for stoves, constituted of an even number of pipes, *a a*, connections *b c d e*, partitions *f f*, and plugs *g*, for the core-support apertures, all substantially as specified.

120,519. — SAFETY AND VACUUM VALVE.—George Hibberd, Wheeling, W. Va.

Claim.—1. The combination and relative arrangement of the connected valves A B, transverse opening *c*, transverse neck M, and pin D, to admit of ready attachment or removal of the valve B, as herein set forth.

2. The valve A A¹, cylinder X, and casing Y, constructed and arranged as herein shown, so that the shoulder *x* at the lower end of the cylinder X will constitute a permanent stop to limit the upward motion of the valve, in combination with the adjusting-screw H to graduate the pressure upon the valve without changing the position of the stop *x*.

120,520.—PEN-AND-PENCIL CASE.—William S. Hicks, New York, N. Y.

Claim.—The herein-described pen-and-pencil case, consisting of the tube or body A with the sliding tube E having the pen-slide F arranged therein, and the pencil-case D secured at the opposite end of the body A, all constructed and arranged to operate substantially as described.

120,521.—MACHINE FOR UPSETTING TIRES. Edgar Hitt and Andrew Lent, Katonah, N. Y.

Claim.—As an improvement in machines for upsetting tires, the arrangement herein described and shown, of the griping-jaws, fitted loosely on transverse slides, the screws by which to adjust one jaw of both pairs toward and from the other to accommodate tires of different breadths as well as to clamp, and the wedges by which to actuate the other jaws of the two pairs, and to supplement the compressing or clamping force of the same.

120,522.—HOISTING-BUCKET.—Edwin James Hulbert and Aimé Nicholas N. Aubin, Portland, Conn.

Claim.—The combination of the detached bottom, suspended by chains or rods, with the supporting-pins eccentrically fixed to the bucket, the whole constructed substantially as and for the purpose hereinbefore set forth.

120,523. — BRUSH. — Daniel W. Lapham, Baltimore, Md., assignor to Josephine M. Lapham, same place.

Claim.—As a new article of manufacture, a brush composed of a handle, A, provided with a series of conical faces, B, for the reception of and in combination with the bristles C, substantially as and for the purpose specified.

120,524.—MACHINISTS' VISE.—Hezekiah E. Long, Decatur, Ill., assignor of one-half his right to Burroughs & Co., same place.

Claim.—1. The trunnion *a* formed on the bottom of the back jaw G, and operating in a corresponding concavity at the center on the top of the bed-plate A, when said trunnion and concavity are constructed with inclined or dovetailed abutting surfaces, substantially as and for the purposes herein set forth.

2. The arrangement of the drop-button H, loosely astride of the neck of the screw E and resting upon the same within a cavity, *b*, prepared for it, substantially as and for the purposes herein set forth.

3. The combination of the back jaw G having trunnion *a*, the bed-plate A with corresponding concavity, said trunnion and concavity being constructed with inclined or dovetailed abutting surfaces, and the stop-button I pivoted in lugs *f f* on the bed-plate A to turn and drop into perpendicular grooves *h h* in the back jaw and bed-plate, substantially as and for the purposes herein set forth.

120,525.—SYRINGE.—Horatio N. Mattison, New York, N. Y.

Claim.—1. The arrangement of two screw-threads of different size in the socket *a* of the bulb A to receive nozzles of different size and shape, substantially as set forth.

2. The arrangement of a screw-thread, *s*, in the end of the nozzle C to receive a corresponding thread on the stem of the nozzle D, substantially as described.

3. The compound nozzle B C D, constructed as shown and described.

120,526.—RAILWAY-CAR COUPLING.—George W. McEuen and Chandler Eves, Millville, Pa.

Claim.—The pendent pin B supported from the roof of the chamber, and the lever L constructed so as to extend across under the draw-head to the side, thence up to the top through the notches or grooves *m m* and over beyond the opposite edge, where it is weighted, as shown at *w*, for the purpose herein specified.

120,527.—BRAKE FOR MACHINERY.—Robert David Napier, Limehouse, England.

Claim.—The combination of the differential lever A with the brake-band B and wheel C, when said lever has its joints or points of attachment *c d* and fulcrum *b* arranged, in relation with each other and the band, substantially as specified, and whereby the strain on the joints is thrown upon different sides of the fulcrum of the lever, and so that the same action that moves the one end of the band round the wheel moves the other end in the same circular direction, but at a different rate, as herein set forth.

120,528.—GRIDIRON.—Charles Noble, Philadelphia, Pa., assignor to Charles Noble & Co., same place.

Claim.—The hearth-plate A, covering the opening in the base-plate of a stove, perforated near its edge, and having an opening, *a*, to which is fitted the covered gridiron B, as and for the purpose described.

120,529. — METALLIC CARTRIDGE. — Alwin Payne, Bridgeport, Conn.

Claim.—1. The combination herein shown of the re-enforced shell A and disk or anvil B, whereby said disk or anvil is firmly secured in place by upsetting or turning the metal of the case over the disk or anvil, substantially as specified.

2. The improved cartridge-shell, having the flange *b*′ to hold the anvil or anvil-re-enforcement B, when said flange is formed from the re-enforcement *a*, for the purpose set forth.

120,530, antedated September 30, 1871.—COMBINED TENT AND COT.—William H. Penrose, Fort Lyon, Col. Ter.

Claim.—1. The combination of the uprights A A, jointed to the cap-plates B, with the folding-bar C, the thimbles G G, and the extension-bars articulated to the thimbles, and connecting the lower ends of the uprights, when constructed to operate substantially in the manner and for the purposes set forth.

2. The combination of the frame above described, consisting of the parts A, B, C, D or F, and G with a bed-bottom supported by the thimbles G, substantially as described.

3. The combination of said frame with the bed-bottom E or L, and the tent-cloth covering the whole, substantially as described.

120,531.—APPARATUS FOR MANUFACTURING SIRUPS OR CREAMS AND SODA-WATER.—Antoine Piccaluga, Paris, France.

Claim.—1. The combination of two cylinders, the inner one I for receiving the ice, and the other K for the reception of the soda-water, the latter cylinder being provided with a tube, M, for introducing the soda-water, and a tube or tap, L, for drawing off the liquid, and a valve, *b*, for the exit of the excess of carbonic-acid gas.

2. The combination, with the two cylinders, of the revolving star-piece H bearing the cylinders N for the reception of the cream or sirup.

3. The combination, with the ice-receiver I, of the conical revolving ice-cutter E, actuated by a thirty-toothed wheel, C, and a seventy-four-toothed wheel, D, by the aid of the fly-wheel X.

120,532.—MACHINE FOR TURNING WOOD.—George Pickering, Janesville, Wis.

Claim.—1. The adjustable chuck, in combination with the hollow revolving mandrel and cutter-head, substantially as described, for the purposes specified.

2. In combination with the sliding blocks I, the knives K, substantially as described, for the purposes specified.

3. The adjustable blocks I, adapted to hold the knives K parallel to the axis of the stick to be turned by means of the set-screw J and the shoulder L around the inner edge of the opening in the cutter-head, substantially as herein shown and described.

120,533.—DOOR-CHECK.—John Pool, Elizabeth City, N. C., assignor to himself and Clinton L. Cobb, same place.

Claim.—As a new and improved article of manufacture, the door-fastener herein described, formed by the combination of the driving spike A provided with a deep slot, *c*, in its head, through which freely passes the arm *e* of the catch *a b* pivoted between the prongs *d d*, as shown and described.

120,534. — MILK-HOUSE. — John A. Price, Beckleysville, Md.

Claim.—The arrangement, within a milk-house, of a chest, C, with a chimney-pipe, D, extending up through the top of the house, and with pipes E extending through the side of the house into and down an adjoining well, and terminating in flaring or conical ends, all substantially as herein shown and described, and for the purpose set forth.

120,535.—BRACELET-FASTENING.— Bethuel Ranger, Brattleborough, Vt.

Claim.—1. The combination of a locking device with the clasp or catch of a bracelet, substantially as set forth.

2. The combination of the cam or cams *d* with the clasp or catch C, substantially as set forth.

3. The combination of the notches *e* of the cams with the pins *c* of the push-piece, to prevent the accidental withdrawal of the cams, substantially as set forth.

4. The arrangement of the slotted cam-slide or

its equivalent with relation to the push-piece and the guides, substantially as set forth.

5. The engagement of the pins *e* with the notches *f* (and their disengagement) by yielding pressure, substantially as set forth.

120,536.—MILL-PICK.—Albert Rasner, Dayton, Ohio.

Claim.—The head A provided with the shoulders *a* and slotted stud D, the perforated cap E, and the wedge F, in combination with each other, substantially as and for the purpose specified.

120,537.—TRUSS.—Samuel S. Ritter, Philadelphia, Pa.

Claim.—1. The shaft D *e*, in combination with the grooved truss-pad B, substantially as described, for the purpose specified.

2. In combination with the shaft D *e*, upon which the pad rotates, the pivoted arm *i* with its projecting end, and the set-screw *j*, substantially as described, for the purpose specified.

120,538. — CURTAIN-FIXTURE. — Anthony Roelofs, Philadelphia, Pa.

Claim.—The combination, with the sectional roller constructed as described, of a shade which is clamped between the flat surfaces of the sections, folded round the outside of one section, and secured by means of the clamps, as set forth.

120,539.—DISTILLING NAPHTHA AND OTHER HYDROCARBON LIQUIDS.—Henry H. Rogers, Brooklyn, N. Y., assignor to The Charles Pratt Manufacturing Company, New York city.

Claim.—1. The apparatus herein described for separating volatile hydrocarbons, composed of a still, a column, and a condensing and separating apparatus, each constructed so as to operate substantially as herein set forth.

2. The column Q, in combination with the condensing and separating apparatus, as set forth.

3. The condensing and separating apparatus, composed of the tank A′, coils D^{d}, pipes I, pipe G, and valves *d*, arranged and combined substantially as set forth and described.

4. The pipes I′, in combination with the auxiliary or cooling-worms J^{1} J^{2} J^{3}, as and for the purpose set forth.

5. The pipe G, in combination with water-tank H and pipes L and L′.

6. The combination of the worm F with the condensing and separating apparatus composed of tank A and coils D^{d}.

7. The combination of the running-pans with the condensing and separating apparatus, as set forth.

8. The pipes D, E^{a}, and E with valves P, R, and R^{1}, arranged to operate as described.

9. The pipe V, connected with apartments C C C, &c., so as to fill and draw off the liquid from the cooler, as described.

120,540.—SASH-HOLDER.—Addison V. Sanford, Binghamton, N. Y., assignor to himself and William P. Pope, same place.

Claim.—The bolt, in the form of an arc of a circle, with extension finger piece in the same vertical plane, and the pivoted arm forming a radius of the same circle, in combination with the case A, finger-rest *b*, and opening *f* of same size as the bolt, substantially as herein described.

120,541.—ALARM-LOCK.—Charles Schnepf, Marietta, Ohio.

Claim. — The construction and combination of the top bar J, central sliding bar K, the upright locking-bars H, bolt B, the lever M, and spiral springs M M M′ M″ with the alarm-bell, when operated by two keys in the manner herein described, for the purposes set forth.

120,542. — SAW-SET. — Duncan Shaw, Cincinnati, Ohio.

Claim.—A set for circular saws, consisting of the adjustable centering and clamping device, in combination with the frame A provided with the beveled anvil B and spring-punch C, all constructed and arranged to operate substantially as described.

120,543.—SASH-BALANCE.—George E. Smith, Fitchburg, Mass.

Claim.—1. The sashes B C provided with the racks D E, in combination with the large spur-wheel F and the pinion G, constructed and operated substantially as and for the purpose described.

2. The locking-bolt H, slotted rack D, and pinion G, in combination with the large wheel F and rack E, substantially as described.

120,544.—COTTON-SEED PLANTER.—James H. Sorey, Flora, Ill.

Claim.—In a cotton-seed planter the tines *d*, constructed as specified, and arranged upon the shaft D, substantially as described.

120,545. — HYDRO-PNEUMATIC MOTOR.—Charles L. Stevens, Galesburg, Ill., assignor to himself and L. B. Flanders, Philadelphia, Pa.

Claim.—A hydro-pneumatic motor, in which water is forced from and a vacuum created in two or more chambers by steam and water-jets, and is caused to actuate continuously a turbine wheel contained in a casing communicating with said chambers, substantially as described.

120,546. — FENCE. — Charles H. Strowger, Webster, N. Y.

Claim.—The stakes A A and B B, notched at their upper ends, and connected with the upper set *b* of wires, in the manner shown and described, whereby the wires are strained and the fence rendered complete, as specified.

120,547.—ADJUSTABLE RAIL-JOINT.—John R. Sullivan, Woodland, Cal.

Claim.—The slotted strap *g* having the knuckle-joint *i*′ in combination with the main rail and the removable splice-pieces h, as described.

120,548.—HYDRAULIC ENGINE.—William J. Tate, Philadelphia, Pa.

Claim.—The combination of the semi-annular or segmental casing A and the revolving ring D carrying disks G adapted to the said casing, and hung to the ring D so that they can be brought flush with or at right angles to the face of the same, all substantially as and for the purpose set forth.

120,549. — CORN-SHELLER. — Ambrose B. Thompson, Owego, N. Y.

Claim.—1. The arrangement, in a corn-sheller, of the double cogged driving-wheel I and of the pinions L M upon the shafts of the shelling and feed-wheels, substantially as described and shown, and for the purpose specified.

2. The supports Q for the clamping-jaws O, constructed in two parts, R R′, as described, each provided with corresponding recesses in their proximate faces, as and for the purpose specified.

3. In combination with the supports Q, the clamping-jaws O O cast with trunnions upon their enlarged heads, substantially as described, for the purpose specified.

4. The arrangement of a weight and spring with the hinged clamping-jaw of a corn-sheller, substantially as described, whereby the force exerted by the weight acts directly upon the spring alone, which spring holds the jaw against the corn, for the purpose specified.

5. In combination with the clamping-jaws O, the spiral springs W′, adapted for adjustment through the short arms of the weighted levers W, substantially as described, and for the purpose specified.

6. In combination with the clamping-jaws O, the weighted levers W, and the adjustable spiral springs W′, the studs X, and nuts Z, substantially as described, for the purpose specified.

7. In combination with the jaw-supports Q and with the clamping-jaws O, the weighted angular levers W, substantially as described, for the purpose specified.

120,550.—TABLE OR STAND.—James Thornton, Oswego, N. Y.

Claim.—The combination of the standard B having spring-cleft C, clamp-screw E, and swivel-joint *g*, with the leaf F having lug *d*, substantially as and for the purpose specified.

120,551. — WHIP-HOLDER. — James Thornton and Emmit G. Latta, Genesee, N. Y.

Claim.—The whip-holder, composed of the parts A and B, constructed and arranged substantially as herein described.

120,552. — RAILWAY FREIGHT-CAR.—Theodore R. Timby, Tarrytown, N. Y.

Claim.—As an improvement in freight-cars, the movable or detached bottom B provided with vertical sides and frame-work D *d* and guards F, the whole working in guides *b* and supported by springs C resting beneath on the timbers of the main car-body, as herein shown and described.

120,553. — GUN-CARRIAGE. — Theodore R. Timby, Tarrytown, N. Y.

Claim.—The shoe C, adapted to rest upon the supporting-rails, and provided with springs D E and followers F, upon which the cheeks of the carriage rest, the whole combined substantially as and for the purposes set forth.

120,554.—BLACKING-BOX.—John Van Santvoord, Mount Vernon, N. Y.

Claim.—As a new article of manufacture, the blacking-box A, formed of a single sheet of material, with the incline D and straight edges *a* and *b*, as and for the purpose set forth.

120,555. — BATHING APPARATUS. — Charles Venn, Kastnersville, Canada.

Claim. — 1. The pipe E having two or more branches, *b b*, in combination with the adjustable roses or nozzles *c*, arranged substantially as set forth.

2. The combination of the tank B, pipe E, arms *b b*, roses *c*, pipe D, and spout *a*, arranged substantially as described.

120,556. — PROCESS OF MAKING WHITE LEAD.—Charles L. Wheeler, Pittsburg, Pa.

Claim.—The process of making carbonate of lead by passing carbonic-acid gas through heated water or a heated solution into a properly-heated stack containing pots charged with acetic acid and metallic lead, substantially as described.

120,557.—PADLOCK.—William Wilcox, Middletown, Conn.

Claim.—The cast-metal skeleton, consisting of the rim *d* and supports for the interior movable parts of the lock, in combination with the wrought-metal front and back plates, substantially as and for the purpose set forth.

120,558.—PORTABLE PHOTOGRAPHIC DARK-CHAMBER. — I. Fletch Woodward, McMinnville, Tenn.

Claim.—The door A, the double window C, and the simple eye-hole B as they are combined and applied to an ordinary trunk or box, in the manner and for the purposes set forth in my specification.

120,559.—ROAD-SCRAPER.—William S. Worley, Arcola, Ill.

Claim.—1. The combination of the bottom A with stripe *b b* and plates *f f*, and the wheels B B with spikes *a a* and rollers *h h*, all substantially as and for the purposes herein set forth.

2. In combination with the above, the rod C, tongue D, brace E, spring G, rubber *d*, lever H, and double catch *e*, all constructed and arranged substantially as and for the purposes herein set forth.

120,560.—SULKY ATTACHMENT FOR PLOWS. John Worrell and James H. Rynerson, Clayton, Ind.

Claim.—The curved rack H and hinge F, in combination with the lever H′, beam E, bar D, and arms C C′, when constructed and arranged substantially as and for the purpose specified.

120,561, antedated October 27, 1871.—TRACE-BUCKLE.—Alvah Worster, Syracuse, N. Y.

Claim. — 1. In connection with the swinging loop D and buckle-frame C, the tongue-plate E having extensions or arms *f f* projecting, between which the strap passes from its rear end, substantially as and for the purpose herein specified and shown.

2. The swinging loop D and buckle-frame C, united by the screw-bolt *g*, when the said screw-bolt also serves to secure the buckle to the hames-tug, substantially as herein described and shown.

120,562.—FEED-MILL.—Zadok S. Cracraft, Ottawa, Ill., assignor to himself and William Stormont, same place.

Claim.—1. The arrangement, in a feed-mill, of a hopper, G, between and feeding two sets of burrs, substantially as herein set forth.

2. The combination of the hubs B B, burrs D D, shaft C, and journals *b b*, all substantially as and for the purposes herein set forth.

3. The combination of the adjustable bars E E moved by the set-screws H H, the hopper G, and burrs D′ D′, all substantially as and for the purposes herein set forth.

120,563.—LOCK FOR SPOOL-HOLDERS.—Nicholas Kenny, New York, N. Y., assignor to himself and Frederick A. Keerspeedt, same place.

Claim.—A spool-holder having a suitable device for locking the spindle, upon which the spool revolves, so that the spool cannot be removed except by the aid of a key, as herein set forth.

REISSUES.

4,612.—Division A.—MANTEL AND FRONT FOR FIRE-PLACES.—David K. Innes and Wesley W. Magill, Cincinnati, Ohio.—Patent No. 117,294, dated July 25, 1871.

Claim.—1. Providing a cast-iron mantel with a shelf composed of slate, marble, or other suitable mineral, as and for the purpose explained.

2. The detached and shiftable wall-plates E E′, when arranged as herein described, and for the object designated.

4,613.—Division B.—MANTEL AND FRONT FOR FIRE-PLACES.—David K. Innes and Wesley W. Magill, Cincinnati, Ohio.—Patent No. 117,294, dated July 25, 1871.

Claim.—1. The provision, in a non-metallic mantel, of the separable cast-iron key C, for the object stated.

2. The combination of the mantel A *a*, separable cast-iron key C, screw-threaded shank D, and nut *d*, for the purpose set forth.

4,614.—WOOD-BENDING MACHINE.—Hiram McDonald, Shortsville, N. Y. — Patent No. 31,182, dated January 22, 1861; reissue No. 4,548, dated September 12, 1871.

Claim.—1. The eccentrics *l m*, sliding plates *o p*,

slides t u, and keyer s, arranged at the outer parts of the lever-beds, as described, to form an improved mode of upsetting the ends of the strips when under the bending operation.

2. A rigid and non-elastic bed-lever, F, holding the blank straight at every point not intended to be bent, connected by strap J with the former C, and provided with free ends that shift the fulcrum of the lever at every point of its movement, as shown and described, and for the purpose specified.

3. A pivoted clamp, E, with friction-roll f between the forks thereof, combined, as described, with a rigid bed-lever, F, as and for the purpose specified.

4. The former-plates D having hooked and slotted ears b b', and the lever-plates g g having hooks k on lower end, combined with straps J having a transverse eye for a removable key at each end thereof, for the purpose of fastening said straps in the manner as shown and described.

4,615.—DREDGE-BOX.—Augustus F. Tripp, Buffalo, N. Y., assignor to Sidney, Shepard & Co.—Patent No. 106,430, dated August 16, 1870.

Claim.—The combination, in a dredge-box, of the lesser flanged cap E, central perforated portion C, and offset c', substantially as and for the purpose hereinbefore set forth.

4,616.—SPRING-MATTRESS.—Edwin L. Bushnell, Poughkeepsie, N. Y.—Patent No. 95,984, dated October 19, 1869; reissue 4,103, dated August 23, 1870.

Claim.—1. A spring for beds, having eyes or loops formed thereon by bending or twisting the wire of the spring, substantially as described.

2. The combination of a series of springs, A, united by connecting their adjoining eyes or loops, substantially as herein described.

3. In combination with the springs A, the cords e and f, arranged substantially as herein described.

4,617.—Division A.—AUTOMATIC BARREL-FILLER. — Seth C. Catlin, Cleveland, Ohio.—Patent No. 99,159, dated January 25, 1870.

Claim.—1. With the barrel-filling apparatus, the combination of the float G, lever F, adjustable rod T, and the tripping-hook L, arranged and operating substantially as and for the purpose described.

2. In combination with the lever F and float G, the balancing-weight W, substantially as and for the purpose described.

3. The orifice k connected with the tube E', and the screw-valve j, in combination with a barrel-filler, whereby liquid may be discharged for testing or other purposes, substantially as set forth.

4. The tubes E' B', collar n, and hollow conical end g, as arranged in relation to each other and the valve I, substantially as and for the purpose set forth.

4,618.—Division B.—AUTOMATIC BARREL-FILLER. — Seth C. Catlin, Cleveland, Ohio.—Patent No. 99,159, dated January 25, 1870.

Claim.—The float G and float-chamber O and discharging-tube A, arranged in such correlation to each other that the said chamber and float are within said discharging-tube and extending above the outlet of the same, substantially as described, and for the purpose set forth.

4,619.—COMBINED GRIDIRON, GRIDDLE, AND FRYING UTENSIL.—Samuel Lee, Taunton, Mass. — Patent No. 118,462, dated August 29, 1871.

Claim.—1. A cooking utensil, composed of a bottomless metallic frame, adapted to fit in or over the pot-hole of a stove, and provided internally with means to uphold a gridiron or other article, as described, placed within, but having no permanent connection with it, in combination with a cover the upper face of which forms a griddle, substantially as herein shown and set forth.

2. The combination with the metallic frame, adapted to carry within it a gridiron or other article, as described, of a cover, connected therewith by a vertical hinge, and formed on its top to serve as a griddle, substantially as herein shown and set forth.

3. In a cooking utensil, substantially such as herein described, the connection of the combined griddle and cover with the frame by means of a vertical pin and socket joint, substantially as and for the purposes set forth.

4. A cooking utensil composed of the bottomless metallic frame, the gridiron, the fry-pan, and the combined cover and griddle, constructed and arranged to operate substantially as shown and described.

4,620.—LOCK AND DETECTER. — John H. Lyon, New York, N. Y. — Patent No. 25,428, dated September 13, 1859; reissue No. 849, dated November 8, 1859.

Claim.—1. In combination with a padlock or other lock provided with a shackle, a supplemental shackle arranged with a lead or soft metal-tube as as to be temporarily secured thereby to the lock-case, and admitting of being released only by severing of said tube, which thereby serves as a detecter, substantially as described.

2. The lock-case A, formed of the two parts a b, with a division-plate, p, between, substantially as and for the purpose described.

3. The soft-metal tube E, in combination with the shackle C, by means of a screw or screws, as, upon which the tube is compressed, whereby the tube may be readily removed by unscrewing it from the ends of the shackle after it has been severed, substantially as described.

DESIGNS.

5,326.—CARPET-PATTERN. — Thomas Barclay, Glasgow, Scotland, assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawings or photographs accompanying this specification.

5,327.—CARPET-PATTERN.—Joannin Bouët, Kidderminster, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,328. — BILLIARD-TABLE. — Levi Decker, New York, N. Y., assignor to Kavanagh & Decker, same place.

Claim.—A design for billiard-tables in which the curved or concave cove B is combined with the straight sides, substantially in the manner above described.

5,329.—PRINTED CARPET.—Emile Demouy, Paris, France, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,330. — PRINTED CARPET. — Christopher Dresser, London, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,331.—CARPET-PATTERN.—Otto Heinigke, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawings or photographs accompanying this specification.

5,332.—CARPET-PATTERN.—Otto Heinigke, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawings or photographs accompanying this specification.

5,333.—CARPET-PATTERN.—Otto Heinigke, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawings or photographs accompanying this specification.

5,334. — CARPET-PATTERN. — William Mallinson, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,335. — CARPET-PATTERN.—William Mallinson, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,336. — CARPET-PATTERN.—William Mallinson, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,337. — CARPET-PATTERN.—Joseph James Patchett, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,338. — CARPET-PATTERN.—Joseph James Patchett, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,339.—CARPET-PATTERN.—Herbert Robinson, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,340.—CARPET-PATTERN.—Herbert Robinson, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,341.—CARPET-PATTERN.—Herbert Robinson, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,342.—TYPE.—Alexander McLeester, Philadelphia, Pa., assignor to Collins & McLeester, same place.

Claim.—The design for printing-type, as shown.

5,343. — CHANDELIER. — Frederick Robt. Seidensticker, West Meriden, Conn., assignor to Bradley & Hubbard, same place.

Claim.—The design for chandelier, as shown in the accompanying photographic illustration.

5,344. — CHANDELIER. — Frederick Robert Seidensticker, West Meriden, Conn., assignor to Bradley & Hubbard, same place.

Claim.—The design for bracket and lamp-cup, as shown in the accompanying illustration, together or separately, as described.

5,345. — CUPBOARD-LATCH. — William E. Sparks, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for the base or plate of cupboard-latches, as shown and described, and with or without the keeper.

5,346.—CHEST-HANDLE.—William E. Sparks, New Haven, Conn, assignor to Sargent & Co., same place.

Claim.—The design for chest-handle and base, as shown and described, separately or together.

5,347.—SASH-LIFT.—Adolph Wunder, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for sash-lift, substantially as described and shown in the accompanying illustration.

TRADE-MARKS.

506. — LUBRICATING-COMPOUND. — George M. Denison, Essex, Conn.

507.—SPECTACLES.—Jacob Diamond, Pittsburg, Pa.

508.—NIPPLE-SALVE.—Jane Lovett, Allegheny City, Pa.

509.—FISH-LINE.—George Henry Mansfield, Canton, Mass.

510.—FIRE-BRICK, TILES, &c.—McConnell Porter & Co., Sciotoville, Ohio.

511.—LIQUID SLATING, &c.—James Davis Wilder, Chicago, Ill.

EXTENSIONS.

FINLEY LATTA, of Cincinnati, Ohio, administrator of the estate of ALEXANDER B. LATTA, deceased.—Letters Patent, No. 18,460, dated October 20, 1857.

"Improvement in Steam-Generators."

Claim.—The application of the pump E to a coiled boiler, in combination with the pipes C and strainers D, the whole being arranged and operated in the manner substantially as described, for the purpose of causing the water to circulate through the coils from the lower part of the water-jacket, and of separating the steam generated in the coils from the water and then conducting it into the steam-chamber or upper part of the water-jacket, and of returning the water unconverted into steam back into the lower part of the water-jacket, as set forth.

STANLEY A. JEWETT, of Cleveland, Ohio.—Letters Patent No. 18,399, dated October 13, 1857; reissue No. 1,658, dated April 19, 1864.

"Improvement in Melodeons."

Claim.—1. The production of a perfect mute, by combining the action of the air-passages m N O, or their equivalents, with the mute-valve L, as herein set forth.

2. The formation of a gradual swell or crescendo and diminuendo by means of operating the swell-valve T, by the contraction and expansion of the bellows or its equivalent, as herein specified.

LAURISTON TOUNE, of Providence, R. I.—Letters Patent No. 18,490, dated October 20, 1857; reissue No. 928, dated March 13, 1860.

"Improved Chain-Machine."

Claim.—1. The combination of a punch, plunger, or other equivalent instrument, with a forming-guide or its equivalent, substantially as described.

2. The combination of a forming-guide, or its equivalent, with the instruments co-operating with said guides or their equivalents, to effect the bending of the arms, substantially as described.

3. The combination of the die *j*, Fig. 6, or its equivalent for giving the first bend to the link, with a forming-guide or its equivalent, substantially as described.

4. The combination of a carrier, on which the link is transported, with a forming-guide in which the link is deposited, or their equivalents, substantially as described.

5. The forming-guide for holding and transmitting the chain during the formation thereof, or its equivalent, substantially as described.

6. Giving to the forming-guide an angular or intermittent rotary movement upon its axis so as to present the chain to the successive links in such positions that the arms thereof will alternately interlock.

7. The slender converging rods *r r*, or other equivalent instruments, for holding down the top link while the arms of the link next beneath are being bent over it, substantially as described.

8. The arrangement and operation of the slides *a a*, or their equivalents, substantially as described, so as to bend the arms of each link successively by pairs and cause the succeeding pair or pairs to overlap the preceding ones, or in case the links have an odd number of arms to cause the succeeding arms of each link to overlap the preceding ones singly, in succession.

T. W. WHITE, of Milledgeville, Ga.—Letters Patent No. 18,482, dated October 20, 1857.

"Improvement in Cotton-Seed Planters."

Claim.—1. The arrangement of the flange, in relation to the hopper and the plow, so that it will follow in the furrow made by the plow and elevate the discharge-opening for the seed above the ground, for the purpose described.

2. In attaching the plow to the frame of the machine by a flexible connection, and also with the seed-coverer by an adjustable link, so that the point of the plow may be directed in accordance with the undulations of the ground, without tipping the frame or changing the line of draft of the seed-coverer, and the pressure on the seed coverer varied so as to cover the seed uniformly in light and compact soil, and also the position of the seed-coverer varied in relation to the plowshare, thereby regulating the depth to which the seed are covered, as circumstances may demand.

GARRY I. MIX, of Yalesville, Conn.—Letters Patent No. 18,513, dated October 27, 1857; reissue No. 4,706, dated August 8, 1871.

"Improvement in Iron Spoons."

Claim.—A metal spoon, having the rivet which unites the handle and bowl made or formed of the same piece of metal with, and forming part of, the handle or bowl, substantially as herein described.

ISSUE OF NOVEMBER 7.

PATENTS.

120,564. — CLEANING COTTON-WASTE AND OTHER FIBROUS MATERIALS.—Haydn M. Baker, Brooklyn, assignor to John Adams, Rochester, N. Y.

Claim.—The process, as herein set forth, for the purpose of simultaneously cleansing refuse cotton-waste and other fibrinous substances, and recovering and refining the oils contained therein by the use of a hot, boiling solution of aluminate of soda or a hot, boiling solution of a mixture of aluminate and silicate of soda, substantially as described.

120,565.—PISTON-PACKING. — George F. Blake, Boston, Mass.

Claim.—As an improvement in pistons for pumps and engines, a piston formed by the insertion, between the inner and outer rings B E of metallic packing, of the rubber ring A, controlled by the adjusting-screws C, in the manner and for the purpose specified.

120,566.—FIRE-TONGS. — John Bradbury, Berlin, assignor to Hart Manufacturing Company, Kensington, Conn.

Claim.—The improvement in tongs herein shown and described, to wit: The combination of the handle B, head C, stud *a*, recess *b*, legs A A′, and rivet *c*, all as and for the purpose set forth.

120,567.—FIRE-TONGS. — John Bradbury, Berlin, assignor to Hart Manufacturing Company, Kensington, Conn.

Claim.—The combination of the handle A, head B, socket C, notches *a a′*, legs E E, cap D, and projection *b*, the whole combined and operating together to produce a cheap and superior tongs-joint, substantially as described.

120,568.—CASTER.—John Bradbury, Berlin, assignor to Hart Manufacturing Company, Kensington, Conn.

Claim.—The improvement in caster-frames herein described, consisting of the cast-metal frame B and stud *a* cast in a single piece around the pin *b*, the said pin extending entirely through the stud and frame, as shown and specified.

120,569.—BIRD-CAGE HOOK. — John Bradbury, Berlin, assignor to Hart Manufacturing Company, Kensington, Conn.

Claim.—A new article of manufacture, consisting of the plate A, hook B, brace C, and boss D, all combined to produce a neat and durable bird-cage hook, as herein shown and described.

120,570.—CLOTHES-HOLDER.—William Z. Brown, Decatur, Ill., assignor to himself and Phineas B. Provost, same place.

Claim.—A non-elastic clothes-holder, consisting of a hollow cylinder, open at each end, divided along one of its sides, and having its inner edges rounded off, substantially as and for the purpose described.

120,571.—GRATE-FENDER.—George Buchanan, Washington, Pa.

Claim.—The fender C, constructed substantially as hereinbefore described, and pivoted with relation to the grate B, in the manner set forth.

120,572.—GANG-PLOW. — Luke Chapman, Collinsville, Conn., assignor to himself and The Collins Company, same place.

Claim.—1. The beam *a*, made reversible, and provided with sets of plows both before and behind the point of suspension, substantially as described.

2. The reversible beam *a* combined with the swivel *b*, sliding block p^1, and standard *d*, and made rotary by means of the worm-gear *e* and worm e^1, substantially as described.

3. The parts as claimed in the immediately preceding clause, combined with the lifting-jack described, substantially as described.

4. The standard *d* having a reversible beam *a* hung therein, and made oscillatory sidewise upon the main axle *g* by means of the bed-plate *f* pivoted to the axle-plate f^1, and the worm f^2 and worm-teeth f^3, substantially as described.

5. In combination with a reversible plow-beam *a*, the gauge-wheel *m*, attached adjustably thereto, substantially as described.

6. A plow-beam, *a*, made reversible by mechanism substantially as described, made adjustable vertically and sidewise by mechanism substantially as described, and the whole hung on a main axle, *g*, permanently sunk below the level of the centers of the supporting-wheels, substantially as described.

120,573.—GATE. — David Creighton, Vacaville, Cal.

Claim.—1. The looped bars D and E, with the operating levers J K and the bails I I′, substantially as and for the purpose herein described.

2. In combination with a gate having one stationary and one movable pintle, as shown, the looped operating bars D and E, and the levers provided with a long arm, J, and a short arm, K, when constructed to operate substantially as and for the purpose described.

120,574.—TORPEDO FOR OIL-WELLS. — Julius C. Dickey, Titusville, Pa.

Claim.—In a torpedo, the combination of the tubes *a*, flexible couplings *g*, and base *k*, substantially as and for the purpose set forth.

120,575.—NURSING-BOTTLE.—Lemuel Pomeroy Dodge, New York, N. Y.

Claim.—The stopple B for a feeding-bottle, perforated at *c*, and provided with a slit ring-valve, *a*, substantially as described.

120,576.—Not issued.

120,577.—INTERLOCKED CONICAL BOLT FOR SAFES.—John Farrel, New York, N. Y.

Claim.—1. A screw-bolt, to be used in the construction of safes having the narrow peripheral grooves shown near the butt thereof, when the body of the bolt is of tapering or conical shape, in order to maintain its holding capacity if parted, substantially as described.

2. In combination with the grooved conical screw-bolt the interlocking-bars or collars, substantially as and for the purpose specified.

120,578.—LETTER-BOX.—John A. Farrington, Brooklyn, N. Y., assignor, by mesne assignment, to himself, E. Parke Coby, and Isaac U. Coles.

Claim.—The combination and arrangement of the openings B and G for the reception of papers and letters, provided with doors or covers C and H, the door I, the revolving shelves D D D D, curved guard F with the main box A, when constructed as shown and described.

120,579.—COMPOSITION FOR MAKING CRUCIBLES, GLASS-MELTING POTS, &c.—William Albert Fischer, Allegheny City, Pa.

Claim.—The compounds herein described for the making and manufacturing of crucibles, glass-melting pots, &c.

120,580.—HINGE.—Robert B. Fouzer, Butler, Pa.

Claim.—A spring, *c*, forming part of or attached to one of the straps of a hinge, and recurved or bent back so as to bear against the other strap, substantially as described.

120,581.—PLOW-WHEEL. — Henry Galentine, Greece, N. Y.

Claim.—1. In combination with the wheel A, the bushing *b* secured in the former by means of the lug *c* locking against the inclined face of the wheel-hub, substantially in the manner set forth.

2. A wheel and hanger combining in their construction the following instrumentalities, viz., The tapering bushing *b* secured in the wheel substantially as set forth, and the sleeve *d* detachable from the fixed stud *i* and prevented from revolving thereon, for the purposes set forth.

120,582.—GRAIN-SEPARATOR. — Charles S. Hall, Rochester, N. Y.

Claim.—1. The relative arrangement of the raddle D, grain-belt C, and straw-carrier E, herein described and shown, whereby the straw is allowed to drop down off the raddle upon the grain-belt, and is then immediately lifted up therefrom and removed by the carrier, substantially as and for the purposes specified and set forth.

2. In combination with the open raddle D and grain-belt C, the guiding strips *g*, constructed and arranged to operate substantially as set forth.

120,583, antedated October 24, 1871.—BRACE OR SUSPENDER.—Marx Harris, New York, N. Y.

Claim.—The straps A A, horizontal brace C, with pockets *a a*, with the detachable belt or band B, which is provided with the hooks or fastenings D D, the whole constructed and arranged to operate as herein shown and described.

120,584.—COMBINED SUSPENDER AND SAFETY-POCKET. — Marx Harris, New York, N. Y.

Claim.—The suspender A, combined with the safety-pocket B, the latter being constructed, arranged, and secured by the former as shown and described.

120,585.—COMBINED CLOTHES DRIER AND PENDENT SEAT.—John Hirons, Buchanan, Mich.

Claim.—1. The combination of pendent seats with a rotary clothes-drier, substantially as described.

2. The combination of the crank-shaft D, wheels J and G, pendent seats F, and rotary arms B, substantially as and for the purposes set forth.

120,586. — PISTON-HEAD FOR STEAM-ENGINES.—Oscar S. Howard, Bangor, Me.

Claim.—The arrangement, in a piston-head without a follower, of expansible rings *c d*, steam-ports *e e*, each having double passages *f g* at right angles thereto, connecting with annular grooves *h i*, substantially as set forth and described.

120,587.—BED-BOTTOM.—Charles Johnson, Chicago, Ill.

Claim.—1. The springs H when provided with a projection, J, and the lower end I curved so as to form a lateral support to prevent tipping, substantially as specified.

2. The springs D, when provided at the lower end with loops or hooks F and at the upper end with the loop or hook G, substantially as and for the purpose specified.

3. The combination of the springs D with the bar or rod K and cover L, substantially as and for the purpose described.

120,588. — OPERATING MACHINE-GUNS.—George O. Kinne, Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Company, same place.

Claim.—The grooved cylinder F, or the mechanical equivalent thereof, in combination with the rotary shaft by which the discharge of the gun is produced, whereby the described lateral reciprocating motion of the gun is obtained from the motion of the parts which effect the discharge, substantially in the manner hereinbefore set forth.

120,589.—PLANING-MACHINE. — Henry A. Lee, Worcester, Mass.

Claim.—1. The combination, with the vertical side-feed roll M, of the slide-bearing N, spring *d*, or

equivalent device, adjusting-standard O, shaft P, and gears M', P', and Q, said parts being constructed and arranged to operate substantially as and for the purposes set forth.

2. The combination, with the lower cutter-head and the bearings of the same, of a slide-piece or plate supporting the said bearings, and arranged to slide in or on the frame transversely to the length of the machine, as shown and described, so that, when desired, the cutter-head may be moved out from the side of the machine, for the purposes stated.

3. The combination, with the bearings R which support the lower cutter-head, of the bearing-plate R', slide-plate S, and adjusting and clamp-screws *h i k*, substantially as and for the purpose set forth.

120,590. — PORTABLE GAS APPARATUS. — George Lowden, Brooklyn, N. Y.

Claim.—The mechanical arrangement of the carbureting-tubes 1, 2, 3, 4, 5, and 6 in separate tiers, so that they may be used separately or combined with each other, in combination with the other working parts of the apparatus, all inside of the case A, or otherwise.

120,591.—FLUTING-MACHINE.—James Weadon Madden, Buffalo, N. Y.

Claim.—1. The roller-frame of a fluting-machine, provided with eyes or projections B' to support the same upon a stove while heating, and to prevent the rollers from coming in contact therewith, as described.

2. The roller-frame above described, when provided with a means of attachment to a permanent base or supporting-frame, as described.

120,592.—RAILWAY SWITCH.—Edward Mercier, Springfield, assignor to himself and Little & Stanton, Huntington, Mass.

Claim.—In combination with the switch D, the metallic frame A, fan F, eccentric V, shaft X, and connecting-rods H and W, the parts being all constructed and arranged substantially as hereinbefore specified.

120,593.—LATHE ATTACHMENT FOR CHASING DESIGNS ON MOLDS.—John Ernest Miller, Birmingham, Pa., assignor to himself and Washington Beck, same place.

Claim.—1. The chuck D with pattern *b* applied upon it, in combination with a tool, *i*, an adjustable stock, *g*, a rest, L, a block, *k*, and a spring, *p*, arranged and combined substantially as and for the purpose set forth.

2. An auxiliary spring, *p'*, applied in a glass mold chasing-machine, substantially as and for the purpose described.

120,594. — DOVETAILING-MACHINE.—Oscar J. Pennell and George Zimmer, Williamsport, Pa.

Claim.—1. The carriage, with its loose rest-lever and pin, in combination with the grooved rails, as shown and described.

2. The cutter B, adapted, substantially as described, to be turned out of action when combined with the carriage, as and for the purposes set forth.

3. A dovetailed and shaping-machine having the adjustable mandrel and cutters and the carriage with its loose rest, the latter operated by the grooved rails, as described.

120,595.—INSECT-TRAP.—Charles E. Penny, Fort Wayne, Ind., assignor to himself and John McCartney, same place.

Claim.—Receiving-chamber A, fluted pan B having offset or ledge *a*, decoy C, springs *c c* subserving the double purpose of securing the receiving-chamber A to the pan B and supporting the decoy C, the whole being arranged, combined, and constructed substantially as described.

120,596, antedated November 4, 1871.—PROCESS AND APPARATUS FOR EXTRACTING ESSENTIAL OILS.—George Gilman Percival, Waterville, Me.

Claim.—1. Extracting the oil from charge in the still-body by water, and the subsequent separation of the oil from this water by distillation in separate vessels or apparatus, or separate parts of same vessel or apparatus.

2. The producing or increasing currents of water in still-bodies by pumps.

3. Exhausting two or more charges in separate vessels at once by the same water, and using but one distilling apparatus.

4. The combination of a single still-body, A, or a series of still-bodies, A A, with a pump, C, or its equivalent.

5. The combination of a single still-body, A, or of a series of still-bodies, A A, with an oil-extractor, B, or its equivalent.

6. The combination of a single still-body, A, or of a series of still-bodies, A A, with a pump, C, or its equivalent, and an oil-extractor, B, or its equivalent.

7. The combination of a series of still-bodies, A A.

8. The combination of a still-body, A, and a spreader D, or its equivalent.

9. The combination of a still-body, A, with a boiler with a labyrinthine bottom, all substantially as and for the purpose specified.

120,597. —HYDRAULIC AIR-COMPRESSER.—William E. Prall, Washington, D. C.

Claim.—1. An air-compressing machine, consisting of the cylinder *a* in which air is compressed by direct application of water from an elevation and the water-supply pipe *b*, water-discharge pipe *c*, and air-supply pipe *e*, air-discharge pipe *d*, and valves *f*, *g*, *i*, and *j*, operating substantially as shown and described.

2. The cut-off valves *f g* placed in the outlet and inlet-pipes *b a*, and operated automatically by the force of the water as it passes through the machine, substantially as set forth.

120,598. — ROAD-WAGON.—Thomas Henry Prushaw, Fredonia, N. Y., assignor to Taylor, Day & Co., same place.

Claim.—1. The sides F of the wagon-body E, made in two parts and pivoted together for the purpose described, in combination with the spring-slats A, elliptic side springs B, and bolsters C C, arranged substantially as described.

2. The wagon-body E' having the sides F F pivoted together and provided with the cross-pieces F¹ F², in combination with the spring-slats A and bolsters C C, substantially as set forth.

3. The elliptical side springs B B, in combination with the reversed upper springs *b b*, the two arranged and operating in connection with the wagon-body E', substantially as described.

4. The wagon-body E' having the sides F F¹ pivoted together as described, whereby the wagon-body is relieved from strain in case unequal weight is applied at either end, substantially as set forth.

5. The central cross-piece D, stiffening-tubes *c c*, blocks *d d*, standards *d*¹, bolts *d*², and seat E, in combination with the side elliptic springs B, slats A, bolsters C C, and the wagon-body E', arranged and operating substantially as described.

6. The seat E mounted upon the standards *d*¹ supported upon the side springs B, which also support the body of the wagon, as set forth.

120,599. — BED-BOTTOM. — Jason H. Sherman, Galesburg, Ill.

Claim.—The conical or conoidal bed-spring C, when constructed with its end *c''* next the base of the cone turned inward and downward toward the center of the coil, substantially as described, and for the purpose set forth.

120,600. — NECK-TIE FASTENER. — Edgar Side, Brooklyn, N. Y.

Claim.—As a new article of manufacture, a neck-tie fastener, constructed as shown and described.

120,601.—JOINT OF BREASTPINS.—Daniel O. Stanley, South Attleborough, Mass.

Claim.—A joint, C, made from a hollow tube, and having two shoulders, *d d*, in combination with the plate A and the pin B, the whole constructed and arranged in the manner substantially as described, for the purposes specified.

120,602.—GAVELING-FORK FOR HARVESTERS —Ora Webster, Murray, N. Y.

Claim.—1. The fork F and arm D, in combination with the rocking frame E, constructed and operating substantially as described, for gathering the gavel at the grain side of the platform, as specified.

2. The combination of the rocking frame E, crown-wheel 2, dog B, and arm 3, by which the gavel is carried in rear of the machine, substantially as and for the purpose specified.

3. The incline *s*, retracting spring 7, and its connections with the arm D, in combination with rocking frame E, by which the gavel is discharged and the fork is elevated and returned, substantially as described.

4. The combination of the crown-wheel with the arm 3, standard C, intermediate ring-pulley, and hinged arm D, operating substantially as and for the purpose described.

5. The combination of the slotted fork-handle with the standard C and arm D, connected and operating conjointly in the manner and for the purpose described.

120,603. — RAILWAY-CAR BRAKE. — Adam Wellshmidt, Albany, N. Y., assignor to himself and Anton F. Waldbillig, same place.

Claim.—1. The combination of the skids D D and flanges *a a* with the beams F F', shoes *f*, rods *r r'*, and buffer G, substantially as and for the purpose set forth.

2. The combination of the frame A, hangers E, beams F, and skids D with the rods *r r'* and buffer G, substantially as and for the purpose set forth.

3. The combination of the buffer G, crank or lever *h*, hand-lever *h'*, ratchet-wheel *i*, and dog *k*, substantially as and for the purpose set forth.

4. The combination of a hinged cow-catcher, J, rod *k'*, and dog *k*, substantially as and for the purpose set forth.

5. The combination of the coiled spring *l*, (or its equivalent weighted lever,) levers *h* and *h'*, buffer G, and suspended beam H, substantially as and for the purpose set forth.

120,604.—DESK AND TABLE.—Adolph Wibbert, Milwaukee, Wis.

Claim.—1. Girts A and legs K, top B, slides C, support E, spring F, and movable edge G, substantially as described.

2. Girts A, top B, slides C, in combination with cord L and weight M, and stops I, substantially as and for the purpose described.

3. Top B, slides C, supports D, held in position by girts A and legs K, substantially as described.

4. Top B, inkstand O, and cover P, substantially as described.

120,605, antedated October 18, 1871.—COMPOSITION FOR PAINTING AND STAINING FURNITURE. — Harmon K. Wilson, Barbourville, Ky.

Claim.—The described paint, composed substantially of the ingredients and in the proportions described, compounded in the manner and for the purpose described.

120,606, antedated October 21, 1871.—TANNING HIDES. — Riley P. Wilson, New York, N. Y.

Claim.—1. A cylinder, as above described, in combination with buckets and water-box, or a fountain supplied with jets, for the purpose described.

2. The above compositions for depilating, coloring, and tanning, as above set forth, and for the purposes specified.

120,607.—SHOVEL-HANDLE.—Frank Alsip, North McGregor, Iowa.

Claim.—The curved hand-piece C attached directly to the handle B of the shovel at its upper end, and projecting downward, and supported at its lower end by the brace D, as shown and described.

120,608. — CONSTRUCTION OF ARCHES.—Frank Alsip, North McGregor, Iowa.

Claim.—In combination with the column A and arches B B, the bearer D and cross-piece E, constructed and arranged substantially as and for the purposes herein shown and described.

120,609.—COUNTING-REGISTER.—Alexander P. Atkinson, Vermont, Ill.

Claim.—The registering mechanism herein described, consisting of a frame, C, and a series of disks, C¹ C² C³ C⁴—the disk C¹ being provided with a pawl or dog in its periphery for giving motion to the remaining ones of the series—springs D D¹ D², flange or disk C⁵, and a dog which passes through the disk C², the parts being constructed and arranged substantially as and for the purpose set forth.

120,610, antedated October 21, 1871.—RAILWAY-CAR COUPLING.—Anson A. Atwater, Trumansburg, N. Y.

Claim.—The combination with the slide *c*, engaging with the weighted elbow-lever *e*, of the pin *g*, link *f*, and weighted elbow-lever *e'*, substantially as specified.

120,611.—LOCOMOTIVE AND TRACTION ENGINE.—Thomas Aveling, Rochester, England.

Claim.—In combination with the fire-box of a boiler, the side horn-plates *a a*, constructed and applied as and for the purpose set forth.

120,612. — COTTON AND HAY PRESSES.—George H. Aylworth, Brighton, Ill.

Claim.—1. The arrangement of the frame A, follower B, pulleys *f*, cords D, and the eccentric pulley E with the sweep G attached, substantially as herein described.

2. In combination with the foregoing, the weight *e* attached to the cords C passing over pulleys *c* and attached to the follower B, all as herein set forth.

120,613, antedated October 28, 1871.—VAPOR-BURNER.—Silas D. Baldwin, Chicago, Ill.

Claim.—The shield *b*, when attached to and supported by the non-conducting envelope E resting upon the collar-cap B, substantially as and for the purposes specified.

120,614.—SEWING-MACHINE.—Adam Barth and Nicholas Barth, St. Louis, Mo.

Claim.—1. The vertical slide F carrying the upper feed-wheel, and attached to the laterally-adjustable bar E, substantially as set forth.

2. The upper wheel H, connected by chain h with the wheel G and combined with the lever *I*, adjustable rod *j*, and crank arbor *l*, as described.

120,615.—MEANS FOR SECURING THE CLOTHING ON CARDING-MACHINE CYLINDERS.—Harrison Bennett, Waterbury, Conn.

Claim.—The combination, with the cylinder of a

carding-machine, of the shafts B, arranged in recesses in said cylinder, and each provided with hooks *a a* and with a holding-mechanism, so that by turning the said shafts the sheets attached thereto may be drawn and held tightly upon the cylinder, substantially as described.

120,616.—BUSTLE.—Isaac W. Birdseye, Birmingham, Conn.

Claim.—The herein-described bustle, consisting of the band A, transverse springs B C D, more or less in number, combined with vertical springs F, one end of which is rigidly secured to the band A, and passing down so as to form a body support, and returning up in connection with the several springs to the upper spring B, and there secured to the band A by a flexible band or strap H, substantially in the manner and for the purpose herein described.

120,617.—MACHINE FOR SHRINKING HAT-BODIES.—Peter V. W. Bishop, Morristown, assignor to himself and Jeptha W. Dunn, Newark, N. J.

Claim.—1. The combination of a grooved roller, H, a series of rollers, C, and a pressure-lever, N, when said grooved roller is arranged for adjustment toward and from rollers C, and suspended by springs, and connected to the pressure-lever also by springs, substantially as specified.

2. The series of rolls H C E, combined, as described, with an endless belt, F, arranged to keep the bodies from drawing down between the small rolls.

3. The combination, with the grooved roller suspended on springs L, of the springs M, lever N, straps P, winding-shaft Q, ratchet and pawl, and crank, substantially as specified.

120,618.—WATCHMAKERS' TOOL.—Leonard C. Butch, Lancaster, and Augustin F. Thoma, Piqua, Ohio.

Claim.—The improved watchmakers' tool, consisting of the stand A, jointed bars C D, slotted arm and clamp-screw O, the said arms being provided with suitable notches, holes, &c., for holding various parts of a watch, screws, &c., all substantially as specified.

120,619. — CHAIN-LOCK. — Levi F. Cahn, New York, N. Y.

Claim.—The pivoted bolt C arranged in the case A, and provided with a projection, *d*, which is above the line of the pivot, to open the lock by pulling on it, substaptially as herein shown and described.

120,620.—FRUIT-BASKET.—Henry Carpenter, Williamsburg, N. Y.

Claim.—An improved fruit-basket formed of the three strips A B B, strengthened at its upper edge by the band C, and in its middle part by the strip or handle D extended around the sides and bottom of said basket, and whether any additional bands be used or not, substantially as herein shown and described, and for the purpose set forth.

120,621. — ADJUSTABLE ELASTIC MEASURING-SCALES.—Baptist Edme Chassaing, Buenos Ayres, Argentine Republic.

Claim. — The improved instrument herein described, formed of the graduated rod A, fixed arm G, movable arm F, set-screw E, head B, nut C, and elastic band R, arranged substantially as specified.

120,622.—APPARATUS FOR CONVERTING MOTION.—Joseph Julien Chenal, Génissiat, (Ain,) France.

Claim.—The combination of the lever *a* provided with slotted frame *d d'* and having racks *e f e' f'*, and the disks *g h g' h'* arranged with their toothed portions contiguous and opposite, as shown and described.

120,623. — CHAIN FOR WATCHES, &c.—George W. Clampitt, Attleborough, assignor to Henry F. Barrows, North Attleborough, Mass.

Claim.—The fastening of the staples B by which the links A are secured together, by bending the ends of said staples over the ends of the links, substantially in the manner described.

120,624. — BEE-HIVE. — William R. Clark, Piqua, Ohio.

Claim.—1. The base A, the bars B fitting in slots thereof and having pins C thereon, the two sides E F G, and the two removable horizontal bars H combined to hold the honey-sections D, as described.

2. The frame W T having pivoted legs U, combined with a two-part hive, as and for the purpose specified.

120,625. — METALLIC CARTRIDGE. — John Webster Cochran, New York, N. Y., assignor, by mesne assignments, to Union Metallic Cartridge Company, Bridgeport, Conn.

Claim.—A metallic cartridge-case, consisting of the case A and the cup C, when the said parts are constructed and arranged substantially as herein shown and described.

120,626.—HAY-TEDDER.—John K. Collins, Hartford, Vt.

Claim.—The pivoted tine-shanks G, the pivoted levers F having pins *b d*, and the rods E having tubular guides H at one end and elongated slots at the other, constructed and combined together in a hay-tedder, as and for the purpose specified.

120,627. — VAPOR-BURNER. — John Cook, New York, N. Y., assignor of one-half his right to G. L. Smith, same place.

Claim.—The vapor-burner, consisting of the tube F provided with disk G, corrugated disk H, holes O O, and slotted cap K having the wire-gauze screen M, all arranged in relation to each other, substantially as shown and described.

120,628. — APPARATUS FOR MAKING BOOT AND SHOE SOLES.—Louis Coté, St. Hyacinthe, Canada.

Claim.—The dies *a b*, having the projections *c d* provided with sockets, the latter being adapted to revolve on any suitable journals, as described.

120,629. — VENTILATOR FOR HATS AND CAPS.—William Dale, New York, N. Y.

Claim. — The hat or cap, constructed with air-tubes C under the sweat-band B, the tubes being formed and arranged substantially in the manner set forth.

120,630. — METALLIC CARTRIDGE.—Charles Felix de Dartein and Jules Edouard de Dartein, Strasbourg, France.

Claim.—1. In a cartridge, the combination with the cylinder or socket H provided with the collar H', of the cap I having the circular inner flange I', as and for the purpose described.

2. In a cartridge, the socket H provided with bits or helical threads for imparting the incipient rotary motion to the projectile, as and for the purpose specified.

120,631. — COMPOUND FOR LUBRICATING AXLES. — George M. Denison, Essex, Conn.

Claim.—1. The combination of the three substances, tallow, sulphur, and soap-stone, or their equivalents, to form a lubricating compound without reference to their proportions.

2. A compound for lubricating purposes, when made of the materials and in about the proportions hereinbefore described.

120,632.—SEAT FOR CHAIRS AND STOOLS.—Fletcher W. Dickerman, New York, N. Y.

Claim.—The bottom A and cover B, constructed and applied together, as described, to admit of the application of the stuffing, in the manner set forth.

120,633.—SAW.—William L. Earing, Oswego, N. Y.

Claim.—The knife-plates C, having knives D provided with a lip in the rear thereof, to prevent the shavings from being left fast to the timber.

120,634. antedated October 20, 1871.—MACHINE FOR CUTTING AND PUNCHING SHINGLE BANDS.—John S. Everitt and Charles H. Avery, Oshkosh, Wis.

Claim.—1. As an improvement in machines for punching and cutting metallic shingle-bands, the combination, substantially as described, of the table C, shaft B, cams A A, bars E E, punches I J, and fixed bar Z, all constructed and operating substantially as set forth.

2. The combination of the table C, longitudinally and vertically-reciprocating feed-bars, with their punches, the holding-bar R, and shear, substantially as described.

120,635. — LUBRICATING APPARATUS FOR CYLINDERS OF CONDENSING STEAM-ENGINES. — William Fletcher, New York, N. Y.

Claim.—1. The lifting-puppet or equivalent valve in a valve-tube open at the lower end, in combination with the oil-cup and with the tube or passage, the open end of which opens into that part of the valve-tube which is above the valve, and the other end communicates with the cylinder of the engine when the apparatus is attached thereto, substantially as specified, by means of which combination, when a vacuum is induced in the cylinder, the valve-tube above the valve is exhausted and the valve lifted by atmospheric pressure, and the lubricating matter forced from the cup into the cylinder of the engine.

2. The set-screw for adjusting the throw of the valve, in combination with the cup, the lift-valve, and the valve-tube, open at its lower end to communicate with the lubricating matter in the cup and the tube, the upper of which is connected with the valve-tube above the valve, and the lower end with the cylinder of the engine when attached thereto, substantially as and for the purpose specified.

3. In combination, the following devices, viz.: the cup for containing the lubricating matter, the lift-valve and the tube in which it works, open at the lower end, the tube or passage which connects the upper part of the valve-tube with the cylinder when attached thereto, and the tube with its valve for the passage of steam from the cylinder to the cup, the combination having a mode of operation, substantially as described.

120,636.—WASHING-MACHINE.—John Fox, Farmersville, Iowa.

Claim.—1. The armed sockets C D, in combination with the legs E and frame B that supports the water-box A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pivoted rack S and arms T with the water-box A of a washing-machine, substantially as herein shown and described, and for the purpose set forth.

120,637.—FUNNEL. — Bridget French, Rochester, N. Y.

Claim.—The body A, tube C, packing *f*, and enlarged and detachable nozzle B, arranged to operate in connection with each other, as set forth.

120,638.—SPARK-ARRESTER AND CONSUMER FOR LOCOMOTIVES.—George H. Griggs, Worcester, Mass., assignor to Charles F. Pike, Providence, R. I.

Claim.—1. The inverted bell-mouth pipe I, either separately or with a cone, N, or netting *b*, in combination with pipe E and furnace B, all arranged substantially in the manner and for the purpose set forth.

2. The inverted bell-mouth pipe I, either separately or with a cone, N, or a netting, *b*, in combination with the pipes G and F, so arranged with reference to said pipe F that it will receive the cinders, sparks, &c., discharged from said pipe F, in the manner and for the purposes specified.

120,639.—PAPER-FOLDING MACHINE.—Richard R. Gubbins, Troy, N. Y., assignor to himself, Patrick J. Fitzgerald, and Lewis H. Dezouche, same place.

Claim.—The stop *x* and lever *w*, in combination with the folding-knife B, substantially as and for the purpose set forth.

120,640.—THILL-COUPLING.—Joseph Hale, Somerville, Mass.

Claim.—The shaft-coupling or clip, having a construction and arrangement of parts, substantially as shown and described.

120,641.—PIE-WRENCH.—Ira S. Hamilton, Hamilton, Ohio.

Claim.—In combination with the body and claw A *a* and sliding adjustable block B, the cam E, constructed with a claw, F, to arrest the action of the cam at the desired point, substantially as set forth.

120,642.—CUTTING UP AND PUNCHING SOLE-LEATHER.—Lorenzo D. Hawkins, Stoneham, Mass.

Claim.—1. In combination with the vertically-reciprocating platen or follower *k* for imparting a positive movement to the stripper-knife, the cutter-block *h*, having provision for vertical adjustment at its opposite ends, substantially as described.

2. In combination with the bed *f* and follower *k*, the mechanism for stripping and the mechanism for punching, when both are arranged upon the follower to permit either to be brought into or out of action at will, either to cut the leather into strips or to punch soles or other blanks therefrom, substantially as described.

3. The stripper-knife and stock *u v*, combined with screws *w*, shaft a^2, and gears *z x*, to effect the retreat of the knife into the follower or its projection therefrom, substantially as shown and described.

4. The stripper-knife arm n^2 arranged upon the follower, as shown and described, to permit it to be swung down under the follower into position to cut, and up over the follower and out of position, as set forth.

5. The punch-slide e^2, arranged to slide upon the ways or flanges d^2 of the follower, substantially as described.

6. The punch-slide e^2, made with the hangers m^2 arranged to be swung on pins, substantially as and for the purpose described.

7. The rotary punch-disk or wheel g^2, connected with and carried by the slide, and having connected to and rotating with it the punch-stem h^2, substantially as shown and described.

8. The punch-stock i^2 sliding vertically upon the stem h^2, substantially as described.

9. In combination with the vertically-reciprocating punching or stripping mechanism, the described automatic stop mechanism, operated by the finger w^2 when drawn into slot x^2 in the flange, substantially as set forth.

10. In combination with the described stop mechanism, the mechanism for bringing the cutting or punching mechanism into action, consisting of the pedal-board a^2, levers c^2, and arm *f* on rock-shaft i^2, substantially as shown and described.

11. The bed or bed-frame *f* secured to the beam by the screws *i*, which permit of lateral adjustment and removal of the bed, substantially as described.

120,643. — CORN-PLANTER. — Alexander Hearst, Peoria, Ill.

Claim.—In a corn-planter, the auxiliary lever K

provided with notch *m* and foot-board *d*, and pivoted to the rear end of lever I having foot-rest *e*, both levers being arranged to operate in the slot of brace H, in combination with pin *a*, substantially as shown and set forth.

120,644.—BUGGY-REACH.—John Clinton Hilsabeck, Montovallo, Mo.

Claim.—In combination with buggy-axle A, fifth-wheel F, and reach B, the upper strap C having elevated part E for the spring, and the box G, all constructed, arranged, and applied together as and for the purpose specified.

120,645.—CHILD'S CARRIAGE.—Chauncey Holt, Jersey City, N J.

Claim.—A child's carriage having a sliding drawer under the carriage-body, substantially as set forth.

120,646.—PRINTING-PRESS.—Berthold Huber, Williamsburg, N. Y.

Claim.—1. The varying crank E F, in combination with the guide-groove G and the cylinder of a printing-press for driving the bed-plate B with a variable motion, substantially as herein shown and described, and for the purposes set forth.

2. The combination of the levers I J or equivalent with the bed-plate B, variable crank E F, guide-groove G, and cylinder C for connecting the said variable crank with the said bed-plate, substantially as herein shown and described, and for the purpose set forth.

120,647.—DASH-BOARD FOR CARRIAGES.—Artemas B. Hurd, Painted Post, N. Y.

Claim.—1. A dash-board formed of sheet or other metal, of a single thickness and having the edges bent or turned over the marginal bow, in combination with the feet *b*, substantially as described, as a new article of manufacture.

2. In combination with the dash-board A, formed of sheet metal, the rigid whip-socket B and rein-holder C, said parts constituting an integral whole, as herein described.

3. The stiffening and strengthening of the circumferential edges of the dash-board by means of bending or turning over the edges thereof, as herein described.

120,648.—TREADLE-BRACE.—George H. Hurd, Memphis, Tenn.

Claim.—The combination of the screw C, passing through the frame B B B B, and the rubber spring A, when constructed, arranged, and applied to a sewing-machine, as herein shown and described, for the purpose specified.

120,649.—CORN-PLANTER.—Bendix Ingebrigtson, Cambridge, Wis.

Claim.—The tilting-gates G, operated by the tilting-slide O at the end of the return movement of the dropper-slide D and simultaneous with the action of the markers P on the ground, substantially as specified.

120,650.—CAT-BALL.—Thomas H. Joyce, New York, N. Y., assignor to himself and Jacob Cohen, same place.

Claim.—1. An improved toy, consisting of the block A *a'* and ball B, said parts being constructed substantially as herein shown and described, and for the purpose set forth.

2. The ball B, made of cork to adapt it to be played with safety, substantially as herein shown and described.

120,651.—GALVANIC BATTERY.—Edwin J. Leland, Worcester, Mass.

Claim.—The combination of the vessel A, zinc B, porous or carbon cup C, and platinum D with the sulphate of mercury within the cup, all operating substantially as herein shown and described.

120,652.—TWINE-CUTTER.—Charles Carrington Lewis, Gainesville, Ala.

Claim.—1. A twine-cutter, consisting of the frame A, pivoted weight C, knife D, and movable bed E, all arranged to operate substantially as herein shown and described.

2. The spring *i* affixed to the pivoted weight C to bear upon the twine on the movable bed, substantially as herein shown and described.

120,653.—OIL-CAN.—Donald D. Mackay, Whitestone, and Cyrus Butler, New York, N. Y.

Claim.—1. The combination, with an oil-can, of a rotary agitator and a hand-crank for turning it, all substantially as specified.

2. The step for the spindle A, supported on the spring bottom by a spring, substantially as specified.

3. The combination, with the nozzle and the crank-pin, of a catch, L, substantially as specified.

120,654.—DEVICE FOR OPERATING SEWING-MACHINES.—George W. Manson, New York, N. Y., assignor to himself and Samuel Keeper, Orange, N. J.

Claim.—1. The combination and arrangement of the spring and the train of gear-wheels and pinions, the uppermost pinion being directly on the driving shaft, all arranged and constructed with relation to the strength of the spring, substantially as described and shown.

2. The combination of the levers M N, spring pawls *m n*, and ratchet-wheel L, all arranged to operate substantially as herein described.

3. The combination of the train of gear-wheels and pinions, arranged with relation to the strength of the spring, the spring E, levers M N, spring-pawls *m n*, ratchet-wheel L, brake-wheel R, brake S, spring T, rod *r*, and treadle U, all constructed and arranged to operate substantially as described.

120,655.—PUMP.—John Marquis, San Francisco, Cal.

Claim.—1. The arrangement of the passages B B, when placed with reference to the pump, bolted on the plank to the right and left of the cylinder, and divided below the valve-seats by the partition E, as described.

2. The doors I I, covering the valve-chambers, and the guides J J for the valves K K, substantially as described.

3. The lower valve-chamber C C, when constructed as described, with the openings for the door, and the partition M' for dividing the said chambers, as described.

4. The flanges L M for closing one-half of the cylinder, constructed and arranged substantially as described.

120,656.—ORNAMENTING AND LETTERING HARD AND UNEVEN SURFACES.—William Henry McElcheran, Hamilton, Canada.

Claim.—1. The method or process of ornamenting hard or uneven surfaces, substantially as herein described.

2. The flexible pattern-sheet, prepared substantially as herein described, and composed of the ingredients herein described, or their equivalents, for the purpose set forth.

120,657.—BURIAL APPARATUS.—William H. McGavran, Connotton, Ohio.

Claim.—The burial apparatus consisting of the box A, which has the slanting back *a* and the removable front-sections *c*, and of the windlass B, to operate as set forth.

120,658.—MANUFACTURE OF PICKS AND RAMMERS.—Daniel McNally, Mount Savage, Md.

Claim.—A method of re-enforcing the eye of picks, rammers, and analogous articles by welding a transverse piece of metal above and a like piece below said eye, and with its grain across that of said articles, as described, for the purpose of preventing them from cracking or splitting lengthwise thereof.

120,659.—MACHINE FOR ENAMELING MOLDINGS.—Thomas Moore, Boston, Mass.

Claim.—1. The adjustable combination-die, composed of plate P, steel-polishers T T' V, and scrapers U W, made adjustable by means of slots and secured with screw-bolts Z Z Z Z Z or their equivalents, substantially in the manner as and for the purposes hereinbefore set forth.

2. In combination with the foregoing claim, the flanges *s s'* upon the driving-shafts *j j'*, and corresponding grooves in elastic section-pulleys L L', substantially in the manner as and for the purposes set forth.

3. In combination with the above claims, the gear-wheels C and D, combined with gear-wheels E E', F F', and G G', when connected by arms H H' and I I' carrying driving-pulleys K K' and L L', frame *r r'* carrying shafts *j j'*, adjustable in guides or grooves in uprights *k k'* by means of screw-shaft and hand-wheel J, substantially in the manner as and for the purposes set forth.

4. In combination with the foregoing, the rabbet-pulleys *v v'*, in combination with the adjustable yielding rabbet guide-pulleys *w w'*, the frame I *c c'*, and springs *i i'*, when combined and arranged substantially in the manner as and for the purposes hereinbefore set forth.

120,660.—LUBRICATOR.—Daniel F. Mosman, Chelsea, Mass., assignor to himself and Leonard Atwood, New York city.

Claim.—1. In combination with a glass reservoir and metal stem, a contractile band or girth-spring, *i*, substantially as described.

2. The scores or grooves *k* in the glass reservoir for receiving the girth-spring wire, substantially as described.

3. In combination with the oil-reservoir and stopper and the eduction-stem, a valve which closes the stopper-passage when the reservoir is detached from the stem, and is opened by the stem when the reservoir and stem are connected.

120,661.—STEAM-ENGINE.—Jacob Neuert, Sandusky, Ohio.

Claim.—1. An adjustable cut-off valve, F, of angular shape, sliding upon the back of a slide-valve, B, to alternately cover and uncover ports E, E', made at corresponding angles in said slide-valve, substantially as and for the purpose specified.

2. The bearing-surface G, having inclined or angular faces *c c*, in combination with the corresponding angular faces *d d*, substantially as and for the purpose set forth.

3. The inclines or wedges *c c* and *d d*, for adjustment of the valve F, as and for the purpose described, when said wedges *d d* are operated by a fixed lever or governor.

120,662.—SELF-CLOSING TELEGRAPH-KEY.—Jeremiah F. O'Sullivan and Philip W. O'Sullivan, Jackson, Miss.

Claim.—The lever D, spring *c*, and second button C, applied to a telegraph-key, substantially as and for the purpose herein shown and described.

120,663.—BLACKING-BRUSH.—George R. Owen, Utica, N. Y.

Claim.—1. The combination of the movable handle *e* with the spring *d* and bolt *f*, and the brush *a*, as and for the purpose hereinbefore set forth.

2. The blacking-brush *a*, with the additional brush *f* and studs *g g*, in combination with the folding handle, which, when turned back upon the brush, prevents displacement of the blacking-box, substantially as set forth.

120,664, antedated October 21, 1871.—VALVE.—Samuel J. Peet, Boston, Mass.

Claim.—The combination of an auxiliary automatic or self-closing valve, *e*, and its seat and opening in the shell A with the main valve and its adjuncts, the said parts being arranged to operate together in manner as described.

120,665.—BRACKET AND TOWEL-RACK COMBINED.—George W. Peirce, Boston, Mass.

Claim.—As a new article of manufacture, a wall-bracket provided with arms pivoted thereto, as shown and described, to form a rack for towels and other articles.

120,666.—SMOKE AND SPARK ARRESTER AND CONSUMER.—Charles F. Pike, Providence, R. I.

Claim.—1. The combination of the chimney provided with the smoke-arch C, artificial draught or blower N, engines O O, pipes or flues P P and H H, furnace or combustion-chamber B, boiler A of a locomotive, all constructed, arranged, and operating substantially as and for the purpose set forth.

2. The combination and arrangement of the chimney provided with smoke-arch C, register G, artificial draught or blower N, engines O O, pipes or flues P P and H H, furnace or combustion-chamber B, and boiler A, constructed and operating substantially as and for the purpose set forth.

3. The combination of the ash-pan W with the pipes or flues P P and H H, artificial draught or blower N, engines O O, smoke-arch C, register-valve G, chimney and the boiler A, when all are constructed, arranged, and operating as shown, and for the purpose set forth.

4. The arrangement of the chimney provided with the smoke-arch C, register G with the artificial draught or blower N, reservoir M, pipes or flues P P and H H, furnace or combustion-chamber B, boiler A, auxiliary engines O O, exhaust-pipes E and I in a locomotive, when all are constructed and operated as shown, and for the purpose specified.

5. The combination of the chimney having a smoke-box or arch, C, the artificial draught device or blower N, the pipes or flues P and H, the furnace or combustion-chamber B, and the boiler A, all constructed and arranged for operation, substantially as shown and described.

120,667.—APPARATUS FOR COOLING AND PRESERVING.—Charles F. Pike, Providence, R. I.

Claim.—The cooling apparatus herein described, consisting of an ice-receptacle, in combination with a series of metal tubes, so as to utilize both the direct cooling effect of the ice and the water which results from the melting of the ice.

120,668.—STOP-COCK.—Jacob Radston, San Francisco, Cal.

Claim.—A stop-cock constructed of the two pieces or parts A and D, having the screw-threads C G K, slots H, and pin J, with the tube F, and ball L, as and for the purposes herein recited.

120,669.—HARVESTER.—Amos Rank, Salem, Ohio.

Claim.—The extended bent pivot-pin connecting the drag-bar and shoe, constructed as described, and acting as a fulcrum and as a support on which the shoe, the cutting apparatus, the rake, and the platform oscillate, as set forth.

120,670.—CASTER FOR TRUNKS.—Thomas L. Rivers, Newark, N. J.

Claim.—The sheet-metal friction-roller frame A, corrugated in the sides or ears so as to strengthen them, and provided with points *a' a* in combination with the cleat C for fastening it to the bottom of the trunk, substantially as and for the purposes set forth.

120,671.—CLOTHES-RACK.—August G. Schmidt, New York, N. Y.

Claim.—The combination of one or two movable

inclined central bars, A, horizontal cross-bars B, knobs d with a suitable metallic bracket, C, joint-pin a, stop-pin c, and safe-pin b, the whole being arranged to operate substantially as described, and for the purpose set forth.

120,672.—PREPARATION OF MORTARS, CEMENTS, &c. — Henry Young Darracott Scott, Ealing, England.

Claim.—1. A paste or slip, consisting of a liquid mixture of quicklime and sulphate of lime or other equivalent sulphate, or sulphuric acid, in order that the lime may become thoroughly impregnated with the sulphate and thus lose its normal activity for chemical combination with water.

2. A highly plastic and cementitious scientific preparation or compound, produced by agitating, triturating, or rubbing together with water, as above described, quicklime with a small percentage of sulphate of lime or other equivalent sulphate, and combining it with other materials, such as sand, chalk, burnt clay, or other substances for the purpose of producing mortar, as herein set forth.

120,673. — SPITTOON. — Jonathan H. Seymour, Hagerstown, Md.

Claim.—The lid F, the covering G, the slit *e*, the guide *f*, projections *b b'*, the flange *c*, the groove *d*, the knob *g*, stopper *h*, and set-screw *k*, in combination with the spittoon A, the funnel B, flooring C C, valve D, and elbow-lever E, substantially as hereinbefore set forth.

120,674.—UTERINE-SUPPORTER.—James S. Shannon, Lena, Ill.

Claim.—The combination of the slotted zinc ball A and the stem C, which is adjusted and secured in any required position by the nut at F, with the curved wire-braces E E, adjustable in nuts within the ball A, all arranged as described.

120,675.—SPIRIT-LEVEL.—George A. Shelley, Madison, Conn.

Claim.—A spirit-level, consisting of the two parts A B hinged together so as to fold and be set at a right angle, substantially as described.

120,676.—ELEVATOR. — David F. Skinner and Joseph Arnold, Albany, N. Y.

Claim.—The combination of the weighted brake-lever L, the belt-shifter U, and a lever, W, in such manner that the belt-shifter will be actuated by the brake-lever simultaneously with the movements of the brake, or the latter will be actuated for arresting the platform or allowing it to descend without affecting the belt-shifter, at the will of the operator, substantially as specified.

120,677.—OIL-HOLE COVER FOR LUBRICATORS.—Smith A. Skinner, Hoosick Falls, N. Y.

Claim.—The herein-described mechanism for forming an oil-hole cover or protector, viz.: The outer and inner case or cylinder *j i*, stem *f*, spring 2, and flaring ring *n*, constructed, arranged, and operating as and for the purpose described and represented.

120,678.—HORSE-POWER.—Hemphill Smith, Shelby Station, Tenn.

Claim.—1. The draft-rope F and windlass G applied to the frame C of a horse-power, substantially as and for the purpose herein shown and described.

2. The draft-weight H applied to the horse-power, in combination with the rope F, as specified.

120,679. — SPOON. — John Harry Smith, Brooklyn, N. Y., assignor to Florian Grosjean, same place.

Claim.—The combination of the bowl and the hollow-beaded handle of the sheet-metal implement by means of the raised hollow bead upon one of the two entered into a notch in the other of the two, substantially as before set forth.

120,680, antedated November 4, 1871.—APPARATUS FOR FEEDING PULVERIZED FUEL TO FURNACES.—John Y. Smith, Pittsburg, Pa.

Claim.—1. In combination with the injector-hopper B, the cask A provided with the flexible sack-mouth, and arranged to operate substantially as set forth.

2. The barrel C when constructed with a uniform bore, and used in combination with the removable spiral feeder D, substantially as set forth.

3. The spiral feeder D when constructed with the transverse grooves *d*, substantially as set forth.

4. In combination with the spiral feeder D, the lever D' for giving a longitudinal motion to the former while rotating on its axis, substantially as set forth.

5. In combination with the lever D', the plate M, constructed with the segmental and radial slots, substantially as and for the purpose set forth.

6. The spiral feeder D, in combination with the endless screw K, communicating to the feeder a rotary motion derived from the action of the blast on the fan-wheel in the case I, substantially as set forth.

7. In combination with the barrel C and jacket E, the adjustable ring G for regulating the blast, substantially in the manner set forth.

8. In combination with the barrel C and spiral feeder D, the adjustable valve H, arranged to operate substantially as set forth.

9. In combination with a feed-injector, an adjustable mouth-piece O, arranged to operate substantially as set forth.

10. A mouth-piece, O, made of silex, substantially as described.

11. In combination with the feeding device D C and the jacket E, the pipes P', arranged to discharge gases or combustible liquids into the pulverized fuel when mingled with the air or other blast, substantially in the manner set forth.

120,681, antedated October 21, 1871.—COMBINED STEAM AND AIR-ENGINE.—William Mont Storm, New York, N. Y.

Claim.—1. In combination with a steam-engine, the employment of an air-pump (single or double-acting) actuated by a cam or other device, so that its movement shall be accelerated or made intermittent in degree of piston-speed as compared with the stroke of the engine at certain portions, substantially as and for the reason explained.

2. In combination with my air-pump and the given engine, the air check-valve D, whose opening is restrained by means such as described, notwithstanding the exposure of its surface next to the air-pump to a greater pressure than that on its opposite surface next to the engine, by which I make the pump itself, during a portion of its stroke, serve as a reservoir of compressed air, that is to supply, combined with steam, the engine proper on its next stroke, and attain other advantages explained.

3. In contradistinction to the corresponding devices designed for use under my patent of September 23, 1851, the employment of the simple or single auxiliary cut-off, between which and the cut-off next to the conduits of the cylinder the air is to be injected direct from the pump and admitted with the steam, all arranged and operating together substantially in the manner and for the purpose explained.

4. In combination with the auxiliary cut-off, the steam-check valve, for the purpose explained.

5. The reaction check-valve on the exhaust, for the purpose explained.

6. The employment of the lenses in the cylinder-heads, for the purpose explained.

7. The reflectors on the piston, both as reflectors of heat and as auxiliary to the purpose of the lenses, as explained.

8. Electrically insulating or partially insulating the cylinder and its immediate adjuncts, substantially in the manner and for the purpose set forth.

120,682. — BELL-PULL. — Amos L. Swan, Cherry Valley, N. Y.

Claim.—The bell-pull mechanism, consisting of the rod B, levers *b*, *d*, and D, and spring *i*, all arranged to operate substantially as herein shown and described.

120,683.—GAME AND RAT-TRAP.—Benjamin F. Tatem, Memphis, Tenn.

Claim.—The combination of these several parts, arranged and operated substantially as and for the purpose hereinbefore set forth.

120,684.—CULTIVATOR. — Jerome H. Tomlinson, Mount Carroll, Ill.

Claim.—A wheel-cultivator having the end-pivoted beams E E of the plows attached by the described connecting mechanism to the pivoted axles of wheels C C, as described, so that as the plowman moves the handles of his plows laterally both plows and wheels will correspondingly adapt themselves to the sinuosities of the rows and avoid cutting up the plants.

120,685. — LUMBER-MEASURE. — William E. Walton, Chester, assignor to himself, George J. Naylor, and Charles G. Boekenkamp, Philadelphia, Pa.

Claim.—1. The ratchet-wheel E with the guides F G and pawl I, in combination with the roller C, the whole arranged, substantially as set forth, in connection with an indicating apparatus for the purpose of calculating and registering the board-measure feet of lumber that pass through a planing or sawing-machine.

2. The mode herein described, or any equivalent to the same, of arranging the holes *d'* in the plate D, in combination with the lever H and movable-guide G for the purpose of securing the latter in position to leave any desired number of teeth in the ratchet-wheel E exposed to the action of the pawl I.

120,686, antedated November 2, 1871.—SHAFT-COUPLING. — Thomas Aldridge Weston, Ridgewood, N. J., assignor to himself and Franklin B. Colton, Philadelphia, Pa.

Claim.—A shaft-coupling formed of the divided sleeve B B', provided with the collars *c c* fitting into corresponding grooves on the shaft, with the wedge-shaped key-bolt E, the shaft-ends A A being fitted thereto, substantially as set forth.

120,687. — WRENCH. — Alonzo Whitcomb, Worcester, Mass.

Claim.—1. The block or screw-support D having a quill or tube, *d*, extending through the wooden handle E, substantially as described.

2. Said tube provided with an annular recess, *e*, to form a ferrule for the front end of the handle, as shown and described.

3. A monkey-wrench having its bar A made tapering from the fixed jaw *a* backward to the handle, substantially as described.

4. In combination with the tapering grooved bar A, the sliding jaw B provided with the tongues I to work in the said groove and hold the jaw snugly in place, as set forth.

120,688. — CORN-HARVESTER. — John H. Whitney, Rochester, Minn., assignor to himself and W. W. Marsh, Sycamore, Ill.

Claim.—1. The combination of the reciprocating guard *p* with the knife *o*, when arranged to operate as described, whereby the stalks are bent so as to enable the knife to cut them on a slant, as set forth.

2. The arrangement of the screw-shaft D, knife *o* with its guard *p*, and the cutter-bars I, all as herein described.

3. The within-described corn-harvester, consisting of a frame mounted on wheels, with the tongue composed of the two bars T, with the inclined cutter-bars I at their rear end, in combination with the oscillating knife *o* and guard *p*, all constructed and arranged to operate substantially as set forth.

120,689.—FIELD CORN-HUSKER.—John H. Whitney, Rochester, Minn., and William W. Marsh, De Kalb, Ill.

Claim.—1. In combination with the husking-rollers *n*, the breaker-bar *t*, made adjustable, substantially as described.

2. The combination, in a field corn-husker, of the forked tongue T, rubber-covered rollers *n*, screw I, and adjustable breaker-bar *t*, when said parts are constructed and arranged for operation substantially as described.

120,690.—DITCHING-PLOW.—Henry D. Williams, Fairview, Iowa.

Claim.—Bottom cutter G and the two inclined side cutters K K, combined, as described, with the single elongated mold-board L and the base *l'*, to cut, carry, and throw all the dirt on one side of the ditch.

120,691. — WASHING-MACHINE. — Stephen Williams and Henry McNeill, Philadelphia, Pa.

Claim.—1. The combination of the clamps and cams L and N with the radial arms, as described and shown.

2. The construction and arrangement of the spider F, having the bearing E for the shaft C and the bearing for the prop P formed therein, in combination with the removable board B and bearing D supporting the shaft C, as shown and described.

3. The double-armed lever G, having a crank-handle, H, formed thereon, in combination with the prop P, revolving shaft C, and grooved arms J, clamps L, and rubbing-bed of slats O, arranged and operating as hereinbefore described and shown.

120,692. — CULTIVATOR.—William C. Wilson, Brunswick, Ill.

Claim.—1. The shovel *h*, having the pins or bolts *k k* eyed loosely to a strap on the back thereof, in combination with the shoe I provided with the oval slots or holes *m m* and ears with holes *i i* for receiving the bolts or pins, substantially as described.

2. In a wheel-cultivator, the construction and arrangement of the axle B with its braces *c c* and *d d*, holes *e e e e*, tongue C, hounds *g g*, and hooks *n n*, wheels, A A and the beams F F with extensions E E and shovel-stems G H, all as shown and described.

120,693.—OIL-HOLE COVER FOR JOURNAL-BOXES.—Walter A. Wood, Hoosick Falls, N. Y.

Claim.—An oil-hole cover or protector, made of a slotted rubber cap united to a tube or ring, and inserted in or over the oil hole to be protected, substantially as described and represented.

120,694.—RAILWAY SWITCH AND SIGNAL.—John A. Anderson, Lambertville, N. J.

Claim.—1. The indicators *q q'*, constructed substantially as described, and operated automatically, so as to show the relative positions of the rails by the movement which shifts the points, as and for the purpose set forth.

2. The combination of the hand-lever G, toothed connecting-bars K K', and the horizontal rods or shafts I I', constructed with the projections *i* for locking and unlocking the rails, substantially as described.

3. The combination of the hand-lever G, rods or shafts I I', connecting mediums *o* O M N, and the danger-signals P, for the purpose of displaying and withdrawing the latter simultaneously with the unlocking and locking of the rails, and by the same movements, as set forth.

120,695.—ROASTING AND TREATING ORES.—John W. Bailey, San Francisco, Cal.

Claim.—1. The process described of treating ores,

consisting in conveying them by a suction or drawing force until they are sufficiently acted upon by the heat of the furnace or furnaces, and then forcing them against strong pressure into a receiving-chamber, as described.

2. The combination of a furnace, a fan, and a water-tank, connected by suitable pipes, the fan being located between the furnace and the tank and the end of the discharge-pipe being located beneath the surface of the water, as described.

3. The combination of a furnace, a fan, a receiving-chamber, and a water-tank, connected by suitable pipes, the fan being located between the furnace and tank, and the end of the discharge-pipe being located beneath the surface of the water, as described.

4. The combination of a receiving-chamber, fan, and tank, the receiving-chamber being located between the tank and fan, and being connected thereto by suitable pipes, one of which discharges beneath the surface of the water in the tank, as described.

5. The arrangement of the furnace A, fan B, receiving chamber C, and tank D with their connecting-pipes, as shown in Fig. 1.

6. The arrangement of the furnace A, receiving-chamber C, fan B, tank D, and their connecting-pipes, as shown in Fig. 2.

120,696.—Furnace for Roasting Ores.—John W. Bailey, San Francisco, Cal.

Claim.—1. The combination of two or more furnaces of varying temperature, with a suction-fan, as described.

2. The combination of the series of furnaces with the fans E F and pipe I.

3. The pipe I, composed of sections, successively increasing in diameter, as described.

4. The combination of the fans E F, furnaces A B C D, pipes I J, chamber K, and tank M, as described.

120,697. — Paper-Cutting and Scoring Machine.—George Bates, Philadelphia, Pa.

Claim.—The bracket D, with its key F and set-screw *m*, the whole being adapted to the bar B, substantially as set forth.

120,698.—Bee-Hive.—Burt Benton, Wee-saw, Mich.

Claim.—The bee-hive having an angular roof, hinged bottom A, bail H, pivoted to the end walls, and lid B, formed by hinging one of the sides of the roof to the body of the hive, as specified.

120,699. — Hat-Blocking Machine.—Charles H. Berry, Brooklyn, N. Y.

Claim.—1. The hollow perforated block A, heated by steam, as and for the purpose described, in combination with the heating-chamber B, when constructed and arranged to operate substantially as set forth.

2. The combination of the heating-chamber B with the perforated hollow block A and its steam-pipe *a*, substantially as set forth.

3. The arrangement of a detachable crown, C, on the hollow block A, substantially as described.

120,700.—Machine for Sharpening Saws.—Newton H. Bolton, Omro, Wis.

Claim.—The combination of frame B, mandrel C, shaft C′, slide G, rack H, and wheel H′, as described, whereby a longitudinal movement may be imparted to the said shaft C′ simultaneously with a tilting movement of the same, the whole arranged to operate the emery-wheel K, substantially as and for the purpose specified.

120,701. — Still for Spirits. — Anderson Booze, Buchanan, Va.

Claim.—1. The process of evaporating singlings by means of the vapor arising from steamed mash, when the singlings are received in a cap above the still and the vapor passes through a coil of pipe placed within said cap, as described.

2. The combination of the cap *a*, cone *b*, and coil *c*, constructed and operating as specified.

120,702.—Nozzle and Cap for Oil-Cans.—Jabez A. Bostwick, New York, N. Y.

Claim.—1. The within-described tap for an oil-can or other vessel, constructed of a valve, D, provided with a threaded seat, C, to receive the end of a screw, E, projecting from an inner support out centrally through the discharge-aperture of the can, and combined with a lip-plate, F, spanning the corner of the can, substantially as and for the purpose herein set forth.

2. The lip-plate F, in combination with the valve D and discharge-opening of a can, H, substantially as herein set forth.

120,703.—Tool for Setting Hook-Buttons.—Horace C. Bradford, Providence, R. I.

Claim.—1. The movable retaining-clamp C, provided with a projection, *d*, which is fitted to enter the space between the under side of the hook or button and the top of the shank-plate, and arranged to sustain the hook during the setting operation, substantially as described.

2. The retaining-clamp, provided with a stem, spring and thumb-piece, substantially as described.

120,704. — Door-Lock. — James Brady, Branford, Conn., assignor to The Branford Lock Works, same place.

Claim.—The arrangement of the guard G, having apertures *g* and *h* relative to each other and to the spindle F and key-hole *f*, so that by operating the tumblers and shooting the bolt from the interior of the apartment by the cam E on the knob-spindle F the guard G shall be simultaneously operated to close the key-hole on the outside of the door, substantially as described, and for the purpose set forth.

120,705.—Medical Compound or Restorative Balsam.—George H. Brecht, Burton, Ill.

Claim.—The medicinal compound made of the ingredients substantially as specified.

120,706.—Middlings Separator.—John B. Brennan and William Tucker, Paris, Ill.

Claim.—The combination and arrangement of the sieve P, frame F, valves O, inclined chutes N, and sieves C D E, constructed with the perforated and unperforated parts M and L, substantially as shown and described, and for the purpose set forth.

120,707.—Chandelier.—Thomas Buckley, New York, N. Y.

Claim.—1. The frame A of a double cone-reflector chandelier, constructed with the radial supporting-rods or arms rigidly secured by screws or riveting, as and for the purpose set forth.

2. The reflector-frame A constructed with compressing-screws D for the purpose of slightly changing the form of said frame when required, as set forth.

3. The reflector-frame A constructed with its parts united by seaming, as shown in Fig. 4, instead of by solder.

4. The rims and pendent ring *o* of the reflector-frame A, constructed with corrugated hoops M, as set forth.

5. The pendent ring-hoop L, attached by screws to the ends of the radial arms or pipes K, at a distance from the burner-ring J, as and for the purpose set forth.

120,708. — Oscillating Churn. — Ezekiel W. Bullard, Barre, Mass.

Claim.—1. In an organized mechanism for imparting oscillatory movement to a churn, substantially as described, the swinging levers B B′ supporting the churn, and having their leverage made adjustable, in the manner shown and set forth.

2. The combination, with the oscillating-table C B B′, of the cream-receptacle or churn-box D provided with semicircular flanges J, handle L, and downward flange *d*, substantially as shown and described.

3. The combination, with the churn-box D, of the swinging grates M, substantially as and for the purposes set forth.

120,709.—Bee-Hive.—John Burnham, York, Mich.

Claim.—The combination of the box E provided with ingress-pipe *h*, feeding-hole covered by gauze *h′*, and exit-openings *k* with the drawer F provided with opening *i*, when arranged in a bee-hive, substantially as described, and for the purposes set forth.

120,710. — Stove-Pipe Thimble.—Cephas A. Buttles, Milwaukee, Wis.

Claim.—1. Securing the inner band of a stove-pipe thimble by binding its edge over into grooves *c c* formed in the outer surfaces of the heads, substantially as and for the purposes described.

2. The radial ribs *a a* cast in the upper plate *a* of a stove-pipe thimble, substantially as and for the purposes herein set forth.

3. A stove-pipe thimble constructed with upper head strengthened by ribs *a a* and lower head formed convex on its upper side, said heads being connected by a sheet-metal band, C, held by the ribs of the upper and convexity or rabbet of the lower head, and also by a short metal band, D, having its edges turned over the inner edges of the heads, substantially as and for the purposes specified.

120,711.—Ditching-Machine.—Henry Carter, Aylmer, Canada.

Claim.—1. The adjustable lip R, as arranged and hinged to the conductor P, for the purpose specified.

2. The arrangement of the spring K as constructed, standard H provided with a notched plate, *j*, having a point, *e*, and hook L, in combination with the plow F and adjustable handles, J, as and for the purpose set forth.

3. The vibrating frame A, adjustable handles J, when hinged or pivoted to the sides *f′* of the cross-head, and operating conjointly in the manner and for the purpose substantially as set forth.

4. The caster-wheel S, when hinged to the front of the platform in the manner as shown and described, for the purpose set forth.

120,712.—Screw-Die Press. — James H. Clapp, Providence, R. I.

Claim.—1. The combination, with the screw-spindle and cross-head, of the sustaining-screw connecting the cross-head to the spindle, and holding-nut *n*, substantially as described.

2. The combination of the screw-spindle, cross-head, sustaining-screw for connecting the cross-head to the spindle, and holding-nut *n* with the check nut H fitted to the screw-spindle and capable of an independent vertical adjustment, as and for the purposes specified.

120,713. — Locomotive-Engine. — John Clark, London, England.

Claim.—1. Providing for the radiation of the leading and trailing-axles of locomotive-engines, when such engines are passing round curves, by fitting an inner or driving-axle within a tubular axle to which the running wheels are secured, and so connecting these two axles together as to allow the tubular axle to rock and move endwise on the inner axle, as above described.

2. Transmitting to the carrying-springs *e′* of the leading and trailing-wheels that portion of the weight of the engine intended to be borne by them through the double fulcrum-supporting slings *l*, for the purpose of steadying the engine while running on a straight road, and allowing for the free endwise movement of the hollow radial axles when traversing a curve.

3. The means above described for maintaining the parallelism of the inner or driving-axles with the main driving-axle.

4. The means described for avoiding the cross-twist or torsion of the long framing.

120,714.—Water-Elevator. — Alvens J. Clemmons, Aberdeen, Miss.

Claim.—The bucket *a*, combined with the chute *c c′*, valves *c e*, chain *g*, and lever *i*, as described.

120,715.—Gas-Burner.—Theodore Clough, New York, N. Y.

Claim.—The side regulating-screw, in combination with the burner-tube perforated at its base and the surrounding tube for regulating the supply of external gas to the burner, substantially as specified.

120,716.—Boring-Machine. — George F. Cluff, Petersburg, Ill.

Claim.—1. The combination of the jointed legs A and slotted bars C with the frame B that supports the operating mechanism of the machine, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the arm O, toothed rack P, segmental gear-wheel Q, rod R, and lever or handle S with the slotted or grooved shaft M that carries the tool, and with the frame-work of the machine, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the hollow screw T U and adjustable collar V with the grooved shaft M that carries the tool, and with the frame-work of the machine, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the gear-wheels Y Z, shaft A′, and fly-wheel B′ with the shaft I, by which is driven the slotted or grooved shaft M that carries the tool, substantially as herein shown and described, and for the purpose set forth.

120,717.—Washing-Machine. — Margaret P. Colvin, Battle Creek, Mich.

Claim.—In a washing-cylinder the sides of which are built in strip-sections, as at D and E, the combination of the central T-strip F with each plain section D to form two internal buckets, *f f*, and two or more conical discharge-tubes, G G, with each section E flanged at *i i* to form one bucket, said sections being arranged alternately around and constructed and operated substantially as and for the purpose specified.

120,718.—Plow.—Solon Cooley, Clarkston, Mich.

Claim.—1. The beam-plate A, having the parts A^1, A^2, and A^3 of the form shown, all cast in one piece from a solid pattern, substantially as described.

2. The plow-colter J′, provided upon its land-side with a recess which corresponds to and receives the adjustable standard J, in combination with said standard, substantially as and for the purpose specified.

120,719.—Clothes-Drier.—Gabriel Felix Couty, Paris, France.

Claim.—An improved rack for drying clothes, which consists of the clamp *a*, radial arms *d*, folding bars *e*, in combination, substantially as described, the apparatus being so constructed that it can be applied to the pipe of a stove, as set forth.

120,720.—Carriage-Wheel. — Samuel D. Craft, New York, N. Y.

Claim.—1. As a new article of manufacture, the felly-connection A made of malleable metal and having dovetailed chambers or recesses *b*, as and for the purpose set forth.

2. The metallic felly-connection A having the dovetailed chambers *b*, in combination with the dovetailed ends of the wooden fellies, when all constructed and arranged as herein shown and set forth.

120,721. — TREATING INDIAN CORN WITH MALT-EXTRACT. — Mattjas Cziner, New York, N. Y.

Claim.—Making extract from Indian corn by the combined action of a current of steam and of a liquid extract of malt, in the manner substantially as herein shown and described.

120,722.—RUFFLING ATTACHMENT FOR SEWING-MACHINES.—George W. Darby, Cincinnati, assignor to himself and James Harsha, Circleville, Ohio.

Claim.—1. The described arrangement of horizontally-guided gatherer F *f* G, detent L, and peculiarly-formed bracket E E′ E″ E‴, and bent lever H I, for the purpose explained.

2. In the described combination with the above the temper-screw K, for the object designated.

120,723.—FURNACE FOR HEATING TIRES.—James Degree, Hinesburg, Vt.

Claim.—The two series of perforations in the plate D′ and the intervening solid portion of said plate to cause the ascending currents of the products of combustion to impinge upon the quarters and avoid the central portion of the tire, substantially as specified.

120,724.—HOLDER FOR STEREOSCOPIC PICTURES.—John L. Dibble, New York, N. Y.

Claim.—1. A stereoscopic-case, having the bottom near the open end formed with a beveled surface, *a*, adapted to receive and deflect upward the picture being introduced, and to guide it smoothly under the pile, as herein specified.

2. The folding end and half top C B, in combination with the main body A and beveled bottom *a*, the whole adapted to serve as herein specified.

120,725.—WASHING-POUNDER.— Archibald F. Dinwiddie, Columbia, Mo.

Claim.—The construction of the band *a*, connected with the socket for the handle by the conical form *a′*, in combination with cylinders *c* constructed to extend below the band *a*, in the manner shown and described.

120,726.—CAR-COUPLING.—Robert H. Dowling, Fenton, Mich. and Elkanah S. Perry, Clay Lick, Ohio.

Claim.—The hereinbefore-described car-coupling, consisting of the draw-bars A, each provided with a head, A′, containing a recess, B, and the bifurcated hooked bar C, pivoted to or upon the rod *a*, when each of said parts are constructed and combined in the manner and for the purpose specified.

120,727.—METALLIC BAND FOR BALING COTTON, &c. — John Downes, Handsworth, England.

Claim.—As a new article of manufacture, a folding metallic band for baling cotton and like purposes, constructed as herein described, consisting of two or more sections of hoop-iron hinged togeth er, substantially as shown and set forth, to allow of said sections being folded flat together for transportation.

120,728.—COOKING-STOVE.—Paschal P. Ellis, St. Louis, Mo., assignor to Charles H. Buck and Wiley S. Wright, same place.

Claim.—1. The warming-closet for cook-stoves, with its several sections constructed and connected together as described, so as to fold as represented in Fig. 3, and expand and be sustained as represented in Figs. 1 and 2, all as set forth.

2. The hinged portion E, in combination with the several sections of the warming-closet, substantially as described and shown.

3. The combination of the tongue-and-groove joints A and ties *g* with the several folding sections of the warming-closet, substantially in the manner described and shown.

120,729. — DOOR-BOLT. — Lewis J. Evans, Binghamton, N. Y.

Claim.—The door-bolt herein described consisting of the cylindrical case A, the grooved key-spindle B, and the bolt, shaft B′, provided with the toothed recess D, having the depth of the diameter of the key-spindle the length of its developed circumference, and arranged for said key-spindle to pass entirely through from side to side, as specified.

120,730.—DEVICE FOR ARRESTING MOTION. John Everding, Philadelphia, Pa.

Claim.—The combination, with a prime mover for machinery, of a wiper moving longitudinally upon a rotating screw, and a valve placed in the pipe through which the supply of operating fluid passes to the prime mover, the valve being closed by the rotation of the wiper upon the screw at determined points, substantially as and for the purpose set forth.

120,731.—SHUTTLE FOR SEWING-MACHINES. George A. Fairfield, Hartford, Conn., assignor to "The Weed Sewing-Machine Company," same place.

Claim.—1. The screw *c*, at right angles to the axis of the bobbin, with its nick *c′* for allowing the end of the bobbin-spindle to pass through the head, and a shoulder or groove under the head for retaining the bobbin-spindle in place, substantially as described.

2. The tension-spring *d* lying along the side and end of the inside of the shuttle-case, having a fulcrum at the end and regulated by a screw passing through the thick portion of the end of the shuttle-case parallel to its axis, substantially as herein described.

120,732.—CULTIVATOR.—John Faning and Friedrich Legler, Burlington, Iowa.

Claim.—1. The semicircular contrivance J, with its appendages *n* and *g*, constructed and operating as described.

2. The combination and arrangement of the axle B C with its perforations, pins, or bolts *c c*, tubular devices *r r*, beams P P, wheels A A, and parts *b b*, all constructed, arranged, and operating substantially in the manner and for the purposes herein described.

3. The combination of the inner and outer perforated arms of the axle B C, bolts or pins *c c*, and the grooved parts *b b* of the wheels, for adjusting the height of the axle and at the same time maintaining the proper relation of the beams and shovels to the ground, as herein set forth.

120,733.—GRATE-BAR.—Addison C. Fletcher, New York, N. Y.

Claim.—1. In grate-bars, constructed or provided with detachable fuel-bearings or points, the construction of the body A of the bar of a plate or plates having holes *b* in it, in combination with fuel-bearings or points B, formed with hook-shaped extremities for passage through said holes to lock with the body, substantially as specified.

2. The construction of the fuel-bearings or points B with lower side extensions *c*, hooked, as at *d*, with a groove, *e*, on the under side of their upper portions, essentially as herein set forth.

120,734.—SLAT-HOLDER FOR BEDSTEADS.—Frederic G. Ford, Philadelphia, Pa.

Claim.—The metal slat-receiver herein described, as a new article of manufacture.

120,735.—PROPULSION OF VESSELS.—Samuel F. Gard, New Orleans, La.

Claim.—1. A boat made with openings on the sides only, and provided with a track running around the same, in combination with the revolving drum or apron B provided with the wheels *b b*, said apron being operated from within, as set forth.

2. In combination with the revolving drum or apron B and paddles D D, the levers *e e* and guard *f*, or their equivalents, for the purposes herein set forth.

3. The combination of the boat A with track *a*, drum or apron B with wheels *b b*, and chain or rack-bar *d*, the cog-wheels C, and paddles D D, all constructed and arranged substantially as and for the purposes herein set forth.

120,736. — WHEELBARROW. — John Gehr, Clear Spring, Md.

Claim.—1. A wheelbarrow, provided with goosenecks *a*, as specified.

2. The combination of a wheelbarrow with slotted guards *g* and springs *e*, as described.

120,737. — MORTISING-MACHINE.—Dalphon L. Gibbs, Worcester, Mass., assignor to R. Ball & Co., same place.

Claim.—1. The combination with the frame, bearing-piece, treadle, and treadle-rod, of the weight E, pulley F, pulley or pulleys G, pulley K, and the cords, straps, or chains connecting said parts, substantially as and for the purposes set forth.

2. The arrangement of the weight E between ways M in the bottom or lower part of the frame A, as herein shown and set forth.

120,738. — STOVE-LID.—Robert C. Graves, Barnesville, Ohio.

Claim.—An inclined aperture through a stove-lid or other portable section of stove-tops, when used for the purpose of removing said lid or portable sections of stove tops from the stoves or replacing them upon the stoves.

120,739.—ADJUSTABLE CROWN-BLOCK FOR HAT-BLOCKING MACHINES.—William C. Griswold, Newark, N. J.

Claim.—1. A crown-block for blocking-machines consisting of a segmental ring expanded and contracted by slides and levers, substantially as described.

2. In combination therewith, the cam-arms *g′* for preserving the proper relative position of the sides of the oval, substantially as described.

120,740.—ADJUSTABLE BANDING-RING FOR HAT-BLOCKING MACHINES.—George Hayden, Newark, N. J., assignor to William C. Griswold, same place.

Claim.—The adjustable expanding banding-ring, operated by slides and levers, substantially as set forth, and for the purpose herein specified.

120,741, antedated October 24, 1871.—CHEESE-BOX.—John Jeffers Hecox, Lyons, N. Y.

Claim.—A cheese-box composed of the hinged parts A C, having the gauze ventilatura and covers, and the bottom D provided with movable platform B rotating in a guiding-groove and series of ridges, as specified.

120,742. — COTTON-PLANTER.—Richard G. Hobson, Houlka, Miss.

Claim.—1. The seed-plow T to open the furrow, a roller to press down the earth after the seeds are deposited therein, followed by a spring coverer and ridger X, substantially as and for the purpose specified.

2. In combination with the hopper the dividing-bar K, and the feed-shaft provided with the radial feed-arms J, and the two sets of spirally-arranged pins *h h*, substantially as described, for the purpose specified.

3. The feed-shaft, constructed as described, with the central radial feed-arms J, and the two sets of pins *h h*, arranged spirally around and upon said shaft in opposite directions, substantially as described, for the purpose specified.

120,743.—LOCK.—Edmund Dorman Hodgson, London, England.

Claim.—The combination of the slotted and serrated bolt B, its stump *b*, and inclined edges *k* and *m*, the lever D and its serrated projection E, the tumblers C, and the sleeve or curtain *l*, slotted for the passage of the bit of the key, and having an arm, *k*, the whole being constructed and operating as described.

120,744.—CIRCUIT-CLOSER FOR ELECTRICAL BURGLAR-ALARMS AND SIGNALS.—Edwin Holmes, Brooklyn, N. Y., and Henry C. Roome, Jersey City, N. J.

Claim.—1. The circuit-closer, consisting of the permanent magnet D, surrounded or inclosed by the magnetic coil or coils C C, charged by a primary circuit, and operating substantially as described, for the purpose set forth.

2. The combination of the armature I with the circuit-closer L, whereby the synchronous opening of one circuit and the closing of another by the action of said armature is effected, substantially as specified.

2. The combination of the foil spring *s* with the magnet D, essentially as described.

120,745.—FANNING-MILL.—Charlotte Ayer Hutchins, Syracuse, Iowa, administratrix of James Hutchins, deceased.

Claim.—The agitator-bar E when constructed as described and shown, and arranged to operate in relation to the vibrating shoe and hopper-throat of a fanning-mill or grain-separator, substantially as and for the purpose described.

120,746.—RAILWAY CAR-COUPLING.—Lawrence Ibeck, Kickapoo, Ill.

Claim.—In car-couplings, the tube d^1 hinged to the link D, spring d^2, piston E, and lever F, in combination with the dog G and perforated plate I, substantially as and for the purpose described.

120,747. — GLASS GLOBE FOR LAMPS.—George M. Irwin, Birmingham, Pa.

Claim.—A new article of manufacture, viz., a glass globe for lamps, the said globe being provided with a reflector consisting of a series of lozenge-shaped projections on the inner wall of the globe, with corresponding indentations silvered over, as described, and for the purpose set forth.

120,748. — TOP FOR MOLASSES-PITCHERS.—George M. Irwin, Birmingham, Pa.

Claim.—A new article of manufacture, viz., a top for molasses-pitchers, said top consisting of a rim or band, A′, provided with a flange, B, and lip C, covered by a lid, D, constructed as herein described, and for the purpose set forth.

120,749.—HEAD-BLOCK FOR SAW-MILLS.—William S. Jenks, Port Huron, Mich., assignor to himself and Orrin L. Jenks, same place.

Claim.—1. The construction and arrangement of the frame A A′, bearings B B^1 B^2, shafts D D, bevel-geared ratchet-wheels E E, pinion F, lever G, and pawls J for rotating the set-shaft C, substantially as described.

2. In combination with the above-named elements, the perforated quadrant H provided with

2. The metallic felly-connection A having the dovetailed chambers b, in combination with the dovetailed ends of the wooden fellies, when all constructed and arranged as herein shown and set forth.

120,721. — TREATING INDIAN CORN WITH MALT-EXTRACT. — Mattjas Cziner, New York, N. Y.

Claim.—Making extract from Indian corn by the combined action of a current of steam and of a liquid extract of malt, in the manner substantially as herein shown and described.

120,722.—RUFFLING ATTACHMENT FOR SEWING-MACHINES.—George W. Darby, Cincinnati, assignor to himself and James Harsha, Circleville, Ohio.

Claim.—1. The described arrangement of horizontally-guided gatherer F *f* G, detent L, and peculiarly-formed bracket E E' E'' E''', and bent lever H I, for the purpose explained.

2. In the described combination with the above the temper-screw K, for the object designated.

120,723.—FURNACE FOR HEATING TIRES.—James Degree, Hinesburg, Vt.

Claim.—The two series of perforations in the plate D' and the intervening solid portion of said plate to cause the ascending currents of the products of combustion to impinge upon the quarters and avoid the central portion of the tire, substantially as specified.

120,724.—HOLDER FOR STEREOSCOPIC PICTURES.—John L. Dibble, New York, N. Y.

Claim.—1. A stereoscopic-case, having the bottom near the open end formed with a beveled surface, *a*, adapted to receive and deflect upward the picture being introduced, and to guide it smoothly under the pile, as herein specified.

2. The folding end and half top C B, in combination with the main body A and beveled bottom *a*, the whole adapted to serve as herein specified.

120,725.—WASHING-POUNDER.— Archibald F. Dinwiddie, Columbia, Mo.

Claim.—The construction of the band *a*, connected with the socket for the handle by the conical form *a'*, in combination with cylinders *c* constructed to extend below the band *a*, in the manner shown and described.

120,726.—CAR-COUPLING.—Robert H. Dowling, Fenton, Mich. and Elkanah S. Perry, Clay Lick, Ohio.

Claim.—The hereinbefore-described car-coupling, consisting of the drawn-bars A, each provided with a head, A', containing a recess, B, and the bifurcated hooked bar C, pivoted to or upon the rod *a*, when each of said parts are constructed and combined in the manner and for the purpose specified.

120,727.—METALLIC BAND FOR BALING COTTON, &c. — John Downes, Handsworth, England.

Claim.—As a new article of manufacture, a folding metallic band for baling cotton and like purposes, constructed as herein described, consisting of two or more sections of hoop-iron hinged together, substantially as shown and set forth, to allow of said sections being folded flat together for transportation.

120,728.—COOKING-STOVE.—Paschal P. Ellis, St. Louis, Mo., assignor to Charles H. Buck and Wiley S. Wright, same place.

Claim.—1. The warming-closet for cook-stoves, with its several sections constructed and connected together as described, so as to fold as represented in Fig. 3, and expand and be sustained as represented in Figs. 1 and 2, all as set forth.

2. The hinged portion E, in combination with the several sections of the warming-closet, substantially as described and shown.

3. The combination of the tongue-and-groove joints A and ties *g* with the several folding sections of the warming-closet, substantially in the manner described and shown.

120,729. — DOOR-BOLT. — Lewis J. Evans, Binghamton, N. Y.

Claim.—The door-bolt herein described consisting of the cylindrical case A, the grooved key-spindle B, and the bolt, shaft B', provided with the toothed recess D, having the depth of the diameter of the key-spindle the length of its developed circumference, and arranged for said key-spindle to pass entirely through from side to side, as specified.

120,730.—DEVICE FOR ARRESTING MOTION. John Everding, Philadelphia, Pa.

Claim.—The combination, with a prime mover for machinery, of a wiper moving longitudinally upon a rotating screw, and a valve placed in the pipe through which the supply of operating fluid passes to the prime mover, the valve being closed by the rotation of the wiper upon the screw at determined points, substantially as and for the purpose set forth.

120,731.—SHUTTLE FOR SEWING-MACHINES. George A. Fairfield, Hartford, Conn., assignor to "The Weed Sewing-Machine Company," same place.

Claim.—1. The screw *c*, at right angles to the axis of the bobbin, with its nick *c'* for allowing the end of the bobbin-spindle to pass through the head, and a shoulder or groove under the head for retaining the bobbin-spindle in place, substantially as described.

2. The tension-spring *d* lying along the side and end of the inside of the shuttle-case, having a fulcrum at the end and regulated by a screw passing through the thick portion of the end of the shuttle-case parallel to its axis, substantially as herein described.

120,732.—CULTIVATOR.—John Faning and Friedrich Legler, Burlington, Iowa.

Claim.—1. The semicircular contrivance J, with its appendages *n* and *g*, constructed and operating as described.

2. The combination and arrangement of the axle B C with its perforations, pins, or bolts *e e*, tubular devices *r r*, beams P P, wheels A A, and parts *b b*, all constructed, arranged, and operating substantially in the manner and for the purposes herein described.

3. The combination of the inner and outer perforated arms of the axle B C, bolts or pins *e e*, and the grooved parts *b b* of the wheels, for adjusting the height of the axle and at the same time maintaining the proper relation of the beams and shovels to the ground, as herein set forth.

120,733.—GRATE-BAR.—Addison C. Fletcher, New York, N. Y.

Claim.—1. In grate-bars, constructed or provided with detachable fuel-bearings or points, the construction of the body A of the bar of a plate or plates having holes *b* in it, in combination with fuel-bearings or points B, formed with hook-shaped extremities for passage through, said holes to lock with the body, substantially as specified.

2. The construction of the fuel-bearings or points B with lower side extensions *c*, hooked, as at *d*, with a groove, *e*, on the under side of their upper portions, essentially as herein set forth.

120,734.—SLAT-HOLDER FOR BEDSTEADS.—Frederic G. Ford, Philadelphia, Pa.

Claim.—The metal slat-receiver herein described, as a new article of manufacture.

120,735.—PROPULSION OF VESSELS.—Samuel F. Gard, New Orleans, La.

Claim.—1. A boat made with openings on the sides only, and provided with a track running around the same, in combination with the revolving drum or apron B provided with the wheels *b b*, said apron being operated from with-*a*, as set forth.

2. In combination with the revolving drum or apron B and paddles D D, the levers *e e* and guard *f*, or their equivalents, for the purposes herein set forth.

3. The combination of the boat A with track *a*, drum or apron B with wheels *b b*, and chain or rack-bar *d*, the cog-wheels C, and paddles D D, all constructed and arranged substantially as and for the purposes herein set forth.

120,736. — WHEELBARROW. — John Gehr, Clear Spring, Md.

Claim.—1. A wheelbarrow, provided with gooseneeks *a*, as specified.

2. The combination of a wheelbarrow with slotted guards *g* and springs *e*, as described.

120,737. — MORTISING-MACHINE.—Dalphon L. Gibbs, Worcester, Mass., assignor to R. Ball & Co., same place.

Claim.—1. The combination with the frame, bearing-piece, treadle, and treadle-rod, of the weight E, pulley F, pulley or pulleys G, pulley K, and the cords, straps, or chains connecting said parts, substantially as and for the purposes set forth.

2. The arrangement of the weight E between ways M in the bottom or lower part of the frame A, as herein shown and set forth.

120,738. — STOVE-LID.—Robert C. Graves, Barnesville, Ohio.

Claim.—An inclined aperture through a stove-lid or other portable section of stove-tops, when used for the purpose of removing said lid or portable sections of stove tops from the stoves or replacing them upon the stoves.

120,739.—ADJUSTABLE CROWN-BLOCK FOR HAT-BLOCKING MACHINES.—William C. Griswold, Newark, N. J.

Claim.—1. A crown-block for blocking-machines consisting of a segmental ring expanded and contracted by slides and levers, substantially as described.

2. In combination therewith, the cam-arms *g'* for preserving the proper relative position of the sides of the oval, substantially as described.

120,740.—ADJUSTABLE BANDING-RING FOR HAT-BLOCKING MACHINES.—George Hayden, Newark, N. J., assignor to William C. Griswold, same place.

Claim.—The adjustable expanding banding-ring, operated by slides and levers, substantially as set forth, and for the purpose herein specified.

120,741, antedated October 24, 1871.—CHEESE-BOX.—John Jeffers Hecox, Lyons, N. Y.

Claim.—A cheese-box composed of the hinged parts A C, having the gauze ventilators and covers, and the bottom D provided with movable platform B rotating in a guiding-groove and series of ridges, as specified.

120,742. — COTTON-PLANTER.—Richard G. Hobson, Houlka, Miss.

Claim.—1. The seed-plow T to open the furrow, a roller to press down the earth after the seeds are deposited therein, followed by a spring coverer and ridger X, substantially as and for the purpose specified.

2. In combination with the hopper the dividing-bar K, and the feed-shaft provided with the radial feed-arms J, and the two sets of spirally-arranged pins *h h*, substantially as described, for the purpose specified.

3. The feed-shaft, constructed as described, with the central radial feed-arms J, and the two sets of pins *h h*, arranged spirally around and upon said shaft in opposite directions, substantially as described, for the purpose specified.

120,743.—LOCK.—Edmund Dorman Hodgson, London, England.

Claim.—The combination of the slotted and serrated bolt B, its stump *b*, and inclined edges *h* and *m*, the lever D and its serrated projection E, the tumblers C, and the sleeve or curtain *l*, slotted for the passage of the bit of the key, and having an arm, *k*, the whole being constructed and operating as described.

120,744.—CIRCUIT-CLOSER FOR ELECTRICAL BURGLAR-ALARMS AND SIGNALS.—Edwin Holmes, Brooklyn, N. Y., and Henry C. Roome, Jersey City, N. J.

Claim.—1. The circuit-closer, consisting of the permanent magnet D, surrounded or inclosed by the magnetic coil or coils C C, charged by a primary circuit, and operating substantially as described, for the purpose set forth.

2. The combination of the armature I with the circuit-closer L, whereby the synchronous opening of one circuit and the closing of another by the action of said armature is effected, substantially as specified.

2. The combination of the foil spring *s* with the magnet D, essentially as described.

120,745.—FANNING-MILL.—Charlotte Ayer Hutchins, Syracuse, Iowa, administratrix of James Hutchins, deceased.

Claim.—The agitator-bar E when constructed as described and shown, and arranged to operate in relation to the vibrating shoe and hopper-throat of a fanning-mill or grain-separator, substantially as and for the purpose described.

120,746.—RAILWAY CAR-COUPLING.—Lawrence Ibeck, Kickapoo, Ill.

Claim.—In car-couplings, the tube d^1 hinged to the link D, spring d^2, piston E, and lever F, in combination with the dog G and perforated plate I, substantially as and for the purpose described.

120,747. — GLASS GLOBE FOR LAMPS.—George M. Irwin, Birmingham, Pa.

Claim.—A new article of manufacture, viz., a glass globe for lamps, the said globe being provided with a reflector consisting of a series of lozenge-shaped projections on the inner wall of the globe, with corresponding indentations silvered over, as described, and for the purpose set forth.

120,748. — TOP FOR MOLASSES-PITCHERS.—George M. Irwin, Birmingham, Pa.

Claim.—A new article of manufacture, viz., a top for molasses-pitchers, said top consisting of a rim or band, A', provided with a flange, B, and lip C, covered by a lid, D, constructed as herein described, and for the purpose set forth.

120,749.—HEAD-BLOCK FOR SAW-MILLS.—William S. Jenks, Port Huron, Mich., assignor to himself and Orrin L. Jenks, same place.

Claim.—1. The construction and arrangement of the frame A A', bearings B B^1 B^2, shafts D D, bevel-geared ratchet-wheels E E, pinion F, lever G, and pawls J for rotating the set-shaft C, substantially as described.

2. In combination with the above-named elements, the perforated quadrant H provided with

the movable stop L, substantially as and for the purpose specified.

120,750. — BATTERY-CURRENT MANIPULATOR.—Jerome Kidder, New York, N. Y.

Claim.—1. The combination, with the slide C and series of linearly-disposed batteries, of a pole-changer, composed of cogged wheels or devices *m n*, and pole-springs *s t* for operation in concert with the springs which close upon the poles of said batteries, substantially as specified.

2. The elongated springs *b' c'* of either or one of the traveling slides, when arranged in relation with the poles *f g* of the batteries as described, whereby said springs are made to close on a succeeding battery before leaving the other battery on which they were closed, and, when the slide is located, are caused to close upon one pole on each side of the apparatus.

3. The combination of the key *c'* with either of the elongated springs *b' c'* of the slide B or C, to which the latter are applied, essentially as herein set forth.

4. The shifting connector D^1 in combination with the poles *f* and *g* of the batteries, substantially as described.

5. In combination with the slide which closes the poles of the batteries, a helix, D^2, or helices carried by said slide, substantially as and for the purpose herein set forth.

120,751.—PAINT.—Benjamin F. King, Annapolis Junction, Md.

Claim. — The combination of the ingredients herein mentioned, in the manner specified.

120,752. — SHOW-CASE. — William Henry Grove, Philadelphia, Pa.

Claim.—A show-case having at the corners shields B applied so as to cover the joints at the junctions of the strips or moldings, as set forth.

120,753.—RAILWAY CHAIR.—John Lidderd, Manchester, Great Britain.

Claim.—The novel and peculiar construction and arrangement of railway chair shown and described, together with its peculiar adaptation to railway metals or rails for steadying and supporting the same, substantially in the manner hereinbefore described, set forth, and fully illustrated in the drawing attached.

120,754.—ICE-HOUSE.—Charles Liebmann, Brooklyn, E. D., N. Y.

Claim.—1. A dripping-floor for an ice-house, constructed of a series of troughs, which is fastened to the floor-beams by clamping-strips and screws, substantially in the manner set forth.

2. The floor-beams E, constructed substantially as described, with the metallic floor made up of a series of detached troughs, in combination with the ice-chamber and cooling compartment of an ice-house, as set forth.

120,755.—BOTTOM OF BIRD-CAGES. — Otto Lindemann, New York, N. Y.

Claim.—A bird-cage bottom having a seamless inner face, in combination with the foot B, when the two are united together by means of the bead *b*, central depression *a*, and annular recess *c*, the whole constructed as and for the purpose set forth.

120,756. — CLOTHES-DRIER. — Hayden J. Lockwood, Wayne, Pa.

Claim.—A clothes-bar constructed as described, having its main and supplemental wings so connected by staples as that the said supplemental wings, when filled with clothes, may be turned inwardly and held rigidly in such position against the foot of the rack, in the manner and for the purposes herein described.

120,757. — FOLDING CARRIAGE FOR CHILDREN.—Herman Lutz, New York, N. Y.

Claim.—1. The front wheels or runners E secured to detachable or folding standards, in combination with the folding body A of a vehicle, and with the detachable hind wheels or runners F, substantially as described.

2. The braces *r*, in combination with the folding body A of a vehicle and its front and hind wheels or runners, substantially as described.

3. The hinged seat C, in combination with the body A, spring or springs *j*, hinged back-rest B, and hinged foot-rest D, all constructed and operating substantially in the manner herein set forth.

120,758.—WAGON.—Daniel Mater, Jr., Bellmore, Ind.

Claim.—The within-described running-gear for wagons, consisting of the bolsters A, boxes B with rollers *a*, axles C, coupling D with hooks *b c*, eye or loop *d*, fifth-wheel E, and wheels G, all constructed and arranged substantially as and for the purposes herein set forth.

120,759.—TABLE.—Louis Menzer, Goodrich, Mich.

Claim.—The combination of the table A B C A' B' C', leaves D D' and G G', and levers E E or their equivalents, constructed, arranged, and connected together, substantially as and for the purposes herein set forth.

120,760.—EXTENSION-TABLE.—Louis Menzer, Goodrich, Mich.

Claim.—The combination of the drawer C, springs *e e* and *f*, pin *i*, and trigger A, all constructed and arranged substantially as and for the purposes herein set forth.

120,761.—WATER-RAM. — Franklin Miller, Pittsburg, Pa.

Claim.—1. The tube B running longitudinally through the hull of a vessel, and having at its front end a bell-shaped or conical mouth, covered by a grating, C, and at its rear end a spindle-valve, G, substantially as and for the purposes herein set forth.

2. The combination of the tube B, air-chamber D, discharge-pipe B, and valve G, all constructed and arranged to operate substantially as and for the purposes herein set forth.

120,762.—HINGE. — Jonathan Miller, Watkins, N. Y.

Claim.—1. The spiral pintle A comprising the cylindrical part *a*, the flange *b*, and spiral ribs *c* and *d*, combined with the knuckles H I, when said ribs and the walls of the holes in the knuckles are arranged in the forms substantially as described.

2. In combination with a rising and falling gate-hinge, the locking device herein described, consisting of the projections B and the tapered pintle F on the knuckle I, and the eye in the horizontal and the long rib D on the perpendicular portion of the knuckle G, substantially as set forth.

120,763, antedated October 28, 1871.—FERRULE.—Daniel Moore, Brooklyn, N. Y., assignor to Eugene Bissell, New York city.

Claim.—The cap *d'* formed with a hole to receive the tang *f*, and with a cylindrical recess into which the ferrule is passed, as and for the purposes set forth.

120,764.—GAS-FURNACE AND FORGE.—Joseph R. Morris, Houston, Tex.

Claim.—1. The combination of one or more forges with a furnace which consumes the gases evolved from such forges, and with a boiler in which steam is generated by the combustion of such gases in the furnace, such steam being applied to the driving of machinery of any kind, substantially as specified.

2. The combination of the chimney *b c*, flues A, flaps *g g'*, and forges *a a'*, as described.

3. The combination of the cut-off *t*, elbow-lever p^1, loop p^2, arm q^1, and piston-rod *q*, as set forth.

4. The combination of the anvil *s*, lever *v*, treadles *v'*, connecting-rod *w*, tube *u*, and pipe *o*, as explained.

120,765.—SURFACE-SIZED PAPER FOR PAPER-COLLARS, &c.—William F. Moseley, Brooklyn, N. Y.

Claim.—1. The process herein described for finishing paper, the same consisting in the application of a surface-size of glue and starch, then covering with talc or its equivalent, and afterward brushing the surface, all substantially as set forth.

2. The improved surface-sized collar-paper herein described, either in the form of sheets or made into collars, as set forth, the same being a new article of manufacture.

120,766.—BEE-HIVE. — Abraham Mutersbaugh, Lewinsville, Va.

Claim.—1. Mounting the box upon the perforated sheet-iron plates C, in combination with the cupola likewise perforated, for the purpose of ventilation, while light is excluded from the interior of the hive, the said plates C also serving to insure the hive against depredation by the bee-moth, as herein shown and described.

2. The arrangement of the ingress and egress passages E F of the hive for protecting the swarm against the attacks of robber bees and the depredation of the bee-miller, in combination with the wire-netting I attached to the box and encompassing one of the openings of the hive, the latter to be used as a safety-guard to the escape and destruction of the bees when they emerge in the spring, as herein shown and described.

3. The employment of sheet-iron plates G to break the joints of the sides and top of the hive, in the manner and for the purpose described.

120,767. — PUMP-PISTON. — Wilson Newcomb, Baltimore, Md.

Claim.—The packing-ring E, constructed in segments united at their ends, as described, and provided with the pivoted plates L L, constructed to lap over and protect the joints of the ring, all said parts being combined and arranged substantially as and for the purposes herein set forth.

120,768.—BROILER.—John C. Nobles, Ilion, N. Y.

Claim.—1. The sheet-metal frier and broiler, consisting of two separate pans, A and B, one provided with the bent lip *d* and rim *c*, the other with the annular ledge *a*, substantially as specified.

2. The sheet-metal frier and broiler, consisting of two separate pans, A and B, one provided with the lip *d* and rim *c*, the other with an annular ledge *a*, and both with the center-holes *z* and covers *n*, substantially as specified.

120,769.—CULINARY UTENSIL FOR BROILING AND FRYING.—John C. Nobles, Ilion, N. Y.

Claim.—1. The improved culinary vessel, having the pan A adapted to receive the skeleton frame and gridiron E, the cover A', and the spoon-shaped handle and handle-lid B B' adapted to hold the spoon *a*, fork a^1, and knife a^2, in combination with the flange *b*, lip *b'*, and ring G, as and for the purpose specified.

2. In a culinary utensil having a double spoon-shaped handle, B B', the arrangement of the knife, fork, and spoon, in the manner described.

3. The combination with the pan A, having the cover A' and double handle B', of the combined box-frame and gridiron E and boxes e^2, as and for the purpose specified.

4. The improved travelers' dinner-knife, having the hollow handle D with lid *d*, as and for the purpose set forth.

120,770.—GATE.—William A. Penney, Morrisville, N. C., assignor to himself and Samuel R. Horne, same place.

Claim.—1. The rail *a* provided with the groove *b*, and combined with the spring *f*, elastic bar *g*, catch *i*, and pin *c*, as specified.

2. The slotted post *k* combined with the faced pin *l*, knob *o*, and handle *n*, as described.

120,771. — MANUFACTURE OF ARTIFICIAL SULPHATES OF BARYTA.—Jacob Philip, Hamburg, Germany.

Claim. — 1. The product obtained by treating kieserit or epsom salt with soluble salts of baryta, substantially in the manner described.

2. The product obtained by treating kieserit or epsom salt with caustic lime, caustic baryta, or caustic strontia, in the manner herein set forth.

3. The product obtained by treating kieserit or epsom salt with muriate of lime, produced and applied in the manner described.

120,772. — ELECTRO-GALVANIC CHAINS, BANDS, &c.—Isac Louis Pulvermacher, London, England.

Claim.—1. Metal plates combined with a backing of porous or absorbent material, said backing being provided with a wax or sparadrap, arranged so that they can be used with a self-sustaining and permanent electrical or galvanic action derived from an exciting liquid or by perspiration thrown off from the body of the wearer, substantially as and for the purpose set forth.

2. The arrangement of the devices, constructed as herein shown and described, for applying electric, galvanic, and magnetic currents to the human body, as set forth.

3. The apparatus herein shown and described for charging the bands, chains, garments, or articles of dress, as set forth.

4. The arrangement of the deep trough battery shown in Figs. 65 and 66, operating as and for the purpose set forth.

120,773.—SAW-FILER.—John Adam Rau, Bethlehem, Pa.

Claim.—A block, F, having a transverse opening for the reception of a file-handle, in combination with a guide-bar, C, to which one or both edges of the block are adapted, and on which the block can both slide and rock, so that the file can be inclined either upward or downward, substantially as described.

120,774, antedated November 1, 1871.—CUTLERY.—Henry T. Reeves, Beaver Falls, Pa.

Claim. — The bifurcated tang *a a*, made with barbs *c* and recesses *e*, in combination with a handle grooved on both edges and the end, and a cast filling, *f*, such filling entering the end groove of the handle covering the ends of the tangs and engaging the hooks or barbs *c*, as at *s*, substantially as described.

120,775. — POTATO-DIGGER. — Richard B. Robbins, Adrian, Mich.

Claim.—In a potato-digger having the horizontal bent arms E arranged as described, the standard C, bent at C', as and for the purpose specified.

120,776.—EXPLOSIVE COMPOUND.—Edward A. L. Roberts, Titusville, Pa.

Claim. — 1. The improved explosive compound herein described, produced by combining nitro-glycerine or other highly-explosive liquid with mineral fiber or asbestus, substantially as set forth.

2. The combination of nitro-glycerine, asbestus, and infusorial earth or silica, as set forth.

3. The combination of asbestus and solid explosive compounds, such as herein described, with or without the addition of nitro-glycerine.

120,777. — HARVESTER-RAKE. — John M. Rosebrooks, Hoosick Falls, N. Y.

Claim.—In combination with a rake and its stale,

the former carried around the platform by a chain, *s*, so as to move the grain from the inner toward the outer side of the platform, and the latter turning upon a pivot at *a* near the main frame and almost in rear of the drive-wheel, the pivotal connections *a* and *b* and slide *d* or their equivalents, as shown in Fig. 3, so that they will admit of the slide increasing and diminishing its operative length, substantially as described.

120,778.—WINDMILL.—Asahel D. Ruddock, Berlin, Wis., assignor of one-half his right to T. L. Terry, same place.

Claim.—1. The fans or wings G G, provided with pins *i h*, as described, so as to be pivoted on their edges to the wheel *b d c*, and operated by means of the sliding collar H, cranks *n n*, rods *m m*, and eyes or loops *l l*, all substantially as and for the purposes herein set forth.

2. The combination of the hollow shaft L and the governing-rod *p* with weight J and float K, all constructed and operating substantially as and for the purposes herein set forth.

3. The combination of the governor *m n*, lever *s*, and weight *t*, all constructed and arranged substantially as and for the purposes herein set forth.

120,779. — CHECK-REIN, &c.—John Schofield, Worcester, Mass.

Claim.—1. A harness provided with a check-rein attachment or device, operating substantially, as herein shown and described, to draw up and fasten, without the assistance of the driver, the check-rein, after the horse has finished drinking.

2. The combination, with the check-rein L and saddle or central portion in a harness, of the socket A, stop-block B, elastic cord or strap D, spring-latches G, and latch-cord H or equivalent devices, substantially as and for the purposes set forth.

3. The combination, with the socket-piece A attached to the saddle of the harness, and stop-block B attached to the check-rein, of an automatic-catch device, for the purposes stated.

4. The combination, with the socket-piece A, of the flexibly-attached bolt *a*, substantially as and for the purpose set forth.

5. The combination, with the elastic cord D, stop-block B, and head E, of the screw-thimbles K K′, substantially as and for the purposes set forth.

120,780. — EXTENSION CHAIR. — Ludwig Friedrich Schwenkel, New York, N. Y.

Claim.—1. The sections E F and foot-rest *p*, connected to each other by slip-joints *n*, and attached to the seat A, substantially in the manner herein shown and described.

2. The combination of the extension back-rest C, hinged arm pieces D, seat A, hinged sections E F, foot-rest *p*, and folding-legs *q*, substantially in the manner herein set forth.

3. The chamber-pot B, situated in the interior of the seat A, and supported by a lever, *b*, in combination with the finger-piece *c* and valve *f*, all constructed and operating substantially in the manner and for the purposes herein shown and described.

120,781.—STRAW-CUTTER.—Hugh Sells, Vienna, Canada.

Claim.—The combination of the wooden frame A, iron bed-frame B B¹, cutting-box B², driving-shaft C, cutter-shaft *D*, gears E E′, fly-wheel F carrying the cutters G and cam-plates O, the feed-rolls H and J, ratchets I and I′, lever K, pawls L and L′, and spring M, all constructed, arranged, and operated substantially as described and shown.

120,782.—WHIP-BRAIDING MACHINE.—Emerson Sizer, Westfield, Mass.

Claim.—1. The construction, upon the inside of a globe-machine, of the track B, formed in pieces or sections, for the purpose of enabling one racer to revolve around another traveling upon said section-way, substantially as set forth.

2. The arrangement upon the inner surface of wheels D D, &c., of the racers P P, &c., carrying the working cords, substantially as shown and described.

3. In combination with section-way B and the racers thereon, and the wheels D D, &c., with their racers, the wheel T with its arms W W, &c., with spring-washers *g g*, &c., at their points of attachment to wheel T, the parts being all constructed and arranged substantially in the manner and for the purpose shown and described.

120,783.—CASTER FOR SEWING-MACHINES.—Henry A. Skinner, Worcester, Mass., assignor to himself, Johnothan Luther, and Moses W. Wheeler, same place.

Claim.—The combination of the cams A A A A, each pair coupled by the rods B B, with the single toggle-lever D D operating the casters E E E E by one movement, substantially as shown and described, and for the purpose set forth.

120,784. — STONE-CRUSHING APPARATUS.—Austin H. Smith, Brooklyn, N. Y.

Claim.—1. A hydraulic ram, reciprocated by a reciprocating plunger acting upon the liquid in an inclosed vessel, substantially as set forth.

2. The stone-crushing jaws combined with the ram *l* and reciprocating plunger *r*, substantially as set forth.

3. The stop *o*, ram *l*, rods *g*, and springs *h*, in combination with the moving jaw *d* and stationary jaw *a*, as and for the purposes set forth.

4. The adjustable displacement plunger *t*, in combination with the plunger *r*, ram *l*, and water-vessel *b*, substantially as and for the purposes set forth.

5. The stone-crushing jaws, in combination with hydraulic mechanism, substantially as set forth, for moving one or both such jaws, as set forth.

120,785. — CLOTHES-DRIER.—George Clayton Smith and Charles Henry Dietrich, Middleville, Mich.

Claim.—1. The combination of the arms H, curved plates *h h′*, gudgeon *i*, posts A and C, when constructed and arranged substantially as and for the purpose set forth.

2. The disk *h′*, in combination with the gudgeon *i*, arms H, plate *h′*, and post C, as and for the purpose specified.

120,786. — REVENUE-STAMP PROTECTOR.—Robert M. Smith, Baltimore, Md.

Claim. — The beer or spirit-package revenue-stamp protector, substantially as herein described.

120,787. — CURTAIN-FIXTURE. — William Robert Smith, Seaforth, Canada.

Claim.—The combination, with the curtain-roller B and pulley C, of the end guide *d*, center guide *d′*, and weighted cord D, and curtain E, constructed substantially as specified.

120,788. — BREECH-LOADING FIRE-ARM.—William S. Smoot, Ilion, New York, assignor to himself and E. Remington & Sons, same place.

Claim.—1. The combination of the lever D, with its spring and scar-nose *c*, with the breech-block B and hammer C, as and for the purpose substantially as described.

2. The combination of the inclined surface on the breech-block with the cut-away portions of the extractor and the spring L, as and for the purpose described.

3. In combination with the extractor E, operating as herein described and represented, the enlarged head *e*, corresponding in shape with the rear end of the barrel, as and for the purpose described.

120,789. — CULTIVATOR. — Samuel Snider, Taylorsville, Ky., assignor to himself, A. P. Harcourt, and G. H. Stone, same place.

Claim.—The shovel G, having a central ridge, *d*

e, the slides being sloped and furnished with wings H H, while the upper portion of the shovel is rounded in cross-section, and is gradually widened out above the point at which the wings diverge, as shown and described.

120,790. — CAMERA-STAND. — Charles H. Snively, Millersburg, Pa.

Claim.—1. In a camera-stand, the combination of the box A, table C, posts D D′, rack *d*, and wheel *d¹*, as and for the purpose specified.

2. The clamping-bars F F′ and clamping-screw E, in combination with the adjustable table C supported on posts D, as and for the purpose specified.

3. In a camera-stand, the combination of the adjustable pivoted table H, vertically-adjustable table C, hinged frame I, slotted standards K, and transverse bar L, as and for the purpose set forth.

120,791.—BROOM. — William C. Spellman, Hartford, Conn.

Claim.—1. A broom, composed of corn doubled upon itself and inserted in the head so that both the butts and points constitute the body or brush, substantially as described, for the purpose specified.

2. In combination with a broom and its strengthening-wires or bands, the wooden posts I, substantially as described, for the purposes specified.

3. The broom-head, consisting of the doubled corn inserted in the head, as described, the strengthening-wire or band, and the wooden posts I, as herein set forth.

120,792.—ATTACHMENT FOR WASH-BOILERS.—Charles W. Sterick, Northumberland, assignor to William A. Middleton, Harrisburg, Pa.

Claim.—The combination of the rim A, bottom B raised in the center, plates C C, tubes D D, and rods E E, all constructed and arranged as described to form attachment for wash-boilers, substantially as herein set forth.

120,793.—CORN-PLANTER. — Seth Stevens, North Fryeburg, Me.

Claim.—1. The adjustable roller *e¹* sliding on its shaft, cam-projections *a*, cranks *d² d*, shaft *c′*, and vibrating seed-boxes *f* and slides K, adapted to conjoint operation, substantially as described.

2. The rod E, clutch-arm *e²*, lever D, and crank-shaft *d³*, in combination with the adjustable roller *e¹* and shaft *c* and vibrating seed-boxes, as and for the purpose set forth.

3. The pivoted arms G H, connecting the standards F and *c*, substantially as and for the purpose set forth.

4. The short coverers *I²*, formed with a vertical convex inner surface, in combination with the long oblique coverer *I¹*, curving to the rear and inward, all constructed and arranged in the manner described, and secured to the standards F, as and for the purpose specified.

120,794.—CULTIVATOR.—Alexander C. Taylor, North Fairfield, Ohio.

Claim.—The arrangement, upon the standard C, of the share D, hinged and adjustable wings F, adjustable and reversible wings G, and stay-rod H, as and for the purpose set forth.

120,795.—EGG-CARRIER.—Christopher Tennant, Dublin, Md.

Claim.—An egg-carrier, consisting of a box filled with perforated plates of any suitable material, having on both sides rows of hollows between the holes, and placed one above another with their wide and narrow margins alternately next the same side of the box, substantially as specified.

120,796, antedated October 21, 1871.—SASH-STOP AND LOCK. — Nathan Thompson, Brooklyn, N. Y.

Claim.—1. The combination of the perforated stationary bar D with the sash-bar or strip E having locking-points or cavities *c*, and the screw or movable stop G, essentially as herein set forth.

2. The bar or strip E constructed to form a guide in direction of its length, and provided with centering and locking-points or cavities *c*, in combination with the box or nut F and screw G, substantially as described.

120,797.—WASHING-MACHINE. — Milow L. Tompkins, Wataga, Ill.

Claim.—The hollow shaft I, having a ledge, K, and pinion J, and the disk L, when constructed as described, and arranged to operate with the shaft D, pinion E, disk G, tub B, frame A′ A′, uprights A A, and shaft M with crank *m′* and bevel-wheel *m*, substantially as shown, and for the purpose specified.

120,798.—JAM-NUT.—William H. Van Cleve, Ypsilanti, Mich.

Claim.—As a new article of manufacture, the wooden jam-nut A, hooped or incased with a metallic band, A′, as described.

120,799.—BEE-HIVE.—Fabien Varin, Huntsville, Ala.

Claim.—1. The bee-hive protector, having the drawer E constructed as described, with ribs F and trough B, substantially as described.

2. The drawer E constructed in two parts and furnished with the horizontal shelves K, as and for the purpose specified.

3. The box C having the hinged door D and rod D′, in combination with the drawer E having ribs F, shelves K, and trough B, as and for the purpose specified.

120,800. — BREECH-LOADING FIRE-ARM.—Friedrich Von Martini, Frauenfeld, Switzerland.

Claim.—1. The removable trigger-plate, made with lugs or ears and having faces or abutments, in combination with the breech-receiver or body, fulcrum-pin, and tilting hand-lever, formed with suitably-curved faces or bearing-surfaces, which rest against or work upon the circular faces or abutments of the lugs or ears of the trigger-plate, whose fore-end is secured in position by the axis-pin of the extractor-lever, all as herein shown and set forth.

2. The combination of the cocking-lever, its fulcrum-pin, and the external indicator, with the jointed part arranged to operate in conjunction with the projecting part or extension of the hinge-pin of the breech block, as herein shown and set forth.

3. The combination, with the removable trigger-plate, of the external indicator and its slide, the latter being arranged to operate in conjunction with the projecting part or extension of the hinge-pin of the breech-block, as shown and set forth.

4. The combination of the slotted hand-lever, pivoted in the removable trigger-plate, with the spring-catch arranged within the breech-receiver or body, and operating in conjunction with said hand-lever, substantially in the manner shown and specified.

5. A breech-loading mechanism, constructed with the curved surfaces of the pivoting-joint of the hand or tilting-levers made to take their bearings upon and oscillate around corresponding surfaces on the trigger-plate, so as to relieve the axis-pin of the tumbler or cocking-lever from any strain, friction, or gripe, substantially as and for the purposes set forth.

120,801.—TRANSPLANTER.—John E. Waite, Hatfield, Mass.

Claim.—1. In combination with the frame for holding them and affording a bearing for the lever-handle S, the pipe D, collars H and I, spring *m*, followers *h h*, pieces *k k*, forming in effect, when brought together, an inverted funnel, and the lever-handle S with its connecting-rod, the parts be-

ing constructed and arranged substantially as and for the purpose hereinbefore specified.

2. In combination with the above the wheel W with one or more spurs, *r*, as shown and described.

120,802. — MEDICAL COMPOUND FOR THE CURE OF RHEUMATISM. — Charles F. Washburn, San Francisco, Cal.

Claim.—A mixture composed of the above-named ingredients compounded in about the proportions above described.

120,803.—HEATING-STOVE. — John W. O. Webb, Vinton, Iowa.

Claim.—1. The arrangement, within the interior drum D, of a series of loose sheet-metal tubes, *c*, with their upper ends opening into the chamber which incloses them, and supported in position by contact with each other, requiring no fastenings, and serving to retain the heat of the drum, as shown and described.

2. The sheet-metal tubes *c* of the drum D, made open or split from end to end to allow them to be fitted one against the other in a nest, and admit of their expansion and contraction, as described.

120,804.—LOCK FOR PIANOS, &c.—Elbert D. Weyburn, Pittsburg, Pa.

Claim.—The vibrating bolt B actuated by the bent spring *s*, in combination with the unlocking-cam G and adjustable screw-catch pin F, arranged to operate within the disk-shaped case, as described, and in co-operation with the spring-tube a, substantially as and for the purposes set forth.

120,805.—DUMPING-WAGON.—John I. Wolf, Greenfield, Ohio.

Claim.—1. The combination of the plates B B, chains *a a*, and shaft E, substantially as and for the purposes herein set forth.

2. The pins *c c*, arranged in the shaft E, substantially as and for the purposes herein set forth.

3. The lever G, rod *d*, and lever *f*, or their equivalents, constructed and arranged substantially as and for the purposes herein set forth.

120,806.—REEFING SAILS. — John Edward Worthman, Mobile, Ala., assignor to himself, Orville F. Cawthorn, and Randolph G. Reading, same place.

Claim.—1. The combination, with a sail and yard, of draw-ropes *d e* pulling in opposite directions, reef-points *f f'*, one-half attached to one draw-rope and the other half to the other draw-rope, main block A, lower block B, and halyard B', as specified.

2. The combination, with the foregoing, of the branches d^1 d^2 e^1 e^2, carings *g m*, pendant-blocks *j*, draw-ropes *k l*, and reef-points *n n'*, as described.

3. The combination, with a sail and the draw-ropes herein described, of reef-points passing through the grummets and attached to the loops *q*, as explained.

120,807.—CRUCIBLE FOR MELTING METALS, &c.—Richard Yeilding, Detroit, Mich.

Claim.—A crucible ribbed and grooved to receive and lock the coating thereto, in the manner specified.

120,808. — SKIRT-SUPPORTING CORSET.—Sapphira Young, Elmira, N. Y.

Claim.—1. The arrangement of the eyelet-holes *g* and the suspending-buttons h, in the production of my improved bust-supporting and skirt-suspending corset, substantially as and for the purpose herein set forth.

2. In combination with the eyelet-holes *g* and the buttons h of said corset, the skirt-protecting flap *e*, substantially as and for the purpose herein set forth.

REISSUES.

4,621.—CARRIAGE-TOP PROP-BLOCK. — Sarah L. Barnett and Simon Beery, Urbana, Ohio, assignees, by mesne assignments, of William N. Barnett, deceased.—Patent No. 52,126, dated January 23, 1866.

Claim.—1. A carriage prop-block, when composed of India rubber and having a projecting surface to serve as a cushion, substantially as described.

2. A carriage prop-block, when composed of India rubber having a projecting surface and projecting end pieces, substantially as described.

3. A carriage prop-block substantially as described, when constructed with a square hole longitudinally through the center thereof, to serve as a means of attachment.

4,622.—MANUFACTURE OF IRON AND STEEL. Jacob Jameson, Philadelphia, Pa.—Patent No. 92,054, dated June 29, 1869.

Claim.—The herein-described composition, as a flux, for the manufacture of iron and steel, and likewise the manufacture of iron and steel by the addition to molten iron, while in the furnace, of the herein-described composition in proper proportions.

4,623.—TRANSMITTING MOTIVE POWER.—Roswell T. Smith, Nashua, N. H., assignor to himself, John G. Blunt, William Earl, and J. K. Priest, same place.—Patent No. 59,089, dated October 23, 1866.

Claim.—1. The swinging rod or lever G and its counterbalancing weight in a machine for transmitting motion, substantially as described.

2. The combination of the loaded lever G and swivel-standard A in a machine for transmitting motion, substantially as described.

3. The jointed arm I, in combination with the loaded lever G and turning or swivel standard A in a machine for transmitting motion, substantially as described.

4. The combination, with the pendent swinging arm I, of the stirrup J, pivot-shaft K, and handle O, substantially as described.

5. The belt-pulley E on pivot-shaft C, and the belt-pulley L on pivot-shaft K, in combination with lever G and arm I, substantially as described.

6. The swivel stirrup J on swinging arm I, in combination with cage N, handle O, and shaft *g*, and connecting with the shaft K in the stirrups by bevel-gear or other equivalent means, substantially as described.

4,624.—ROOFING COMPOSITION.—Jacob H. Smyser, Pittsburg, Pa. — Patent No. 113,588, dated April 11, 1871.

Claim.—1. A composition for roofing of vulcanized India rubber or caoutchouc, in connection with the products of a destructive distillation or slow putrefactive change of organic matters, such as coal-tar, pine-tar, bitumens, asphaltum, or other chemically-equivalent vehicle or solvent, substantially as described.

2. Combining or mixing with the above-mentioned vulcanized India-rubber compound a salt of an alkaline metal, or salt of an earthy metal, or a mixture or chemical combination of salts of both, substantially as and for the purpose set forth.

4,625.—HEAD-BLOCK.—Edward H. Stearns, Erie, Pa.—Patent No. 81,837, dated September 1, 1868.

Claim.—1. In head-blocks for saw-mills, the employment of springs, so applied that when the knees are released from the setting mechanism the springs will automatically force the knees back to the required position for the next advancing movement, substantially as set forth.

2. The segment-bars L, constructed, arranged, and applied in the manner shown, or in any equivalent way, for the purpose of limiting the backward movement of the knees, as set forth.

3. The projecting arm *e* on knee C, in combination with the notched segment-bar L, or equivalent devices for stopping the backward movement of the knee, in the manner and for the purpose described.

4. The shaft N, notched cams M, in combination with segment-bar L having lug *r*, in the manner and for the purpose described.

5. The elastic buffer-stop P, composed of arm *e*, spring *n*, plate *f*, and bolt *g*, in combination with the segment-bar L, in the manner and for the purpose described.

6. The shaft G, pulley H, spring J, and chain I, in combination with the knee C of a head-block, in the manner and for the purpose described.

7. The supporting knee-guides B B and B B of two head-blocks with their knees C C, slides D D, and their actuating devices, the notched cams M, and segment-bars L, one on each head-block, in combination with the single extended shaft N and lever O, in the manner and for the purpose shown.

8. The shaft K having a cam on its end to throw the pawls out of gear with the rack, in combination with the shaft G, pulley H, chain I, and knee C, in the manner and for the purpose described.

9. The flanges T on sockets S, for the purpose of carrying and adjusting the dogs Q when they are disengaged from the log, substantially as described.

10. The head-block herein described, having attached thereto and operating therewith a mechanism for setting the knee toward the saw, a device for unlocking the mechanism and forcing it out of contact with the rack on the slide, a device for causing the knee to make a backward movement, and a device for stopping the backward movement at any desired point, constructed and arranged to operate in the manner substantially as describe .

4,626.—FLOUR-PACKER.—Samuel Taggart, Indianapolis, Ind. — Patent No. 24,963, dated August 2, 1859.

Claim.—1. A portable auger packing-machine having a short packing-shaft and a pressure-controlling brake, and the several parts constructed and arranged to occupy a single floor of a mill instead of two or three stories as heretofore, as described.

2. In a machine for packing flour and other substances, having a packing-shaft and auger, the combination therewith of a variable brake for increasing or diminishing the packing pressure upon the flour when required, essentially as described.

3. The combination, substantially as described, of a packing-shaft and auger with means for connecting it with a controllable brake, consisting of the lever C, connecting-rod K, and pinion M, as described.

4. In combination with a friction-weighted brake and a packing-shaft, the hand-wheel L for controlling the descent of the packing-shaft into the barrel, as described.

5. The upper bearing for the packing-shaft and the bearing for the clutch-wheel formed in one and the same fixed plate, as described.

6. The oil-chamber for the clutch-wheel, constructed and arranged to serve also as an annular centering guide thereto, as described.

7. The barrel-lifter, constructed and arranged to have an automatic lateral swinging movement to deliver the filled barrel out of the way of the filling-tube, as described.

8. A barrel-lifter, having a vertical swiveling post connected to the frame by guides to admit of its descent, and an oblique guide arranged to be operated by a fixed projection, by the weight of the filled barrel, to impart thereto a lateral swinging movement from beneath the flour-tube, as described.

9. The combination of the swinging barrel-lifter with the operating cam-lever U V, guide Y, and fixed projection Z, as described.

10. The guide Y and fixed projection Z, constructed and operating to both swing the filled barrel laterally out of the way and arrest the unfilled one centrally with the filling-tube, as described.

4,627. — LAMP-HEATER.—Windsor Newton White, Winchendon, Mass.—Patent No. 108,863, dated Novem'ber 1, 1870.

Claim.—1. The apparatus herein described, consisting of the vessel D provided with recessed bottom, and the shelf C having the central chimney-inlet *a* and the surrounding escape passages *b*, substantially as specified.

2. In a lamp-cooking apparatus a shelf, C, provided with the clamping-passage *d*, constructed to operate automatically on a supporting-rod passing through it, substantially as specified.

3. In lamp-heating apparatus, the combination, with the rod B and vessel D, of the adjustable annular shelf C, having rod-receiving passage *d*, substantially as specified.

4,628.—FASTENING FOR PAINT-CANS, &c.—John K. Chace, New York, N. Y., assignor to Silas A. Ilsey and Charles L. Northrup. Patent No. 101,430, dated April 5, 1870.

Claim.—1. The sheet-metal can, made with a screw at the upper portion of the sides, and an inward offset for the flanged sheet-metal cover, in combination with the screw-ring *d*, substantially as set forth, so that the cover or its packing rests upon the edge of the sheet-metal can, and the flange of the cover intervenes between the offset and the screw-ring, as set forth.

2. The ears *f* and bail *g* in combination with the sheet-metal screw-ring *d*, as and for the purposes set forth.

3. The combination of the sheet-metal screw-ring *d*, ears *f*, and bail *g*, with the rim *a*, inward offset *b*, and cover *c*, as set forth.

4,629.—HARVESTER-REEL.—John H. Keller, Boalsburg, Pa., assignor, by mesne assignments, of part interest to Daniel F. Luse and J. F. Sieberling Reaper Company.—Patent No. 108,912, dated November 1, 1870.

Claim.—1. A jointed adjustable reel-support, as herein described, provided with pulleys *c d e e'*, which bear the endless driving-chain or band of the reel, the same being arranged one upon the reel-shaft, one on a pivot concentric with the joint of the support, one near the latter within the angle of the joint, and one below on the standard of the support, in the manner shown, so as to keep the tension of the said chain or band nearly uniform in all the various positions to which the reel may be adjusted, substantially as herein specified.

2. The pivoted vibratory adjusting prop L, operating by means of a lever, H, connecting-rod *f*, and catch or ratchet-bar *k*, in combination with the jointed reel-support, substantially as and for the purpose herein specified.

3. In combination with the prop L, the vibratory lever H and connecting-rod *f*, the latter being connected with the lever or prop in adjustable positions, so as to vary the extent of the movement of the prop with a given movement of the lever, as specified.

4,630.—EXTRACTION AND MANUFACTURE OF OILS FROM VEGETABLE AND ANIMAL SUBSTANCES. — Thomas Richardson, John James Lundy, and Robert Irvine, London, England, assignors to John H. Wingfield, Milford, Conn. — Patent No. 42,987, dated May 31, 1864.

Claim.—1. The extracting and recovering oils from animal and vegetable substances by means of the solvent properties of the volatile hydrocarbons hereinbefore mentioned.

2. The use of gasoline boiling under 160° Fahrenheit as a solvent in the extraction and recovery of oils, fats, and grease from animal and vegetable substances.

3. The use of petroleum, naphtha, or benzine, boiling under 212° Fahrenheit, for the same purposes.

4,631.—End-Gate for Wagons.—Jeremiah L. Stropes, Bloomfield, Ind.—Patent No. 117,014, dated July 11, 1871.

Claim.—1. The combination of the braces *d*, cross-bar B, and grate D, constructed with cam-sides E, and having spring-latches K attached to said cams, substantially as specified, and for the purposes set forth.

2. The combination, with a wagon-body having the recessed transverse bar B with staples I and braces *d*, of the gate D provided with the latches K, side-pieces E, and hooks *h'*, substantially as specified.

3. The transverse sill-bar B, constructed with the recesses *i* to receive the hooks O when the end-gate is pressed down, substantially as specified.

4. The improved end-gate for wagons, having its cam-sides E cut obliquely from the hooks O to the hooks *h'*, substantially as and for the purpose specified.

5. The braces *d*, constructed with the shoulders *m* adapted to press down the end-gate D, as and for the purpose set forth.

6. The braced catch *d m*, operating in connection with the undulating spring-latch K of the end-gate D, substantially as specified.

4,632.—Electro-Magnetic Engine.—Jacob P. Tirrell, Charlestown, assignor to Edward Gassett, Boston, Mass.—Patent No. 118,561, dated August 29, 1871.

Claim.—1. A series of electro-magnets arranged radially in a frame, B, in combination with a series of radial arms placed on one or both sides of the same, and connected with a shaft, I, which operates a circuit-breaker, substantially as and for the purpose set forth.

2. The frame B with its electro-magnets, made adjustable substantially as and for the purpose set forth.

4,633.—Globe for Gas-Lights.—Toussaint Trudeau, Ottawa, Canada.—Patent No. 117,486, dated July 25, 1871.

Claim.—A shade or globe for gas-burners, having its bottom and top openings and its height of certain adjusted relative proportions, as herein set forth, and so arranged as to bring the narrowest part of its lower opening on or nearly on a level with the tip of the burner for regulating the inflowing currents of air and preventing the flickering of the flame, substantially as described.

DESIGNS.

5,348.—Tongs for Coals, &c.—John A. Ervien, Philadelphia, Pa., assignor to himself and Benjamin R. Myers, same place.

Claim.—1. The design for the enlargements or feet C C, substantially as shown and described.

2. The design for the whole tongs, including the feet C, legs A, and spring-connection B.

5,349.—Heating-Stove.—Robert Scorer and Robert Ham, Troy, N. Y., assignors to J. L. Mott, New York city.

Claim.—1. The design for the urn Z, as described.

2. The representation of a lantern, Y, cast on and with a plate of a stove or heater, as herein set forth.

3. The tablet or background X, in combination with a representation of a lantern, as herein set forth.

4. The design for the upper section W, as herein described.

5. The design for the frame or frames T of the illuminating section, as described.

6. The design for the rim-plate Q, as shown.

7. The design for the open-work section P, as described.

5,350.—Not issued.

5,351.—Fire-Dog.—Adolph Wunder, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for fire-dog, as described and shown in the accompanying illustration.

5,352.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,353.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,354.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,355.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,356.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,357.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,358.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,359.—Carpet-Pattern.—Albert Cowell, Kidderminster, England.

Claim.—The design for carpets, as shown.

5,360.—Carpet-Pattern.—Victor Guéritte, Glasgow, Scotland, assignor to W. Sloane & I. Sloane, New York city.

Claim.—The design for a carpet, as shown.

5,361.—Carpet-Pattern.—Josiah Mark Silcox, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

5,362.—Carpet-Pattern.—Josiah Mark Silcox, Kidderminster, England, assignor to James Humphries & Sons, same place.

Claim.—The design for carpets, as shown.

TRADE-MARKS.

512.—Smoking-Tobacco.—Louis Lee Armistead, Lynchburg, Va.

513.—Kitchen-Ranges.—Bartlett, Robbins & Co., Baltimore, Md.

514.—Cundurango.—Bliss, Keene & Co., New York, N. Y.

515.—Cundurango.—Bliss, Keene & Co., New York, N. Y.

516.—Gentlemen's Boots.—Clement, Colburn & Co., Boston, Mass.

517.—Wines, Liquors, &c.—Irad Fuller, New Haven, Conn.

518.—Lathe Chucks.—Eli Horton & Son, Windsor Locks, Conn.

519.—Wood Carpeting, Wainscoting, &c.—National Wood-Manufacturing Company, New York, N. Y.

520.—Stoves.—Redway & Burton, Cincinnati, Ohio.

521.—Carriage-Makers' Hardware.—H. D. Smith & Co., Plantsville, Conn.

522.—Woven Fabrics.—Sidney J. Solms, Philadelphia, Pa.

523.—Plows.—The Collins Company, Collinsville, Conn.

524.—Tea and Coffee.—The Great New York Tea Company, Baltimore, Md.

525.—Chemicals for Dyeing.—Weeks & Dupee, Boston, Mass.

526.—Blackings.—Charles H. Young & Co., Boston, Mass.

ISSUE OF NOVEMBER 14.

PATENTS.

120,809.—Washing-Machine.—William Arnold, Pawtucket, R. I.

Claim.—The connection of the boiler E by the pipes G and F, in combination with the machine A, all arranged as shown and described, for the purpose set forth.

120,810, antedated October 26, 1871.—Apparatus for Drying and Finishing Paper.—Hezekiah Dodge, Albany, N. Y.

Claim.—The stationary drying-chests A A or other equivalent, substantially as described, and for the purposes hereinbefore mentioned.

120,811.—Base-Burning Stove.—William Doyle, Albany, N. Y.

Claim.—1. The interposition of a detachable solid plate, A, within the combustion-chamber of a base-burning or fuel-reservoir stove, in combination with open or lattice-work shelves K or J, as and for the purposes herein shown.

2. The combination and arrangement of detachable solid plate A with fuel-reservoir B, and one or more doors, *r r* or *s*, in a base-burning stove, having flues D D and D' D', and an extension-flue, P, in the manner and for the purpose herein described.

3. The combination of revolving shelf K with reservoir B, and heating-chamber F formed by the interposition of detachable solid plate A, as herein set forth.

4. The combination of lattice-work shelves K or J within the combustion-chamber C of a base-burning stove with doors *r r* or *s*, and with or without the interposition of solid plate A, as herein shown and described.

5. The construction of open work or lattice-shelves K and J with solid places *g g* for the protection of irons, as herein set forth.

120,812.—Varnish for Destroying Insect Life.—Thomas J. Elliott, New York, N. Y.

Claim.—The addition to any good commercial varnish of my solution of corrosive sublimate, sal ammoniac, and gum or crude camphor in alcohol and spirits of turpentine, in the proportions stated, and in the ratio of solution to quantity of varnish as set forth, and for the purpose specified.

120,813.—Horseshoe.—David Grim, Pittsburg, Pa.

Claim.—A horseshoe formed with a high central rib, B, provided with indentations *e*, in combination with toe and heel calks *c' c'*, so constructed and arranged as to set astride of said rib and be maintained in place by their inside projections R resting in the indentation of the rib, substantially in the manner shown and set forth.

120,814.—Surgical Bandage.—John G. Groocock, New York, N. Y.

Claim.—As an article of manufacture, the tubular and woven bandage A, with a perforated strap, C, and buckle B with fixed pin D, at the ends, for the purposes set forth.

120,815.—Sewing-Machine.—Thomas J. Harper, Atlanta, Ga.

Claim.—The feeding mechanism herein shown and described, consisting of the slotted reciprocating inclined bar O, feeding-dog M, slotted bell-crank P, link *m*, and adjustable bar N having a pin entering the slot in *m*, all arranged and operating as set forth.

120,816, antedated October 27, 1871.—Inhaler.—Rush B. Heintzelman, New York, N. Y., assignor of one-half his right to Amzi S. Dodd, same place.

Claim.—The described inhaling instrument, consisting of the reservoir A fitted with the valve and perforations as described, the tube B made and applied to the reservoir as set forth, and a flexible tube or tubes, D, fitted with suitable tips and applied to the tube B over a perforated cap, all substantially as shown and described.

120,817.—Ruffling Device for Sewing-Machines.—Elijah Leavitt Howard, Malden, assignor to George Augustus Whiting, Charlestown, Mass.

Claim.—For use with a sewing-machine, the improved ruffling mechanism, as described, consisting of the plate *m* and its adjusting mechanism, the three plates *f g h*, the reciprocating ruffler R, and the upper band-guide *i*, all arranged and constructed in the manner and to operate substantially as described.

120,818.—Broom and Mop Holder.—George B. Isham, Burlington, Vt.

Claim.—The within-described mop, broom, and whip-holder, composed of the angular metal frame A having dowels F F, oblique slots B B with enlarged ends D D, and the smooth friction-rollers C C moving in the slots B B, all as shown and described.

120,819.—Rotary Pump.—Solomon W. Kelly, Nashville, Tenn.

Claim.—1. One or two central inlet supply-pipes or hollow journals, G, forming extensions of the plates of wheel B, in combination with one or more scrolls or wedges, *a*, applied between said plates, substantially as described.

2. The water-checks *g*, as described, combined with the rotary hollow wheel B and *a*, substantially as described.

120,820.—Ratlin Attachment for Rigging.—John C. Knowlton, Providence, R. I.

Claim.—The improvement in shroud-clasps used

in ratlin attachments, which consists in making openings A or a through the same, substantially as described, for the purposes specified.

120,821.—Bottle-Stopper. — Garrett C. Lowe, New York, N. Y.

Claim.—The staves *a a* between the cones *b c* and within the rubber cylinder *c*, in combination with the screw *d* for distending the cylinder *c* of the bottle-stopper, as set forth.

120,822.—Permutation Padlock. — Samuel Loyd, New York, N. Y.

Claim.—The flanged tumblers A A′, fitted one within the other, the outer one of which having the dial marked thereon, in combination with the adjustable curved spring E and the step-shaped notches of the hasp C, substantially as and for the purpose set forth.

120,823.—Propulsion of Canal-Boats.—Joseph M. McMaster, Rochester, N. Y.

Claim.—1. The oscillating valve-segments F provided with valves *g*, and arranged to be adjusted substantially as and for the purposes set forth.

2. The combination of the sets B B′ of double propeller-tubes provided with propellers C, the oscillating valve-segments F and adjusting arms *i*, arranged and operating substantially as and for the purposes set forth.

120,824.—Gas-Machine. — William T. McMillen, Richmond, Ind.

Claim.—1. An automatic gas-machine, composed of the air-blower L and carbureter B, in combination with the auxiliary carbureter and reservoir Q, arranged as herein specified.

2. The combination of cylinder D having buckets E, with the cylinder B with its ribs B′, both being rigidly attached to and revolving with hollow shaft F, substantially as herein set forth.

3. In combination with the generator of a gas-machine the removable jacket V, made in two parts, substantially as herein described and shown.

4. The blower M with its wings C fastened alternately to the ends of its case, and flaring suction-wing openings *a a* reversed at each end, in combination with the case L, substantially as described and set forth.

5. The drum H′, arranged within the pulley H, as herein described.

6. In combination with a gas-generating machine the arrangement of the stuffing-box K, as herein described.

120,825.—Stand for Show-Windows.—Joseph R. Palmenberg, New York, N. Y.

Claim.—The combination of the guides B, upright posts D with movable rods N, sliding-bar F with the movable rods G, supporting-bars *w*, and provided with hinged rods C, substantially as and for the purpose hereinbefore set forth.

120,826, antedated October 27, 1871. — Thrashing-Machine. — Aurelius V. Pitts, Chicago, Ill.

Claim.—1. In combination with the cylinder B the adjustably-rotative fan-case F and its inclosed fan, when constructed and arranged for operation, substantially as described.

2. The fan-case F and its inclosed fan, thrashing-cylinder B, and endless apron *a* provided with the prongs *b*, when combined and arranged to operate substantially as and for the purpose specified.

3. The combination and arrangement of the fan-case F and inclosed fan, apron *a*, cylinder B, and the fingers *t*, as described and shown.

4. In combination with a machine for thrashing grain, the fan-case F with its inclosed fan, when constructed to be removable, substantially in the manner and for the purpose specified.

120,827, antedated November 4, 1871.—Auger for Boring Boxes. — Robert L. Priester, Souder's Station Post Office, Md.

Claim.—The curved and adjustable cutter D with its cutting-edges E and R, when combined and operating on the slotted flange of the cutting-auger C, as herein described, and for the purposes set forth.

120,828.—Grain-Binder.—Moses T. Ridout, Sun Prairie, Wis., assignor to himself and Joseph H. Mann, same place.

Claim.—1. Teeth F and shaft G hinged to frame A, shaft H″ and teeth H, shaft K, teeth L, shaft M, teeth N, and lever U′, arranged substantially as described.

2. Forked piece O, piece K′, spiral spring P, rack Q, pinion R′, shaft S, spool T, shaft Y, treadle Z, tension-wheel A″, twisting-jaws M′, lever U, knife N″″, spring-jaws O′, block Y″, spring Q′, and spring S, forming a twisting device, arranged substantially as and for the purpose set forth.

3. Frame A, wheels B, rim C, pinion D, shaft E, lever X‴, bracket V″, sleeve W′, arm X, lever W, lever Y, sleeve W‴, collar V‴, arm I, sleeve W″″, and shaft H″, arranged substantially as described.

4. Adjustable plates Z′, guards B′, in combination with frame A, substantially as described.

5. Shaft E, standard R, pinion R′, shifter R″, in combination with rack Q, substantially as described.

120,829.—Metallic Roofing.—John Siddons, Rochester, N. Y.

Claim.—A metal roof consisting of sheets of metal permanently united at their ends and sides, and having the body of the sheets curved or raised vertically between their end joints to allow for expansion and contraction and prevent them from being separated or torn loose, substantially as described.

120,830, antedated November 10, 1871.—Cork-Puller.—Charles T. Simpers, Philadelphia, Pa.

Claim.—The stem S, barrel B, and pin P, in combination with the wires W, as and for the purpose specified.

120,831. — Wash-Board. — Alpheus D Smith, Grafton, Ohio.

Claim.—As a new article of manufacture, a fluted or corrugated roller wash-board, constructed and arranged substantially in the manner and for the purpose shown and set forth.

120,832.—Potato-Digger.—Joseph Smith, Ridgeville, Ohio.

Claim.—In a potato-plow, the combination of the straight cutting-edge for penetrating the ground, set at such an angle with the ground as to cause it to enter readily, combined with a set of guide or screw-rods, substantially as set forth.

120,833, antedated October 26, 1871. — Chair.—Peter M. Snell, Oscar Snell, and Ainsworth S. Snell, of Williamsburg, Ohio.

Claim.—Attaching the rear round or its equivalent to the side rounds by having holes near its extremities through which are driven the tenons of the side rounds, they projecting through sufficient for the back to be driven thereon or taken off the seat, being attached to the front, rear, and side rounds, independent of the back, for the purpose described.

120,834.—Kiln for the Manufacture of Artificial Stone.—Daniel M. Sprogle, Annapolis, Md.

Claim.—The portable sectional kiln, constructed substantially in the manner and for the purpose as set forth.

120,835.—Cone for Locomotive Smoke-Stacks.—Dennis B. Strope, Fort Wayne, Ind.

Claim.—Cone A, constructed in sections *a b* and deflectors *c* and *c*, for the purpose and in the manner substantially as described.

120,836, antedated October 28, 1871. — Ditching-Machine. — Franklin Taylor, Indianapolis, Ind.

Claim.—1. The friction-rolls *a* and cog-wheels *e* on shaft F, in combination with the friction-rolls *a′* and cog-wheels *e′* hung in arms G, arranged to operate the spades C C′, substantially as set forth.

2. The arrangement of the rods I attached to the dumping-tables M and to the bent lever J, bent rod *r*, and guides K, constructed as described, in combination with hook S attached to the spade C, substantially as and for the purpose set forth.

3. The cog-bar *g* and bent lever H in combination with cog-wheel *e′* and pin *i* in spade-shaft D, all constructed and arranged substantially as and for the purpose set forth.

120,837.—Paper-Rag Engine.—Newton W. Taylor and Joseph W. Brightman, Cleveland, Ohio.

Claim.—1. The herein-described paper-rag engine roller, consisting of the cast-iron cylinder or shell E, having bars F secured thereto by arranging said bars in the mold in which said cylinder is cast, and the metal thereof allowed to run between the bars, whereby their edge becomes embedded in the face of the cylinder, substantially as and for the purpose set forth.

2. The herein-described bed for a paper-rag engine, consisting of the cast-iron bed-plate or piece G, having corrugated bars H of a uniform thickness secured thereto by arranging said bars in the mold in which said bed-plate is cast and the metal allowed to run between the bars, whereby their edge becomes embedded in the bed-plate, substantially as and for the purpose specified.

3. The shoe I, constructed with sides K and cleats *a*, in combination with the bed-plate G, substantially in the manner as and for the purpose set forth.

120,838.—Machine for Rolling Metal.—Leopold Thomas, Pittsburg, Pa.

Claim.—The combination, substantially as described, of the two rollers, plain surfaced and cylindrical, except at the points *g*, where they are slightly flattened or depressed, and arranged with their axes parallel to one another, the guides B B, and mechanism to rotate said rollers in the same direction, for the purpose set forth.

120,839. — Combined Root-Cutter and Shovel-Plow.—George Trump, Second Fork, Pa., assignor to himself and George William Huntley, same place.

Claim.—The combination of the root-cutters K K with the beam B and adjustable rod E, when the rod E is attached to the curved end of the beam and to the cutters K or plow J, as described, for the purpose set forth.

120,840. — Cooking-Stove. — John W. O. Webb, Cedar Rapids, Iowa.

Claim.—1. The oven E, without bottom, and arranged to receive the hot-air directly from the tubes B, as described and represented in Fig. 1 of the drawing.

2. The openings *d* and their covers *d′*, arranged between the air-heating tubes B for the purpose of regulating the heat of the tubes B, as described and shown in Fig. 3 of the drawing.

120,841. — Pump. — Norman W. Wheeler, Morristown, N. J.

Claim.—The combination of the barrels *a* and *b*, plunger *d*, and ram *e* with the pipes *i* and *j* and valves *l* and *o*, substantially in the manner and for the purposes described.

120,842. — Breech-Loading Ordnance.—Joseph Whitworth, Manchester, England.

Claim.—1. The arrangement for closing the breech of ordnance by a breech-block moved along and held by grooves, the direction of which is inclined to the breech-face of the gun, substantially as described.

2. The method, substantially as described, of forming the screw-thread so that the force of the explosion on the breech-block may not tend to separate the guides, but rather to draw them together.

120,843.—Let-off Mechanism for Looms. Andrew J. Woodman, Indian Orchard, Mass.

Claim.—The combination of the cam *b* and slotted plate F, or their mechanical equivalent or equivalents, with the draw-pawl D and its actuating-lever E, and the ratchet-wheel B, the shaft A, and the worm C thereof, and the worm-gear *h*, the shaft *g*, the pinion *f*, and the gear *e* applied to the yarn-beam G, all being arranged and to operate substantially as explained.

120,844. — Vertical Hoist. — William E. Worthen, New York, N. Y.

Claim.—1. The combination of a secondary or auxiliary rope, *d*, and weight d^1, pulleys d^1, d^2, and d^3, and a brake or brake-block, *f f*, and the platform of a hoist, substantially as herein described.

2. The combination of a secondary or auxiliary rope, *d*, with a pulley or pulleys and a brake or brake-blocks, in the manner substantially as described.

3. The special arrangement herein described of three pulleys, one of which is free to rise and fall, with brake-blocks arranged between them, as represented and described.

4. The apparatus, substantially such as herein described, for unlatching a door or bar by the action of the platform of the hoist.

5. The apparatus, substantially such as described, by means of which the door or bar, when open, locks the "start," preventing it, and consequently the platform, from being moved until the door is shut.

6. In combination with a door, a secondary latch and a main latch, a spring to open the door, whereby the door is open when the platform arrives at the desired height only when the secondary latch is unlatched, the combination being substantially such as described.

7. The connection between the start and the platform, in combination with a spring-door actuating this connection, the combination being substantially such as described, and operating to bring the platform to rest automatically in consequence of the opening of the door.

8. In combination with devices substantially such as described for unlatching the door by the platform, apparatus acting to lock the start when the door is open, substantially in the manner set forth.

9. In combination, devices for unlatching by the action of the platform, for opening the door, and for locking the start, all substantially such as described, so that the platform is the implement whereby the latch is unlatched, the door opened, and the start locked.

120,845. — Hub for Carriage-Wheels.—Edward A. Archibald, Methuen, Mass.

Claim.—In combination with the flange *f*, into-

gral with the box *a* and provided with ring *n*, the removable nut-threaded flange *i* having a plain surface to press against the spokes, and sleeve *k*, formed with the hollow *q*, and secured upon the box by the screw-threads *g h*, substantially as shown and described.

120,846.—PROPELLING-POWER.—Nathaniel B. Baldwin, Chicago, Ill.

Claim.—1. The combination of the ways R and curved plates S with the oscillating steam-cylinders P and stationary steam-pipes T, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the ratchet-wheels L, pawls M, and levers N with the axle or shaft K and piston-rods O of the pivoted steam-cylinders P, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the standard B' and pivoted and slotted cross-bar C' with the levers N and piston-rods O of the pivoted steam-cylinders P, substantially as herein shown and described, and for the purpose set forth.

120,847. — CARRIAGE-WHEEL. — Isaac E. Bower, Bainbridge, Ga.

Claim.—The sheet-metal rim E of a carriage-wheel, triangular in form and having extension shank G, combined with the sockets H to receive spokes, and having necks to receive said shanks, as described.

120,848. — WASHING-MACHINE. — Joseph Brower, James Campbell, and Harvey Campbell, West Alexandria, Ohio.

Claim.—The improved cylinder for washing-machines, having the metallic cylinder-heads *c* constructed with the dovetailed recesses *d'*, and provided with the beveled ribs D, arranged substantially as specified.

120,849. — CHURN-DASHER. — William C. Broyhill and William D. Sperry, Tremont, Ill.

Claim.—1. The dasher-blades, provided with grooves on the under side, substantially as and for the purpose specified.

2. The improved churn-dasher, formed of the radial oval blades C, made of wedge-form in cross-section, and set at an inclination of about thirty degrees to their shaft A, as shown and described.

120,850.—LAYING TILES.—Manly A. Burnham, New York, N. Y., assignor to himself and Tobias New, same place.

Claim.—1. The stone floor E interposed between the "ganged mortar" D and the tile of a tile floor or sidewalk, substantially as and for the purposes described.

2. The continuous stone flooring E, in combination with wood floor C and ganged mortar D, substantially as and for the purposes described.

120,851.—TIN-ROOFING MACHINE. — Orrin W. Burritt, Woodsport, N. Y.

Claim.—The clamping-tool A provided with jaws B and C with projection *e*, in combination with the hinged bar D, plate foot-lever E, and spring *d*, as constructed, and arranged to operate substantially as herein shown and described, for the purposes set forth.

120,852. — SHOE AND GAITER. — Freeman P. Buzzell, Milton Junction, assignor of one-half his right to Oscar D. Rowe, Edgerton, Wis.

Claim.—The quarter B, constructed as shown and described, with the two pieces C C cut out and sewed on, in the manner and for the purposes set forth.

120,853.—WATER-METER. — Camille Campeaux, New York, N. Y.

Claim.—1. The elastic friction slide *l*, connected with the stem *e* of the plug D and bearing against the tube C in order to retain the plug in its respective positions, substantially as herein shown and described.

2. The pin *p* on the wheel *o*, combined with the lever *t* and drop *r* for locking the post E and plug D in the elevated position, substantially as herein shown and described.

120,854.—LINK-JOINT FOR WATCH-CHAINS. Charles B. Carpenter, North Attleborough, Mass.

Claim.—An improved joint for watch-chains, formed by the combination of two rings, B, with each other and with the adjacent ends of two pairs of links, A, substantially in the manner herein shown and described, and for the purpose set forth.

120,855.—BUTTON-HOLE SEWING-MACHINE. William Chicken and Eri S. Moulton, Chelsea, assignors to Amos L. Wood, trustee, Brookline, Mass.

Claim.—1. In combination with the friction-pawl feed mechanism, the pawl-lever *k* hung to the center-pin *g*, and having a fork or slot, *l*, which embraces the pin *m* of the pawl *i*, substantially as shown and described.

2. The slide-bar *j* moving radially on the guide-block *o* hung upon the center-pin *g*, and driven up against the ring *d* by the forward movement of the pawl *i*, substantially as shown and described.

3. The pawl-lever *k*, hung upon the center-pin *g*, and actuated by the link or lever *s*, which is jointed to it by the pin *y*, said link or lever being connected to and driven by the cam-actuated lever *u*, all substantially as shown and described.

4. The reciprocating slide *p*, connected to the lever *s* by the link *r* and controlling the extent of feed movement of the clamp-ring, the extent of movement by the slide being determined by the automatically-located pins *m n*, substantially as shown and described.

5. The rotatively-reciprocating looper-ring *c'*, carrying the thread-carrier *a'* and looper *b'*, substantially as shown and described.

6. In combination with the ring *c'*, looper *b'*, and thread-carrier *a'*, the notch *r'* in the throat and the loop-spreading beak *t'*, substantially as shown and described.

7. The looper, thread-carrier, and loop-spreading mechanism, all controlled or brought into action by the reciprocating bar or slide *i'*, substantially as shown and described.

120,856.—STEAM-GOVERNOR. — George W. Clark, Council Bluffs, Iowa.

Claim.—1. The combination of a shifting re-enforcing-weight, P, a piston, D, and connecting devices therefor, with a governor-lever, M, the piston being subject to the action of the live steam, and the said connecting devices being arranged to cause the weight to shift along the said lever as the steam pressure varies and the piston rises or falls, all substantially as specified.

2. The combination and arrangement of the piston D, lever E, elbow-lever H, notched bar L, weight P, governor-lever M, and springs S, all substantially as specified.

120,857.—APPLE-CORER.—Stephen C. Collins, Oregon, Mo.

Claim.—The apple-corer, consisting of the handle A and trough-shaped conical blade B, substantially as herein shown and described.

120,858.—BEE-HIVE.—Tandy S. Collins and Hiram Senseman, Tremont, Ohio.

Claim.—1. In combination with triangular pieces H H two rectangular pieces, G, edge-flanged, having cap *g* thereon, hinged to base A, and folding together at an angle on top, as described, to admit of thorough protection from the weather by its form, easy access by its unfolding on every side, and of being conveniently fastened by one pair of hooks and eyes.

2. The combination, with flanged sides G and side H, held by said flanges, of base A having the end J removable, as specified, to enable one side, H, to be removed, as set forth.

3. The triangular comb-frame E, provided with a central guide, e^2, substantially as herein shown and described.

4. The central guide e^2 of the comb-frames E, made hollow and with lateral top and bottom openings, substantially as herein shown and described, and for the purpose set forth.

5. The arrangement of the rear-hinged end H and detachable end board J of the base A, in connection with the base A, sides G *g'*, and honey-boxes M, substantially as herein shown and described, and for the purpose set forth.

120,859.—EVAPORATING APPARATUS.—Justus Cook, Wellsville, N. Y.

Claim.—1. The agitators I and J with the sweep-plates or fans M, in combination with an evaporating or heating vessel, arranged and operating as described.

2. The arrangement, in combination with a heater or evaporator, of the shaft P and gear-wheels O E, substantially as and for the purposes herein shown and described.

120,860, antedated November 11, 1871.—COMBINATION-LEVER BRIDLE-BIT.—Henry M. Cornell, Brighton, Ill.

Claim.—The levers B B, forming, when put together, a single round bit, each provided at one end with a loop through which the other passes, and connected with the bars A A, as specified.

120,861. — REIN AND SHAFT SUPPORT.—James P. Crutcher and Thomas Y. Vancleave, Cornersville, Tenn.

Claim.—The rein-holder E, applied to the shafts or poles of vehicles and adjustable thereon, substantially as shown and described.

120,862.—MANUFACTURE OF GUNPOWDER.—Charles William Curtis, London, England.

Claim.—The improvement in the process of manufacturing gunpowder for use in heavy ordnance, such as the so-called "pellet" powder, the said improvement consisting in splitting each grain or pellet into halves, which are afterward stoved and glazed, as described.

120,863. — MACHINISTS' LATHE-CHUCK.—Austin F. Cushman, Hartford, Conn.

Claim.—As an improvement in the construction of chucks, the case or shell, composed of the two parts A and B, as described, jointly with the combination of the pinions and their shafts, the annular and cogged scroll-plate, and the jaws, as set forth.

120,864.—LIFTING-JACK.—Arthur A. Davis, Clark's Green, Penn.

Claim.—1. The friction-catch J and rolls K K, substantially as and for the purposes described.

2. The cams H H, in combination with the lever G, catch J, and friction-rolls K K, as and for the purposes described.

3. The holding-catch L, substantially as and for the purposes described, in combination with cams H H and plate F, as set forth.

4. The lifting-bar E, in combination with the friction-catch J and cams H H, as and for the purposes described.

120,865.—SPRING-BED.—John M. Farnham, Hartford, Conn.

Claim.—1. As parts of a bed, the rocking-frames No. 1 and No. 2, respectively fitted for pivoting to a bed-frame, substantially as described, and for the purposes set forth.

2. A woven-wire fabric, composed of alternate lengths of circular spiral coils and oval spiral coils intertwined, substantially as described.

3. The combination of a pivoted rocking-frame, substantially like either of those described, with a bar, b^4, perforated for a pin, the pin itself, and the rack *e*, the whole constructed, arranged, and operated substantially as and for the purpose set forth.

4. In combination with the parts specified in the immediately-preceding clause, the strap *f'* and pin *a'*, the whole constructed, arranged, and operated substantially as and for the purpose set forth.

5. The construction shown for attaching the stretcher to the end rails—to wit, by means of the short slats of metal d^1, hooking upon the hooks d^2, the whole constructed, arranged, and operated substantially as and for the purpose set forth.

120,866.—"EXCELSIOR" MACHINE.—Jacob Felber, St. Louis, Mo., assignor to himself and Andrew Brandenburger, same place.

Claim.—1. The arrangement of a rotating disk, J, carrying cutters *j*, cutter-heads J', and stripping-knives j^3, in combination with feed-boxes and feed mechanism, substantially as and for the purpose described.

2. The combination and arrangement of a cam-guide, K, connecting-lever k^4, anti-friction roller k^5, cutter-heads J', and rotary disk J and its cutter devices, all constructed to operate substantially as and for the purpose described.

3. A cam-wheel, I', cast with cams *i* and secured adjustably to shaft I, cammed lever G, arranged, in combination with the feed mechanism described, to operate as and for the purpose set forth.

4. The arrangement of shaft I, frame castings B with grooves *a*, rotating disk J, its cutters *j*, revolving cutter-heads J' carrying stripping-knives j^3, and slide pieces j^2 having pins j^3, connecting-lever k^4, guiding-cam K, adjustable cam-wheel I, cammed lever G, when all said parts are combined with feed-boxes C, and their gearing and feed devices, to operate substantially as and for the purpose described.

120,867.—REFRIGERATOR.—James W. Fisher, Islip, N. Y.

Claim.—In refrigerators, the combination of slides H O with chambers C G, as and for the purposes specified.

120,868.—HEMMER FOR SEWING-MACHINES. David Forrest, Eastport, Me., assignor to himself and A. H. Bibber, same place.

Claim.—1. The plate A A^1 jointed at C, and having arm A^2 with stud F thereon, combined with gauge E, plates G H I, scroll K, and detachable block M, as and for the purpose specified.

2. The combination, with the hemmer-scroll, of the detachable blocks or tongues M, substantially as and for the purpose specified.

120,869.—FLUTING SAD-IRON.—Edward A. Franklin, Brenham, Tex.

Claim.—The fluting-sad-iron, composed of the body A, roller B, combined roller and handle C, and crank *d*, all arranged substantially as herein shown and described.

120,870.—ASH-PAN FOR STEAM-BOILERS.—John Gates, Portland, Oreg.

Claim.—1. In combination with boiler B and ash-pan A, having damper D operated from the engineer's room, the surrounding-pan C having water-space *a*, stays *b b*, and pipes *d e*, arranged as and for the purpose specified.

2. The escape-pipe *e* extending from the water-space *a*, and discharging a visible stream into the funnel *f*, substantially as and for the purpose herein shown and described.

120,871.—MANUFACTURE OF IRON.—Leven S. Goodrich, Waverly, Tenn.

Claim.—The process above described of forming artificial balls of ground carbon, lime, nitrate of soda, iron ore, and molasses, as and for the purpose specified.

120,872. — ADJUSTABLE MUSIC-STOOL, STAND, AND WORK-TABLE.—George W. Griswold, Factoryville, Pa.

Claim.—In combination with a stool, table, or stand made in two parts, with an interposed friction-pad or spring, so that the upper can be elevated, depressed, or held to or on the under part, a strap, *e*, and suitable fastenings *d e*, all for operating and holding said two parts in their adjusted positions, substantially as described.

120,873.—HARROW.—Elial S. Herrington, Emmett, Ohio.

Claim.—The combination of a harrow and leveling boxes F I J with each other, substantially as herein shown and described, and for the purpose set forth.

120,874.—ELECTRIC LINING FOR SAFES.—Edwin Holmes, Brooklyn, N. Y., and Henry C. Roome, Jersey City, N. J.

Claim.—1. A safe or vault provided with an electric outer lining surrounding or covering it wholly or in part, and insulated therefrom, and protected, substantially as herein shown and specified.

2. The exterior inclosure B, made of the parts *b* and *c*, substantially as herein shown and described, to be applied to a safe or vault, in the manner specified.

120,875. — ELECTRO-MAGNETIC BURGLAR-PROOF CURTAIN.—Edwin Holmes, Brooklyn, N. Y., and Henry C. Roome, Jersey City, N. J.

Claim.—1. A curtain composed in part of metallic conductor of electricity, to be used substantially as herein specified and described.

2. The metallic gudgeons of the curtain, when connected with the battery and with the metallic fabrics *a b* of the curtain, and combined with the metallic lower connections *a b*, substantially as specified.

120,876. — HOG-RINGING DEVICE.—Winfield S. Houston, Mansfield, Ohio.

Claim.—1. A hog-ringing device, consisting of a pair of forceps having the front end of its jaws formed into a semicircle, C, and provided with a semi-cylindrical punch or blade, D, and the rear ends of the same with cutting-blades E, and also having its handles provided with a locking-loop, d, substantially as herein described.

2. The semicircular end C of the jaws B when closed, for the purpose of forming the wire ring thereon when the same is in place upon the snout of the animal, as set forth.

3. The semi-cylindrical punch or blade D, in combination with the semicircular end of the jaws B, when constructed substantially as described, for the purpose of allowing the device to be disengaged from the ring, as set forth.

120,877.—ANIMAL-TRAP.—Nathan S. Howell, Tualatin, Oreg.

Claim.—1. The combination of the platforms C C′, catch-levers D D′, pivoted jaws B B′, and springs E E′ with each other, all arranged to constitute a trap, as set forth.

2. The hook *d*, affixed to the under side of the upper platform C to bear against the under side of the lower platform C′, substantially as and for the purpose herein shown and described.

120,878.—BALANCED VALVE FOR STEAM-ENGINES.—David W. Huntington and William A. Hempstead, South Coventry, Conn.

Claim.—1. The spring D′, combined, as described, with the flanged cylinder C B to hold it down to a slide-valve, A, as specified.

2. A steam-tight exhaust-cylinder, C, arranged on a vertically-exhausting slide-valve, A, provided with a rod, G, to oscillate it, as and for the purpose specified.

120,879. — MEDICAL COMPOUND OR PILE OINTMENT.—Amanda M. Irwin, Brooklyn, N. Y.

Claim.—The compound or remedy herein described, composed of alum, nut-gall, and lard, and called by the name of "Mrs. Irwin's Pile Ointment."

120,880. — MUSIC-STAND. — Willard C. James, Fishersville, N. H.

Claim.—1. The combination of the tubes A B, plug D, elastic rods E, and the folding rack, all constructed and arranged substantially as specified.

2. The folding rack C, hooked spring L, block M, hooks P, bar J, and tube A, all arranged substantially as and for the purpose set forth.

120,881. — SPRING-BED. — John Johnson, Hartford, Conn.

Claim.—1. The equalizing frame, composed of the levers *f* and cross-piece *f′*, pivoted to the bed-frame, and operated upon by the rocking arms *e′* or their equivalent, substantially in the manner and for the purpose set forth.

2. In combination with said equalizing frame, pivoted as described, the springs *i* and the stretcher *d*.

120,882.—GAS-BURNER REGULATOR.—William Jones, Chelsea, Mass.

Claim.—A gas-burner regulator having the main and auxiliary gas-passages arranged and controlled substantially as described.

120,883. — MECHANICAL MOVEMENT.—William F. Jones, Easton, Kansas.

Claim.—1. The driving-wheel A, frame B, arm B′, pinions E, (one or more,) shaft F, and shafts G G, combined and arranged substantially as and for the purposes described.

2. In combination with the driving-wheel A, the socket J in one or more pinions E, as and for the purposes described.

3. In combination with the driving-wheel A, pinions E, frame B, and spider C, the grooves and key-screws H H, as and for the purposes described.

120,884.—TELEGRAPH-INSULATOR.—George W. Kidwell, Elwood, Ind.

Claim.—1. A two-part insulator, B, having cavity E and projection F, to hold the two parts coincident, as specified.

2. A block, A, and tubular insulator, B, constructed and combined with a pin, D, to hold them together, as specified.

120,885. — HONEY-BOX FOR BEE-HIVES.—Ellery Channing Lewis, Glasgow, Mo.

Claim.—1. The hexagonal honey-boxes B, made with slots b^1 b^2 in their lower sides, and with slots b^3 b^4 in their upper sides to adapt them for use in connection with each other and with a bee-hive, substantially as herein shown and described, and for the purpose set forth.

2. The hexagonal boxes B, made with their lower sides movable and secured to the ends of said boxes, substantially as herein shown and described, and for the purpose set forth.

3. The hexagonal boxes B having cross-slots b^4 formed in the upper angle thereof, as and for the purpose specified.

120,886.—DISH-WASHER.—Mary E. Lewis, Mansfield, Ohio.

Claim.—The combination of the wire-basket B, tilting-beam D, ring F, weight E, and standard C, in the manner and for the purposes substantially as shown and described.

120,887. — ATTACHMENT FOR SEWING-MACHINES. — William Henry Lewitt, St. Louis, Mo., assignor to Thomas M. Cochrane, same place.

Claim.—1. The tuck-creaser, with its plate A C *c* c^2 c^3, adapted for ruffling, as described.

2. As an article of manufacture, the described tuck-creaser, ruffler, and hemmer, constructed and arranged as set forth.

120,888.—PISTON-PACKING. — Herschell P. McCarroll, Pittsburg, Pa.

Claim.—1. The circular and expansive spring F, when combined with the ring D, springs *b*, and pin *c*, as and for the purpose specified.

2. The steady-pins *c* applied by the pressure of the springs *b* against the inner periphery of the coiled spring F, as specified.

120,889.—MATCH-BOX.—L. Otto P. Meyer, Newtown, Conn.

Claim.—Match-holders constructed of such size or of such relative proportions to my safety-matches' wooden box-shell that the parts are adapted to be used for one definite end, substantially as and for the purpose hereinbefore set forth.

120,890. — MATCH-HOLDER. — L. Otto P. Meyer, Newtown, Conn.

Claim.—The combination of part A and part B, the plate B serving the purpose of affixing the holder to its place; and also serving, in conjunction with part A, to secure a match-box shell in its place, substantially as and for the purpose hereinbefore set forth.

120,891. — MATCH-HOLDER. — L. Otto P. Meyer, Newtown, Conn.

Claim.—1. The cap F, as shown in the holder D′, substantially as and for the purpose hereinbefore set forth.

2. The combination of the front-plate B with the rear-plate B′, as shown in the support of holder D D, and in connection with a receptacle, substantially as and for the purpose hereinbefore set forth.

120,892.—POCKET MATCH-CASE. — L. Otto P. Meyer, Newtown, Conn.

Claim.—1. In combination with the box A, the lid C, without or with hook E, as shown in match-case G, and without or with flanges F, as shown in match-case H, substantially as and for the purposes hereinbefore set forth.

2. The combination of metallic plate A with grooves and flanges F, with variance in construction, and in connection with the other part, made of material easily pliable, all as shown in match-cases I and K, substantially as and for the purpose hereinbefore set forth.

120,893.—BEDSTEAD-FASTENING.—Thomas W. Moore, New York, N. Y., assignor to Frances N. Moore, same place.

Claim.—A bedstead-fastening formed of the tenon C, mortise D, and flange F, when the latter is placed entirely upon one side of the tenon and the mortise is made to correspond, as shown and described.

120,894.—AGRICULTURAL BOILER. — John Murdock, South Carver, Mass.

Claim.—In a boiler-furnace, A B C D, the flange E having one outlet above and another below it into the discharge-flue G, combined with a sliding damper, H, as and for the purpose specified.

120,895. — APPARATUS FOR FORCING LIQUIDS. — Mancelin E. Ogden, New York, N. Y.

Claim.—The combination of the tank A B, slide C, pipes and valves D *d′* E *e′*, pivoted lever H, connecting-rod J, weighted lever K P, catch N, bent arm M, sliding rod O, rod Q, pipe and stop-cock R *r′*, pipe F′ provided with valve *b′* and stop-cock l^2, and air-tank G provided with stop-cocks g^1 and g^2, the whole being constructed and operating substantially as herein shown and described, and for the purpose set forth.

120,896. — FRAME FOR DIKING-SHEETS.—James S. Pierson, New York, N, Y.

Claim.—A frame, B C D, made of wood or metal, and permanently or detachably attached to a diking-sheet, A, substantially as herein shown and described, and for the purposes set forth.

120,897.—FUR-SET BOX.—Benjamin F. Porter, Nashua, N. H., assignor to George T. Garrison, Boston, Mass.

Claim.—The combination, in a fur-set box, of the movable shelves *a a* with the projecting bottom *a b c*, for the purposes of a fur-set box.

120,898.—FIRE-KINDLER. — Noah Rogers, Thomasville, Ga., assignor to William H. Rogers.

Claim.—The combination of the box A, wheels B C D, and axles E F, strap G, spring H, rod or lever I, pivoted apron J, loop K, spring L, guard M, movable jaw or clamp N, pivoted rod O, sliding plate P, spring Q, spring R, strap S, pins *f′ e′ d′*, and locking-pin *s* with each other, substantially as herein shown and described, and for the purpose set forth.

120,899.—BEE-HIVE. — Martin R. Sanders, Cambria township, Pa.

Claim.—The combination of the movable bar K, fixed bars or cleats K′ K′, and hooks *s s* with the comb-frames L M N, as shown and described, whereby the frames are held in place, as specified.

120,900. — ROOFING. — Robert Sanderson, Cleveland, Ohio.

Claim.—The ribs G, grooved-edged plates or sheets I having side laps and an overturned end, E, and an overturned end, C, tongue H, and paper or other equivalent material, substantially in the manner as described, and for the purpose set forth.

120,901.—BAKERS' OVEN.—Robert Sanderson, Cleveland, Ohio.

Claim.—1. The arrangement and combination of the plates I, wheels F G, worm and pinion K L, guard-plates M N, and oven A, substantially in the manner described, and for the purpose set forth.

2. The two furnaces C D, arranged in relation to the bottom and side of the oven A in the manner substantially as described, and for the purpose specified.

120,902.—FOUNTAIN. — Henry H. Sawtell, Randolph, N. Y.

Claim.—The pan F, combined, as described, with and placed above the top of nozzle H and pipe D, whereby an increased height of column and much greater power are obtained.

120,903.—MACHINE FOR THREADING BOLTS. Charles Schneider, Newark, N. J.

Claim.—The projecting pins *c c* and pivots *d d*, having eyes at their outer ends, combined as described, and applied to the sections of screw-cutting dies, as and for the purpose specified.

120,904.—MOTH-PROOF BOX.—Raphael M. Seldis, New York, N. Y., assignor to Jason Crane, Bloomfield, N. J.

Claim.—The moth-proof box or receptable lined with gutta-percha, as described.

120,905.—PORTABLE HEATING APPARATUS.—William Shaw, Albany, N. Y.

Claim.—1. The arrangement of the heat-conducting drop C with the retort A at the lowest or most depressed portion of the bottom *a*, substantially as and for the purpose set forth.

2. The arrangement of the volatilizing projection D within the retort and over the most depressed portion of the bottom of the same, substantially as and for the purpose set forth.

3. The arrangement of the flue E, having both ends open, with the retort A, when the lower open end of the said flue is placed in position over the most depressed portion of the said retort, substantially as and for the purpose set forth.

4. The arrangement of the vertical flue E, having both of its ends open and its lower open end dropping down over the most depressed portion of the bottom of the retort A, and at a short distance from the same, with the annular space constructed between the sides of the said retort and the said flue, substantially as and for the purpose set forth.

5. The arrangement of the seat *e*, or equivalent projecting lips described, with the retort A, substantially as and for the purpose set forth.

6. The arrangement of the supporting-arms *c c* with the vertical flue E and the retort A, substantially as and for the purpose set forth.

120,906, antedated November 1, 1871. — FEED-BOX.—Winfield S. Shaw and Marcus B. Gould, Buffalo, N. Y.

Claim.—1. In an automatic feed-box, constructed substantially as described, the depression or basin *d*, for the purpose set forth.

2. In combination with a feed-box, constructed substantially as described, the wires *e* arranged within the elevated reservoir *b*, and operated in the manner and for the purpose set forth.

120,907.—BLACKING-BOX.—Thomas R. Sinclaire, New York, N. Y.

Claim.—As an article of manufacture, a blacking-box having beveled sides A, rib B, and flange C, constructed substantially as shown, and for the purpose described.

120,908.—APPARATUS FOR FILTERING LIQUIDS.—Thomas R. Sinclaire, New York, N. Y.

Claim.—In combination with a filtering-vessel and a force-pump, or its equivalent, the perforated tube or receiver I, substantially as and for the purposes herein shown and described.

120,909.—CORN-SHELLER.—Abia B. Smith, Wellsburg, W. Va.

Claim.—1. The arrangement of the spring G in the slot or opening *f* of the hopper E, substantially as and for the purpose herein specified.

2. The arrangement of the feed-wheel D, hopper E, and shelling-disk C, substantially as and for the purpose herein specified.

3. In combination with the feed-wheel D, the pinion H, constructed as described, and arranged to operate substantially as and for the purpose herein specified.

4. The combination and arrangement of the partition-rib or plate I with the hopper F, shelling-disk C, spout *c*, and cob-discharge opening *d*, substantially as and for the purpose herein specified.

120,910.—PIPE-TONGS. — James Stratton, New Haven, Conn.

Claim.—The rotary disk C, applied to the short jaw of a pair of pipe-tongs, A B, as and for the purpose specified.

120,911, antedated October 28, 1871.—HARVESTER.—John S. Truxell, Greensburg, Pa.

Claim.—The combination of the pivoted draft-bar *b*, adjustable at its rear end in the slotted standard *c*, the standard *o*, pin *p*, brace *q*, hinged shoe *k*, and the sickle-bar, substantially as herein shown and described, for the purpose specified.

120,912.—AIR-REGISTER.—Edward A. Tuttle, Brooklyn, N. Y.

Claim.—1. The combination, with the frame A and the slats, of one or more springs receiving and supporting the journals while bearing against them.

2. The spring-plates, one or both, bearing against the ends of the slats, whether supporting them or not.

120,913.—BRIDLE-BIT.—Edward Vanauken, Ludlowville, N. Y.

Claim.—A perforated tubular bridle-bit, having its ends closed by screws formed on or attached to the check-pieces, as and for the purpose specified.

120,914.—ASPHALTIC AND CRUSHED-ROCK PAVEMENT. — Aaron Van Camp, Washington, D. C.

Claim.—The improved asphaltic pavement herein described, made by combining crushed or pulverized rock or stone, asphaltum, and red oxide of iron or iron-clay, with or without the addition of other materials such as herein named.

120,915.—PERMUTATION LOCK. — John F. Vinton and George A. Hines, Brattleborough, Vt., assignors of one-third their right to Seymour Field, same place.

Claim.—1. The lever J, in combination with the pin O upon the driving-wheel and pin *h''* on the dog H, substantially as and for the purpose set forth.

2. The combination of the nut G with the tubular bearing A' and driving-wheel E E', when said nut is arranged in a recess of the latter, as shown and described.

3. The combination of the driving-wheels E E', provided with the circumferential shoulder S, and clamping-screws with heads formed as described, for the purpose specified.

4. In the combination lock herein described, the bolt I, piece H', dog H, lever J, pins O and *h*, wheel E E', nut G, bearing A, grooved spindle C, tumblers F F', and collars *f f*, all relatively constructed, and arranged and operating as shown and set forth.

120,916.—MANUFACTURE OF WHITE LEAD.—Decius Wadsworth, Brooklyn, N. Y.

Claim.—The peculiar arrangement of perforated pipes in grooves of the floor B of a white-lead manufacturing apparatus, for the purpose of enabling gas to be forced therethrough into the tank, as described.

120,917. — FIRE-PLACE GRATE.—Miles S. Watkins, Memphis, Tenn.

Claim.—The tubes passing through the cross-bar of the grate and extending back into the air-chamber in the back of the fire-place, the air-chamber and the tubes passing thence into different apartments, constructed substantially as described, and for the purposes set forth.

120,918. — BEE-HIVE. — John Wheeldon, Greensburg, Ind., assignor to himself and J. C. St. John, same place.

Claim.—The outside and inside walls C D C D C' D' C' D', stationary fronts B B' with the side and rear walls hinged thereto and opening in the rear center, so that the comb-frames can be removed and others replaced independently, all substantially as herein described and shown.

120,919.—DENTISTS' AND BARBERS' CHAIR.—Otis C. White, Hopkinton, Mass.

Claim.—1. In combination with a chair having a seat to be raised and lowered, a metal spindle, D, having a vertical series of gear-teeth, *e*, on the spindle, the points of the teeth being flush with or sunk below the outer surface of the spindle, substantially as described.

2. The combination, with the movable frame for the seat, of a spindle, D, having a vertical gear-rack thereon, a worm-wheel, E, engaging with the teeth of said rack, and a worm, I, on the actuating-shaft F, as shown and described.

120,920.—BARREL AND OTHER CYLINDRICAL PACKAGES.—Henderson Willard, Grand Rapids, Mich.

Claim.—A cylinder for barrel or other circular package, with two series of vertical staves arranged to break joints, substantially as and for the purpose set forth.

120,921.—FOLDING CHICKEN-COOP. — Edward J. Willcox, Ivy Mills, Pa.

Claim.—The combination of the bars A B, roof or cover C, pivoted bars D, board E, cross-bars F, side bars G, keepers H, and spring-catches I with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

120,922. — VACUUM-BRAKE FOR RAILWAY CARS. — Robert J. Wilson, Pittsburg, Pa.

Claim.—The combination of air-pump *e*, vacuum-chamber C, and cylinder D, said parts being connected through the medium of pipes, and the whole used for operating car-brakes through the medium of a vacuum, as hereinbefore described.

120,923. — BOTTLE-STOPPER. — Wendell Wright, Phœnicia, N. Y.

Claim.—A stopper for bottles, jars, &c., with the groove B, extending from the top of the stopper in the direction of the grain of the wood, substantially as shown and described.

120,924.—FOLDING-BED.— Wendell Wright, Bloomfield, N. J.

Claim.—The bottom A, pivoted head B D, pivoted foot C D E, pivoted and shouldered legs H I J, springs L, and cross-pieces K, constructed, arranged, and combined with the rails, as and for the purpose specified.

120,925.—AUTOMATIC RELIEF-VALVE.—Albert F. Allen, Providence, R. I.

Claim.—1. The relief-valve and hydraulic-lever connected within the walls of the main chamber, as and for the purposes specified.

2. The curved-faced lever D, in combination with the relief-valve, as and for the purposes specified.

3. The combination of the relief-valve with the independent valve-holding device for confining the valve to its seat and cutting off communication with the pump during the operation of drawing water, substantially as described.

4. The combination of the valve-stem, screw-spindle, and hydraulic lever, by which the lever may be set at any desired angle by turning the valve-stem, substantially as described.

5. The stem of an automatic relief-valve, its surrounding sleeve and the annular recesses combined and arranged substantially as described, for the purposes specified.

120,926.—CORN-PLANTER.—David Altman, Nashville, Tenn.

Claim.—1. The scraper D, having the elastic standards, as described, made adjustable by means of the screw D' and nut D'', substantially as specified.

2. The toothed slide *f* arranged to vibrate the hopper L, in combination with the gate or guard *g*, as and for the purpose set forth.

3. In a corn-planter, the combination of the adjustable inclined feeding-slide with the lever H, studded spokes *i*, spring G, and auxiliary locking slide L, substantially as specified.

120,927.—ADJUSTABLE WEIGHT FOR SCALES. Hiram Andres, Troy, N. Y., assignor to himself and Stephen R. Andres, same place.

Claim.—In combination with the weight C and lever D connected thereto, and projecting therefrom into convenient position to be seized and manipulated by the user, the beam-bar *a*, and notch *b* in the weight or lever, so that when said weight or lever is moved into suitable position the beam-bar will take up and suspend upon itself or let down said weight, as and for the purpose described and represented.

120,928.—CHURN-DASHER. — Ezra J. Ashton, Utica, Ind.

Claim.—A churn-dasher, consisting of the bell-shaped portion C and the cap D, when constructed and arranged for operation, substantially as herein described.

120,929. — BLOWER. — William H. Bailey, Mahanoy City, Pa.

Claim.—A fan composed of a series of large wings, B B, and a series of smaller ones, C C, constructed as described, and arranged alternately to operate substantially as and for the purposes herein set forth.

120,930.—BOILER AND ENGINE FOR STREET-CARS.—William Baxter, Newark, N. J., assignor to himself, A. J. Halsey, and William Baxter, Jr., same place.

Claim.—1. The mode herein described of accumulating the power needed to start the car by the employment, in connection with the steam-cylinders operating together as described, of a steam-chamber into which the excess of steam generated by the boiler during the stoppage of the engine is received and from which, when the engine is again started, it is fed to the second cylinder, or that cylinder which receives the exhaust steam of the first cylinder, substantially as shown and set forth.

2. The combination, with the steam-chamber, boiler, and steam-cylinders operating together, as specified, of the pipes and safety-valve connecting the first cylinder and the boiler with the steam-chamber, substantially as shown and described, whereby the steam-pressure in the said chamber is automatically increased upon stoppage of the engine, and after the engine has again started is reduced to its original or normal state, for the purposes set forth.

3. The combination of the steam-cylinders, steam-chamber, and boiler with connecting and exhaust-pipes and valves under the arrangement substantially as shown and described, whereby steam from the boiler may be used in said cylinders under the four conditions herein specified.

4. The arrangement of the steam-chamber or space around the boiler, substantially as herein shown and described.

120,931.—MACHINE FOR TURNING HUBS.—William G. Beach, New Haven, Conn., assignor to the New Haven Wheel Company, same place.

Claim.—The hub-turning machine, consisting of the cutter-cylinder A and device for rotating the block, in combination with mechanism, substantially such as described, for imparting an alternately slow and quick movement of the said cutter-cylinder.

120,932.—GATE.—Alfred H. Betts, Cleveland, Ohio.

Claim.—The wheel-irons I, weighted-levers J, quadrants *l*, and rods M, in combination with the cranks G, rod F, and swing-levers D, arranged and operating substantially as and for the purpose set forth.

120,933, antedated November 13, 1871.—RAILWAY CROSSING.—George W. Billings, Chicago, Ill.

Claim.—The bed-plate C provided with grooves or channels, throat-plate F, and guard-rails E, constructed and arranged in relation to the rails E', substantially as and for the purpose set forth.

120,934.—REFRIGERATOR.—William Bogk, Milwaukee, Wis.

Claim.—The ice-chamber *d*, shelves *k*, and racks *l*, as arranged in relation to the water-reservoir *i*, and lids *m*, *n*, and *o*, and doors, as herein set forth.

120,935.—RAILWAY CAR-TRUCK.—George E. Brown, South River, and William Bell, Perth Amboy, N. J.

Claim.—1. The construction of a car-truck frame, each wheel thereof contained within a frame, and each of said frames being pivoted to the main frame of the truck, substantially as described, so that said truck shall automatically adjust itself through the change of direction of the wheels on a curve.

2. The hollow car-axle, arranged in connection with an orifice leading thereto at the outer bearing of the axle, substantially as described, so as to introduce oil at the same time to the outer and inner bearings from the outside of the truck.

120,936.—COFFEE-POT.—Robinson Brown and Edwin A. Blaisdell, Goffstown, N. H.

Claim.—The combination of the separate tea or coffee and hot-water compartments C E with the central removable perforated holding-tube D, the separate valves *c d* with their stems *e f*, and the divided spout F, the several parts being constructed and arranged for use, as described, and represented in the accompanying drawing.

120,937. — STEAM-GENERATOR. — William Byers, Philadelphia, Pa.

Claim. — The steam-generator herein described, formed of plates, each provided with equal and alternating convexities and concavities, and united by stay-rods or bolts *d* so as to leave a water and steam-space between them, as and for the purpose specified.

120,938.—COFFEE-POT.—Simon I. S. Cawthon and Abel F. Tatom, Troy, Ala.

Claim.—1. In a coffee-pot, the perforated tubes F, in combination with the central upright flue E, substantially as and for the purpose described.

2. In a coffee-pot, the combination, with the flue E, of the perforated tube F and box G, substantially as and for the purpose specified.

120,939.—WASHING-MACHINE.—John Randolph Cazier, Hemlock, Mich.

Claim.—1. The combination of the frame A A provided with slot *a*, hook *a*, notches *b'*, rollers C D, springs G and I, regulating nut *b*, and rods *a a*, all constructed and operating substantially as set forth.

2. The combination of the frame A A, rubber-covered rollers C D, rods *a a*, springs G I, rods A, gudgeon *i*, holder S, and flanged screw *k* with thumb-nut *n*, all constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the sides K K, bent wooden bottom L with rubber backing between it and the sides, and the under connecting screw-bolts *p p*, all substantially as set forth.

4. The combination, with a tub-tank K L, of the removable partitions N N, provided with rubber packing *z* on their edges, and forming compartments O^1 O^2 O^3, all substantially as set forth.

5. The rinsing-table P^4 provided with rubber strip *z*, and supported in the middle compartment O^2 of the washing-tank L L by the rod *w*, and operated by means of the lever S and rod *y*, substantially as and for the purposes herein set forth.

6. In combination with the above-described washing-machine, the tables P^1, P^2, and P^3, made removable, all constructed substantially as set forth.

120,940.—PULLEY-BLOCK.—Henry Cherry, Birmingham, England.

Claim.—The combination of the bevel-wheel E, pinions F and J, and eccentric boss or pin H, operating together substantially as and for the purpose hereinbefore described.

120,941.—MACHINE FOR BORING POSTS.—William Franklin Cline and Philip David Weaver, Bendersville, Pa.; said Weaver assigns his right to said Cline.

Claim.—The slide B, with its clamping-lever C moved lengthwise by the shaft E, cords D, and crank F, and moved laterally by the pulley-cords and treadles, in combination with the auger H, substantially as set forth.

120,942.—BALING-PRESS.—Thomas J. Corning, San José, Cal.

Claim.—The single elongated follower B with its operating arm C, in combination with chains D, pulleys E, and the horizontally-moving lever H, operating substantially as described, for the purpose herein set forth.

120,943.—CORE FOR DIKES.—John P. Culver, Jersey City, N. J., assignor to the Union Pipe Company, New York city.

Claim.—1. A core or core-section, constructed of a perforated inner sheet, plate, or board, incased by a covering of plastic substance arranged to pass through the perforations in the sheet, and which when set is hard and impervious to water, substantially as and for the purpose or purposes herein set forth.

2. The inner perforated core B, having flanges *b b* at its edges, in combination with the covering C of cement or plastic substance, essentially as described.

3. The combination of the trusses *c c* with the perforated core B and covering C of cement or plastic material, substantially as specified.

120,944.—BEE-HIVE.—Samuel Cuplin, Iowa Falls, Iowa.

Claim.—1. A bee-hive capable of changing the form of its brood-chamber from a broad shallow one in summer time to a deep narrow one in winter, said change being effected by means of the partition-boards H H, secured by the strips I I and buttons J, substantially as herein set forth.

2. The combination of partition-boards H H with frames G G, hive A, and cap C, substantially as set forth.

120,945.—TEA AND COFFEE-POT STAND.—Thomas D. Currier, Waldoborough, Me.

Claim.—1. In a stand for holding a tea-pot, the combination of the standards C, expansible pivoted ring E, and bent arm F, substantially as described.

2. The combination of the pivoted ring E and standards C with a suitable tilting-crank or handle, when said ring is adapted to hold a tea-pot, as described.

3. The arm *g*, bent to hold the bottom of the vessel A, in combination with the ring E, as and for the purpose set forth.

120,946, antedated November 1, 1871.—HOG-LIFTING MACHINE.—Joseph Dagley, Gosport, Ind.

Claim.—1. The combination of the frame A, wheels B, vertically-sliding post D with hook-arms G, hinged tongue H, and caster B', substantially as specified.

2. The trough C, applied to a hog-carrier, in combination with a sliding post, D, having hooks G, substantially as and for the purpose specified.

3. In a machine for carrying and hanging hogs, a vertically-sliding post, D, having hook-arms G, substantially as and for the purpose described.

120,947.—WRENCH.—Augustus Ball Davis, Philadelphia, Pa.

Claim.—The detachable and reversible toothed plate *f*, in combination with the permanent or movable jaw of the wrench, and arranged in respect to the inclined face of the opposite jaw, as specified.

120,948. — MACHINE FOR CUTTING SOLID LEATHER BELTING.—Theodore J. Dickerson and Oliver B. Warren, Auburn, N. Y.

Claim.—1. In a machine for cutting solid leather belting, the divided cutters A B, constructed and operating as and for the purpose described.

2. In combination with the cutters A B, the cap C, as and for the purpose described.

120,949. — BAND SAWING-MACHINE.—William H. Doane and William P. McKee, Cincinnati, Ohio, assignors to J. A. Fay & Co., same place.

Claim.—1. The frame A A' A'', in combination with the lower arbor-bearing, said frame being constructed, as herein described, with a depression, A''', permitting the ready removal of the arbor, as explained.

2. The arrangement of frame A A' A'' A''' and of the horizontally and vertically-adjustable arbor-bearing C D D' E E' G H A.

3. The arrangement of step or saddle K and its contained box or bearing L L'.

4. In combination with the upper arbor L', the lower arbor-bearing E, adjustable both vertically and horizontally, as shown and described, and for the purpose set forth.

5. In combination with the lower arbor, the upper arbor-bearer, adjustable in a vertical plane by means of the screw M, nut T, and spring O, as and for the purpose designated.

6. The combination of the slotted standard A' *a*, saddle K *k*, arbor-bearing L, L', *i*, and T, screws M N, and spring or cushion O, as shown and described, for the purpose set forth.

7. The arrangement of spring S, drum U, strap R, saw-guide P, and set-screw Q, for the purpose set forth.

120,950.—FIELD-ROLLER.—George H. Dow, Freeport, Ill.

Claim.—The combination of frames D D and bar A^3, the latter being slotted as described, and the former being provided with bolts, *a a*, connected together by suitable mechanism so as to be adjusted to or from each other from the driver's seat, substantially as set forth.

120,951.—HOISTING-GEAR.—George Duerre, Williamsburg, N. Y.

Claim.—The within-described hoisting-gear, consisting of the frame C D, axis B, tube R, windlass K, ratchet-wheel A, bifurcated lever G pivoted to the arm *e* and pawl I, and the long pawl L pivoted to the arm J of the elbow-lever, all constructed and arranged to operate substantially as and for the purposes set forth.

120,952, antedated November 6, 1871.—STILTS.—John Emmert, Dunleith, Ill.

Claim.—The spiral spring in combination with the movable step and standard, substantially as described, for the purpose specified.

120,953.—ANIMAL-TRAP.—Oscar S. Ewing, Rome, Tenn.

Claim.—1. The combination of the box A, yielding-floor *b*, tongue *c*, levers *d e*, springs *f l*, crank *m*, shaft *i*, and teeth *k*, as specified.

2. In combination with the elements of the above claim, the trigger *g* and arm *g'*, as described.

120,954.—CHUTE OF WATER-WHEEL CASES.—John T. Fanning, Norwich, Conn.

Claim.—1. A series of chutes contiguously arranged, and having their effluent or inner ends adapted to discharge the water to the wheel in the same general plane, and their influents ends located alternately, either in groups or individually, in different planes, substantially as described.

2. A series of chutes having their influent ends arranged alternately in different planes, and each set of such ends provided with its independent annular gate, as described.

120,955.—MECHANICAL MOVEMENT.—Peter Ferguson, New Haven, Conn., and Francis G. Bates, Springfield, Mass.

Claim.—The cylinder A fixed upon the shaft B, provided upon its interior with the two cut rings H and their lever L, and combined with the heads E F, each actuating the lever upon its cylinder, and combined with a reciprocating device to impart a movement to the said heads when the said heads are arranged so that a movement in one direction engages one of the rings and the other head the other ring in the opposite direction, substantially as described.

120,956.—COMPOSITION FOR PAVEMENTS.—Lewis S. Filbert, Philadelphia, Pa.

Claim. — The improved composition for pavements and other purposes, constructed substantially as above described and set forth.

120,957. — DRIVING-GEAR FOR PORTABLE FORGES.—Lewis R. Fitch, Chicago, Ill., assignor to Napoleon Dubrul, same place.

Claim.—1. The combination and arrangement of the friction-pinion K, the wheel I, the pulley *i*, and the internally-geared friction-pulley A, substantially as specified and shown, for the purpose of transmitting power, as described.

2. The combination and arrangement of the driving-pulley A, and standard B placed outside of said pulley, and constructed to act as a guard or shield to the pulley in the manner specified, and as set forth and shown.

3. The combination, with the pinion K, of an inner band or layer of rubber, *c*, and an outer covering or layer of leather, *c'*, substantially as specified.

120,958. — AUTOMATIC RELIEF-VALVE.—James Garland, Providence, R. I., assignor, by mesne assignments, to himself and Heber Le Favour, same place.

Claim.—The combination of the valve B, arranged to work under an equilibrium of pressure, the cylinder and piston appropriate to operate such valve, and the safety-valve opening by the pressure to be relieved, and enabling such pressure to work the relief-valve, the whole constituting an automatic relief apparatus, substantially as described.

120,959. — STEAM-BOILER FEED-WATER HEATER. — Benjamin Garvin, Oshkosh, Wis.

Claim.—The construction and arrangement of the coils or pipes A A A A with injection-pipe B, connection-pipes C and D, stop-cocks E and F, and check-valve O, when used in combination with a steam-boiler, as described, and for the purposes set forth.

120,960.—SEATED URINAL. — Dwight Gibbons, Rochester, N. Y.

Claim.—1. As a new article of manufacture, the urinal or bath A, of oval or elliptical form, constructed and arranged as herein described.

2. The seat B, consisting of the concave or dishing flanges *b b* and intermediate slot *c*, when combined with the urinal A or its equivalent rim or bathing-vessel, as herein described.

3. In combination with the seated urinal A, the cover D, with its flange *f* resting outside the rim of the vessel, as herein described.

120,961.—BIDET OR HIP-BATH. — Dwight Gibbons, Rochester, N. Y.

Claim.—1. As a new article of manufacture, the bidet or hip-bath, constructed, arranged, and operating as herein described.

2. The separate chair-back G, combined with the bed or frame A and cover C, in the manner and for the purpose specified.

3. The angle-irons *g g* and pads *h h*, combined with the chair-back and bed, in the manner and for the purpose specified.

120,962.—RIGGING-CLAMP.—James H. Gillis, Washington, D. C., assignor to Joseph J. Walton, Newark, N. J.

Claim.—1. The two-part clamp *a b* locked together by means of the eyes *c* and horns *i i*, substantially as and for the purposes set forth.

2. The links *f f* connecting the two-part clamp *a b* to the ring *g*, in combination with the horns *i i* and eyes *c c* for connecting the clamps *a b* to each other, substantially as and for the purposes set forth.

120,963, antedated November 9, 1871. — MODE OF EXPLODING TORPEDOES.—Edwin Gomes, New York, N. Y.

Claim.—1. A torpedo, combined with a ball, to be driven lengthwise of the case by the explosion of powder in a chamber, said ball making an opening through the powder for the fire which follows the same, so that the charge will be ignited, as set forth.

2. The nipple *e* or tube made with a tapering end to enter the folds of the fuse *r*, and to which it is united, as specified.

120,964.—BRUSH.—James Alexander Grant, Ottawa, Canada, assignor to Robert Charles Wilkins McCuaig, same place.

Claim.—As a new article of manufacture, the clothes and table brush, consisting of the stock and handle A B and the thin blade of sponge C, held one edge in a groove or split by screws D, substantially as shown and described, for the purposes set forth.

120,965.—KILN FOR BURNING BRICK, LIME, &c.—William P. Hall, Piqua, Ohio.

Claim.—1. A kiln having a movable back-wall with car attached upon which to move the mass to be burned in and out, substantially as herein set forth.

2. The combination of the movable back H with the aperture *i* and flue I, the car G, and flues J J with apertures *m m*, all constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of an arched closed-top kiln, A B, with furnaces at the front end, flat bottom with track *f*, and a movable back-wall, H, with car G, all substantially as and for the purposes herein set forth.

120,966.—GUIDE FOR SEWING-MACHINES.—William H. Halladay, Chicago, Ill., assignor to himself and Daniel A. Kimbark, same place.

Claim.—The combination and arrangement of the guide-plate A, rod B, sleeve C, spring D, slotted bar E, bar F, pressure-plate G, and spring H, substantially as specified and shown.

120,967. — CORSET.—Caroline L. Hamlin, New York, N. Y.

Claim.—A new article of manufacture, consisting of a corset, skirt-supporter, or similar article of wearing apparel, in which the stiffening is composed of interlayers of textile fabric stitched to and forming a component part of the garment, substantially as described.

120,968.—CLOTHES-WRINGER. — James W. Hampton, Mt. Pleasant, Iowa.

Claim.—The combination of the slotted posts or standards B B, rollers C C, caps *a a*, rods D D with loops *b b*, levers E E and G, and treadle H, all constructed and arranged as and for the purposes herein set forth.

120,969.—HEMMING AND BINDING ATTACHMENT FOR SEWING-MACHINES. — Milo Harris, Jamestown, N. Y.

Claim.—The guide E, in combination with the double scroll B, all constructed as and for the purpose set forth.

120,970.—POSTAGE-STAMP HOLDER.—George Cliffe Hatch, Calcutta, India.

Claim.—The lining of reels with a fabric or other material, when employed for holding stamps or labels, in the manner and for the purposes hereinbefore shown and described.

120,971.—WINDOW-SHADE FIXTURE.—Louis Christian Hoffmeister, Jr., Philadelphia, Pa.

Claim.—1. The combination, substantially as described, of a friction-box with a shade-roller, or with its grooved pulley or operating-cord, for the purpose specified.

2. The friction-box H, adapted for the reception of the grooved pulley or flanged end of a shade-roller, and having lugs or rollers arranged to bear upon the same or upon the operating-cord, and a spring-bar, J, arranged to bear against one of the trunnions of the roller and to force the latter and the friction-block together, all substantially as specified.

3. The combination, with the friction-box and its spring-bar J, of the bracket B with its recess *d* and socket *d'*.

4. The bracket B, when constructed as shown in Fig. 3, with recesses *x* in place of the usual screw-holes.

120,972, antedated November 4, 1871.—ORE-CRUSHING MACHINE.—Samuel Hughes, Charleston, S. C., assignor to himself and James J. Grace, same place.

Claim.—1. The shell A and cone B, provided respectively with ribs F and D set obliquely to the axis of the machine, when constructed and arranged substantially as shown and described.

2. The inclined ribs F secured in place or to the shell A by the lugs J K and flanges L M, as specified.

3. The improved ore-crushing machine herein described, consisting essentially of the shell A, ribs F, cone B, ribs D, bearing G, and legs F', each of said parts being constructed and arranged as specified.

120,973.—PUMP.—Aaron J. Hull, Sterling, Ill.

Claim.—The combination of the pump-section B and the pump-section A, fitting into the section B and forming an interior annular shoulder, hollow valve-seat C with rims *a* and *b*, valve E, and ball D, all substantially as set forth.

120,974.—FISHING-SEINE.—Robert Jeffrey, Gloucester, Mass., assignor to himself, James L. Shute, and William T. Merchant, same place.

Claim.—1. The improved seine, as provided with the netted projection or bottoming B, arranged with the body portion A, in manner substantially as shown and described.

2. The combination and arrangement of the two sets of main and branch pursing-lines with the body portion A and the extension or bottoming B, when arranged together as set forth.

120,975.—HYDRAULIC MOTOR.—John Henry Jenninga, New Bedford, Mass.

Claim.—The improved motor, consisting of the wheel C with buckets B and shaft D, and the exterior case A having adaptations for the application of water above, as through the pipe H', and beneath, as through the pipe L, substantially as shown and specified.

120,976, antedated November 1, 1871. — MOTH-PROOF CLOTHING-CHEST.—Ralph S. Jenninga, Philadelphia, Pa.

Claim.—The combination of the chest A with the cedar lining *y* and rubber stripe *c*, folded and attached as described and specified.

120,977.—APPARATUS FOR LIQUEFYING NITROUS OXIDE AND OTHER GASES.—Wilbur F. Johnston and William A. Johnston, Brooklyn, N. Y.

Claim.—The condensation or liquefaction of gaseous or aeriform matter by pressure transmitted from a pump by means of a liquid to the matter it is desired to condense.

120,978. — METHOD OF COMPRESSING AND LIQUEFYING NITROUS OXIDE AND OTHER GASES.—Wilbur F. Johnston and William A. Johnston, Brooklyn, N. Y.

Claim.—1. The combination of a hydraulic pump with one or more tanks, substantially as described, and for the purposes set forth.

2. In apparatus for condensing gas or aeriform matter, the use of a series of tanks of varying strength, substantially as and for the purposes set forth.

120,979.—DEODORIZING APPARATUS FOR WATER-CLOSETS.—Augustus Jordan, Washington, D. C.

Claim.—1. In combination with the reservoir D and the bowl and water-pipe of a water-closet or urinal, an automatic injection-valve and pipe, arranged to cause a small quantity of water from said water-pipe to be injected into said reservoir after the flow through said supply-pipe is shut off, substantially as and for the purpose set forth.

2. The shut-off valve C and weighted or spring-valve F, arranged to be overcome by the water-ram upon closing of said valve C, combined with the reservoir D and the bowl of a closet or urinal, substantially as set forth.

120,980. — RAILROAD-CAR VENTILATOR.—Daniel C. Justison, Wilmington, Del.

Claim.—1. The sash B, hinged at its lower edge and provided with the hinged sill-plate D, operating under the pins *a a*, substantially as and for the purposes herein set forth.

2. The side plates E E, attached to the sides of the sash B and provided at their outer edges with rubber stripes *d d*, substantially as and for the purposes herein set forth.

3. The combination of the frame A, sash E, sill-plate D, side plates E E with rubber stripes *d d*, notched bar G, and spring-catches C H, all constructed and arranged to operate substantially as and for the purposes herein set forth.

120,981.—LADY'S DRESS. — Austin Kelley, New York, N. Y.

Claim.—A dress-waist having one or more elastic stripe, B, concealed by loose portions or plaits of the dress-fabric or by attached trimming, substantially as and for the purposes herein specified.

120,982.—ENGINE-GOVERNOR. — Benjamin S. Lawson, Brooklyn, N. Y., assignor to himself and Handren & Ripley, New York city.

Claim.—1. The quick-acting governor, having a valve, A, in a suitable case controlled by the friction-wheel A', subjected to the influence of loaded levers I, revolved around it by the action of the engine and inducing friction thereon, tending to close the valve, while an opposing force B tends to open the valve, all substantially as herein set forth.

2. In connection with the above, the frictional pieces J and adjusting means *j*, arranged and operating relatively to each other, the levers I, and friction-wheel A', controlling the valve A, all substantially in the manner and for the purposes herein set forth.

120,983.—GRAIN-SEPARATOR.—Samuel Lesig, Sr., Reading, Pa.

Claim.—The combination and arrangement of the blast-regulator *k* and the pivoted separator *l* with each other and with the fanner of an apparatus for separating grain from straw and chaff, substantially as herein set forth.

120,984.—BRONZE ALLOY.—George Montefiore Levi, Brussels, and Charles Maurice Klinzel, Liege, Belgium, assignors to Charles James Adolph Dick, Philadelphia, Pa.

Claim.—1. The within-described process of producing the alloy specified—that is, by combining with the metal a prepared alloy of phosphorus and tin or copper when the said prepared alloy is so proportioned to the metal, and when the ingredients of said alloy are so proportioned to each other, that the product shall not contain more than 2.5 per cent. of phosphorus and fifteen per cent. of tin.

2. The process of casting the alloys specified in molds prepared by the application of petroleum or its equivalent, substantially as set forth.

120,985.—RAILWAY CAR-WHEEL.—Henry C. Lockwood, Baltimore, Md.

Claim.—The improved railroad car-wheel, having the elastic packing B and separated fellies C arranged within the groove A', in connection with the movable screws D, keys D', and nuts E', or their equivalents, substantially as described.

120,986.—GRAFTING-TOOL.—John Maddy, Clearfield, Pa.

Claim.—The combined tool, consisting of a saw, knife, and wedge, all combined and arranged substantially as specified.

120,987.—GRAIN-CLEANING, SCOURING, AND DECORTICATING MACHINE. — James A. Maloney, Georgetown, D. C., assignor of two-thirds his right to J. Q. Larman and Riley A. Shinn.

Claim.—1. In combination with a grain-cleaning and separating machine, the grain-spout L, when constructed and arranged to operate in the manner described, and for the purpose set forth.

2. In combination with the scouring-shell D of a smut-machine, the scouring-cylinder described, when composed of the series of outwardly and inwardly burred and perforated cones G and the burred and perforated vertical beater-blades F, substantially as and for the purpose described.

3. In combination with a grain-cleaning and decorticating machine, constructed substantially as herein described, the sieve or sieves W, as and for the purpose specified.

120,988. — WATCHMAKER'S CHUCK. — Job Mansir, Richmond, Me.

Claim.—The combination, with the perforated chuck-plate B, of the face-plate A, screws *a a*, thumb-nuts K K, and back-spring D, substantially as specified.

120,989. — FENCE. — Benjamin F. Meare, Washington, Ind.

Claim.—The sections of a portable fence combined with the crossed stakes placed at the junctions of the sections, and with the cap pieces *d* connecting the middle stakes of the sections, and with the riders *f*, all arranged as specified.

120,990. — METALLIC CARTRIDGE. — Henry Metcalfe, New York, N. Y.

Claim.—A center-fire metallic cartridge for magazine fire-arms, combining a centrally-recessed pocket, primed from the inside, with a bell so flattened or formed about its forward end that, when brought in contact with or jostled against the head of a preceding cartridge, it may not reach the fulminate or crush the base of the shell, and thereby induce explosion, while, with a properly-arranged firing-pin or other like device, said fulminate may be ignited and the cartridge fired when in that part of the fire-arm thereunto designed, substantially as set forth.

120,991.—SOLDERING APPARATUS— Frederick L. Miller, Brooklyn, N. Y.

Claim.—1. The revolving soldering-bed, arranged in an inclined position, substantially as and for the purpose herein set forth.

2. The construction of such inclined revolving-bed with two or more seats arranged one within another for the reception of cans of different sizes, substantially as herein described.

3. The hollow shaft D, having perforations *e e* near its upper end, in combination with the inclined revolving-bed E, substantially as and for the purpose herein specified.

120,992, antedated November 3, 1871.—STOVE-GRATE.—Reos Moes, Philadelphia, Pa., assignor to himself and Silas H. Emery, same place.

Claim.—1. A circular grate, having plain and inclined teeth A and A' and intervening spaces *c*, arranged substantially as specified, in combination with devices substantially as herein described, whereby the said grate may be either revolved or reciprocated.

2. The pawl D hung loosely to the pivot-pin *a* of the said grate, adapted to the ratchet-teeth *b'* of the latter, and otherwise arranged to be operated, substantially in the manner described, by a key, F, or its equivalent.

3. The reversible key F with its pin *m* adapted to the socketed end of the pawl, to the slots *p* and *p'* of the same, and to the projections and recesses of the grate, all substantially as and for the purpose specified.

120,993. — MORTISING-MACHINE.— Edward Myers and Samuel R. Smith, Cincinnati, Ohio, assignors to Lane & Bodley, same place.

Claim.—1. The reversing mechanism of a mortising-machine having the following elements, to wit: The mandrel A, latch O, shafts L and *p*, clutches K and J, sleeve B, double eccentric D *d* D' *d'*, wheels G and H, bolt E, arm P, and spring F, the whole being combined and operating to produce an interrupted rotation of the mandrel in one direction, as and for the purpose designated.

2. In connection with the elements of the preceding claim, the nuts U V upon the screw-threaded part *e* of the sliding bolt E.

3. In connection with the elements of the first claim, the spring R, for the purpose explained.

120,994. — LAWN-MOWER.—Joseph S. Oakley, Passaic, N. J., and Oscar D. Wood, Newburg, N. Y.

Claim.—1. The combination, substantially as described, of the stationary and separately-detachable knives H with the pivoted knives I, when the stationary knives are held upon the knife-bar solely by the overlying pivoted knives, and are kept from lateral displacement by means of pins *b* projecting from the knife-bar and engaging with openings in the stationary knives.

2. The combination of the lugs *f f* on the wheels D D, the levers K L with projections *k* A, spring *m*, connecting-rod M, L-shaped lever N, and pitman O, all constructed and arranged to operate substantially as and for the purposes herein set forth.

120,995.—DINNER-PLATE COVER.—Mary M. J. O'Sullivan, New Haven, Conn.

Claim.—As an article of manufacture, the herein-described dinner-plate cover, consisting of the plates A B with the chamber C formed between, and having a cavity in the plate B so as to receive the plate F, and provided with the cover E, all constructed in the manner and for the purpose substantially as described.

120,996.—PREPARED GLUE.—Jolan Fr. Petting, Rochester, Ind., assignor to himself and Joseph Weidner, same place.

Claim. — The prepared glue, substantially as herein described.

120,997.—CURTAIN-FIXTURE.—Phineas W. Phillips, Salem, Mass.

Claim.—In a shade-roller, the detent D, for the purpose of stopping the upward movement of the shade, as shown and described.

120,998.—CUTTING BOOT AND SHOE COUNTERS.—Sylvanus C. Phinney, Stoughton, Mass., assignor to S. C. Phinney and J. C. Phinney, same place.

Claim.—1. Adjusting the gauge J by a rack-and-pinion movement, substantially as shown and described.

2. The clamp R, ring S, and spring T, arranged to operate upon the cutting-knife, substantially as and for the purpose set forth.

3. The arms O and *q* and screw P, arranged substantially as and for the purposes described.

4. The combination of the feed-rolls B B, apron I, gauge J, and knife M, when the same are arranged to operate substantially as and for the purposes described.

120,999. — DRAIN-PIPE MACHINE.—Mason R. Pierce, New York, N. Y.

Claim.—1. An apparatus for molding drain-pipes and other analogous articles, composed of a mold-case and core, constructed and operating without a core-socket, as described, in combination with a stationary or movable support for the mold-case and with a separate stationary or movable support for the core, the whole combined together to enable the core to be discharged from the case after a pipe has been molded without requiring the case to be removed from the support which sustained it during the molding operation, and without the use of a core-socket, substantially as herein set forth.

2. The arrangement of the "mixing-table" and "mixing-plows" relatively to the molds, substantially in the manner set forth.

121,000. — BUTTON. — Clark M. Platt, Waterbury, Conn.

Claim.—1. As a new article of manufacture, a button of the class mentioned, having the edges of the hole through which the rivet or eyelet passes strengthened by means of a washer fitting into the hub, as shown and described.

2. As a new article of manufacture, a button of the class mentioned, having the edges of the hole through which the rivet or eyelet passes strengthened by rolling back said edges, in the manner shown and described.

121,001.—STOVE-PIPE DRUM.—Lewin Racine, Hillsdale, Mich.

Claim.—Chambers A in combination with pipe B, oven C, dampers F, and frame G, constructed substantially as described, for the purpose specified.

121,002.—LIFTING-JACK.—William L. Rayment, Union City, Mich., assignor to himself and Ralph A. Day, same place.

Claim.—The ratchet lifting-bar D, in combination with the pendulous lifting-pawl bar *p* H, retaining-foot operating spring-pawl G *g*, and hand-lever E, the whole secured to operate properly between suitable standards A *a* and on a proper platform, B, upon which said standards and connected operating devices are mounted, substantially as and for the purposes set forth.

121,003. — HARROW. — William Rennyson, Norristown, Pa.

Claim.—The draft-bar G, the casting E with its segmental flanges *b* and *b'*, and the arm H provided with a roller on its outer end, when the same are so arranged and constructed that by the raising of the draft-bar pressure is thrown upon the arm H in whatever position it is placed, thus using a pressure from said bar as an auxiliary to the weight for revolving the harrow, substantially as herein set forth.

121,004.—MAIN-SPRING ATTACHMENT FOR WATCHES.—Charles E. Rice, Jersey City, N. J.

Claim. — A coil-spring, A, when provided with the arm *a*, projecting in an opposite direction to the coil of the spring, and arranged within the barrel B, substantially as described, so that the power of the spring bears the arm *a* toward its connection with the barrel, for the purpose set forth.

121,005.—HARVESTER.—Eli B. Rice, Madison, Wis., assignor of one-half his right to John H. Garnhart, same place.

Claim.—1. The combination of the endless rake-apron with the elevating-apron of a harvester, each composed of two or more parts moving parallel to each other, the front part of each moving at a greater speed than the rear parts, substantially as described, for the purpose specified.

2. In combination with the grain-platform and the compound rake-apron, the removable frame W, substantially as described, for the purpose specified.

3. In combination with the sickle, the double-inclined angular projections D', arranged as described, for the purpose specified.

4. The arrangement of the laterally-swinging binders' tables J' at each end of the concave Y, and of the hinged platform F', as herein described, for the purpose specified.

5. The binders' tables J', constructed as described, and hung upon uprights J' at each end of the concave by means of the socketed studs K' and brace-rods L, substantially as described, for the purpose specified.

121,006. — LINE-HOLDER.—John D. Sater, Greensburg, Ind., assignor to Sater & Son, same place.

Claim.—The combination of the box A having corrugations *c c* and openings *d d*, with the pivoted lever B having pointed end *b*, all substantially as and for the purposes herein set forth.

121,007.—SAW.—David Sattler, Napoleon, Ohio.

Claim.—A saw provided with scoring-teeth *a*, routing-teeth *c*, and rakers *b*, constructed and arranged as herein shown and described.

121,008.—LAMP.—William Scarlett, Aurora, Ill.

Claim.—1. The guide K arranged in the body of the lamp adjacent to the filling-hole L, and adapted to guide the float M *m*, as and for the purpose specified.

2. The bright cap *m* on the float M, so mounted in a lamp as to be conspicuously seen in looking down into the filling-hole L and to warn when the filling is nearly completed, as shown.

3. The perforated cylinder B in the hollow stock or shaft of the lamp, arranged as shown, so as to receive air freely below and discharge it gently into the space around, to be thence conducted upward, through the annular space C, to the burner, all as herein set forth.

121,009.—WELDING COPPER.—Christian L. Schurr and William G. Rehbein, Baltimore, Md.

Claim.—1. As an article of manufacture, a welded copper chain.

2. The process of welding copper herein described.

121,010.—FEED-REGULATOR FOR LIQUIDS.—Hermann Seyter, Vaihingen, Wurtemberg.

Claim.—1. In combination with the float *i*, the arm *f g* with its regulating-screw *h* and check-nut *h'*, movable around the hinge *e*, as and for the purpose set forth.

2. The combination of the valve-plate *k*, guides *m m*, valve *l*, holes *o o* with the supporting hooks *n n* and guiding-hook *p*, as and for the purpose set forth.

121,011, antedated October 28, 1871.—FIRE-ESCAPE.—William A. Sharp and George Hollenbeck, Tama City, Iowa.

Claim. — The links A A, having their upper rounds convoluted or coiled and their lower ones embraced by the latter, substantially as and for the purpose set forth.

121,012, antedated November 1, 1871. — CORN-PLANTER. — David J. Sheets, Belmont Wis.

Claim.—The corn-marker herein shown and described, operating in the manner and for the uses and purposes as set forth.

121,013.—RAILWAY CAR-BRAKE.—William F. H. Smith, Milwaukee, Wis.

Claim.—1. The combination of the shaft *z*, eccentrics *d*, rings *p*, shackles *c*, brake-blocks *a* having grooves *s* and flanges *t*, the connecting-bars A, springs B, lever C, and chain D, all constructed and arranged so that the brake-blocks may be used as ordinary friction-brakes, or may be lowered in front of the wheels to raise them up from the rails, substantially as herein set forth.

2. In combination with a shaft, *z*, from which the brake-blocks are suspended, the ratchet-wheels *f f* and pawls *h h*, substantially as and for the purposes herein set forth.

121,014.—Binding-Guide for Sewing-Machines.—William T. Smith, West Zanesville, Ohio.

Claim.—1. The combination of the forming-shoe with the adjustable braid gauge-plate, both constructed and arranged in connection with each other, substantially as described.

2. In a braid-binder for sewing-machines, the combination of the shoe A, guide-loop a, holding-stem b, and arm d with the adjustable gauge-plate B B′, with its gauge-lips n n and holding ends e e, the several parts being constructed and arranged to operate as described.

121,015.—Snap and Buckle Combined.—Philip A. Snyder, Butlerville, Ohio, assignor of one-half his right to Samuel Gustin, same place.

Claim.—The snap-hook C, provided with the buckle, consisting of the frame B having the bars a b c d, with spaces e′ b′ c′, and tongue e, arranged substantially as described.

121,016.—Pump.—George Steck and Franklin Arnold, Hughesville, Pa.

Claim.—The relay-pump herein described, consisting of the stocks G G′, the open vessel A divided into two compartments, as described, the boxes and valves herein described, the plunger-rods P P′, the racks R R, the guides F F, the wheel W constructed with the socket, as described, and the vertical handle L, all arranged and operating in connection with each other substantially as herein set forth.

121,017.—Thimble for Making Attachments to Steam-Boilers.—Allan Talbott, Richmond, Va.

Claim.—The bushings or thimbles with solid bottoms, screwed or riveted into boilers, substantially as and for the purpose set forth.

121,018.—Rotary Steam-Valve.—Julius F. Tallant, Burlington, Iowa.

Claim.—The oscillating steam-valve, having the induction-port F, the projecting arch E, the steam-chamber D, the open exhaust H, the steam-ports G, and the oscillating cylinder A with its connecting grooves B, all constructed, arranged, and operated as specified.

121,019.—Stove-Lid.—William Teamer Evansville, Ind.

Claim.—A stove-hole cover having a hole to which is adapted a plate rendered self-closing, substantially in the manner described.

121,020.—Fishing-Reel.—Silas B. Terry, Waterbury, Conn., assignor to Terry Clock Company, same place.

Claim.—1. The principal head A of a reel constructed with an internal flange, a, having a spool-head arranged therein, substantially as described, in place of the plate or cap usually employed.

2. The lever L, extending through the head A, and provided with a spring, f, to act in connection with the pinion d, substantially as and for the purpose specified.

3. The lever N arranged within the chamber of the head, extending therefrom to afford a means of operating, and provided with a jaw, n, to engage with the pinion D, substantially as and for the purpose set forth.

4. The frictional device for fishing-reels, consisting of the projection m, to extend through the head of the reel, and combined with an adjustable spring-pressure, substantially as and for the purpose specified.

121,021.—Harrow.—Colin Tharp and George P. Tharp, Bryan, Ohio.

Claim.—1. The teeth D^1 D^2 D^3 attached to bars D D D, in combination with the rocking-bars E E′, connected together by suitable means, and operated by the mechanism F F′, as and for the purpose described.

2. The improved harrow herein described and shown, consisting of the platform A a a, knives G G′, trucks i i, and the mechanism E E′ F F′ for operating the bars D D D, all in combination substantially as shown and described.

121,022.—Harness-Mounting.—Charles H. Thornton, Newark, N. J.

Claim.—Covered harness-mountings, when the seam or seams thereof on the outside of the same are covered and protected by a metallic strip or beading, as a new article of manufacture.

121,023.—Railroad Spike.—Theodore R. Timby, Tarrytown, N. Y.

Claim.—The rearward projection E, formed of a double bevel, with an obtuse angle below the point to which the spike is intended to be driven.

121,024.—Railway Car-Basket.—Morton Tower, Boston, Mass.

Claim.—Applying a hollow tube or outer cylinder to the two exterior rods or supports of a car-basket and connecting or fastening the wires thereto, substantially in manner and for the purpose set forth.

121,025.—Hub for Carriage-Wheels.—Holland E. Vick, Alliance, Ohio.

Claim.—1. The collars or thimbles A B provided with radial lugs C and flanges e, forming recesses in the ends thereof, into which are received the head G of the axle-box and screw, collar or thimble E, in combination with the wooden core A′, axle-box H, and screw, collar, or thimble E, substantially in the manner as described, and for the purpose set forth.

2. The axle-box H having a screw end, J, head I provided with a female-screw, I, in combination with the collars or thimbles A B of the hub and screw-thimble E, in the manner substantially as and for the purpose specified.

3. The two-part nut K provided with an external or male screw, K′, recess D′, and ring L, as arranged in relation to and in combination with the collar C′ of the axle B′ and head G of the axle-box H, in the manner substantially as described, and for the purpose set forth.

121,026.—Writing Apparatus for the Blind.—Arthur Von Briesen, New York, N. Y., assignor to himself and Victor E. Mauger, same place.

Claim.—1. A writing-tablet for the blind, provided with an automatically-adjustable hand-guide, which is held at one end only, substantially as and for the purpose set forth.

2. The combination of the adjustable hand-guide E, notched rod D, and spring-click c or its equivalent with the paper-holder C and tablet A, substantially as set forth.

121,027, antedated October 28, 1871.—Wrench.—Nelson Warren and James C. Stock, Wilmington, Del.

Claim.—The plate D, block E, and ferrule F, constructed, arranged, and secured in position substantially in the manner and for the purposes shown and described.

121,028.—Planing-Machine.—Andrew J. Watson, Lyons township, Mich.

Claim.—1. The combination of the board-gauge L, brought into and held in action by its weight N, with the chip-breaker H, to which it is pivoted in the manner and for the purpose described.

2. The combination of the chip-breaker H, held in action by its weight K, and arranged on the frame of the machine, as described, the board-gauge L, the straight-edge F provided with a chip-breaker at its forward end, and the grooving and tonguing tools E E′, the whole constructed, arranged, and operating as herein described.

121,029.—Tile.—David H. Watts, Philadelphia, Pa., assignor to himself and W. C. Sharpless, same place.

Claim.—A tile having dovetailed grooves, substantially as described.

121,030.—Wagon-Jack.—James Weathers, Greensburg, Ind.

Claim.—The within-described wagon-jack, composed of the leg A with notches b b, leg E, lever C, and bar D with tang or pin e, the lever and legs being pivoted together by one bolt, a, all substantially as herein set forth.

121,031.—Loop-Banding Machine.—George W. Weeks, Clinton, Mass.

Claim.—1. The revolving head W, with gears b and d d and twisting-hooks G G, constructed and arranged as shown and described, and operating in combination with the stop I, substantially as and for the purposes herein set forth.

2. The stops M M′ to control the oscillations of the rods S T, in combination with said rods and their arms, substantially as herein set forth.

3. The stop-motion arms L L′, adjustable upon the rods S T, in combination with said rods, their arms, and stops, substantially as and for the purposes herein set forth.

4. The slide J, with cams or inclined planes K K′ and loop-hook H, constructed and arranged to operate substantially as and for the purposes herein set forth.

5. The adjustable collars O O, slide-rods U U, and weight Q, arranged to operate in combination with the slide J, substantially as and for the purposes herein set forth.

121,032.—Elastic Car-Wheel.—James M. Whiting, Providence, R. I.

Claim.—The sections A B, the latter being provided with the axle or hub F and the former with the tread D and cylinder G, an elastic packing C being interposed between the two, substantially as described.

121,033, antedated November 9, 1871.—Hank for Sails.—George C. Williams, Boston, Mass.

Claim.—The within-described hank, composed of two parts, a and b, hinged at c, with the portions which hold the leach formed as sister-hooks, held in position by the pin d or its equivalent, substantially as and for the purpose described.

121,034.—Iron Folding-Chair.—George Wilson, Chicago, Ill.

Claim.—1. The combination of the cams J, pivoted bars G, and rigid bars H, substantially as specified.

2. The combination of the foot-frame C, curved rack-bars O, cross-piece P, shaft Q, tongue S, handle R, and arm-lever L attached to the seat-frame, substantially as specified and shown.

3. The combination and arrangement of the arm-levers L, arcs M M′, lever N, and spring n, substantially as specified and shown.

121,035.—Horse Hay-Rake.—James E. Wisner, Friendship, N. Y.

Claim.—1. The combination of the sliding clutches J, connecting-rods L, the catch-bar M, and the cam-guides for the purpose of positively holding the clutches engaged with the wheels until the proper moment of discharge, substantially as described.

2. In combination with the spring catch-bar M and the cam-guide having the inclined face and the recessed flange, the hand-lever P, substantially as described, for the purpose specified.

3. In combination with the spring catch-bar M, hand-lever P, and the cam-guide, the slotted and shouldered frame O, substantially as described, for the purpose specified.

4. In combination with the hand-lever P, the catch-bar M, and the slotted and shouldered frame O, the spring s, substantially as described, for the purpose specified.

5. The slotted loops E, constructed as described, with the arms f and slotted raised base H, for attaching the teeth to the axle or rake-head.

REISSUES.

4,634.—Machine for the Manufacture of Lozenges.—Oliver Rice Chase, Boston, Mass., assignor to Chase & Co.—Patent No. 39,196, dated July 7, 1863.

Claim.—1. The combination of the extra delivering-apron F with the main delivering-apron G, the sugaring and redoing apparatus, and mechanism for stamping out or cutting the lozenges from the paste, substantially as and for the purpose hereinbefore set forth.

2. The combination of the delivering-apron G, the cutter-board H, and the series of cutters I, substantially as and for the purpose hereinbefore set forth.

3. The combination of the delivering-apron G, the cutter-board H, the series of cutters I, and the discharging-apron N, substantially as and for the purpose hereinbefore set forth.

4. The combination of the surface-changing apron I, the cutter-board H, and the series of cutters I, substantially as and for the purpose hereinbefore set forth.

5. The combination of the delivering-apron G and a receiver or discharging-apron N with the surface-changing apron I, the cutter-board H, and the series of cutters I, substantially as and for the purpose hereinbefore set forth.

6. The combination of the comb-plate O with the cutters I, and the cutter-board or device for supporting the paste while being acted on by the cutters, substantially as and for the purpose hereinbefore set forth.

4,635.—Sediment-Collector for Steam-Boilers.—Collins Wood Deane, Philadelphia, Pa.—Patent No. 113,405, dated April 4, 1871.

Claim.—1. A mud-trap having the within-described slotted filtering-plates, arranged within a steam-boiler so that the entire surface-current may traverse the same in passing from end to end of the boiler.

2. The mud-trap B with its filtering-plates, the whole extending across or nearly across the shell of the boiler, as set forth.

3. The surface mud-trap C with its slotted filtering plates extending across or nearly across the boiler, in combination with the perforated discharge-pipe I.

4. The within-described combination and arrangement of the two mud-traps B and C with their filtering-plates.

5. The combination of one or more depressions, r, in the trap B with a corresponding number of suspended discharge-pipes.

6. The combination of a trap with two or more independent suspended discharge-pipes communicating with a larger pipe, by which the mud is discharged from the boiler, as set forth.

4,636.—Machine for Shearing and Punching Shingle-Straps.—Theodore E. Harris, Green Bay, Wis.—Patent No. 67,429, dated August 6, 1867.

Claim.—1. A machine-cut-and-punched shingle-strip or bale-fastening, made from sheet-iron, substantially in the manner described.

2. The combination of the table D provided with holes n n, the punches G G adjusted to the holes,

and the cutting-blade E, arranged to operate at the edge of the table in connection with the punches, and mechanism to reciprocate said blade and punches, substantially as described, for the purposes specified.

3. The combined machine herein described, consisting, essentially, of the frame H, table D, blade E, operating mechanism L, and adjustable punches G G, substantially as and for the purposes specified.

4,637.—VISE.—John Simpson, Cleveland, Ohio.—Patent No. 119,658, dated October 3, 1871.

Claim.—1. The box *a* provided with the rack C, and having its rear end contracted and mouth more or less flaring, substantially as and for the purposes herein set forth.

2. In combination with the box *a* having its rear end contracted, and provided with the rack C, the box *b* and screw E, constructed and arranged substantially as and for the purposes herein set forth.

DESIGNS.

5,363.—BURIAL-CASE.—Samuel Stein, Rochester, N. Y.

Claim.—The design for a burial-case, in which the mouldings A B C D constitute a border for the sides, inclosing the glass panel I, ornamental woodwork E *e*, and tablets F, substantially as above described.

5,364.—HAND-STAMP.—William N. Weeden, Boston, Mass., assignor to William B. Gorham, same place.

Claim.—A design for a linen or other marker, substantially as shown and described.

TRADE-MARKS.

527.—TEAS.—Allen, Shapleigh & Co., Boston, Mass.

528.—WAGONS.—S. N. Brown & Co., Dayton, Ohio.

529.—CORSETS.—M. Cohn & Co., New York, N. Y.

530.—SEWING-MACHINE ATTACHMENTS.—Domestic Sewing-Machine Company, Toledo, Ohio.

531.—GIN.—Gill & Lootz, Boston, Mass.

532.—MEDICINES.—John J. Haley, San Francisco, Cal.

533.—PINE-APPLE BEER.—Quincy A. Hooper, Attleborough, Mass.

534.—MEDICINE.—Andrew J. Hopkins, Providence, R. I.

535.—FERTILIZER.—Joshua Horner, Jr., Baltimore, Md.

536.—BILLIARD-TABLES.—Kavanagh & Decker, New York, N. Y.

537.—BREAD.—John F. Kohler, New York, N. Y.

538.—COTTON SHEETINGS, &c.—The Jackson Company, Nashua, N. H.

539.—CORSETS, SKIRTS, &c.—Thomson, Langdon & Co., New York, N. Y.

540.—SKIRTS.—Thomson, Langdon & Co., New York, N. Y.

541.—CORSETS.—Thomson, Langdon & Co., New York, N. Y.

542.—CORSETS.—Thomson, Langdon & Co., New York, N. Y.

543.—SKIRTS AND CORSETS.—Thomson, Langdon & Co., New York, N. Y.

544.—GIN.—C. & W. A. Waters, Boston, Mass.

EXTENSIONS.

JOHN P. MANNY, of Rockford, Ill.—Letters Patent No. 18,510, dated October 27, 1857.

"Improvement in Mowing-Machines."

Claim.—Suspending, elevating, and lowering the cutter-bar of mowing-machines in a horizontal position by means of flexible connections, such as cords or chains, attached to each of its ends, when the same are arranged in relation to and used in combination with independent rigid frames, substantially in the manner and for the purposes herein described.

DANIEL LOVEJOY, of Lowell, Mass., and ELIZABETH S. BUTTERFIELD, of Rockingham, Vt., administratrix of GEORGE F. BUTTERFIELD, deceased.—Letters Patent No. 18,509, dated October 27, 1857.

"Improved Grinding and Polishing Machine."

Claim.—Giving the plate R, or other article to be ground, a vertical reciprocating motion tangentially with the plane of motion of the stone or wheel D, or parallel therewith, and also a vibrating lateral motion, for the purpose set forth.

HOSEA WILLARD AND ROBERT ROSS, of Vergennes, Vt.—Letters Patent No. 18,562, dated November 3, 1857; reissue No. 1,775, dated September 27, 1864.

"Improvement in Harvesters."

Claim.—1. The combination of the grain-platform G, or its equivalent, with a hinged coupling-arm E', and a rear connection, which allows of an up-motion of the platform, independent of the main frame, substantially as described.

2. Supporting the rear delivery side of the platform G, or its equivalent, by a yielding connection from the main frame, in combination with supporting the front delivery side by a leading-wheel, F'', or its equivalent, substantially as described.

3. The combination of the rear of the grain-platform, raker's seat G', and arm G''', or its equivalent, with the inner side of the main frame, substantially as set forth.

4. Connecting the front of a grain-platform of a two-wheeled harvesting-machine to a finger-beam, which is, in turn, hinged by a free hinge to a hinged coupling-arm, whereby the platform is free to conform to the inequalities of the ground, substantially as and for the purposes set forth.

5. The combination of the independent supporting and driving-wheels B B' with ratchets *b b'*, levers C C', gears D D' and *d d'*, substantially as and for the purposes set forth.

6. The combination of convex pulley J' with concave ratchet-wheel *k'*, substantially as set forth.

HOSEA WILLARD and ROBERT ROSS, of Vergennes, Vt.—Letters Patent No. 18,562, dated November 3, 1857; reissue No. 1,776, dated September 27, 1864.

"Improvement in Harvesters."

Claim.—1. The combination of a knuckle, or the equivalent thereof, with the joint which connects the finger-beam and coupling-arm, for raising the hinged finger-beam of a mowing-machine off of the ground to pass obstructions.

2. The combination of a lever with a hinged finger-beam and coupling-arm, as herein described, in such a manner that while the finger-beam on either end is free to conform to the inequalities of the ground while in operation, the finger-beam can be raised or elevated to pass over obstructions, as set forth, by simply raising the coupling-arm, substantially as described.

3. The combination, with the joint which connects the finger-beam and coupling-arm, of a knuckle and adjusting-screw or bolt, or their equivalents, for regulating the upward deflection of the heel-end of the finger-beam.

HOSEA HILLARD and ROBERT ROSS, of Vergennes, Vt.—Letters Patent No. 18,562, dated November 3, 1857; reissue No. 1,780, dated September 27, 1864.

"Improvement in Harvesters."

Claim.—1. The combination of a leading-wheel with the inner shoe hinged to a coupling-arm, substantially as and for the purposes herein described.

2. The combination, with said shoe and leading-wheel, of an adjustable arm, for the purposes set forth, substantially as and for the purposes herein described.

3. The combination and relative arrangement of a wheel *g''*, arm *g'*, finger-beam F', shoe F, and curved coupling-arm or finger-bar extension piece E', substantially as described.

HOSEA WILLARD and ROBERT ROSS, of Vergennes, Vt.—Letters Patent No. 18,562, dated November 3, 1857; reissue No. 1,781, dated September 27, 1864.

"Improvement in Harvesters."

Claim.—The combination, with the finger-beam or bar and the main frame of a two-wheeled machine, of an adjustable hinged coupling-arm, substantially as and for the purposes set forth.

EARLE HARRY SMITH, of Bergen Heights, N. J.—Letters Patent No. 18,605, dated November 10, 1857.

"Improvement in Sewing-Machines."

Claim.—The discoidal shuttle, constructed as set forth, and made to control the loop of needle-thread, substantially in the manner described and represented.

ISSUE OF NOVEMBER 21.

PATENTS.

121,036.—STEREOTYPES.—Frank H. Aiken, Franklin, N. H.

Claim.—Forming a stereotype-plate with a wooden back by placing said back, suitably perforated or grooved, within a mold and pouring therein to molten metal, which fills the holes or grooves in the wooden back and forms the metal face, substantially as herein specified.

121,037, antedated November 4, 1871.—REFRIGERATOR.—August W. Almqvist, Long Island City, and Eugene G. Conradson, Brooklyn, N. Y.

Claim.—1. The water-chamber C formed by the combination of an interior heat-conducting metallic wall, B, and an exterior porous and water-absorbing wall, A, on the outer surface of which latter wall the water evaporates, substantially as and for the purpose hereinbefore set forth.

2. The ice-plate D, constructed as described, in combination with the water-chamber C, substantially as and for the purpose hereinbefore set forth.

3. The combination of the recessed platform G, serving as bottom to the box, and the door J hinged thereto, substantially as and for the purpose hereinbefore set forth.

121,038.—PREVENTING MILDEW IN CANVAS.—Theodore Bathy, Smith's Creek, Mich.

Claim.—The compound for preventing mildew in canvas and similar fabrics, composed of the ingredients herein set forth.

121,039.—DEVICE FOR TIGHTENING LOOSE TIRES.—Hiram Beckwith, Grass Lake, Mich.

Claim.—The combination of the standard A provided with the claw-foot *a*, the nut *b*, and the clamp G with the screw B provided with the swivel-bearing *c*, and the screw D, all constructed, arranged, and operated substantially as described and shown.

121,040, antedated November 2, 1871.—JOURNAL-BOX.—John D. Beers, Philadelphia, Pa.

Claim.—1. The combination of the journals of the axle P with the wheels C C, and the combination of said wheels with the rollers F and stationary axles H H, when the said parts are constructed and arranged in relation to each other and geared together, substantially in the manner and for the purpose above set forth.

2. The curving of the shoulders of the shaft P and the corners of the wheels C C in relation to each other, and also the shoulders of the journals of the rollers F and the corners of the rings E in like manner, substantially as and for the purpose specified.

121,041.—PRINTER'S GALLEY.—John F. Bronson, Waterbury, Conn.

Claim.—In a printer's galley the arms F F', pivoted at their outer ends, respectively, to the galley-edge B and the side-stick D, and at their other ends pivoted to the longitudinal bar E, substantially as specified.

121,042.—WASHING AND WRINGING MACHINE.—George R. Clarke, New York, N. Y.

Claim.—1. The combination of the revolving perforated disk *m* and pressure-roller or rollers *f*, whereby the clothes, by a continuous movement, are automatically subjected to immersion in water and to a squeezing action, substantially as described.

2. In combination with the perforated disk, the series of buckets shown in Figs. 4 and 5, substantially as and for the purpose specified.

3. The arrangement of tub *a*, frame and movable arms *c* and *d*, and hinge or pivot *b*, substantially as and for the purpose specified.

121,043.—THREAD-RACK FOR SPOOLING ATTACHMENTS OF SEWING-MACHINES.—John L. Demarest, Elmira, N. Y.

Claim.—The combination, with the sewing-machine table, of the hinged rack provided with the guiding-arm B D, the pins K for receiving the spools, and the washers for holding the ends of the thread, and arranged for operation with the spooling device, as set forth.

121,044, antedated November 4, 1871.—COMPOSITION FOR SOAPS.—Julius Edmund Dotch, Washington, D. C.

Claim.—A disinfectant, deodorizing, and antiseptic soap or saponaceous compound wash or ointment, made of the ingredients as above set forth.

121,045. — FELTING-MACHINE. — Rudolph Eickemeyer, New York, N. Y.

Claim.—1. The combination and arrangement of a stationary yielding platen with a jiggering platen placed beneath, and supported upon fixed bearings, substantially as described.

2. In combination with a stationary yielding platen, adjustable links connecting the platen and frame, whereby the platen may be firmly and accurately held against the lateral thrust of the jiggering platen.

3. In combination with the jiggering platen, the adjustable supporting rocking columns, supported upon a fixed base, substantially as and for the purpose described.

4. In combination with the stationary platen of a felting-machine, a jiggering platen having a gradually-diminishing throw, substantially as described.

5. In combination with the jiggering platen and the crank or eccentric from which it derives its motion, the intervening vibrating lever and link-connection placed upon a shifting fulcrum, and operating to gradually diminish the throw of the jiggering-platen, substantially as described.

6. In combination with the jiggering platen and the mechanism for moving it with a gradually-diminishing throw, the lifting-toe or cam and the yielding worm-shaft, whereby said mechanism is released from connection with the power of the machine, and the gradually shortening of the throw by the automatic action of the machine caused to cease at a determined time without stopping the reciprocating action of the jiggering platen.

121,046.—HEMMER FOR SEWING-MACHINES. Henry A. Ellis, Albany, N. Y., assignor to himself and George S. Weaver, same place.

Claim.—1. The guide B', constructed with an oblique edge, *a*, extending beyond the rear of and in combination with the hook *b* of the folder, substantially as described.

2. The combination, with the above, of the pressure-stretching spring E, when constructed and arranged as described to bear directly in line with the feed of the machine and leave a wide space between itself and the guide B', substantially as described.

3. The combination of the inverted scroll D with the guide B' having an oblique edge, *a*, and the hook *b*, substantially as described.

4. The combination of the spring E, as described, with the inverted scroll D *y*, as described, for the purpose set forth.

121,047.—CAR-COUPLING.—John M. Enos and Joab Enos, St. Joseph, Mich.

Claim.—The hooks C provided with elongated ends D, mortised toggle-slide I, shafts F provided with lifters H, in combination with buffers A A and standards U B, substantially as described.

121,048. — HORSE-POWER. — Luther R. Faught, Philadelphia, Pa.

Claim.—1. In lever-powers, the squared or splined extension B' of shaft B, in combination with a conformingly-shaped sleeve or socket O on the king-post M, the whole arranged and operating in the manner and for the purpose set forth.

2. In horse-powers having an internal driving wheel on the first shaft, the hollow shaft F and its pinion E, in combination with the stationary spindle G and support A, all arranged and operating in the manner and for the purpose set forth.

3. Securing the bevel-wheel J on the shaft F by means of the tapered screw or ping *h* and transverse incision *g*, in the manner and for the purpose set forth.

4. In combination with pinion K and shaft L, the tapered key *q* and set-screw *r*, all relatively arranged, and operating as set forth.

121,049.—CIGAR-LIGHTER.—Moses F. Gale, New York, N. Y.

Claim.—1. The combination of screws A and B fixed in a bird or other ornamental device, when used for the purposes set forth.

2. The combination of the parts A, B, C, S, and T.

121,050. — BRUSH. — Hayward A. Harvey, Orange, N. J., assignor to Manhattan Brush Manufacturing Company, New York city.

Claim.—1. A bunch or tuft of bristles or fibers looped into a ferrule or eyelet, indented as described, in combination with a brush-stock.

2. The combination of a brush-stock with a corrugated ferrule or eyelet containing a bunch of bristles or fibers, substantially as set forth.

121,051.—CAR-COUPLING.—John B. Heverling, Greenville, Ohio.

Claim.—The combination of the hook A having the points B and D, and the shank slotted at *c*, with the slide C, for the purposes and in the manner above described.

121,052.—PROPULSION OF MARINE TORPEDOES. — John Adams Howell, United States Navy.

Claim.—The combination of the fly-wheel and torpedo for the purpose of propelling the latter, as hereinbefore set forth.

121,053. — COOKING-STOVE. — Seymour Ketchum, Macon, Ill.

Claim.—The division of the long center piece of a stove in two pieces, B B', flanges *b b'*, in combination with the mortises *d d'*, standard D, and plate E, substantially as described.

121,054.—PLATFORM OR HANDLE FOR FRUIT-BASKETS.—Joseph Knapp, Coloma, Mich.

Claim.—A removable platform or handle for fruit-baskets, consisting of the parts A B, hold to the basket by wires *c* so as in part to hold the netting in place, as set forth.

121,055.—LUBRICATOR FOR STEAM-ENGINES. Charles Lynch, Detroit, assignor to himself, Daniel A. Mathews, Ypsilanti, and Henry McGraw, Detroit, Mich.

Claim.—1. The arrangement of the guard F, gauge-tube I, and packing-rings *e* within the reservoir B, as described.

2. The arrangement of the condenser C and pipe A' with relation to the hollow standard A and within the reservoir B, as shown and set forth.

3. The automatic lubricating device, consisting essentially of the hollow standard A, reservoir B, condenser C A', guard F, glass gauge-tube I, valve G, feeding-pipe H, check-valve *b*, filling-cup J, and drain-cock K, constructed, arranged, and operating substantially as described.

121,056, antedated November 3, 1871. — KITE.—Oscar Maddaus, Brooklyn, N. Y.

Claim.—The curved upper bar A' of the kite, in combination with the cord B, upon which the apron vibrates, substantially as herein shown and described, and for the purposes set forth.

121,057. — MACHINE FOR BENDING TUBE-SKELPS.—George Matheson, Boston, Mass., assignor to The National Tube Works Company, same place.

Claim.—The combination of the jaws *b b'* having slots *m*, flanges *t t'*, slots *u u' v v'*, screws *n*, pins *q*, dies *s s'*, and frames *w w' o o'*, arranged as specified.

121,058.—BENT CUTTER-BENCH AND KNEE. Edward Milner, Strathroy, Canada.

Claim.—The bench A A'' and knees A' when bent from a single piece of timber, as described.

121,059.—TOOL FOR BORING CIGAR-MOLDS. Heinrich F. Moeller and Hermann P. Brandt, Davenport, Iowa.

Claim.—The within-described cigar-mold cutter, tapering toward both ends, as an article of manufacture.

121,060.—SCREW-BOLT. — Frederick Mutimer, Rockford, Ill.

Claim.—The screw-bolt herein described, composed of the head A, square part B, part C having the projecting ribs *h*, round part D, and screw part E, as a new article of manufacture.

121,061.—HARVESTER.—Peter Nicola, Massillon, Ohio.

Claim.—1. The combined bevel and spur-wheel L X, in combination with the bevel driving-wheel M, the spur-wheel train K H, and the rotary sickle J, the several parts being arranged substantially as and for the purpose specified.

2. In a rotary reaping-machine, the combination of the following elements, to wit: A frame, A A D R E F, driving-wheels O O, bevel driving-wheel M, combined bevel and spur-wheel X L, spur-wheel train K H, supporting-disk G, rotary sickle J, and caster-wheel U, the several parts being arranged and operating, and the whole being impelled and guided, substantially as is herein specified.

3. The rake-fingers *d d d*, in combination with the revolving sheath-gatherers *b c b c*, the several parts being arranged for joint operation, substantially as specified.

4. The holder-head *f* and revolving sheaf-holder *g f*, in combination with the revolving sheaf-gatherers *b c b c*, the said parts being arranged for joint operation, substantially as specified.

5. The swinging bar *n* with its stop-arm *p*, in combination with the holder-head *f* journaled on the shaft P, the several parts being arranged and operating substantially as specified.

6. The hinged binding apron A, in combination with the swinging holder-head *f* and revolving sheaf-holder *g f*, the several parts being arranged as and for the purpose specified.

7. The combination, in a gathering and binding mechanism for a reaper, of the following elements, to wit: A series of rake-fingers for gathering the cut grain, a revolving sheaf-gatherer for taking the sheaves from the rake-fingers, a revolving sheaf-holder for receiving the sheaves, holding them while being tied up and discharging them to the ground, and a binding-apron operated by the binder's foot and serving to control the movements of the sheaf-holder, the several parts being arranged substantially as is herein described.

8. The pivoted lever *q*, and link *s* with treadle-bar *t*, in combination with the hinged binding-apron A, the several parts being arranged and operating substantially as and for the purpose specified.

121,062.—SMOKE-STACK FOR ENGINES, &c. Thomas B. Phoebus, Memphis, Tenn, assignor of one-half his right to John F. Titus, same place.

Claim.—1. The combination of the stack, the deflector, the guide-rods, and the adjusting lever, substantially as described, so that the deflector may be easily and quickly adjusted, for the purpose specified.

2. The combination of the stack, the deflector, the enlarged drum, and its narrow throat, these members being constructed to operate in combination, substantially as hereinbefore set forth.

121,063. — ROOFING. — Osborne J. Pierce, Worcester, Mass.

Claim.—1. The method of laying slate and other roofing material herein described by the employment of pieces A so formed and laid in courses as to cover the joints and leave the central portion of each slate or piece exposed, the slates or pieces in each course being arranged with spaces between them laterally, substantially as and for the purposes set forth.

2. The combination, with the larger pieces A, formed as shown and described, of the auxiliary pieces B, substantially as and for the purposes set forth.

121,064. — STEAM-ENGINE. — Edward H. Rees, Mansfield, Ohio.

Claim.—1. The hollow cylindrical rotating valve F provided with a solid head, *e*, longitudinal exhaust-recess *f*, and one or more ports, *g*, constructed, arranged, and operating within the valve-chest E, against the bonnet *i* thereof, with relation to the steam and exhaust-ports of a steam-engine, substantially as described.

2. The combination, in a trunk-engine, of the two cylinders A and A' having the exhaust-belt *a* between them, and the steam-valve F, the several parts being constructed and arranged as described and shown, for the purposes set forth.

3. The construction and arrangement of the cylinders A A', passages *a a' d*, piston B, trunk C, cylindrical steam-chest E, hollow cylindrical valve F provided with head *e*, exhaust-recess *f*, and port *g*, the spindle G, curved arm H, and set-screw I, substantially as and for the purposes set forth.

121,065.—WINE-FILTER.—August F. Schmidt, Davenport, Iowa.

Claim.—1. The projecting ring *b* on the bottom of the vat *a*, substantially as and for the purpose hereinbefore set forth.

2. The application of the compressing screws *t t t t* from the top of the filter, substantially as and for the purpose hereinbefore set forth.

121,066, antedated November 2, 1871.—TONIC AND DIATONIC MUTATION SCALES. James H. Scott, Kickapoo, Ill.

Claim.—1. The bars B C, with notches *a a* to facilitate the removal and adjustment bars *h i j k*, &c., in combination with the musical staff A, substantially as and for the purpose set forth.

2. The bar B, provided with spring *d* for retaining hinged strip D over the bars *h i j k*, &c., when adjusted in the proper notches *a a*, in combination with the musical staff A, substantially as and for the purpose set forth.

121,067.—PERCH FOR FOWLS.—Lewis Thayer Stetson, Randolph, Mass.

Claim.—A fowl-roost, as constructed with the jointed uprights *b b*, water-cups *c c*, detachable cross-bar *g* with its poisonous cloth A and bar *f*, in the manner and for the purpose as herein set forth.

121,068.—EARTH-CLOSET.—Robert R. Strain, San Francisco, Cal.

Claim.—1. In combination with the hopper B, the sliding receptacle, consisting of the plate *l* and hinged jaws *o p*, arranged and operated substantially as and for the purpose above described.

2. The sliding plate *l* with the hinged jaws *o p*, in combination with the levers *t*, bell-cranks *t*, spring *w*, and roller *u*, substantially as and for the purpose above described.

3. The hinged jaws *o p*, having their sides united by a pin and slot when the rear edge of the lower jaw is curved downward, in combination with the roller *u*, bell-crank *t*, and spring *w*, substantially as and for the purpose above described.

4. An automatic device for supplying a quantity of earth in earth-closets, consisting of the slotted board E, slotted side plates A, sliding plate *l*, jaws *o p*, roller *u*, bell-cranks *t*, levers *t*, and spring *w*, the whole constructed and arranged to operate substantially as and for the purpose above described.

121,069.—BLACKING-BOX.—Albert M. Utley, Watertown, N. Y.

Claim.—A blacking-box, composed of a blacking-box proper, (with or without a handle, removable or not, as preferred,) and a hinged cover having

a water-receptacle on its under side, and arranged for operation, substantially as shown and described.

121,070. — School-Desk and Seat. — Wiley Watson, Visalia, Cal.

Claim.—1. The platform A, in combination with the adjustable desk F and adjustable seat B, substantially as and for the purpose above described.

2. The desk F, having the legs G G, provided with the tongue K and pawl f, in combination with the grooved posts or standards C with their racks E, substantially as and for the purpose above described.

3. The box N and sliding block O, with their pawls q and racks X, in combination with the seat R provided with the single leg or standard, the whole combined so as to form a revolving seat, adjustable in height, substantially as and for the purpose above described.

4. The adjustable revolving seat above described and claimed, provided with the strap X', in combination with the slotted platform A and pin W', substantially as and for the purpose above described.

121,071.—Tea-Kettle.—Abraham F. Wolf, Beaver Falls, Pa.

Claim.—A concave lid for tea-kettles, constructed as herein described, and for the purpose set forth.

121,072, antedated November 13, 1871.—Tuyere. — Alfred M. Worthing, Reno, Nev.

Claim.—The box A, having a sliding bottom, B, and provided with the parallel slots d on its upper surface, in combination with the adjustable slides g and water-pipe i, substantially as and for the purpose above described.

121,073. — Fire-Place Fender. — Charles C. Algeo, Pittsburg, Pa.

Claim.—The fender, provided with the flange B having holes for the caster-spindles, also with the cavities D above the holes, and the caster-spindles fitted in the said holes and cavities and secured by pins G, all substantially as specified.

121,074.—Boring-Machine.—Frank S. Allen and Charles F. Ritchal, New York, N. Y.

Claim.—1. The combination of the sliding frame F that carries the pulley E and crank-wheels G I, the sliding plate or frame L that supports the forward parts of the cranks K and their attached nuts P with the frame A, swiveled screw Q, stationary guide-plate N that guides the boring-tools, and stationary rest O that holds the work, substantially as herein shown and described, and for the purpose set forth.

2. The boring-tools M, made elastic, and arranged in the guide-frames or plates L N so as to converge, as shown and described, for the purpose specified.

121,075. — Railway Car-Wheel.—Albert G. Barrett, Barrett, Kan.

Claim.—1. A car-wheel having a hub suspended from the rim by means of elastic spokes, substantially as described.

2. A wheel provided with a polygonal strengthening-girdle, as described.

121,076.—Carriage-Curtain Fastener.—Henry M. Bidwell, New Haven, Conn., assignor to himself and Stillman Moore, same place.

Claim.—As an article of manufacture, the herein-described fastening for carriage-curtain, consisting of the two jaws C D, constructed and applied to close onto the neck of the knob, in the manner substantially as described.

121,077. — Hammer-Flange Butt of Piano Actions.—Dominic L. Bollermann, Mount Vernon, assignor to Jesse J. Davis, Brooklyn, N. Y.

Claim.—1. The extended metallic arched spring I, arranged between the parts A and B of the hinge-butt, and adapted to serve relatively thereto and to the screw E and hammer H, substantially in the manner and for the purposes herein set forth.

2. The chamber J, recessed between the parts A and B, arranged as shown relatively to the spring I, and adapted to serve therewith and with the adjusting-screw E and hammer H, as and for the purposes specified.

121,078, antedated September 7, 1871.—Tire-Machine. — William Bowden, White's Corners, assignor to Richard Bowden, Hamburg, N. Y.; said Richard Bowden assignor of one-half his right to George Abbott, same place.

Claim. — The arrangement of the hollow bed-plate A, movable clamp-blocks B B', following-block or blocks F, hook-heads c c', and cams D b b', the whole constructed as described, and operating conjointly in the manner and for the purpose specified.

121,079. — Steam-Generator. — Alvan D. Brock, Washington, D. C.

Claim.—The steam-generator B, composed of a series or coil of tubes, connected with the steam and water reservoir A, the outlets C C of said generator entering said reservoir near its water-level, substantially as and for the purpose set forth.

121,080. — Chair-Seat Frame. — Henry Buchter, Louisville, Ky.

Claim.—The piece E, constructed as described, and applied in the manner and for the purpose set forth.

121,081. — Lifting-Jack.—Walter S. Burgin, Washington, Vt.

Claim.—The combination of the handle D, link e, and lever C with the sliding elevator B and supporting case A, all arranged to constitute a jack, as specified.

121,082.—Asphalt Pavement.—Cornelius Burlew, Washington, D. C.

Claim.—A concrete composition for pavements and floors, composed of equal parts of sand, gravel, coal-ashes, pulverized stone, and marl, combined with about five per cent. of hydraulic cement, and saturated with the within-described solution of roofers' pitch, coal-tar, gum asphaltum, and nitrous acid.

121,083.—Wrench.—Luke Chapman, Collinsville, Conn.

Claim.—1. The method of manufacturing a monkey-wrench by slipping the movable jaw B upon the shank A and then welding the step d onto said shank, as set forth.

2. The washer f, interposed between the step d and screw C for retaining the upper end of said screw in the movable jaw, as specified.

3. The lip h on the ferrule d, applied under the step d for retaining the pin g in place, as specified.

121,084. — Drawing-Knife. — Thomas M. Clarke, Winsted, Conn.

Claim.—As an article of manufacture, a drawing-knife in which the blade is formed from thin metal corrugated longitudinally, substantially as set forth.

121,085.—Fanning-Mill.—Daniel Collins, Zanesfield, Ohio.

Claim.—1. The arrangement of trough A in relation to plate H and suction-tube f, as and for the purpose specified.

2. The vibrating and perforated plate E and the fixed plate H, combined as described with trough A, tube f, and screen F, for the purpose specified.

121,086.—Dump-Cart.—George L. Collins, Trenton, N. J.

Claim.—The strap or bar C, spring D, and reversed catches e e, when arranged and constructed as described, substantially as and for the purpose herein set forth.

121,087. — Baling-Press. — Joel S. Cook, West Groton, Mass.

Claim.—1. The combination of the windlasses g, chair f, follower e, bottom d, joists h, and chains i, constructed and arranged to operate as specified.

2. The press-box herein described, consisting of the pivoted end pieces a, strips k, braces c, sills b, cross-pieces e, and side-boards m n, constructed as described.

121,088. — Spirit-Level.—Leonard Leroy Davis, Springfield, Mass.

Claim.—The arrangement, in the stock of a spirit-level or plumb recessed as described, of the bubble-case B having the studs b b and axial bearing C, in combination with the holding-plate E, and the bearing D having the eccentric socket d formed therein, the whole constructed and arranged substantially as described.

121,089.—Lamp-Bracket for Sewing-Machines.—Robert S. Dennison, Winsted, Conn.

Claim.—The lamp-bracket H arranged upon the post F, the said post made adjustable in the clamping device B C D, and by means of which clamping device the bracket is secured to the table, substantially as set forth.

121,090.—Binder's Table for Harvesters. — Patrick M. Donohoo, St. Rose, Wis.

Claim.—The combination of frame A, shaft B, platform H, uprights G, disk C, gear D, pinion D', shaft E, and wheel F, substantially as and for the purpose described.

121,091. — Revolving Urn and Spice Stand.—William John Evans, New York, N. Y.

Claim.—1. The foot or pedestal A B C, spice-stand d^1 d^2, perforated hollow cylinder F, ring-plate J, notched plate K, washer M, glass-stand N, and plate O, in combination with each other, substantially as herein shown and described, and for the purpose set forth.

2. The drip-chamber E and hot-air chamber G formed in the revolving spice-stand D, substantially as herein shown and described, and for the purposes set forth.

3. The pipes e^1 e^2 leading from the drip-chamber E, in combination with the revolving spice-stand D, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the base P, washer Q, and urn-stand R T with the flanged plate O, glass-stand N, washer M, plates K J, spice-stand D, and foot A B C, substantially as herein shown and described, and for the purpose set forth.

5. The springs H attached to the drawers and spice-boxes of the revolving spice-stand D, provided with the pins d^2 to keep said drawers and spice-boxes in place in said stand when revolving, substantially as herein shown and described.

121,092.—Skate-Fastening.—Edward Lawson Fenerty, Halifax, Canada.

Claim.—1. The plate A a^1 a^2 a^3 and plate C c^1 c^2, constructed and operating in connection with each other and the skate-iron B, substantially as herein shown and described, and for the purposes set forth.

2. The combination of the lever D with the plate A a^1 a^2 a^3, plate C c^1 c^2, and skate-iron B, substantially as herein shown and described, and for the purpose set forth.

3. The plate E c^1 c^2 and plates F f', constructed and operating in connection with the skate-iron B and heel-fastening A a^1 a^2 a^3 C c^1 c^2 substantially as herein shown and described, and for the purpose set forth.

121,093.—Machine for Boring and Mortising Blind-Slats.—Thomas Flesher, Dunkirk, N. Y.

Claim. — The combination and arrangement of the machine as a whole, consisting of the curved standard B holding vibrating frame e, pivots f f, the mandrel H, also the hanger or arm C supporting shaft D, with slotted crank I, connecting-rod J, and the pulleys E a b j, operating in the manner and for the purpose specified.

121,094.—Rocking Apparatus.—John N. Fowler, New York, N. Y.

Claim.—1. The folding-seats M^1 M^2 on the rocker B, in combination with the stand A, and arranged to operate thereon, as and for the purposes specified.

2. The yoke-piece B^2, formed and arranged as represented, to act on guide-pulleys C^1 C^2, and to serve relatively to the rocker B and seats M^1 M^2, as and for the purposes specified.

3. The spring E and adjustable fastening e, arranged and adapted to operate relatively to the rocker B and seats M^1 M^2, working on the stand A, as specified.

4. The extensible base pieces A^4 A^4 on the rocker-stand A, arranged to serve as represented relatively to the rocker B and seats M^1 M^2, for the purposes specified.

5. The entire combination of the rocker B with its folding-seats M^1 M^2, and yoke B^2 with the stand A, extensible feet A^4, guide-pulleys C^1 C^2, and springs E G, as specified.

121,095. — Windmill. — Hans Heinerich Frank and Peter Hansen, Richton, Ill.

Claim. — 1. The combination of the wheel C, having the side frames d provided with the pivoted blades e attached to its arms c, with the sliding shaft k, weight w, and the intermediate connecting mechanism, when constructed and arranged substantially as and for the purpose set forth.

2. The combination of the wheel D, pinion J, and intermediate connecting mechanism with the cog-teeth L and wheel C, when constructed and arranged to operate substantially as and for the purpose set forth.

121,096. — Key for Sewing-Machine Looms.—Edward L. Gaylord, Bridgeport, Conn.

Claim.—The key A, having two elastic prongs beveled inwardly at the ends thereof, as and for the purpose specified.

121,097. — Stove-Grate. — William A. Greene, Brooklyn, N. Y., assignor to John H. Burtis, same place.

Claim.—In combination with the central cone C having a fluted surface, the correspondingly-serrated collar B, substantially as and for the purpose set forth.

121,098.—Sash-Holder.—John C. Hanna, Rossville, assignor to C. W. Harvey, Tama county, Iowa.

Claim.—The plate c, when hinged to the plate b, and provided with the flange d, or their equivalents, substantially as described.

121,099.—Post-Office Letter-Stamping Apparatus.—Thomas C. Hargrave, Boston, Mass.

Claim.—1. In a post-marking and canceling-machine, having cylinders F F', the endless band E driven by gears C D D' from shaft *b*, and guide-boards *a a*, substantially as described.

2. The reversed printing-cylinder F, *b*, in combination with the movable types *c*, plates *f*, and armed washer R, all constructed, arranged, and operated substantially as and for the purpose set forth.

121,100.—Stud-Fastener.—Adolph Hartmann, New York, N. Y.

Claim.—As an article of manufacture, a double-shanked stud provided with levers B B pivoted to said shanks, and coil-springs *a a* arranged on the pivots of said levers, as shown and described.

121,101.—Cooking-Stove.—Levi Hermance, Lansingburg, N. Y., assignor of one-half his right to Pelatiah J. Marsh, same place.

Claim.—The combination of the back plate A, oven-plate E, and plate I, when constructed as described, with reservoir L, the whole arranged to operate substantially as and for the purpose herein described and set forth.

121,102.—Printing-Telegraph.—Richard Herring, Canonbury, England.

Claim.—1. The combination of levers *f f*' and styles *f*² *f*³, armatures *f*⁴ *f*⁵, and magnets *d d*', substantially as specified.

2. The combination of clamp *e*, composed of stamp *m*, pad *n*, and spring-lever *m*', with the lever of a telegraphic-printing apparatus, substantially as shown and described, for the purpose specified.

3. The combination of clamp *e*, levers *f f*', styles *f*² *f*³, and the disk *l*, connected with its shaft by a spring to allow of intermittent rotary motion, substantially as specified.

4. The combination of the keys *c* and *p* of the sending instrument with the armature *v* of the relay instrument, and levers *f f*', and the connected magnets, as specified.

121,103.—Piston.—William H. Holland, Boston, Mass.

Claim.—1. The beveled segment *l*, formed with a curved back and permanent alternate triangular projections *i k* on the face, in combination with the rings *d d c c*, spring *m*, and piston *a*, substantially as specified.

2. The spring *m*, in combination with the beveled segment *l*, rings *d d c c*, and piston *a*, substantially as specified.

3. The rings *d d c c* arranged with beveled recesses *f f' g h h'*, tongues *c c c c*, and flanges *p p p p*, &c., in combination with beveled segment *l*, spring *m*, and piston *a*, substantially as specified.

4. The combination of the piston *a*, formed with the boxes *b b b b*, with the spring *m*, rings *d d c c*, and beveled segments *l l l l*, substantially as specified.

121,104.—Stove-Pipe Elbow.—George W. Howell, Covington, Ky.

Claim.—1. The parts A B, when constructed as herein described, adapted to packing for shipment, substantially as herein set forth.

2. The parts A B when constructed to form sections of stove-pipe elbows, substantially as herein set forth.

3. The elbow, composed of the parts constructed substantially as herein set forth.

121,105.—Shingle-Machine.—Elisha Hughes, Gowie, Canada, assignor to G. Miller Aylesworth, same place.

Claim.—1. The combination of the saw A, carriage C, and turn-table E, all substantially as specified.

2. An apertured and traveling carriage, C, a vertically-moving turn-table, E, and a bifurcated lever, K, combined, as described, in a bolt-sawing machine, with a stationary saw, as and for the purpose specified.

121,106.—Lining Oil-Barrels.—Merritt G. Huntley, Grand Rapids, Mich., assignor to himself and Harvey Bissell, same place.

Claim.—The herein-described method of rendering barrels or other wooden vessels impervious to oil by separate and successive applications of glue and shellac, substantially in the manner set forth.

121,107.—Adjustable Reel and Cut-off for Harvesters.—John H. Keller, Boalsburg, and Daniel F. Luse, Centre Hall, Pa.

Claim.—1. The connecting-rods K L, moving in different and variable directions, and the pivoted directing-arm M, when arranged on a harvester, in combination with the cut-off arm and reel, which have a simultaneous height and lateral adjustment so as to make the cut-off rod self-adapting in its movements to the adjustments of the reel, substantially as herein specified.

2. The combination of the connecting-rods K L, directing-arm M, cut-off rod G, movable arm D of the reel-support, adjusting-lever N, and ratchet-bar O, arranged and operating together substantially as herein set forth.

3. The combination of the connecting-rods K L, directing-arm M, cut-off rod G, movable arm D, standard C, pulleys Q R and S T, spring V, and endless driving chain, belt, or cord P, as and for the purpose herein set forth.

121,108.—Excavating-Cart.—Jesse King, Oswego, N. Y.

Claim.—1. The horizontal paddle-wheel M, arranged within the upper part of the earth-box, combined with a rotary bucket-carrier discharging the soil over one side of the box, as described.

2. The arrangement of chain Q and pulleys P E S, as and for the purpose specified.

121,109.—Steam-Engine Governor.—Aaron K. Kline, Readington, N. J.

Claim.—1. The combination, with the governor-shaft A provided with pivoted and weighted arms B, and with rod C raised and lowered by said arms, of the gears D D E, when the overlapping wheel E has a beveled face, G, but little more than half way round its inner projecting surface, so that, by turning the said face G, the wheels D and E may be disconnected at pleasure.

2. The combination, with governor-shaft A provided with pivoted and weighted arms B, movable rod C, and wheels D D, of the overlapping wheel E when supported in adjustable bearing K to allow the gears to be moved up, the arc traveled over by the weighted arms to be increased, and the throw of the valve-crank I to be augmented, as specified.

3. The shafts A P, their connecting gear, the pulley on the end of said shaft P, the belt O which passes over said pulley and another pulley driven by the engine, when said shaft P is arranged in open bearings and only held therein by the said belt O, as described, so that when the said belt breaks or runs off the governor will cease to operate.

4. The combination, with governor-shaft A and its driving-shaft P arranged in open bearings, of the loose collar U on said shaft P, the belt S, and the pulley R on the shaft of wheel E, as described, so that when said governor shall cease to operate the said wheel E will be turned to close the valve.

5. The combination, with wheel E, of the spring X, arranged to bear thereon with sufficient friction to prevent the said wheel being carried by its acquired momentum beyond its proper distance, as described.

121,110.—Mechanical Dice Apparatus.—Adolph Klingenburg, Baltimore, Md., assignor to Herman C. Drexel, same place, and D. Lamont, Jr., of Wilmington, Del.

Claim.—The herein described apparatus, consisting of the rotating disks, in combination with the actuating-lever G, mounted in a suitable frame, and arranged to operate substantially as described.

121,111.—Bed-Bottom.—Morris Kohn, Hartford, assignor to himself and Albert L. Munson, New Haven, Conn.

Claim.—A spring bed-bottom composed of longitudinal and transverse spiral springs interlaced, substantially as described.

121,112.—Chair-Seating.—Morris Kohn, Hartford, assignor to himself and Albert L. Munson, New Haven, Conn.

Claim.—The herein-described seating, consisting of strands of wire of the form described, and interlaced substantially in the manner herein set forth.

121,113.—Hoisting-Machine.—Samuel L. Lord, New York, N. Y.

Claim.—A compound machine for hoisting light or heavy weights, consisting of parts F G H I J, when combined to operate in the manner described.

121,114.—Cultivator.—Abram M. Manny, Lena, Ill.

Claim.—1. The combination of the beams E, having bent rods E' pivoted on the under side of the tongues *e* to bolt *d*, vibrating lever D having hook *d*'' at its rear end, segmental supporting-bar D', and chains *b b*, constructed and arranged to operate in the manner described.

2. The arched adjusting-rod G, having auxiliary rod *g*' attached thereto, in combination with the hook *g* on tongue *e*, in the manner and for the purpose described.

3. The combination of the inclined handles H, beams *e*, chains *b*, and vibrating lever D having hook *d*'', constructed in the manner and for the purpose of raising and holding the beams at any point vertically, as described.

121,115.—Cultivator.—Abram M. Manny, Lena, Ill.

Claim.—The rigid frame of the cultivator, composed of the bent pieces C C, cross-girts *c* and *c*', and curved metal part C' bolted at its forward ends to pieces C, and clamped to the upright part of the arched axle B by clamps *a*, in the manner described.

121,116.—Corn-Planter.—Jeremiah Matthews, Lincoln, Ill.

Claim.—The frame H, provided with bar U having a friction-roll on each end, (by which the levers are actuated,) and pivoted to the axle, as and for the purpose specified.

121,117.—Machine for Cutting and Assorting Playing-Cards.—Victor E. Mauger, New York, N. Y.

Claim.—1. The graduated plate E, applied to a cutting-machine to receive on its several steps the pieces, respectively, that are cut from a sheet or strip, as specified.

2. The sliding finger or fingers *e* applied to the graduated plate E for conveying the strips, cards, or pieces deposited thereon from the higher to the lower steps, and thereby arranging them in regular succession one above the other, as specified.

3. The sheets *b b*, combined with the graduated plate E for depositing the pieces that issue from the cutting apparatus upon the steps of the said plate E, respectively, substantially as herein shown and described.

4. The vertically-adjustable receptacle G, applied to the lower end of the graduated plate E, substantially as herein shown and described.

121,118.—Cement, and Appliances for Preparing and Using the Same.—James McKenzie and J. Monroe Stebbins, Philadelphia, Pa.

Claim.—1. The composition of sand, ashes, decarbonized tar, hydraulic cement, and resin in about the proportions and for the purpose specified, and to be called or known as "Paris cement."

2. The portable furnace A, provided with kettle E and tilting smoke-stack H, substantially as and for the purposes described.

3. The portable hand-heater, Fig. 3, composed of furnace F and receptacle Q, combined as and for the purpose specified.

4. A closed chamber or receptacle, B, in combination with the roller D, as and for the purposes specified.

5. The furnace A, provided with compartment B and kettle E, as and for the purpose specified.

6. The portable mill, composed of the jacketed cylinder J, in combination with revolving shaft K, dashers L, and inclined floor O, as and for the purpose specified.

121,119.—Ornamenting and Dressing Glass and Metal Surfaces, &c.—George F. Morse, New York, N. Y.

Claim.—1. One or more hoppers, E, and tubes F, combined, as described, with a suitable receptacle thereunder for the article to be dressed or ornamented, as and for the purpose set forth.

2. A compound formed of coarse particles of corundum and emery intimately mixed and applied, as and for the purpose set forth.

121,120.—Rock-Drilling Apparatus.—Lycurgus Nelson, Smyrna, Tenn.

Claim.—The drilling apparatus, consisting of the frame A, shafts C, D, E, and F, beam G, and lever L, all combined to operate substantially as herein shown and described.

121,121.—Cotton and Hay Press.—John Day Nix, Noble, Ill.

Claim.—1. The combination, with the catch-bars U and cross-bars W, of the friction-rollers X, substantially as specified.

2. The combination, with the catch-bars U and cross-bars W, of the catches Y and Z, substantially as specified.

121,122, antedated November 6, 1871.—Feed-Water Regulator.—Nicholas Nolan, New York, N. Y.

Claim.—The vertical water-chamber C, valve-seated at E, held fixedly within the water of the boiler, and connected with a valve-rod passing therethrough, and also having a float, I, at the upper end thereof adjusted to the water-line of the boiler, for the purpose of automatically feeding water to the boiler, as described.

121,123.—Track-Clearer for Harvesters.—Charles N. Owen, Salem, Ohio.

Claim.—1. In combination with a track-clearer attached to the finger-bar or shoe of a harvester by two pivots, one vertical and the other horizontal, substantially as described, a spring, applied to and acting upon that part of the joint or connection which vibrates in a horizontal plane, as set forth.

2. In combination with a track-clearer attached to the finger-bar or outer shoe of a harvester by a vertical pivot, the coiled spring E, substantially as set forth.

3. In combination with the pivoted clearer C, the spring E and adjustable stop *d*, substantially as set forth.

121,124.—DEVICE FOR SLITTING AND LOOPING RAGS FOR CARPETS.—Leoman C. Palmer, Howard, Pa.

Claim.—1. The blade B provided with the overhanging guard B', in combination with the chambered block A and screw-spindle C, substantially as set forth.

2. In combination with the chambered block and pivoted knife B, the sliding cover A' provided with the notch *a'*, substantially as set forth.

121,125, antedated November 4, 1871.—WINDMILL.—Lewis Patric, Springfield, Ohio.

Claim.—1. In combination with the weight, wind-wheel, and friction-stop, the trigger K and connecting devices, operating substantially as set forth to stop the wind-wheel, as described.

2. In combination with the pawls H H, the sliding bar D^1, operated substantially as set forth to raise the pawls and permit a reverse motion of the ratchet-wheel G, as described.

3. The combination of pawls H H *g* and operating devices, substantially as set forth, with ratchet-wheel G, whereby, after the power has been communicated by the action of the wind, it (the power) may be either stored or immediately expended by the automatic action of the mechanism.

4. In combination with the weight, wind-wheel, and friction-stop, the trigger K' and connecting devices, substantially as described, whereby the wind-wheel is set in motion when the accumulated power has been expended, as described.

5. The combination of wings E', links *e*, disks F F^1 F^2, and movable shaft D, substantially as set forth.

121,126, antedated November 20, 1871.—COFFEE-POT.—James Willard Patterson, New York, N. Y., assignor to John Ashcroft and Sarah Ellen Patterson, same place.

Claim.—1. The combination of an open removable bottom or steam-generator, G, with a jacket having an open bottom, *i*, a surrounding chamber, *b*, communicating with said generator, and a suspended pot, *a*, as and for the purpose described.

2. The perforated collar *e* for suspending the inner pot, and forming a communication of the top chamber *d* with the surrounding chamber *b* and the steam-generator, as described.

3. In a coffee-pot having a separate removable bottom or steam-generator and a jacket with an open bottom, the water-joint A *i* to seal the steam-generator with the jacket and form a closed chamber therewith, as described.

4. The combination of the removable bottom or steam-generator G, the jacket, the sealing-joint A *i*, the inner suspended vessel *a*, perforated collar *e* with the upper chamber and closed covers *c* and *d*, the several parts being constructed and arranged as described.

121,127.—CLOTHES-DRIER AND IRONING-BOARD.—Martin Power, Chicago, Ill., assignor to himself and Henry McLaughlin, same place.

Claim.—1. The combination of the folding-board A, folding-legs H, flat-iron rack F, and disk B, for supporting arms J, as set forth.

2. The combination of the upper disk *d* for supporting arms I, standard C, disk B, ironing-board A, folding-legs H, and flat-iron rack F, as shown and described.

121,128.—MODE OF PRODUCING DESIGNS FOR KNIT AND WOVEN FABRICS.—Isaac Rehn, Washington, D. C.

Claim.—1. The combination of photographic delineations and a determined scale in the origination of designs from which to manufacture ornamented fabrics, as set forth.

2. The process described for producing designs from which to manufacture ornamented fabrics.

121,129.—ROAD-DRESSER.—Samuel D. Reynolds, Rochelle, Ill.

Claim.—1. The combination, in a road-dresser, of inclined timbers B and plates C, attached and operated together in the manner and for the purpose specified.

2. The scraper-platform A having keeper G, combined, as described, with the roller-platform frame E, hinged to the middle thereof, to enable the roller to be adjusted at different angles.

3. The combination of the roller and scraper-frames, when the former projects over and is attached near the middle of the latter, as described, to enable the driver to bring his weight to bear in the manner and for the purpose specified.

121,130.—MANUFACTURE OF PAPER-PULP FROM STRAW, &c.—Julius A. Rothe, Philadelphia, Pa., assignor to Simon J. Stine, Lebanon, Pa.

Claim.—The process herein described for treating fibrous material in the manufacture of paper-pulp, the same consisting in boiling the material in water or in a solution of sal soda, and then treat with ammonia, as set forth.

121,131.—LET-OFF MECHANISM FOR LOOMS.—Charles Schilling, Auburn, N. Y.

Claim.—The levers A, weights B, crossed cords C, pulleys H I, friction-straps C, pinions K, toothed bar L, lever M having arm Q and weight P, all arranged and operating in the manner described, thus preventing the levers from bounding and the band that leads from lever to yarn-reel from slipping on its pulleys.

121,132.—LIFE-PRESERVER.—Thomas R. Scott, New York, N. Y., assignor to Mary A. Scott, West Hoboken, N. J.; said Mary A. Scott assignor to herself and Adaline M. Ingersoll, Brooklyn, N. Y.

Claim.—The cork life-preserver with openings in the covering so that the cork can be examined, as set forth.

121,133.—HAY AND COTTON PRESS.—John J. Sivley, Clarksville, Tex.

Claim.—In combination with a racked-follower, C L, and lever M, a pawl, P, when connected with said lever by a cord, Q, as and for the purpose specified.

121,134.—DEVICE FOR FILLING BARRELS.—Frederick Stitzel, Louisville, Ky.

Claim.—1. The combination of the cylinder J K, washer L, hollow stem M, rod P, and nut *s*, the float V, pawl T, lug U, trigger-lever S *a*, partition R, and rod Q, all arranged within the casing B H I N N, and operating substantially as herein described.

2. The combination of the cock A B, connecting-pipe D, bolts and nuts F, and cross-bars E with the casing B H I N N having openings Y Y and perforations W W, the cylinder J K, washer L, hollow stem M, rod P, and nuts *s*, the float V, pawl T, lug U, trigger-lever S *a*, partition R, and rod Q, all arranged and operating substantially as herein described.

121,135.—CLOTHES-LINE REEL.—Charles H. Staffin, Boston, Mass.

Claim.—The clothes-line reel when constructed as set forth, consisting of the frame B provided with the dovetail D and friction-plate N, and holding the bobbin A, substantially as described, and for the purpose set forth.

121,136.—COMBINED WASHER AND BOILER.—George C. Taylor and John B. Crisman, Port Jervis, N. Y.

Claim.—1. The holder I J K L, constructed substantially as herein shown and described, in combination with the box or water-chamber A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the detachable rack H with the holder I J K L, substantially as herein shown and described, and for the purpose set forth.

3. The water-chamber or box A, legs B, flange *e*, double-walled cylinder C, pipes D E, ash-chamber F, and grate G, constructed and arranged, in connection with each other, substantially as herein shown and described, and for the purpose set forth.

121,137.—WATER-WHEEL.—De Witt C. Teller, Fort Plains, N. Y.

Claim.—1. The combination, with flanges I, of swiveled screws J, short cranks K, frame L, shaft M, and lever N, as a means of adjusting vertically the gate of a turbine-wheel.

2. The combination, with notched flanges I, of the gate and notched flange B, of guide-boards O, arranged in said notches at a tangent to a circle larger than but concentric with the wheel, and so as not to overlap each other, whereby the water is allowed a free passage to and from the wheel and temporary obtructions readily removed.

3. The arrangement of the packing P, in connection with the grooved or channeled case A and gate H, to adapt it to be held out against the said gate H by the pressure of the water, substantially as herein shown and described, and for the purpose set forth.

121,138.—SASH-HOLDER.—Charles T. Tessier, New York, N. Y.

Claim.—1. A sash-fastener comprising the sliding bolt C, elastic roller H, shifting plate L, elbow-lever F, and a spring, G, all combined substantially as specified.

2. A sash-fastener comprising the elastic roller H, shifting plate L, and an elbow-lever, F, all substantially as specified.

121,139.—SHEET-METAL CAN.—Lancaster Thomas, Philadelphia, Pa., assignor of one-half his right to Joshua Pusey, same place.

Claim.—As a new article of manufacture and trade, a sheet-metal can, constructed as herein specified.

121,140.—RAILWAY CAR-BRAKE.—Israel Townsend, Capeville, Va.

Claim.—The combination of the auxiliary shoe B and rod E for actuating the brake when the shoe B is hinged to the common brake-shoe A, substantially as herein described.

121,141, antedated November 17, 1871.—PRESERVING WOOD.—James Grover Voorhees, Aqueduct Mills, N. J.

Claim.—A tank or building for preserving wood, constructed with double walls G H, which are lined with roofing-felt or its equivalent in the intervening space, and packed with earth and asphaltum, substantially as set forth.

121,142, antedated November 4, 1871.—DOOR-LOCK.—Nelson Warren, Wilmington, Del.

Claim.—The tumbler G, constructed as shown and described, in combination with the rests 1 and 2, so that either end may be lifted while the other remains comparatively at rest, as set forth.

121,143.—STONE-CRUSHER.—Peter Wood, Jersey City, N. J.

Claim.—1. The jaw F, having recess for the face-plate beveled at *f*, combined, as described, with a beveled strip, L, and bolts *m* to embody a new mode of attaching the face-plate to the jaw.

2. The back-grooved face-plate I and front-grooved jaw F, combined with the soft-metal filling cast therein, as and for the purpose specified.

121,144.—SAWING-MACHINE.—William M. Wright, Galesburg, Ill.

Claim.—1. The vertical saw-sash B, having a vertical slot, in combination with the adjustable saw-sash C, vertical slot *k*, and adjustable fastening *i*, substantially as and for the purposes described.

2. The combination of the sash B and C with the saw D and its blocks *l l*, substantially as and for the purposes described.

3. The saw D, when constructed with the blocks *l l*, the slot *m*, the slide *n*, pivoted socket *q*, in combination with the spring *s* and feed-frame E with its pivot *a* and cross-bar *f s e*, substantially as described.

4. In combination with the sash B, the oscillating bar *b*, slides *d d*, pitman-rod *c'*, and frame A, substantially as and for the purposes set forth.

121,145.—RAILWAY CAR-SEATS.—James M. Allen, Washington, D. C.

Claim.—1. The head-rests F, of the described construction, hinged and arranged so that when folded they will form a supplementary front to the back and allow either to be unfolded while the other lies flush with and forms a part of said back, as described.

2. A hinged head-rest frame, made of elastic bars *e* and wire filling *f f* to admit of being bent to conform to the curve of the back or to be bulged out to either side, whether said head-rests be folded or unfolded upon their hinges, as described.

121,146.—MANUFACTURE OF PAINT.—Damon R. Averill, New Centreville, N. Y.

Claim.—1. A process for combining the materials to form a paint, consisting in wetting the base or body with a solution of a metallic salt, and then combining the wet material with oil or its oleaginous equivalent to form a paint, substantially as described.

2. The herein-described compound, when composed of the ingredients and combined in the order and manner set forth, for the purpose specified.

121,147.—MANUFACTURE OF PAINT.—Damon R. Averill, New Centreville, N. Y., and Josiah Browning, Newburg, Ohio.

Claim.—The addition of water to pigments and oil in the order and in about the proportions, substantially as described, and for the purpose set forth.

121,148.—BUCKET FOR CHAIN-PUMPS.—Aaron Bauman, Toledo, Ohio.

Claim.—1. The bucket A, having a central hollow screw or tube, B, swiveling it to the link C, substantially as set forth.

2. The combination of the hollow screw B, loop D, plates *a*, rubber *b*, and link C, substantially as and for the purpose specified.

121,149.—MACHINIST'S VISE.—Jonas D. Beck, Liberty, Pa.

Claim.—1. The jaw D' having the chambers D'', in which are the dogs *d'* and key *e*, as and for the purpose specified.

2. The pin L, spring L', key *m*, and rod M, in combination with the jaw G and bar A, as and for the purpose set forth.

3. The friction-plate A, in combination with the laterally-adjustable jaw G, screw B, nut H, and bar A, as described.

121,150.—CAR-BRAKE.—John Frederick Brede, Memphis, Tenn.

Claim.—The combination of the inclined screw D, collar *a*, box *b*, brake-bar G, shoes *e*, guide-rods *d*, and spring *f*, constructed and arranged substantially as and for the purpose specified.

121,151. — METHOD AND APPARATUS FOR CASTING PIPES.—Anthony T. Brodie, Robert R. Smith, and John T. Tyler, Pittsburg, Pa.

Claim.—The method of casting pipe by means of a metallic mold made in two sections, which are hinged together by lugs B, pivoted and secured to the walls of the mold-pit through the medium of lugs C and pintle D, and combining with said sections and a metallic core a sand-ring, E, for the purpose of forming a pouring gate or gates, substantially as hereinbefore described.

121,152, antedated November 9, 1871. — COMPOSITION-STOPPER FOR VESSELS.—Morgan W. Brown, New York, N. Y.

Claim.—1. A chemically-prepared stopper, made of glycerine and glue mixed, with or without an alkali, substantially as described.

2. A cork stopper coated with a composition of glycerine and glue mixed, with or without an alkali, substantially as set forth.

121,153.—PLOW.—Luther E. Burdin, Lexington, Ky.

Claim.—1. The combination of the double beam D D, suitably connected at its forward ends, clamps E E′, handles G G′, standard C, mold-board A, and land-side B, all constructed substantially as set forth.

2. The combination of the double beam D D with guide *d*, draft-rod J, standard C, clevis H, and pivoted hooks *a a*, all substantially as set forth.

121,154.—MILK-CAN. — Durnant Burnett, Bedford Station, assignor to H. W. Shepard and Robert Seaman, New York city, N. Y.

Claim.—As a new article of manufacture, the arched plate C, outside collar C′, and cylindrical hoop D encircling the cylinder, all so formed together out of a single piece of metal as to produce a seamless breast for milk-cans, substantially as described.

121,155.—MILK-SAFE.—James W. Case, Ypsilanti, Mich., assignor of one-half his right to John Gilbert, same place.

Claim.—The combination of the octagon safe A, central post B, shelves C, D, E, G, and H, rollers I I, and portable shelf J, all constructed and arranged substantially as shown and described, and for the purposes herein set forth.

121,156.—BOX.—Joseph Cohn, New York, N. Y.

Claim.—The arrangement of the metallic corner pieces provided with spurs *d*, in combination with the several parts constituting a box, said parts being perforated for the reception of the spurs *d*, substantially in the manner herein shown and described.

121,157.—LAND-ROLLER.—John Cole, Fredericksburg, Iowa.

Claim.—The combination of the frames A and B B, bars E E, and rods G G and H H, and the rollers C D D, constructed and arranged as described, and for the purposes herein set forth.

121,158.—RAILWAY SWITCH.—Charles Lee Cooke, Shortsville, N. Y.

Claim.—The combination and arrangement of the wheel-flange supporter B formed of wood and plate-iron, fitted to the section rail C and the main rail A, and guard-rails *a a b b*, also made of sections of rails, all in the manner and for the purpose herein described.

121,159.—HORSE HAY-RAKE. — Lucian A. Crockett, Wythe county, Va.

Claim.—An improved horse side-rake, consisting of the runners B, frame J, arms I, rake K L, handle F pivoted in bracket H, lever D, and connections E M, all arranged as and for the purpose described.

121,160.—DRAIN-PIPE MACHINE.—Albert J. Davis, Newark, N. J.

Claim.—1. The arrangement, herein shown, of the screw B, revolving clamp-nut D E, box C, and bevel-gear G, as and for the purpose described.

2. The arrangement, herein shown, of the hollow screw B, shaft J, clamp-nut D E, box C, and bevel-gear G, as and for the purpose set forth.

3. The combination of the hollow screw B, shaft J, box C, friction-collar and rollers, and gear G, constructed and arranged to operate as set forth.

4. The combination of the hollow screw B, shaft J, piston N provided with valve O, case M, and die L, when constructed and operating as and for the purpose set forth.

121,161. — LOOM.—Henry G. Davis, Worcester, Mass.

Claim.—1. The combination, with the crank-shaft B B′ and lay C C′, of the double connecting-arms E H and swinging staffs F, substantially as and for the purposes set forth.

2. The combination, with the connecting-arms E and H, of the adjustable staffs F and adjustable studs G, substantially as and for the purposes set forth.

3. The combination, with the crank-shaft B and frame A, of the rectangular bearing-box D and set-screw K, substantially as and for the purposes set forth.

4. The combination, with the hand-rail N, of the shuttle-guard, composed of the obliquely-hinged arms M and cord L, substantially as shown and described.

121,162.—TREATING FATTY MATTERS.—Leó Louis Aimé Elie Picot de la Peyrouse, Paris, France.

Claim.—1. The employment of mixtures of alkaline carbonates, (monocarbonates, sesquicarbonates, bicarbonates,) of oxides of sodium, potassium, or ammonium, with some alkaline or earthy chlorides, such as chlorides of sodium, potassium, magnesium, aluminium, dissolved and put in contact by ebullition with the fatty matters which it is proposed to melt or purify, in manner substantially as herein described, and thereby to effect the melting and treating of fatty matters without the use of acids or the production of greaves, while at the same time the fatty matters separated from their membranes and so treated are neutral and inoxidizable.

2. As a new article of manufacture, fats treated as above described, adapting them for use for culinary purposes in lieu of butter, lard, and raw suet, and to envelop fresh meat and other animal and vegetable substances for the purpose of preserving them, in manner substantially as herein described.

3. The manufacture, with the alimentary fats treated according to my invention, of solid or concrete soups by the mixture of such fats with flour of peas, beans, lentils, and other farinaceous substances, and fecula, and with dry meat or with fresh vegetables, in manner substantially as herein described.

121,163.—PROPELLER FOR VESSELS.—Lewis de Lill, Phœnix, N. Y.

Claim.—The hub and arms E *e*, with buckets D D hinged thereto, and coupled together with links *f f* and ring *o*, oblique bearing C, and cam *m*, all constructed and operating substantially as and for the purpose described.

121,164.—COOKING APPARATUS.—Nicholas Gorgen, Buffalo, N. Y.

Claim.—The construction and arrangement of the stove, consisting of the central fire-cylinder C, the partitions *b b b b*, forming the cooking chambers *a a′ a″ a‴*, or their equivalents, the removable

dome or cover B or its equivalent, and the pipe E, in combination with the outer case A and pipe D, substantially as hereinbefore specified.

121,165. — LAMP-POST.—Lyman A. Gonch, Yonkers, N. Y.

Claim.—The combination of the upper internal flange *b* and lower internal flange *c* of different diameters, formed in the upper portion of the base part A of the post, with the tapering stem *d* of the upper part B of the post arranged to fit within said flanges, substantially as specified.

121,166. — PROCESS AND APPARATUS FOR THE MANUFACTURE OF ROOFING, FLOORING, PIPES, &c. — James Kent Griffin, Waterdown, Canada.

Claim.—1. A centrifugal condenser, L, provided with tapering ends or necks, for the purpose of receiving and intermixing wood or other fiber, substantially as set forth.

2. A centrifugal condenser for receiving and intermixing wood or other fiber, in combination with holding, drawing, and pressing rollers, substantially as set forth.

3. A centrifugal condenser, L, in combination with one or more band-saws, D, and a conductor, K, operating as set forth, for the purpose specified.

4. One or more band-saws, arranged as described, in combination with the revolving table G and centrifugal condenser L, substantially as set forth.

5. Rope produced from wood fiber, as an article of manufacture.

6. The screw-core N, made hollow for the passage of blasts or currents of cold air or water to regulate the heat produced in the manufacture of wood or other fibrous pipe.

7. The loose thimble, arranged upon the screw-core N, for the purpose specified.

8. A hollow conical-shaped pressing-and-forming cylinder, O, having internal spiral corrugations or ribs, substantially as and for the purpose set forth.

9. The combination of the screw-core N and conical-shaped pressing-and-forming cylinder O, arranged and operating substantially as set forth.

10. A stationary or revolving knife, cutter, or saw, R, for dividing pipe produced from wood or other fibrous material, when operating in connection with a core, N, and cylinder O.

11. The funnel Y and plunger Z, constructed and operating as and for the purpose set forth.

12. The rubber packing, or its equivalent, arranged upon the sides of the saws.

13. The gear C^1 for operating the screw-core, in combination with the gear C^2 for operating the pressing-and-forming cylinder.

14. One or more band-saws mounted upon pulleys C C, arranged for cutting fiber lengthwise from logs, substantially as herein shown and described, and for the purpose set forth.

15. Fiber-stone, produced by intermixing the fiber of wood, manufactured as described, with pulverized artificial or natural stone, mineral, or cement with an adhesive compound, or their equivalents, substantially as and for the purposes set forth.

121,167.—CLOTHES-LINE HOLDER.—Joseph B. Habecker, Newport, Pa.

Claim.—The combination of the posts A, guides B, bars C, the spring-bolts G or their equivalents, holes *a* with their grooves, and the handles *b*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

121,168. — MILK-CAN HANDLE.—John W. Hannan, Elyria, Ohio.

Claim.—The herein-described can-handle, consisting of the plate A, hook-eye B, handle-ing C, extension *b*, and stop *c*, all cast in one piece for the reception of the hinged handle D, as a new article of manufacture.

121,169. — SPRING BED-BOTTOM. — Hanson Hard, Akron, Ohio.

Claim.—1 The bars B, Fig. 4, made each of two pieces, overlapping, with their dowels and corresponding countersinks E, substantially as and for the purpose hereinbefore expressed.

2. The combination of the bars A and B, the rods C, loops D D *d*, the dowels and corresponding counterSinks E, springs F in number and arrangement, and hooks G, substantially as and for the purpose as before represented and set forth.

3. The combination of the bars A and B, the rods C, loops D D *d*, and dowels and corresponding counterSinks E, springs F in number and arrangement, hooks G, links I with or without indentations H, substantially as and for the purpose heretofore described.

121,170, antedated November 6, 1871.—GAS-HEATER.—David Greene Haskins, Cambridge, Mass.

Claim.—1. The outside cap or chimney N, flattened at the mouth, with perforated or closed sides, when used as and for the purpose specified.

2. The perforated metal casing or cylinder D, in combination with a perforated metal or incised baked-clay cap E or, their equivalents, and outside perforated or closed chimney N, substantially as and for the purpose set forth.

3. The tube S, when used in combination with the cylinder D, cap E, and outside chimney N, as and for the purpose described.

4. The combination of the apertured sockets A, the perforated frustum C, the cylinder D, the cap E, and outer chimney N, substantially as described.

121,171.—SHOW-CASE FOR WATCHES.—Isaac S. Huckins, Wenona, Mich.

Claim.—1. The combination of the frame A, plate-glass B, glass door C, and interior removable sash D with plate-glass E, the plates B and E being provided with suitable hooks, substantially as and for the purposes herein set forth.

2. A glass plate for a show-case, provided with small holes through which is passed a metallic single or double hook, *a*, having a head or flange, *b*, and secured by a flanged nut, *d*, all as shown and described.

121,172.—MACHINE FOR MAKING AXES.—Henry H. Parsons, Hoosick Falls, N. Y., administrator of the estate of Edwin F. Hurd, deceased.

Claim.—1. In combination with the carrier G and bed E, the arms H and K, the first for driving the punch through the ax-blank and the other for releasing the blank from the punch, as described.

2. In combination with the carrier G and support E′, the scoring or slotting-cutter *f*, as and for the purpose described.

3. The arrangement upon the same bed and frame, and with a single carrier, G, of a series of anvil and of drop-dies, so that an operator on each side of the machine may at one and the same time put an ax-blank under the several successive operations to form it into an ax without interfering with each other, as described.

121,173. — ELECTRO-MAGNETIC ENGINE.—Solomon Jones, New Orleans, La.

Claim.—1. The forked or V-shaped armatures C C, when arranged so as to operate substantially as described.

2. The current-breaker arms E E and rod or wire E^2, when arranged in connection with the bar D having plates *d d* attached, substantially as described.

3. The vertical lever C and current-breaker arms E E, when the same are so combined and arranged as to operate substantially as described.

121,174.—VULCANIZING RUBBER FOR DENTAL-PLATES, &c. — Cyrus M. Kelsey, Mount Vernon, Ohio.

Claim.—1. An improvement in the method and manner of vulcanizing India rubber, the use of a

sand-bath, combined with a flask, in the manner heretofore and herein substantially set forth.

2. In combination with a sand-bath and flask for vulcanizing India rubber, the employment of a thermometer, substantially in the manner herein and heretofore set forth.

3. In combination with a sand-bath and flask for vulcanizing India rubber, the employment of tubes or conductors, substantially and especially herein set forth.

4. In combination with a sand-bath and flask for vulcanizing India rubber, the employment of a thermometer and tubes or conductors, substantially and particularly in the manner herein described, including also a reservoir of water, attachable or detachable, combined with a heating apparatus and thermometer.

121,175.—LOCK-NUT.—Salem T. Lamb, New Albany, Ind.

Claim.—In combination with a cast nut, *c d*, a projection or extension, 3, thereon, for the purpose of forming a support for the fastening 4, which passes between the bars thereof, by which said nut is prevented from turning or becoming loose on the bolt, as described and represented.

121,176.—LOCK-NUT.—Salem T. Lamb, New Albany, Ind.

Claim.—The combination of the bolt, nut, cap, and the key, pin, or screw, applied from the exterior, so as to hold the bolt, nut, or cap from turning or becoming loose, one upon the other, substantially as described.

121,177. — SHAFT-TUG FOR HARNESS.—Charles C. Lee, Falls Church, Va.

Claim. — The metallic shaft-tug A constructed with stationary loops D D and tongue E, and provided with friction-rollers B C, as described and shown.

121,178.—SASH-PULLEY.—Antoine Le Page, Woodhaven, N. Y.

Claim.—The combination, with the pulley-case, of the spurs *c c* and oblique or spiral-threaded button D, substantially as and for the purpose herein described.

121,179. — BRICK-KILN.—Thales Lindaley, New York, N. Y.

Claim.—1. The drying-chambers A A and burning-chambers B C D, &c., when placed in juxtaposition and otherwise constructed and arranged, as shown and described.

2. The doors and door-frames to a drying-chamber, provided with ribs and grooves, substantially as and for the purposes set forth.

3. The track draw-bridge with lever w^4, ways w^5, rollers w, cam-roller w^2, and band or chain w^1, in connection with the doors and removable rails, all substantially as and for the purposes described.

4. In combination with a burning-chamber, the furnace *e* with flue-damper *v*, furnace-door g^1, and the tumbler-valve *e*, constructed and operating substantially as described.

5. The combined buttress and cycloidal fuel-bin, the latter being provided with throat-feeding damper, all constructed and operating as indicated.

6. The combination and arrangement herein shown of the fire-chamber, dampers *v*, and co-operating flues, for the purpose set forth.

7. The brick car, shown at A, Sheet 2, provided with shelves divided into two wings, each wing revolving laterally upon vertical stay-rods.

8. In the kiln described, the combination of devices and appliances, as set forth.

9. The traction-truck with curved handle f^1, wheels *w*, and arms *l* provided with the beveled hooks l^1, constructed as shown, and for the purposes set forth.

121,180.—METHOD OF FINISHING CHILLED ROLLS. — George Granville Lobdell and Jarrett Megaw, Wilmington, Del.

Claim.—The within-described process of finishing a chilled roll—that is to say, first turning the body of the roll, then turning the journals while the turned body revolves in bearings, and, finally, grinding the body of the roll while its journals revolve in bearings.

121,181.—GATE. — Washington L. Ludlow, Cleveland, Ohio.

Claim.—The boards *f f*, secured together and confining the pivoted ends of the bars *d d*, and arranged and guided within the weight-cylinder provided with the top and bottom plates *g g*, and operating in connection with the bars *d d*, as herein set forth.

121,182.—TROLLING-SPOON.—John Henry Mann, Syracuse, N. Y.

Claim.—In fishing-tackle, the loose glass washer or bead *d*, applied to the stem A, in combination with the trolling-spoon D, substantially as specified.

121,183.—ARCH FOR LIME-KILNS.—Alexander McBride, Lowell, Mich.

Claim.—In the lime-kiln herein described, the solid partition G, in combination with the perforated arch E, inclined jaws *a a*, and convex grate H, when constructed and arranged substantially as and for the purposes herein set forth.

121,184.—TRAVELER FOR CART AND DRAY SHAFTS.—William B. McClure, Alexandria, Va., assignor of two-thirds his right to John C. Graham and H. O. Claughton, same place.

Claim.—A traveler provided with friction devices, as described.

121,185.—BASE-BURNING FIRE-PLACE HEATER. — William L. McDowell, Philadelphia, Pa.

Claim.—1. A movable top or crown, A, constructed and applied to a fire-place stove, substantially as and for the purposes hereinbefore set forth.

2. The two pairs of shield-plates E E, constructed as described, in combination with the two respective upper and lower continuous grooves 5 5 and 6 6, and arranged to operate therein in relation to the illuminating plates D D, as and for the purposes hereinbefore set forth and described.

3. The movable, perforated, or skeleton screen-plates H H H, having tenons h'' h'' projecting from their respective lower edges to correspond with the respective mortises h''' h''' in the front part of the bottom plate of the hot-air chamber B, and their respective upper edges constructed to slip up into the groove h' of the under side of the top plate of the hot-air chamber B when being applied thereto, all substantially as and for the purposes hereinbefore set forth.

4. The loose-flanged short hollow cylinder f', when constructed and applied to operate in relation to the fuel-cylinder or fire-box of a stove and the top plate of the hot-air chamber or space around the said fuel-cylinder or fire-box, substantially as and for the purposes hereinbefore set forth and described.

121,186.—SEWING-MACHINE. — Lincoln A. Merriam, New York, assignor to himself and Elisha P. Wheeler, Middletown, N. Y.

Claim.—1. The pulley E''', cranks E' and E'', and cams *e e'*, when constructed, as described and shown, to operate the needle-shuttle and feed.

2. The arms C and H, slotted, as described and shown, and arranged to be operated by the cranks E' and E'', and connected and combined with the needle-bar and pivoted shuttle-carrier K, as set forth.

3. The presser-bar F, having the internal spring F''' and one or more feed-rollers F', located as shown.

4. The combination of the above with the feed-dog F, mounted on the adjustable fulcrum-pin G', for the uses set forth.

121,187, antedated November 9, 1871.—CONSTRUCTING AXLES.—James Montgomery, New York, N. Y.

Claim.—As an improvement in the method of manufacturing axles set forth in the patent No. 28,004, granted to me April 24, 1860, for improvements in railroad axles and other shafts, jointly, the mode of and mechanism for welding the ends of the stave-shaped bars together and forming the journals thereon, as herein described.

121,188.—GATE.—James D. Morrison, Richfield, Ill.

Claim.—1. The duplex weight *f f'* to operate a gate, in connection with the curved shoulder *c*, cords *d d'*, and pulleys *a a'* when the weights singly are lighter, and together are heavier, than the end of the gate, as specified.

2. The fixed latch *o* and reversed notch *p*, operating in combination with the slotted upper hinge *m* and the curved shoulder, cords, pulleys, and weights, as and for the purpose specified.

3. In combination with a swinging gate the curved shoulder *c*, cords *d d'*, pulleys *a a'*, equal weights *f f'*, cords *i i'*, and levers *g g'*, substantially as and for the purposes specified.

121,189.—TUYERE-IRON.—John Nelson, Oswego, N. Y., assignor to himself and Robert T. Morrow, same place.

Claim.—The combination, with the hollow ball-valve C having the two series of apertures, and the supporting axle and crank G, of the spring or yield-support E, all constructed and arranged as set forth.

121,190.—STEP-LADDER.—Joseph S. Oakley, Passaic, N. J.

Claim.—1. The stiles A A, grooved longitudinally along their inner sides to receive the panels B B, substantially as herein set forth.

2. The steps D D, having their ends grooved on the upper and lower sides to receive the ends of the panels B B, substantially as herein set forth.

3. The combination of the stiles A A, panels B B, blocks C C, and steps D D, substantially as and for the purposes herein set forth.

4. The boxes E E, constructed and applied as described, with flanges *a a*, substantially as and for the purposes herein set forth.

121,191.—PORTABLE BOOK-HOLDER.—Herman A. Oesterle, Philadelphia Pa.

Claim.—The combination of two bars, A and A', strap B, and a handle, D, hinged to the upper bar, and constructed substantially in the manner described, so as to serve the threefold purpose of a handle, strap-tightener, and strap-retainer.

121,192.—RIDDLE OR SIEVE.—William Page, Epsom, assignor of one-half his right to John Smith, Carshalton, England.

Claim.—1. A riddle, sieve, or screen with a double bottom, or a bottom formed of two perforated plates or sheets, made adjustable in such a manner that the holes or perforations therein are opened or closed by moving one plate upon the other, and provided with a screw or other device for adjusting and retaining them in any required position.

2. A cylindrical screen or sieve consisting of an inner and outer perforated cylinder, fitted together and adjustable with regard to each other, and provided with a screw or other device for adjusting and holding them, as hereinbefore specified, and with or without the interior screw or worm.

121,193.—HOLLOW BUILDING-BLOCK.—Mason R. Pierce, New York, N. Y.

Claim.—1. As a new article of manufacture, a building-block having an unbroken wall around two or more spaces or perforations in the block in such a manner that when one block is placed upon two others a proper "bond" will be obtained and continuous air-flues will be formed without any vertical joint or joints in the wall surrounding the flues, substantially as described.

2. A building-block composed of two or more parallel upright columns, of a cylindrical or other equivalent geometrical shape, connected together at the point where their peripheries meet, substantially as set forth.

3. The combination, with the wall or walls of a hollow brick or building-block, or one containing spaces or perforations as set forth, of plates of metal or other materiel or their equivalent so as to form a channel way or recess for a window or door to slide in, substantially as shown and described.

121,194. — COMBINED WISP AND FLASK.—Louis T. Pyott, Philadelphia, Pa.

Claim.—The combination of a clothes-wisp and flask, substantially as herein shown and described.

121,195.—WATER-WHEEL. — Willis Read, Patterson, N. Y.

Claim.—The combination of the wheel D, having vertical curved buckets *d*, with case A having openings *a*, annular gate B with opening *b*, and projecting chutes *b'*, and arranged to be operated in the manner and for the purpose described.

121,196.—ADVERTISING SHOW-CASE.—William H. Reiff, Philadelphia, Pa.

Claim.—1. The combination of the show-case, a longitudinal roller, *c*, adapted to receive and retain a series of cards, gear and cog-wheels *d d'*, and shaft *h*, all being arranged as specified and operated by a turbine, E, or its equivalent, to impart a continuous rotary motion to the roller, as specified.

2. The combination of the motor E, its shaft and wheel *d'*, pin *y*, gears, and the spindle *r*, pin-wheel *t*, and lever *m*, for regulating the operation of the music-box, as set forth.

121,197.—FLOUR-SIFTER. — Charles Richardson, Philadelphia, Pa.

Claim.—1. The box A provided with the partition B and hopper E, in combination with the crushing-rolls F F, reciprocating sieve *s*, and operating-gear described, or its equivalent, all arranged and operating substantially as and for the purpose set forth.

2. The box H, in combination with the detachable receptacle I, having at the bottom a sieve, *s*, for the purpose specified.

121,198, antedated November 18, 1871.—PHOTOGRAPH-CUTTER. — Stillman W. Robinson, Champaign, Ill.

Claim.—The combination and arrangement of the dull-edged roller A, the shank B C provided with the annular groove, the set-screw E, socket D, and handle F, forming a photograph-trimmer to operate by detrusion or pressure, in combination with the pattern or guide, all as herein shown and described.

121,199.—REVOLVING FIRE-ARM. — Jacob Rupertus, Philadelphia, Pa.

Claim.—1. The combination of the cylinder, notched at its front end, with the locking and releasing devices herein described, or any equivalent to the same.

2. The bolt J, adapted to notches *h* in the front end of the cylinder, acted on by a spring or spring-pin, *m*, and having a combined sliding-and-turning movement upon the supporting-pin *i*, imparted to it by a lug on the hammer, all substantially as specified.

3. The pins *m* and *m'* contained within a recess of the frame and acted on by a single spring, *q*, by which they are forced in opposite directions into

recesses of the bolt J and breech-pin D, all as herein set forth.

121,200.—PLATFORM-SCALES.—Elnathan Sampson, (Amanda A. Sampson, administratrix,) Nassau, assignor to himself, Stephen R. Andres, and Hiram Andres, Troy, N. Y.

Claim.—1. In combination with the beam D, the adjustable yoke or bridge *y*, screw-shaft A^3, and counter-balance, arranged as and for the purpose described and represented.

2. The beam D, so constructed as that its main portion shall vibrate in an inclosed chamber or box and its graduated portion outside thereof, and in a horizontal or inclined position so as to be easily seen and read, as described and represented.

3. In combination with the beam and beam-box E, a series of graduated weights in said box furnished with recesses and projections, by which they may be connected to or detached from the beam at the will of the user, as and for the purpose described.

4. The combination of the long skeleton A-shaped main beam-lever and the skeleton short beam-lever B, with their knife-edge pivots, supported at both ends, and connections, as at *j k l m n*, substantially as described.

5. In combination with the platform C, frame A, and the long and short beam-levers, the friction-blocks *t t'* and shoulders *r* on the platform, the notches *s s* in the frame, and the knife-edge bearings *f f* on the levers, so that the platform may be readily adjusted, removed or replaced, and be held to the frame without actually touching it, as described and represented.

6. The weights formed with the notches x^1 x^2 and the cavity *p'*, and provided with the weight-lever or cam *o'*, in combination with the bridges s^1 s^2 and cross-bar *r'* of the beam, arranged and operating as herein represented and described.

121,201.—BOTTLE-FAUCET.—James Sargent and Lyman F. Munger, Rochester, N. Y.

Claim.—1. In a bottle-faucet the valve-screw C provided with the conical end *d*, when combined with the stem A having the passage *a*, perforations *c c*, and with a seat to correspond with said conical end, as herein described.

2. A bottle-faucet constructed with the passages *a p* extending respectively through the stem of the faucet and the valve-screw without the interposition of other parts, and communicating by the perforations *s s*, the whole arranged as described.

3. The depressed neck *f* of said faucet, sunk below the threads, and having the perforations *c c*, as and for the purpose specified.

4. In a bottle-faucet the conical boring-end *k* of the stem A when cut with screw-threads clear to the point, as and for the purpose specified.

121,202.—AUTOMATIC CHECK-REIN ATTACHMENT.—John Schofield, Worcester, Mass.

Claim.—1. The holding-terret F, provided with a locking-plate, G, substantially as and for the purposes set forth.

2. The hollow-headed check-bar I I^1, substantially as and for the purpose described.

3. The combination, with the saddle A and check-rein B, of the terret F, locking-plate G, check-bar I I^1, spring or elastic cord D, and tripping-cord E, substantially as and for the purposes set forth.

121,203.—WASHING-MACHINE.—Joseph J. Schroyer, Springfield, Ill., assignor of one-half his right to Elijah C. Matheny, same place.

Claim.—1. The combination, with the boiler A, of the rotating cylinder G having transverse openings, corrugated and perforated inner cylinder or casing B, and valves H, substantially as specified.

2. In combination with the boiler A, the perforated bucket C, forming a wall inside the casing B of the cylinder, said wall extending to or nearly to the center of said cylinder, substantially as specified.

3. The combination, with the boiler A, of a rotating cylinder provided with buckets Z and valves H, substantially as specified.

121,204.—CORN-PLANTER.—Levi Scofield, Watertown, Wis., assignor to himself and Justin B. Wait, Farmington, Ill.

Claim.—1. In combination with the adjustable side rods E, the adjustable scraper-shaft I^2 and the adjustable scrapers O^2, substantially as described, for the purpose specified.

2. The seat G^2, in combination with the scraper-rod I^2 and the axle A, substantially as described, for the purpose specified.

3. The adjustable sockets K^2 of the seat in combination with the scraper-shaft I^2, stop L^2, and the socket of the scraper-lever M^2, substantially as described, for the purpose specified.

4. The runners and their attachments, jointed to the rear portion of the machine by means of the side rods E and the shaft Q, by which the seeding mechanism is driven, substantially as described, for the purpose specified.

5. The flanged plates K, constructed as described, for the reception of the adjustable hoppers L and the seed-tubes J, substantially as specified.

6. The driving-shaft Q suspended from the parallel bars M by means of the adjustable brackets O, constructed as described, for the purpose specified.

7. The seed-tubes J, constructed as described, with their lower ends enlarged in the form of an inverted truncated pyramid, and provided with openings upon opposite sides above said enlargement, in combination with the valves *v w*, substantially as described, for the purpose specified

8. The dropping valves, constructed as described, with the central portion *v* and the detachable wings *w*, substantially as and for the purpose specified.

9. The compound interchangeable dropping plates W' M^1 in combination with the hoppers L made adjustable on the plates K to receive the dropping-plates, substantially as and for the purpose specified.

10. In combination with the dropping-valves, the lateral pins *z* and the star-shaped grooves in the face of the wheel A^1, substantially as described, for the purpose specified.

11. The combination of the ratchet Y^1 and its operating mechanism with the shaft Q, cam gear-wheels A^1, seed-plates M^1, and the dropping-valves, substantially as described, for the purpose specified.

12. The recessed seed-plates M^1 and supplemental plates W' in combination with the flanged plates K, substantially as described, for the purpose specified.

13. The flanged plates K, constructed with recessed seed-openings *u* v^1, substantially as described, for the purpose specified.

14. The supplemental plates W', constructed with the recessed seed-openings *x'* and the pins *y'*, substantially as described, for the purpose specified.

15. The seed-plates and the dropping-valves, adapted for simultaneous operation, either continuously from the driving-wheel or intermittingly from a hand-lever, by the means substantially as herein shown and described.

16. The arrangement of the bounds R of the machine with relation to the rod H, parallel rods M, shaft Q, and the axle of the driving-wheels, as herein described, for the purpose specified.

17. The combination of the sliding reach S^2 and adjustable spring T^2 with the bounds R and a suitable support upon the rear portion of the machine, substantially as described, for the purpose specified.

18. The combination of the jointed foot-lever with the bounds R, sliding reach S^2, and adjustable spring T^2, substantially as described, for the purpose specified.

19. The seeding-machine in which the runners or coilers which carry the seeding mechanism are held in contact with level or uneven ground by a pivoted foot-lever, P^2, whose force is applied to the bounds R of said runners with a yielding pressure, substantially as described, for the purpose specified.

20. In combination with the clutch-pulley C^1 the slotted and shouldered rod *f'* and the cam-lever *j'*, both mounted upon the sleeve B D, substantially as described, for the purpose specified.

121,205.—MEDICAL COMPOUND FOR THE CURE OF CUTANEOUS DISEASES.—Elizabeth Angeline Shewell, Boston, Mass.

Claim.—The said medicinal compound, made of materials and in the manner substantially as hereinbefore explained.

121,206.—COFFIN-RECEPTACLE.—James H. Shields, Louisville, Ky.

Claim.—The within-described coffin-receptacle, composed of the body A, molded or otherwise made in one piece, of cement and sand, and provided with a set-off, *a*, entirely around its upper edge, into which is fitted the lid B, which rests on the interior shoulder thus formed, all substantially as shown and described.

121,207.—STUBBLE-TURNER FOR PLOWS.—George B. Smith, Shopiere, Wis.

Claim.—In the herein-described stubble-turner A, the angular shank *a a'*, in combination with the strap *b* and bolt *c*, the angular shank, together with the strap and bolt, forming the locking device whereby the bar is secured to the plow-beam.

121,208.—CLOTHES-DRIER.—Obadiah S. Smith and Clark R. Hopkins, Middletown, Conn.

Claim.—The stand *a*, adjustable extension-tubes *i*, swivel-flange supports *b*, arms *f*, substantially as and for the purpose set forth.

121,209.—PUMP.—Hatherly Spear, Portland, Me.

Claim.—1. A system of chambers, C C^x, separated by valves b^1 b^2, and all except the upper one containing an elastic diaphragm, *f*, when combined with an exhaust and with connecting-pipes D and cocks G G^1, operating as herein described.

2. The atmospheric relay-pump herein described, consisting essentially of the base A, the chambers C C^x, the valve-chambers B B^1, the diaphragms *f f*, the valves *b* b^1, the pipes D D, the cocks G G^1, the exhaust E, the pipes P P^1, the outlet I, and the valves *v v'*, all combined and operating substantially as and for the purposes herein set forth.

3. The tubular diaphragms *f*, in combination with the chambers C C^1, when arranged in the manner and for the purpose specified.

121,210.—COMBINED CORSET AND SKIRT SUPPORTER.—Linda Spigelmyer, Easton, Pa.

Claim.—As a new article of manufacture, a combined adjustable waist, skirt, drawers, and stocking supporter, constructed and arranged as herein shown and described.

121,211.—LIQUID-METER.—D. Brainard Spooner, Syracuse, N. Y.

Claim.—1. The beveled collars or packing-rings H and collars *g g*, having beveled or convex faces toward the diaphragm, and the beveled bearing-surface of the walls E, in connection with the flexible diaphragm and tight wall E, substantially as and for the purpose specified.

2. The discs *a a*, placed loosely on the ends of the bolts G so that the disks will adjust themselves correctly to the face of the diaphragm A, as and for the purpose specified.

3. The combination of the anti-friction carriage J *j* with the apex F', valve F, and actuating-roller K, substantially as and for the purpose described.

4. The valve-frame M, constructed with projections *m m*, as shown in Fig. 4, in combination with the carriage J *j* F', as and for the purpose herein specified.

5. The valve F, when made with beveled leading edges that engage with the frame M at the end of the stroke to hold the valve to its seat against back pressure, and making connection with the jaws *n* of the carriage J *j* F' by a beveled joint, as and for the purpose specified.

6. The yoke *f*, when made with the guards N N and open center S, as and for the purpose described.

7. For operating the apex-carrier and valve F, a weight, L, when so arranged as to have its weight increased by impact of the current from the pipe O, as and for the purpose specified.

8. The valve F, made separate from the apex F', and connected therewith by a loose joint, as and for the purpose described.

9. In a fluid meter, a molded vulcanized rubber diaphragm having a flat rim and a concavo-convex or corrugated center, as and for the purpose described and represented.

121,212.—RAILWAY STOCK-CAR.—William Stark, White Pigeon, Mich., and Joseph G. Fisher and Simeon Fitch, Toledo, Ohio.

Claim.—1. In stock-cars the spring-buffers O, substantially as described and shown, for the purposes set forth.

2. In stock-cars the sliding panels Q, constructed and arranged substantially as described and shown, for the purposes set forth.

3. In stock-cars the movable frame P, substantially as described and shown, for the purposes set forth.

4. The combination of the partitions M and the doors N N, substantially as described and shown, for the purposes set forth.

5. The combination of the compartments L, the partitions M, doors N N, and the separate feed and water boxes *c* and *d*, all constructed and arranged substantially as described and shown, for the purposes set forth.

121,213.—RAILWAY STOCK-CAR.—William Stark, White Pigeon, Mich., and Joseph G. Fisher and Simeon Fitch, Toledo, Ohio.

Claim.—1. The combination of the separate compartments G and the movable or permanent continuous water-troughs I, constructed and arranged substantially as described and shown.

2. The combination of the water-reservoir *a*, the pipe K, and the sprinklers F and F', constructed and arranged substantially as described and shown.

3. The combination of the air-chambers *b* and the water-reservoir *a*, constructed and arranged substantially as described and shown.

4. The compartment-car A, provided with a fixed middle deck, B, permanent partitions G', and continuous water-troughs I, constructed and arranged substantially as described and shown.

121,214.—APPARATUS FOR FEEDING AND WATERING STOCK IN CARS.—William Stark, White Pigeon, Mich., and Joseph G. Fisher and Simeon Fitch, Toledo, Ohio.

Claim.—1. A system of pipes or tubes having suitable connections with reservoirs or other sources of supply, and arranged for the simultaneous supply of food or water to the cars of a stock-train, substantially as set forth.

2. The combination of the elevated reservoir A, the main pipe B, and the branch pipes C or D, substantially as described, for the purposes set forth.

3. The combination of the series of grain-bins H and the boxes G or standards F, constructed and arranged substantially as described, for the purposes set forth.

121,215.—COMPOSITION SADDLERY GOODS.—Jacob Straus, St. Louis, Mo.

Claim.—1. As a new article of manufacture, a

saddle-tree, stirrup, or other similar articles of saddlery goods composed of molded plastic material, substantially as and for the purpose specified.

2. The hereinabove-described plastic composition for use in forming articles of saddlery goods, substantially as shown.

121,216.—CLOTHES-WASHER.—David P. Sulouff, Milton, Pa.

Claim.—The diaphragm *b* having holes *c*, and sloping from the center toward the sides and ends, in combination with the radial ribs *f*, flange *g*, central pipe, *d*, and rose-head *e*, all arranged as described.

121,217.—CLOTHES-WASHER.—David P. Sulouff, Milton, Pa.

Claim.—The concave diaphragm *c d*, having the flange *b* and slot *e*, and combined with the shelves *f*, slats *h*, pipes *i*, and rose-heads *j*, as specified.

121,218.—ALARM FOR LETTER-BOXES.—Alfred Taylor, Brooklyn, N. Y.

Claim.—The combination, with the hinged door A of a letter-depository, of the hooked lever C fixed firmly thereto, catch J, spring I, rod S, elbow-lever D, bell F, hammer E, and spring H, all constructed substantially as set forth.

121,219.—VAULT FOR SEWERS.—Louis D. Tredway, St. Louis, Mo.

Claim.—1. In a slop-vault, the combination of a removable receiving-vessel, D, with the conducting-trough K and hand discharging-screw L, as described.

2. The interior projecting flanges *e* partially inclosing the stench-trap F, and the perforated sides *d* upon and by which the receiving-vessel D is supported, both made removable with said vessel, and serving to protect the trap F from choking, as described.

3. The arrangement of the waste-water pipe M so as to enter the chamber E near the bottom of the receiving-vessel D and deliver the waste-water against the solid side D' thereof, as and for the purpose described.

4. In a slop-vault, the combination of the removable receiving-vessel D with its inclosing and supporting flanges *e* and open sides *d*, the conducting-trough G or K, hand discharging-screw L with the fixed vessel C and stench-trap F, the whole constructed and arranged as shown and described.

121,220.—THRASHING-MACHINE.—Parley Upton and Jacob B. Lobdell, Battle Creek, Mich.

Claim.—1. The arrangement of the rock-shaft A, arms *f f* and *g g*, pinion *b*, wheel B, pitman C, and lever *d* with the sleve D and board G, all substantially as shown and described.

2. The combination of the board G, connecting-rods *m n*, bent lever *p*, and bottom board I, substantially as and for the purposes herein set forth.

121,221.—TAG.—Theophilus Van Kannel, Cincinnati, Ohio.

Claim.—A shipping-tag composed of a single paper web, A, split at one end, and having a patch, B, inserted and cemented within said split, as and for the purpose set forth.

121,222, antedated November 11, 1871.—GRAFTING INSTRUMENT.—David S. Wagener, Pultney, N. Y.

Claim.—The instruments for preparing the cion and cutting the kerf to receive it, when they are made substantially as specified, and used for the purpose herein set forth.

121,223.—DRILL-BIT AND REAMER.—Peter M. Ward, Cow Run, Ohio.

Claim.—The combination, with the drill-shaft D provided with the expansion *e* and dovetail channels *u u*, of the sleeve F and screw-collar G, when constructed substantially as and for the purposes shown and described.

121,224.—EYELETING-MACHINE.—Gennaro Wunderlich, Philadelphia, Pa., assignor to himself and Lewis H. Manch, same place.

Claim.—1. The combination of the sliding box G, carrying within it a feeding device, operating substantially as described, the post *c'* or its equivalent, and the cutting and punching devices, substantially as set forth.

2. The two sets of punches *e e'* and *s s'*, and the sliding platform G, so operated in respect to each other that the punches shall remain in contact with and hold the work during the rearward movement of the said platform.

3. The combination and arrangement, substantially as herein described, of the sliding platform G, its recessed arm *i'* acted on by a spring and carrying the serrated plate *i*, the pivoted dog *k*, and the pin *k'* of the post *c'*.

4. The combination of the said sliding platform and its feeding devices, a scroll-cam, *h*, and a lever, *g*, substantially in the manner described.

5. The combination of the eyelet-feeding and compressing devices, a weighted lever, *q*, the devices connected therewith or their equivalents, and a treadle, F, arranged, substantially as described, so as to operate the other portions of the machine.

6. The combination, with the eyelet-feeding devices described, and the latch *w*, of connecting-rods *v v*, levers *v²* and *q*, and the treadle F, as set forth.

121,225.—LINK FOR CHAIN-COUPLINGS.—Salem T. Lamb, New Albany, Ind.

Claim.—A chain-coupling, composed of links A with depressions *a a*, and links B with an opening or gap, *b*, made and united in the manner and for the purpose herein described and represented.

REISSUES.

4,638.—CLOTHES-WRINGER.—Robert B. Hugunin, Cleveland, Ohio, assignor to Albert H. Spencer, Providence, R. I.—Patent No. 75,425, dated March 10, 1868.

Claim.—1. The spiral cog-wheels herein described, whether they be made single or double, and whether placed at one or both ends of the rollers, with the means to prevent their becoming disconnected, in combination with the elastic rollers of a wringing-machine, substantially as and for the purpose specified.

2. The combination of the supporting-frame C C', elastic pressure-rollers A A', and single or double spiral cog-wheels B B', substantially as and for the purposes specified.

4,639.—MECHANISM FOR CUTTING AND SEWING OVAL SEAMS.—Agur Judson, Newark, N. J.—Patent No. 68,828, dated September 10, 1867.

Claim.—1. The arrangement, in connection with a sewing-machine, of rotating shears adapted to cut the material presented to them in oval or elliptical form, and so that the material so cut can be afterward presented to the sewing mechanism for the purpose set forth.

2. Mechanism, substantially as described, for guiding material in oval or elliptical forms, when combined and arranged with mechanism, substantially as described, for cutting the said material and for sewing it.

3. The revolving plate *r*, constructed and operating substantially as described.

4. The radially-slotted disk *s*, applied and operating as and for the purpose set forth.

5. The combination of the plate *r* and slotted disk *s* for joint action, substantially as set forth.

6. The combination of the adjustable slide V with the disk *s*, as and for the purpose set forth.

7. The plate B, provided with sockets for the reception of cork or other substance, as and for the purpose set forth.

8. The combination of plate B, constructed as described, with the top plate or piece D, as and for the purpose set forth.

9. The combination, with frame or bed-piece A, of a scale for indicating the size of the oval to be described.

10. The combination, with such frame or bed-piece, of a scale for indicating the change in the form of the oval to be described.

4,640.—VARIABLE CUT-OFF GEARING.—John E. McKay, New York, N. Y.—Patent No. 118,958, dated September 12, 1871.

Claim.—The combination of a cut-off valve or valves, the intervening angular lever *f*, link *h*, and governor *k*, all constructed and operating substantially as and for the purpose set forth.

4,641.—BOLT-HEADING MACHINE.—James Minter, Lowell, Mass., assignor to himself, Jonathan Hope, and Robert H. Butcher, same place.—Patent No. 43,521, dated July 12, 1864; reissue No. 2,093, dated October 17, 1865.

Claim.—1. The combination of the vertical heading-die and the side dies, acting in pairs, substantially as described.

2. The heading-die for upsetting the metal in line with the axis of the bolt, in combination with the side dies, acting in pairs, and the jaws, substantially as and for the purposes set forth.

3. The side dies P, P', Px Px', and *d*, in combination with their respective carriages and adjusting-screws or their equivalents, whereby they are adjusted to make heads of different sizes and shapes.

4. The combination of the vertical carriages and side carriages with mechanism to reciprocate said carriages and their adjustable dies, substantially as described.

5. The mechanism herein described, by means of which the heading-dies of a bolt-heading machine may be made to operate at regular or irregular intervals, at the will of the operator, substantially as herein set forth.

6. The spring-dogs O O' Ox Ox', carriages *s*, with their shoulders and their dies P P' Px Px', in combination with the piece *k* or its equivalent, and the foot-lever *c*, when constructed and operating substantially as set forth.

7. The combination of the elastic plate *p* with the dog *n* and the heading-die *d*, as set forth.

8. The lever *q* and cam *r*, in combination with a foot-lever *c* and the forming mechanism, as described, so that said cam shall control the time of action, as set forth.

9. The combination of the hand-lever *d'*, swivel-arm *b'*, and movable jaw *a'''*, when constructed and operating substantially as and for the purposes set forth.

4,642.—HUB FOR CARRIAGE-WHEELS.—Almon Warner, Hampden, assignor, by mesne assignments, to Elihu Hall & Co., Wallingford, Conn.—Patent No. 61,900, dated February 5, 1867.

Claim.—The combination of the ring B, formed with its mortises *a* and flanges *c c*, with a mortised wooden hub, A, substantially as described.

4,643.—STEAM-HEATING APPARATUS.—Samuel F. Gold, Englewood, N. J., and William A. Foskett, New Haven, Conn., assignors, by mesne assignments, to The Union Steam and Water Heating Company.—Patent No. 36,000, dated July 29, 1862.

Claim.—1. A steam-chamber, C, for radiating heat, studded with a series of projections, *p*, extending from its outer surface at intervals from each other along the side of said chamber or radiator to divide or partially divide the current of air, substantially as hereinbefore set forth.

2. The steam-chamber C for radiating heat, studded with projections *p*, arranged alternately, substantially as hereinbefore set forth.

3. The steam-chamber C for radiating heat, studded with projections *p*, having vertically-inclined surfaces, substantially as set forth.

4. Two or more steam-chambers or radiators, C, connected by a central opening, *d*, extending through two or more of said chambers, and also opening into the side passages, substantially as herein set forth.

5. The combination, with a steam-chamber, C, of a diaphragm, D, substantially as hereinbefore set forth.

6. The arrangement contiguous to each other of two or more steam-chambers or radiators, C, studded with projections *p*, having vertically-inclined surfaces, or arranged alternately, substantially as hereinbefore set forth.

7. The arrangement contiguous to each other of two or more steam-chambers or radiators, C, studded with projections *p* to divide the current of air, substantially as set forth.

4,644.—MODE OF REGULATING THE DRAUGHT OF HOT-AIR FURNACES.—Albert H. Mershon, Philadelphia, Pa. — Patent No. 55,138, dated May 29, 1866.

Claim.—1. Mechanism, operating substantially as described, for enabling persons on any floor of a building to regulate the fire of a furnace without passing to the place of location of said furnace.

2. A gauge or indicator, applied in combination with mechanism for operating the draught-door, substantially as and for the purpose described.

3. The chain F and weight J together, substantially as described, operating with a draught-door in the manner and for the purpose set forth.

DESIGNS.

5,365.—BADGE.—Isaac Bedichimer, Philadelphia, Pa.

Claim.—The design for a badge, substantially as described, and as represented in and by the accompanying drawing.

5,366.—BUTT-HINGE.—Frederick W. Brocksieper, New Haven, Conn., assignor to Sargent & Co., same place.

Claim.—The design for butt-hinge, substantially as shown in the accompanying illustration and described.

5,367.—SHAWL FABRIC.—Samuel Byrom, Philadelphia, Pa.

Claim.—The design for fabric, as shown.

5,368.—BARN-DOOR HANGER.—John Herald, Unadilla, N. Y.

Claim.—The design for a barn-door hanger, as shown.

5,369.—MANGER.—James L. Jackson, New York, N. Y.

Claim.—The design of the open-work lattice cast-metal side of the manger, substantially as shown in the drawing.

5,370.—MANGER.—James L. Jackson, New York, N. Y.

Claim.—The design of the open-work lattice manger of cast metal, substantially as described and represented.

5,371.—PICKLE-JARS.—John Jepson, West Meriden, Conn., assignor to The Meriden Britannia Company, same place.

Claim.—The design for pickle-jar, as shown in the accompanying illustrations, and as herein described.

5,372.—CARPET-PATTERN.—John H. Smith, Enfield, assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawings or photographs accompanying this specification.

5,373.—LOCK-CASE FOR SATCHELS, &c.—Bernard Steinmetz, Paris, France, assignor to Raphael Neumann & Co., New York city.

Claim.—The design for a lock-case, representing a monitor, substantially in the manner above described.

5,374.—PICKLE-JARS.—Horace C. Wilcox, West Meriden, Conn., assignor to The Meriden Britannia Company, same place.

Claim.—The design for a pickle-jar, as shown in the accompanying illustration, and as herein described.

5,375.—CARPET-PATTERN.—Alfred Heald, Philadelphia, Pa., assignor to McCallum, Crease & Sloan, same place.

Claim.—The design for a carpet-pattern, substantially as described, and as represented in and by the accompanying drawing.

5,376.—CARPET-PATTERN.—Alfred Heald, Philadelphia, Pa., assignor to McCallum, Crease & Sloan, same place.

Claim.—The design for a carpet-pattern, substantially as described, and as represented in and by the accompanying drawing.

5,377.—PEN OR PENCIL CASE.—Ephraim S. Johnson, New York, N. Y.

Claim.—The design of a barrel of a pen or pencil case, made of ivory, wood, rubber, or other suitable material, ornamented, substantially as shown.

5,378.—IRON POST.—Melville D. Jones, Boston, Mass.

Claim.—The design for an iron post, as shown.

TRADE-MARKS.

545.—MEDICINES.—William A. Bishop, Dodgeville, Wis.

546.—MUCILAGE.—Carter Brothers & Co., Boston, Mass.

547.—BRANDY.—Ives, Beecher & Co., New York, N. Y.

548.—BRANDY.—Ives, Beecher & Co., New York, N. Y.

549.—BRANDY.—Ives, Beecher & Co., New York, N. Y.

550.—WHISKY.—Charles H. Ross & Co., Baltimore, Md.

551.—GIN.—Thomas L. Smith, Boston, Mass.

552.—SEWING-MACHINE.—The Remington Empire Sewing-Machine Company, Ilion, N. Y.

ISSUE OF NOVEMBER 28.

PATENTS.

121,226.—PROCESS FOR THE MANUFACTURE OF IRON.—Charles Adams, Philadelphia, Pa.

Claim.—The manufacture of iron direct from the ore, without the use of a blast-furnace, by the process of melting the ores in the cupola-furnace, and the use and operation of carbon or hydrogen, separately or combined, or carbonic oxide, applied to the molten ore in a highly-heated condition—that is to say, at a temperature of not less than 600° Fahrenheit—and which, being brought into contact with the molten ore maintained at the high temperature, in which it comes from the cupola, by the reheating-furnace, thus deoxidizes and purifies the ore and separates it suitably for balling, substantially as described.

121,227.—OYSTER-DREDGE.—William Cornelius Baker, Baltimore, Md., assignor to himself and Jacob F. Cook, same place.

Claim.—1. The plows *b b* on an oyster-dredge, substantially as and for the purpose described.

2. The skeleton arched frame, formed of the bars A A and C D D′, for supporting the rake B, the open net-work *g*, bail J, and edge *e*, all constructed substantially as shown and described.

3. The runner-shaped guards G G, applied on the arches A A of the cage outside of the netting, for allowing the cage to glide easily over the sides of the boat, substantially as described.

121,228, antedated November 17, 1871.—CULTIVATOR AND HORSE-HOE.—John W. Blake, Jefferson, Wis.

Claim.—1. In a cultivator, the central adjustable standard *a*, pivoted to the beam A, and connected to the clevis-bolt by means of the draft-rod D, whereby the pivot of the standard is relieved of strain, substantially as described, for the purpose specified.

2. The brace or plate E, in combination with the shovels and standards, to re-enforce the points of the shovels, as herein shown and described.

3. The combined braces and handles M M sliding loosely upon the cross-head B, in combination with the pivoted adjustable central standard *a*, as herein shown and described, for the purpose specified.

121,229.—STOVE-PIPE ELBOW.—James P. Brace, Springfield, Ohio, assignor of one-half his right to Edward G. Danforth, same place.

Claim.—The circular stove-pipe elbow herein described, constructed with sections A and rings *c* united by means of flanches and rivets, as described, substantially as specified.

121,230.—PLANING-MACHINE ATTACHMENT.—Louis C. Brastow, and Alphons M. Zwiebel, Wilkesbarre, assignors to L. B. Flanders, Philadelphia, Pa.

Claim.—The within-described attachment, consisting of a stationary frame, B, secured so as to be detachable to the base-plate of a planing-machine, and carrying a face-plate operated by the reciprocating bed through the medium of a rack, E, and wheel D, or equivalent mechanism, as set forth.

121,231, antedated November 10, 1871.—STUD FOR SHIRTS.—Ernst Bredt, New York, N. Y.

Claim.—A shirt-stud made of two disks, with their respective necks, in the manner specified, and united together by a connection that passes through said necks, as and for the purposes set forth.

121,232, antedated November 10, 1871.—CLAMP FOR FRUIT-JARS.—Ira Buckman, Jr., Williamsburg, N. Y.

Claim.—A clamp for securing caps or covers upon fruit-jars, struck up from sheet metal, and having its arms corrugated, as set forth.

121,233.—SPONGE-CUP.—Seth C. Catlin, Cleveland, Ohio.

Claim.—The herein-described pen and sponge-holder, consisting of the cup or stand A, having arranged around the inside thereof a series of vertical chambers or niches, B, lining or curb C reaching partially or wholly to the floor of the well D, and having in the lower edge thereof a series of openings, *a*, whereby said chambers are put in communication with the well or sponge-cup D, substantially in the manner as and for the purpose set forth.

121,234, antedated November 16, 1871.—ILLUMINATING APPARATUS.—Gustavus Cuppers, Brooklyn, E. D., N. Y.

Claim.—1. The ring-bracket A supporting the suspended cup C, in combination with the gas-burner extending horizontally over the cup, substantially as and for the purpose described.

2. The slotted arm *a* on the ring-bracket, in combination with the cup C and burner *c*, as set forth.

121,235.—FLUTING-MACHINE.—Edward Mortimer Deey, New York, N. Y.

Claim.—The combination of the lower roll *d′* with the clutch-coupling N O *n′* and crank-handle, arranged with the chimney B C, as shown and described.

121,236.—STOVE-GRATE.—William Doyle, Albany, N. Y.

Claim.—1. A circular rotating grate, constructed with either curved or straight arms, having one raised or cutting-edge, *l*, substantially as and for the purpose herein shown and described.

2. The combination and arrangement, with a circular grate, D, of a helically-grooved or ribbed center-pin, A, and a correspondingly ribbed or grooved hub, *g*, of grate-bar or rest C, substantially as and for the purpose herein shown and specified.

121,237.—SEWING-MACHINE FOR BOOTS AND SHOES.—William Duchemin, Boston, Mass., assignor to himself, George B. Bigelow, William Edson, and John Bigelow, same place.

Claim.—1. The work-supporting arm P P¹ working in a segmental slide, in combination with the standard P², all operating substantially as and for the purpose described.

2. In a machine for sewing turned shoes, a reciprocating pressing device, operated by a cam or its equivalent, substantially as described, to retain the upper in close contact with the sole while the needle is entering and being withdrawn from the sole and upper, and which is released when the feed takes place.

121,238.—COVER FOR FRUIT-BASKETS.—Aaron S. Dyckman, South Haven, Mich.

Claim.—1. The improved cover, constructed of the hoop or band B, provided with cross-slats *c*, in combination with the adjustable hoop C, as and for the purpose herein described.

2. The combination of the top or cover B *c*, adjustable hoop C, and netting D with a fruit-basket, as shown and described.

3. The combination with the cover B *c*, hoop C, and hooks *i i*, with a fruit-basket, as shown and described.

121,239.—PAPER-CUTTING MACHINE.—Frank A. Fletcher, Newark, Del.

Claim.—The application and use of the flexible metallic plate I, substantially as and for the purpose hereinbefore set forth.

121,240.—STUDIO EASEL.—John Charles Forbes, Toronto, Canada.

Claim.—1. The combination of the crank-handle C, worm-screws D, pinion E, cross-spindle F, spur-wheel G, vertical racks B, for the purpose of raising and lowering the canvas-holder, substantially as and for the purpose specified.

2. The combination of the crank-handle I, vertical spindle J, pinion L, rack M, for the purpose of altering the inclination of the canvas-holder, substantially as specified.

121,241.—LANTERN.—Alonzo French, Philadelphia, Pa.

Claim.—1. A screw-thread, arranged on and between the ends of the globe of a lamp or lantern.

2. A detachable skeleton stand for lanterns, constructed with catches or equivalent devices, operating as and for the purpose described.

3. A skeleton stand for lamps or lanterns, constructed so as to be detachable, substantially as above described.

121,242.—CURTAIN-FIXTURE.—Joshua Gray, Medford, Mass., assignor to Arthur W. Gray and Charles H. Haftshorn, same place.

Claim.—1. The balls or slides *b*, in combination with a tube, C, operating substantially as described, for the purpose specified.

2. The combination of the balls or slides *b*, the tube C, and the curtain D, operating substantially in the manner and for the purpose set forth.

3. In combination with the tube C and the balls or slides *b* the curtain D and the closet E, as and for the purpose specified.

121,243.—STALL-FLOOR.—Frank Elmer Hall, Bridgewater, Mass.

Claim.—In the construction of stall-floors, the arrangement of the metallic bed-plate, the inclined gutters, and the wooden floor-bars, when constructed substantially as shown and described.

121,244, antedated November 9, 1871.—HAY-PRESS.—Finlay F. Hamilton, Green Bay, Wis.

Claim.—1. The arrangement of the doors I hinged to and swinging under the cross-bars J of the case, the hinged blocks M, and cross-bars N in the frame B, as herein described, for the purpose specified.

2. The arrangement of the four separate following-ropes adapted to be attached and detached in sets over the follower, in the manner herein described, for the purpose specified.

121,245.—PREPARING IRON CHIPS, SHAVINGS, &c., FOR MELTING.—Ernest C. Haserick, Lake Village, N. H.

Claim.—1. The aggregation of chips, shavings, turnings, filings, or other small pieces or particles of iron into blocks or masses by means of a substance which will cause them to cohere, and also will shield them from burning up in the melting furnace, substantially as and for the purpose herein specified.

2. The aggregated masses or blocks, as above described, when formed with perforations in the manner and for the purpose herein specified.

121,246.—REED ORGAN.—Albert K. Hebard, Boston, Mass.

Claim.—A slide, E, or its equivalent, arranged in connection with the reed or reeds of an organ and connected to the bellows thereof for operation, substantially as and for the purpose described.

121,247.—HARVESTER-RAKE.—John Heuermann, Wilhelm Sternberg, and John Stuhr, Davenport, Iowa.

Claim.—The combination of the slotted platform A, rake B with carriage *b*, chains and pulleys, levers C, connecting-bar D, lever E, rod F, arm G, crank H, and cam I with the connections described, as and for the purpose set forth.

121,248.—ATTACHMENT FOR PLANERS.—Alonzo S. Hewlett, Sebastopol, Cal.

Claim.—The presser-foot A with its shank B and spindle C, said spindle passing through a barrel, E, and held in place by a spring, *f*, in combination with the plate D provided with a recess, *e*, and having the clasp *j*, all constructed and arranged to operate substantially as and for the purpose above described.

121,249.—OYSTER-DREDGE.—Ezra B. Lake, Mauricetown, N. J.

Claim.—The combination of beams B and C, paddle-wheel D, levers G, F, and H, with pulleys E, K, and L, substantially as and for the purpose hereinbefore set forth.

121,250.—MEN'S DRAWERS.—Killian V. R. Lansingh, Jr., Albany, N. Y.

Claim.—Cloth drawers, as a new article of manufacture, having the front and back portions, which form the legs thereof, cut or shaped as hereinbefore set forth.

121,251, antedated November 13, 1871.—SLEIGH.—Whitman Leslie, Gray, Me.

Claim.—A sleigh constructed with a sheet-metal body, A, and a bottom, B, both secured together by and through bars C, and stiffened by uprights L, substantially as described.

121,252.—CAR-COUPLING.—Henry H. Morgan and Albert Gerry, San Francisco, Cal.

Claim.—1. The interlocking-bumpers B, consisting of the vertically-slotted leaves or jaws *c c'*, in combination with the horizontal sliding bolt *e*, substantially as and for the purpose described.

2. The vertical shaft *i*, connected with the bolt *e* by an arm, *j*, and having the bent end *l*, in combination with the tripping-bar *k*, substantially as and for the purpose above described.

121,253, antedated November 18, 1871.—COMBINED LATCH AND LOCK.—John H. Morse, Peoria, Ill.

Claim.—The form of round bolt D, with its flattened part D *e*, pin *f f*, cross-bar *g*, in connection with tumblers E, all inclosed in a round metal case, C B, with stays *m m*, and operated with knob-rod *b*, with arms *d d*, and flat key F, all working in the manner and for the purpose herein specified.

121,254.—CRUTCH.—Eugene T. Pearl, Milwaukee, Wis.

Claim.—1. A crutch, when constructed with head A, springs B B, side pieces C C, ferrules D D, sockets E E, rods F F, and keepers G G, substantially as described.

2. Crutch-head A, spring B, side pieces C, rods F, keepers G with oblong orifices, and strap L, substantially as described.

121,255.—ARM FOR RAILWAY CAR-SEATS.—Anton Prier, Milwaukee, Wis., assignor to Loeffelholy & Prier, same place.

Claim.—1. Arm-plate A, arm B, pivot C, recess E, stop F, and screw H, all in combination, substantially as described.

2. Arm-plate A, arm B, pivot C, screw D, recess E, stop F, cap G, and screw H, arranged substantially as described.

121,256.—PRINTING-PRESS.—George W. Prouty, Charlestown, Mass.

Claim.—1. The arrangement and combination of the pinion C, spur-gear D, connecting-rod E, segmentary gear F, and pinion *d* with the shafts A and G, the chain-wheels H, and inking-roller carriage K, all constructed, combined, and operating in the manner and for the purpose specified.

2. The combination of the gear D, the connection E, the segment F, the connecting-rod I, and plates J, as herein described.

121,257.—FEATHER-RENOVATOR.—Solomon B. Shoemaker, Willoughby, Ohio.

Claim.—1. In connection with a revolving jacketed drum, C, mounted on a hollow perforated shaft, D, and with a steam-generator, A B, the application of a cylindrical chamber or cap, H, to the end of the drum around the shaft D, as shown, the same being combined with side valves *v v* and openings I I leading into the steam-space C^1, and with a removable plug-valve, *w*, all constructed and arranged as shown.

2. In a rotary drum, C, mounted on a hollow perforated shaft, D, and adapted to the curing and renovating of feathers by steam, the arrangement of lifting-spikes *s s* around the concave wall of the drum, substantially as and for the purposes specified.

121,258, antedated November 13, 1871.—MACHINE FOR MAKING LOOM-HARNESS.—Joseph Sladdin, Lawrence, Mass., assignor to himself and John Lord, same place.

Claim.—1. The presser-lever J^3, having arm K^1 in combination with grooved stationary needle N and spring L^3, all arranged and operating as described, and for the purpose set forth.

2. The loose-rods Q^3 Q^4, having the within-described rotary movement, substantially as and for the purpose set forth.

3. The gear-wheels T^1 Z^3 D^4, sector-gears U^1, arms V^1, and cams X^3 Y^3, in combination with the loose-rods Q^3 Q^4, substantially as and for the purpose described.

4. The rocking temples W, arranged and operating substantially as described, for the purpose set forth.

121,259.—HINGE FOR SEATS.—William A. Slaymaker, Atlanta, Ga.

Claim.—The frame A, with ear *a* having the slot *a'*, and recess *b* with notch *b'*, in combination with the arm C having the recess *c*, ear c^1 with projections c^2 c^3, as and for the purpose set forth.

121,260.—STEM WINDING AND SETTING WATCH.—Harry R. Smith and Rufus Folsom, Cincinnati, Ohio.

Claim.—The described arrangement of the intermediate wheel D, revolving parallel and shiftable perpendicularly to the dial-plate, said wheel remaining permanently in gear with the contrate wheel C that meshes with the pinion F upon the winding stem, and being capable of being placed in gear with either the winding-wheel E or the hand-pinion R by means of the shifting mechanism J K L N O or its equivalent, for the objects stated.

121,261.—MANUFACTURE OF GUARDS FOR HARVESTING-MACHINES.—John Edson Sweet, Syracuse, N. Y.

Claim.—The method hereinbefore described of determining the shape and area in cross-section of the blank bar jointly with the production of such bar, of shape and area so determined by rolling, and the reduction of said bar to blanks by cutting or punching, in the manner described and illustrated, as my improvement in the art of making guard-fingers for harvesters.

121,262.—LOOM-SHUTTLE.—Frederick O. Tucker, Stonington, Conn.

Claim.—The guard or arm *a*, in combination with the pawl *d*, trigger Z, and spring-wire *g*, relatively constructed and arranged within a shuttle-body at one side of same for operation of the guard *a*, substantially as and for the purpose described.

121,263, antedated November 13, 1871.—CONVERTING ARTICLES MADE OF WROUGHT-IRON INTO STEEL.—Louis La Breche-Viger, Montreal, Canada.

Claim.—1. The cementation or conversion into steel of articles made of wrought-iron by immersing them in a bath of molten cast-iron after they have been partially worked into their respective shapes, whereby the heaviest parts of the work are accomplished upon wrought-iron and not upon steel, and the operation of welding steel to iron is dispensed with.

2. The cementation or conversion into steel of articles made of wrought-iron by immersing them in a bath of cast-iron in fusion in such a way as to convert only the surface of such articles to the required depth, leaving the interior in its orignal state of malleable iron, thereby producing articles externally as hard as those made of pure steel, with the toughness dependent on that part of their substance retaining the nature of malleable iron, and free from the inconvenience of imperfect welding.

3. The use of furnaces to effect such conversion on a large scale, as set forth.

4. The lining of crucibles or furnaces with a brasque of pure carbonaceous matters and nitrogenous substances to keep the bath of cast-iron to its normal degree of carburization and to supply nitrogen to the steel.

5. Composing the bath of pure cast-iron necessary for such conversion by melting wrought-iron or blister-steel in a cupola-furnace with pure fuel, and recarburising said bath by returning the cast-iron to said cupola-furnace whenever required, the whole as above described, and for the purposes set forth in the foregoing specification.

121,264.—MACHINE FOR CUTTING WEDGES.—Norman Warner, Jasper county, Ind.

Claim.—A wedge-cutting machine, composed of the several parts herein shown and described, constructed and arranged as and for the purposes set forth.

121,265.—NOZZLE.—Thomas Watson, Nevada, Cal.

Claim.—A hose-pipe nozzle having a double truncated cone near its connection with the hose, and narrowing by a more obtuse line of contraction from the extremity of such truncated cone to the point of delivery, all as shown and described.

121,266.—CASTING FEMALE SCREWS.—William D. Alford, Cuyahoga Falls, Ohio.

Claim.—The core I, having a central point or stem J, and provided with the plate or flange I'', as arranged, and in combination with the sections of the core-box A B and plate E, as and for the purpose substantially set forth.

121,267.—CULTIVATOR.—John Ansley and George W. Ansley, Marengo, Mich.

Claim.—The plank platform A carrying the pole B and cultivating-teeth *a a a*, &c., or equivalent plows, in combination with the runners C C, with or without tracking-wheels, connecting fulcrum-bar D, and handle-levers E E, constructed, connected, and operated substantially in the manner and for the uses set forth.

121,268.—SADDLE-GIRTH.—Seth W. Baker, Providence, R. I.

Claim.—As a new article of manufacture, a textile band for horses, woven with several sets of warps and filling, and having its edges unselvaged and forming a compact mass of one set of threads only.

121,269.—BLOWING APPARATUS FOR ORGANS.—John F. Barker, Springfield, Mass.

Claim.—1. The pipes F and E, the vessel A whether made movable or fixed, and the vessel B either with or without the chamber D therein, in combination with the wind-chest or reservoir of an organ, substantially as and for the purposes described.

2. The pipes F and E, and the vessels A and B either with or without the chamber D therein, in combination with the wind-chest or reservoir of an organ, substantially as and for the purpose described.

121,270.—ATTACHING WHEELS TO AXLES.—John Williams Beal, South Scituate, Mass.

Claim.—My improved wheel and axle connection, the same consisting of the sliding catch-plate *e* provided with a spring, *f*, in combination with the conical head *a* and annular groove *b*, the whole being arranged and applied together and to the journal and hub of a wheel so as to operate in manner and for the purpose set forth.

121,271, antedated November 18, 1871.—BUTTON FOR DOORS.—George F. Beardsley, Binghamton, N. Y.

Claim.—The combination of the face-plate A, back flanged plate B, latch F with offset *h* and lip *i*, said latch being operated by spindle *s*, all arranged as and for the purpose described.

121,272.—INSECT-DESTROYER.—John M. Bennett, Jaynesville, Iowa.

Claim.—The catcher D I combined with the trough *b d a* and beater S S, when said parts are combined and arranged as and for the purpose set forth.

121,273.—FLAT-IRON HOLDER.—Frederick Bruns, Cleveland, Ohio.

Claim.—The combination of the cylindrical-shaped hinged pieces A A and lugs B B with guides C C, and the grooves E E conforming to handle D D, substantially as and for the purpose hereinbefore set forth.

121,274.—MACHINE FOR MAKING SHOVEL-HANDLES.—Henry R. Butterfield, Vassalborough, Me.

Claim.—As an improvement upon the machine for making the hand part or head of shovel-handles patented by Russell D. Bartlett March 14, 1854, the combination, with the shaft E^2 and pin *e*, of the worm-clutch collar B, the worm-clutch D', and the forked lever C with the cam Z of said machine, substantially as and for the purpose specified.

121,275.—LIFE-RAFT.—Hervey C. Calkin, New York, N. Y.

Claim.—1. In a life-raft, the cylinders K, consisting of the cone-shaped ends A, the short cylindrical sections B and heads L, when constructed, arranged, and united in the manner and for the purpose herein shown and described.

2. The combination of the cylinders K, angle-irons *b*, cross-pieces D, and braces E, when constructed and arranged substantially as and for the purpose set forth.

3. In combination with the cylinders K, the angle-irons *a*, and bars or timbers H, when constructed and arranged substantially as and for the purpose set forth.

4. In combination with the cylinders K, angle-irons *b*, cross-pieces D, and braces E, the open floors or bottoms G, when constructed and arranged substantially as and for the purpose set forth.

121,276.—STAND-PIPE OF GAS-RETORTS.—Moses Coombs, Jr., Youngstown, Ohio.

Claim.—The combination, with the stand-pipe

of a gas-retort, of a cylinder or jacket surrounding the same, which is kept filled with water of a temperature lower than that of the gas evolved from the retort, all substantially as set forth.

121,277.—MACHINE-GUN. — Louis Christophe and Joseph Montigny, Brussels, Belgium.

Claim.—In combination with the box *g*, within which are arranged the percussion-hammers A in proper relative position to the several barrels, the lever *f* for moving the said box, and trigger-plate *p* for discharging the hammers, all arranged and operating substantially in the manner specified.

121,278.—DOVETAILING-MACHINE.—Asahel Davis, Lowell, Mass.

Claim.—The adjustable tables K K′ provided with gauge L, in combination with the adjustable cutters F F′, and a suitable carriage and supporting frame, constructed substantially as herein shown and described.

121,279.—BED-BOTTOM.—Loton L. Deming, Andrew J. Deming, and Rinaldo Alden, Erie, Pa.

Claim.—The shaft with arms extending therefrom, and friction-rollers placed in the ends of the same, as set forth, in combination with the lever and ratchet, when the same are arranged as and for the purposes set forth.

121,280.—REFRIGERATOR.—Joseph F. Dick, New Orleans, La.

Claim.—The refrigerator herein described, having one or more glass openings, B and B′, and the interior revolving ice-receptacle D, with arms, pins, or hooks F, substantially as described, for the purposes set forth.

121,281, antedated November 24, 1871.—MODE OF FASTENING HORSE-POWERS.—Hiram Charles Drew, Jamestown, Mich.

Claim.—1. The mode of constructing and applying levers or braces to powers for the purpose and in the manner described.

2. The mode of holding the stake upright by the mortise J, in connection with the braces or levers A and B and the pivot G, and the plates C and D, and ratchets F F′, all in the manner and for the purposes specified and set forth.

121,282. — SADDLE-TREE. — Edward H. Dunn, Portland, Me.

Claim.—The method of attaching the water-hook, having the shank, as described, to the saddle-tree by means of the slot *b*, key W, and screw K, substantially as and for the purposes set forth.

121,283.—LOCOMOTIVE. — Richard S. Gillespie, New York, N. Y.

Claim.—1. The poppet-valve *b* and its spring, in combination with the steam-chest of a steam-engine, constructed to operate in the manner and for the purpose described.

2. The valves *b*′ that close the exhaust nozzles and safety-valves *c*, in combination with the steam-cylinder of a steam-engine, in the manner and for the purpose described.

3. The combination of the poppet-valve *b*, valve *b*′, and safety-valve *c* with the steam-cylinder of a steam-engine, constructed and arranged to operate in the manner and for the purpose described.

121,284.—COATING CONCRETE AND CEMENT FLOORS, PAVEMENTS, &c. — Charles C. Hallock, Brooklyn, N. Y., assignor of one-half his right to Asa Hoyt, same place.

Claim.—1. A composition composed of powdered stone, linseed-oil, gum copal or shellac, and litharge made in substantially the manner herein specified.

2. The method of producing a stony surface on a concrete or cement pavement or floor, substantially as herein described.

121,285. — WASH-BOILER. — Abraham S. Herr, Bainbridge, Pa.

Claim.—In steam wash-boilers, a single central tube, A, when permanently closed on the top, and provided with perforations around its circumferences from below upward, said tube affixed to a portable bottom, B, which is centrally convex, and provided with a flat projecting rim, C, the whole supported on feet D, in the manner and for the purpose specified.

121,286.—HAND-STAMP.—Benjamin B. Hill, Springfield, Mass.

Claim.—1. In a hand-stamp the friction-bearing or stop, substantially as herein set forth, as a means of securing the revolving head C in the desired position for printing.

2. The combination of the latch *e*′ with the detent *e*, when applied to a hand-stamp, substantially in the manner and for the purpose specified.

3. The collar *a*, having a free rotary movement with the spindle A′, and having a pin or projection therein which engages with a guide-slot in the vibrating part of the stamp, and operating to keep said vibrating part and collar *a* always in the same relative position with each other.

4. In a hand-stamp the spindle-socket, constructed and arranged in two parts, B and N′, in combination with the collar *a*, and secured together substantially as and for the purposes specified.

121,287, antedated November 11, 1871.—SCHOOL-DESK AND SEAT. — Wendell P. Hood, Winona, Minn.

Claim.—1. The combined folding-desk and seat, constructed and arranged to operate substantially as described.

2. The spring *f*, applied to the standard A, in combination with the rearwardly-projecting arm J of the seat, arranged and operating substantially as herein set forth.

3. The socket E, or its equivalent, arranged upon the standard A for receiving and holding the ink-well, substantially as set forth.

121,288.—COVERED BUCKET. — Francis D. Kellogg and George N. Ives, New Haven, Conn.

Claim.—1. The packing *a*, of India rubber or other material, arranged in a rabbet around the upper edge of the bucket, upon the outer surface, and secured in place by the hoop B, substantially as and for the purpose described.

2. The shaft D, constructed with cams at its ends and arranged across the top of the bucket, combined with ears E F fixed to the bucket, and operating in the manner substantially as described.

121,289, antedated November 18, 1871.—APPARATUS FOR DEVELOPMENT OF THE MUSCLES OF THE HANDS. — Helena P. De Bruyn Kops, New York, N. Y.

Claim.—The instrument or apparatus constructed with indented edges and perforations, substantially as and for the purpose set forth.

121,290. — GRAIN-BINDER. — Sylvanus D. Locke, Janesville, Wis.

Claim.—1. The combination of the pinion G, plate H, and pawl I with the arm J and flange *f*, to operate as set forth.

2. In combination with the compressing and carrying arms M O P, the cam T and pin S, cam-plate Y, and pin W, substantially as described, to effect the acceleration of the motion of arm O to discharge the gavel.

3. The apron B′, divided longitudinally, and the parts separated, as described, in combination with the binding-arm M, substantially as and for the purpose set forth.

4. The take-up pulley F, constructed with an inclosed take-up spring, the friction-roller *e*′, and the orifice *f*′, to receive the binding-wire at or near the center of revolution, as and to operate in the manner set forth.

121,291.—COPY-HOLDER.—Alpheus B. Manard, Rockford, Ill.

Claim.—The combination of the hinged bent lever *a*′, hinged plate *a*, support B, and springs *b* with the bar C and pointer-rule D, constructed and arranged in the manner described.

121,292. — COFFEE-ROASTER. — Daniel D. Martin, Cincinnati, Ohio.

Claim.—The herein-described case *a* for supporting and inclosing the coffee-cylinder, constructed with widely-projecting flange *a*″, concavo-convex projections *a*′, and downward projection *a*‴, as and for the purpose specified.

121,293. — ATTACHMENT FOR SEWING-MACHINES. — Sarah O. Matteson, Chicago, Ill.

Claim.—The plate A, folded to form the parts D C, in combination with the notches *d b* and conical part E, as shown and described.

121,294. — CONCRETE PAVEMENT.—George H. Moore, Norwich, Conn.

Claim.—In a pavement formed of sections of plastic material, powdered steatite interposed between the sections for forming a separable joint.

121,295.—CARRIAGE.—Earl C. Newton, Batavia, Ill.

Claim.—1. The sliding of the seat B and seat-riser C on an inclined plane, substantially as and for the purpose hereinbefore set forth.

2. The combination of sliding one end and jumping the other end of the seat-riser C and seat B, substantially as and for the purpose hereinbefore set forth.

3. The folding of the seat D, substantially as and for the purpose hereinbefore set forth.

4. The connecting of the reach I with the cross-spring H, substantially as and for the purpose hereinbefore set forth.

121,296, antedated November 11, 1871.—APPARATUS FOR AMALGAMATING GOLD IN TAILINGS.—Thomas A. Pratt, Marysville, Cal.

Claim.—The vessel A, provided with the hopper-shaped spout B, in combination with the adjustable stirring-wheel, composed of the disks *h i*, with their angular wings *m n* and vertical dividing wings *g*, all constructed and arranged to operate substantially as and for the purpose above described.

121,297.—TRAMWAY-SADDLE.—Joshua Clayton Robinson, Hamilton, Nev.

Claim.—The combination of the hinged levers D D with the jaws F F and pulleys G G, also, the head of the frame A from the dotted line upward, substantially as and for the purpose hereinbefore set forth.

121,298, antedated November 11, 1871.—CIGAR-MACHINE. — Socrates Scholfield, Providence, R. I.

Claim.—1. The combination, with a bunch-forming apparatus or device constructed to produce an elongated bunch or filler, of a cutter or cutters, G, formed to divide and taper the bunch, substantially as specified.

2. The combination of the cutters G and H with a bunch-forming and binding apparatus, essentially as described.

3. The intermittently-moving apron D provided with strips or projections *e*, in combination with the bunch-forming apparatus and cutters G H, substantially as specified.

4. The drawer K, constructed and arranged to receive an intermittent movement alternately, in reverse directions, along paths or ways *l*′ *l*², arranged the one below the other, and connected by drop-grooves *u*, essentially as described.

5. The combination, with the drawer K arranged to operate as described, of the conveying-apron D and the guides *k k*, substantially as specified.

6. The combination, with an apparatus for forming cigar-bunches and putting on the binders, of devices for cutting, conveying, and packing the bunches, arranged for operation in an automatic manner, subject to the action of a clutch controlled by the opening and closing of the apparatus which forms and binds the bunches, essentially as and for the purposes herein set forth.

121,299. — MACHINERY FOR HANDLING LOGS IN SAW-MILLS.—Edward H. Stearns, Erie, Pa.

Claim.—1. The combination of the track-ways B″ B‴, either with or without the grooves in their top sides, and having the idle-sheaves *d d*, the endless chains J² J², and the working-sheaves M′ M′, constructed and arranged substantially as and for the purpose described.

2. The combination of the endless chain N′ (both having the same construction as J² and N′) and the jack-way B′, having the idle-pulleys M″ and working-sheave M, with the track-ways B′ B′ and chains J², constructed and arranged substantially as and for the purpose described.

121,300. — TRACK-CLEARER FOR MOWING-MACHINES.—James Timms, Malta, Ohio.

Claim.—1. The track-clearer D, applied to revolve by contact of a portion of its base with the ground upon an axis inclined from its base inward toward the frame of the machine, substantially as herein described and shown.

2. The track-clearer D, applied as described and shown, in combination with the curved divider C, as set forth.

121,301, antedated November 17, 1871.—APPARATUS FOR LIGHTING AND EXTINGUISHING GAS BY ELECTRICITY.—Jacob P. Tirrell, Charlestown, assignor to George F. Pinkham, Boston, Mass.

Claim.—1. The within-described mechanism for automatically breaking the circuit through the electro-magnet and causing the current to pass to the next apparatus, the said mechanism consisting essentially of the ratchet-wheel G operated by the electro-magnet, in combination with the shaft *c*, lever *g*, cylinder J with its insulated plates, and the springs *p q v b*′ *c*′ and wires connected therewith, operating substantially as set forth.

2. The ratchet-wheel G, with its pins 13 14 15-16, in combination with the lever *g* for operating the gas-valve *e*, substantially as described.

3. In an electrical apparatus for lighting and extinguishing gas the circuit-breaker N, operated by the armature of the electro-magnet and placed in close proximity thereto, substantially as and for the purpose set forth.

4. The combination of an auxiliary burner, S, with the main burner I and an electric spark-generating mechanism, substantially as and for the purpose described.

5. The arrangement of the primary coils P within the apparatus and in close proximity to the burner, substantially as and for the purpose set forth.

6. One or more springs, *g*′ *g*′, attached to the insulated post Q and connected with one pole of the battery, in combination with the pin *i*′ connected with the opposite pole of the battery for producing the sparks, substantially as described.

7. The rod *k*′, in combination with the valve *b*′, auxiliary burner S, pin *i*′, and one or more springs, *g*′ *g*′, operating substantially as described.

121,302, antedated November 17, 1871.—APPARATUS FOR LIGHTING AND EXTINGUISHING GAS BY ELECTRICITY.—Jacob P. Tirrell, Charlestown, assignor to George F. Pinkham, Boston, Mass.

Claim.—1. The two electro-magnets B C, operated alternately, in combination with a mechanism connected therewith for operating the gas-valve A, and a switch, K, or equivalent device, for breaking the electric current through either one of the electro-magnets and causing the current to pass to the next apparatus, substantially as described.

2. The electro-magnets B C and pawl T with its releasing device in combination with the rod O, pin n', one or more springs m' m', and the auxiliary burner S with its valve p', all operating substantially as and for the purpose set forth.

3. The combination of the electro-magnets B C, the rock-shaft D, and connecting-rod e, for operating the gas-valve A, substantially as described.

4. The combination of the lever k with its toothed segment 17, operated by the electro-magnets B C, the pinion l, shaft m, loose wheel p, brake r, friction-clutch q, and the fast wheel J with its pins for actuating the switch K, all constructed to operate as and for the purpose set forth.

121,303, antedated November 16, 1871.—CLOTHES-PIN.—Hiram J. Wattles, Rockford, Ill., assignor to Henry W. Price, same place.

Claim.—A spring-clamp constructed as described, and provided with an auxiliary leg, as and for the purpose set forth.

121,304.—BASKET-SPLINT.—Irving F. Wilcox, Streetsborough, Ohio.

Claim.—As an article of manufacture, a basket-splint produced in the manner specified.

121,305.—NAIL FOR SECURING WEATHER-TILING AND SIDING.—William E. Worthon, New York, N. Y.

Claim.—A weather-tiling fastening, composed of the bushing d and nail a', constructed in the manner and for the purpose described.

121,306. — APPARATUS FOR CONTROLLING THE VELOCITY OF STEAM-ENGINES. — William E. Worthen, New York, N. Y.

Claim.—The exhaust-pipe d, brake-valve e, and lever e, in combination with the steam-chest of a steam-engine, substantially in the manner and for the purpose described.

121,307.—WASHING-MACHINE.—James Abbot, Fitchburg, Mass.

Claim.—The combination of suds-box A having inclined sides a and concave perforated bottom b, the longitudinal trough d having faucet e, the dasher B made of rods attached between perforated bars g g, and the balance-handle i, all arranged in a washing-machine, as and for the purpose set forth.

121,308.—ELECTRIC GAS-LIGHTER.—Almon N. Allen and Rodney H. Dewey, Pittsfield, Mass.

Claim.—The combination of a galvanic battery with a lamp-post and with a flexible diaphragm which controls the admission of gas to the burner, and the mechanism for opening and closing the circuit of the galvanic battery, substantially in the manner herein shown and described.

121,309.—FASTENING FOR WINDOW-BLINDS.—Isaac Amos, Bel Air, Md.

Claim.—The pintle B, provided with the finger-hold b' and stud b, and combined with the leaves A A, having notches, as specified, whereby the pintle may be operated to unlock and swing the shutter, as set forth.

121,310.—BIN FOR WAREHOUSES.—Frederick W. Aufderheide, St. Louis, Mo.

Claim.—1. The hoppers constructed as described, in combination with conveyer E and discharge-spouts d D, when arranged to discharge grain, as and for the purpose set forth.

2. The grain-bins, consisting of hopper-boards a a' a² b b' C C' c c', in combination with joists B, conveyers E e', and discharge-spouts d D, substantially as and for the purpose set forth.

121,311.—COMPOUND FOR FILLING OR STUFFING SURFACES TO BE PAINTED OR VARNISHED.—Damon R. Averill, New Centreville, N. Y.

Claim.—The compound as herein specified, for the purpose set forth.

121,312. — SHOE-QUARTER, &c. — Samuel Babbitt, Brasil, Ind.

Claim.—The rear portion of a shoe crimped in one piece, and provided with stays, as described.

121,313. — STREET-WASHER. — George C. Bailey, Pittsburg, Pa.

Claim.—1. The pipe d', branching on one side into a water-discharge, d'', and on the other into a swivel-socket, e, when combined with a hydrant-valve below and a swivel-stem, e', above, arranged and operating substantially as described.

2. The discharge-pipe d', branching at its upper end into a water-discharge, d'', on one side, and a head or arm, e, on the other, in combination with a removable valve or cock-hydrant and stop-cock, all inclosed in a single case, f, substantially as described.

121,314. — CHEESE-CUTTING MACHINE.—John Gulick Baker, Philadelphia, Pa., assignor to "Enterprise Manufacturing Company of Pennsylvania."

Claim.—1. The combination of a handle, M, serving also as a pointer, stationary graduated index, and table H' with mechanism for imparting motion from the said handle to the table.

2. The combination of the table and its circular rack with the bevel-wheel J and its spiral rib, f, bevel-pinion K, and crank-shaft L.

3. The guided rack D and its blade E, in combination with the inclined disk H and its spiral rib or ribs.

4. The table H', the position of which may be determined by a pointer and index, substantially in the manner described, in combination with a blade, E, which derives its motion from a source independent of that which actuates the table.

121,315.—ROCK-DRILLING MACHINE.—Nathan Ball, East Palestine, and Joseph A. Stansbury, Salem, Ohio; said Stansbury assigns his right to said Ball.

Claim.—1. The pipe A, threaded exteriorly upon one end, and provided at its opposite end with the head B, the interiorly-threaded sleeve C fitted over the end of said pipe, and the bar D fitted within said pipe and sleeve and connected to or with the latter by means of the pin E, the whole forming the drill-standard, substantially as specified.

2. The shaft H, the plate I, the box K, the pipe O, and the holes o, in combination with the drill-head F and with the drill-stock L, substantially as and for the purpose shown.

3. The rack-bar P, pinion Q, shaft q, and crank R, when the several parts are constructed as described, and combined with the drill-stock L and drill-head F, substantially as and for the purpose set forth.

121,316. — MOTIVE POWER AND BALANCE CAR. — Joseph Rayna, San Francisco, Cal.

Claim.—1. The treadles M M hinged to the platform C, and the cranks e e and connecting-rods O, together with the wheels A and B, when the whole is constructed to operate substantially as described.

2. The device, consisting of the gear-wheels H and I, mounted independently, as shown, and the pinion K with its operating-lever J, constructed and operating substantially as herein described.

121,317.—COTTON-PRESS.—Charles J. Beasley, Petersburg, Va.

Claim.—1. The combination of the followers A B, arms C, fulcrum-rods E, and connecting-rods D, as described, for the purpose of causing the lower follower, as it descends, to raise the upper follower.

2. The combination of the followers A B, arms C, fulcrum-rods E, connecting-rods D, cords N, and winding-shaft H, as specified.

3. The lever J, provided with the slot *f* and rigid projection *b*, and arranged in relation to the ratchet I on the shaft H, as set forth.

121,318. — METALLIC COLUMN. — Charles Bender, Phœnixville, Pa.

Claim.—1. A metallic sectional column whose segments are united by means of ribs or bulbs, clamp or channel pieces, and rivets or bolts, combined, and operating to draw together the segments, substantially as herein shown and described.

2. In a column composed of metallic segments united together, the use of metallic dowels or pins placed in the seams between the segments and extending from the exterior to the interior of the columns, substantially as shown and described.

3. The mode herein described of putting up a metallic sectional column—that is to say, binding the segments together in their proper positions to form a column, with or without the aid of a core or form, then drilling and riveting together the segments while thus supported and held, and then removing the core or form, if one be used, substantially as set forth.

4. A metallic column composed of segments whose contiguous edges are drawn together and united by a clamp connection located inside the column, substantially as herein shown and set forth.

121,319.—PRUNING-SHEARS. — Georg Bergner, Washington, Mo.

Claim.—The box-plate C, provided with the raised curved rim *k* and hooked projection *o*, when pivoted on the screw *d* and operated upon by the spring *e* in the combination, substantially as shown and described.

121,320.—VALVE FOR DIRECT-ACTING ENGINES.—George F. Blake, Boston, Mass.

Claim.—1. The slide-valve C, constructed as described, and operating both the plunger and piston, thus performing the function usually performed by two valves, as fully set forth and shown.

2. The combination and arrangement of the slide-valve C, rod K, yoke H, ports *a b c d e*, plunger B, and flat pin G with the main piston of a direct-acting engine, all constructed and operating in the manner and for the purpose specified.

121,321.—PROCESS FOR RESTORING WRITING OR PRINTING ON CHARRED PAPER.—James V. Z. Blaney, Chicago, Ill.

Claim.—The use of the soluble compounds of silver and of copper for the restoration, temporarily or permanently, of writing or printing on paper which has been wholly or partially charred by fire, such charring having rendered such writing or printing wholly or partially illegible.

121,322, antedated November 11, 1871.—WASHING-MACHINE. — Jacob A. Boyce, Altoona, Pa.

Claim.—The rubber C, rollers B B, rod *c c*¹, spring D¹, cross-bar D, and uprights D², in combination with the lever I, pitman *g*, connecting-rod G A, and parts F E, all constructed and arranged to operate substantially as shown, and for the purpose set forth.

121,323. — WASHING-MACHINE. — David Bradley and Asa Doney, Saratoga Springs, N. Y.

Claim.—1. In a washing-machine, an endless belt of rubbing-rollers and a reciprocating rubber, when the former is adapted to impart motion to the clothes or to hold them in a fixed position, substantially as described, for the purpose specified.

2. In combination with the endless belt of rubbing-rollers, the holding device for the clothes, by which they are adapted for reversal upon the rollers to receive the action of the reciprocating rubber upon both sides, substantially as herein shown and described.

3. In combination with the endless belt of rollers and the reciprocating rubber, the corrugated inclined guide-board H, substantially as described, for the purpose specified.

4. In combination with the gear-wheels M and the shaft of the endless rubbing-apron, the toothed wheel P and pawl Q, whereby said apron is adapted to be thrown in and out of operation during the movements of the reciprocating rubber, substantially as described, for the purpose specified.

121,324.—ANIMAL-TRAP.—Milton D. Brown, Newburg, Tenn.

Claim.—A trap-door, H, and bait-hook F combined, as described, with a lever, E, which holds the bait with one arm and the trap-door with the other, as described.

121,325. — BUCKLE. — John Buche, Apple River, Ill.

Claim.—1. The body C of a breech-buckle, having hinged tongue E carrying the pin *g* applied crosswise thereto, as and for the purpose specified.

2. The ring D and the body C, having hinged tongue E with pin *g*, constructed and arranged as described, to form a new article of manufacture.

121,326.—TEA AND COFFEE POT.—Edwards M. Burchard, Washington, D. C.

Claim.—1. In combination with the inner end of the discharge-spout of a tea or coffee pot, the strainer C, provided with locking-springs D for the purpose of retaining the same in position, substantially as set forth.

2. As a new article of manufacture, a semi-spherical metal strainer, C, provided with locking-springs D, substantially as and for the purpose shown.

121,327.—STREET LANTERN.—Alois Burger, New York, N. Y.

Claim.—The circular rings B F, flanges D G, cross-bar C, globe O, and inside bolts H, in combination with the hinged cover L, spring-catch N, and projecting flange E, all arranged and operating substantially as and for the purpose set forth.

121,328.—SEWING-MACHINE ATTACHMENT FOR BUTTON-HOLES.—William Burnam, Pana, Ill.

Claim.—The arrangement, with presser-foot *a* and needles *m* and *n*, of the wheel *d*, bar *g*, spring *i*, carrier *j*, and hinged tooth *e*, as shown and described, whereby they are adapted to operate in connection with said needles, as set forth.

121,329.—STOVE-PIPE THIMBLE.—Cephas A. Buttles, Milwaukee, Wis.

Claim.—The stove-pipe thimble, herein described, consisting of an upper head, A, constructed with the parts *a e i*, as represented, in combination with the lower head B and the bands C D, substantially as and for the purposes specified.

121,330. — PAINT. — Walter J. Byrne, Russellville, Ky.

Claim.—Paint prepared by uniting dissolved In-

dia rubber with lime, or any of its salts, and oil, substantially as herein described.

121,331.—SHOVEL.—Robert Calhoun, Allegheny City, Pa., assignor to himself and James C. Lindsay, same place.

Claim.—1. The improved shovel, the blade of which is corrugated, as shown, and which is attached to the handle by straps d d', which straps taper from the blade upward, as at e, such parts e being riveted together above the blade, substantially as set forth.

2. The back strap d', V-shaped at its lower end, in combination with a V-shaped corrugation, a', the edges of the strap being turned into the hollow of the corrugation, substantially as described.

121,332.—EMBROIDERING ATTACHMENT FOR SEWING-MACHINES.—William Carpenter, Lawrence, Kan., assignor to himself and Samuel Pool, same place.

Claim.—1. The combination of the lever E operated by a suitable mechanism from the needle-bar, the stationary notched and grooved plate G, the pivoted and notched plates J and J' which carry the embroidery-threads, when constructed, arranged and operating substantially as herein set forth.

2. The combination of the plate B with the angular lever C, vertical arm D, spring d, lever E, stationary notched and grooved plate G, and a pivoted and notched plate, to which is connected movable arms which alternately act and feed the thread to the cloth, all connected to the extremity of the presser-foot bar and operated substantially as herein set forth.

121,333.—SWINGING RAILWAY FOR LOADING VESSELS.—James L. Cheeseman, Gardiner, Me., assignor of one-half his right to Henry C. Cheeseman, same place.

Claim.—1. The swinging railway in connection with the stationary railway and platform-car, constructed substantially as and for the purpose set forth.

2. The combination of platform A and its stationary rails C C, pivoted post P P and their arms E E, and hinged bars e e with car K and its hinged planks S S and hooked rod H, substantially in the manner and for the purpose set forth.

121,334.—UPRIGHT PIANO.—Charles F. Chickering, New York, N. Y.

Claim.—1. The upright piano-forte having its hammers arranged on a curve, substantially as and for the purpose herein shown and described.

2. The arched rails B, C, and D of the action-frame, arranged as described to permit the application of the hammers on a curved line, as specified.

3. The damper-frame having the arched rail F, substantially as and for the purpose herein shown and described.

121,335.—AUTOMATIC FLY-BRUSH.—William H. Chipley, Libertytown, Md.

Claim.—1. The combination of a clock-work, crank-wheel B, pitman C, arm D, upright rocking shaft or bar G with notches or offsets b b and one or more brush-holders, all substantially as and for the purposes herein set forth.

2. The brush-holder, consisting of the bar H with fork I, projection d, pawl f, spring e, and socket h, all constructed and arranged substantially as and for the purposes herein set forth.

3. The combination of the shaft k, handle m, arm n, and spring i, all constructed and arranged substantially as and for the purposes herein set forth.

121,336.—CAKE-STIRRER.—Sarah M. Clark, Beaver Dam, Wis.

Claim.—1. The vessel A, brackets B, screws C, bars D G E, set-screw F, gear-wheels K M, shaft H, arms N, and vertical plates O, all combined and arranged substantially as specified.

2. The bar D, having the slot J, in combination with the ears B B', also having slots to facilitate the attaching and detaching of the vessel, substantially as specified.

121,337.—WATCH-ESCAPEMENT.—Abel Coombs, Burlingame, Kan.

Claim.—1. The lever having the pallets d e arranged relatively to the pivot and the escape-wheel, and arranged with the roller and roller-pin on the balance-staff for increasing the leverage and stopping the train only once for the beats of the balance, all substantially as specified.

2. The arrangement of the lever, roller, roller-pin, banking-pin, and banking-notch, for operation substantially as specified.

121,338.—MEDICAL COMPOUND.—Jules Leon Augustin Creuse, Brooklyn, N. Y.

Claim.—A medical compound, formed by the combination of sesqui-iodide of iron and vegetable salts, substantially as herein described.

121,339.—KNIFE-POLISHER.—William H. Cummings, Oxford, Mass.

Claim.—A knife-polisher, consisting of the cylinder A, closed at each end by a perforated ring, B, with or without a facing, C, as herein shown and described.

121,340.—CHUCK FOR SCREW-CUTTING.—Charles Deane, New York, N. Y., assignor to The Archer & Pancoast Manufacturing Company, same place.

Claim.—The combination of the mortised body C, the pivoted jaws D D, the sliding collar E with its projections b b, the ring F, and yoke-lever G, the whole arranged for operation substantially as and for the purpose set forth.

121,341.—STOVE-PIPE ELBOW.—Ferdinand Dieckmann, Cincinnati, Ohio.

Claim.—A pipe-elbow, produced by means of a succession of flat crimps or seams, B, in the form and manner herein represented and described.

121,342.—CURTAIN-FIXTURE.—Charles Eaton, New York, N. Y.

Claim.—The combination of the spring-roller A, strip B, brackets C C, stop-pulleys E E, and cord D, when arranged as described, and for the purposes set forth.

121,343.—MACHINE FOR BLACKING BOOTS AND SHOES.—Nathan Eisenmann, New York, N. Y.

Claim.—1. The combination of the brushes O P Q, shaft P, pedestal N, and wires L M with each other, with the box A, and with a clock-work, B C D E G H I J K, or equivalent train of gearing, substantially as herein shown and described, and for the purpose set forth, whether the said clock-work be driven by hand or spring-power.

2. The combination of the swiveled socket S with the crank R to adapt it to receive a long handle, T, substantially as herein shown and described, and for the purpose set forth.

121,344.—FOLDING COMMODE.—Roscoe G. Elder, New York, N. Y.

Claim.—The commode-seat A, combined with the hinged cover B, the hinged leg-frames G H, and hinged curtain pieces I I, substantially as described.

121,345.—LIBRARY-STEP AND HOLDER FOR BLACKING IMPLEMENTS COMBINED.—Roscoe G. Elder, New York, N. Y.

Claim.—1. The hinged cover C of a library-step provided with a rigid foot-rest, D, arranged substantially as and for the purpose set forth.

2. The hollow step B of a library, having a hinged cover, C, and hinged back I, constructed and arranged substantially as and for the purpose set forth.

3. In combination with the hollow steps of a library the hinged cover C and back I, the former carrying the foot-rest D and the latter the box-holder H, all arranged substantially as and for the purpose set forth.

121,346.—CANAL-BOAT.—James English, Syracuse, N. Y., assignor to himself and Jonathan M. Roberts, Burlington, N. J.

Claim.—1. A tug-boat, having an open space, B, provided with an inclined surface, a, located below the water-line and in rear of the propeller for the purpose of directing the water displaced by the propeller in a downward direction, in order that its force may be expended without great surface agitation, as described.

2. The tug-boat described, provided with the compartments A A, hull C, deck E with inclined portion a, open space B tapering slightly outward from the bow to the stern, and the propeller, all combined and arranged as described.

121,347.—BULLETIN-BOARD.—Andrew M. Ernsberger, Danville, Ill.

Claim.—The frame A, holding the movable boards C, grooved cleats D, hinged plates E, and latches F, or equivalents, substantially as and for the purpose set forth.

121,348.—NUT-LOCKING DEVICE.—James L. Estill, Salem, Ohio, assignor to himself and Daniel Koll, same place.

Claim.—1. A malleable sheet-metal slip having one end clamped by, or by and between, the fish-plate and the rail, and the other end between the nuts to be locked, as and for the purpose described.

2. The malleable-metal lock-plate intervened between the rail and the fish-plate to cushion the latter and form a space between the rail and said fish-plate, as described.

3. The tough malleable-metal lock-plate a, held in position to lock and unlock the nuts by means of the fish-plate, as described.

4. The lip c of the malleable-metal lock-plate for holding its nut-locking end away from the fish-plate, as and for the purpose described.

121,349.—CLOTHES-DRIER.—Jabez B. Fellows, Augusta, Mo.

Claim.—The collar G, constructed with the lug G', and holding the plate g and adjusting-screw h, when applied to a clothes-drier having movable arms E, in the manner and for the purpose set forth.

121,350.—TRACE-COUPLING.—James R. Finley, Delphi, Ind.

Claim.—A trace-coupling, consisting of the ferrule A, slotted joint B, and fastener D, of the form shown, when constructed and arranged together for operation, as described.

121,351.—MIXER AND HEATER FOR PREPARING CONCRETE FOR PAVEMENTS, &c.—Henry Franke, Brooklyn, N. Y.

Claim.—1. The mixing-drum A having mounted on its ends the wheels B B, and being connected to a draft-pole or push-handle, substantially as and for the purpose described.

2. The heating-jacket E, in combination with the mixing-drum A, wheels B B, and pole or handle D, substantially as set forth.

3. The furnace F suspended from one or more springs, in combination with the jacket E, drum A, wheels B B, and pole or handle D, substantially as set forth.

121,352.—METHOD OF MAKING HARNESS-PADS.—Conrad Gabr, Newark, N. J.

Claim.—1. The dies A B E combined, applied, and relatively constructed, as described, so that the leather shall be successively shaped and stuffed in the same female die and by the mode of operation above set forth.

2. The two dies A B, combined, constructed, and applied, as described, to form on the leather a flange, a, to be riveted, as well as the cavity to be stuffed.

121,353.—CORNSTALK-CUTTER.—Thomas A. Galt and George S. Tracy, Sterling, Ill.

Claim.—In a cornstalk-cutter having the cutting-reels C and the transverse beams or stop-bars z, the bent levers g pivoted about midway between the stop-bars z, and bearing at the ends of their lower or curved arms the carrying-wheels G, substantially as specified.

121,354.—DEVICE FOR CONVERTING RECIPROCATING INTO ROTARY MOTION.—George L. Gavett, Sandstone, Mich.

Claim.—The rack-frame A, racks a a', studs a², spring E, wheel F, and slots D, when arranged, constructed, and operating together, as described.

121,355.—OSCILLATING-ENGINE.—Thomas W. Godwin, Norfolk, Va.

Claim.—1. The valve B and oscillating seat, herein described, in combination with the steam-chest D, substantially as set forth.

2. The oscillating valve-seat and valve, constructed as described and shown, in combination with the steam-chests D and H with intervening steam-pipes E K K'.

3. A stationary steam-valve with projecting hollow arms at irregular distances, for the purpose of conducting steam to the piston-cylinder or exhausting it therefrom, substantially as described.

4. The arrangement of the hollow valve-stem B', hollow trunnions A¹ A², steam-chest D, and valve B having hollow arms, all constructed and operating substantially as shown and set forth.

121,356.—BINDER FOR SEWING-MACHINES.—Bernard Goldsmith, Newark, N. J., assignor to Jenny Goldsmith, same place.

Claim.—As an article of manufacture, the binder herein described and shown, provided with slots e and projection g, as and for the purpose set forth.

121,357.—CORN-PLANTER.—Henry Gortner, Nashport, Ohio.

Claim.—1. The combination of the frame F F I J G G with the frame A A, tongue C, and hook j, adapted to receive either the plows or planter, substantially as described, and for the purpose set forth.

2. The combination of the frame F F with the lever-fulcrums G G, and levers [illegible]D, and supports E E, and the rollers a a, and pivot f, substantially as set forth and described.

121,358.—STEAM-VALVE.—William F. Gould, Davenport, Iowa.

Claim.—The combination of the valve, roller, piston, and intermediate connecting mechanism with the cross-bar E, screw-stems G, and check-nuts f, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

121,359.—LOOM PICKING MECHANISM.—Elijah D. Gove, Holyoke, Mass.

Claim.—The case C, block F, rocker B, and bed A, all combined, constructed, and arranged substantially as and for the purpose described.

121,360.—SOLDERING APPARATUS.—John Gracie, Pittsburg, Pa.

Claim.—1. A covered melting-pan, with a dip-

ping-trough arranged in the cover, substantially as and for the purposes set forth.

2. In connection with the covering devices of a melting-pan an adjustable dipping-trough, *e*, arranged therein, substantially as and for the uses described.

3. A dipping-trough, *e*, arranged in connection with a floating cover or other equivalent device, whereby the trough *e* shall always contain a uniform depth of solder, substantially as described.

4. The combination of trough *e*, cover-plate *d*, pipes *s*, and nuts *u*, substantially as above set forth.

5. The cover *c*, carrying hollow posts *c'*, when combined with an adjustable dipping-trough, *e*, by adjustable connections *s*, substantially as and for the purposes set forth.

121,361.—BASE-BURNING STOVE AND FURNACE.—Clark B. Gregory, Beverly, N. J.

Claim.—1. A furnace in which air passes through a mass of ignited fuel contained in a combustion-chamber at the base of a fuel-magazine, and in which the products of combustion are met at or near the surface of the ignited fuel with jets or volumes of air which pass with the said products of combustion to a contracted opening or openings at the top of the combustion-chamber, all substantially as set forth.

2. The slabs M and M', situated at the top of the combustion-chamber, one or both of the said slabs being adjustable for the purpose specified.

3. The arrangement, substantially as described, of the combustion-chamber J with its contracted opening, the magazine F, tile E, and grate H.

4. The combination of a reservoir, F, and a chamber formed by the front plate E and side plates A A, when the said chamber is provided with a falling grate hinged at the rear, and so arranged as to support a body of the fuel between the plate E and the reservoir, as specified.

5. The magazine, separated into two compartments by a partition, *b*, substantially as described.

6. The combination of the hinged grate H with the supplementary sliding grate I or its equivalent, operating as set forth.

121,362.—CARRIAGE-SEAT JOINT.—John A. Hanna, Bel Air, Md.

Claim.—1. The improved carriage-seat joint formed of the movable part A having the tongue *a*, and the fixed part B provided with recess *c* for reception of the tongue, both said parts having abutting shoulders on the sides and back, as shown and described, for the purpose specified.

2. The rubber tube D having the projecting flap E, applied to the seat-joint of a vehicle, as and for the purpose described.

121,363.—STOVE-GRATE.—Thomas Hartley, Bridgeport, Ohio.

Claim.—1. In a fire-grate the stationary part B *b*, in combination with the movable part B', substantially as shown and described.

2. The sliding rim E, in combination with the fluted or scalloped rim F, when arranged with reference to a fire-grate, substantially as herein shown and described, and for the purposes specified.

3. The combination of the sliding rim E and folding door G, as shown and described.

121,364.—STEAM-ENGINE.—Arden A. Heath, Mercer, Pa.

Claim.—1. The annular steam-chest, annular valves, and the ports H, arranged substantially as specified.

2. The arrangement, with the annular space D, of the annular exhaust-spaces F and passages G, substantially as specified.

121,365.—COTTON-GIN.—William Lindsay Henderson, Comrawatte, The Berars, Western India.

Claim.—In cotton-gins of the class above described, a reciprocating knife, C, having alternate diagonal or oblique ribs and openings, in combination with a revolving-roller and fixed knife, and operative substantially in the manner and for the purposes set forth.

121,366.—ATTACHMENT FOR SEWING-MACHINES.—Albert H. Hewitt, Batavia, N. Y.

Claim.—The slide-plate D having tongue *e* adapted to bear against the presser-foot, the longer tongue *f* curved on its lower side and projecting as far as the side of the hemmer, and the longest tongue *g* curved on its upper surface, in a higher plane than the others, and receiving the trimming between it and the other tongue, the thus-constructed plates and tongues being combined with a cloth-gauge, A B, having the holes *a b c*, as and for the purpose specified.

121,367.—GAITER-PATTERN.—Samuel Hodgins, St. Louis, Mo., assignor to himself and Ferdinand Meyer.

Claim.—The herein-described gaiter-pattern, having the instep part cut with the openings and slits *a a'*, substantially as and for the purpose set forth.

121,368.—TELEGRAPH-INSULATOR.—Minard Y. Holley, Washington, D. C.

Claim.—A telegraph-insulator having the triangular form, as and for the purpose set forth.

121,369.—SEWING-MACHINE.—John O. Hough, De Witt county, Ill.

Claim.—The frames A A and B B, constructed as described, drive-wheel D, pinion H, crank-shaft G, and saw J, when arranged to operate with the carriage O, rack-bars Q Q, pinions S S, crank T, pulleys U U U U, dog V, and lever L, substantially as described, and for the purpose set forth.

121,370.—WASH-BOILER.—Maria C. Hubbard, Troy, N. Y.

Claim.—The frame B and rods D E, combined, as described, with boiler A F, as and for the purpose set forth.

121,371.—CLOTHES-DRIER AND AWNING COMBINED.—Charles E. Hyde, Oswego, N. Y.

Claim.—The standards *a a*, cross-bars *b b*, cords *c c* and *e e*, awning *f*, cords *g g*, and loops *i i*, arranged, as shown and described, to form a combined clothes-drier and awning, as specified.

121,372.—PIPE-WRENCH.—Henry A. Hyle, Shamburg, Pa.

Claim.—The pipe-wrench herein described, consisting of the handle A, serrated jaws H C, set-screw G, and spring F, when the serrated surfaces of the jaws are arranged so as to grasp the pipe on two diametrically-opposite sides, all as shown and described.

121,373.—SCROLL-SAW GUIDE.—Samuel Ide, Medina, N. Y.

Claim.—1. The two independent guide-bars B B, grooved guide-plate L arranged in a socket of the arm A, and provided with the clamp and temper-screws K and F, as shown and described.

2. The combination of the oil-cups G, plates H, guide L, and clamp-screw K with the saw and the arm A, substantially as specified.

121,374.—IRON GIRDER.—Peter H. Jackson, New York, N. Y.

Claim.—1. The within-described girder, formed of separate castings A^1 A^2, with a tie or ties, B, constructed and combined substantially as herein specified.

2. The separate castings A^1 A^2, in combination with each other and the tie B, with soft metal confined between the abutting surfaces and serving therewith, as specified.

3. In an iron girder having a tie-rod, B, to receive the tensile strain, and two separate castings, A^1 A^2, to receive the compressive strain, the partially-cylindrical form a^2 of one abutting surface, and the corresponding concave form a^1 of the opposite abutting surface, adapted to yield downward and relieve one casting from most of the transverse strain while keeping each other firmly abutted and supporting the incumbent masonry, as specified.

121,375, antedated November 13, 1871.—COMPOUND FOR COLORING LEATHER.—Gottfried Jäger, Indianapolis, Ind.

Claim.—1. The application of the solution of oxalic acid and salt of tin to the leather, and in the proportion and the manner and way as herein set forth.

2. The application of the solution of potash for the purpose of coloring, as herein set forth.

3. The combination of oxalic acid, salt of tin, and potash with nutgall and sulphate of iron, substantially as and for the purpose specified.

121,376.—STEAM AND WATER INJECTOR.—Samuel S. Jamison, Jr., Saltsburg, Pa.

Claim.—The double conical piece *a*, in combination with an injector, as specified.

121,377.—THRASHING-MACHINE.—Frederick P. Jaquith, Hoosick Falls, N. Y.

Claim.—1. In combination with the thrashing-cylinder and its shaft, a series of arms or teeth loosely placed on said shaft, and having spring-joints in them, as at *a*, and passing through slots in the shell of the cylinder, as and for the purpose described and represented.

2. In combination with a thrashing-cylinder and its spring-arms and beaters, as described, the driving mechanism consisting of the shafts, pulleys, and belts, substantially as described, and for the purpose set forth.

121,378, antedated November 18, 1871.—WAGON.—Jesse Jenkins, Sligo, Md., assignor of one-third his right to Abner C. P. Shoemaker, Brightwood, D. C.

Claim.—The within-described vehicle, consisting of the box D, springs E E attached under the box, and provided with loops at each end, which encircle the front and rear bounds C C', rear spring G, and axle A A', connected by the perches B B, all substantially as set forth.

121,379.—POTATO-DIGGER.—Moses Johnson, Three Rivers, Mich.

Claim.—1. The separator B, composed of the side pieces *b* united by angle-irons *b' b'*, and the separable point B' secured by means of plates *d*, said separator having its sides tapering and without lateral curve, and employed in connection with a fingered wheel, substantially as specified.

2. The wheel C, constructed with a circular imperforate dividing-wall extending from the periphery to or nearly to the hub or center, and provided with the bent gathering-fingers, substantially as specified.

121,380.—MONUMENT.—Francis Marin Jones, Independence, Miss.

Claim.—The tombstone or monument constructed of perforated wood A, covered with cement B, as and for the purpose set forth.

121,381.—CULTIVATOR.—W. Thomas Jordan, Newnan, Ga.

Claim.—The plowshare E and slotted foot F having the grades *n n*, when forming a cycloidal curve, in combination with the adjustable arms or braces G G and curved rod D with its setting and adjusting mechanism, consisting of the movable semi-collars K L, bolt *o*, perforated plate I, hand or clamp screw *e*, and clamp-plate *h*, constructed to operate substantially as set forth.

121,382, antedated November 17, 1871.—PLOW.—Horace M. Keith, Commerce, Mich.

Claim.—As an improvement upon my former patent dated October 18, 1870, the standard B with vertically-slotted arm *b*, in combination with the concave edger A having elongated bolt-holes *a a*, and washer *c*, substantially as and for the purpose set forth.

121,383.—NICKEL-PLATING.—Nathaniel Shepard Keith, New York, N. Y.

Claim.—Plating solutions made by the addition of the acid or neutral salts, formed by the union of organic acids with a base or bases, to the solutions of the salts of nickel, substantially as specified.

121,384.—CORN-PICKING AND HUSKING-MACHINE.—Silas R. Kenyon, Greenville, R. I., assignor to himself and William D. Vernam, Elizabeth, N. J.

Claim.—1. The adjustable cross-bar or plate *c* combined with the picker-cylinder *b* and roller *c* in the manner and for the purposes set forth.

2. The roller *c*, placed, as shown, toward the feeding side of the machine above the picker-cylinder *b*, and in combination with the same, so as to break the stems of the ears, as and for the purposes set forth.

3. The plate *f*, combined with the roller *c* and picker-cylinder *b*, as and for the purposes set forth.

4. The clearing-bar *l*, applied to and combined with the picker-cylinder *b*, as and for the purposes specified.

5. The shield *n*, placed over the journal-boxes of the rollers *o o p p* of the corn-husking-machine, as and for the purposes specified.

6. The journal-boxes 5 of the husking-rollers, made with the projecting lips 4, and provided with the clamping-screws and adjusting-screws 8 8, for the purposes specified, the parts being arranged as set forth.

7. The adjustable cover *r*, provided with the flaring ends for the reception of the ears, and connected by the slotted ears *s* and screws, so as to sustain the same in the proper position relatively to the husking-rollers, as set forth.

121,385.—FURNACE FOR SMELTING LEAD AND OTHER ORES.—Winfield Scott Keys and Albert Arents, Eureka, Nev.

Claim.—The method of tapping or withdrawing molten lead or other metals from a smelting-furnace by means of the basin B and tube or connection C, in combination with the furnace, substantially as shown and described.

121,386, antedated November 18, 1871.—HOISTING APPARATUS.—Theodore Krausch, New York, N. Y.

Claim.—1. The clamp for a hoisting-machine, consisting essentially of the pivoted arms *a a'*, the swiveled jaws C carrying friction-rollers *g* in the arms *e*, the links *f f*, and the clamping-screw *k*, substantially as described, for the purpose specified.

2. In combination with the clamp A and swivel-jaws C, the elastic pads *d*, substantially as described, for the purpose specified.

121,387, antedated November 13, 1871.—MALT-HOUSE.—Theodore Krausch, New York, N. Y.

Claim.—1. In a malt-house, the arrangement of an air-trunk, I, steam-nozzle N, and pipes J K L, substantially as described.

2. The air-channels *f* and air-space *d*, surrounding the ice-chamber B, in combination with malt-bins C, air-pipes J K L, air-trunk I, and steam-nozzle N, substantially as described.

3. The air-trough *l* and water-pan *o*, in combination with the air-channels *f*, malt-bins C, pipes J K L, air-trunk I, and steam-nozzle N, substantially as set forth.

4. The sprinkling apparatus, composed of a water reservoir, D, fan-blower E, air-chamber F, and hose H, substantially as set forth.

5. The steam-pipe P, in combination with the sprinkling apparatus, constructed as described.

6. The steam-pipes P Q, in combination with malt-bins C, air-pipes J K L, air-trunk I, and steam-nozzle N, substantially as set forth.

121,388. — Engine and Pump. — Oscar P. Lewis, Cincinnati, Ohio.

Claim. — 1. The compound engine and pump, composed substantially of the cylinder A A′ with the three pistons $p\ p^1\ p^2$ and the heads A h arranged to receive and guide the rods $r\ r^1\ r^2$, as herein set forth.

2. The three pistons $p\ p^1\ p^2$, cylinder A A′, heads A h with the stuffing-boxes $s\ s^1\ s^2$, when constructed and combined substantially as herein set forth.

3. The combination and arrangement of the pistons $p\ p^1\ p^2$, rods $r\ r^1\ r^2$, cross-heads $i\ i^1$, pitmen $m\ m^1\ m^2$, and cranks $k\ k\ k\ k\ k\ k$, substantially as described.

4. The three pistons $p\ p^1\ p^2$ with metal exteriors and wooden or other linings, arranged within the cylinder A A′, substantially as and for the purposes set forth.

5. The arrangement of the passages $c\ c\ q\ q$ above and beneath the cylinder A A′, in combination with suitable engine-pistons, substantially as herein set forth.

6. The combination of the piston-chamber A A′ with the condensing-chamber C^2, substantially as and for the purpose herein described.

121,389.—Machine for Rolling Leather. Newton Linsley, Lena, Ill., assignor to himself and William Clement.

Claim.—In combination with the concave roller D, journaled within the upper extremities of the standards A′, the convex roller D′ provided with sliding journals within the slots of the standards, and moved up and down by means of the pins n, levers I, shaft m, rod k, treadle G, and springs h, all arranged upon the frame A B, substantially as and for the purposes herein set forth.

121,390.—Motor for Tremolos of Musical Instruments.—John R. Lomas, New Haven, Conn., assignor to R. Shoninger, same place.

Claim.—A rotary tremolo having cranked journals b d, and a wind-instrument, C, combined, with connecting mechanism e f, as and for the purpose specified.

121,391.—Infant's Head-Dress. — Louise E. Love, New York, N. Y.

Claim.—An infant's cap of crotcheted silk, as a new article of manufacture.

121,392. — Wind-Wheel. — Giles Mabie, Dixon, Ill.

Claim.—1. The bisected metallic frame C c d e f g which perfectly and efficiently embraces and supports the main wind-wheel shaft i and the several parts of the machine that are combined therewith, substantially as herein set forth.

2. The combination of the wheel-shaft i with the sectional wind-wheel supporting-frame, substantially as and for the purpose herein set forth.

3. The combination of the pitman r with the wheel-shaft i by means of the sectional head k and the crank-pin s, substantially as and for the purpose herein set forth.

121,393.—Whiffletree-Clip. — William John McMaster, Dixmont, Pa.

Claim.—An improved whiffletree-clip having a rib, B, formed upon the outer surface and a groove, C, upon the inner surface of its body A, and a wing or flange, D, upon one or both its side edges, substantially as herein shown and described, and for the purpose set forth.

121,394.—Lamp-Burner. — Rufus S. Merrill, Boston, Mass.

Claim.—The combination, substantially as shown and set forth, with a screw-threaded base and two wick-tubes having a draught-passage between them, of a single-slotted deflector, a chimney-rest and air-distributer e, and a guide-tube removable from the wick-tubes, and constructed substantially as described to allow air to pass through the air-distributer into and up through the passage or space between the wick-tubes, for the purpose stated.

121,395.—Sectional Steam-Boiler.—John H. Mills, Boston, Mass.

Claim.—1. A cast-iron steam-generator composed of one homogeneous casting, consisting of the pipes $a\ b\ c\ d\ e\ f\ g$, arranged as described, and the elevated grate-surface q erected on the lower water-pipe b, substantially as shown and set forth.

2. A steam-generator composed of sections formed each of a single casting, with a fire-space, a grate-bar erected on and elevated above the lower water-pipe, and flanges to form air-pockets, so that when said sections are placed side by side together the furnace or fire-box, elevated grate surface, and air-pockets will be formed without further fitting, substantially as herein shown and described.

3. The air-pockets n with orifices p formed in the side walls and between the sections of the generator, substantially as and for the purpose set forth.

4. The steam-generator provided with passages arranged, as described, so that the products of combustion shall first divide and pass laterally from the furnace into and through combustion-chambers formed on each side thereof, thence upward in rear of the bridge-wall and over the furnace, effecting one or more traverses of the entire length of the generator before escaping into the chimney, substantially as set forth.

121,396.—Sawing-Machine. — Joseph K. Milnor, Baltimore, Md.

Claim.—The combination and arrangement of the wagon-box A with its axles and wheels, pulleys C D d d upon their respective shafts, saw e, table E, and standards G G, all substantially as shown and described, and for the purposes herein set forth.

121,397. — Composition for Pavements, &c.—George H. Moore, Norwich, Conn.

Claim.—1. Combining and intermixing crushed or powdered steatite with the various other ingredients employed for molding or forming blocks, tiles, pipes figures, &c.

2. Combining and intermixing powdered steatite with coloring material, as and for the purpose set forth.

3. The combining of steatite cement and sand with or without gravel and coloring material, as and for the purpose set forth.

121,398. — Steam-Boiler Furnace for Draught-Regulators. — Thomas H. Moore, Alexandria, Va.

Claim.—1. The valves e, adapted to open and close automatically under the action of the exhaust, and operating to regulate the draught and prevent the escape of gas from the furnace, substantially as described.

2. A partition, G, situated between the front flue-sheet and the exhaust pipes, and provided with openings covered by valves adapted to open and close automatically under the action of the exhaust, substantially as herein described, for the purpose specified.

3. In combination with openings and valves b e in the partition G, an opening, f, in the upper part of said partition, and provided with a door, g, arranged and operating substantially as described, for the purpose specified.

4. A deflector, h, constructed and arranged substantially as shown and described with relation to the partition G, its openings and valves, and the flue-sheet and flues, for the purposes set forth.

121,399, antedated November 13, 1871.—Pepper and Spice Box.—Bernard Morahan, Brooklyn, N. Y.

Claim.—A series of cutting-flanges attached to a knob by a rod through the perforated cover of a pepper-box, when the rod is left sufficiently long and loose in the cover that the shaking of the pepper-box vertically will produce an alternate blow of the cutters and knob upon the perforated top of a pepper box, substantially as and for the purpose set forth.

121,400. — Process of Manufacturing Shoe-Bindings. — Charles E. Morrill, Deering, Me.

Claim.—The improved process of manufacturing leather shoe-bindings, consisting essentially in cutting the skins of hides into strips, coloring the latter in the center, uniting them at the ends, and finally separating them through the center of the colored portion, substantially as described.

121,401.—Watch-Escapement. — Don J. Mozart, New York, N. Y.

Claim.—1. The arbor D, having the pronge b c and intervening cavities d e, to be moved by constant contact with the escapement-wheel and aid in impelling the staff, as set forth.

2. The staff C provided with recessed faces r p engaging with revolving detent arms, and the shoulder g having end surface h, combined with the escapement-wheel A, as and for the purpose set forth.

3. The revolving arms of arbor D having ruby-pins j k on the ends thereof, combined, as described, with projection f of the staff C, for the purpose set forth.

4. The detent arms affixed to the arbor D, which carries the second-hand to abut against the staff and produce quarter-seconds, as set forth.

5. An escapement, composed of the wheel A, pronged arbor D, which carries the ruby-pins j k, and the detents, and of the staff C, having the stops f and g, as set forth, all operating as specified.

6. The staff C having notches p r of different heights and angles, combined with two pairs of revolving radial arms of the arbor D, as and for the purpose described.

121,402.—Apparatus for the Manufacture of Ice.—A. Mühl, San Antonio, Tex.

Claim.—1. In machinery for making ice or for refrigerating substances, organized and operating substantially as described, a worm or liquefactor, for condensing the vapor received from the pump, composed of pipes or conduits of gradually-decreasing diameter or section, substantially as and for the purpose set forth.

2. The said liquefactor or worm constructed as herein described, in combination with the reservoir, freezing vessel or vessels, and pump or pumps, and their connections, substantially as shown and set forth.

121,403.—Wagon.—William Arthur Nichols, Zionsville, Ind.

Claim.—1. The wagon-body, constructed with convex plates D having flanges d, together with blocks F having dovetailed recesses for holding the springs F′, substantially as specified.

2. The hinged coupling-brace G connecting the wagon-body A with the India-rubber springs F′ resting on but not attached to the bolsters B, substantially as described.

3. The hinged wagon-coupling G notched at its forward end, as described, in combination with the plate g having the slotted eye g^2, as and for the purpose specified.

121,404. — Clothes-Drier. — Richard L. Normando, Higginsville, N. Y.

Claim.—The within described adjustable and portable clothes-bars, consisting of the hooked rod A, stationary collars $a^1\ a^2\ a^3$, adjustable collar a^4, movable collars $b^1\ b^2\ b^3$, arms $d^1\ d^2\ d^3$, bars C C, braces D D, and notched ring E, or their equivalents, all constructed and arranged substantially as and for the purposes herein set forth.

121,405. — Belt-Fastener. — Marcellus Olmstead, Alum Creek, Tex.

Claim.—The two frames A A B B, fastened together by a hinge-joint, as specified, and operating in the manner and for the purpose set forth.

121,406.—Bench-Plane.—Sidney W. Palmer and Elliot G. Storke, Auburn, N. Y., assignors to William J. Moses, same place.

Claim.—1. In metallic bench or other planes a pivoted cap, provided upon its lower side with a central longitudinal rib, substantially as and for the purpose specified.

2. The cap I, pivoted loosely at or near its transverse center, substantially as and for the purpose shown.

3. The arrangement of the lugs or bearings H upon the stock A, substantially as shown, and for the purpose described.

4. The stock A, provided with the bearings H and f, arranged substantially as and for the purpose set forth.

5. In combination with the bearings H and f and a suitable bit, the cap I, pivoted at or near its transverse center, substantially as and for the purposes specified.

121,407.—Capsuling Bottles.—James Paterson, Edinburgh, North Britain, assignor to William Betts.

Claim.—1. The within-described process of applying metallic capsules to bottles—that is, by the pressure of a fluid acting upon an elastic diaphragm so constructed as to inclose the neck of the bottle and its metallic covering.

2. The combination of the cylinder a, ram or plunger d, chamber b, and elastic chamber e, arranged and operating substantially as and for the purpose hereinbefore described and illustrated by the drawing.

121,408.—Baling-Press. — William H. H. Peairs, Olathe, Kan.

Claim.—1. The fingers h h, in combination with the follower H, as and for the purpose herein set forth.

2. The levers E F, in combination with the ratchet-wheels E E, pulley G, rope or chain g, and followers H H′, arranged substantially in the manner and for the purpose set forth.

3. The combination of the levers F F with the pulleys k l l, drums L L, pulley G, rope g, and followers H H′, and press-box B, all constructed and arranged substantially as and for the purpose set forth.

121,409.—Wagon-Body.—James D. Pettit, Rochester, Ind.

Claim.—1. The combination of the bottom B and side pieces A A with the hooked iron standards I I fastened to the inner surface of the side pieces near the ends of the wagon and the stout curved standards N N fastened to the outer surface of the side pieces at the middle of the wagon, said middle standards N N extending down through the projecting beam M, and being provided with an eye below the beam so as to be fastened by keys a a beneath it, substantially as described, for the purposes specified.

2. The staples s s, when applied to the wooden cross-bars C C′, and employed in combination with

the hooked standards I I at the ends of the wagon, in the manner and for the purpose described.

3. The end gates and dovetail sockets, in combination with the bent rocking-rod R, the central loop of which forms a handle, while the ends project through the sockets W W into the dovetail tongue of the gates to hold them in place, substantially as described, for the purpose specified.

121,410.—DECORATING IN GILT UPON JAPANNED-METAL SURFACES.—Horace Petrie, Chicago, Ill.

Claim.—1. The process of lettering, printing, and etching upon gilded japanned-metal surfaces, substantially as specified.

2. The process of matching the gilding upon japanned surfaces, substantially as described, for the purpose specified.

121,411.—MODE OF BALANCING PULLEYS.—Ebenezer W. Phelps, Elizabeth, N. J.

Claim.—The flange C provided with holes or apertures *c*, more or less in number, in combination with a pulley or other revolving body, when used substantially as and for the purposes herein shown and described.

121,412.—FRUIT-BOX.—Samuel W. Phelps, Sandusky, Ohio.

Claim.—The wire loop and fastening A A and C C, constructed as shown, for the purpose described.

121,413.—COAL-CHUTE.—William E. Phelps, Elmwood, Ill.

Claim.—The aprons E and G, constructed as described, in combination with the box B and door C, arranged to operate substantially as and for the purpose set forth.

121,414.—HEMP-DRAWING MACHINE.—George W. Pittman, Dartmouth, Canada.

Claim.—The strick-cylinder with the teeth in one or more groups or sections, in combination with a cylinder or belt of teeth from which the strick of fiber is taken, and with a cylinder or belt upon which the strick is received, substantially as and for the purposes set forth.

121,415.—REVERSIBLE FLOCK-CUTTING MACHINE.—James Pitts, Millville, Mass., Robert Aldrich, Slatersville, R. I., and Edwin T. Marble, Worcester, Mass.

Claim.—1. In combination with a cylinder for cutting flock, the cover or cap *x*, with openings *a a* and slides *c c*, (or their equivalents,) by means of which the stock may be fed to either end or part of the cylinder, substantially as and for the purposes described.

2. The discharge-orifices H H, arranged with respect to the openings *a a* in the cap *x*, and the hopper F, as and for the purpose specified.

3. The combination of the cam-groove R, shaft S, lever U having fulcrum W, cylinder L, and bolt T, all constructed, arranged, and operating as shown and described, for the purpose specified.

4. In combination with the bed B', the adjusting-screw D and stop-screw E, as and for the purposes shown and described.

5. The lags *g* and set-screws A, in combination with the blades *f*, as and for the purposes described.

6. The clamp-screws J and plate K, in combination with the lags *g* and blades *f*, as described.

7. The adjustable plates O and springs P, in combination with blades *a* of a flock-cutting cylinder, substantially as and for the purposes described.

8. In combination with a flock-cutting cylinder, the reversible hopper F and the cap *x*, when the same are constructed and arranged substantially as and for the purposes described.

121,416.—APPARATUS FOR FEEDING WHITE LEAD, &C., FROM THE MIXING-TUB TO THE MILLSTONES.—James B. Pollock, Port Richmond, N. Y.

Claim.—1. The combination of a feeding-tube, B, grooved cylinder or plug C, case B', and scraper G, substantially as specified.

2. The combination, with the scraper G, of an adjustable stop device for varying the dip of the said scraper in the groove of the cylinder, substantially as specified.

3. The plug C, provided with a groove, T, in combination with the scraper H, substantially as specified.

4. The combination, with the above-described feeder, of the revolving disk J and scraper H, substantially as specified.

121,417.—WOOD-LATHE.—Albert Price and Henry Arnd, St. Louis, Mo.

Claim.—The combination of feed-carriage B, having gearing devices constructed as described, with a series of adjustable frames, E E', each pivoted by a screw-bolt, J, provided with an adjustable slotted bridge-tree, F, and supporting an adjustable pulley, arbor, and cutter, the whole being constructed and arranged in the manner and for the purpose set forth.

121,418.—GAUGE FOR STAVE-JOINTERS.—Washburn Race and Sherman D. Hooper, Lockport, N. Y.

Claim.—The combination of the cross-piece B, part C, and arm F, and accompanying devices, substantially as and for the purpose hereinbefore set forth.

121,419.—SWITCH-STAND.—Ezekiel F. Reynolds, St. Joseph, Mo.

Claim.—The combination of the lever A, pivoted upon the tie B, and the quadrant D D', the several parts being constructed, arranged, and operated substantially as described and shown.

121,420.—MACHINE FOR GRADUATING SCALE-BEAMS.—William Wells Reynolds, Brandon, Vt.

Claim.—1. The adjustable bearing *m*, with oscillating block *i*, in combination with the lever *f*, eccentric A, notched cylinder *k*, and tool-bar G, substantially as described.

2. The tool-bar G, grooved on its under side and provided with the inclined plates *x x*, in combination with the bent or elbow-levers *d d* and bar *b*, substantially as specified.

121,421.—FIRE-SHIELD.—Henry Rieger, Beaufort, N. C.

Claim.—The platform A, raised above and projecting over the wheels, the stanchions D, connected at the top E, and provided with hanging pulleys F, the corner rods G curved, forked, and provided with pulleys H and braces I, the crank pulley-shafts K M, and pendent plates O, all combined, constructed, and arranged as described to form an improved fire-shield.

121,422.—FURNACE FOR THE MANUFACTURE OF IRON AND STEEL.—Jonathan M. Roberts, Burlington, N. J.

Claim.—1. The crucible E, constructed, as described, of the slabs F F, held at the bottom by the hearth R and at the top by the tiles L L, as described.

2. The centrally-arranged and circularly-formed crucible E entirely surrounded by the heating-chamber D, as described.

3. The combination of the fire-chamber A, heating-chamber D, and crucible E.

4. The furnace described, provided with fire-chamber A, heating-chamber D with tile L, crucible E with cover I, contracted throat U, and stack H, all combined and arranged as described.

121,423.—FAIR-LEADER FOR STEERING-RODS OR CHAINS.—Augustus W. Robinson, Providence, R. I.

Claim.—In combination with a guide-roller or pulley, an auxiliary or compressing-roller, acting in conjunction therewith and upon the steering-rod or chain, as and for the purpose specified.

121,424.—FIELD-ROLLER.—Andross Rogers, Freeport, Ill.

Claim.—The buttons J J, bar K, lever L, in combination with bolster D, front frame G G', substantially as shown.

121,425.—Not issued.

121,426.—STEAM-BOILER.—James Shand, 75 Upper Ground Street, Blackfriars, England.

Claim.—The combination of the eccentric water-space or chamber F with the inclined water-tubes H, arranged in successive transverse layers, essentially as described.

121,427.—STEAM OR WATER ENGINE.—Lorenzo D. B. Shaw, Boston, Mass.

Claim.—1. A steam or water engine having cylindrical valves C D and valve-seats G H, when operating in the manner and for the purpose set forth.

2. The combination, in a steam or water engine, of cylindrical valves and valve-seats with the piston P, and partition Q, and pipes J and K, when operated by the induction and eduction of steam or water alternately through ports *a d* and *b c*, substantially as described.

3. The combination, in a steam or water engine of cylinders E F, heads A^1 A^2, supply and exhaust valves, and piston P, when operating in the manner and for the purpose set forth.

121,428, antedated November 23, 1871.—FLUTING-TONGS.—Edwin R. Shepard, Binghamton, N. Y.

Claim.—The yoke A or its equivalent when applied to the shanks *c*, as hereinbefore described, for the purpose set forth.

121,429.—HYDRANT.—James Small, Washington, D. C.

Claim.—The bracket *f* and screw-cap *i*, in combination with the spring *g*, the valve *e*, and the pipes *a b d*, substantially as set forth, for the purpose specified.

121,430.—FAUCET.—Alpheus D. Smith, Grafton, Ohio.

Claim.—A faucet the gate-seat of which is lined with a soft elastic substance, and having concentrically within this a hard spring or yielding metal lining, which shall always hold its just relation to the gate by the action of the adjoining soft elastic lining, and by which the imperfections caused by shrinking or swelling or from the natural wear may be compensated for, substantially in the manner and for the purpose set forth.

121,431.—STAIR-ROD.—Eldridge J. Smith, Washington, D. C.

Claim.—The triangular rod A provided with the shouldered arm D secured by the rotary screw-hook G, all arranged as described.

121,432.—METALLIC COLUMN.—Frederick H. Smith, Baltimore, Md.

Claim.—1. A hollow metallic column, composed of angle-bars placed together substantially as herein described, with a metallic backing or support in each of the angles formed by the junction of any two of said bars, the bars and their metallic backing or supports being united by rivets or bolts, substantialy as shown and set forth.

2. A hollow wrought-metal corrugated column, composed of angle-bars laid back to back so as to break joint, and united substantially as herein shown and described.

3. The combination, in a hollow metallic column, of external wrought-metal angle-bars placed together so as to form a corrugated surface, as described, and internal cast-metal thimbles placed in the angles formed by the junction of the bars and united with the same by riveting or bolting, substantially as shown and set forth.

4. The manufacture of hollow metallic corrugated columns of angle-bars or angle-irons, substantially as herein set forth.

121,433, antedated November 11, 1871.—BASE-BURNING STOVE.—August Spitzmiller, Buffalo, assignor to himself and Norman H. Galusha, Rochester, N. Y.

Claim.—The jacket-space *d* formed between the pipes G and H, with the passages *f f*, smoke-pipe B, and damper I, in combination with the base-chamber C, drum D, division-plate O, and tube *w* extending into the pipe G, when the said several parts are constructed and operate in connection with a stove, in the manner shown and described.

121,434.—COMBINED POTATO-MASHER, STEAK-POUNDER, AND ICE-BREAKER.—Henry P. Stichter, Pottsville, Pa.

Claim.—The household implement herein described, constructed with handle D, semi-cylindrical head A, and metallic plate *b*, having projections *b'* so formed that the points thereof shall describe the arc of a circle, substantially as and for the purposes specified.

121,435.—MACHINE FOR MAKING SHEET-METAL SCREW-NECKS AND SCREW-CAPS FOR CANS.—John H. Stone, Hamilton, Canada West, assignor to himself and J. M. Williams, same place.

Claim.—1. The annular cutter E and flat washer 4 connected to the screw-threaded mandrel A jointly with the annular groove in the die G and the internally screw-threaded die G, as and for the purpose set forth.

2. The annular cutter D and beveled washer 3 connected to the screw-threaded mandrel A jointly with the annular groove in the screw-threaded die F, as and for the purpose set forth.

121,436.—STUMP-EXTRACTOR.—John D. Troyer, Goshen, Ind.

Claim.—1. The combination of the frame A B, shafts C C', pulleys D D', ratchet-wheel E, pawl G, ropes *a b*, and chains *d e*, all constructed and arranged substantially as and for the purposes herein set forth.

2. In combination with the above, the supports H H and brace-rods I I, substantially as and for the purposes herein set forth.

121,437.—BED-BOTTOM.—John C. Walker and William Lapish, Burlington, Iowa.

Claim.—The combination, with a spring bed-bottom, of the levers G G and G' G', constructed and arranged to operate substantially as and for the purposes herein set forth.

121,438.—METALLIC ROOFING.—John C. Wands, Nashville, Tenn.

Claim.—The fastening herein described, consisting of the upper plates *c*, lower plates *d*, and center pieces *e*, applied to the corrugated roof, as specified.

121,439.—CULTIVATOR.—William M. Watkins, Talcott, Va.

Claim.—1. The combination of the shank E, wing G, and point H, when said parts are constructed and arranged substantially as and for the purposes herein set forth.

2. The within-described cultivator, consisting of

the frame A A, B B, C, and D D, metallic sockets *a a*, shanks E E, wings G with flanges *b b*, and grooved points H H, all constructed and arranged substantially as set forth.

121,440.—Breast-Pin.—Auguste Weiller, New York, N. Y.

Claim.—As an article of manufacture, a thermometer-pin, composed of thermometer B, plate A, and pin C, as and for the purpose set forth.

121,441.—Hydraulic and Pneumatic Motor for Sewing-Machines.—James Hampton Welch and Rosia Washington Welch, Georgetown, D. C.

Claim.—The oscillating engine E having stationary trunnion D, constructed substantially as described.

121,442.—Self-Acting Gate.—James A. Wood, Crosswicks, N. J., assignor to himself, John Brinslin, and Charles D. Lippincott, same place.

Claim.—1. The combination of the sliding bar H with the arm or arms *d* of the crank-spindle F.

2. The sliding bar H, limited in its movements by fixed pins *g g*, which enter slots *f f* formed in the said bar.

3. The said slots *f f* of the sliding bar, when made partly straight and partly inclined, substantially as and for the purpose specified.

4. The combination of the slotted bar H, the forked arm or arms *d* of the spindle F, and a cord, wire, or chain, J, passing around pulleys A and A', and by which the said bar H is operated, substantially in the manner described.

5. The combination of the arm *i* having a hub with shoulders *z z*, and the crank-spindle having projections or pins *z z*, and arranged and operating with the arm *i*, as set forth.

6. The combination of the latch P, its internal ratchet *l*, and sliding pawl *m*, all arranged upon a gate-post, and the stop *s* upon the gate, substantially as described.

121,443.—Construction of Rolls.—John V. Woodhouse, Mine La Motte, Mo., assignor to himself, Radcliffe B. Lockwood, and William A. Scott, same place.

Claim.—1. A roll or roll-sleeve, composed of a series of transverse sections constructed to lock with each other by means of the projections *b* and recesses *c* on or in their faces, and bolted or united together, substantially as specified.

2. The combination of the grooves *g* in the hub A with the tongues h on the inner periphery of the sleeve-sections and their locking-keys *f*, substantially as described.

121,444, antedated November 26, 1871.—Coffee-Pot Holder.—Joseph Thatcher Woods and Ernest Henry Leseman, Toledo, Ohio.

Claim.—The within-described coffee-pot holder as a new article of manufacture, consisting of the plate A, clamp B, and screw C, the clamp having a downward curve, *a*, substantially as and for the purposes herein set forth.

121,445.—Steam-Boiler Sediment-Collector.—Albert Zipser, Biala, Austria.

Claim.—1. A vessel, A, open at top, having pipes B opening through its bottom and discharging downward in said vessel, combined with a steam-boiler by suspending or supporting the same therein, substantially as described.

2. The vessel A, constructed and applied as described, in combination with a perforated lid, substantially as described.

121,446.—Overshoe.—Augustus O. Bourn, Providence, R. I.

Claim.—The improved binding for cloth-and-rubber gaiter overshoes herein described, consisting of the rubber binding-strip B partially interposed between the united surfaces of the exterior fabric and the lining, and also partially folded down upon the exterior surface of the outer fabric, substantially as described.

REISSUES.

4,645.—Refrigerator.—Andrew Fuller and Louis P. Reichert, Buffalo, N. Y.—Patent No. 74,813, dated February 25, 1868.

Claim.—1. The combination, with a refrigerating chamber having no communication with the external air, and an ice-box, of a fan or other equivalent air-forcing apparatus, whereby the air is forced to pass in a circuit over or in contact with the ice, and through the refrigerating compartment, substantially as hereinbefore set forth.

2. The combination, with such closed refrigerating compartment, ice-box, and air-forcing apparatus, of a vessel or chamber containing charcoal or other purifying substance in such a manner as to cause the air as it is forced to circulate within said refrigerating compartment to pass successively in contact with the ice and purifying substance substantially as hereinbefore set forth.

3. The combination, within a closed refrigerator provided with an air-forcing apparatus and a purifying-chamber, of an ice-box, and air-pipe K, whereby the air, as it circulates, is compelled to pass through said purifying-chamber, substantially as shown and described.

4. The combination and arrangement within a closed refrigerator, provided with a fan and ice-box, of the water drip-pipe O O', purifying-chamber M, and air-pipe K K', whereby the water which drips from the ice is compelled to pass through the purifying material before it escapes from the refrigerator, as hereinbefore set forth.

4,646.—Printing-Press.—Merritt Gally, Rochester, N. Y.—Patent No. 97,185, dated November 23, 1869.

Claim.—1. In a printing-press, such a construction of the ways, in or on which the wheels or guides of the inking-rollers run, as shall raise such inking-rollers free from the distributing-cylinder or cylinders when approaching or leaving the same, substantially as and for the purpose described.

2. The traverse-cam C, whether attached to crank-pin as a cap or forming part of the crank-wheel, when used in connection with the stud or pulley G, for the purpose set forth.

3. The mechanism described, or its equivalent, for imparting to the inking-rollers a positive motion in both directions over the form, combined with the mechanism or its equivalent for stopping the inking-rollers at the will of the operator without stopping the press.

4. The positively-moving lever L and lever K and connection M, combined for the purpose of giving motion to the inking-rollers, substantially as described.

5. The lever N *g*, combined with the connection M, for the purpose of disconnecting the levers L K, substantially as explained.

6. The mechanism described or its equivalent for stopping the inking-rollers, combined with the mechanism or its equivalent for preventing the inking-rollers from being set in motion at an improper time.

7. The latch P, combined with the levers L K, for the purpose of holding lever K and hook-connection M in position for reconnection and preventing the release of lever N at an improper time, substantially as specified.

8. A curved wedge or sleeve, i^2, combined with the freely-moving bearing M^2, which sustains the force of the impression, and so arranged that the said wedge or sleeve may be set in different positions to produce varying degrees of impression, substantially as set forth.

9. The wedge or sleeve i^2, combined, as described, with the adjusting-bar T.

10. The set-latch L' W, combined with a handle, V, as and for the object explained.

11. In combination with such set-latch, the projection X or bar T of the wedge or sleeve i i^2, as and for the end specified.

12. The use of rubber packing or other elastic material for the purpose of relieving the cut-off of the ink-fountain from the direct pressure of the set-screws, substantially as set forth.

13. The additional lug S placed on the lever-projection of support R, in combination with the flange Y, as and for the purpose described.

14. The type-bed B, inclined backward at any angle between the vertical and forty-five degrees, in combination with the vibrating, rocking, or oscillating platen A, constructed substantially as herein set forth.

15. A hollow bed, divided into chambers by means of internal partitions, substantially as described.

16. A frisket-finger provided with a hole or holes, *u*, substantially as and for the purpose specified.

4,647.—Whiffletree.—George Gibbs and William Gibbs, Canton, Ohio.—Patent No. 75,408, dated March 10, 1868.

Claim.—1. The combination of a pair of disconnected steel spring-arms with the ends of a non-elastic draft-bar, said draft-bar with its spring-arms being arranged to turn on a central bearing, and being used with respect to the direct draft and the resistance of the load, substantially as is herein specified.

2. A bar-steel spring-arm for a draft-bar having an open draft-link secured in a turned eye at its end, substantially as and for the purpose herein specified.

3. The combination of a non-elastic draft-bar and two steel spring-arms having open draft-links secured in turned eyes at their ends, said arms being arranged at the ends of said draft-bar, and said draft-bar being arranged to turn on a central bearing, substantially as and for the purpose specified.

4. In combination with a draft-link secured in the end of a spring-arm on the end of a draft-bar, and encircling the end of said bar, a stop-pin or projection in the draft-bar for preventing said link from being swung off from said draft-bar, substantially as herein specified.

5. In combination with a draft-link or connection at the end of a spring-arm for a draft-bar, a scale of indexes marked on said link, and an indicator secured on the draft-bar for the purpose of showing the amount of draft applied by the team, substantially as is herein specified.

4,648.—Fare-Box for Vehicles.—John B. Slawson, New York, N. Y.—Patent No. 105,005, dated July 5, 1870.

Claim.—1. The combination of the cover or hood G, mouth F, and horizontal shelf H, as arranged for the purposes described, with the diagonal plate I, as set forth.

2. In combination with the shelf H, arranged as described, the vertically-arranged diagonal plate I, for the purpose set forth.

3. In combination with the shelf H and plate I, the inclined plate J and shelf U, for the purpose described.

4. The combination of the plates K and N, when moved at the same time in reverse directions, as and for the purpose specified.

5. The combination of racks *a* and *a'*, pinion O, shaft P, spring T, and driver's strap R, as arranged, for the purpose specified.

4,649.—Machine for Covering Cords.—John Turner, Norwich, and Isaac E. Palmer, Montville, Conn.; said Palmer assignor to said Turner.—Patent No. 38,190, dated April 14, 1863; reissue No. 3,345, dated March 30, 1869.

Claim.—The combination of a laying-up mechanism, two or more twisting-spindles for twisting the several strands, and a corresponding number of covering devices for covering the several strands before being laid together, when the covering devices rotate independently of the twisting-spindles.

4,650.—Wood-Incased Can.—Orrin S. Camp, Grand Rapids, Mich.—Patent No. 118,904, dated September 12, 1871.

Claim.—The wood-incased metal can, consisting of the can A provided with the external horizontal flange B, and of the case B' provided with the inwardly-flanged hoop E, covering the upper edge of the case B', and soldered to the flange B, substantially as specified.

4,651.—Division A.—Broiler.—David E. Roe, Elmira, N. Y.—Patent No. 106,210, dated August 9, 1870.

Claim.—The combination, with a broiler-frame provided with a horizontal groove, of a removable grate or gridiron for supporting the food to be broiled.

4,652.—Division B.—Broiler.—David E. Roe, Elmira, N. Y.—Patent No. 106,210, dated August 9, 1870.

Claim.—1. The combination, with an inner and outer ring, of radiating arms, which hold the two rings together by being hooked or clinched upon them, substantially as described.

2. The combination, with the outer hooked ends *a*, of the arms when radiating from a common center of the outer ring B, substantially as described.

3. A supporting device for broilers and for other purposes, the parts of which are combined together, substantially as shown and described.

4,653.—Fluting-Machine.—Samuel G. Cabell, Quincy, Ill., assignor, by mesne assignments, to Flora B. Cabell and Susan R. Knox.—Patent No. 83,924, dated November 10, 1868.

Claim.—1. The cap-plate F, when constructed and arranged substantially as herein described, for the purpose of furnishing a support and bearing for the cylinder or cylinders I, as set forth.

2. In combination with a stationary fluted cylinder and one or more movable fluted cylinders, a lever and eccentric for raising, holding in position, and depressing the movable cylinder or cylinders, constructed and arranged to operate substantially as and for the purpose described.

3. The cap L and bolt *g*, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

4. In combination with the cylinder H, the cap M on the end of the crank N, constructed substantially as herein described, and for the purpose set forth.

5. In combination with the cylinders I, the covers O and thimbles P when constructed and arranged substantially as described, and for the purpose set forth.

6. The fluting-rolls for fluting-machines, constructed with ogee-fluting of the form herein described, and shown in Figs. 4 and 5.

DESIGNS.

5,379.—Carpet-Pattern.—Joseph Barrett, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawing or photograph accompanying this specification.

5,380.—Carpet-Pattern.—Alexander Beck, Philadelphia, Pa.

Claim.—1. The design for the body A of the carpet, substantially as shown and described.

2. The design for the border B, substantially as described and illustrated.

3. The design for a carpet-pattern, in which the body A and border B are combined.

5,381.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,382.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,383.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,384.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,385.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,386.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,387.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,388.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,389.—CARPET-PATTERN.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic prints accompanying this specification.

5,390.—CARPET-PATTERN.—Alfred Heald, Philadelphia, Pa., assignor to McCallum, Crease & Sloan, same place.

Claim.—The design for a carpet-pattern, substantially as described, and as represented in and by the accompanying drawing.

5,391.—CARPET-PATTERN.—Alfred Heald, Philadelphia, Pa., assignor to McCallum, Crease & Sloan, same place.

Claim.—The design for a carpet-pattern, substantially as described, and as represented in and by the accompanying drawing.

5,392.—CARPET-PATTERN.—Otto Heinigke, New York, N. Y., assignor to Hartford Carpet Company, Hartford, Conn.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawing or photograph accompanying this specification.

5,393.—OIL-CLOTH PATTERN.—James Paterson, Elizabeth, N. J., assignor to Page, Wilder & Co., Hallowell, Me.

Claim.—The general conformation of the design herein shown with the present or other colorings of the same.

5,394.—STOVE.—Robert Scorer and Robert Ham, Troy, N. Y., assignor to J. L. Mott, New York city.

Claim.—1. The design for the body-sections A B C, as herein described, in combination with the design for the base of the stove, as shown in Fig. 1.

2. The design for the fender-ring G, as described.

3. The design for the top plate H, as set forth.

4. The word "Flash," composed of letters shaped and arranged together upon and forming a part of the ornamental design of a plate of a stove, as herein described.

5,395.—PARLOR-STOVE.—Robert Scorer and Robert Ham, Troy, N. Y., assignor to J. L. Mott, New York city.

Claim.—1. The design for the urn A, as described.

2. The design for the cover B, as described.

3. The design for the top plate G, as set forth.

4. The design for the plate J, as described.

5. The design for the rim-plate K, as described.

6. The design for the frame or frames L, as set forth.

7. The design for the rim-plate M, as shown.

8. The contour of the fire-pot casing N, as set forth.

9. The combination of ornaments on the casing N, as described.

10. The design for the base plate W, as set forth.

11. The design for the ash-pit cover Z, as described.

12. The design for the leg Y, as shown.

13. The word "Sirius," composed of letters shaped and arranged together upon and forming a part of the ornamental design of a plate of a stove, as herein set forth.

TRADE-MARKS.

553.—COFFEE.—John Ashcroft, Brooklyn, N. Y.

554.—MEDICINE.—Cloud, Akin & Company, Evansville, Ind.

555.—SOAP.—William Dreydoppel, Philadelphia, Pa.

556.—PLAYING-CARDS.—Victor E. Mauger, New York, N. Y.

557.—HYDROCARBON OIL.—Rufus S. Merrill, William B. Merrill, and Joshua Merrill, Boston, Mass.

558.—SMOKING-TOBACCO.—Charles R. Messinger, Toledo, Ohio.

559.—SMOKING-TOBACCO.—Charles R. Messinger, Toledo, Ohio.

560.—GIN.—I. D. Richards & Sons, Boston, Mass.

561.—YEAST.—Elisha T. Smith, Hartford, Conn.

562.—SCYTHES.—The Dunn Edge-Tool Company, West Waterville, Me.

563.—SCYTHES.—The Dunn Edge-Tool Company, West Waterville, Me.

564.—SHEET AND PLATE IRON.—Alan Wood & Company, Philadelphia, Pa.

EXTENSIONS.

ALBERT FRANKLIN, of Genoa Cross Roads, Ohio.—Patent No. 18,579, dated November 10, 1857; reissue No. 3,310, dated February 23, 1869.

"Improvement in Seeding-Machines."

Claim.—1. The combination of a hopper-bottom having triangular openings, with a revolving seed-cylinder, when said openings are arranged in such relation to the cylinders that the revolution of the latter draws the seed to the apex of the former, as and for the purpose described.

2. The combination of the hopper-bottom having triangular openings, with a revolving seed-cylinder, having cells, or recesses, upon its surface, when said combination is provided with a passage-way between the hopper and cylinder, as and for the purpose described.

RICHARD M. HOE, of West Farms, N. Y.—Letters Patent No. 18,640, dated November 17, 1857.

"Improved Mode of Operating Fly-Frame of Printing-Presses."

Claim.—Operating the fly-frame I, by means of cam-shafts C, placed one at each end of the machine, and provided with cams D E F, and used in connection with arms *j m p*, rods *i l o*, arms K, and springs M or an equivalent device, whereby the cams are made to actuate the fly-frames in a more direct manner, and consequently insuring a more perfect operation of the same than heretofore.

ALEXANDER S. NEWTON, of Brandon, Vt.—Letters Patent No. 18,646, dated November 17, 1857.

"Improved Machine for Turning Wooden Boxes."

Claim.—1. The use of the combination of the grooved rod, and bevel-wheel on the end thereof, with the wheel Q and cam T, substantially as set forth.

2. The use and combination of the grooved rod, and bevel-wheel on the end thereof, with the wheel R, and cams X and Y, substantially as set forth.

3. The use and combination of the cam X with the lever Z, cutter-lever b^3, and discharging-bar f^3, or their equivalents, separately or collectively, for the purposes set forth.

4. The cam Y, in combination with the lever k^2 and rack r^2, or equivalents for the said parts, substantially as set forth, and for the purposes hereinbefore described.

WILLFORD H. NETTLETON, of Bristol, Conn., CHARLES RAYMOND, of Guelph, Canada, and ANSON HATCH, of New Haven, Conn., Letters Patent No. 18,661, dated November 17, 1857; reissue No. 3,489, dated June 8, 1869.

"Improved Machine for Turning Pillars for Clock-Movements."

Claim.—1. The combination, substantially as described, of the wire to be operated on; the straightener and its sliding carriage or support; mechanism for drawing the wire, and with it the straightener and its carrier; mechanism for holding the wire in a fixed position after each successive drawing or feed forward; and mechanism for gradually forcing the straightener and its carriage back to their original positions after each movement forward, for the purposes of straightening the wire and feeding it up to the cutters and jaws.

2. The compound levers *i* and 19, made and acting in connection with the feeding-slide *h* and clamp 14, substantially as and for the purposes specified.

3. The holding-jaws *k* and 26, constructed and combined substantially as described, in combination with the screws 28 and 29 and the cam *n*, substantially as and for the purpose set forth.

4. The holding-jaws *k* and 26, constructed and combined substantially as described, in combination with the screws 28 and 29, cam *n*, and turning-tools 32, substantially as and for the purpose set forth.

5. The combination of the feeding-device *h*, hopper 37, jaws *k* and 26, and the turning tools 32, as and for the purpose set forth.

ORSON W. STOW, of Plantsville, and AUGUSTUS BARNES, of Southington, Conn. Letters Patent No. 18,713, dated November 24, 1857.

"Improvement in Candle-Snuffers."

Claim.—The snuffers A B struck out of sheet metal, the legs formed with and constituting a portion of the wing-blanks, and cutter-wing B, bent as set forth, so as to form a good cutting-edge, all as described.

WILLIAM PRATT, of New York, N. Y.—Letters Patent No. 18,704, dated November 24, 1857.

"Improvement in Safety-Lamps."

Claim.—1. Protecting the orifices of vessels used in holding, pouring, and burning inflammable liquids with a volute of ribbed metal wound upon itself, or made of strips of plain and corrugated metal wound together—these, so formed, making most economically a series of regular tubes of great stability and conducting power, together with freedom of pouring through them the liquids used, and also presenting great facility of cleaning from any accidental obstruction.

2. The arrangement of the feeder-tube and cap and the wick-tubes and cap, either by the intersection of their peripheries or stops suitably placed in such a manner that the removal of the wick-cap cannot take place till that which covers the protected orifice for replenishing the lamp is first taken off.

J. W. RIGGS, of Brooklyn, N. Y.—Letters Patent No. 18,708, dated November 24, 1857.

"Improvement in Trusses."

Claim.—The construction of the pad with a knob bed or noduled face, substantially as herein described, so that it shall press upon several distinct points or intervals around and upon the tissues

concerned in hernia and not have a continuous bearing, and operate as herein set forth.

PIERPONT SEYMOUR, of East Bloomfield, N. Y.—Letters Patent No. 18,774, dated December 1, 1857.

"Improvement in Machines for Spreading Lime and other Fertilizers."

Claim.—The combination and arrangement of a series of vibrating plates or distributers, *d*, attached to and working upon the face of an inclined plane or distributing-surface, C, by means of the rod E or any equivalent connection that will give the required motion to one end of said plates while another portion is stationary upon the board or plane, substantially in the manner and for the purpose herein described.

JOHN GRIFFIN, of Phœnixville, Pa.—Letters Patent No. 18,773, dated December 1, 1857.

"Improved Pile for Rolling Beams."

Claim.—The manufacture of wrought-iron I or T girders and bars by forming the pile of grooved pieces, in combination with the intermediate welding, arranged and combined in the manner substantially as above described.

WILLIAM SELLERS, of Philadelphia, Pa.—Letters Patent No. 18,775, dated December 1, 1857; reissue No. 656, dated February 8, 1859.

"Improved Machine for Threading Bolts."

Claim.—1. The use of rotating dies, in combination with cams or their equivalents, when both are so arranged as to be capable of revolving about a common center at different velocities for the purpose of opening and closing the dies, substantially as described.

2. The arrangement of cams with open spaces between them, in combination with the die-box and dies, substantially as described, to facilitate the changing of the dies.

3. The mode of attaching the tap-holder to the revolving die-box, substantially as described.

ISSUE OF DECEMBER 5.

PATENTS.

121,447.—CUTTER FOR MOLDING-MACHINES. Edwin Benjamin, Chicago, Ill.

Claim.—The combination of the tools E and clamping devices D G H with the sleeve A provided with the disks B C, adjusting screw K, and nuts I J, substantially as and for the purpose set forth.

121,448.—FENCE.—Cortland E. Brown, Pamelia, N. Y.

Claim.—1. The combination of the boards A and the staples with which they are provided with posts B and the transverse pins for supporting the boards, said parts being set up and arranged in panels, as herein shown and described.

2. In combination with the boards A, provided with staples fitting the posts B and resting on pins projecting from said posts, the intermediate posts C and staples *c*, substantially as herein shown and set forth.

121,449.—BRICK-MOLD.—George Carnell, Philadelphia, Pa.

Claim.—A brick-mold having an inside lining, D, of hard brass, faced with a steel edge, *g*, as herein described.

121,450.—BRICK-MACHINE.—Jacob Cooke, Muncy, Pa.

Claim.—1. The radial arms a^1 a^2 a^3 a^4 provided with adjustable presser-blocks *s s s s*, in combination with the base-plate E, rods 5 6 7 8, and shaft C, substantially as and for the purpose described.

2. The combination and arrangement of the shaft C with the cam *c*, bar *d*, links *e e*, bell-crank *d*, adjustable rod *f*, rock-shaft *t*, connecting-rods *o o*, bars *s s*, pusher-bar *m*, and weight *n*, when used to operate the molding-boxes *i*, substantially as described.
